The commercial navy consisted, at the close of 1875, of 5,001 vessels of 239,134 tons. Of these, 3,908 vessels, 41,076 tons, were of less than 60 tons each, and 16 were steamers of 6,048 tons.

Greece had, in 1877, only one railroad in operation. It connects Athens with the port of Piræus and Phalerum, was opened in 1869, and is 12 kilometres long (1 kilom. = 0.62 mile). The aggregate length of the electric telegraph lines, in 1875, was 2,565 kilometres; that of the wires, 3,165 kilometres. The number of telegraph stations was 60, and the number of dispatches, 249,673.

A change in the ministry took place in

March. Deligeorgis, the leader of the chief faction of the opposition, succeeded in uniting the different parties opposed to the ministry, and M. Kumunduros was forced to resign. A new ministry was formed under the former, who, reserving for himself the departments of Foreign Affairs and the Interior, selected Demitrios Levidis for the Finances, Antonios

Mavromichalis for War, Spilios Antonopolus for Justice, and Rufos for Education. In his address, Deligeorgis stated that he was not opposed to reform in the army and to the armaments, but he desired first to reduce the budget and remove the deficit of 2,000,000 drachmas. The Chamber of Deputies sanctioned his policy by a vote of 75 to 72. It also sanctioned a loan

CORINTH.

of 10,000,000 for military purposes, and the laws relating to the standing army and the extraordinary reserve. The latter went into operation immediately: 10,000 men were to be called out, and divided into 3 practice-camps. After they had been drilled for 6 months, they were to be dismissed, and 10,000 more to be called out. On March 30th the Chamber ad-

joined, and on May 28th met again. The day before, the students of the university, with a large concourse of people, went to the palace and requested of the King, in case a change in the ministry should take place, to form a coalition one, composed of the recognized party-leaders. He promised to give the matter his attention. When the Chamber as-

CORFU.

sembled, it elected the former Minister of the Navy, Averginos, a partisan of Kumunduros, to be its president. This was equivalent to a vote of want of confidence in the ministry, and Deligeorgis resigned. The King then intrusted Kumunduros with the formation of a ministry. When he presented his programme to the

Chamber, Deligeorgis made use of the opportunity to inform that body of the results of his short administration. The Russo-Turkish War had considerably excited the public mind, and a war between Greece and Turkey began to be thought possible by many. When, therefore, the late minister showed how he had taken all

possible steps that such an event should find Greece ready for it, he gained the popular favor to a high degree. The efforts of Kumunduros to form a ministry were unsuccessful. After a number of lists of names had been presented to the Chamber, hardly any of which survived a day, the following combination was finally effected, and sanctioned: President of the Ministry, and Minister of the Navy, Canaris; the Interior, Kumunduros; Foreign Affairs, Tricoupis; Justice, Zaimis; Finance, Deligeorgis; Public Instruction, Deligiannis; and War, Zrinbrakalis.

On July 2d the Minister of Finance submitted a bill in the Chamber of Deputies, authorizing him to obtain a foreign loan of 20,000,000 drachmas, with a home loan of the same amount. He also demanded a credit of 35,000,000 drachmas for armaments. The session was closed by a royal order on July 30th.

The success which had hitherto attended the Russian arms excited the popular mind, and warlike demonstrations frequently occurred. The regular army, which had been brought up to its full number (27,000), was divided into 4 large camps, ready for duty, while numerous bodies of volunteers were formed by natives, as well as Greek subjects of Turkey. The relations with the latter country assumed a serious aspect in August. On the 12th, large crowds marched through Athens, calling for the declaration of war. As the Greek Government seemed to be preparing for hostilities, having bought 6 batteries of Krupp cannons and 16,000 breech-loaders, and was continually sending troops to the front, Earl Derby, in August, at the instance of the Turkish Government, addressed a note to the former, calling for an explanation, and suggesting that it should engage not to make war upon Turkey in the future. In reply, the Greek Government denied the report that it had entered into an alliance with Russia. At the same time, however, it refused to make the engagement as suggested, declaring that it would be equivalent to the termination of the rights of Greece as an independent state, and of her duties to Hellenism. M. Tricoupis, the Minister of Foreign Affairs, fell back upon the Protocol of 1832, in which Lord Palmerston, and the plenipotentiaries of France and Russia, summarily rejected identical propositions which were then put forward by the Porte. In answer to a second communication from Earl Derby, M. Tricoupis declared that Greece would not renounce the privileges of the independence which was acknowledged in 1832, and that the condition and danger of Hellenism in Turkey rendered it more than ever necessary that Greece should have that liberty of action which is essential to independence.

The death of Admiral Canaris, in September, threatened to bring about another ministerial crisis. The entire ministry resigned, but afterward withdrew their resignations. The post of president remained vacant at the close

of the year. The Chambers reassembled on October 22d, but no business of any importance was transacted by them. The popular clamor for war continued, and several warlike demonstrations again occurred in Athens.

GREEK CHURCH. The population connected with the Greek Church, in 1877, was as follows:

Russia	60,171,000
Finland	87,000
Austro-Hungary	3,051,000
Turkey	6,500,000
Roumania	4,529,000
Servia	1,206,000
Greece	1,442,000
Montenegro	120,000
Total	77,056,000

Of the population belonging to the Russian Church, 54,854,000 lived in European Russia, 84,000 in Poland, 2,072,000 in Caucasia, 2,937,000 in Siberia, and 274,000 in Central Asia.

The Procurator-General of the Holy Synod of Russia, Count Tolstoi, publishes an annual report on the condition of the Greek Church in Russia. The report for 1874, which appeared in 1877, contained the following facts: In the diocese Irkutsk, 1,935 persons were baptized. In this diocese the missionaries labor under the greatest difficulties to convince the native Buriats that, by embracing Christianity, they do not at the same time become Russians and cease to be Buriats. The Christian parents very frequently try to keep their children, and particularly the girls, from baptism. The girls are engaged and married at an early age, and the parents receive for them a certain price. One that has been baptized cannot, however, be bought or sold, while for a baptized boy no bride can be bought in advance.

Great difficulties are also experienced in converting the Mohammedan Tartars. In the government of Kasan, 470 persons returned to the Mohammedan Church during the year 1874, and, in order to put an end to this, the priests were permitted to use the Tartaric language for the services. During 1874, 2,519 pagans, 747 Mohammedans, and 427 Jews, were baptized in the government of Kasan. In the same year, 2,890 schismatics returned to the Orthodox Church. In Kasan, their principal stronghold, public discussions were held with them, which were attended by large audiences. The principal question discussed was that of the Antichrist, which is one of the fundamental doctrines of this priestless sect. 1,707 converts were received from the Roman Catholics, and 743 from the other Christian churches. In discussing the inner affairs of the Church, the report says that more and more attention was paid to preaching and catechetical instruction. With regard to elementary instruction, the report says that, not very long ago, the people avoided the schools, and tried to keep the children away, regarding learning as superfluous, and interfering with their home affairs. But these views have been

changed, in the course of years, by the beneficial influence exerted by the priests. The people are now convinced of the necessity of instruction, and not only children, but even grown persons, attend the parochial schools, which have been established in all eparchies. Of these schools there were, in 1874, 7,672, with 193,713 scholars, of both sexes. The reorganization of the theological institutions of learning, which was begun in 1866, had been completed in the higher institutions (theological academies); of the 52 secondary schools (seminaries), 41, and of the 186 lower schools (theological schools), 146 had been reorganized.

The Russian Society for the Distribution of the Holy Scriptures issued its fourteenth annual report in 1877. According to this report, it had distributed 39,473 copies of the Bible (3,459 more than in the year preceding), at an expense of 17,592 rubles. The colporteurs sent out by the society had especial success among the soldiers. By an exceptional measure, free access was given them to the barracks and camps. Of the copies distributed, 445 were given away in Servia, through the Society of the Holy Cross, to the sick and wounded in the hospitals. At the end of the year 1876 the society numbered 514 members. The general meetings of the society were 13; the directors met weekly, under the presidency of N. A. Astafess. Since the society was founded, in 1863, it had distributed, through its colporteurs, or by sale at its depositories, 487,795 copies of the Holy Scriptures.

A new and revised Russian translation of the Bible was completed in 1877, after twenty years of patient labor. It was prepared under the superintendence and with the coöperation of the Holy Synod, and was fully authorized by it.

The latest information on the mission of the Russian Church in Japan (see *ANNUAL CYCLOPEDIA* for 1876) is given in the *Missioner*, of Moscow. Its correspondent at Hakodadi writes as follows: "Up to this time the propagation of the gospel in Japan has gone on most successfully in one of the provinces formerly called Sendai, in the principality of Sanuma. In 27 places in this province the teaching of Jesus Christ has been given. Paul Savabe has been laboring there. During the last three months about 180 persons have been baptized, and about 200 are preparing for holy baptism at Easter. The Christians here support their priest, and the greater part of their religious teachers, of their own means. They have erected chapels in three cities. Father Paul, on his return, will celebrate the holy Eucharist there, the Archimandrite Nicholas having recently sent thither all things needful therefor."

In Austria proper there is one ecclesiastical province with a metropolitan, at Czernovitz, and two bishops in the Bukowina and Dalmatia. There were besides, in 1875, 343 parishes: 2 in Vienna, 1 in Austria above the Enns, 3 in the Littoral, 242 in the Bukowina,

and 95 in Dalmatia. The number of the secular clergy, together with the candidates for the priesthood, was 454; of whom 2 were in Vienna, 2 in Upper Austria, 9 in the Littoral, 1 in Galicia, 315 in the Bukowina, and 125 in Dalmatia. The number of monasteries was 14: 3 in the Bukowina, and 11 in Dalmatia, together with 71 members belonging to them. Of the total number of students in the Austrian universities in 1876 (8,327), only 208 belonged to the Greek Church. Of these, 103 were in Vienna, 21 in Gratz, 2 in Innsbruck, 8 in Prague, 13 in Cracow, and 61 in Czernovitz.

A noteworthy fact in the Greek Church of Turkey is the great progress of education both among the Greek and the Bulgarian nationalities, especially among the former. A work recently published in Germany, under the title "Macedonian Sketches" ("Mittheilungen aus Macedonien"), gives some interesting information on the establishment of teachers' seminaries in Macedonia, after the model of the German schools of this class. The founder of these institutions is Dr. Demetrios Maroulis, who, after finishing his education at the German universities, was for some time director of the Greek gymnasium at Thessalonica, and subsequently (1870) of that of Serre, a town in Macedonia, which numbers among its 35,000 inhabitants about 30,000 Greeks, and has at present as archbishop the learned Bryennios, who has gained a world-wide reputation among theological scholars by publishing, early in 1876, the first complete edition of the two epistles of Clemens. Enthusiasm for the cause of general education, and the unsatisfactory condition of the elementary schools in Macedonia, induced Maroulis to resign his presidency of the gymnasium and to devote himself wholly to the cause of elementary instruction. Relying entirely on private contributions, he has succeeded in establishing a training-school for male teachers, and subsequently another one for female teachers. Already a number of the pupils of these schools are laboring with great acceptance in the elementary schools of the province, and diffusing a new interest in the cause of education among the people.

In Egypt there are now no Orthodox metropolitans, and but one bishop, who resides at Cairo, as vicar to the patriarch. The members of the Orthodox Church in Egypt intend urging upon Sophronius, the Patriarch of Alexandria, that, as soon as may be, four metropolitans be nominated and consecrated. Of the six metropolitans occupying sees in 1870, three (the bishops of Libya, Tripoli, and Cyrene) are dead; one (of Pentapolis) removed; two (Meletius, of Thebes, and Amphilochius, of Pelusium) retired, the former now residing in the island of Rhodes, the latter at the Sphigmenon monastery on Mount Athos.

GRINNELL, MOSES H., died in New York, November 24, 1877. He was born in New Bedford, Mass., in 1803, and was a brother of Henry Grinnell, whose name is well known in

connection with Arctic explorations. In early life Moses went to New York, and entered the firm of Fish, Grinnell & Co., dealers in whale oil. Two of his brothers were partners in this firm, whose name was changed, in 1828, to Grinnell, Minturn & Co., under which title it has become extensively known as one of the chief mercantile houses in the country. In 1838 Mr. Grinnell was elected to Congress by the Whigs, but at the next election he was defeated. He now gave his attention exclusively to his extensive business. In 1856 he was a presidential elector on the Republican ticket. In 1869 he was appointed Collector of New York, in which position he was succeeded by Thomas Murphy, in 1870. Mr. Grinnell was one of the most public-spirited and respected citizens of New York. He became President of the Phoenix Bank in 1838, and continued one of its directors till his death. He became President of the Chamber of Commerce in 1843, and held the position for several years. He was a member of the original Central Park Commission, and from 1860 to 1865 was one of the Commissioners of Charities and Correction. During the war he contributed liberally in time and money to the Union cause, and was an active member of the Union Defense Committee.

GUATEMALA (REPÚBLICA DE GUATEMALA), one of the five independent States of Central America, extending from 13° 50' to 18° 15' north latitude, and from 88° 14' to 93° 12' west longitude. It is bounded on the north by the Mexican State of Chiapas; on the east by British Honduras and the Caribbean Sea; on the south by the republics of Honduras and San Salvador; and on the southwest by the Pacific Ocean.

(For the territorial division of the country, and statistics concerning area, population, etc., reference may be made to the *ANNUAL CYCLOPEDIA* for 1875.)

The President of the Republic is Lieutenant-General Rufino Barrios (elected May 7, 1873).

The cabinet is composed of the following members: Minister of the Interior and of Public Works, Señor Don J. Barbarena; Minister of Finance and Public Credit, Señor Don José Antonio Salazar; Minister of War, Señor Don J. M. Barrundia; Minister of Foreign Affairs and of Public Instruction, the Señor Dr. Don Lorenzo Montufar.

The United States Minister to Guatemala (and for all five Central American States) is G. Williamson.

The most recent official returns concerning the national revenue are those given in the *ANNUAL CYCLOPEDIA* for 1875.

As to the national debt—set down, on January 1, 1875, at:

Home debt.....	\$1,242,480
Foreign debt.....	2,634,904
Total indebtedness.....	\$3,877,384

—"the Republic is unencumbered," said a native writer, in May, 1877; "it has less debt than

any other country in the world in proportion to its inhabitants and its riches. Supposing the debt, including all late negotiations, to amount to \$5,000,000, it would be equal to \$4 for each inhabitant, a sum which does not amount to two years' expenditures, or two years' estimates: Costa Rica owes \$107 for each inhabitant, and Honduras \$108. It is, therefore, not without good reason that we consider Guatemala is free from debt, or rather that her debt is so insignificant as not to be worth mentioning."

But a short time before the foregoing remarks were penned, the subjoined statement came to light in a British financial journal:

The arrangement made by the Council in 1872 for the payment, in installments, of the two coupons due in that year, has worked satisfactorily. The final settlement was effected in April, 1876, the bondholders receiving 6s. 4d. per cent. in excess of the par value of the coupons.

The coupons, due in October, 1875, and April, 1876, fell also in arrear, owing to the war with a neighboring republic. Through the exertion of Sir Henry Scholfield, Her Majesty's Chargé d'Affaires, the agent of the bondholders in Guatemala, payment of these arrear coupons has been arranged by means of Treasury bonds bearing 6 per cent. interest, and payable at twelve months from the above dates respectively.

With reference to the service of the debt from October, 1876, the Government has undertaken to pay on November 1 and December 1, 1876, and January 1, 1877, \$10,000 each month; on February 1st and March 1st, \$15,000; and, subsequently, at least \$20,000 per month. Two payments of \$10,000 each have been received by Sir Henry Scholfield.

The month of May, 1877, brought forth two decrees, one for the purpose of permanently increasing the national revenue,* the other to afford immediate relief necessitated by extraordinary outlays. It has been regarded as regrettable that at a time when the country is in the enjoyment of undisturbed peace, General Barrios should resort to such extreme measures as oppressive imposts and a forced loan: the import duties were already little short of prohibitory, such in the case of a number of articles as to double the invoice cost, and being in a few instances upward of 200 per cent. Here follow translations of the decrees referred to:

I, J. Rufino Barrios, General of Division and President of the Republic of Guatemala, considering that the public income ought to increase in proportion to the necessities of the country, and that it is fitting to the national credit to appoint new funds for the extinction of the bonds of the converted debt, thereby favoring the holders of those bonds, in use of the faculties with which I am invested, decree:

ARTICLE 1. From the 1st of July next, the administrations of taxes will collect 50 per cent. more than is paid at present on every marizana of sugar-cane.

ART. 2. The duties which are collected at present in the custom-houses, both maritime and on the frontier, are raised 25 per cent. on foreign merchandise.

ART. 3. The payment of the augmentation of 25 per cent. hereby established shall be made in the following manner: Counting ten days from this date

* The revenue rarely exceeds \$2,600,000; the expenditure in 1875 was \$2,542,600.

for the introduction of goods proceeding from any part of Central America; thirty days for importations from California, Mexico, and South America; two months for goods proceeding from New York and the Antilles; four months for the importations from Europe, if made by steamer, and six months for the same if made by sailing ship.

ART. 4. On paying this tax, 10 per cent. will be paid in bonds of the converted debt and 15 per cent. in cash.

Given in the Government Palace, May 24, 1877.

J. RUFINO BARRIOS.

J. Rufino Barrios, General of Division and President of Guatemala, decrees:

ARTICLE 1. A loan of \$500,000 shall be raised on the largest capitals of the Republic, payable in monthly payments of \$100,000 each, half in silver and half in notes at par; the first payment to be made on the 15th of June next, and the others on the same day of the following months.

ART. 2. The Government will give a bonus of 10 per cent. on all the payments made in coin, and it will also give it on those made in paper when this is at par in the market; it will also pay 1 per cent. interest a month on the whole amount subscribed.

ART. 3. Fifty thousand dollars in paper will be extinguished monthly, twenty-five thousand of this amount being of the present loan, and the other twenty-five thousand the amount of paper destroyed monthly in the administrative offices of the Republic in conformity with a former decree.

ART. 4. For the refunding of the capital and interests of the loan the income from spirits (native) is set apart, of which \$75,000 shall be paid every three months, the first payment being made on June 30, 1878.

ART. 5. For the amounts lent, and their corresponding bonuses, bonds of the converted debt will be given. These bonds will be stamped with a special seal bearing the words, "Loan of 1877." After the payment of the interests, these bonds shall be drawn by lot until they reach the rest of the amount destined to be refunded.

ART. 6. The distribution of the loan will be made by the Governors (*jefes políticos*) in the fairest manner, according to the calculations they are able to make of the capitals of the contributors.

ART. 7. The payments shall be made in this capital in the office of the Central Commission of Consolidation, and in the departments in the office of the Governor.

ART. 8. The persons that resist the punctual payment of their respective amounts will thereby render themselves liable to the payment of double the amount which shall be levied on their property; in such cases the authorities must proceed in such a manner as to enforce the payment three days after the requisition.

ART. 9. The Minister of the Exchequer is charged with the execution of this decree.

Given in the Government Palace, May 26, 1877.

J. RUFINO BARRIOS.

The Government, according to report, had decided to do away with the National Bank of Guatemala, as not having served the object for which it was originated, and to establish a joint-stock bank in its stead. Messrs. Pedro J. Barros, Francisco Camacho, and Manuel Benito were named by President Barrios as a commission to form a joint-stock company, the capital of which would be employed in establishing in the Republic a bank of circulation and discount, on the following basis:

The bank to be established shall be named Banco Comercial de Guatemala, and it will do all kinds of business appropriate to institutions of this class.

It will also emit bills or notes payable to bearer on demand, in good money. The capital of the bank will be, for the present, \$1,000,000, in 10,000 shares of \$100 each. This capital may be increased by consent of the body of the shareholders. The subscription to shares must be made in the city of Guatemala. The subscribers must deposit 2 per cent. of the nominal value of the shares at the time of subscribing. When one-fourth of the capital has been subscribed, a meeting of the shareholders will be called to form the statutes, name the officers, and organize the bank. Each shareholder will have a vote, and all of the decisions of the general meetings for the progress and administration of the institution shall be in accordance with the absolute majority of the votes present. On the occasion of the first general meeting, a second deposit of 3 per cent. on the nominal value of the shares subscribed must be made.

It was officially announced in February, 1877, that it was the intention of the Government to make an important improvement in the military* system of the Republic, which would in the end give them a much more reliable, even if a smaller, force, and prove very advantageous in an economical point of view. Instead of the present militia system, by which a number of men are called together for a month or two, and then sent home to be replaced by a similar draft, one or two long-service battalions are to be formed, disciplined in the same manner as European troops and officered by the cadets who have finished their course in the military college. By this means the Government will raise the status of the army in the country, making it an honorable profession to be adopted and followed, like any of the others, and at the same time will possess a force highly useful either to repel aggression from abroad, or repress insurrection at home.

The great cause of public instruction continues to be the object of especial care and solicitude on the part of the Government; and the reappointment of Dr. Lorenzo Montufar to the portfolio of Foreign Affairs and Public Instruction is looked upon as a favorable augury for this department.

In order to obviate the difficulties which naturally result from the change from the old† to the new system of public instruction, the rector of the university had been empowered, when question arose, to act in the matter as he may judge best. The establishment of a complete school in Alta Verapaz had been decreed. The Minister of War had issued a decree tending to secure military discipline and improve the instruction of soldiers.

The *Official Gazette* of April 27th published a decree of the President approving of the establishment of an Athenæum in Guatemala City, first initiated by Prof. Don Valero Pujol. The object of the institution is stated in the following extract from the statutes:

The Athenæum of Guatemala is a society exclusively scientific, literary, and artistic.

* According to the old system, the nominal strength of the standing army was 3,200, and that of the militia 13,000.

† See ANNUAL CYCLOPEDIA for 1876, p. 374, where will also be found school statistics.

The members propose to increase their knowledge by means of debates and lectures, and to extend it by means of education and printing.

In order to realize the objects of the institution the Athenæum shall publish, and cause to be published and circulated throughout the country, the writings best fitted for the diffusion of useful knowledge; shall publish a weekly paper wholly free from political questions; promote the establishment of free schools and public lectures, inviting for the same persons of acknowledged ability and capacity.

The Athenæum shall have a library and a reading-room in which will be found all of the periodicals published in Guatemala and the most prominent of those published abroad.

The Athenæum will consist of three sections, viz: 1. Moral and political science; 2. National and physical science and mathematics; 3. Literature and the fine arts. Each member shall belong to one of these at least.

The opening of five evening schools in the capital, for the benefit of the working and trade classes, was ordered in July. None not punctual or failing to make fair progress will be allowed to continue as members of the classes.

In an official return, the value of the imports for the year 1876 was set down at \$2,264,832, which, with \$451,962, freight, insurance, commission, etc., makes a total of \$2,716,794.

The countries most extensively represented in the imports, and the value of the merchandise received therefrom, were as follows:

Great Britain.....	\$1,125,150.31
France.....	449,587.39
Germany.....	264,288.25
United States.....	245,867.54
Total.....	\$2,084,843.49

The yield of the custom-house for the same year was \$1,275,625.38.

In the month of January, 1877, several important laws were made for the encouragement of agricultural industry, and the assistance of them who have employed their capital in cultivating the land of the Republic. A contract was made between the Government and Messrs. Cleaves & Co. for the introduction of agricultural machinery, planting of corn on modern principles, raising of improved stock, and breeding of fish, etc., etc., coupled with the obligation of instructing a certain number of youths in the science of agriculture.

On account of the scarcity of flour in Guatemala the importation of that article into the Republic was declared free of duty till the 31st of October 1877. The heavy tax imposed by the decree of 22d May last upon each head of cattle for consumption was reduced, and at the same time the Government arranged for the establishment of a new slaughter-house in the capital, and laid down instructions by which this business was to be regulated in the different departments.

The work on the railroad from San José de Guatemala to Escuintla was to begin in September, under the direction of Mr. Nanne, with whom were associated Captain A. T. Douglas and two or three of the leading capitalists of Costa Rica.

The Government, at the suggestion of Mr. Nanne, adopted the standard gauge of 4 feet 8½ inches for the line.

The Government was negotiating for the establishing of a line of telegraph with Mexico, which would place Guatemala in telegraphic communication with the United States and Europe. The Government of Mexico has expressed itself favorable to the enterprise, and it was believed that by the end of the year the wires of the two republics would be connected. Mexico appeared for the present to have given up the question of boundaries with Guatemala.

On July 11th, the telegraph-line connecting Huehutenango with Nenton, immediately on the Mexican frontier, was opened to the public. This concludes the contract with Mr. S. McNider for the construction of telegraph-lines in the State. The entire Republic is now united by telegraph. There are some 42 stations or offices and 1,073 miles of wire in use.

An attempt was made to assassinate President Barrios on September 25, 1877, while he was visiting at San Pedro Jocopilas, near the Mexican frontier. Seventeen of the principal conspirators were executed at the capital in November.

The international affairs with Costa Rica, etc., were of an unimportant character throughout the year.

H

HAMPTON, WADE, Governor of South Carolina, was born at Columbia, in that State, in 1818. He graduated at the University of South Carolina, studied law, and was successively a member of the House and of the Senate in the State Legislature. At the beginning of the Civil War he entered the Confederate service, and commanded the Hampton Legion of Cavalry at the battle of Rull Run, where he was wounded. He was made brigadier-general, served in the Chickahominy campaign, and was again wounded in the battle of Seven Pines. He afterward com-

manded a cavalry force in the Army of Northern Virginia, and was again wounded at Gettysburg. In 1864 he was made lieutenant-general, and commanded a body of cavalry in Virginia. He was afterward sent to South Carolina, and in February, 1865, commanded the rear-guard of the Confederate army at Columbia. Large quantities of cotton had been stored here; and, upon the approach of the Union army, under General Sherman, this was piled in an open square, ready to be burned. Fire was set to it, which resulted in a conflagration, by which a great part of the

city was destroyed. A sharp discussion afterward arose between Hampton and Sherman, each charging the other with the willful destruction of Columbia. The fact appears to be that, as far as either was concerned, the conflagration was purely accidental.

In 1876, General Hampton was the Democratic candidate for Governor of South Carolina. The election was followed by a determined contest between Hampton and the Republican candidate, Governor D. H. Chamberlain, each claiming to have been lawfully elected to the office. Both exercised the functions of Governor until April 10, 1877, when, by order of President Hayes, the United States troops, which had been guarding the State House, occupied by Governor Chamberlain, were withdrawn. The latter official then ceased to assert his claim, and Hampton continued Governor without opposition. (*See* SOUTH CAROLINA in ANNUAL CYCLOPEDIA for 1876.)

Governor Hampton is the grandson of Wade Hampton, who was born in South Carolina in 1755, and died there in 1835. He was a member of Congress, and a major-general in the United States Army; and, at the time of his death, was supposed to be the most wealthy planter in the United States, being, as it was said, the owner of more than 3,000 slaves.

HARLAN, JOHN M., Associate Justice of the Supreme Court of the United States, is about forty-two years old, and is the son of James Harlan, a distinguished Whig, who represented one of the Kentucky districts in Congress from 1836 to 1839, was Secretary of State of Kentucky from 1840 to 1844, and was Attorney-General of the State from 1850 till 1863, when he died. In 1859 John M. Harlan ran for Congress, but was defeated by his Democratic opponent. At the breaking out of the war he entered the Union service, and for two years was Colonel of the 10th Kentucky Infantry. In 1863 he was elected Attorney-General of the State on the Union ticket. After the close of his term he engaged in the practice of the law in Louisville. In 1871, and again in 1875, he was an unsuccessful candidate for Governor of Kentucky. General Harlan has acquired wide celebrity as an orator, and for many years has been known as one of the foremost lawyers of Kentucky. As a leader of the Republican party of the State, he infused life and vigor into the political canvass. He is gifted with great intellectual powers, and is noted for his physical strength and powers of endurance. In October, 1877, he was nominated by President Hayes to fill the vacancy on the Supreme Bench, which had been made by the resignation of Associate Justice David Davis; and having been confirmed by the Senate, he entered upon his duties early in December.

HARPER, FLETCHER, the last of the four brothers who founded, in New York, the publishing-house of Harper & Brothers, died in New York, May 29, 1877. James, the eldest

of the four, died March 27, 1869; Joseph Wesley, February 14, 1870; and John, April 22, 1875. They were all born at Newtown, Long Island: James in 1795, John in 1797, Joseph Wesley in 1801, and Fletcher in 1805. The grandfather of these brothers came to this country, from England, about the middle of the last century. He was a schoolmaster, and settled on a farm at Newtown, Long Island. He afterward removed to New York, where, for many years, he kept a grocery-store. His eldest son, Joseph, was born in 1766, became a house-carpenter, cultivated a small farm, and kept a retail store. In 1792 he married Elizabeth Kolyer, the daughter of a Dutch farmer. Six children were the fruit of this marriage, of whom the four brothers above named grew to manhood, and two died in infancy. James and John were early apprenticed to the trade of printing, the former becoming an expert pressman and the latter an excellent compositor and proof-reader. In 1817 they went into business together on their own account, in New York, under the name of J. & J. Harper. Wesley, who had also learned the trade of printing, became a member of the firm in 1823, and Fletcher in 1825. The business was conducted under the name of J. & J. Harper until the latter part of 1833, when the style was changed to that of Harper & Brothers. According to the division of labor adopted by the brothers, John Harper made most of the purchases, and became the financial manager of the affairs of the firm. James Harper superintended the mechanical operations, and for years before his death daily visited all the departments. Wesley Harper, for a number of years, read the proofs of all important works, and conducted the correspondence of the firm. Fletcher Harper, after acting for some years as foreman of the composing-room, gradually assumed charge of the literary departments. The idea of *Harper's Magazine* originated with James Harper. Fletcher suggested both the *Weekly* and the *Bazar*. He took a special interest in all the periodicals, and exercised a careful and intelligent supervision over them, not only with respect to their typographical appearance and mechanical make-up, but also their literary and pictorial features. The firm is now composed of the descendants of the original founders.

HART, JOEL T., an American sculptor, died at Florence, Italy, March 1, 1877. He was born in Clark County, Ky., about 1810. His education was restricted to a quarter's schooling, but he read diligently all the books he could obtain. In 1830 he entered a stone-cutter's shop in Lexington, and soon began to model busts in clay, making good likenesses of many influential persons, among whom were General Jackson and Cassius M. Clay. The latter gave him his first commission for a bust in marble. The work was so satisfactory, that the artist was commissioned by the "Ladies' Clay Association" of Virginia to execute a

marble statue of Henry Clay, which now stands in the Capitol Square at Richmond. He went to Florence in 1849 to execute this order, but the work was delayed in consequence of the loss of his model by shipwreck, and by other circumstances, and it was not till 1859 that the statue was shipped to the United States. Mr. Hart afterward made the colossal bronze statue of Henry Clay, which now stands at the intersection of St. Charles and Canal Streets in New Orleans. He resided in Florence for many years, where he executed a number of busts of eminent men, and several ideal works. Among the latter are "Angelina," "Il Penseroso," and "Woman Triumphant." The model of a statue of "Venus," upon which he spent between 15 and 20 years, is probably left unfinished. A machine for "pointing" a bust in marble directly from the head of the living model, which Mr. Hart invented, was too mechanical to be regarded with favor by other sculptors.

HART, JOHN SEELY, an American author, was born at Stockbridge, Mass., January 28, 1810, and died in Philadelphia, Pa., March 26, 1877. His family removed to Pennsylvania, finally settling near Wilkesbarre. He graduated at Princeton, N. J., in 1830, and, after teaching for a year at Natchez, Miss., he became, in 1832, tutor, and in 1834 Adjunct Professor of Ancient Languages, at Princeton, where, from 1836 to 1841, he had charge of the Edgehill School. From 1842 to 1859 he was Principal of the Philadelphia High School, and from 1863 to 1871 of the New Jersey State Normal School at Trenton. In 1872 he became Professor of Rhetoric and of the English Language at Princeton. He was the founder, and long the chief editor, of the *Sunday-School Times*, and in 1859 was editor of the periodicals published by the American Sunday-School Union. He also contributed largely to periodicals, and edited several journals and illustrated annuals. Besides some text-books and religious works, he published "Class-Book of Poetry" (1844); "Female Prose-Writers of America" (1851); "In the School-Room" (1868); "Manual of Composition and Rhetoric" (1870); "Manual of English Literature" (1872); "Manual of American Literature" (1873); "Short Course in Literature, English and American" (1874); "Mistakes of Educated Men," "Spenser and the Faerie Queen," "Exposition of the Constitution for Schools," and "Greek and Roman Mythology."

HAYTI. (See SANTO DOMINGO.)

HEIMANN, BASILI ALEXANDROVITCH, the victor of Ardahan, was born in 1823. He entered the army in 1842, and began to participate in active operations in 1845, since which time he has, almost without an interruption, been engaged against the native tribes of the Caucasus. In 1859 he was a lieutenant-colonel, took part as colonel in 1862 in the Caucasian expedition of Prince Albert of Prussia, and was advanced in 1872 to the rank of lieutenant-general, and received the command of the 20th Infantry Division.

HILLIARD, HENRY, who was nominated by President Hayes as minister to Brazil, was born in North Carolina in 1808. In 1829 he was admitted to the bar at Athens, Ga., where he practised about two years. He was a professor in the University of Alabama from 1831 to 1834, was elected to the Alabama Legislature in 1838, and in 1840, as a delegate to the National Whig Convention, earnestly advocated the nomination of Henry Clay. In the following year he was an unsuccessful candidate for Congress. From 1842 to 1844, he was Chargé d'Affaires in Belgium, and in 1845 he was elected to Congress, where he served for three successive terms. He supported the compromise measures in 1850. His name was on the Fillmore electoral ticket in 1856, and the Bell and Everett ticket in 1860. He at first opposed secession, but afterward went with his State (Alabama), and was appointed a Commissioner to Tennessee. He was commissioned a brigadier-general in the provisional army of the Confederate States. About 1862 he began the practice of the law in Augusta, Ga. In 1868 he was an unsuccessful candidate for Congress. He took an active part in the presidential canvass of 1872, when he advocated the election of Greeley and Brown. In 1876 he ran for Congress as an Independent Democrat, but was defeated. Since the war, he has acted with the Democratic party.

HOBART PASHA, the Admiral of the Turkish fleet, was born April 1, 1822. He is the third son of the Earl of Buckingham, his real name being Augustus Charles Hobart. In 1836 he entered the British Navy, and, having distinguished himself in the Crimean War, rose to the rank of captain. The British Navy during peace did not satisfy his adventurous spirit, and when the Civil War broke out in the United States, he took command of a blockade-runner, being eminently successful in this position. At the close of the Civil War he returned to Europe, and in 1867, upon the outbreak of the insurrection in Crete, he offered his services to the Sultan, who immediately gave him the command of the fleet operating against Crete. He had, however, failed to obtain the permission of the British Admiralty for this step, and, in consequence of the remonstrances of the Greek Government, the Foreign Office requested the Admiralty to strike his name off the British Navy list. In 1874 he addressed a letter to Lord Derby, admitting that he had committed a breach of naval discipline by accepting service under the Turkish Government without leave, but adding: "During seven years that have elapsed since that time, I have endeavored to maintain the character of an Englishman for zeal, activity, and sagacity, and I have been fortunate enough to obtain a certain European reputation, of which I hope I may be justly proud. I prevented, by my conduct during a very critical period, at the

end of the Cretan revolution (while I was in command of a large Turkish fleet), much bloodshed, and, many people think, a European war. I have organized the Turkish Navy in a way which has led to high encomiums as to its state from all the commanders-in-chief of the English fleets who have lately visited Constantinople. I have established naval schools, training and gunnery ships (and here I have been ably assisted by English naval officers). While doing all this toward strengthening the navy of our ally, I have naturally made many enemies. . . . All that they can find to say (and it is bitter enough) is, 'He has been dismissed the British service,' without, of course, explaining the cause. This is most painful to me, and is very detrimental to my already difficult position." He therefore asked that his offense might be overlooked, and that he might be relieved from "the ban of disgrace." This application was supported by the Earl of Derby, "as a matter of imperial policy," considering it to be of material advantage that Admiral Hobart Pasha should occupy the position he held in Turkey. The Lords of the Admiralty, therefore, consented to allow him to be reinstated in his former rank, placing him on the retired list, with the opportunity of rising by seniority to the rank of a retired admiral.

HUNGARY, a kingdom of Europe, and one of the two main divisions of the Austro-Hungarian monarchy. (All the affairs which are common to the entire monarchy have been treated of under the head of AUSTRO-HUNGARIAN MONARCHY.) As the Military Frontier, which had formerly its own administration, has been wholly incorporated, partly with Hungary proper and partly with Croatia and Slavonia, the lands of the Hungarian crown now consist of three large historic divisions, namely:

DIVISIONS.	Area.	Population in 1869.
Hungary proper.....	87,046	11,890,897
Transylvania.....	21,217	2,115,024
Croatia and Slavonia.....	16,782	1,864,034
Total.....	125,045	15,509,455

The Hungarian ministry in 1877 was composed as follows: 1. President of the Ministry, Koloman Tisza; 2. Minister near the King's person (*ad latus*), Baron Wenckheim; 3. Minister of Finance, Koloman Szell; 4. Minister of the Interior, Koloman Tisza; 5. Minister of Education and Public Worship, Dr. Augustin von Trefort; 6. Minister of Justice, Bela Perczel; 7. Minister of Public Works, Thomas Pechy; 8. Minister of Agriculture, Industry, and Commerce, A. von Trefort; 9. Minister of Croatia and Slavonia, Koloman Bedekovitch de Czomoz; 10. Minister for the Defense of the Country, B. Szende von Kevesztes.

The budget for the countries belonging to the Hungarian crown, for 1877, was as follows (in florins, 1 florin = 48 cents):

RECEIPTS.	
1. Direct taxes.....	86,600,428
2. Indirect taxes.....	79,568,557
3. Receipts from government property, and state institutions.....	30,779,549
4. Extraordinary receipts of the Ministry of Finance.....	390,121
5. Receipts of the other ministries.....	9,668,221
6. Other receipts.....	5,228,287
Ordinary receipts.....	212,290,108
Extraordinary receipts.....	8,925,997
Total.....	216,156,105
EXPENDITURES.	
1. Royal Household.....	4,650,000
2. Royal Cabinet Chancery.....	74,041
3. Diet.....	1,159,082
4. Council of Ministers.....	809,685
5. Ministry (<i>ad latus</i>).....	50,243
6. Ministry for Croatia and Slavonia.....	85,040
7. " of the Interior.....	7,584,053
8. " of Public Defense.....	5,992,525
9. " of Education and Worship.....	4,050,181
10. " of Justice.....	9,434,998
11. " of Agriculture and Commerce.....	10,232,476
12. " of Communication.....	9,616,214
13. " of Finance.....	53,051,972
14. Administration of Croatia and Slavonia.....	5,268,808
15. " of Fiume.....	84,430
16. Pensions.....	8,812,572
17. Public debt.....	31,527,757
18. Contributions to the common expenditure of the Empire and to the Austrian debt.....	62,425,858
19. Other expenditures.....	20,401,802
Ordinary expenditures.....	229,681,912
Extraordinary expenditures.....	6,920,130
Total expenditures.....	236,602,042
Deficit.....	20,445,937

The public debt of Hungary at the close of 1874 amounted to 548,415,012 florins, exclusive of the common debt of the Empire. Hungary also has a share in the public debt of Austria proper, about 30 per cent. of its amount previous to 1868. This debt is regarded as exclusively Austrian, but Hungary pays annually for interest and its amortization 80,927,997 florins. The assets of the state were estimated in 1874 at 792,600,000 florins.

The aggregate length of railways open for traffic was, on January 1, 1877, 6,656 kilometres (1 kilometre = 0.62 mile). The number of private and official letters, newspapers, etc., in 1875, was 76,672,000; the number of post-offices, 1,948; and the value of valuable letters and packages, 705,600,000 florins. The length of telegraph-wires in January, 1876, was 49,005; of telegraph-lines, 14,498 kilometres. The number of telegraph-stations was 911, and the number of dispatches sent and received 2,487,998.

In 1876 there were 315 newspapers and periodicals published in Hungary, against 325 in 1875. Of the whole number, 187 were political papers, 36 were literary journals, 180 were devoted to special subjects, and 12 were comic journals.

The public interest in Hungary during 1877 was divided between the negotiations on the "Ausgleich" (see ANNUAL CYCLOPEDIA for 1876), and the relations of the Empire to the Eastern question. The President of the Ministry, M. Tisza, in his New Year's speech, declared it to be the duty of the Hungarians to

avoid everything that would estrange the peoples of the two halves of the monarchy. At the same time he spoke of the arrangement of the "Ausgleich" as near at hand. He also opposed a provisional solution of the bank question, demanding either a dualistic or an independent Hungarian bank. Several meetings were held in Pesth during January between the ministers of the two countries, and as they did not lead to any definite result, the Austrians returned to Vienna. On January 29th the Hungarian ministers Tisza, Szell, Wenckheim, and Trefort, proceeded thither to resume the negotiations. These, however, were as unsuccessful as the former conferences. Both Governments came to an agreement on all points relating to the new organization of the bank, and the only question unsettled was that of the "Centrallausschuss." Tisza had agreed to Count Andrassy's proposition that 14 general councilors should belong to this board, 5 should be Austrians, 5 Hungarians, while the remaining 4 should be elected by the shareholders, without regard to nationality. Suddenly, however, the Austrian Government, and the administration of the bank, insisted that these 4 members must also be Austrians. Tisza declared that he could not consent to this, and having returned home, sent in the resignation of the entire Hungarian ministry. The King accepted the resignation, and called upon Tisza to name his successor. The latter suggested the leader of the opposition, Baron Paul Sennyey, and he, as well as the *Jud. Curie Majlath*, was, in consequence, called to Vienna. The name of Sennyey, however, met with a strong opposition in the Foreign Office, and Andrassy threatened to resign immediately in case of the formation of a Sennyey-Majlath cabinet. Baron Sennyey declared himself willing to form a ministry, if he could immediately dissolve the Chamber, and as the Government did not submit to this step, he retired voluntarily. The King then tried a simple change of persons within the Liberal party, and turned to the former ministers, Szlavy, Bitto, and Ghyczy, but without success. They declared themselves unable to form a cabinet, supported by a strong majority, in opposition to Tisza. The King was thus forced to fall back on Tisza, and called upon him again to take charge of the Government. This he did provisionally, and the conferences between the two ministries again began. They finally agreed upon the following compromise: The general council of the bank should consist of one governor, two vice-governors, and 12 general councilors. The governor and vice-governors were to be appointed by the Emperor, the governor upon the united recommendation of the two Governments, and one vice-governor upon the recommendation of each of the Governments. Of the general councilors 2 were to be elected by the shareholders upon the recommendation of each of the Governments, while the remaining 10 were to be elected without regard to their

nationality. These propositions were sanctioned by a committee of the Constitutional party of the Austrian Reichsrath on February 22d, and Tisza was then again permanently appointed President of the Ministry.

Immediately upon its reappearance in the Hungarian Chamber of Deputies, which had reassembled on January 20th, the reorganized ministry was bitterly attacked by the so-called "Independents" and the extreme Left for its course on the bank question. Of the former, Baron Louis Simonyi, formerly Minister of Commerce under Tisza, spoke; while of the latter Nemeth gave expression to his hostility in almost unparliamentary language. Tisza answered both with dignity, and succeeded in removing all ill-feeling in the large Liberal party, while even the Right, under the leadership of Sennyey, received his explanations with applause. The discussions of the "Ausgleich" were resumed in the deputations of the two Parliaments, which met on May 29th. The Austrian deputation elected for its president Count Wrba, and the Hungarian, Szlavy. These discussions threatened to be without any definite result, as the Hungarians insisted on a reduction of one per cent. of their contribution to the common Treasury. As the labors of the deputations resulted in no understanding, each appointed a sub-committee to consider the question. Even these could not come to an agreement, and the subject was, in July, finally laid over till the fall.

The peculiar character of the population of Hungary caused all classes to take a special interest in the events going on beyond the Danube. The Slavs, especially the Croats, naturally sympathized with their struggling brethren in Turkey. On the other hand, the Hungarians, fearing their very existence threatened by the growth of Slavic influence in South-eastern Europe, and being also, with the Turks, the last remnants of the Turanian race in Europe, strongly sympathized with the latter. In order to give an expression to this sympathy, the Hungarian students resolved to present the Turkish commander-in-chief, Abdul Kerim, with a sword of honor. A deputation of twenty was chosen for this purpose. On January 7th they arrived in Trieste, and embarked immediately on account of the hostile demonstrations of the Slavic and Greek inhabitants of that city. In Constantinople, however, they were received with great honors.

The Turkish Government spared no efforts to secure the sympathies of the Magyars. In April the Sultan signed a decree that the library known as the "Corvina" be returned to Hungary. The "Corvina" was originally established by King Matthias Corvinus in the fifteenth century, and comprised 50,000 volumes. Every book was bound in velvet, and decorated with gold and silver clasps, and the emblems of the king. After the death of Corvinus, and the capture of Buda by the Turks, the library was scattered all over the world. Since then the

Hungarians have made great efforts to obtain at least a part of it. According to recent researches by Ernst Simonyi, there were in the libraries of London, Paris, Brussels, Wolfenbüttel, Florence, Venice, Rome, and Besançon, 48 Corvina manuscripts. Besides these there were 363 others, which may be regarded as genuine. The present of the Sultan to the Hungarians comprised 35 well-preserved works. The Chamber of Deputies therefore passed a unanimous resolution to present to the Sultan the thanks of the nation.

THE THEINKIRCHE, PRAGUE, BOHEMIA.

On May 2d, three interpellations on the Eastern question were made in the Hungarian Diet, and a fourth one was announced. The answer given by Tisza, on May 4th, was similar to that made by the Austrian Government to the Reichsrath on the same day. Its substance was that the best policy would be not to waste the strength of the nation prematurely; freedom of action was of the greatest consequence; co-operation with Russia was impossible, and no secret convention with that Power existed. On the 9th Tisza added, in answer to a question on the navigation of the Danube, that a demand had been sent by the common ministry to St. Petersburg and Constantinople, for the removal of all obstructions to the free navigation of the river. From this time on interpellations on the Eastern question were of com-

mon occurrence, and were promptly answered by Tisza. An additional source of trouble was a Slavic demonstration in Agram, the capital of Croatia, on the occasion of the visit of the Archduke Albrecht. During the torchlight procession the crowd cheered Russia, while a band played the Russian national anthem. The archduke received a delegation of Russian refugees, and promised them his intercession with the Emperor, to procure for them further assistance, but refused to receive a Pan Slavistic address of the students.

During the remainder of the session of the Diet, interpellations continued to be made almost uninterruptedly, and the minister in all cases gave answers similar to those made by Prince Auersperg in the Austrian Reichsrath. (*See AUSTRO-HUNGARIAN MONARCHY.*) The Russian successes continued to inflame the Hungarians, and in September an attempt was made by Szeklers, the Hungarians living in Transylvania, to enter Roumania from that province. The conspiracy, however, was discovered, and arms and ammunition were seized in boxes which were represented to contain machinery. Meetings were held in a large number of towns to protest against the annexation or occupation of Bosnia, and to demand "the maintenance, in its integrity, of the Ottoman Empire." A meeting of Slavic sympathizers, held in Agram on August 5th, on the other hand, adopted a resolution expressing the conviction of those present, that the barbarous and cruel oppression of the Christian peoples in the East would continue so long as Turkey existed, and that the Turkish Empire in Europe must therefore fall, if an existence, compatible with the dignity of mankind, was to be secured to those Christians.

The Diet reassembled on September 15th. Five interpellations were immediately made. The first was whether the Government had any settled policy, and what that policy was. The second referred to Serbia, and asked whether it was true that the Government had hindered the Turks from taking such precautions as might prevent that Power from again going to war; and whether the Government was prepared to bring pressure to bear upon Serbia, by all the means in its power, in order that she should not enter once more into the arena. Then from two sides of the House a question was asked about the Triple Imperial Alliance—whether it existed, and, if so, what was its nature; while the last interrogatory referred to the representations made about the violation of the Geneva Convention. In reply to these questions, M. Tisza said that the foreign

policy hitherto pursued had resulted in the fact that now no danger whatever threatened the interests of the monarchy. He denied that the Government had exercised neutrality in a way unduly favorable to Russia, or that the policy pursued by the Hungarian Government was contrary to the opinion of the Hungarian people. The Government's policy consisted now, as formerly, in the protection of the interests of the country, without war if possible, but, at the same time, in protecting them in every contingency; also in seeing that nothing took place in the East without the consent of Austria-Hungary. If Servia broke peace, Austria-Hungary would not impede Turkey's action against her. As regarded the three Emperors' alliance, that alliance did not exist in the sense that the three Emperors and three Powers had entered into engagements with each other upon the Eastern question, or upon other concrete questions. The Emperors and their Governments had only agreed, in the interest of European peace, to proceed in harmony, but not in common on any question which might arise. They had succeeded in this for several years, and, even now, the fact that the war had not become a European one was partly due to their amicable relations. The three Emperors' alliance might again be of service in maintaining peace after the close of the present war. The fact that one of the parties to the alliance had entered upon war contrary to the views of the two others, threw no responsibility upon those others, particularly not on Austria. He denied that the Government wished the dismemberment of Turkey. In answer to a question relative to the Salzburg interview, M. Tisza said that Austria's relations with Germany remained very good, as they had been for a long time.

On October 16th, a member questioned the Government in relation to its toleration of the transport of war material destined for the Russian army, while, on the other hand, strong measures had been taken respecting the recent events in the Szekler districts. M. Tisza, in reply, declared that, so far as was known, no arms had been transported through Hun-

gary, either for the Russians or the Turks. The measures which the Government had taken in the Szekler districts for the self-defense of the state, must be respected by everybody. The Minister for War proceeded to Transylvania to furnish the Government with authentic information regarding what had passed, but nobody had been invested with special powers, nor had any commissioners been appointed. In reply to another deputy, who demanded the liberation of the persons arrested for participation in the Szekler demonstration, M. Tisza declined to accede to this demand, as such a proceeding would be contrary to the laws. The House then resolved, by an overwhelming majority, to take cognizance of the minister's answer.

A violent scene occurred in Pesth on the evening of December 16th. In the afternoon some 7,000 persons assembled, and speeches of a highly inflammatory nature were made, in which the policy of Count Andrassy was bitterly denounced. A deputation was sent to M. Tisza, and, upon his refusing to receive more than ten or twelve persons, a portion of the mob entered his house, while the crowd outside broke the windows, and raised shouts of "Down with Andrassy!" and "Down with Tisza!" It was not until the troops had been called out, and threatened to charge upon the assemblage, that it could be dispersed. On the following day a member of the House asked that an inquiry should be instituted into the circumstances attending the demonstration. M. Tisza, in reply, stated that the Government could not suffer either the foreign or home policy of Hungary to be determined by street demonstrations. It was its duty to maintain confidence in Hungary, and he counted upon the patriotism of every citizen to aid it in this task. In conclusion, he declared that proceedings would be taken with all due severity against the authors of the demonstration.

Among recent works containing information on Hungary are P. Hunfalvy's "*Ethnographie von Ungarn*" (Buda-Pest, 1877), and J. H. Schwickler's "*Statistik des Königreichs Ungarn*" (Stuttgart, 1876).

I

IGNATIEFF, NICHOLAS PAULOVITCH, a Russian diplomatist, was born January 29, 1832. He belongs to the numerous lower nobility, and is descended from a family which has given to Russia many high dignitaries. Aided by the influence of his father and his other numerous relatives, he advanced very rapidly. After having finished his education in a military academy, he was for three years captain of the Hussars of the Guard, and then entered the general staff. In 1854 he was placed under the command of Count Berg in the Baltic provinces, where he remained during the entire

Crimean War. Although he did not take an active part in that war, and could, therefore, not distinguish himself on the field of battle, his advancement did not suffer. In 1856 he rose to the rank of colonel, and as such he entered the diplomatic service. He was appointed military attaché to the Russian embassy in London; and there, as well as in Paris, at the conclusion of the treaty of peace, he showed, for the first time, what an eminent talent for his new career he possessed. By his energy he saved for Russia several important strategical points during the adjustment of the

boundaries, which through ignorance of military affairs had been conceded by the other Russian diplomatists. He was then appointed by his Government to conduct the adjustment of the boundaries with Roumania, and for his services on this occasion was created a major-general in 1858—only twenty-six years old. His rapid advancement in the army, however, did not prove an attraction strong enough to draw him away from the diplomatic career, for which he had conceived a great inclination. But he now turned his attention to Asia; and the great territorial additions made to the Russian Empire on that continent since that time have been mainly his work. Just at that time Muravyeff, the Governor of Eastern Siberia, needed a diplomatic councilor on account of his frequent intercourse with China. Ignatieff was ordered to report to him for special missions; and he had been there but a few months, when, by the treaty of Aigoun, of May 28, 1858, he succeeded in inducing the Chinese to cede the greater part of Mantchooria to Russia. It was for a long time thought that this treaty was the work of Muravyeff, and not till many years later did it become known that it was due entirely to General Ignatieff. On his return he concluded advantageous commercial treaties with Khiva and Bokhara; and at the same time drew up a plan of the country, which was afterward of great service to the Russians in their operations in Turkistan. From 1859-'63 he was Russian ambassador in Peking. In this position he again succeeded in securing for Russia the lion's share of the concessions made to the European Powers by China, in consequence of the British and French victories; and also another large addition of territory. His position in Peking, however, did not engage his time to such an extent but that he could devote himself to various studies, principal among which was the Turkish language, which he acquired so completely, that afterward, when he was in Constantinople, he was the only one among the foreign ambassadors who could communicate directly with the Sultan without the aid of an interpreter. At the time of the Polish insurrection Ignatieff returned to Europe—having, in the mean while, risen to the rank of adjutant-general of the Emperor—and was appointed director of the Asiatic department in the Ministry of Foreign Affairs. In this position he remained little less than a year, and used his time to gain a complete insight into European relations. On July 26, 1864, he was appointed extraordinary ambassador in Constantinople, and thus entered upon the position which has placed his name among the ablest statesmen of the century. A completely new field was opened to him, and his activity at Constantinople has been fitly designated as "mining," inasmuch as Turkey seems to be completely undermined at the present time. Pan Slavism, which in the last ten years has become such a terrible danger to Austria and Turkey, found in Ignatieff one of its most

enthusiastic supporters. But although he could not immediately make this question the leading one, as he desired, he made his influence felt in all the differences between the Porte and its subjects. Although he was not equal in rank to his colleagues at the court of the Sultan—until, in 1867, he was raised to the rank of envoy extraordinary—he nevertheless obtained such complete ascendancy over the other members of the diplomatic corps, that even men like Lord Lytton and Count Prokesch-Orten were forced into the background by him. He even brought several Turkish statesmen under his influence—prominent among them Mahmoud Nedim Pasha, who was nothing but a tool in the hands of Ignatieff. Like Talleyrand, he believes that language was given to men to conceal their thoughts, and his enemies say that he was never yet caught speaking the truth. He is a very hard student, having read up, and mastered in all their details and bearings, the thousand-and-one Hattis which Turkey has during the last centuries bestowed upon her subjects. He is married to the Princess Catherine Galatzin, and is thus connected by marriage not only with the highest aristocracy of Russia, but also with the ducal families of Luynes and Chaulnes, in France. Madame Ignatieff, described as clever as she is charming, takes a very active part in her husband's affairs; and it is said that not only no dispatches ever left for St. Petersburg without first having been submitted to her approval, but that she has been the initiator of many of the general's most successful political inspirations.

ILLINOIS. The Thirtieth General Assembly of Illinois began its session on the 10th of January, and brought it to a close on the 23d of May. A United States Senator was chosen for the term of six years, beginning March 4th, to succeed General John A. Logan. The first

STATE SEAL OF ILLINOIS.

informal ballot was taken in the two Houses on the 16th of January. The vote stood, in the Senate, for John A. Logan, 20; for John M. Palmer, 22; for William B. Anderson, 7;

for Elihu B. Washburn, 1; blank, 1; in the House, for General Logan, 77; for Palmer, 67; for Judge David Davis, 7; for William Lathrop, 1. The first ballot in joint convention was taken next day, and resulted in 98 votes for Logan, 88 for Palmer, 8 for Davis, 7 for Anderson, 1 for Washburn, 1 for Lathrop, and 1 for William H. Parish. The balloting continued from day to day until the 25th, 40 votes being taken in joint convention. During the first 20 ballots there was no material change in the position of the candidates. On the 21st Logan received 87 votes, Palmer 85, Anderson 13, Haines 2, and Parish 1. The first important change was on the 29th ballot, when Logan had 96, Anderson went up to 88, Palmer disappeared from the list, Washburn had 6, C. B. Lawrence appeared as a candidate with 2, and 16 votes were scattered among seven other names. The contest went on without further change of importance until the 35th ballot, when Judge Davis suddenly ran up to 97 votes, and Judge Lawrence to 86, while Anderson's name disappeared, and Logan dropped to 2 votes. On the 38th ballot Haines went up to 56, and Lawrence came down to 39. Finally, on the 25th of January, the 40th ballot was taken, resulting as follows: Whole number of votes, 200; necessary for a choice, 101; David Davis had 101, Charles B. Lawrence 94, John C. Haines 3, John A. Logan 1, and William H. Parish 1. The long contest was due to the fact that the Legislature was very evenly divided between Democrats and Republicans, while a few Independents held the balance of power. The composition of the two Houses was as follows: In the Senate, Republicans, 22; Democrats, 24; Independents, 5. In the House, Republicans, 79; Democrats, 74. On a full joint ballot, Republicans, 101; Democrats, 98; Independents, 5. Judge Davis was the candidate of the small number of Independents, but was finally supported by the Democrats. He was born in Cecil County, Maryland, March 9, 1815, and graduated from Kenyon College, Ohio, in 1832. He studied law for a time in Massachusetts, and afterward at the Law School at New Haven, Connecticut. He settled at Bloomington, Illinois, in 1835, and attained a high degree of success in the practice of his profession. He was elected to the State Legislature in 1844, as a Whig, and in 1847 was a

member of the Convention that framed the Constitution of Illinois. He was elected Judge of the 8th Judicial Court of the State in 1848, and reelected in 1855 and 1861. He was an intimate friend of Abraham Lincoln, and a member of the Convention which nominated him for the Presidency in 1860. On the 8th of December, 1862, he was appointed Associate Justice of the Supreme Court of the United States, and after President Lincoln's death was administrator of his estate. In 1870 Judge Davis held, with the minority of the Supreme Court, that the acts of Congress making Gov-

STATE CAPITOL OF ILLINOIS, SPRINGFIELD.

ernment notes a legal tender in payment of debts were constitutional. In February, 1872, the National Convention of the Labor Reform party nominated Judge Davis as its candidate for President, on a platform that declared, among other things, in favor of a national currency "based on the faith and resources of the nation," and interchangeable with 3.65-per-cent. bonds of the Government, and demanded the establishment of an "eight-hour law" throughout the country, and the payment of the national debt "without mortgaging the property of the people to enrich capitalists." In answer to the letter informing him of the nomination, Judge Davis said: "Be pleased to thank the Convention for the unexpected honor which they have conferred upon me. The Chief Magistracy of the Republic should neither be sought nor declined by any American citizen." His name was also used before the Liberal Republican Convention at Cincinnati the same year, and received 92½ votes for this nomination on the first ballot. After the regular nominations had been made, he concluded to retire from the contest, and so announced in a final answer to the Labor Reformers. He resigned his seat on the Supreme Bench to take his place in the United States

Senate on the 4th of March, 1877. There he has been rated as an Independent, but acts more commonly with the Democrats. He is understood to be in favor of remonetizing silver, and postponing the resumption of specie payments.

The legislation of the session was unimportant. The following is a statement of the appropriations made:

General and deficiency appropriation bills.....	\$3,678,391 89
State charitable institutions and Reform School.....	1,565,068 19
Normal University at Normal.....	72,387 50
Normal University at Carbondale.....	70,887 50
Industrial University at Champaign.....	74,500 50
Industrial University (deficiency).....	16,060 00
State and County Boards of Agriculture.....	88,000 00
Expenses of next General Assembly and State Government.....	700,000 00
Completion of Douglas Monument.....	50,000 00
Completion of Lincoln Monument.....	27,000 00
Indebtedness of Penitentiary.....	98,090 98
Construction of Southern Penitentiary.....	200,000 00
Construction of Eastern Insane Hospital.....	200,000 00
Payment of Barnard and Gowan claim.....	10,000 05
Payment of William Head's claim.....	5,968 67
Copperas Creek dam and Spring Lake outlet.....	51,453 18
State Horticultural Society.....	4,000 00
Reimbursing Williamson and Jackson Counties for suppressing Williamson County vendetta.....	88,000 00
State Board of Health.....	2,000 00
Total.....	\$6,194,808 46

An act was passed prohibiting the publication or dissemination in any way of notices "with intent to procure, or to aid in procuring, any divorce either in this State or elsewhere." A penalty of fine or imprisonment is attached to the offense. A new law relating to fire insurance was passed, of which the following are the most important provisions:

No joint-stock company shall be incorporated under this act in the city of Chicago, nor shall any company incorporated under this act establish any agency for the transaction of business in said city, with a smaller capital than \$150,000 actually paid in, in cash, nor in any other county in this State with a smaller capital than \$100,000, actually paid in, in cash; nor shall any company formed under this act for the purpose of doing the business of fire or inland navigation insurance, on the plan of mutual insurance, commence business, if located in the city of Chicago, nor establish any agency for the transaction of business in said city, until agreements have been entered into for insurance with at least 400 applicants, the premiums on which shall amount to not less than \$200,000, of which \$40,000 at least shall have been paid in cash, and notes of solvent parties, founded on actual and *bona-fide* applications for insurance, shall have been received for the remainder; nor shall any mutual insurance company in any other part of the State commence business until agreements have been entered into for insurance with at least 100 applicants, the premiums on which shall amount to not less than \$50,000, of which \$10,000 shall have been paid in cash, and notes of solvent parties, founded on actual and *bona-fide* applications for insurance, shall have been received for the remainder. No one of the notes received as aforesaid shall amount to more than \$1,000, and no two notes shall be given for the same risk, or be made by the same person or firm, except where the amount of such notes shall not exceed \$1,000, nor shall any such note be represented as capital stock unless a policy be issued upon the same within 30 days after the organization of the company upon a risk which shall not be for a shorter period than 12 months. Each of the said notes shall be payable, in part or in whole, at any time when the directors

shall deem the same requisite for the payment of losses by fire or inland navigation, and such incidental expenses as may be necessary for transacting the business of said company; and no note shall be accepted as part of said capital stock unless the same shall be accompanied by a certificate of a justice of the peace or supervisor of the town or city where the person making such note shall reside that the person making the same is, in his opinion, pecuniarily good and responsible for the same; and no such note shall be surrendered during the life of the policy for which it is given.

An act making the silver coins of the United States "a legal tender at their face value, and receivable in payment of all debts, without limit as to amount," was vetoed by Governor Cullom, on the ground that it was inexpedient, and likely to flood the State with depreciated coin, and also because it was unconstitutional. On the latter point the Governor said:

The bill is repugnant to the Constitution of this State and of the United States, in the fact that its operation must be as to past transactions to impair the obligation of contracts. This bill plainly proposes to operate upon past contracts, and does not discriminate between them and such as may hereafter be made.

The Legislature evidently intended that no discrimination should exist; hence, in all cases under this bill, if it could be upheld, subsidiary silver coin might be forced as a tender upon a creditor where he had no express contract for other kinds of coin, and whatever might be the extent of the depreciation of the same, the creditor's right to demand currency would be taken away, and so the bill would operate to impair the obligation of the contract between the parties.

The bill assumes to permit an obligor who has agreed in express terms in legal-tender notes to pay the same in silver coin, if he chooses to do so. Such a provision manifestly impairs the obligation of the contract, where the silver coin is of less value than the legal-tender currency.

This bill interferes with the power of Congress to regulate the value of money. The power to coin money and regulate the value thereof is vested in Congress as a power *in solido*, in effect without any reserve to the States, for powers conferred upon Congress, the exercise of which is not expressly prohibited to the States, are held to be exclusive where there is a direct repugnancy or incompatibility in their exercise by the States.

The power has been exercised by Congress, and that body has, in effect, declared that subsidiary silver coin shall, in the absence of any agreement, be a legal tender or forced tender for only five dollars. This bill declares it shall be a legal tender for an unlimited amount. Congress gives to subsidiary silver coin a money-value in the payment of debts in sums of five dollars and not beyond. This bill attempts to give it a lawful and forced value beyond that amount.

The declaration by Congress as to what should be the lawful money-value of subsidiary silver, and to what amount, was, by necessary implication, a declaration that it should not have a different value, and should not be a lawful tender for a greater sum than that named in the law of Congress save as parties might agree. There was no design in this by Congress to remit the matter to the several State Legislatures, nor could it perhaps have done so had that been its intention.

Among the other acts of the session was one establishing 13 judicial circuits, and providing for the election of judges in them on the first Monday in August. The question of making

an appropriation of \$532,000 for the purpose of completing the State Capitol, on which nearly \$3,000,000 had already been expended, occupied considerable attention; and finally it was decided to make the appropriation, subject to ratification by the people at an election to be held in November. Out of 389,189 votes cast at that election, only 80,242 were in favor of the appropriation. A majority of the people in only six counties voted for it.

The total assessed value of property in this State, as reported in the month of August, was \$892,842,398, of which \$4,467,802 was of railroad property, \$187,648,445 personal property, \$442,969,507 improved lands, \$48,735,477 unimproved lands, \$170,773,582 improved town and city lots, and \$37,747,485 unimproved town and city lots. The purposes to which land under cultivation was devoted are indicated in the following statement:

	Acres.
Wheat.....	1,874,224
Corn.....	8,280,888
Oats.....	1,480,891
Meadows.....	2,277,070
Other field products.....	776,707
Inclosed pastures.....	4,018,513
Orchards.....	819,143
Woodland.....	630,759

The statistics of crops, compiled from reports made to the State Department of Agriculture, show that during the season there were 8,935,411 acres of corn under cultivation, yielding 301,646,473 bushels; 1,729,296 acres of winter wheat, yielding 29,510,032 bushels; 258,449 acres of spring wheat, yielding 2,980,524 bushels; 1,556,194 acres of oats, yielding 61,145,988 bushels; and 2,443,360 acres of hay, producing 4,044,967 tons.

The State militia consists of 117 companies, aggregating 5,958 enlisted men in what is known as the National Guard. The entire force includes 63 general and staff officers, 189 cavalry, 163 artillery, and 6,017 infantry.

A committee appointed by the Governor to examine into the condition of the State penitentiary reported, in April, that it had a debt of \$110,734.69; that the number of convicts was 1,648; and that the cost of maintaining each was \$149.50, which might be reduced to \$115.58 for the current two years, making the probable expense for that period \$624,722.19, against which the estimated receipts stood at \$451,694.72. The commission appointed to locate the southern penitentiary made a report, on the 11th of August, in favor of Grand Tower, in Jackson County; but this location was not approved by the Advisory Board, consisting of the Governor, Auditor, and Attorney-General. Chester was next fixed upon by a majority of the commission, one member reporting against it, and the location at that point received the sanction of the board on the 19th of September.

There was a convention of the State Farmers' Association, at Springfield, in February. It was devoted to the discussion of topics bearing more or less upon the agricultural interests

of the State; and the following resolutions regarding the currency of the country were adopted:

Resolved, That the Illinois State Farmers' Association hereby substantially reaffirm its past action on the currency question, as expressed in the following resolutions:

1. We demand a legal-tender currency, receivable for all debts, both public and private, and issued directly by the United States Government in sufficient volume to answer all the demands of trade, and made interchangeable with Government bonds bearing a low rate of interest.

2. Opposition to all banks of issue.

3. That we demand the free coinage of gold and silver; and all moneys, both metallic and paper, to be endowed by law with the full function of money, and a legal tender for all debts and payments whatsoever.

4. That we demand of our Senators and Representatives in Congress to pass such laws as will carry out the intention of the foregoing resolution.

UNIVERSITY HALL, EVANSTON.

A tornado of wind, accompanied by violent rain, occurred at Mount Carmel on the 4th of June, resulting in the loss of 16 lives, the injury of some 25 persons, and the destruction of nearly half a million dollars' worth of property.

The Supreme Court decided, in November, in the case of the City of Springfield *vs.* Ninian W. Edwards, that the injunction obtained in the lower court against an increase of the debt of the city should be made perpetual. The main ground of the decision was that the debt of the city already exceeded the constitutional limit of five per cent. of the valuation of taxable property. The following is the decree of the court:

It is therefore ordered, adjudged, and decreed by the court, that said city, the council, and mayor, or their agents, officers, clerks, and employes, be perpetually enjoined from incurring any indebtedness, in any manner, or for any purpose, including existing indebtedness, in the aggregate exceeding five (5) per centum of the valuation of the taxable property in said city, to be ascertained by the last assessment for State and county taxes, previous to the incurring of any additional indebtedness, or levying taxes for

the payment of interest for improvements and for city expenses, in excess of the ordinary revenue of the fiscal year immediately preceding, unless in the payment of interest on the public debts of the city, they shall provide according to law, by taxation or otherwise, some additional fund, out of which such excess of appropriation may be made to meet such indebtedness; or from issuing any warrants, or authorizing their issue, for the payment of any money when there are no means in the city treasury for their payment; or from issuing the same to bear interest, or to become due at a future day, or for the payment of any money out of the treasury, without by ordinance making appropriation therefor; or from assessing and collecting taxes for the year 1874 in any other manner than is provided for under the general laws of the State for the assessment and collection of State and county taxes; or from borrowing money when the interest on the outstanding indebtedness shall exceed the one-half of the city revenue arising from the ordinary taxes within the city for the year immediately preceding.

IMMIGRATION. During the last four years of commercial depression there has been a rapid decline of immigration to the United States. In the year 1876 the immigrant arrivals were fewer than during any year since the first influx which followed the Irish potato-famine of 1846, excepting during the period following the financial crash of 1857, and extending through the first years of the war (1858-'63), as can be seen at a glance from the following table of the immigration statistics since the foundation of the Republic:

YEARS.	Immigrants.	YEARS.	Immigrants.
1789-1819.....	250,000	1849.....	226,527
1820.....	8,885	1849.....	297,094

Total.....			9,726,455

During the first 8 months of the year 1877, the falling off was still increased, the number of immigrants being 30 per cent. less than for the corresponding period in 1876.

The fluctuations in the tide of immigration, apparent in the above table, may be briefly explained as follows: From the year when the records of immigration were first officially kept (1819), there was a gradual increase of 3,000 to 6,000 a year until the cholera year, 1832, when nearly thrice as many immigrants arrived as in the preceding year. From various

causes, chiefly industrial, the course of immigration fluctuated, declining more than half after the panic of 1837; then again increasing, and again falling off one-half in 1843, and a second time recovering, but, on the whole, augmenting, until the year 1847, which year shows an increase of 50 per cent. over the preceding. During the period of political disturbance in Europe, from that year till 1854, there was a vast flood of immigration; in 1855 this impetus had spent its force; the country was over-stocked with immigrant-labor, and a falling off of one-half from the enormous immigration of 1854 was only partially recovered in 1857, when the panic of that year caused another decline of one-half, and the outbreak of the Civil War a further decrease of about 40 per cent. In 1863 the number again nearly doubled, and from that time there was a constant increase, until, in 1872, the number of immigrants exceeded that of any previous year, being 5 per cent. more than at the high tide of the European influx after the Revolution of 1848, which was during the year 1854. Since the crash of 1873 a rapid decline has set in, and during the last two or three years many laborers have been driven, by dearth of employment here, to return to their former homes. From the following tabulated statement of the arrivals of aliens at the port of New York—in which city fully two-thirds of the European immigrants disembark—it will be seen that for the last 30 years, during which period the bulk of the alien population has been imported, nearly 42 per cent. of the total number of immigrants have been German, and nearly 36 per cent. Irish:

ARRIVALS OF ALIENS AT NEW YORK.

* Eight months.

Several new classes of immigrants have been drawn to our country of late years, notably the coolies from the southeastern provinces of China; the Swedes, and other Scandinavians, who seek the northwestern farming-lands; the Italians, chiefly from Naples and Calabria, who are employed in bands in different parts of the United States, for all manner of coarse labor; the Mennonite sect, from Russia, who have settled in colonies in the West, to the number of nearly 20,000, having brought enough capital with them for the purchase of lands. The most noteworthy of the nationalities of which the ranks of the recent immigrants are composed are given below, with the number of arrivals in New York from each country for 8 months of the year 1877, and for the 3 entire years previous:

COUNTRIES.	1874.	1875.	1876.	1877.
Austria.....	5,321	4,790	1,210	502
Belgium.....	325	204	292	63
Bohemia.....	2,721	1,765
Denmark.....	3,154	1,354	1,218	1,169
England.....	19,077	10,793	8,447	2,905
France.....	8,316	2,376	2,168	492
Germany.....	40,302	25,559	21,004	10,430
Holland.....	1,335	894	593	216
Hungary.....	13	85	496	219
Ireland.....	37,447	19,924	13,314	5,903
Italy.....	5,094	2,575	2,618	1,841
Norway.....	8,447	2,602	2,114	1,341
Russia.....	7,565	8,123	5,636	1,549
Scotland.....	4,739	8,070	2,240	621
Sweden.....	8,743	8,303	3,693	2,792
Switzerland.....	2,296	1,439	1,292	871
Wales.....	1,226	849	451	244

Grouping the total numbers of immigrants for 5 years, 1871-'75, according to races, we find that Anglo-Saxons (551,889) make 32.3 per cent. of the total number (1,706,426); the German peoples (548,389), over 32 per cent.; the Irish (295,179), 17.3 per cent.; the Latin races—French, Italians, etc.—(102,385), 6 per cent.; Scandinavians (119,688), 7 per cent.; Slavs, chiefly Mennonites (23,468), 1.4 per cent.; Chinese and other Mongolians (65,428), nearly 4 per cent.

A noteworthy fact connected with recent immigration is the diminution in the ratio of the female to the male immigrants within the last 4 years. The decrease in the percentage of female arrivals, which is a symptom of the hard times both here and abroad, is stated in the following table:

YEAR.	Male per cent.	Female per cent.
1867.....	60.32	39.68
1868.....	60.37	39.63
1869.....	61.26	38.74
1870.....	60.52	39.48
1871.....	59.17	40.83
1872.....	59.40	40.60
1873.....	61.07	38.93
1874.....	61.59	38.41
1875.....	64.34	35.66
1876.....	66.28	33.72
Average.....	60.42	39.58

The classification of the total immigration for 1876, according to ages, is given in the following table:

	Males.	Females.	Together.
Under 15 years of age.....	15,208	12,667	27,875
15 to 40 " ".....	83,840	87,894	121,734
Above 40 " ".....	12,738	7,639	20,377
Total.....	111,786	58,200	169,986

The total immigrants of 1875-'76, classified according to occupations, numbered, in the following general divisions, 2,182 males and 218 females who had learned professional and artistic callings; 23,015 males and 1,185 females who were skilled in industrial trades; 65,579 males and 6,696 females of various miscellaneous occupations, including, principally, 34,229 day-laborers, 13,964 farmers and farm-laborers, 3,519 traders, and 5,554 female servants; and 20,669 males and 49,532 females without occupations.

In the first 6 months of 1877 the total number of immigrants was 69,997; of these, 10,577 were under 15 years of age, 51,658 from 15 to 40 years of age, and 7,762 above 40 years of age. The total males were 47,975: under 15 years old, 5,622; from 15 to 40, 37,288; over 40, 5,065. The total females were 22,022: under 15, 4,955; 15 to 40, 14,370; above 40, 2,697. Of the total number of immigrants, 667 followed professional occupations. Among the 291 artists of all kinds, there were 87 Italians, 71 Germans, 44 Norwegians, 20 French; among 106 clergymen, were 20 English, 17 Irish, 15 French, 18 Germans. The engineers numbered 10, the lawyers 15, medical men 63—English 12, Germans 8, French 8. The scientists were 2. The teachers numbered 59—23 Germans, 15 French, 9 English. Of the total professional immigrants, Germany furnished 147, Italy 95, France 87, England 83. The 9,951 immigrants who were skilled in the different mechanical trades came mostly from the following countries: Germany (2,006), British America (1,882), England (1,443), France (840), Ireland (686), Scotland (584), Portugal (406), Norway (333), Austria (216), Sweden (197), Italy (188), Australia (169), Russia (168), Switzerland (163), Belgium (106).

The proportions in which the principal trades are represented among the skilled immigrants, and the leading countries in each trade, are as follows: Carpenters (total, 905): from the British Dominions (260), Germany (200), England (136), Ireland (111). Miners (total, 759): from England (287), Norway and Sweden, Russia, Ireland, Germany. Masons (total, 728): from the British Provinces (310), Germany (109), France (81), Norway, British Isles. Mariners (total, 636): from Portugal, British Provinces, Germany. Clerks (total, 597): from Germany (168), England (125), Ireland, Scotland, France. Blacksmiths (total, 473): from Germany (151), British America (138), England, France. Tailors (total, 347): from Germany (99), England (48), France (29). Shoemakers (total, 317): from Germany (113), France (40). Bakers (total, 284): from Germany (128), England (41). Butchers (total, 260): from Ger-

many (112), England, France, Austria. Painters (total, 138): from Germany (46), England (21). Weavers (128): from England (48), Germany (39). Dressmakers and milliners (total, 98): from British Provinces, Germany, Ireland.

Among the 31,146 immigrants of various miscellaneous employments, including farmers and laborers, servants, and traders, the largest contingents came from China (7,493), British America (5,482), Germany (4,391), Ireland (3,283), England (2,838), Sweden (1,149), Norway (1,099), Italy (1,052). Of the 17,921 laborers, China furnished 7,448, British Provinces 2,048, Ireland 1,811, Germany 1,672, England 1,476, Italy 728, Sweden 634, France 369, Austria 368, Norway 328. Of the 7,268 farmers, 2,229 came from British America, 1,669 from Germany, 755 from England, 440 from Norway, 390 from Russia, 327 from Sweden, 298 from France. Of the merchants and dealers, 1,905 in all, 642 came from Germany, 274 from England, 151 from Norway, 140 from the British Dominions, 106 from France, 91 from Spain. Among the 2,418 servants were 1,040 Irish, 433 Canadians, 196 English, 172 Germans, 134 Swedes. 22,233 immigrants of no stated occupations make up, with the 3 general classes above mentioned, of professional, skilled, and miscellaneous occupations, the sum of the total immigration for the half-year. This latter class consists almost exclusively of women and children, the families of immigrants. Out of a total immigration from Germany of 14,338, it amounted to 7,704, or nearly 54 per cent.; from the considerable influx of mechanics, laborers, etc., from the British-American Provinces, amounting in all to 10,926, only 3,526 belonged to this class—little over 32 per cent.; of the total English immigration, 8,582, it amounted to 4,218, about 49 per cent.; the Irish immigration, altogether 7,273, included 3,283, or 45 per cent., of this class; the Scotch, in all 1,682, only 642, or 38 per cent.; among the 7,656 immigrant Chinese there were only 151 so classified; among the 2,633 Swedes there were 1,281, about 48 per cent.; among the 2,197 Norwegians, only 869, or 39 per cent.; among the 863 Danes, 392, above 45 per cent.; in the Austrian immigration the proportion was very high—1,515, in a total of 2,394, or above 63 per cent.; in the Russian total of 1,877, it was 1,161, nearly 62 per cent.; among the French, total immigration 2,863, it was only 1,005, or 35 per cent.; among the Italians, total 2,026, it was 34 per cent., 691 souls; among the Swiss, 315, out of 888, about 35½ per cent. Out of the grand total, 69,997, there were 28,233 of no stated occupations, giving a mean percentage of 40½ per cent. Of these, 19,156 were females and 9,077 males. In the entire fiscal year 1876-'77 the total immigration was 141,857—92,033 males and 49,824 females. Classified, there were 1,885 of professional occupations—1,674 males and 211 females; 21,006 of skilled occupations—20,144 males and 862 fe-

males; 55,650 of miscellaneous occupations—50,116 males and 5,534 females; 63,316 of no stated occupations—20,099 males and 43,217 females. The latter class formed 44 per cent. of the total immigration of the year. In the year 1875-'76 the proportion was about 42 per cent., and in 1874-'75 nearly 47 per cent.

INDIA,* a British viceroyalty in Asia. Viceroy and Governor-General of Bengal, Lord Lytton, appointed in 1876; commander-in-chief of the army, Sir Frederick P. Haines. The Executive and Legislative Council is composed as follows: The Viceroy, the commander-in-chief, Major-General Sir E. Johnson, Sir John Strachey, Whitley Stokes, E. C. Bayley, Sir Andrew Clarke, and Sir Alexander J. Arbuthnot. The lieutenant-governors of the provinces are honorary members of the Council, when it meets in their respective provinces. *Government Secretaries*: For the Interior, A. C. Lyall; for the Finances, R. B. Chapman; for Agriculture and Commerce, A. O. Hume; for Foreign Affairs, C. V. Atchison; for Military Affairs, Colonel H. K. Burne; for Public Works, Colonel W. A. Crommelin. The lieutenant-governors and chief commissioners of the different provinces are as follows: Bengal, Lieutenant-Governor, Hon. A. Eden; Northwestern Provinces, Sir G. E. W. Couper, Bart.; Punjab, Lieutenant-Governor, R. E. Egerton; Central Provinces, Chief Commissioner, J. H. Morris; British Burmah, Chief Commissioner, A. Rivers Thompson; Madras, Governor-General, Duke of Buckingham and Chandos; Bombay, Governor-General, Sir R. Temple, Bart.

The area and population of British India, according to the census of 1872, were as follows:

DIVISIONS.	Area in English Square Miles.	Population.
Under British administration.	905,046	190,840,848
Feudatory States.....	556,982	48,088,500
Total.....	1,462,028	238,929,348

The receipts and expenditures for the year 1875-'76 were as follows:

GROSS RECEIPTS.	
Land revenue.....	£21,505,089
Tributes and contributions.....	726,188
Public domains.....	672,528
Excise.....	2,498,232
Assessed taxes.....	510
Duties.....	2,722,533
Salt monopoly.....	6,244,415
Opium tax.....	8,471,425
Stamp tax.....	2,758,042
Coinage.....	110,459
Post-Office.....	763,765
Telegraphs.....	809,040
Court receipts.....	796,460
Police receipts.....	84,160
Port receipts.....	230,431
Education Department.....	103,891
Interest.....	561,189
Deductions from pensions.....	749,166
Miscellaneous receipts.....	764,636
Total ordinary receipts.....	£50,143,464

* For a full account of the area and population of the different provinces, the distribution of the population according to religion and sex, and the population of cities, see ANNUAL CYCLOPEDIA for 1876.

Total ordinary receipts.....	£30,143,464
War Department.....	1,045,618
Department of Public Works.....	655,725
Railroads.....	239,512
Provincial taxes.....	143,115
Provincial funds.....	233,359

Total £52,515,738

EXPENDITURES.

1. Costs of the gross receipts.....	£9,553,354
2. Interest on the public debt.....	5,173,103
3. Interest on the service funds.....	383,560
4. Administration.....	1,428,908
5. Minor departments.....	344,995
6. Justice.....	3,212,447
7. Police.....	2,130,049
8. Ports.....	629,867
9. Education.....	755,120
10. Church.....	162,189
11. Sanitary Department.....	607,972
12. Foreign service.....	433,387
13. Pensions, etc.....	3,653,029
14. Loss by exchange.....	1,429,732
15. Miscellaneous.....	763,220
16. Substitutes for absent officials.....	229,199
17. Provincial funds.....	44,188
18. Relief of famine.....	595,779
19. Army.....	15,308,459
20. Public Works.....	4,427,293
21. Railroads.....	214,713
22. Sureties to railroad companies.....	1,055,623

Total ordinary expenditures £30,846,907

23. Extraordinary expenditures for public works..... 4,270,629

Total..... £35,117,536

The budgets, as estimated for the years 1876-'77 and 1877-'78, are as follows:

YEAR.	Gross Receipts.	Expenditures.	Deficit.
1876-'77	£51,206,700	£57,285,000	£6,078,300
1877-'78	52,192,700	56,442,440	4,249,740

The public debt of India on March 31, 1875, was as follows:

I. CONSOLIDATED DEBT.			
1. Payable in India.....	£69,549,953		
2. Payable in England.....	43,597,033		
Total consolidated debt.....	£113,146,986		
II. Not consolidated debt.....	12,046,293		
Total.....	£130,193,280		

The values of the principal articles of import and export for the year 1874-'75 were as follows:

ARTICLES.	Imports.	Exports.
Grain, particularly rice and paddy.....	£5,457,000
Seeds and fruits.....	£233,000	3,236,000
Colonial goods, particularly tea and coffee.....	936,000	4,097,000
Wines, spirits, and malt and other liquors.....	1,378,000
Coal.....	630,000
Woods, timber, and carving material.....	159,000	307,000
Raw wood, cotton, silk, jute, and other weaving material.....	915,000	16,821,000
Hides and skins.....	2,678,000
Drugs, chemicals, oils, and resin.....	1,644,000	4,149,000
Opium.....	11,957,000
Yarns and woven goods of all kinds.....	20,132,000	1,768,000
Other manufactures.....	5,449,000	2,522,000
Miscellaneous goods.....	8,094,000	1,310,000
Total goods.....	£34,645,000	£56,812,000
Total precious metals.....	8,141,000	1,598,000
Total.....	£42,786,000	£57,905,000

The movement of shipping for 1874-'75 was as follows:

NATIONALITY.	ENTERED.		CLEARED.	
	Vessels.	Tons.	Vessels.	Tons.
British.....	8,165	3,123,742	3,322	3,280,395
Foreign.....	2,401	568,973	2,133	536,583
British Indian.....	4,307	815,779	4,069	771,915
Native.....	10,002	400,328	9,520	393,530
Or				
Sea-going vessels.....	6,347	2,442,561	6,057	2,392,955
Coasting vessels.....	13,528	2,461,266	13,087	2,589,718
Total 1874-'75.....	19,875	4,908,827	19,094	4,982,673
Total 1873-'74.....	20,436	4,425,324	19,629	4,588,428

On March 31, 1877, there were 6,937 miles of railroad in operation.

On March 31, 1876, there were 3,666 post-offices. The number of letters sent in the year preceding was 107,576,943.

The length of the telegraph-lines on March 31, 1875, was 16,649 miles, and the number of stations 225. In 1874-'75 the number of dispatches sent was 883,727, the receipts £203-881, and the expenditures £333,731.

On February 22d, Lady Anna Gore-Langton, who had accompanied her brother, the Duke of Buckingham and Chandos, to India, when he was appointed Governor of Madras, delivered an address on "The Social Condition of Women in Southern India." She said that Indian children were married at eight years of age. Native fathers considered it a disgrace to have single girls in the family, and endeavored to get them married in childhood; but, when married, they did not always go at once to their husbands' homes. Although but little money was expended in clothes and education, the marriages were very expensive, as there was great feasting; and many families had been for years impoverished by the expense. Infanticide was not so prevalent as a few years ago, and the Government had done much to put it down. The marriages were generally arranged by the old women, who went from family to family to find suitable matches. The men, in India, were to a great extent ruled by the women, who were very conservative, and had a great objection to any improvement in their customs. Women of the lower class worked very hard. The natives treated widows very badly; their clothes and jewels were taken from them, and they were made as miserable as possible. Nothing was more painful to see than the vacant, hopeless, melancholy faces of the adult women, and nothing was more wanted than lady-doctors, who might save Indian women much suffering. Sir Salar Jung had exerted himself to get a lady-doctor; but he had to send to America for one, who now had a large practice among the native women.

The official account of the products of India which were shown at the Centennial Exhibition in 1876, was accompanied by a report prepared by Dr. J. Forbes Watson, of the India Office, in the last twenty years, namely, from

1858—when the Government was transferred from the East India Company to the British Crown—to 1877.

In those twenty years, he says, India has undergone a profound transformation. Two causes have mainly contributed to bring about this result—the gradual progress of education, and the extraordinary development of means of communication. The expenditure on education, as far as Government is concerned, has increased fourfold, and now exceeds £1,000,000 in the year, and the number of pupils has increased from about 200,000 in 1857 to about 1,700,000, and is rapidly increasing. Small as this number may seem, it being below one per cent. of the population, it shows extraordinary progress, and proves that education is beginning to affect the masses. At any rate, it compares favorably with the number in other semi-civilized countries. The progress of education in India is also shown by the increasing number of graduates of the universities of the three Presidencies, and the large number of pupils in the special engineering, art, and medical schools; and equally striking is the rapid growth of the native press and literature. But the results of the progress of education are at present valuable chiefly as the promise of a better future, when the present generation shall have grown up. The changes wrought by improved means of communication have been, on the other hand, almost instantaneous, and have already transformed the whole face of the country. The length of railways open in 1857 was 274 miles; in 1876 it had become 6,497 miles. The passengers carried in 1857 were 1,825,000; there were 26,779,000 in 1876. The miles of telegraphs increased from 4,162 miles to 16,649 miles; the letters and packets conveyed by post from less than 29,000,000 to more than 116,000,000 in the year. The opening

of the Suez Canal, in 1869, also marked a turning-point in the trade of India and the East generally. The revenue of India advanced from £31,691,000, in 1857, to £55,422,000, imperial and provincial, in 1877; the expenditure from £31,609,000 to (estimated) £61,382,009, in 1877. The excess of expenditure over income, in 1877, is due partly to the famine and partly to the outlay on remunerative public works. Adding together the cost of public works, of education, and of surveys and other scientific operations, we find about £10,000,000 now yearly spent by the Government in India for the permanent improvement of the country and its people. The trade and shipping returns show a vast increase in wealth and prosperity. The tonnage entered and cleared in the foreign and coasting trade was 4,549,000 tons in 1857, and rose to 9,887,000 tons in 1876. The value of the imports was £28,608,000 in 1857, and £48,697,000 in 1877; of the exports, £26,591,000 and £62,975,000 respectively. These figures include treasure as well as merchandise. The imports of treasure amounted in the 20 years, 1858–77, to £167,582,677, but the exports of treasure to only £28,804,587, showing an increase in the precious metals to the amount of nearly £239,000,000, or about £1 for every head of population in the whole of British and Native India. The imports of merchandise have risen from £14,000,000 to £37,000,000 in the 20 years, an increase of 163 per cent.; the exports of Indian produce and manufactures from somewhat over £25,000,000 to £59,000,000, an increase of 133 per cent.; the total of imports and exports of merchandise showing an increase of 140 per cent.

On New-Year's-day, 1877, Queen Victoria was proclaimed Empress of India, with all the pomp of Eastern state. The proclamation was made at Calcutta, Bombay, and Madras; but

FORT OF PESHAWER.

the scene of the chief ceremony was at Delhi. The place selected for the proclamation was an extensive plain about three miles north of the viceregal camp, where a dais and a large amphitheatre had been erected. The governors, lieutenant-governors, the state-officials, and sixty-three ruling princes, attended by their suites and standard-bearers, with magnificent memorial banners, were grouped in a semicircle in front of the throne. Behind them the vast amphitheatre was filled with

the foreign embassies and the native nobility and gentry who had been invited, while in the rear was the vast concourse of spectators who had come to witness the spectacle. The whole presented a scene of unwonted brilliancy and splendor. To the south of the dais 15,000 troops were drawn up under arms, while to the north were ranged the minor chiefs, with their troops and retinues. The Viceroy arrived at about half-past twelve, and at once ascended the throne. His arrival was heralded

by flourishes of trumpets and a fanfaron from the massed bands of the different regiments present. A grand march was played, followed by the national anthem. Major Barnes, the chief herald, then read the proclamation, which was followed by a salute of 101 salvoes of artillery of six guns each.

Previous to the proclamation, during the last week of December, 1876, the Viceroy received in Grand Durbar many of the principal chiefs. One of the most interesting receptions was that of the Khan of Kelat, who, on this occasion, set foot on British India for the first time. The Khan was quite at his ease, and answered the Viceroy's questions without hesitation. He had seen, he said, in British India, three things which greatly surprised him—namely, steamboats, railways, and telegraphs. Lord Lytton replied that he hoped two of them might be shortly introduced into the Khan's dominions, and that the British Government would be glad to assist him in establishing them. The Viceroy then presented the Khan with very valuable presents, when the interview came to an end.

On March 13th, General Strachey, the Finance Minister, laid the budget before the Legislative Council. The statement closed the accounts of 1875-'76. After allowing for the cost of the Behar famine, it shows a surplus of £1,658,882 on the ordinary account; but if the public works extraordinary are included, then a deficit of £2,601,747. The regular estimates for 1876-'77 show a deficit of £2,278,300 on the ordinary account, which is increased to £6,078,300 on the extraordinary account. Here the cost of the famine, which is estimated at £3,100,000, is included in the ordinary account. If it were excluded, this account would show a surplus of £624,800. The following are the budget estimates for 1877-'78: revenue, £52,192,700; expenditure, £56,442,400, of which £3,628,000 is for public works extraordinary. The deficit, £4,249,700, is reduced to £621,700, if extraordinary works are excluded; estimated cost of famine, £2,150,000, making £5,250,000 in two years; surplus, excluding famine, £928,300.

The decentralization scheme introduced by Lord Mayo was to be extended. The principle is that each province should, as far as possible, have the responsibility of meeting the cost of its own local requirements. This, however, is to be for the present carried out only in Bengal and the northwest. There would be no fresh imperial taxation; but Bengal was called upon to guarantee £275,000, and the northwest £50,000, being the interest on money spent on local canals and railways. It was proposed to extend the existing system of provincial taxation in Bengal, but not to introduce novel taxes in the northwest. A light license tax was to be imposed on trades, and authority given to assign 10 per cent. of the existing local rates for the canals and railways.

On March 21st, the Legislative Council dis-

cussed two bills introduced in accordance with Sir Richard Strachey's scheme for extending the decentralization of the finances. The budget was generally approved, the decentralization scheme finding particular favor. On the other hand, the abolition of duties on cotton goods was generally condemned as unwise. Two bills affecting local rates in the north-west, introduced in pursuance of the decentralization policy, were passed by the Council on March 28th. The Viceroy took advantage of the occasion to review the financial and general policy of the Government. He began by expressing the pleasure he felt to think that in the first year of his administration the Government had an opportunity of submitting its whole financial policy for discussion by the Council. The Government, he said, had honestly tried to avail itself of that opportunity, and had freely confided its anxieties and hopes to the public. Alluding, first, to the policy of excluding from extraordinary accounts unremunerative public works which might hereafter be undertaken, he said it was decided on by the Secretary of State, while Lord Northbrook was Viceroy, though now first announced. He believed that this policy was a step in the right direction; and it would not be his fault if it did not go much further, for he doubted whether an extraordinary budget was not altogether a mistake. He discussed at some length the cotton duties question, and said he earnestly desired their abolition, but altogether denied that he and those who thought like him were recklessly indifferent to the duty which they owed to Indian interests. He objected to the cotton duties because they appeared to him inconsistent with sound financial principles, and, as such, injurious to the interests of India. The Secretary of State had left the Government large, but not unlimited, discretion. That discretion extended only to time, and was most suitable and efficacious for carrying into practical effect principles which were finally determined on. He would not deny that their financial system was not free from other features as vicious as the cotton duties from a purely fiscal point of view; but he doubted if they were equally objectionable from a social and political standpoint. These all stood on the condemned list, and he hoped the Government would soon be able to deal with the worst of them—namely, the inland customs. He spoke strongly in favor of the decentralization scheme, and thought it surprising that English statesmanship, generally so free from Continental passion for legislative symmetry, should have persisted in attempting to apply to every part of an empire, vast, various, and composite, the same form of taxation. He hoped that the measures now before the Council would be prolific of beneficial results.

Passing to the depreciation of silver question, he expressed an opinion that experience had fully justified the Government resolution not to tamper prematurely with the standard of

value. Government was fully alive to the importance of the question, but was unable at present to announce any action upon it.

He then turned to the famine, and estimated its cost at £5,250,000, although the area and the intensity of distress were much greater than during the Bengal famine, which cost £6,750,000. This encouraging fact was due partly to the completion of adequate railway communication, partly to the application of principles which experience had proved to be sound, and to the energy and discretion with which these principles were carried out. The person to whom the country was chiefly indebted for the present moderate estimate was Lord Northbrook, who laid down most important principles, which the Government were now following as far as possible.

GATEWAY OF THE TEMPLE OF JUGGERNAUT.

The Viceroy next turned to military expenditure. The increase was mainly due to charges not under the control of the Government of India, but part of the increase was caused by measures recently taken to improve the power of rapid mobilization, which measures had been magnified and misrepresented by uninstructed rumor into preparations for a great campaign. No such design was ever entertained.

It had been his privilege to conduct to a successful issue efforts for the pacification of Kelat begun by Lord Northbrook. The present relations with Kelat were more satisfactory, more fraught with promise of the future and security for the present, than had

been the case for many years. The country was now quiet and prosperous, and British influence predominant and welcome. He considered that the safest and strongest frontier India could possibly have would be a belt of independent frontier states, throughout which the British name was honored and trusted, and British subjects liked and respected; by which British advice was followed without suspicion, and British word relied on without misgiving—in short, a belt of states whose chiefs and people should have every interest and desire to coöperate with British officers in preserving peace on the frontier, developing their own resources, and vindicating their title to an independence of which the British would be the principal well-wishers and supporters. Looking to recent events on the frontier, he did not

think this end unattainable; but did not believe it attainable by means of military expeditions, or, indeed, anything except constant friendly contact with their less civilized neighbors, and the presence, with everyday acts, in their midst of earnest, upright, English gentlemen.

Various parts of India were visited by a severe famine during the year 1877, which fully equaled that of China in its severity, although the relief measures adopted by the Supreme Government of India tended to deprive it of many of those horrors which attended the famine in China. According to a dispatch from the Government of India to the Secretary of State, the distressed territory in Bombay included an

area of 54,000 square miles, with a population of nearly 8,000,000. In Madras the distressed districts were divided into two tracts, the first consisting of Bellary, Kurnool, and Zudapah, which was by far the most afflicted, as in the southwest, northwest, and northeast the monsoon had failed. The second tract comprised nine districts, namely: Kistna, Nellore, Chingeeput, North Arcot, Salem, Madura, Coimbatore, Tanjore, and Trichinopoly; while only eight districts were actually free from famine in Madras. The total area affected in Madras was stated at 84,700 square miles, with a population of nearly 19,000,000. The Supreme Government indicated its policy in this case in a dispatch to Sir Richard Temple, as fol-

lows: "While the Government desires to make every effort, so far as the resources of the state will admit, to prevent deaths from famine, it considers it absolutely necessary, in the present condition of the finances, to practise the most severe economy. It admits that the task of saving life, irrespective of cost, is beyond its power; and that to relieve all the constantly recurring famines of India on the scale adopted in Behar three years ago must inevitably lead to national bankruptcy." After laying down these general principles, the Government determined to give Sir R. Temple directions for

relief operations, based on the experience of past famines. The people should, as far as possible, be collected on large relief works, so as to admit of close supervision. A strict labor test should be applied; wages should be only such as will give a bare subsistence. Gratuitous relief should be given only in cases of extreme necessity. The relief works need not be in the distressed districts, if the people can be easily removed to a place where food is more abundant. Private trade in grain should not be interfered with. The Madras Government is censured for having, at the beginning

THE PRESIDENCY COLLEGE, MADRAS.

of the scarcity, purchased 30,000 tons of grain. The Supreme Government believes such operations calculated to increase the difficulty of procuring a food-supply, and it is confident that private trade, if left perfectly unfettered, may be counted on to supply the wants of both Presidencies. The dispatch concluded by laying down a general rule that every province ought, as far as it might be practicable, to be held responsible for meeting the cost of the famines from which it might suffer, and that the burden should not fall on the general taxpayers. By the middle of February, the numerous dispatches from the Supreme and the local Governments, together with the reports of Sir R. Temple, gave a complete picture of the terrible calamity. Besides the large portions of Bombay and Madras, the territories of the Nizam and of the Maharajah of Mysore were seriously affected. On the distress in the territory of the Nizam, Sir R. Temple reported as follows:

Out of the 17 districts which compose the dominions of his Highness the Nizam, there has been a bad failure of harvests in parts of 6 only. The failure has been most utter in the Alpur subdivision of East Raichore; there no crop whatever was saved this season. In the rest of the distressed tracts it is estimated that a yield of about one-sixth of an ordinary crop has been secured. In tracts adjoining the distressed districts the harvests have not been

so good as usual; but over the rest of the country the harvests have been fair; while in the districts north of Hyderabad there have been decidedly good crops. The harvests of the two previous years had been good throughout the country, save in one comparatively small tract, just where the present failure is worst. Stocks are probably considerable. The Revenue Secretary estimated that there must be quite a year's food in the country.

In Mysore, the Government reported that nearly two-thirds of the whole area, and one-half the population of the provinces, were affected. Large numbers of people from the surrounding villages flocked to the city of Madras, where eight relief camps were established, and thousands of people were fed entirely at the public expense. As soon as they were strong enough to work, they were sent to other camps outside the city, and set to work. In the city smallpox and cholera set in in March, and produced a terrible mortality. A sign of the severity with which the famine was pressing on the people was the amount of jewelry and personal ornaments tendered for sale at the Presidency Mint. The value of silver ornaments tendered from January to October, 1876, averaged from £300 to £600 monthly, and this rose in November to over £6,000. In May, 1877, it had reached the enormous figure of £80,000. In the beginning of August, a large meeting was held in Madras, in which it

was decided to appeal for help. In September, the prospect began to grow brighter, as rain commenced to fall at various places. With the beginning of October, a general and most favorable change set in over Northern and Central India. From October 5th to 9th, there was extensive rain, extending from Patna and Nagpore in the south to Jhylum in the north, and from Hurdul in Oude in the east to Ajmir and Gujerat in the west. The rainfall ranged from two to ten inches everywhere, and benefited all the affected districts. Agriculture began to be active everywhere; emigrants from the threatened districts were returning home; prices of food began to be lower, and the number of persons employed on the relief works and furnished with gratuitous supplies was decreasing considerably. An idea of the aid furnished by the Government may be gathered from the fact that up to August 25th the amount expended on the famine relief work in the Madras Presidency, was 21,590,925 rupees (1 rupee = 46 cents); in gratuitous relief, 5,072,299 rupees: making a total outlay of 26,663,224 rupees. The prospects now continued to improve, and during the month of October there was a decrease of 900,000 persons employed on the works. The great saving thus effected had been unattended by any suffering or loss of life.

The difference between the Afridis and the Indian Government was settled in March, by the complete subjection of the former. (*See AFGHANISTAN.*) In August fresh disturbances occurred on the Punjab frontier. The offenders were Jowakis, a section of the Adam Khel tribe of Afridis. They are a small and insignificant clan, inhabiting the heights above the Kohat Pass; but their position gives them ample opportunity for inflicting annoyance when mischievously inclined. In August they made a raid into British territory, cut the telegraph-wires, and did other damage. When called upon to make restitution, the chief sent an insolent message, saying he would come into Kohat and submit, provided all the fines previously imposed were remitted, and provided the Government paid the value of all the cattle lost by the tribe. This was, of course, refused, and as the tribe continued its hostile attitude, although unsupported by other Afridis, a small force was sent from Kohat against the raiders. The troops marched through the Jowaki country, and on their appearance the raiders fled without offering resistance, and the force returned to Kohat. On November 9th, an expedition consisting of 2,100 infantry, with six guns, and a small number of cavalry, under the command of General Keyes, entered the Jowaki territory in three columns. It met with uninterrupted success, and on December 1st captured Jammu, the chief stronghold of the Jowakis. Hostilities were suspended in the latter part of December, although the Jowakis still remained defiant.

A meeting of the Convocation of the Cal-

cutta University was held on March 10th. Lord Lytton, for the first time, presided as Chancellor. He made a long address to the students, in the course of which he alluded to a fuller opening of Government employment to the natives. He said that, although it was rendered necessary by circumstances that certain posts must always be filled by Europeans, there were still many other posts no less dignified and lucrative, which the Government was pledged and determined to throw open to natives. At the same time he advised the students not to look solely to the Government for employment, as their countrymen were too apt to do, but to turn their thoughts and energies also to the various professions. At the same meeting, Vice-Chancellor Hobhouse stated that this year, for the first time, a native lady, a Christian, had applied to be admitted to the university examinations.

The Mohammedans of India showed considerable sympathy with the Turks. Subscriptions were opened in the largest towns, and large amounts were subscribed. Pamphlets and proclamations, coming chiefly from Mecca, were largely circulated. The object of them all is the union of Islam against Russia.

On February 15th, the Commissioner for Oude resigned his post, and Oude was united with the Northwest Provinces. The measure was decidedly unpopular in Oude, and the people of that province showed great unanimity and perseverance in praying for its reconsideration.

INDIANA. The 50th regular session of the Indiana Legislature, which began on January 3d, came to a close on March 5th. Out of 982 bills introduced, only 99 were passed. The general appropriation bill having failed of passage, a special session was called, which continued from the 6th to the 15th of March.

STATE SEAL OF INDIANA.

There was very little legislation of general interest or importance. The tax-levy was 12 cents on each \$100 of taxable property, and a poll-tax of 50 cents. An act was passed providing for the construction of a new State House, for

which an appropriation of \$2,000,000 was made. The work was placed in charge of a Board of Commissioners consisting of the Governor and four other persons to be appointed by him, two from each of the "leading political parties of the State." To meet the expense a special levy of 1 cent on \$100 for 1877 and 2 cents on \$100 for 1878 was provided in the act. Several changes, mostly of minor importance, were made in the school laws. One of these provides that the county superintendent, the township trustees, and the presidents of the boards of trustees in cities and towns, shall constitute the county board of education. Another authorizes the trustees of school corporations to organize separate schools for colored children, with equal privileges and advantages with those provided for white children, but in case no such separate school is established, colored children shall be admitted on equal terms in the schools for white children. Another act made township trustees ineligible for reelection after serving for a term of two years. The school commissioners in cities of more than 30,000 inhabitants were authorized to make temporary loans in anticipation of the revenue of the current year. A bill providing for the funding of the debt of cities of more than 16,000 inhabitants prohibits an increase of such debt hereafter beyond 2 per cent. upon the tax duplicate of the current year, except by temporary loans in anticipation of the revenue of each year. The limit of taxation for general purposes in such cities was fixed at 90 cents on \$100 for general purposes and 20 cents for school purposes. It was further provided that no warrants should be drawn upon the city Treasury when there is no money on hand to meet them, and no appropriation should be made unless the money required therefor be in the Treasury at the time. Among the other acts passed was one requiring that the doors provided for ingress and egress of theatres, opera-houses, public buildings, museums, churches, colleges, seminaries, and school-buildings, shall be hung so as to swing outward, and one prohibiting the sale of intoxicating liquors on Sundays, holidays, and election days. This Legislature consisted of 24 Republicans, 25 Democrats, and 1 Independent in the Senate, and 54 Republicans and 46 Democrats in the House, which gave the Republicans a majority of 6 on a joint ballot.

An investigation of the condition of the prisons was made during the session of the Legis-

lature, but led to no definite action. The prison at Jeffersonville was found to be indebted to the extent of \$118,525.41. The liabilities incurred by the existing administration for the 18 months preceding December 15, 1876, amounted to \$64,297.68, while the assets were \$11,296.02. The grounds and buildings were found in an unsatisfactory condition. The committee which visited the northern penitentiary reported the grounds and buildings in excellent condition and the institution self-supporting. Some criticism was made on the treatment of prisoners, on account of severe punishment in some cases, improper food, and a restriction of the privileges of reading.

STATE HOUSE, INDIANAPOLIS.

Seven amendments to the Constitution of the State were proposed by this Legislature, but must be approved by that to be chosen in 1878 before they are submitted to the people for ratification. They are as follows:

1. Section 2, of article 2 amended so as to read as follows: "Section 2. In all elections not otherwise provided for by this Constitution, every male citizen of the United States of the age of twenty-one years and upward, who shall have resided in the State during the six months, and in the township sixty days, and in the ward or precinct thirty days, immediately preceding such election, and every male of foreign birth, of the age of twenty-one years and upward, who shall have resided in the United States one year, and shall have resided in this State during the six months, and in the township sixty days, and in the ward or precinct thirty days, immediately preceding such election, and shall have declared his intention to become a citizen of the United States, conformably to the laws of the United States on the subject of naturalization, shall be entitled to vote in the township or precinct where he may reside, if he shall have been duly registered according to law."

2. That the Constitution of the State of Indiana be amended as follows: "By striking out the words 'No negro or mulatto shall have the right of suffrage,' contained in section 5 of the second article of the Constitution."

3. That the following amendment to the Constitution of the State of Indiana be and the same is hereby proposed, to wit: Amend section 14 of the second article to read: "Section 14. All general elections shall be held on the first Tuesday after the first Monday in November, but township elections may be held at such times as may be provided by law: *Provided*, That the General Assembly may provide by law for the election of all judges of courts of general and appellate jurisdiction, by an election to be held for such officers only, at which time no other officer shall be voted for; and shall also provide for the registration of all persons entitled to vote."

4. Strike the word "white" from sections 4 and 5 of article 4.

5. Amend the fourteenth clause of section 22 of article 4 to read as follows: "In relation to fees or salaries, except that the laws may be so made as to grade the compensation of officers in proportion to the population, and the necessary services required."

6. Amend section 1 of the seventh article to read: "Section 1. The judicial power of the State shall be vested in a Supreme Court, Circuit Courts, and such other courts as the General Assembly may establish."

7. That the second section of the seventh article of the Constitution of the State of Indiana be amended to read as follows: "Section 2. The Supreme Court shall consist of not less than five nor more than seven judges, a majority of whom shall form a quorum. They shall hold their offices for six years if they shall so long behave well: *Provided*, That the judges elected at the first election after the taking effect of this amendment shall be divided by lot into three classes, as nearly as may be, the fraction being in the last class, and the seats of the first class shall be vacated at the expiration of two years, those of the second class at the expiration of four years, the third class at the expiration of six years, so that one-third thereof, as nearly as may be, shall be chosen every two years thereafter."

The Institution for the Education of the Deaf and Dumb contained 302 pupils at the beginning of the year, of whom 185 were males and 117 females. At the end of the year there were 355, a number too large for the accommodations provided. The total expenses of the institution for the year were \$65,884.62.

The number of school children enrolled during the year was 498,726, the average daily attendance being 298,324. Four hundred and thirteen new school-houses were erected, making the whole number 9,476. The number of teachers employed was 13,635, of whom 8,131 were males and 5,504 females. The average daily pay was \$2.51 for an average number of 128 school-days. Of the number of children enrolled 6,751 were colored. The total valuation of school property was \$11,376,729.88; revenue for the year, \$4,873,131.04.

Shortly after the disturbances occasioned by railroad strikes in different parts of the country, a large mass meeting of working-men was held in the grounds of the State House at Indianapolis. It occurred on August 13th, and the following resolutions were adopted as expressive of its sentiments and purposes:

Whereas, The present deplorable condition of the country is one demanding the most serious consideration of all classes; and

Whereas, The suffering and destitution of the la-

bor element of the country are terrible beyond description, and are being daily augmented by the rapid and heartless encroachments of united capital; and

Whereas, This condition of affairs is becoming so desperate and alarming as to demand prompt and vigorous action by the industrial classes of our population: therefore, be it

Resolved, By the independent working-men of the city of Indianapolis:

1. We demand for labor a recognition of those rights and principles upon the statute books of the nation vouchsafed to it by our *magna charta*, to wit: "That all men are created free and equal, and alike entitled to life, liberty, and the pursuit of happiness."

2. That the creators of all values have a right to make an equitable proportion of those values all their own; and that all laws which rob labor of its fruits to enrich and support in luxury idle drones, are antagonistic to all principles of justice, and we demand their immediate repeal.

3. To this end we demand the repeal of all those special charters and privileges granted to idle capital for the oppression of active capital and labor.

4. That all citizens of the commonwealth should bear their proportion of the public burdens; therefore, we demand that property be taxed, bonds not excepted.

5. We demand the immediate repeal of the resumption act.

6. We demand the retirement of the national bank currency.

7. The power to issue money and regulate its value is given to the Congress of the United States alone. Therefore, we demand that Congress exercise the prerogative by throwing open the mints of the Government for the free coinage of both gold and silver, and providing for the issue of treasury-notes. Both coin and notes to be alike receivable for all debts, dues, and demands of every kind whatever due to the United States.

8. And whereas the principal office of gold and silver coin is to adjust balances between governments, by reason whereof it cannot be depended upon as a medium for exchange, or a basis for currency, therefore we demand the issue by the Government of treasury-notes, as above described, to the amount of \$20 per capita, and that said notes be kept up to that standard.

9. *Whereas*, The interests of labor demand a fixed value for all the products of labor, which can only be given by a fixed value of money; and

Whereas, Experience has taught us that a specie basis is productive of the wildest inflation and the greatest contraction of money upon business principles; therefore,

Resolved, That we, the friends of the laboring classes, are emphatically opposed to a specie basis, or any other financial policy that will result in either inflation or contraction.

10. That we deprecate the spirit of vandalism in any shape, and hereby pledge each other and the country the preservation of peace and the lives and property of our citizens, and call upon all law-abiding people to aid in the attainment of this end.

11. *Resolved*, That there is nothing so detrimental to the interests of labor as a foreign debt, labor paying all the interest thereon; therefore, we denounce all laws and regulations providing for the sale of bonds, either municipal, railroad, State, or national, abroad.

The State Central Committee of the Democratic party held a meeting on December 20th, and issued an address "To the Democratic Voters of Indiana," of which the material portion was as follows:

This is the first occasion upon which the committee has been called upon to address you since the

election of 1876. We cannot now be wholly silent upon what took place after that election. It is known to you all that Tilden and Hendricks were elected, and according to the Constitution and laws they should have been inaugurated. A cabinet officer announced to the country the flagrant falsehood that Hayes and Wheeler were elected, and then it was resolved that they should be forced into the offices. The President gave his sanction to the high-handed proceeding and commanded the military forces of the country to be assembled at Washington, thereby seeking to control the action of Congress and dictate his successor. The work was done. The right of the people to select their rulers at the ballot-box was sacrificed to the greedy demands of party, and in the presence of military power. Rather than involve the country in civil strife, or even expose it to the hazard of that dreadful calamity, the Democrats in Congress chose to trust the Judges of the Supreme Court. That trust was disappointed, and resulted in a fraud—even members of that high court so far forgot the dignity of their position as to allow themselves to be used to serve the purpose of partisan power and gain. We do not propose to disturb the incumbents; but the people owe it to themselves, and the institutions of the country that rest upon the ballot-box, to rebuke the crime, so that it never can be repeated. The party has made no gain by its crime. It is filled with distrust and dissensions. Neither department trusts the other. Indeed how could it be otherwise? Hayes knows that the commission declared him elected when he was not elected; and the country knows that he has identified himself with and made himself and his administration a party to the crime by appointing to lucrative offices nearly all the men who had guilty connection with the foul Returning Board transaction. One of the wretches from Florida, nominated for Chief Justice of one the Territories, was so vile that the Senate was compelled, but a few days since, to reject him. May we not ask sincere and honest Republicans whether they are content to indorse this crime by their votes? Will they not rather join us in its condemnation and in an honest effort to return to better government, with the hope that better times will follow?

The State Convention of the party, to be composed of 1,071 delegates from the various counties, was called for February 20, 1878.

IOWA. The financial record of the State of Iowa for the last fiscal term of two years, ending September 30th, is not altogether satisfactory. At the beginning of that period there was a balance in the Treasury, credited to various funds, amounting in all to \$58,525.77. The receipts for two years were \$2,137,682.40, and the disbursements \$2,122,470.78, leaving a balance of \$73,737.39. But the balance in the general fund was reduced from \$3,144.66 to \$25.56, the receipts having been \$1,983,470.65 and the disbursements \$1,986,559.75. The appropriations of the sixteenth General Assembly so far exceeded the calculations of the Auditor, that at the close of the fiscal year there were outstanding warrants to the amount of \$267,776.81, constituting a floating debt which, in January, 1878, had been increased to \$340,826.56, or about \$90,000 in excess of the constitutional limitation of the indebtedness of the State. Besides this, there was a funded debt of \$543,056.15, consisting of \$300,040 war and defense bonds, due July, 1881, and \$243,056.15 owing to the school-fund. The interest on this debt, for the fis-

cal term, was \$83,541.16. The estimated receipts for the current term are \$2,092,000; expenditures for purposes already provided for in the laws, \$1,745,660; leaving \$346,340, or only a little more than the amount of outstanding warrants, to cover special appropriations. The total amount of taxes levied in the State for all purposes, general and local, for collection in 1877, was \$10,699,762.39. Over 90 per cent. of this sum was for local purposes, and nearly one-half for schools. The permanent school-fund is \$3,459,085.39. The amount of interest collected and apportioned among the schools of the State, for the two years, was \$559,981.59. The value of school-houses in the State is estimated at \$9,044,973; value of apparatus, \$159,216; number of volumes in libraries, 17,329. Other school statistics for the year 1877 are as follows:

NUMBER OF TEACHERS EMPLOYED IN THE STATE.

Males.....	7,348
Females.....	12,513

COMPENSATION PER MONTH.

Males.....	\$34 88
Females.....	28 69

NUMBER OF CHILDREN BETWEEN THE AGES OF 5 AND 21.

Males.....	291,742
Females.....	276,117

Enrolled in public schools.....	421,163
Average attendance.....	251,373
Average cost per pupil, per month.....	\$51 62

NUMBER OF SCHOOL-HOUSES.

Frame.....	9,279
Brick.....	671
Stone.....	257
Log.....	89

Whole number.....10,296

The State University, Agricultural College, and Normal School, are in a flourishing condition, but ask for more liberal allowances from the State.

The Home for Soldiers' Orphans, at Cedar Falls, was closed in June, 1876, and the children remaining in its charge were transferred to the State Orphans' Home at Davenport. In the latter institution, on the 30th of September, there were 139 inmates. The expenditures, for two years, were \$45,210.65. A school for feeble-minded children has been established at Glenwood, where there were 87 pupils at the close of the year. The Reform School contained 141 boys and 53 girls on the 31st of October. A new building for this institution is said to be urgently needed. There were, on the 1st of October, 921 persons at the State insane asylums: 594 at Mount Pleasant, and 327 at Independence. The cost of supporting these institutions, for the fiscal term, was \$370,083.94; of which \$335,711.81 was charged to the counties, and \$34,372.14 to the State. The penitentiary at Fort Madison has been somewhat enlarged, and the number of convicts has increased, in two years, from 67 to 148. The expenses were \$40,447.01 in excess of the earnings. The work on the new State House has progressed

so far that the question was submitted to the Legislature of 1878 of having a dome and turrets added, at an estimated expense of \$461,190.24.

The assessed value of real estate in Iowa, for the year, was \$302,277,661; but the average valuation put upon it by the assessors was but \$7 an acre, which is said to be less than half the actual value. The returns of live stock show 1,452,546 cattle, 659,385 horses, 42,887 mules, 318,439 sheep, and 1,654,708 swine, in the State.

The number of savings-banks is 20, the gross assets \$3,301,209.45; liabilities, including capital stock, \$3,104,614.85; undivided profits, \$196,594.60. There are 31 banks of deposit and discount organized under State law, an increase of 8 in two years. Their assets are reported at \$3,190,063.15, an increase of \$504,712.76. The increase of cash capital is \$315,750.04.

The total value of railroad property in the State is \$22,421,215.10. The number of miles of track is 3,922.2. The assessed value per mile ranges from \$1,000 for the Burlington & Northwestern, narrow gauge, to \$12,000 for the main line of the Chicago, Burlington & Quincy. The total amount built in the last two years is 275 miles, as follows: The Sigourney branch of the Chicago, Rock Island & Pacific Railroad, extended to Knoxville, 49 miles; the Pacific division of the Burlington, Cedar Rapids & Northern Railway, from Traer into Grundy County, 25 miles; main line of the same, from Plymouth to a junction with the Central Railroad of Iowa, and from Norwood northward to Albert Lea, in Minnesota, the addition in Iowa being about 9 miles; the Iowa Pacific Railroad, operated by the Chicago, Dubuque & Minnesota Company, extended from Elkport to Lima, 35 miles; the Des Moines & Minnesota Railroad, 10 miles, to Story City; the Chicago, Newton & Southwestern, which has passed into the hands of the Iowa, Minnesota & North Pacific Company, completed from Newton to Monroe, 13 miles; the Sioux City & Pembina, operated by the Dakota Southern Company, 11 miles, in Plymouth County; a new narrow-gauge road constructed by the Burlington & Northwestern Railway Company, from Burlington to Winfield, 34 miles; the Maple River Railroad, from the Chicago & Northwestern Railway to Mapleton; the Fort Dodge & Fort Ridgely Railroad, 11 miles into Humboldt County; the Crooked Creek Narrow-Gauge Railroad, from Fort Dodge, 9 miles, to Tyson's Mill; and the Chicago, Clinton & Western, from Iowa City to Elmira, on the Burlington, Chicago & Northwestern Railway, 9 miles.

The Government canal constructed around the Des Moines Rapids of Keokuk was formally opened in August. The work had been in progress 10 years. The canal is $7\frac{1}{2}$ miles long, and 300 feet wide, and has 3 locks, each 350 feet long. It has cost the United States

Government \$4,281,000, and \$100,000 more will be necessary for the final completion of the work.

The convention of the Republican party of the State was held at Des Moines on the 27th of June, the Hon. James F. Wilson presiding. It was characterized chiefly by a lack of sympathy with the policy adopted by the National Administration affecting the Southern States. Hon. John H. Gear, of Burlington, was nominated for the office of Governor; Frank T. Campbell, of Jasper County, for Lieutenant-Governor; James G. Day for Judge of the Supreme Court, and Prof. C. W. Van Coelln for Superintendent of Public Instruction.

The platform adopted was as follows:

Acting for the Republican party of Iowa, by its authority and in its name, this Convention declares—

1. The United States of America is a nation, not a league. By the combined workings of the National and State Governments under their respective Constitutions, the rights of every citizen should be secured at home and protected abroad, and the common welfare promoted. Any failure on the part of either the National or State Government to use every possible constitutional power to afford ample protection to their citizens, both at home and abroad, is a criminal neglect of their highest obligation.

2. The Republican party has preserved these Governments to the commencement of the second century of the nation's existence, and they are embodied in the great truths spoken at its cradle, that "all men are created equal," that they "are endowed by their creator with certain inalienable rights, among which are life, liberty, and the pursuit of happiness; that for the attainment of these ends governments have been instituted among men, deriving their just powers from the consent of the governed," which consent is evinced by a majority of the lawful suffrages of the citizens determined in pursuance of law. Until these truths are universally recognized and cheerfully obeyed, the work of the Republican party is unfinished; and the Republican party of Iowa will stand by its colors and fight the good fight to the end.

3. The permanent pacification of the Southern section of the Union, and the complete protection of all its citizens in the free enjoyment of all their rights, is a duty to which the Republican party stand sacredly pledged. The power to provide for the enforcement of the principles embodied in the recent Constitutional Amendments, is vested by these Amendments in the Congress of the United States, and we declare it to be the solemn obligation of the legislative and executive department of the Government to put into immediate and vigorous exercise all their constitutional powers for removing any just causes of discontent on the part of any class, and for securing to every American citizen complete liberty and exact equality in the exercise of all civil, political, and public rights. To this end we imperatively demand of Congress and the Chief Executive a courage and fidelity to these duties which shall not falter until their results are placed beyond dispute or recall.

4. That the public credit should be sacredly maintained, and all the obligations of the Government honestly discharged, we favor the early attainment of a currency convertible with coin, and, therefore, advocate the gradual resumption of specie payments by continuous and steady steps in that direction.

5. That the silver dollar having been the legal unit of value from the foundation of the Federal Government until 1873, the law under which its coinage was suspended should be repealed at the earliest possible day, and silver made, with gold, a legal tender for the payment of all debts, both public and pri-

vate. We also believe that the present volume of the legal-tender currency should be maintained until the wants of trade and commerce demand its further contraction.

6. That the investment of capital in this State should be encouraged by wise and liberal legislation, but we condemn the policy of granting subsidies at the public expense to either individuals or corporations for their private use.

7. That we demand the most rigid economy in all departments of the Government, and that taxation be limited to the actual wants of the public expenditure.

8. That we favor a wisely adjusted tariff for revenue.

9. That we hold it to be a solemn obligation of the electors of Iowa to be earnest in securing the election to all positions of public trust of men of honesty and conscience; to the administrative offices, men who will faithfully administer the laws; to the legislative offices, men who will represent upon all questions the best sentiment of the people, and who will labor earnestly for the enactment of such laws as the best interests of society, temperance, and good order shall demand.

10. That we rejoice in the honorable name of Iowa; that we are proud of the State's achievements, of the degree of purity with which its public affairs have been conducted, and of the soundness of its credit at home and abroad. And we pledge to do whatsoever may be done to preserve, unsullied, the State's reputation in these regards.

Resolutions expressing confidence in the ability and integrity of President Hayes, and approving of the "so-called Southern policy," were defeated. A resolution in favor of the "rigid enforcement of our present prohibitory liquor law and any amendment thereto that will render its provisions more effective in the suppression of intemperance," was adopted.

The Democratic Convention was held in Marshalltown on the 29th of August. John P. Irish was nominated for Governor, W. O. James for Lieutenant-Governor, H. E. J. Boardman for Judge of the Supreme Court, and G. D. Cullison for Superintendent of Public Instruction.

The platform adopted was as follows:

1. The Democracy of Iowa, in convention assembled, hereby declare in favor of a tariff for revenue only, honest economic home rule, the supremacy of civil over military power, the separation of the Church and State, the equality of all citizens before the law, opposition to the granting by the General Government of subsidies to any corporation whatever.

2. The destruction of the industry of the country and the pauperism of labor are the inevitable fruits of the vicious laws enacted by the Republican party.

3. That as means of relieving the distressed portion of the community, and removing the great stringency complained of in business circles, we demand the immediate repeal of the specie resumption act.

4. We denounce, as an outrage on the rights of the people, the enactment of the Republican measure demonetizing silver, and demand the passage of a law which shall restore to silver its monetary power.

5. We favor the retention of a greenback currency, and declare against any further contraction, and we favor the substitution of greenbacks for national bank bills.

6. We congratulate the country upon the acceptance by the present Administration of the constitu-

tional and pacific policy of local self-government in the States South, so long advocated by the Democratic party, and which has brought peace and harmony to that section; and in regard to the future financial policy, in the language of our national platform adopted in the New York Convention in 1868, we urge

7. The payment of the public debts of the United States as rapidly as practicable, all money drawn from the people by taxation, except so much as is requisite for the necessary expenses of the Government economically administered, being honestly applied to such payment when due.

8. Equal taxation of every species of property according to its value.

9. One currency for the Government and the people, the laborer and the office-holder, the pensioner and soldier, and the producer and the bondholder.

10. The right of the State to regulate its corporations having been established by the highest court of the country, we now declare that this right must be exercised with due regard to justice, and as there is no necessary antagonism between the people and these corporations, the common interests of both demand the speedy restoration of the former friendly relation, through just legislation on one side and a cheerful submission thereto on the other.

11. The rights of capital and labor are equally sacred, and alike entitled to legal protection. They have no just cause of quarrel, and the proper relations to each other are adjustable by natural laws, and should not be hampered by legislative interference.

12. We favor the repeal of the present prohibitory liquor law of this State and the enactment of a judicious and well-regulated license law instead, all money derived from licenses to go to the common school fund of the State.

The following resolution was also adopted unanimously:

Resolved, That it is the belief of the Convention of the Democrats of Iowa that S. J. Tilden and Thomas Hendricks were respectively elected President and Vice-President at the last election.

A convention of the Greenback party had been held at Des Moines on the 12th of July, at which D. P. Stubbs was nominated as a candidate for Governor, A. A. McCready for Lieutenant-Governor, John Porter for Judge of the Supreme Court, and S. T. Ballard for Superintendent of Public Instruction. The platform was as follows:

Whereas, Throughout our entire country, labor, the creator of all wealth, is either unemployed or denied its just reward, and all productive industries are paralyzed; and

Whereas, These results have been brought about by class legislation and the mismanagement of our national finances; and

Whereas, After generations of experience, we are forced to believe that nothing further can be hoped for through the old political parties: therefore, we make the following declaration of principles:

1. We demand the unconditional repeal of the specie resumption act of January 14, 1875, and the abandonment of the present suicidal and destructive policy of contraction.

2. We demand the abolition of national banks, and the issue of legal-tender paper money, by the Government, and made receivable for all dues public and private.

3. We demand the remonetization of the silver dollar, making it a full legal tender for the payment of all coin bonds of the Government, and for all other debts, public and private.

4. We demand the equitable taxation of all property without favor or privilege.

5. We commend every honest effort for the furtherance of civil service reform.

6. We demand the repeal of all class legislation, and the enforcement of such wise and progressive measures as shall secure equality of rights to all legitimate interests, and impartial justice to all persons.

7. We demand a reduction of offices and salaries, to the end that there be less taxation.

8. We demand that the Independents of Iowa sustain and indorse the principles of railroad legislative control, as expressed by the highest judicial authority, not as enemies of public enterprises, but as friends of the whole country and of the people.

9. We demand that all legal means be exhausted to eradicate the traffic in alcoholic beverages, and the abatement of the evil of intemperance.

10. We are opposed to all further subsidies by either the State or General Government, for any and all purposes, either to individuals or corporations.

11. We invite the considerate judgment of our fellow-citizens, of all political parties, upon these our principles and purposes, and solicit the coöperation of all men in the furtherance of them, as we do believe that upon their acceptance or rejection by the people the weal or woe of our beloved country depends.

A convention of Prohibitionists was held at Grinnell, on the 22d of August. Their candidate for Governor was Elias Jessup, the rest of the ticket being made up of nominees of the Greenback party.

The election took place on the 9th of October. The total vote for Governor was 245,766, of which Gear received 121,546, Irish 79,353, Stubbs 34,228, and Jessup 10,639. Gear's plurality over Irish was 42,193, but he did not have a majority of all the votes. The Legislature of 1878 consists of 38 Republicans and 12 Democrats in the Senate; and 73 Republicans, 25 Democrats, and 2 "Greenbackers" in the House. The Republican majority is therefore 26 in the Senate, and 46 in the House, or 72 on a joint ballot.

Mr. Gear, the new Governor, was born in Utica, New York, in 1825, and removed to Fort Snelling in 1836. He became a resident of Burlington in 1843, and has been a citizen of the State ever since it was admitted into the Union. He has been prominently engaged in mercantile affairs for many years, his business of late being that of a wholesale dealer in groceries. He was an original member of the Republican party of the State, and in 1863 was chosen Mayor of Burlington. He has since served three terms in the General Assembly, and for two sessions was the presiding officer of the House of Representatives.

The annual convention of the State Woman Suffrage Society was held at Des Moines on the 24th of October. It was devoted mainly to reports and discussions, and the following resolutions were adopted:

Resolved, That the aristocracy of sex as it exists in this country is contrary to natural justice and to the spirit of our free institutions.

Resolved, That taxation without representation is tyranny, whether the victims be women or men, and that all persons who assist in bearing the burdens of government should share equally in its privileges.

Resolved, That the ballot is a source of power and necessary to the protection of individual rights and liberties; that it should be the property of all law-abiding adult citizens.

Resolved, That we believe the ballot in woman's hand would prove a blessing alike to herself and her country; that while it will protect her rights, advance her interests, and enlarge her opportunities, it will also bring to the State the ameliorating influence of her enlightened conscience and moral force.

Resolved, That we pledge ourselves to a more determined and vigorous prosecution of this work; and that we will besiege the State Legislature to take such preliminary action as is necessary toward investing woman with her full rights of citizenship.

Whereas, The ballot is necessary to uproot many of the evils which afflict society; and

Whereas, Women are deprived of this potent, silent power; therefore,

Resolved, That it is not the duty of women to contribute to the support of the clergy who oppose their enfranchisement.

Whereas, Congress has enfranchised the negro, alien, and ex-rebel; and

Whereas, The woman citizens are as intelligent as the aforesaid classes; therefore,

Resolved, That the citizens of the State unite in a petition to Congress for a sixteenth amendment to the Constitution of the United States, giving women also the ballot upon equal terms with men.

Resolved, That the thanks of the Christian women of this Convention be extended to Rev. Isaac See, of New Jersey, and other clergymen, for their noble stand, as ministers of the Gospel, in behalf of woman's right to speak from the pulpit, and thus help to remove the bigotry which fetters the free exercise of the religious inclinations of women.

The annual session of the State Grange was held at the State House in Des Moines, beginning December 11th, and continuing four days. Among the resolutions and declarations were the following:

Resolved, That the State Grange favors the repeal of the resumption act, and the remonetization of silver, and the repeal of the national bank act, and asks the General Assembly to memorialize Congress to shape the financial legislation of the country in accordance with this resolution.

Resolved, That the effort now being made by the Boards of Supervisors of the State to procure legislative reforms reducing the burdens of taxation, has our earnest sympathy.

Resolved, That the Master of this Grange be instructed to present the Convention of Supervisors with a copy of these resolutions, and to call their attention to the propriety of procuring legislation on the following subjects:

1. The abolition of the grand jury.
2. To compel litigants to give security for costs.
3. To tax the whole cost of jury to the losing party. And the winning party shall pay the jury before the verdict is recorded.
4. To fix by law the fee of attorneys appointed by the court to defend criminals.
5. To regulate more definitely the compensation allowed short-hand reporters.
6. The propriety of abolishing the office of County Superintendent.
7. To compel Sheriffs to report their fees as other county officers.

The Supreme Court of the United States decided, in June, the case in which the Chicago, Burlington & Quincy Railroad was the plaintiff in error, brought for the purpose of testing the constitutionality of the law regulating freight and passenger charges on the

railroads of the State. The decision affirmed the right and authority of the State to regulate these charges unless prevented by the terms of charters. It is claimed by those opposed to what is known as the "Grange Legislation," that the result has been to keep capital from seeking investment in the State, that it has prevented Iowa roads generally from making dividends, and that it has increased the burden of the people for transportation expenses beyond the limits of the State, by compelling the companies to secure heavy charges over connecting lines, in which they have an interest.

In a case brought in the Des Moines Circuit Court, and tried in March, for the recovery of property stolen in a sleeping-car, a verdict for the plaintiff was rendered. The court in laying down the law said: "If a person purchases a first-class railroad ticket and a ticket for a sleeping-car berth, the owner of the sleeping-car is under obligations to furnish suitable facilities and means to him for sleeping, and to take charge of and secure the safety of his personal effects—to the extent that is reasonable and prudent for a man to take with him while traveling—while he is asleep."

An accident on the Chicago, Rock Island & Pacific Railroad, on the 28th of August, occasioned by the giving way of a bridge over Little Four Mile Creek, nine miles west of Des Moines, resulted in the death of 20 per-

sons and the injury of 35 others. It was the severest disaster of the kind ever known in the State.

An interesting colony of German socialists, with peculiar religious views, is located at "Homestead," on the Chicago, Rock Island & Pacific Railroad, a short distance west of Iowa City. It is known as the Am-a-na Society's settlement. The number of inhabitants, when the State census was taken in 1875, was 1,624, of whom 827 were males and 797 females. There are seven small villages about three miles apart, consisting of about 250 houses in all, occupied by some 300 families. All property belongs to the Society, though each family has an exclusive right to the use of its house. Meals are taken at boarding-houses. All receipts and expenses are an affair of the Society, and not of individual members. The community is represented as being sober, industrious, and flourishing. Their religion is a modified form of Christianity, somewhat similar to that of the Quakers.

IRON AND STEEL. According to the latest annual report of the American Iron and Steel Association, which contains the most comprehensive and trustworthy statistics, prepared by Mr. James M. Swank, the secretary of the association, the total iron and steel production of the United States during the past five years, in net tons of 2,000 lbs., was as follows:

PRODUCTS.	1872.	1873.	1874.	1875.	1876.
Pig-iron	2,854,558	2,863,273	2,639,413	2,266,581	2,098,236
All rolled iron, including nails and rails	1,941,992	1,966,445	1,839,560	1,890,379	1,921,730
All rolled iron, including nails and excluding rails	941,992	1,076,363	1,110,147	1,097,867	1,042,101
Bessemer steel rails	94,070	129,015	144,944	290,863	412,461
Iron and all other rails	905,930	761,062	584,469	501,649	467,168
Street rails, included in iron rails	15,000	9,430	6,739	16,340	18,066
Rails of all kinds	1,000,000	890,077	729,418	792,512	879,629
Kegs of cut nails and spikes, included in all rolled iron	4,065,322	4,024,704	4,912,180	4,726,881	4,157,814
Crucible cast-steel	29,260	34,736	86,323	39,401	39,382
Open-hearth steel	3,000	3,500	7,000	9,050	21,490
All other steel, except Bessemer	7,740	13,714	6,353	12,607	10,306
Bessemer steel ingots	120,108	170,652	191,983	875,517	525,996
Blooms from ore and pig-iron	68,000	62,564	61,670	49,243	44,628

The decrease in the production of pig-iron from 1873, the year of greatest production in the United States, to 1876, has been 775,042, or 27 per cent. This great shrinkage indicates, with concurrent low prices, a marked depression in the pig-iron industry of the country. The decrease was 6 per cent. in 1874, 15 per cent. in 1875, and 8 per cent. in 1876. The figures for 1876, as compared with those of the preceding year, indicate that the industry has begun to rally from the effects of the panic of 1873. This view is strengthened by the fact that there has been a gradual decrease in the unsold stock on hand at the end of the year. At the close of 1874, this stock amounted to 795,784 net tons; at the close of 1875, 760,908 tons; and at the close of 1876, 674,798 tons. Twenty-three States, and the Territory of Utah, made pig-iron in 1876. Pennsylvania made almost one-half of the entire product, viz., 1,009,613 net tons, or 48.2 per cent., slightly increasing its production over that of 1875, and largely increasing its percentage,

which was 42.4 in that year. Ohio came next to Pennsylvania in 1876, making 403,277 tons, or 19.2 per cent., showing a slight decrease upon its production in 1875, but also a slight increase in its percentage, which was 18.3 in 1875.

At the close of 1876 there were, in 25 States and the Territory of Wyoming, 338 rolling-mills, containing 4,488 single puddling-furnaces, each double furnace being counted as two single furnaces. Of the whole number of mills, 260 were in operation during the whole or part of the year. Of the whole number 98 were built to make rails, and of these 56 made rails in 1876. The rolling-mill capacity of the country, like its blast-furnace capacity, is at least double the production of 1876. Sixty-four rolling-mills in 13 States made cut nails and spikes in 1876. The number of machines contained in these mills was over 3,800, but all were not employed. The American keg of nails weighs 100 lbs.

The production of pig-iron by States in recent years has been as follows:

Of the total production, in 1876, of 2,093,236 net tons of pig-iron, 990,009 tons were smelted with bituminous coal and coke; 794,578 tons with anthracite coal; and 308,649 tons with charcoal. The production of bituminous coal and coke first exceeded that of anthracite in 1875, and then by only 39,499 tons; but in 1876 anthracite fell 195,431 tons below its rival, and 113,468 below its own production in 1875.

The production of bituminous pig-iron was greater in 1876 than in 1872, and 42,464 tons greater in 1876 than in 1875. The production of charcoal pig-iron declined almost 50 per cent. from 1874 to 1876. In the latter year the production was 308,649 tons, against 576,557 tons in 1874, and 410,090 in 1875.

The most important producing districts in the United States are as follows:

DISTRICTS.	WHOLE NUMBER COMPLETED FURNACES, DEC. 31,				CONDITION OF FURNACES ON DEC. 31, 1876.		MAKE OF PIG-IRON, IN NET TONS. (TONS OF 2,000 POUNDS.)

The whole number of completed furnaces in the country at the close of 1876, which were either active, or capable of being made so on short notice, was 714, against a similar total of 713 at the close of 1875. Of the total number of furnaces at the close of 1876, 236 were in blast, and 478 were out of blast. Of 713 furnaces at the close of 1875, 293 were in blast, and 420 were out of blast. The productive capacity of the furnaces of the country is at least twice the actual yield of either of the last two years. The greatest activity in

the erection of new furnaces has been shown in the Hocking Valley, in Ohio, where several bituminous furnaces have been built since the beginning of 1876, while others are now in course of erection or definitely projected. The production of pig-iron in the United States was 54,000 gross tons in 1810, 20,000 in 1820, 165,000 in 1830, 315,000 in 1840, and about 565,000 in 1850. The growth of the various branches of the pig-iron trade of the United States from 1854 to 1876 has been as follows:

YEARS.	Anthracite.	Charcoal.	Bituminous Coal and Coke.	Total.
1854.....	339,495	942,298	54,485	736,218
1855.....	351,566	839,922	62,390	754,178

1874.....	1,202,144	576,557	910,712	2,689,413
1875.....	918,046	410,990	947,545	2,266,581
1876.....	794,578	308,649	990,009	2,093,236

The total consumption of pig-iron in the United States is estimated at 2,154,813 net tons in 1871, 3,149,048 in 1872, 3,012,883 in 1873, 2,734,539 in 1874, 2,324,300 in 1875, and 2,172,503 in 1876. There were imported 245,535 tons in 1871, 295,967 in 1872, 154,708 in 1873, 61,165 in 1874, 66,457 in 1875, and 83,072 in 1876.

The aggregate yield in gross tons of the mines and furnaces of the Lake Superior district, from 1856 to 1876, together with the value of the same, has been as follows:

YEARS.	Iron Ore.	Pig-Iron.	Ore and Pig-Iron.	Value.
1856.....	7,000	7,000	\$28,000
1857.....	21,000	21,000	63,000
1858.....	31,035	1,629	32,664	249,202
1859.....	65,679	7,253	72,937	575,529

1876.....	977,233	61,911	1,039,144	5,397,785
Total...	9,536,353	663,015	10,199,369	\$74,553,279

Rolled Iron.—The total production of all kinds of rolled iron in the United States in 1876 was 1,921,730 net tons, against 1,890,379 tons in 1875, 1,839,560 tons in 1874, and 1,966,445 tons in 1873. As 1873 was the year of greatest production of rolled iron in this country, the steady maintenance in each of the succeeding years of a production only slightly less than that of 1873 shows that the rolling mills must have been more actively employed than is generally supposed; almost as much iron was rolled in 1876 as in 1873.

The probable consumption in the United States of all rolled iron, except rails, was 857,799 net tons in 1871, 1,054,253 in 1872, 1,157,502 in 1873, 1,140,312 in 1874, 1,116,655 in 1875, and 1,067,111 in 1876. The production, importation, and probable consumption of rails in the United States, from 1867 to 1876, were as follows:

YEARS.	Made in United States. Net tons.	Imported. Net tons.	Probable Consumption. Net tons.
1867.....	462,103	163,049	625,157
1868.....	506,714	260,081	756,795
1869.....	563,586	813,163	906,749
1870.....	620,000	399,153	1,019,153
1871.....	776,733	{ Iron, 515,000 Steel, 50,701	1,341,434
1872.....	1,000,000	{ Iron, 381,064 Steel, 149,736	1,530,850
1873.....	890,077	{ Iron, 99,201 Steel, 159,571	1,148,849
1874.....	729,413	{ Iron, 7,796 Steel, 100,486	887,695
1875.....	792,512	{ Iron, 1,942 Steel, 16,816	610,770
1876.....	879,229	{ Iron, 287 Steel, None	879,916

Bessemer Steel.—In 1876 11 Bessemer steel establishments were in operation in the United States, of which 5 were in Pennsylvania, 3 in Illinois, and 1 each in New York, Ohio, and Missouri. In the ten years during which the Bessemer steel industry of this country may properly be said to have had an existence, there has been produced a total of 1,163,028 net tons of steel rails. It has had a slow growth until within the last few years, but it is now a leading branch of the iron industry of the country. In 1876 it consumed one-fourth of the total pig-iron product of that year, and produced more tons of steel rails than the country had produced of iron rails in any year prior to 1866. The details of the Bessemer steel industry in the United States for three years have been as follows:

DETAILS OF PRODUCTION.	1874. Net tons.	1875. Net tons.	1876. Net tons.
Pig-iron and spiegeleisen converted.....	204,352	395,956	539,574
Ingot produced.....	191,933	375,517	525,996
Rails produced.....	144,944	290,363	412,461

The Bessemer steel produced, which is not rolled into rails, is used in various forms as a substitute for wrought-iron, or other kinds of steel.

Steel, other than Bessemer.—In 1876 47 establishments made crucible, puddled, blister, and open-hearth steel in the United States. These establishments were situated in New Hampshire, Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Ohio, Maryland, and Tennessee. There are also steel works in Rhode Island, Georgia, Kentucky, and Illinois, but they were not in operation in 1876. The total production in 1876 was as follows:

DISTRICTS AND STATES Making Steel in 1876.	Crucible Steel, Net tons.	Puddled, Open- hearth, and Bessemer Steel, Net tons.	Total, Net tons.
New England.....	1,098	6,085	7,183
New York.....	2,300	189	2,489
New Jersey.....	6,806	652	7,458
Pennsylvania.....	28,217	15,148	43,365
Ohio.....	700	9,558	10,258
Maryland and Tennessee.....	261	475	475
Total.....	39,382	31,796	71,178

The production of open-hearth or Siemens-Martin steel made but slow progress in this country until 1872, when 3,000 net tons were produced. The production amounted to 3,500 tons in 1873, 7,000 in 1874, 9,050 in 1875, and 21,490 in 1876, the last being the product of 10 establishments.

Imports and Exports of Iron and Steel.—During the year ended December 31, 1876, there were imported into the United States iron and steel products aggregating in value \$10,584,126, against \$15,264,131 in 1875, \$24,578,638 in 1874, \$45,764,670 in 1873, \$61,714,227 in 1872, and \$47,919,926 in 1871. Tin plate is not included in these figures. During the year ended December 31, 1876, there were exported iron and steel products of domestic manufacture to the value of \$15,997,643; 1875, \$20,417,635; 1874, \$20,458,732; 1873, \$16,687,754; 1872, \$14,360,617;

and 1871, \$15,206,179. The decrease in imports since 1872 has been very great, but the exports have remained substantially the same. "The hopes," says the secretary of the American Iron and Steel Association, "that have been indulged by many persons that this country would soon enjoy a large export trade in iron and steel products, have not been realized, and the principal reason why they have not been realized is due to the fact that other leading iron-producing countries still manufacture the coarser forms of iron and steel cheaper than we do. But there are other forms of iron and steel that we could introduce more largely than we do into foreign markets in successful competition with foreign manufactures."

The consumption of American iron has not greatly decreased since the beginning of the panic of 1873. This fact does not indicate even moderate prosperity to the American trade during this period, but it is significant of the vast quantity of iron and steel which this country will always require, even in periods of great depression. The following tables show the marked decline which has taken place in the prices of four leading products of iron industry during the past four years, which embrace the period immediately preceding the panic of September 19, 1873, and extending to the beginning of 1877. The ton quoted is the gross ton of 2,240 lbs.:

In May, 1877, the price of No. 1 anthracite foundry pig-iron had still further declined to \$18.50 in Philadelphia, and the price of refined bar-iron in the same market to \$44.80. The

price of best iron rails had fallen to \$37 in Philadelphia, and the price of Bessemer rails at the works to \$48 and \$49. These are as low prices as the country has ever known.

The production in recent years of cast or pig iron in the various iron-producing countries of the world has been as follows:

COUNTRIES.	Year.	Gross Tons.	Per Cent. of Total.
Great Britain.....	1875	6,365,462	46.52
United States.....	1876	1,563,960	13.66
Germany.....	1874	1,660,208	12.13
France.....	1876	1,449,587	10.59
Belgium.....	1875	541,805	3.96
Austria and Hungary.....	1875	455,227	3.33
Russia.....	1874	514,497	3.76
Sweden.....	1875	350,525	2.56
Luxemburg.....	1874	246,054	1.80
Italy.....	1872	26,000	.19

Norway.....	1870	3,975	.03
Mexico.....	1876	7,500	.06
Canada.....	1876	7,500	.06
Japan.....	1874	8,000	.04
Switzerland.....	1872	7,500	.06
Turkey in Europe and Asia.....	40,000	.29
Australasia.....	10,000	.07
All other countries.....	50,000	.36
Total.....		13,632,750	100.00

The total number of Bessemer works and converters in Europe at the beginning of 1877 was as follows:

COUNTRIES.	Works.	Converters.
Great Britain.....	21	105
Germany.....	19	73
France.....	8	28
Austria.....	12	30
Sweden.....	19	33
Belgium.....	2	6
Russia.....	2	4
Total.....	83	239

The annual producing capacity of these works is estimated at over 2,000,000 tons. Including the 11 establishments and 22 converters in the United States, with an annual capacity of 500,000 tons, the total for the world becomes 94 establishments, and 311 converters, capable of producing 2,500,000 tons of steel annually.

Iron in Brazil.—From its abundance and good quality, iron constitutes one of the most important elements of the wealth of this Empire. In some places the ore is found under the most favorable conditions. Incalculable quantities exist in Minas Geraes, and a large part of some of the mountains is composed of oligistic, magnetic, and micaceous iron. In the northern provinces, as well as in some of the others, there are enormous quantities of iron, more or less decomposed, in the argillaceous deposits which cover the plains and the slopes of the hills. In a comprehensive report on the condition of the Empire, published in 1876, it was asserted that in Brazil there are iron mines which, owing to the complete absence of pyrites, are incontestably superior to the famous mines of Sweden.

The magnetic ore of Brazil contains 72.5 per cent. of iron; the oligistic, the martite, and the best micaceous, 70 per cent.; the proportion falling in the inferior qualities as low as 25 and 20 per cent. In general the deposits can be easily and economically worked,

being for the most part near extensive forests, which, when cut down, spring up again in from six to ten years, and which, therefore, always furnish excellent fuel, near abundant streams and falls, which provide immense water-power for working machinery. Taking advantage of these favorable circumstances, many persons have obtained very profitable results from iron mining. The most important iron works in South America are on the banks of the small river Ypanema, one of the affluents of the Sorocaba. This establishment possesses valuable resources: ore of excellent quality, carbonate of lime for fluxes, refractory clay for building furnaces, sufficient water-power for the more important machinery, and very good forests, which can furnish a daily supply of fifteen metrical tons of charcoal—a quantity sufficient to keep the furnace constantly at work. By obtaining machinery and some skilled workmen from Europe, the Brazilian Government is doing its utmost to make this establishment a successful one.

ISMAIL PASHA, the Khedive or Viceroy of Egypt, and the most powerful of the Sultan's vassals, was born in 1830. He is the second son of Ibrahim Pasha, and grandson of Mehemet Ali. He was educated in Paris, and succeeded his uncle, Said Pasha, in 1863. During his reign he has introduced great improvements, and has brought his country to virtual independence of Turkey. In 1866 he made the beginning of a parliamentary form of government by calling an assembly of the nobility. In 1866 he also made an important step toward obtaining his independence of Turkey, by receiving the sanction of the Sultan to make the law of succession hereditary in the direct line of Ismail, in accordance with the laws prevailing among the Christian Powers of Europe, and in 1867 the Sultan conferred upon him the higher title of Khedive. The opening of the Suez Canal, in 1864, although of the utmost importance to all the nations of Europe, was an event which promised to add greatly to the resources and the power of Egypt. The conquests made during his reign by his generals in Central Africa, raising Egypt in point of territorial extent to the seventh rank among the nations of the earth, also tended to give him a position which only needed his independence to be recognized in the council of nations. It was a matter of wonder that he, of all the vassals of Turkey, should not seize the opportunity of the Turkish war with Russia to proclaim himself independent, but should even furnish Turkey with auxiliaries. But he was certainly opposed by England in any designs that he may have entertained, as England's interests were thought to demand at this time a preservation of the Turkish Power. The heir-apparent is the Khedive's oldest son, Prince Mohammed Tewfik, born in 1852.

ITALY,* a kingdom of Southern Europe.

* For an account of the movement of population, see ANNUAL CYCLOPEDIA for 1876.

King, in 1877, Victor Emanuel II. Heir-apparent, Humbert, born March 14, 1844; married April 22, 1868, to Margarita, daughter of Prince Ferdinand of Savoy, Duke of Genoa; son, Victor Emanuel, Prince of Apulia, born November 11, 1869. (Victor Emanuel II. died January 9, 1878, and was succeeded by his oldest son, Humbert I.)

A new ministry was formed on December 26, 1877, composed of the following members: A. Depretis, President of the Council of Ministers and Minister of Foreign Affairs; M. Crispi, Minister of the Interior; M. Magliano, Minister of Finance; P. S. Mancini, Minister of Justice and Worship; Lieutenant-General L. Mezzacapo, Minister of War; B. Brin, Minister of the Navy; M. Coppino, Minister of Public Instruction; M. Perez, Minister of Public Works; M. Bargonì, Minister of the Treasury.

The following table gives the area of the larger territorial divisions (*compartimenti*), with the population, male and female, of each, according to the census of 1871, and the total population at the close of 1876, according to an official calculation:

TERRITORIAL DIVISIONS.	Square Miles.	INHABITANTS, 1871.		Inhabitants at the Close of 1876.
		Male.	Female.	
Piedmont.....	11,806	1,450,857	1,449,207	3,027,596
Liguria.....	2,056	419,919	423,893	874,616
Lombardy.....	9,085	1,755,545	1,705,279	3,559,527
Venetia.....	9,060	1,334,864	1,303,443	2,769,594
Emilia.....	7,921	1,078,686	1,035,142	2,174,579
Umbria.....	3,720	252,574	267,027	567,131
The Marches.....	3,746	449,548	465,871	936,185
Tuscany.....	9,287	1,096,652	1,045,873	2,192,292
Rome.....	4,601	449,346	397,358	841,140
The Abruzzo and Molise.....	6,677	625,547	657,495	1,315,197
Campania.....	6,942	1,366,557	1,388,085	2,834,952
Apulia.....	8,539	708,514	712,378	1,438,218

Calabria.....	6,668	598,829	612,473	1,240,772
Sicily.....	11,291	1,284,331	1,299,563	2,736,545
Sardinia.....	9,399	327,073	309,557	658,479
Total.....	114,415	13,472,262	13,328,392	27,769,475

In the budget for 1877 the revenue and expenditures were estimated as follows:

ORDINARY REVENUE.

	Lire.
1. Land-tax.....	180,433,636
2. Income-tax.....	182,325,636
3. Duty on grinding.....	81,000,000
4. Mutation-tax.....	142,496,800
5. Registration.....	3,200,000
6. Customs.....	106,000,000
7. Consumption duties (octroi).....	69,634,757
8. Tobacco and salt.....	171,484,891
9. Lottery.....	75,100,000
10. Miscellaneous dues.....	17,576,143
11. Postal department, state railroads and telegraphs.....	71,682,776
12. Incidental receipts.....	7,127,479
13. Receipts from state property and state assets.....	74,749,436
14. Returns of payment and miscellaneous receipts.....	87,965,955
Total ordinary revenue.....	1,270,777,014

The extraordinary receipts amounted to 94,-222,585 lire, and the special revenue from the ecclesiastical property to 33,410,000 lire, making the total revenue 1,398,409,599 lire.

EXPENDITURES.

	Ordinary.	Extraordinary.
1. Ministry of Finance.....	875,557,327	21,563,864
2. Ministry of Justice and Public Worship.....	27,804,752	829,400
3. Ministry of Foreign Affairs.....	6,591,881	174,856
4. Ministry of Public Instruction.....	21,271,987	778,324
5. Ministry of Interior.....	52,754,861	3,801,520
6. Ministry of Public Works.....	50,061,418	83,905,099
7. Ministry of War.....	170,246,168	25,422,000
8. Ministry of the Navy.....	40,439,778	1,191,000
9. Ministry of Agriculture, Commerce, and Industry.....	9,761,513	355,705
Total.....	1,253,589,185	157,018,068

The aggregate of the ordinary and extraordinary expenditures amounted to 1,390,607,203 lire, leaving a surplus of 7,802,396 lire.

The total debt of the kingdom amounted, in 1875, to a nominal capital of 9,883,589,226 lire.

The value of the different articles of import and export in 1876 was as follows, the transit trade being included in both the imports and exports (in lire):

ARTICLES.	Imports.	Exports.
Grain.....	108,000,000	76,000,000
Seeds and fruit.....	13,000,000	69,000,000
Colonial goods.....	107,000,000	4,000,000
Tobacco.....	34,000,000
Wine, beer, ale, etc.....	14,000,000	25,000,000
Animals and animal provisions.....	72,000,000	90,000,000
1. Articles of food.....	349,000,000	267,000,000
Fuel.....	49,000,000	5,000,000
Ores, etc.....	16,000,000	55,000,000
Metals, raw.....	56,000,000	7,000,000
Hair, hides, and leather.....	51,000,000	10,000,000
Spinning materials.....	227,000,000	440,000,000
Wood and carving materials.....	43,000,000	16,000,000
2. Raw materials.....	442,000,000	533,000,000
Glass and pottery ware.....	17,000,000	5,000,000
Yarns.....	70,000,000	58,000,000
Woven goods and articles of clothing.....	207,000,000	23,000,000
Manufactures of different kinds.....	115,000,000	129,000,000
Paper, books, etc.....	8,000,000	5,000,000
3. Manufactured goods.....	417,000,000	225,000,000
Manure.....	1,000,000	1,000,000
Drugs and chemical products.....	45,000,000	49,000,000
Resin, fats, and oils.....	56,000,000	184,000,000
4. Miscellaneous goods.....	102,000,000	154,000,000
5. Precious metals.....	20,000,000	8,000,000
Total.....	1,390,000,000	1,217,000,000

The commercial value of the imports to and exports from the different countries in 1875 was as follows (in lire):

COUNTRIES.	Imports.	Exports.
France.....	369,800,000	392,600,000
England.....	297,700,000	140,100,000
Austro-Hungary.....	234,600,000	191,600,000
Switzerland.....	36,000,000	108,800,000
Russia.....	46,400,000	24,700,000
United States.....	43,000,000	29,100,000
Germany.....	37,800,000	28,600,000
South American Republics.....	30,100,000	46,700,000
Turkey.....	30,400,000	13,200,000
Other countries.....	90,000,000	63,800,000
Total.....	1,215,300,000	1,033,700,000

The movement of shipping in 1875 is exhibited by the following table:

VOYAGES.	TOTAL.		LADEN.		STEAMERS.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
ENTERED.						
1. Long voyage:						
Italian.....	10,495	1,273,186	9,069	1,104,631	778	409,873
Foreign.....	6,288	2,560,207	5,589	2,410,354	2,736	1,965,162
Total long voyage.....	16,783	3,833,343	14,608	3,514,985	3,514	2,895,035
2. Short voyage:

Total.....	116,632	12,705,216	85,876	10,516,739	19,540	8,234,325

The movement of the special foreign trade, from 1871 to 1876, was as follows:

YEAR.	OFFICIAL VALUE.		COMMERCIAL VALUE.	
	Imports.	Exports.	Imports.	Exports.
1871...	880,100,000	756,600,000	963,700,000	1,085,500,000
1872...	1,139,200,000	1,103,800,000	1,186,600,000	1,167,200,000
1873...	1,184,500,000	1,038,500,000	1,286,700,000	1,133,200,000
1874...	1,281,700,000	1,033,400,000	1,303,000,000	935,500,000
1875...	935,500,000	1,033,700,000	1,215,400,000	1,034,000,000
1876...			1,329,500,000	1,216,900,000

The commercial navy was composed as follows, at the close of 1876:

CLASS.		Vessels.	Tons.
1. Registered vessels (long-voyage, short-voyage, and fishing vessels)	Sailing vessels.	10,903	1,020,483
	Steamers.	142	57,831
2. Coast and port service		9,043	(?)
3. Fishing barks.		18,936	48,785
Total.		34,024	1,127,154

The strength of the Italian Army on September 30, 1876, was as follows:

Infantry of the line.....	230,998	Stud depots.....	214
Military districts.....	211,154	Disciplinary companies.....	542
Companies of the Alps.....	7,232	Penal institutions.....	1,827
Bersaglieri.....	89,319	Officers in service.....	11,166
Cavalry.....	27,445	Other officers.....	2,093
Artillery.....	57,571		
Engineers.....	10,211		
Gendarmes (Carabinieri).....	19,706	1. Standing army.....	623,804
Military schools.....	4,381	2. Provincial militia.....	270,973
Sanitary companies.....	3,705	3. Officers of reserve.....	1,928
Veterans.....	1,315	Total.....	901,700

The Navy was composed as follows in 1876:

NAVY.	No.	Guns.	Tons.	Horse-power
Men-of-War:				
Iron-clads.....	18	132	97,542	53,881
Screw-steamers.....	19	117	22,216	17,070
Wheel-steamers.....	10	46	10,186	7,186
Total men-of-war.....	47	295	129,944	83,137
Transports:				
Screw-steamers.....	13	44	16,457	9,072
Wheel-steamers.....	6	..	944	854
Total transports.....	19	44	17,401	9,926
Total navy.....	66	339	147,345	93,063

The railroad statistics are as follows:

YEARS.	Kilometres.
1875.....	7,704
1876.....	7,850
1877.....	7,894

The gross receipts of the railroads in 1875 were 114,819,287 lire. The costs of construction up to December 31, 1874, were, for the government roads, 452,341,146 lire; for the private roads, 1,849,709,635 lire; together, 2,302,050,781 lire.

The number of post-offices in 1875 were 3,010; of letters sent, 115,489,027; of postal-cards, 9,899,070; of printed matter, 113,849,538; of valuable letters, 4,374,716; of insured letters, 30,383, having a value of 25,413,338 lire; and of post money-orders, 3,589,346, having a value of 416,985,156 lire.

The length of telegraph-lines in 1876 was 22,349 kilometres; of wires in 1875, 75,449; of submarine cables in 1875, 178 kilometres; and of stations in 1876, 1,778. The number of dispatches in 1875 was 5,347,500; of which 5,037,490 were private dispatches, 171,947 official dispatches, and 138,133 service dispatches.

According to a report to the Department of State, at Washington, from the United States Consul at Rome, the number of emigrants from Italy in 1876 was 19,783; of whom 10,759 were men, 4,598 women, and the remainder children under 14 years of age. Of the whole number 13,476 went to South America, 2,559 to France, and 824 to the United States. Besides the emigrants, 89,024 persons left the country, who expected to return within a year. Of these, 31,994 went to France, 20,092 to Austria, 18,030 to Switzerland, 4,718 to South America, and 600 to the United States.

The Chambers met on January 15th. On the following day, Deputy Corte of the Left interrogated the Minister of the Interior with regard to certain repressive measures taken against the *Gazzetta d'Italia*, which led to a very violent discussion between the minister Nicotera and the friends of the former minister, Count Cantelli, whom Signor Nicotera accused of having

ANCIENT AND MODERN ROME AND ITS VICINITY.

aided the *Gazzetta* from public funds. On January 24th, the Chamber of Deputies adopted a law imposing severe penalties on priests abusing their powers to attack the Government and the laws. During the debate, the Minister of Worship and Justice declared that the law concerning the Papal guarantees was a solemn and unassailable pledge given to the Catholic world of the Pope's complete independence in the exercise of his spiritual power. Italy ought to regard the maintenance of this law as a question of honor and of loyalty toward Europe. He was determined to respect the law, and would not allow the political friends of the ministry to entertain any illusions in this respect. On March 3d, a law was passed by a large majority, prohibiting certain officers of the Government from becoming members of the Chamber of Deputies. On March 27th, Signor Depretis, the Minister of Finance, made his financial statement in the Chamber of Deputies. The

budget for 1877 shows a surplus of about 12,000,000 lire, and the minister said the expenditure must remain within the limits prescribed by that result. With regard to the construction of new lines of railways, Signor Depretis maintained that the funds required must be provided either through guarantees upon the earnings, or an appropriation of rente, the amount of which, however, should not exceed 50,000,000 or 60,000,000 lire annually. In reference to the Basle Railway Convention, the Government was engaged in liquidating the accounts with the company. Signor Depretis hoped to bring in a bill this session relative to the management of the railways. He alluded to the improvement effected in the state of the budget, and said the Government intended introducing administrative reforms without disturbing the equilibrium which had been attained. He announced the presentation of bills for the gradual extinction of the forced paper

currency, the conversion of the landed property of confraternities and parishes, the imposition of a tax upon the manufacture of home-made sugar, and the introduction of changes in the customs tariff. Alluding to the treaties of commerce, Signor Depretis said: "I hope that the moderation and equity of our demands will be appreciated, and that a conclusion will be arrived at. I cannot consent to long prolongation of the old treaties, and I shall remain unshakable in my resolution to exact parity of treatment." Finally, the ministry presented bills for creating a ministry of the Treasury, and making other administrative changes, as well as for limiting the circulation of paper money, and establishing a sinking fund of 20,000,000 lire. The Chamber subsequently adjourned for the Easter recess until the 9th of April. The Italian Green-book on the Eastern Question was presented on April 9th to the diplomatic corps, and on the 10th to Parliament. It contained 510 documents, ranging between the dates of July 17, 1875, to February 10, 1877, none of which, however, were said to be of any importance. A number of documents were afterward added, which showed that Italy had suggested the well-known voluntary declaration of Russia, when the Protocol was in danger through the opposition of Great Britain. On April 23d, the Chamber of Deputies were occupied with the consideration of the course pursued by the Government on the Eastern Question. Signor Visconti Venosta asked to be informed by the Minister of Foreign Affairs what degree of truth there was in current reports that Italy had entered into an undertaking with one more than with another of the guaranteeing Powers. He did not ask for any declarations which might impede liberty of action in future eventualities, but he wished to be assured that Italy would maintain a strict neutrality; that she would do nothing to create doubts as to her intentions; that she did not intend to increase her armaments so as to arouse the distrust of other Powers. Signor Musolina, a member of the Left, declared himself a greater Turk than the Sultan. He denied the right of Europe to intermeddle in the internal affairs of Turkey. He asserted that Turkey had fulfilled all her promises of reform, and censured the Government for not having

formed a European coalition against Russia. Italy, he affirmed, could take the initiative by resolving the Eastern Question in a moment, and if war broke out the Turkish blood would be on their heads. The atrocities in Bulgaria and the insurrections in the Slav Provinces, he said, were the work of Russian agents and the result of Russian machinations, and he laid upon the table a large bundle of documents in proof of his assertions.

The Duke of Colonna da Cesaro asked if any interchange of ideas had been made between the Powers to secure the neutrality of Roumania. He said additional precautions would be necessary to protect Italians and Italian interests, for if war broke out it would be a religious war. From an examination of a green-book, together with a blue-book, he approved the policy of the Government as that of a liberal nation interested in the condition of oppressed peoples, but, at the same time, maintaining its treaty obligations and its desire for peace. He maintained that Italy had been active and impartial, and had not sided either with Turkey or with Russia. He trusted to hear his words confirmed by the Minister of Foreign Affairs, and a declaration from him of his intention to observe the most strict neutrality until the interests of the nation might require a different course. Replies were made to the different

PIAZZA DEL POPOLO, ROME.

speakers both by the Minister of Foreign Affairs and the President of the Council. They declared in the most formal manner that Italy had emerged from the lengthy negotiation upon the Eastern Question free from any ties whatsoever, and on the best terms with all the Powers indiscriminately. The ministers declared

themselves ready to resume, when circumstances might permit, the work of pacification, and were resolved to maintain the independence and neutral character of their policy, always provided that the essential interests of their country were not engaged. Replying particularly to the question, whether Italy intended

reply to an interpellation on the change of policy in France in regard to Italy, the minister stated that it was clear from the declarations of the French Government that the cordial and friendly relations between the two nations remained unaltered, and that it was neither probable nor possible that

France would let herself be led into acting against the safety of the country, to the formation of which she had so much contributed. Signor Depretis confirmed Signor Melegari's statement, regretting that an interpellation, fraught with so much inconvenience and possibility of misunderstanding, had been made. The Chamber of Deputies adjourned on June 15th, and the Senate shortly after.

In November, the Minister of Public Works, Signor Zanardelli, tendered his resignation to the King, by whom it was immediately accepted. His portfolio remained provisionally in the hands of the President of the Council, Signor Depretis, who was also Minister of Finance. The immediate and ostensible cause of this division in the ministerial council was the convention with the railway companies. The Government, which wished to rescind its contracts with the three existing companies, was limited in its operations by parliamentary votes, forbidding the railways either being placed under state management or being intrusted to foreign companies. The only capitalists in the country who would or could take charge of so vast an enterprise were the same men to whom the tobacco monopoly had been already farmed out. Signor Zanardelli, at that time in opposition, had stubbornly opposed the tobacco convention, and harbored an invisible antipathy to those capitalists, whom he announced as the "vampires of the state." He, therefore, objected to the new railway convention at every step of the negotiations, and although he seemed from time to time to yield to the pressure of his colleagues, he remained to the end a man convinced against his will, and was placed in the alternative either of a break-up of the whole cabinet or of his own retirement.

The Chambers met again on November 22d. On November 28th, the Chamber of Deputies adopted, by a large majority, the clause in the penal code then under discussion, abolishing capital punishment. On December 14th, a debate occurred on the liberty and secrecy of private telegrams, which led to a vote of confidence in the Government being proposed,

CHURCH AND PALACE OF THE LATERAN, ROME.

to make any military preparations, the ministers replied that the necessity of anything of the kind was altogether foreign to their anticipations; but should the interests of the country call for such preparations, Parliament should first be consulted. Signor Depretis concluded by saying that Italy deplored the calamity of war, but felt secure in her own loyalty, in her King, and in the valor of her army.

The Clerical Abuses bill was rejected by the Senate, on May 7th, by a vote of 105 to 92. This vote took every one by surprise, as the separate articles of the bill had been previously adopted, with the exception of the first, which was amended by Signori Cadorna and Lampertico, and was then adopted. The bill had been warmly recommended by Signor Sella, the leader of the Right, and when it was defeated, he resigned his leadership. It may seem rather strange that the chief of the opposition should resign in consequence of a vote given against the ministry, while the Minister of Grace and Justice, who brought the bill forward, retained his portfolio. But the measures rejected by the Senate on this occasion were voted by it as a part of the penal code still in operation, and were framed by the former Government, which, when in office, conceived the necessity for this law. A majority of that party now opposed it when brought forward separately by its successors. On May 23d, the Minister of Foreign Affairs stated in the Chamber of Deputies that the Government would scrupulously observe the law guaranteeing the Pope's liberty. In

which was carried by 184 to 162 votes. Nevertheless, in the sitting on December 16th, Signor Depretis announced that, in consequence of the present position of parties, the ministers had tendered their resignation to the King, who had accepted them, and that Signor Depretis had been charged with the formation of a new cabinet. On December 28th, the King announced the following cabinet to the Senate: Depretis, President of the Council of Ministers and Minister of Foreign Affairs; Crispi, Minister of the Interior; Magliano, Minister of Finance; Mancini, Minister of Justice and Worship; Mezzacapo, Minister of War; Brin, Minister of the Navy; Coppino, Minister of Education; Perez, Minister of Public Works; Bargoni, Minister of the Treasury. The Chamber was prorogued on December 19th, and the Senate adjourned on December 29th.

The Minister of the Interior, Signor Nico-

tera, was engaged in a bitter quarrel with the opposition during 1877. On November 2, 1876, three days before the election for deputies, the *Gazzetta d'Italia* published an article entitled, "The Hero of Sapri," the autobiography of Giovanni Nicotera. In this article it gave a documentary history of the rising of Sapri in 1857, and the trial of the participants in it, all the records of the trial being signed by Nicotera himself. From this article it appeared that Nicotera, who had taken part in this rising, betrayed his confederates, and, while professing to be a Republican, assumed the title of Baron, without having any right to it. In consequence of this article, Nicotera sued the proprietors of the paper for libel. During the trial, however, a large number of damaging facts were produced against the minister, and the general result was so unfavorable to him, that the state-attorney did not uphold

BRIDGE AND CASTLE OF SANT' ANGELO, WITH ST. PETER'S IN THE DISTANCE, ROME.

the charge in its original form, but asked for a comparatively mild sentence. On January 25th, the trial came to an end, and the proprietors of the paper were sentenced to three months' imprisonment, to pay a fine of 500 lire, and the expenses of the plaintiff.

A numismatic discovery, unparalleled in extent, was made near Verona in January. Two large amphoræ were found, containing no less than two quintals, or about 600 English pounds weight, of coins of the Emperor Gallienus, and his successors within the 100 years following his reign. The number of coins was estimated at between 50,000 and 55,000. Of those of the Emperor Probus, there were more than 4,000. The majority were of bronze, but there were some of silver and others of bronze silvered.

They were all in the finest state of preservation, and, with the exception of those of Gallienus, which were a little worn, they were so fresh from the mint as to make it evident they were never put into circulation. The discovery was considered of sufficient importance for the Minister of Public Instruction to dispatch Signor Pigorini specially to Verona to report upon it. All the finest examples were to be placed in the Museum of Verona, and the remainder either exchanged in sets with other museums or sold, as might be decided upon.

On June 3d, the 50th anniversary of the Episcopal consecration of Pius IX., and the 30th of the promulgation of the Italian Constitution, were celebrated with all possible solemnity both at the Quirinal and at the Vatican.

J

JAPAN, an Empire in Eastern Asia. The appellation by which the Emperor is generally known in foreign countries is the ancient title of Mikado, or the Venerable. The present Mikado, Muts-Hito, was born at Yedo, September 22, 1852; succeeded his father, Komei-Tenno, 1867; married December 28, 1868, to Princess Haruko, born April 17, 1850, daughter of Prince Itchidgo. The first child of the Emperor was born in 1873, but died soon after. There is no regular law of succession, and in case of the death of the Emperor without leaving issue, his successor must be chosen from the Katzura, Arisugawa, Fushimi, or Kannin families. At the head of the Government is a Council of State, of which Sandjo is the first president, and Iwakura the second. The other members are the ministers. The ministry was composed as follows, in 1877: Foreign Affairs, Terashima; War, Yamagata; Navy, vacant; Interior, Okubo; Finances, Okuma; Justice, Ogi; Education, vacant; Public Works, Ito; Imperial House, Tokudaïjin.

The following table gives the area of the several islands, according to an official calculation made in 1877, and the population in 1874:

ISLANDS.	Area in Square Miles.	Males.	Females.	Total Population.

The Army comprises 14 brigades or 12 regiments infantry, 3 regiments cavalry, 18 battalions artillery, 10 battalions engineers, 6 companies commissary troops, 9 companies marine artillery. The strength of the army on a peace footing is 31,680, and on a war footing 46,350. The Navy comprises 12 vessels of 2,350 horse-power each, with 51 guns, and is manned by 1,200 men, inclusive of 171 officers.

The foreign commerce in the years 1873-'75 was as follows (value in yens):

YEARS.	Imports.	Exports.	Total Commerce.
1873.....	27,444,065	20,660,995	48,105,060
1874.....	24,228,630	20,001,685	44,225,265
1875.....	29,467,065	18,014,690	49,481,955

An official report on the foreign trade of Japan, in 1876, stated that, in comparison with 1875, the value of the imports had decreased \$5,379,552, while the value of the exports had increased \$9,654,576. The classes of goods which showed the greatest decrease among the imports are the "Foreign Mixed Goods," and cotton and woolen manufactures, the former

over \$3,000,000, and the latter over \$1,000,000. The export of raw silk received a considerable impetus through the partial failure of the silk crop in France and Italy in 1876. The export of tea decreased from \$7,792,244 in 1874 to \$5,427,218 in 1876. The tonnage of foreign vessels in the Japanese ports showed a decrease of 270,996 tons in 1876. The tonnage of American vessels showed a considerable decrease, as the line of steamers between Yokohama and Shanghai sailed under the Japanese flag instead of under the American, as formerly. Exclusive of this line, however, the American tonnage showed an increase of 9,000 tons. The number of foreign residents increased 90, while the number of firms decreased 36. The number of foreign residents and firms, in 1875 and 1876, belonging to each nationality is shown in the following table:

NATIONALITIES.	1875.		1876.	
	Residents.	Firms.	Residents.	Firms.
English.....	1,282	109	1,242	80
American.....	853	89	410	84
German.....	279	43	214	87
French.....	254	42	256	42
Dutch.....	142	12	126	7
Others.....	273	21	835	21
Total.....	2,558	257	2,673	221

The number of foreign residents and firms in each of the five open ports and in Yedo (now called Tokio), in 1876, was as follows:

PORTS.	Residents.	Firms
Yokohama.....	1,521	158
Hiogo and Osaka.....	379	43
Nagasaki.....	289	10
Hakodate.....	27	2
Niigata.....	21	2
Yedo.....	486	6
Total.....	2,673	221

The aggregate length of the railroads in operation is 105 kilometres. There are three lines: Tokio & Yokohama, Hiogo & Osaka, and Osaka & Kioto. The six lines of electric telegraph have an aggregate length of 2,832 kilometres. The number of dispatches sent in 1874 was 396,289. The number of post-offices in 1876 was 3,691; the number of letters forwarded, 20,145,645; the number of postal-cards, 4,020,957; the number of free letters, 644,265; the number of newspapers, 5,122,456; of samples of merchandise, books, etc., 229,291.

The events of past years, in Japan, seemed to indicate a reaction among the people against the progressive policy of the Government, which, in 1877, assumed the aspect of a formidable insurrection. A movement of this kind had been anticipated for some time by native statesmen and resident foreign diplomatists, on account of the rapid and extraordinary conformation of the ancient institutions of the country to an extreme pattern of modern civilization. Risings of a more or less dangerous character had occurred from time to time, but through the vigorous measures of the Government they were always suppressed shortly after their inception. In the beginning of 1877 a revolution broke out in the southern provinces of the Empire, not among the people generally, but among the classes of whom the Samurai, or former armed retainers of the Satsuma clan, were the leaders. The outbreak was based upon the discontent among the remnant of the landholders and others belonging to the exploded system of feudal tenures, who received pensions *pro rata* from the national Treasury on yielding up their lands and privileges to the Central Government. So far this arrangement was fairly successful, but it so drained the Exchequer of means as to check the

NAGASAKI.

financial progress of the state; and the pensions were capitalized, the principal to be paid off in June, 1877; the money to be raised chiefly by foreign loans, part of which was obtained through the London Stock Exchange. As the

time drew near toward the settlement, it was calculated that the amount of funds which would come into the hands of the privileged classes, at an approximate estimate, would be equivalent to £6,500,000. Instead of paying

the recipients in full at the time named, as originally intended, a new arrangement, so as to spread the disbursements over several years, and into national investments, was proposed by Iwakura—well known as chief of the mission to Europe some years ago. He suggested that one-half of this amount be invested in the establishment of a bank, to be conducted on the most approved foreign system; £2,500,000

CASTLE OF OZAKA.

be made a Government loan at liberal interest, and the remainder be employed in the establishment of useful manufactures by machinery. This proposition, although sanctioned by his colleagues in the administration, was opposed in the Assembly of Nobles not only by the inferior ex-daimios, but by some of the most influential in the state, whose kinsmen held important positions in the army and navy, as well as in the civil service. The leader among these malcontents was Shimadzo Saburo, father of the ex-Daimio of Satsuma, and recognized chief of that powerful clan, occupying the district or Ken of Kagoshima, at the southwestern extremity of Kiushiu, one of the smaller Japanese islands. It was here that the outbreak began. Early in February an armed party of Satsuma men seized a Government steamer, and a quantity of gunpowder which was loaded at Kagoshima. The rebels proceeded thence northward, gaining considerable additions to their ranks as they went. Kumamoto, a large fortified town on the west coast of the province of Higo, was taken and held for some time; but after severe fighting, in which there was great loss of life on both sides, the rebel troops were forced to evacuate it. They then proceeded southward, and held for a time Hitoyoshi and other large towns. Suffering continued defeat, they retired westward, through a thinly-populated and exceedingly mountainous region. The warfare here was of a very uncertain nature.

Small bodies of the opposing troops occasionally met, and in such encounters it is said the Imperialists generally were successful. There were evidences of a failure of supplies in the rebel army, stones being used as bullets, and food being unprocurable in the hilly districts. It gradually retreated before the advancing Imperialists, being much harassed by them; and as it neared the eastern shore of the island, it became partially demoralized, and wholesale desertions from it took place. Saigo, with his force thus weakened boldly emerged from the hilly region, and, with the remainder of his army, took possession of Nobeoka, a large town on the east coast of Kiushiu. On August 14th he was forced to retreat from Nobeoka, and to take again to the mountains. At this time he was again left by many of his followers, so that but 600 remained. With these he made a forced march of 150 miles; and, suddenly appearing before Kagoshima, captured the Government stores of

ammunition, and sent off the Government officials in rapid flight. Having established himself, as securely as circumstances admitted, in his own town, which he had left eight months before, he immediately proceeded to the enlistment of fresh recruits for his army, when his operations were disturbed by the arrival of Government troops. He at once retired to a strongly fortified eminence, named Shiroyama, in the neighborhood of the town, and was there surrounded by a body of 15,000 Imperialists. An attack was made on his position on September 24th, which ended in the almost complete annihilation of the rebel army, 30 only escaping with their lives. The bodies of Saigo, Kirino, and of four other principal leaders, were found lying together, death having been caused by *seppuku*, or self-immolation. The heads had been cut off and buried, in order to prevent identification, but they were afterward discovered, and, it is stated, were exposed in the streets of Kagoshima. This put an end to the rebellion, and the authority of the Government was again established over the whole country, though at a cost of 12,000 men, and between £7,000,000 and £8,000,000.

On August 21st, a national exhibition of arts and industries was opened at Tokio, by the Emperor. It consisted of an Agricultural Hall, a Machinery Hall, a Fine-Arts Building, an Horticultural Building, and an Eastern and Western Hall. The exhibitions in agriculture

and horticulture were described as very complete, while in Machinery Hall this was not the case. The fine-arts exhibition was considered also of but little account, the greater part of the paintings being crude attempts, interesting as attempts rather than as professional work. Some of the screens, porcelain, and lacquer work were greatly admired. In the Eastern

Hall, the Department of Education had an interesting collection of books, school appliances, philosophical apparatus, and other matter illustrating the progress of the country in Western learning; but the main part of this collection was in a separate and permanent educational museum. The Western Hall was filled with manufactured articles.

K

KANSAS. The population of the State of Kansas is estimated at 650,000, that shown by the census of 1875 being 531,156. The assessed value of property for this year was \$137,480,000; amount of taxes for State purposes, \$756,137; State debt, \$1,235,900. The total

number of acres of land in the State is 33,599,600, of which 5,595,304.99 were under cultivation and 28,004,295.01 uncultivated. The following are the statistics of farm products for the year, together with the average yield per acre, price, etc.:

ACREAGE OF PRODUCT.

Aggregate value of buildings.....	388,065 00
Total.....	\$15,555,608 47
Average value per mile.....	7,075 72
Total number of miles.....	2,198 59

Important discoveries of lead deposits were made in Cherokee County, on what is known as Shot Creek, early in the spring. Shafts were rapidly sunk, and two towns sprang into existence in a few weeks—Galena and Empire

The regular biennial session of the Legislature began at Topeka on the 9th of January, and came to a close on the 7th of March. A United States Senator was elected to succeed the Hon. James M. Harvey. After several ballots the choice fell upon Colonel Preston B. Plumb, of Emporia, on the 31st of January. Colonel Plumb was born in Delaware County, Ohio, on the 12th of October, 1837, and after receiving an elementary education in the common schools, entered a printing-office as an apprentice at the age of twelve years. In 1853 he became one of the founders of the *Xenia News*, and developed considerable ability as a political writer. He went to Kansas during the excitement of 1856, and was one of a party to lay out the town of Mariposa. During the winter of 1856-'57 he was foreman of the *Herald of Freedom*, at Lawrence. In the course of the year 1857, with four others, he founded the town of Emporia, and established the *Emporia News*, which became a leading exponent of the principles of the Republican party in that section. He also took a prominent part in active politics, and was a leader among the Radical Free-Soil men. He was a member of the Committee on Resolutions in the Free State Convention of December, 1857, and was in active service among the Free State forces during the border troubles of that winter. He was a member of the Constitutional Convention in

March, 1858, and of the first nominating convention of his party in the State in April following. In the latter part of the same year he retired from his newspaper to study law at Cleveland, Ohio, and in the spring of 1861 he opened a law office in Emporia. The following winter he was a member of the Legislature, and at the close of the session was chosen reporter of the Supreme Court. In August, 1862, he recruited two companies of volunteers, and entered the service as a second-lieutenant. By successive promotions he advanced to the position of colonel of a regiment, and served to

STATE CAPITOL, TOPEKA.

City. The former has been declared a city of the third class, and the latter a city of the second class. On the 20th of July, less than two months from the commencement of its survey, an official census of Empire City showed a population of 2,337. Successful mining has been carried on in and about both cities, and the yield before the end of the year was between 300,000 and 400,000 pounds per week.

the end of the war. After his return he served two terms in the Legislature, being Speaker of the House in 1867. He resumed the practice of law in 1868, and continued in it with decided success until 1872, when he accepted the position of president of the National Bank of Emporia. He has also been largely interested in farming and stock-raising, has taken part in railroad enterprises, and accumulated a considerable fortune. Of late he has been

a moderate Republican, and in 1872 voted for Horace Greeley.

The legislation of the session was important. A commission was authorized for a

revision of the laws. The close of the fiscal year was changed from November 30th to June 30th, and appropriations were made for two years and seven months, as follows:

PURPOSE.	1877.	1878.	1879.
Topeka Insane Asylum.....	\$38,000 00	\$38,000 00
Agricultural College.....	5,800 00	12,500 00

Grand total.....	\$1,262,069 40

There was no important action taken by political parties during the year, though an election was held on the 6th of November to choose a Lieutenant-Governor, to fill the vacancy created by the resignation of Mr. Salter, and a Chief Justice of the Supreme Court. The vote for Lieutenant-Governor was, for L. U. Humphrey, Republican, 62,570; Thomas W. Walteson, Democrat, 24,740; D. B. Hadley, "Greenback," 9,590; scattering, 1,039; making a total vote of 97,939. Humphrey's plurality over Walteson was 37,830; majority over all, 27,261. The vote for Chief Justice was 100,124, of which Arthur A. Horton, Republican, received 63,850; William R. Wagstaff, Democrat, 25,378; S. A. Riggs, Greenback, 9,880; scattering, 1,016. Horton's plurality over Wagstaff was 38,472; majority over all, 27,576.

A case involving the law of libel, P. B. Castle, vs. D. W. Houston, was decided by the Supreme Court of the State in December, on an appeal from the District Court of Leavenworth County. The suit was brought against the proprietor of a newspaper for damages for alleged libelous statements regarding the plaintiff. In instructing the jury, the judge of the lower court had said:

The fact of the language being true is not alone an answer to the charge, but can only be shown in mitigation of damages.

It is not a defense simply to show the truth of the matter published, but the party must go further, and show that it was not only true, but that he acted with good motives and for a justifiable end, and that he had some purpose in view that was justifiable. If that be the case, if he acts honestly for good purposes and for justifiable ends, and what he says is true, then he is to be excused or acquitted.

A verdict for damages having been given, an appeal was taken. Chief Justice Horton,

after reviewing the law of libel, laid down these as the established principles:

First.—In all criminal prosecutions the truth of the libel is no defense, unless it was for public benefit that the matters charged should be published, or, in other words, that the alleged libelous matter was true in fact, and was published for justifiable ends, but in all such proceedings the jury have the right to determine at their discretion the law and the facts.

Second.—In all civil actions of libel brought by the party claiming to have been defamed, where the defendant alleges and establishes the truth of the matter charged as defamatory, such defendant is justified in law, and exempt from all civil responsibility. In such actions the jury must receive and accept the direction of the court as to the law. Under this view the court below misdirected the jury on the trial in a very material point, and very properly, on attention being again called to the matter by a motion for a new trial, granted such motion, and set the case again for hearing. The instructions given might have been applicable in a criminal proceeding, where the motive of the publication is important, and where the jury have the right to determine the law as well as the fact, but were erroneous in a civil action, where the facts charged were proven in justification. The instructions assumed that the truth is not a full and complete defense unless it was shown to have been published for good purposes and justifiable ends. This is not correct. If the charges made by the defendant are true, however malicious, no action lies.

The order setting aside the verdict and granting a new trial was affirmed, all the judges concurring.

A monument to the memory of John Brown was publicly dedicated at Ossawatimie, on the 30th of October, on which occasion United States Senator John J. Ingalls delivered an historical and eulogistic address.

KASHGARIA, also called East Turkistan, a Mohammedan Empire of Central Asia; area, about 574,000 square miles; population, about 1,000,000.

In October, 1876, a Russian Embassy was dispatched to Yakub Beg, Amir of Kashgaria, who had, however, departed before its arrival, for the eastern portion of his dominions, in consequence of rumors of Chinese victories on the borders of Kansu. After spending a month in the city of Kashgar, the Embassy set out on its journey after the Amir, and passing through the towns of Aksu and Kucha, reached Kurnja, where he then was, on January 25th. It received a most flattering reception at his hands, and remained at his headquarters for several weeks. It returned in safety on April 18th. In this march of nearly 900 miles each way, the greater part of the territory of Yakub Beg was passed through, and exceptional means for acquiring information was at the disposal of the Russian officers. Captain Kuropatkin, who was intrusted with the charge of the Embassy, contributed to the *Turkistan Gazette* an account of the army which the Amir had collected round Turfan, and of which but for this statement we should know nothing authentic. The picture he drew of this force was anything but favorable. Instead of having under his command an army of 50,000, as had previously been asserted, his main force at Turfan was estimated at but 8,000, while at various other points along the frontier there were only 17,500. Of these 10,000 were Sungarians, who are the same as the Mohammedan rebels of Kansu, and Captain Kuropatkin represents them as not only badly armed, but also untrustworthy. The Kashgar force proper was, therefore, according to this Russian account, scarcely 16,000 men. Even in their equipment, the stories told of his troops being armed with breech-loaders seem to have been much exaggerated, for only 2,000 were armed with such weapons, the remainder possessing flint-locks, match-locks, and falconets of various degrees of usefulness. As a preliminary to the war with China, Yakub Beg sought to improve his relations with Russia. He gave a cordial reception to Colonel Preyevski, when crossing Kashgaria on his way to Thibet, and also met Captain Kuropatkin's mission with a very flattering reception. In the midst of his operations, and after he had been defeated by the Chinese in a battle in the Devan defile, he was overtaken by death on May 31st. His career, which was closely identified with the history of Kashgaria, was certainly a very remarkable one. He owed nothing to birth, but was one of those soldiers of fortune who nowhere so frequently reach supreme power as in the troubled states of the East. A native of Khokan, he first distinguished himself in the defense of the state against the Russians. As early as 1853 he was intrusted with the defense of Fort Ak-Musjid, on the Syr-Darya, and even his foes admitted that he fought heroically, although he was unsuccessful. For a time little was heard of him. But in 1863 he seized a chance of distinction offered by the troubled state of

Kashgaria. That khanate had been conquered by the Chinese. Their rule, however, had been disturbed by a mutiny of the Sungarian soldiers in their service, and the country was thrown into a state of anarchy by the savageness and fierceness of the struggle. The confusion was rendered worse by marauding bands of Kirghiz, who took the town of Kashgar after a long siege, and instantly made it the scene of pillage and frightful massacre. At that stage of anarchy another invader appeared in the person of Khoja Buzurg Khan, who belonged to the family which had formerly ruled Kashgaria, and which the Chinese had exiled. Buzurg Khan took with him, as his general-in-chief, Yakub Beg. Although the two adventurers brought a very small force, large numbers soon flocked to their standard, and the military genius of Yakub gradually overcame all opposition, and brought the whole country under the nominal rule of Buzurg Khan. But then followed an event which has become a commonplace in Oriental warfare. Buzurg was as indolent as Yakub was energetic, and the lieutenant set aside the master. It is almost surprising that the chapter of deposition was bloodless, for the successful aspirant was never troubled by scruples. But Buzurg was allowed to go into exile, and he may still be alive. Yakub Khan, as he now called himself, then showed that he had at least the right to rule which comes from force of character and grasp of intellect. He made his country the most peaceful part of Central Asia. If he ruled it with a rod of iron, he at least kept it free from such revolutions as disturbed the neighboring khanates. All the old factions felt the grasp of a master, and they did not dare to intrigue. His fame soon spread far beyond the confines of Kashgar; and, seeing what he had done for the waning fortunes of Mohammedanism, the Amir of Bokhara gave him the title of the Attalik Ghazi, or leader of the champions of the faith. The Turks seem to have hoped that he might become a great Mussulman power, and thus check the advance of Russia. Abdul Aziz allowed him to take the peculiarly honored title of Amir-el-Mumeinein, or Commander of the Faithful, and Yakub agreed to recognize the spiritual sovereignty of Constantinople by putting the superscription of the Sultan on his coins. He was alive to the interests of trade as well as of religion, and he entered into a treaty of commerce with the Viceroy of India. But most of his energy was spent in the drilling and the equipping of his army. It is stated that he manufactured rifles after Russian models, and, at all events, he made his troops the most formidable body of native soldiers in Central Asia. He had good need to make ceaseless efforts to strengthen his defenses, for he was hemmed on all sides save the south by enemies of overwhelming power. He saw Russia advancing year by year as if at the impulse of fatalism. He saw one native state after another falling to pieces

before her armies. He lived in constant fear that his turn would come next, and the Russians took little trouble to make his mind easy. They blamed him for stirring up mischief in the neighboring khanates. They knew that if their sovereignty in Turkistan should be assailed by a religious war, he would be at the head of it. Anticipating invasion, he had built a fort in a mountain pass leading from his country to Russian territory, while at the same time he had been eager to obtain support from Great Britain. But a more formidable enemy than Russia arose for him for the moment in China, which, years ago, had set out to reconquer her Mohammedan provinces, and had, at the close of 1876, succeeded in subduing the rebellious Sungarians, had a few months before his death even defeated the Amir himself, and forced him to retire to some fortified positions which he had laboriously prepared. That Yakub Beg clearly saw the danger which threatened his country, seemed to be indicated by the report that he appointed Hakim Khan Tura, his faithful lieutenant, as his successor, in preference to his own sons. Hakim, however, declined the gift, and Kuli Beg, the eldest son of Yakub Beg, succeeded to the throne. Hakim Khan Tura is the sole direct representative of the ancient reigning dynasty of Kashgar before the conquest of that country by the Chinese. He took a prominent part in assisting the late Amir in his early wars, and was always greatly trusted by Yakub. Kuli Beg, the eldest son of the late Amir, who has ascended the throne of his father, is the son of a Kazak woman of Ak-Musjid, and is now in his thirty-third year. He was always distrusted by his father, in consequence of his opposition to the British alliance and his Russian sympathies.

According to another report, which reached India through Cashmere, Yakub Khan had been assassinated by Hakim Khan Tura, and Yakub's eldest son had also been slain. It was also stated in this report that Hakim Khan had been recognized by the troops and the people as Amir.

Two official dispatches received in St. Petersburg in January, 1878, stated that the Chinese troops had massacred at Manas upward of 15,000 men, women, and children; that they had fortified Tootchtoagaran and Aksa, two strong strategical points, and that the people were flying in terror into Russian territory.

KENTUCKY. The financial condition of the State of Kentucky is very satisfactory. The public debt amounts to only \$183,394, classified as follows:

1 5-per-cent. bond due 1865, and outstanding....	\$5,000 00
4 6-per-cent. bonds due and outstanding.....	4,000 00
Internal improvement scrip due and outstanding.....	394 00
109 6-per-cent. bonds maturing in 1894.....	109,000 00
60 6-per-cent. bonds maturing in 1895.....	60,000 00
5 6-per-cent. bonds maturing in 1896.....	5,000 00
Total.....	\$183,394 00

The \$2,394 of over-due bonds and scrip remain outstanding, merely because they have

never been presented for payment, and interest on them ceased at maturity. To meet its indebtedness when it falls due, the State held, on the 10th of October:

230 United States 5-20 gold-bearing interest bonds, deposited in the Bank of America, at New York and by act of the Legislature held specially for the payment of the bonded indebtedness of the State, worth.....	\$246,000 00
406 shares of stock in Bank of Louisville.....	82,480 00
Stock in turnpike roads, worth.....	506,267 42
Total.....	\$784,747 42

At the beginning of the last fiscal year there was a balance in the Treasury of \$557,605.16. The receipts of the year amounted to \$1,484,685.85; expenditures, \$1,458,895.73; leaving a balance at the end of the year of \$583,894.87. The balance of the "Kentucky War Claim" upon the Federal Government, yet unpaid, is \$397,587.27.

The common school system of the State shows rapid improvement. The following statistics, making comparisons with the year 1869, exhibit the progress of eight years:

In 1869, the total number of common schools taught.....	4,447
In 1877, the total number taught.....	5,800
In 1869, the highest number of children at school.....	169,477
In 1877, the highest number of children at school.....	208,000
In 1869, the number of children reported.....	376,868
In 1877, the number of children reported.....	470,828

This indicates an increase of 1,353 common schools taught in eight years, and an increase of 93,455 of pupil children reported in the same period.

During the year there were 532 colored schools taught; and the amount of income from the special tax, under the law of 1874, was \$50,736.93. In speaking of the working of the system, the Governor says, in his message to the Legislature of 1878: "We have now had three years of experience with our colored school system, and it may be safely asserted that the result in this time has far surpassed that accomplished in the same length of time when the system of public white schools was inaugurated. There are, without doubt, material benefits to be derived from the education of all human beings; and it is to be hoped that the colored people will show their appreciation of the system presented to them, by cultivating a healthy sentiment in favor of education, and by sending their children to school, so as to prepare them to exercise the privilege of voting intelligently, and enjoy, to the fullest extent, all the sacred rights of freemen."

The Agricultural and Mechanical College, which is connected with the Kentucky University at Lexington, is a State institution, and receives \$9,900 annually from the endowment fund. The number of students has decreased from 283 in 1868-'69 to 66 during the term of 1877-'78.

The Institution for Feeble-Minded Children, located near Frankfort, contained 120 pupils at the end of the year, and was reported to be in excellent condition. The expenses for two years ending September 30th were \$51,181.39.

The Institution for the Blind, at Louisville, contained 74 pupils at the close of the year.

The Eastern Lunatic Asylum, at Lexington, on the 30th of September, 1876, contained 534 patients—269 white males, 200 white females; 31 colored males and 34 colored females. In the year following that date, 137 patients were admitted; and the highest number under treatment at one time was 581. The receipts of the institution for the year were \$124,509.66; expenses, \$111,284.95; leaving a balance of \$13,224.71, against which there were outstanding claims of \$2,143.96. In the Central Lunatic Asylum, at Anchorage, the whole number of patients treated during the year was 515; and the average daily number, 389. About one-fourth of the inmates are in the colored department. The receipts for two years were \$97,243.67; expenses, \$79,687.31. The receipts of the Western Lunatic Asylum, at Hopkinsville, for the year ending October 30th, were \$91,999.78; expenses, \$61,734.64; unpaid accounts, \$5,689.57; cash balance, \$24,275.57.

Although considerable additions have been made to the State penitentiary at Frankfort, it is still overcrowded. At the close of the

and Statistics, Winston J. Davie was appointed commissioner. He has made monthly reports upon the agricultural interests of the State, and has published "A General Account of the Agricultural, Commercial, and Mineral Resources of Kentucky." He has also in preparation a report entitled "Kentucky: Its Resources and Present Condition." Some of the principal live-stock and crop statistics for the last three years are as follows: Horses, in 1875, 377,717; in 1876, 380,573; in 1877, estimated at 382,000. Mules, in 1875, 121,127; in 1876, 124,348; in 1877, estimated at 122,000. Jennets, in 1875, 3,034; in 1876, 2,743; in 1877, estimated at 2,850. Cattle, in 1875, 558,737; in 1876, 545,595; in 1877, estimated at 550,000. Hogs six months old, in 1875, 596,398; in 1876, 739,866; in 1877, estimated at 820,000. Sheep killed by dogs, in 1875, 18,534; in 1876, 12,630; in 1877, estimated at 15,000. Tobacco (pounds), in 1875, 156,137,000; in 1876, 126,809,244; in 1877, estimated at 172,000,000. Hemp (pounds), in 1875, 14,927,519; in 1876, 11,555,193; in 1877, estimated at 13,750,000. Corn (bushels), in 1875, 63,314,126; in 1876, 65,688,429; in 1877, estimated at 64,500,000. Barley (bushels), in 1875, 148,004; in 1876, 294,467; in 1877, estimated at 300,000. Hay (tons), in 1875, 122,596; in 1876, 178,304; in 1877, estimated at 195,000.

The geological survey of the State has continued under the charge of Prof. N. S. Shaler. About three-fourths of the field-work has been completed; four volumes of reports have been issued, and two more are in preparation. A geological map has been constructed, showing the locality of different minerals; and a large collection of specimens has been made.

The commissioners appointed to ascertain the exact boundary between this State and Indiana, in the vicinity of Evansville, have made a report locating the line a short distance from the present bed of the Ohio River, on the Indiana side, and placing the disputed territory of Green River Island in Kentucky. The report awaits the action of the Legislatures of the two States.

Under the act of the last Legislature for the propagation and protection of food-fishes in the waters of the State, a commission, consisting of one member from each of the congressional districts, was appointed in 1876. They

year there were 986 convicts, and only 744 cells. Of the convicts, 453 were whites and 533 blacks. This shows an increase from 181 whites and 20 blacks in 1865.

Under the act of the last Legislature, establishing a Bureau of Agriculture, Horticulture,

CITY HALL, LOUISVILLE.

have distributed 46,225 California salmon and 150,000 white shad in the streams of the State.

The number of insurance companies authorized to do business in Kentucky, in January, was 124; of which 112 were fire and 12 life companies. The authority of one life insurance company was revoked, and one withdrawn, during the year. Eight additional fire insurance companies were admitted, and 19 were

participated in by the employes of the Louisville & Nashville Railroad Company, who left work at Louisville on the 23d of July, and demanded a restoration of wages to the rates from which a reduction had been made at the beginning of that month. The strike of the railroad men was the signal for the gathering of a mob of laborers and of idle and disorderly persons in the streets. A committee of citizens was organized to aid in preserving order, and the following proclamation was issued by the mayor:

TO THE WORKINGMEN OF LOUISVILLE: By all that you hold dear, by the love you bear for your wives and children, by the pride you feel for your city, I adjure you to preserve quiet and order during this trying crisis. If you have wrongs to complain of, there is a proper mode of redress; and as long as you continue moderate, the sympathies of all good citizens will be with you; nay, in your very moderation will be your greatest strength. Listen to no incendiary language, and, above all, heed not the talk of idle and worthless creatures, who, unwilling to work themselves, would gladly get you into trouble, that they may feast upon your misfortune. The experience of

other cities is, that vagrants and tramps have caused all the mischief, that they might pillage and destroy; and yet the poor workingmen have had to bear the odium of the outbreak. From such as these I implore you to shield yourselves as from your deadliest enemies. If you but continue the honorable and highly creditable conduct that has governed you from the beginning of these troubles, I assure you, upon the faith of one who has never deceived you, that all wrongs, imaginary or real, will be readily corrected. Nay, I pledge you my honor, and my life if necessary, that no personal efforts on my part, no matter how onerous, shall be left untried to protect you in the fullest. God grant that wisdom and moderation may govern you; and, if so, a prouder lustre than ever before will be reflected upon the workingmen of Louisville.

CHARLES D. JACOB, Mayor.

A riot broke out on the night of the 24th, and an attempt was made to fire the offices of the railroad company; but the disturbance was promptly suppressed by the authorities, aided by the better class of citizens. The following proclamation was issued the next day by the Governor of the State:

STATE OF KENTUCKY, EXECUTIVE DEPARTMENT, }
FRANKFORT, July 25, 1877. }

TO THE PEOPLE OF KENTUCKY: At this time, when violence, tumult, and riot in some of the States have resulted in bloodshed, destruction of property, and suspension of business, I with pleasure congratulate you on the comparative peace and quietude which exist in our commonwealth. The only disturbance which has been reported to me occurred in the city of Louisville; and I am informed it was not participated in by railroad employes or working-

COLLEGE OF ARTS, KENTUCKY UNIVERSITY, LEXINGTON.

withdrawn. All but 1 life and 10 fire insurance companies doing business in the State were organized in other States. The amount of insurance in the State on the 1st of January was \$127,000,485; premiums collected during the year preceding, \$2,247,261.33; losses paid, \$1,251,888.74.

An election was held on the 6th of August for the choice of State Treasurer, members of the Legislature, and local officers; but it was preceded by no general conventions. The total vote cast for Treasurer was 117,791; of which James W. Tate, Democratic candidate, received 96,557; Isaac H. Trabue, Republican, 20,451; scattering votes, 783.

The subject of improving the navigation of the Kentucky River, and putting in repair the locks and dams constructed many years ago, has occupied the attention of the State authorities and others. A convention was held at Frankfort, in February, for the consideration of this matter, and a committee of thirteen was appointed to confer with the authorities. A part of the object in view is to secure a surrender from the Kentucky Navigation Company of its lease of the river improvements, and appropriations by the Legislature to complete and perfect them. This question entered somewhat into the canvass for election of members of the Legislature in 1878.

The strike of railroad workmen, which occurred in several States in July, was par-

men, but by turbulent persons, who, unwilling to work themselves, sought to drive others from honest labor, but were easily controlled by the prompt efforts of the citizens of Louisville aiding the civil authorities.

In the crisis through which we are passing, true patriotism, and a proper respect for law and order, demand not only prudence and forbearance, but firmness and resolution. Lawless men should be taught that peace and order shall prevail, and that honest, law-abiding men are at the front. Violence and lawlessness will not benefit any person, and usually prove most disastrous to the poorer classes.

Having been asked to send troops to localities where there is no unusual excitement or turbulence, I feel it my duty to state that I believe the civil power of the Commonwealth is at present sufficient to protect all classes and quell any disturbance that is apprehended, and should be invoked and exhausted before the aid of the military is asked. I therefore call on all mayors, sheriffs, and peace-officers of Kentucky to be vigilant in the discharge of their duties; and I earnestly ask all good citizens, by precept and example, to use every effort to avert violence or excitement; and I pledge whatever power or authority I possess to aid in preserving the peace and enforcing the law.

JAMES B. McCREARY, Governor.

The Legislature met for its regular biennial session on the last day of the year. One of its duties was the election of a United States Senator to succeed the Hon. Thomas C. McCreary, whose term expires March 4, 1879. After several days' balloting, in January, 1878, the choice fell on General John S. Williams.

KEY, DAVID M., Postmaster-General of the United States, was born in Greene County, Tenn., in 1824. He was educated at Hiwassee College, and began to practise law at Chattanooga. He commanded a Confederate regiment during the war, and after its close he was pardoned by President Johnson. In 1870 he was elected a Chancellor of the State in the Chattanooga circuit, and in 1872 he was an unsuccessful candidate for Congress. In 1856 he was a presidential elector, and in 1870 was a member of the State Constitutional Convention. In 1875, being then a Chancellor, he was appointed to fill the vacancy made in the United States Senate by the death of Andrew Johnson. In the subsequent election of a United States Senator by the Legislature, he was defeated. Of the 100 members of the Legislature, he received the votes of 45, of whom 21 were Republicans and 24 Democrats. During the intense excitement following the presidential election of 1876, and while the result was in doubt, Mr. Key spoke in the Senate with the greatest moderation and patriotism. In his speech on the Oregon question, December 18, 1876, he said: "It is time that we become infused with more of that charity which thinketh no evil and is kind. It is time that we should have that confidence which would allow us to repose trust in each other. It is time for us to make our Government one of law instead of force. It is time that offenders be tried and punished, and not those who are innocent. The wicked should be condemned,

and not communities or States because wicked men are in them." During the presidential canvass, he advocated the election of the Democratic candidates. In the speech just referred to, he said: "Before the people of my own State in the canvass lately ended, I on all occasions indorsed the candidates of the Republican party as patriotic and honest men, of whom any party or country might be justly proud."

The principles which would govern him in case of being asked to become a member of a Republican administration, were thus set forth by Mr. Key, in a letter written to a friend, on February 16, 1877: "I am ready to do all I can to restore confidence and good government to the people of the South. This can only be done by a hearty fraternization of the sections, for which I have labored. If, without requiring of me the sacrifice of my personal or political independence, you find that my name can be used for the good of the South, in your best judgment you are at liberty to use it. If I were to become a member of an administration I should not feel at liberty to place myself in opposition to its general policy, but should feel bound to build it up and strengthen it in the hearts of the people; and if the time arrived when I could not heartily coöperate with it, I should resign. As matters are in the South I should be more useful to our people in an independent position, and if, as I hope and believe, the Administration will develop a broad and liberal policy toward the people of the South, I would not hesitate to incorporate my fortunes and self with it."

When Governor Hayes became President, Mr. Key was nominated Postmaster-General and confirmed by the Senate.

KRÜDENER, BARON NICHOLAS PAULOVITCH, a Russian general, was born in 1811. He entered the military service in 1828, studied in the School of Engineers and in the Imperial Military Academy, entered the general staff in 1836, and in 1849, with the rank of colonel, was appointed quartermaster-general of the Grenadiers. In 1859 he was made a major-general, and received the command of the Volhynian Life-Guards. With this regiment he took part in the suppression of the Polish insurrection, was appointed to the command of the 27th Infantry Division in 1863, was created a lieutenant-general in 1865, and in 1876 was appointed to the command of the 9th Army Corps. His success at Nicopolis, on July 15, 1877, was followed by his disastrous defeat at Plevna on July 30th. In consequence of this defeat he was removed from the command of the operations against Plevna, but retained that of the 9th Army Corps. According to his statement, his defeat was due to the Grand-Duke Nicholas, who had given him orders to attack Plevna without delay, supposing that Osman Pasha had at the most 27,000 men, while Krüdener had positive information that the Turkish army was fully 50,000 strong.

L

LABOR-STRIKES. The most grievous conflict between employers and the employed, and the most extensive if not the most disastrous riots which the country has witnessed, occurred during the months of July and August, 1877, in consequence of the dissatisfaction of the railroad employes on several of the lines with the reduction of 10 per cent. in their wages, which had been made generally throughout the country in June and July. The commencement of the troubles was the strike of the train-hands on the Baltimore & Ohio Railroad, begun on the 14th of July. It spread rapidly over almost all of the Northern roads between the Mississippi and New England. The strikers took forcible possession of the tracks at all the principal junctions and prevented the forwarding of any goods, and in many cases forbade the passing of passenger-trains. For several days the whole internal commerce of the country was interrupted. It was not until the last of the month that the transportation-lines could generally resume their business. To rescue the railways from the lawless usurpation of the striking hands, the militia forces were called out, and, in States where these were unable or unwilling to confront the law-breakers, United States troops were sent to their assistance. In the large cities and manufacturing towns of the West, riotous demonstrations and uprisings of the laboring classes occurred, and a number of unfortunate encounters took place between the mob and the militia, police, and armed bands of citizens, in which hundreds were injured or killed. In the height of the strike there were at least 100,000 men out, and six or seven thousands of miles of railroad were from first to last in the hands of the strikers, including the four great trunk lines, the New York Central and its connections, controlled by Mr. W. H. Vanderbilt, the Erie system, managed by Receiver Jewett, the Pennsylvania Railroad and continuations, managed by Mr. Thomas A. Scott, and the Baltimore & Ohio and connections, under the control of Mr. Garrett. The strike extended, first and last, over the Baltimore & Ohio road, branches and leased lines, which connects the ocean traffic of Baltimore with the two points, Wheeling and Parkersburg, on the Ohio River, with extensions from both termini to Chicago, and branches running to Washington and to Staunton in Virginia; the Pennsylvania Central, whose tide-water termini are Philadelphia and New York, extending from New York to Philadelphia, thence *via* Harrisburg to Pittsburgh, with branches running to Water Gap, on the Delaware, Cape May, N. J., Canandaigua, N. Y., Erie, Pa., Frederick, Md., and Washington and its Western connections, the Pittsburgh, Fort Wayne

& Chicago; the New York & Erie, running from Jersey City *via* Paterson, Port Jervis, Binghamton, Corning, and Hornellsville, to Buffalo, whose Western ally, the Atlantic & Great Western, joins it at Hornellsville; the New York Central & Hudson River road and connections—the New York Central, running from Albany to Buffalo, and the Hudson River road, running between Albany and New York, participated but feebly in the strike; but the Western subsidiary lines, the Lake Shore, running through Dunkirk, Erie, and Cleveland, to Toledo, and the Michigan Southern, running thence to Chicago, were seized by the strikers. The strike extended also over the coal-roads—the Delaware, Lackawanna & Western, connecting the northeastern Pennsylvania coal-fields with Syracuse, and through the Central New Jersey with New York, and the Philadelphia & Reading road, with termini at Philadelphia and Harrisburg; also over the Canada Southern, in Canada, and the Michigan Central, running between Chicago and Detroit, and the Chicago and Canada roads; also over the Cleveland & Pittsburgh, and the Cincinnati, Sandusky & Cleveland; and in the West over the Pittsburgh, Cincinnati & St. Louis, and the Vandalia line, running *via* Terre Haute from St. Louis to Indianapolis, the Ohio & Mississippi, running between Cincinnati and St. Louis, *via* Vincennes, Ind.; over the Chicago & Alton, joining Chicago with St. Louis, *via* Springfield and Bloomington; over the lines running from St. Louis to Toledo and Detroit, through Decatur, Lafayette, and Fort Wayne, from Bloomington to Cincinnati, through Indianapolis, and from St. Louis to Indianapolis, through Mattoon; and from Bloomington to St. Louis, west of the Chicago & Alton; and beyond the Mississippi the roads involved were the Missouri Pacific, from St. Louis as far as Leavenworth, Kan., and the St. Louis, Kansas City & Northern, with a branch running up into Iowa. These Western roads are all feeders to the great trunk lines, and many of them directly subsidiary to one or another of the four great combinations. The railway strike was the occasion for laborers in many other industries to show their dissatisfaction with the present rates of wages by strikes, or public demonstrations of discontent. The coal-miners in particular united in a general strike, which was more determined and prolonged than the railway strike, and in which as great a number of laborers were involved.

This strike was undoubtedly a preconcerted action, which had been talked over among railroad operatives far and wide for some time before the outbreak. There was no organized combination, but yet an understanding as to the means and methods to be employed, and a

general determination to make it a test-strike, which should give a definite sanction to certain powers for the adjustment of wages to be won by the workmen, although the particular rights which they claimed were anything but definite. The particular grievances which they made their *casus belli* were, however, plainly drawn up by the committees on the different roads. While these differed on each of the lines, the main complaint and the common incentive to the strike was the last reduction of 10 per cent. in the wages, determined upon by the managements of nearly all the railroads in the country, which went in force on some of the roads in June, and on a greater number in July. On nearly all the roads, the restoration of this 10 per cent. was embraced in the demands of the strikers; but on some of them this was done more for the sake of unanimity than because that was the most obnoxious of their grievances; as, for instance, on the New York & Erie road, where the pay was higher than on most of the others, and where the reduction had been already acceded to by the employés. On one or two roads in the West the men struck without alleging any grievances, simply out of sympathy with the movement.

The origin of the rebellion, so general and determined, against the unrestricted control of employers in the matters of the hiring and wages of labor, goes much further back, and its consequences were intended to reach much further ahead than the adjustment of the present compensation of labor on the roads. The hostility of the managers of the corporations to labor unions and combinations, as such, had become more and more pronounced and effective; some of the managers had declared their determination to destroy these associations root and branch, and the practice of discharging the members of grievance and striking committees was common. The power of the strike had been felt upon the railroads, notably in the instances of the successful engineers' strike on the New Jersey Central, in 1876, when every engineer on the road stopped his train at the given hour of midnight on a fixed day, and left his engine where it was standing. A strike was conducted in the same way on the Grand Trunk Railway, in Canada, which extends from Montreal to Detroit, in which the strikers likewise gained their point. These strikes were organized by the great society of the Brotherhood of Locomotive Engineers. This association is the strongest ever formed among the railroad operatives. It numbers 50,000 or more members, and possesses a fund of millions of dollars, it is said. It dates from 1863; the headquarters are in Cleveland, Ohio. It is composed of train and track hands and conductors, as well as engineers, the higher grades of employés being represented the strongest. It first developed its strength after an unsuccessful engineers' strike on the Pan-Handle road—the connection of the Pennsylvania Railroad running from Pittsburgh to Louisville—in 1874.

T. M. Arthur, who is still its head officer, was then elected chief, and is the depository of great authority. He attends to all complaints, and hastens to the spot when any grievance, great or small, is heard of, to confer with the aggrieved parties and with the railroad superintendent. When he decides that the employés are wrong, the matter is dropped. Where he finds that the grievance is real, and where the railroad authorities do not make good the claim, he advises with his brother officers, and if a strike is determined upon, it may not take place immediately, but is consummated at some hour when the railroad has pressing need of all its hands and cannot momentarily replace the striking employés. The brotherhood has thus dictated terms to the railroad managers in many a difficulty, from the case of a discharged workman to the matter of raising wages on whole lines of railroad. Railroad managers have sworn to break this powerful association. A determined strike which took place under its auspices on the Boston & Maine road in February, 1877, led to the passage of a law by the Massachusetts Legislature, making it a penal offense for striking workmen to do any act which would endanger commercial interests; and similar acts were passed in the Legislatures of Pennsylvania, New Jersey, Maryland, Delaware, and Missouri. The Engineers' Brotherhood took no active part in the present strikes, although sympathizing entirely with the movement.

It was rumored that there was a concerted strike planned, which should take place in October upon all the railroads of the country, and that it was forestalled by this premature outbreak on the Baltimore & Ohio road, on which the last oppressive reduction had rendered the men desperate from poverty. The subject of the wages actually received by the railroad employés is a complicated one, on account of the varying conditions under which they have to perform their labor. The train-hands have often to lie idle three or four days in the week, and must spend a good part of their wages in board at distant stations, away from their families. In a conference between a committee of strikers and Mr. King, vice-president of the Baltimore & Ohio road, on July 27th, the strikers demanded \$3.50 and \$3 per day for engineers, \$2.50 for conductors, and \$2 for firemen and brakemen. They declared that firemen and brakemen averaged but 4 days' work in the week, and asked that the time taken in going for engines on passenger-trains, and in reporting for work when called out, if no work was given them, should be counted as extra time, and that 50 per cent. extra should be paid for Sunday running. They stipulated, also, that no man should be discharged for having participated in the strike. On this road the strikers declared repeatedly and emphatically that all they wanted was living rates of wages. Mr. King, in his reply, presented a comparative scheme of the

wages then paid and those of the year 1861, in which it appeared that the rates demanded would exceed those of that year by 33 per cent., while the company was receiving only half the prices for freight which were then paid. He called their attention to the policy followed by the management, of keeping more men employed than the business of the road required, and distributing the wages among as great a number of men as possible, so as not to bring hardship on the families of a part of them by depriving them entirely of work. The comparative rates of wages he gave as follows:

CLASSES OF EMPLOYEES.	PAY RECEIVED		Pay proposed by Committee.
	July, 1861.	July 16, 1877.	
Tonnage conductors.	\$1 66	\$2 25	\$2 50
	1 50	2 08	
	1 33	1 80	
Tonnage brakemen..	1 33	1 58	2 00
	1 17	1 35	
	1 00	
Tonnage engineers..	3 00	2 98	3 50
	2 95	2 90	
	2 50	2 43	
Tonnage firemen....	2 25	2 25	2 00
	2 00	
	1 33	
	1 75	1 58	
	1 50	1 35	
	1 33	
	1 11	

Wages had been cut down three times in three years on this road. Men complained that they often had to wait three or four days at the end of the trip for their turn to go back, and had thus to consume seventy-five cents a day for board.

A list of the wages paid per day to firemen and brakemen on the principal roads, before the reduction, is here given:

LINES OF RAILROAD.	Firemen.		Brakemen.	
Baltimore & Ohio.....	\$1 85 @	\$1 75	\$1 50 @	\$1 75
Phil. Wilmington & Balt.....	1 73 @	2 00	1 73 @	1 92
Philadelphia & Erie.....	2 00 @	2 50
Pennsylvania, N. J. Division.	1 90 @	2 10
Erie.....	1 76 @	2 24	1 75 @	2 00
N. Y. Central & H. R. R. E..	1 25 @	1 75	1 65 @	2 15
N. Y., N. H. & Hartford.....	1 75 @	1 90	1 56

This takes no account of the time lost in lying off, which is different on different roads and different divisions of roads, and in different days on the same road.

The strike on the New York & Erie Railroad was primarily instituted on account of

some discharged committeemen. The leader, Donohue, gave an account of the origin of the action, to wit: He received letters from brakemen and firemen on the Eastern division of the road, complaining that committeemen who had presented grievances to Receiver Jewett had been discharged. He called a meeting of the brotherhoods of firemen, engineers, and brakemen, and they voted to make a formal demand for the restoration of the discharged, and to quit work in the event of a refusal. The grievances subsequently submitted by the strikers embraced the charge that firemen were promoted to engineers' places by favor, and not on account of merit and length of service. Their new demands for wages were for brakemen to receive \$2 a day, the switchmen \$2, the head switchman \$2.25, truckmen in yard \$1.50, truckmen on sections \$1.40, and to pay no rentals on company's grounds except as by agreement; the firemen to have the same pay, or rates of pay, as they received prior to July 1, 1877, and monthly passes to be continued as before, and passes to be issued to brakemen and switchmen.

On the Pennsylvania road the men struck for a general restitution of the old rates—\$1.90 and \$2.10 per day, instead of \$1.70 and \$1.90. They complained that formerly they were paid by the month, and for the time in which they were kept idle they still received pay, whereas now every hour when there is no work to do is docked from their wages. On the New Jersey Central the brakemen demanded their old pay of \$3.16 for a round trip, instead of \$2.00, while the firemen asked for no increase. The following averages of monthly wages are from a schedule presented by Receiver Lathrop of this road: Engineers, \$104; firemen, \$61; brakemen, \$45.25 (on passenger-trains); and engineers, \$110; firemen, \$66; brakemen, \$45.98 (on freight and coal trains). On the Delaware, Lackawanna & Western Railroad, the firemen struck for their old pay of about \$50 a month on the average, instead of \$45. On the New York Central, firemen's wages were \$40 to \$45 a month; brakemen's, \$36.

The following schedule shows the wages actually paid at the time the strike broke out on some of the leading lines for daily runs—usually about 100 miles—and the average of monthly pay made for full work:

LINES OF RAILROAD.	DAILY WAGES.		MONTHLY WAGES.	
	Engineers.	Firemen.	Engineers.	Firemen.
New York Central.....	\$3 15	\$1 58	\$61 90	\$41 08
Erie.....	3 60	2 13	97 12	58 12
Pennsylvania (longer trips) (passenger).....	3 15	1 80	92 73	51 23
Pennsylvania (shorter trips) (freight).....	2 34	1 65	68 66	48 08
Lake Shore.....	2 93	1 47	94 64	47 32
Illinois Central (passenger).....	115 00	57 00
Illinois Central (freight).....	100 00	54 00
Chicago & Alton (maximum).....	5 50	2 25	90 00	45 00
Chicago & Alton (minimum).....	3 30	2 00
Chicago, Burlington & Quincy.....	2 00	51 00	52 00

These rates are generally a third or more above what was paid in 1860, when the usual

pay for an engineer was \$60, and for a fireman \$30.

The following table, showing the average prices of certain quantities of about 60 articles of prime necessity, aggregated according to the quantities of each usually consumed, is useful as illustrating the purchasing power of mechanics' wages in their various fluctuations since the beginning of the Civil War:

YEARS.	Total Cost.	Per Cent.
1860—May 1.....	\$61 55	100
1864—May 1.....	140 21	225
1865—May 1.....	113 77	184
1866—May 1.....	102 53	167
1867—May 1.....	116 46	189
1868—May 1.....	120 80	195
1869—May 1.....	96 50	156
1870—May 1.....	84 11	136
1871—May 1.....	82 98	134
1872—May 1.....	85 45	138
1873—May 1.....	81 49	132
1874—May 1.....	81 39	131
1875—May 1.....	76 48	124
1876—May 1.....	69 45	112
1877—Jan. 1.....	65 76	106

This table does not take account of the continued high rates of rent, nor of the present high prices of many secondary articles which are important for the comfort of the family.

The railroad workmen were not all of them driven into the strike from actual want, although all of them had been obliged, during the successive reductions in wages which have recently been made, to give up many comforts and luxuries to which they had been accustomed.

There was a feeling of deep indignation against the companies on account of the manner in which the business had been conducted for several years past. The argument that many of the roads could not afford to pay the former wages, or any wages at all, and pay at the same time the usual interest on their debts and capital, only aroused the greater indignation of the strikers. The impression that there had been a sorry mismanagement of capital prevailed not only among them, but among the public at large, and explains the general sympathy which the strikers retained among the people in spite of their high-handed and unlawful proceedings. The popular feeling was that they ought not to be made to suffer for the gross mistakes and extravagances of the heads of the companies, whoever else should suffer. The following newspaper report of a conversation with an intelligent brakeman shows the prevailing sentiments of the striking railroaders:

"When we complain," said he, "that our wages are too small to support a comfortable life, they tell us that railroads do not exist primarily to support us in any sort of life—that the managers are trustees of other people's property, and they must conduct their business so as to protect the interest of the property-holders. Now, we can't help seeing that these managers, in spite of their conscientious devotion to the interests of the road-owners, have been wildly squandering this property, income and assets, in a crazy struggle to slaughter each other. Everybody knows that they have been sinking money—sinking it needlessly and willfully; and when this ruinous rivalry flares out in such freaks of puerile and jealous extravagance as those senseless, danger-

ous, and demoralizing races across the continent with fast trains, we lose some of our reverence for the superior sagacity which capital is said to attract into its service. But it is still more irritating to see the money, which is whittled from our wages by these magnates, spent with open-handed liberality to gratify their own love of display and sumptuous pleasure. Right here, into this Jersey City depot, there come at least a dozen private cars, each of which belongs to some grandee on one of the lines in this 'system.' Now, there is actual need of some private cars on some occasions, and if the gorgeousness of these vehicles could be subdued a trifle in the interest of economy and good taste, and if they were only made to facilitate the business of the roads, they would provoke no complaint or comment; but hardly a day passes without one or two of these palaces rolling in here. Empty Pullman coaches are running every hour, but the railroad pasha must have a car of his own. He may have his car all to himself, or he may have all his friends with him. The supplies which are furnished to these luxurious travelers are not such as the families of brakemen habitually enjoy, but they are luxurious meals in several artistic courses, with wines to suit, and all are charged to 'the company.' The occupants sometimes live in these coaches for days together, and they (the coaches) are always nuisances here. They are in everybody's way, and somebody is kept switching, and backing, and hauling them about, until they are coupled to an outgoing train, and on the way to another yard. The actual expenses of a round trip from Philadelphia for one of these cars is \$20, at a moderate estimate; and when 40 or 50 such trips are made in a month, besides voyages to other places, a clean \$1,000 is wiped out.

"But there are still more expeditious methods than this of bringing about an alarming 'shrinkage of values' in railroad stocks. Private cars are not sufficiently distinguished to gratify the most luxurious officials. They must have special trains, and everything must clear the track for them. Mr. — thinks no more of ordering locomotive 1,001 hooked up to car 2,002, than he does of ordering his coachman to harness his bay mare to his road-wagon for a drive. Last winter he used to roll from Philadelphia to New York in this grand style, to attend the opera whenever the performance promised to be sufficiently attractive for his elegant taste, and then he would steam back after it was over. It costs about \$180 to make the run, and five or six specials a month knock the bottom out of another \$1,000. Now, \$2,000 a month for private cars and specials is rather precipitous. It is 10 per cent. of \$20,000, or the pay of 400 men at \$50 per month. And this amounts to saying that the 10 per cent. saved by reducing the wages of 400 men on this division never gets as far as the stockholders, but is charged up in a couple of items to the 'vanity and ease' account.

"Now, you can snow us under with arguments, and political economy, and social science, and it may be that all this has no bearing upon the question of wages as viewed by philosophers. Our men are not profound or subtle thinkers, perhaps, but they keep both eyes wide open, and these things are exasperating. If the men who are paring down our wages for the good of society at large, and railroad-stock owners and bondholders in particular, would only pinch themselves a little in the general squeezing-up, we could listen with more patience to their professions. They say we have a common interest in the prosperity of the roads. Why don't they distress themselves just a little—say to the extent of riding in Pullman palace cars—so that we can luxuriate in some community of suffering for high principle?"

The following resolutions, passed by the strikers on the Fort Wayne road at Pittsburgh,

represent the spirit and intentions of the strikers on most of the railroads:

Resolved, By the train-men and employes of the Pennsylvania Company and leased lines, in convention assembled: That we will in no wise interfere with the passenger traffic or with the United States mail trains.

Resolved, That we agree to furnish a full crew of men, free of charge, to the railroad company, to promptly move to the city all freight now in the yard intended for Pittsburgh firms, to the Duquesne depot.

Resolved, That under no circumstances will we move through freight until we are allowed sufficient wages for our labor to keep our families from actual want.

Resolved, That we fully appreciate the sympathy so fully tendered us by the public at large.

The ruinous competition between the trunk lines for the freight transportation of the West, in which freight prices were reduced far below the normal rates, was the subject of general complaint.

Actual suffering was felt far more generally and pressingly among other classes of laborers who struck—notably among the workers in the coal industry—and among some who did not strike, than among the railroaders. The picture of the condition of the miners given in the following expression of one of the leading strikers is no doubt literally true: "We have for a year done men's work on two meals of mush per day, and a bit of dry bread for our dinners, and we have learned to endure a great deal. We will eat the grass in the field before we will go to work again for less than we demand." Some of the miners could not earn above \$10 a month—few of them over \$25. An obnoxious institution in the mining regions is the companies' stores, the men complaining that they dare not buy from other dealers, at lower prices, lest they lose their places. The coal-heavers who struck at Bergen Point, in New Jersey, were not able to earn over 60 or 70 cents a day. These men, mostly Irish, preserved a quiet and peaceable temper. It was a noteworthy symptom of these strikes that, when they were ready to return to work at the old wages, they were shamed out of it by the pleadings and taunts of their wives. A set of new men were brought to New York to take their places, but left before evening, finding that they were earning at the rate of not more than 25 to 60 cents a day. The stone-quarrymen, who got out stone for the New York pavements, in New Jersey, complained of the prices at which they were obliged to sell to the contractors, the quarriers at Weehawken declaring that they could make but 50 cents per diem. A representative case of low wages in factories was that of the silk mills in Newark, Paterson, and New York. In the Newark mills the men-spinners were paid \$1 a day. Some of these men have worked at their trade for 20 years, and have wives and children to support. Small boys were paid from \$1.10 to \$2.10 per week. The wages of the girls ranged from \$3 to \$5.50 a week. The highest wages

paid was \$9 a week to the dyers. From these wages a reduction was made of 15 per cent. In a New York factory, the wages of the weavers were reduced from 9 to 6 cents a yard, making a reduction in the girls' average pay of from \$4.50 to \$3 per week, while formerly they were able to average \$8 a week.

The elements in this labor-outbreak were: 1. The railroad strikers. 2. The miners, factory-hands, and other laborers in different parts of the country, whose wages were oppressively low, whom a breath could have excited in their desperate or uncomfortable circumstances, and who thought they read in the popular sentiments excited by the railroad strike a disposition to befriend and enforce the cause of their suffering families. 3. The trade-unionists, who, like the next following class, rejoiced in another instance of the power of labor-combination, and who expressed on every hand the liveliest sympathy and well-wishes for the railroad unions, and predicted in their success the advantage and strengthening of all their organizations. 4. The "communistic" element, which could hope for no immediate benefit from the strike, unless it should lead to a general social revolution and disruption of property tenures. 5. The "tramps," being, for the most part, mechanics of more or less idle and irregular habits, who had been for years deprived of employment in their regular trades, owing to the general contraction of the productive industries and the improvement of labor-saving machinery. 6. The dangerous classes—the unproductive, the untalented, and unprincipled multitude which congregates in all larger towns, thousands in number, from which come most of the thieves and paupers. The latter element, which is always ready to inflame and take part in a riot, partly from the hope of booty and partly from motives of envious destructiveness and misanthropy, was most conspicuous during the Sunday of robbery and arson in Pittsburgh, but was out in force also in the street-riots in Chicago and St. Louis. The "tramp" class and the unemployed were over-ready to take part in the closing of the shops and the chasing of willing mechanics from their work. That portion of the demonstrations may be supposed to have been conceived and carried out by this class. Both of the latter elements thought they sympathized in, if they did not understand, the motives of the third class, the "communists." There were many voluntary strikes, especially among the Western factory-hands, where no particular complaint could be alleged, except the universal inferior condition of the laboring-man. Men threw down their tools, under the excitement of the hour, to prate about the wrongs of their class. Meetings and knots of men gathered in all the large towns and industrial sections, to listen to harangues upon the oppression of capital, the social revolution, and the labor republic, and to pass resolutions calling upon

Government to curb capital or organize labor. The "communistic" element in the disturbances consisted of foreign workmen indoctrinated with the ideas of the German and French socialists, and their fellow-enthusiasts and followers. The most remarkable development of this disturbed period was the unexpected extent to which these social-political teachings have spread in this country. Some of the political aspects of the strike are presented farther below. The following brief chronicle recounts the chief occurrences in the different parts of the country, in the order of time in which they took place:

The strike commenced on the Baltimore & Ohio Railroad, some 40 brakemen and firemen stopping work and attempting to prevent the passage of freight-trains on the morning of the 14th of July. On the 16th, the firemen of all the freight-trains at Martinsburg, W. Va., struck work, and drove off the men sent to replace them, defying the police of the town. In the morning, 75 militiamen, sent by Governor Matthews, attempted to guard a Western-bound train; but the strikers, increasing in number to about 100, and joined by several hundred outsiders, prevented its moving, exchanging shots with the soldiers, and frightening off the volunteering fireman and engineer. A train had been thrown off the track at South Baltimore in the night. The road was effectually blockaded at Martinsburg. By evening the strike had extended along the line to Wheeling, and on the side-route to Parkersburg. The whole road was thus in the hands of the strikers. The Governor, perceiving the inefficiency of the slender militia forces, requested the aid of the General Government, and a detachment of two or three hundred United States troops started for the scene of the disturbances on the 18th, under the command of Colonel French, arriving in Martinsburg early on the morning of the 19th. A hundred engines and 1,500 freight-cars stood on the tracks. In the course of the day several men were arrested, and two trains were started off under military escort, after much difficulty in finding engineers and firemen to run trains. A proclamation by President Hayes was posted and distributed along the line. On this day the strike extended over the entire length of the line. On the 19th, in the morning, a strike was declared by the conductors and brakemen on the Pennsylvania Railroad, at Pittsburgh; all freight-trains were stopped, and by night the strikers and their abettors had congregated, to the number of 1,400, in the freight and stock yards. On the 20th an *émeute* occurred in the streets of Baltimore, on the occasion of the 6th Regiment of Militia being ordered by Governor Carroll to Cumberland, where the strikers were defying the law. Toward evening a turbulent concourse of people surrounded the armory, to demonstrate their fellow-feeling for the strikers. When the soldiers marched out, they were stoned by the mob, and, after a little, commenced to shoot

into the crowd, though without orders, keeping up a continuous, irregular fusillade all the way to the station. Nine of the rioters were killed, and 20 or 30 were wounded, including several soldiers. The excitement in the city was intense, and the order for the departure of the militia was recalled. The railroad-station was set on fire. When the 5th Regiment marched to the depot, it was assailed, but no shots were fired. On the 20th, all freight-traffic was arrested on the Pennsylvania Railroad. The strikers at Pittsburgh defied the civil authorities, and the militia of Philadelphia were ordered to the spot. The train-hands on the Pittsburgh, Fort Wayne & Chicago line struck work in the afternoon. Trains were blockaded at Newark, O., on the Baltimore & Ohio, and the State troops were ordered out by Governor Young. That morning, also, the firemen and brakemen on the New York & Erie Railroad went out on strike at several stations along the Western division, and the strikers took control of the track at Hornellsville and other points. On the 21st, the 6th Division of the Pennsylvania State Guard arrived in Pittsburgh. At 5 o'clock p. m. they attempted to clear the Twenty-eighth Street crossing, at the command of General Pearson, and replied to the missiles of the populace by several volleys of musketry. That aroused the fiercest passions of the mob, who soon returned to the attack provided with firearms and three pieces of ordnance, belonging to a local association. They had broken into a gun-shop and warehouses of firearms to obtain weapons. They repeatedly assailed the round-house, in which the military had taken their position, but were driven back with musket-shots. They planted and loaded a field-gun near the walls of the round-house, and numbers were shot down while attempting to fire it. The mechanics of the city, returning from work, swelled the mob. The exasperation of the citizens was intensified by the fact that several innocent persons standing at a distance had been hit by the first musket-shots. The rioters assaulted the building repeatedly, and firing was kept up on both sides. Finding themselves unable to dislodge the soldiers by assault, the rioters determined to set fire to the round-house and roast them out. Oil-cars on the neighboring track were first set on fire, but the flames did not reach the building. An incendiary rage seized the crowd, and torches were applied to the freight-wagons indiscriminately; and when the firemen appeared, they were forbidden to extinguish the railroad property, although the rioters themselves assisted in putting out other burning property. The flames not yet penetrating to the round-house, a car laden with coke was saturated with petroleum and set on fire, and then pushed down the track against the building. Other ignited cars were sent down toward the round-houses. At 5 a. m., when the crowd had for a short time withdrawn from the vicinity of the round-house,

the military, who were in danger of being consumed by the fire which was raging around them, emerged from the building, and, forming in line, marched rapidly toward the United States Arsenal. On their way thither they were overtaken by a thousand or more armed rioters. The commandant refused to admit them into the arsenal, receiving only the wounded. The militia then retreated across the Alleghany River, under the fire of the pursuing rioters, and there disbanded.

In the mean time a vast crowd remained congregated around the railroad buildings, setting fire to buildings and trains that had not yet caught, until, by 7 o'clock, the machine-shops, both round-houses, with 125 locomotives, the Union Transfer Co.'s buildings, and all the buildings of the terminus, were a mass of flames. Many of the freight-cars were pillaged before they were set on fire, men breaking them open with sledge-hammers and handing out the goods to whoever would take them away; while men, women, and children streamed to the spot and away with the booty, in many instances even wagons being used to convey off the plunder. The plundering was carried on in the most barefaced, almost business-like, manner. Every kind of goods, from bales of cloth and silk to books and picture-frames, from barrels of flour to oranges and cigars, were carried, rolled, dragged through the public streets, while the citizens looked on half-amused. The mania for robbery seemed to have possessed many people of ordinarily decent behavior. Some, who had scruples against stealing themselves, helped their neighbors to get away with the booty. Women took a prominent part in the thievery. They left nothing, however useless, but could be seen bearing away laces, kid ball-shoes, parasols, coffee-mills, whips, and gas-stoves. The detectives, in their subsequent researches, came upon seven great trunks of clothing in one house, and eleven barrels of flour in another. Eye-witnesses relate that a wagon-load of sewing-machines was sold off at auction in the street, at from \$1 down to 10 cents apiece. Barrels of spirits were tapped and drunk on the spot. On Sunday evening, when the mob began to break into private buildings and sack liquor-stores and cigar-shops, the citizens and police began to take vigorous steps to arrest the disorder. When the plundering of the freight-cars was at last partially checked by the efforts of the mayor and police, the cars were burned with their freight by the mob. During the whole day the incendiarism was continued. The Union Depot was fired; the freight depot of the Pittsburgh, Cincinnati & St. Louis Railroad was plundered and burned, and the offices, depot, and engine-house of the Pan-Handle line, the depot of the Adams Express Co., the offices and laundry of the Pullman Car Co., the Union Depot Hotel, and all the other railroad buildings, together with a number of private structures, were consumed. The number of freight-cars burned

was about 2,000. The direct loss of railroad property was estimated at \$8,000,000 to \$10,000,000. Governor Hartranft, who was hastening home from the Pacific coast, had sent orders to call out all the militia of the State. The citizens of Pittsburgh had beheld the excesses of the mob on Sunday apparently with indifference, but, on Monday morning, citizens' companies were organized and armed for protection, while the fury of the mob had entirely spent itself. The strikers had taken possession of the track at various other points along the Pennsylvania road, and the connecting roads had suspended traffic as a matter of precaution. In both the Pittsburgh and Baltimore riots all the most violent spirits of the mobs were other laboring-men, and not the railroad strikers; while the worst excesses were committed by low characters who did not belong to the mechanical class—tramps, thieves, and loafers. In both cities the sympathies of the majority of the people were on the side of the strikers, and bitter sentiments against the military prevailed. A sullen and determined feeling was rife along the Baltimore & Ohio road, and the presence of the regulars was not enough to insure the resumption of traffic, although the United States troops were nowhere molested or resisted, except a slight stoning which they underwent in Baltimore on Sunday. There were 400 regular soldiers in that city, under General Hancock. An oil-train was burned there on Sunday. The strike on the Erie Railroad centred at Hornellsville. A regiment of militia was sent thither from Rochester. Strikers boarded and stopped a passenger-train which was sent out with a military guard, while the militia made scarcely an attempt to defend it. Regiments from Buffalo and Brooklyn were ordered to this point. A proclamation, in vigorous terms, was issued by Governor Robinson.

Strikes were now breaking out all over the country. Strikers forbade trains to be moved at Philadelphia. At St. Louis a train was allowed to start on the Ohio & Mississippi line. Meetings were held by laborers' associations in all the cities. On Monday, the 23d, there was a disturbance at Buffalo. Erie and Lake Shore strikers took the firemen and brakemen from the New York Central trains, stopped the work in the car-shops, and attacked a guard of 200 soldiers at the Lake Shore round-house and gained possession of the building. All trains were stopped on the Ohio & Mississippi road. Train, track, and shop men struck work on Monday on the Cleveland, Cincinnati & Columbus road at Cleveland, on the Hocking Valley road, the Indianapolis & St. Louis, the Vandalia, and the Chicago & Alton roads. At Toledo, O., the Lake Shore & Michigan Southern railway was blockaded at the Air-Line Junction. A conference took place between the Erie strikers and Receiver Jewett, at which they offered to resume work accept-

ing the 10 per cent. reduction, provided that discharged committeemen should be restored to their places, and that the switchmen should have their garden-plots, where they had built their cottages along the track, rent-free, as formerly, and that all hands should be paid for extra work, and firemen should be promoted according to merit and seniority. Mr. Jewett, however, refused to listen to any terms. In the West, strikes commenced to break out in various trades entirely disconnected with transportation, at many points; and in many towns lawless bands of men drove willing workmen away from their labor. At Columbus, a mob of miners, tramps, and ruffians closed the rolling-mills, machine-shops, and factories; at Zanesville, also, factories and mills were raided and closed up. In Pennsylvania there were strikes in some of the largest mills on Monday. On Tuesday a partial strike took place on the New York Central, the Canada Southern, and the Delaware, Lackawanna & Western Railroads. In the West, the shorter roads also were nearly all closed by strikers, while all the trunk lines were completely blockaded, and there was no railroad communication with the East. Passenger as well as freight trains were stopped on many of the Western routes, and nearly all the railroad-shops were closed, the mechanics striking or being forced to quit. At St. Louis, Indianapolis, and Chicago, there was a complete embargo on all the roads. The strikers preserved a determined attitude everywhere. It is estimated that 100,000 men were on strike. Further collisions between the strikers and the militia took place at Buffalo, and at Reading, Pa., where 13 of the rioters were killed and 43 wounded. Along the Eastern roads, wherever military were posted, order was gradually restored, although at the first meetings between the militia and the rioters the State Guards showed a culpable lack of discipline, and committed acts of guilty rashness or shameful cowardice. Many of the soldiers, too, sympathized with the strikers; although the troops had been dispatched from distant points, in order that no feelings of personal or neighborly sympathy should come into play. Along the Baltimore & Ohio line, in Maryland and West Virginia, single trains were run under the protection of the Federal forces, although the strikers still maintained a resolute spirit, and the ordinary traffic could not be resumed before the last of the month. In New York State, at Hornellsville, Buffalo, and other points, the National Guard restored order. The workmen on all the New Jersey roads were on strike by Wednesday, but no acts of violence took place in that State. In the West, many towns were threatened by bold and lawless mobs, made up of the idle and dangerous classes. In many cities, scenes of anarchy and intimidation occurred. The citizens gradually rallied in these cities, enrolling themselves into vigilance committees, in several places the railroad strikers themselves taking an active

part in the measures to secure safety and order. At Zanesville, Columbus, and other towns, the unruly spirits were quelled by the citizens' guards. At Fort Wayne the strikers took control of the city, but protected all property. But the same kind of disturbances which were being quelled in these places, kept breaking out at other points, while in Chicago, St. Louis, Toledo, Louisville, and the larger Western cities, repeated scenes of anarchy and terrorism took place. On the 26th, a fierce encounter took place between the police and a large mob in Chicago. It began with an attempt of a force of policemen to clear the streets of the riotous crowds which had been roaming the city without much hinderance for days, shutting up factories, and committing all manner of depredations. The squad of 300 police made a determined charge on a crowd thousands in number, and broke them up, and, when they rallied again, made another fierce charge, reinforced by a company of cavalry; 19 were killed or fatally injured, and many wounded, in the onslaught. Several other skirmishes took place during the day, the police being supported by some United States troops and vigilants, and many arrests were made. In St. Louis, the same practice of closing workshops was proceeding, and the same spirit of riot was rife. Business in the city was at a stand-still. On the 26th, a vast crowd marched down in a regular column and surrounded the headquarters of the police, militia, and vigilants, taunting the militia and daring them to fire. The following day the police broke up a meeting composed of delegates from all the trades-unions and workmen's associations of the city, and arrested all present in the hall, to the number of 70. While mob-law was thus prevailing throughout the central portion of the country, there were outrageous doings in San Francisco also, the "hoodlums," rough characters, and discontented workmen of the city threatening the Chinese quarter with destruction. The police were active, and vigilant committees were rapidly formed among the citizens, who held the reckless rioters in tolerable check, and prevented the terrific massacre and havoc which might have occurred, though in spite of them the ruffians committed ferocious acts, and burned several buildings occupied by coolies. A bloody encounter between rioters and the vigilants took place on the 26th.

A large mass meeting of workmen and socialists, called for the purpose of expressing sympathy for the strikers, under the auspices of the Social Democratic Workingmen's Party, the Independent Laborers, and several trades-unions, took place in Tompkins Square, in New York, on the 25th, in the evening. The concourse was large—some 8,000 or 10,000 workmen—and several spirited speeches were made by John Swinton, the journalist, Justus Schwab, who was conspicuous in the so-called Tompkins Square riot in 1874, Leander Thomp-

son, David Conroy of the Horseshoers' Union, and others; yet the fears which had prevailed of a riotous disturbance resulting from this meeting were proved to be entirely groundless. The following evening a similar meeting was held in the Cooper Union Hall, under the direction of the amalgamated Trade and Labor Unions.

By the 26th and 27th, the strikers, who had shown themselves so determined before, began to waver, and an understanding was brought about with the managers of the companies. Trains were allowed to leave Chicago, traffic was partially resumed in Pennsylvania and on some of the Western roads, while on others passenger-trains at least were allowed to pass. On the 25th, traffic was still suspended on the New York Central, no freight-trains running, and no passenger-trains west of Rochester. The following day freight and passenger transportation was regularly resumed, though the striking trainmen in the Buffalo freight-yards, and the mechanics in the Albany car-shops, still held out; the former succumbed on Friday, and the latter went to work again on Saturday. The Erie road, which was still blockaded beyond Oswego on the 25th, resumed business on the 27th; the strikers had made a proposition, as has been stated above, to go back to work at the old rates, provided the discharged committeemen should be reinstated, and the leaders of the present strike should not be turned off; but nothing in the form of a compromise would be entertained by Receiver Jewett. On receiving assurances, however, that their spokesman, Donohue, should not be prosecuted by the road, and that the old committees should receive consideration, they returned to their work on the 27th, and freight and passenger trains were dispatched over every section of the line. The Pennsylvania Railroad was in use, up to the 26th, only between New York and Philadelphia. Governor Hartranft, upon his return from the West on that day, adopted vigorous measures to break the blockade; and upon his threatening a sharp use of the bayonet and musket, and passing over the road with a detachment of State troops, the strikers came to terms on Friday, the 27th. In the West, trains were running on most of the roads by the 28th.

By the 30th, traffic, both freight and passenger, had been resumed on the trunk lines and most of the principal roads of the country. On the Baltimore & Ohio the strikers showed a determined spirit, and committed many lawless acts; and on the Pittsburgh & Fort Wayne routes the strikers still carried things with a high hand, until, on the 2d of August, they made up their mind to resume work. On the New Jersey roads, the Pennsylvania coal-roads, and the Lake Shore & Michigan Southern, the strike ended also on the 2d and 3d of August.

A sequel to the story of the railroad strikes is that of the riots of striking and discharged

miners in the coal-regions. Their complaints were in a great measure identical with those of the railroad employes in the same part of the country. Their wages had been cut down until their once comfortably-nourished families began to languish in misery; while the same railroad corporations whose hands were out on strike about them were the owners of the mines in which they worked, or in great part controlled them and had drawn their profits from them. From the beginning the Pennsylvania miners had watched the strike on the railroads with eager and interested eyes. They had encouraged and themselves taken part in some of the earliest lawless outbreaks. The miners in the Philadelphia & Reading Railroad's mines complained that the highest wages made for 15 days' work was \$12, many making not more than \$5, while some veins were worked which yielded the miners actually nothing for their labor, or were even worked at a loss. In the Lehigh Valley it was said that \$15 to \$20 a month was all that the miners could make, and \$15 was the highest pay made by laborers. Many intelligent miners declared that their families had scarcely tasted meat for a year or more, and that boiled Indian meal was the only kind of food familiar to them. By the end of July all the miners in the Scranton region, estimated at 40,000 in number, were out, while strikes were taking place in other parts of the coal-country. Bread-riots were feared at different points, owing to the stoppage of work in the mines and the failure of food-supplies caused by the arrest of railroad transportation. On the 1st of August bands of riotous miners took control of the towns of Kingston, Plymouth, and Nanticoke, and throughout the country the mine-pumps were stopped generally, and the mines were rapidly filling with water. Trains were arrested on the Lehigh Valley road, and in Scranton a mob drove the mechanics from the Railroad and Iron Company's shops, killing one or two workmen and wounding the mayor of the town, and robbed and destroyed the company's stores, while they lost three or four of their own number from a hasty volley poured into them by a troop of vigilants. A noteworthy episode of the coal-strike was the action of the coronor's jury called by Alderman Mahan, which brought in a verdict of murder against the vigilance committee. They answered the order of arrest before the court of Wilkes-barre, fearing violence to their persons in Scranton. The strike in the coal-regions was a determined and general one in nearly all the mines in the Lackawanna and Wyoming Valleys, the Lehigh and Shenandoah regions, and extended into the mining sections of Maryland and Illinois. Many outside persons helped to provide the miners' families with the necessities of life. The people generally were on the side of the strikers. Farmers and tradesmen contributed to their support. Whole plantings of potatoes were abandoned to their use, and

labor in the field was provided for many of them. The coal-heavers at Bergen Point, whose average wages were 58 cents a day, after standing out quietly for several days, gained the desired increase. Some of the coal companies compromised early with the strikers; in other mines the men soon gave in; but the mass of the miners held out for many weeks. On August 14th, Mr. Dinning, president of the Pittston Company, announced an advance of 10 per cent. in the wages. His example was followed by the other coal companies in that district. On the 19th, the mines in the Kanawha Valley, Md., resumed operation, the companies acceding to the miners' terms.

Many of the rioters and chief strikers were taken into custody by the police and militia. Most of the prisoners were speedily discharged, or sentenced to a few days' imprisonment. The law is different in the different States regarding such disturbances. In Erie, Pa., where several conductors struck work on the 14th of August, because another conductor, who had taken considerable part in the great strike, had been discharged for alleged neglect of duty, four of them were committed to jail upon the charge of attempting to incite a riot. Barney J. Donohue, the head committeeman of the Erie Railroad strikers, was arrested and taken to New York, where he was tried before Judge Donohue, on the charge of contempt of court in interfering with the property of the Erie Railroad, which was in the hands of a receiver. He was sentenced to a brief imprisonment on that charge, and on his release was rearrested upon another indictment. (*See UNITED STATES.*)

LEWIS, TAYLER, an American scholar, died at Schenectady, N. Y., May 11th. He was born in Northumberland, Saratoga County, N. Y., in 1802, and graduated at Union College in 1820, studied law in Albany, and began to practise at Fort Miller. Occupying his leisure in the study of the Hebrew Bible, he was led to give to Biblical and classical studies a large part of his time for nearly ten years. At length he abandoned the practice of law altogether, and in 1833 opened a classical school in Waterford, whence he removed, in 1835, to a school in Ogdensburg. In 1838 he became Professor of Greek in the University of New York, in which post he continued 11 years. He acquired an unusually wide acquaintance with the Greek and Latin classics, and a knowledge of the Arabic and Syriac, and read the Koran and other Arabic writings, and the writings of the Hebrew rabbis. His special interest in the system of Plato led him to publish a translation of the "Theætetus," with notes; and in 1845 he published the Greek text of the tenth book of Plato's dialogue, "The Laws," under the title "Platonic Theology; or, Plato against the Atheists," with critical and explanatory notes, and illustrative dissertations, showing profound learning. In 1838 he became Professor of

Greek in the University of New York, and in 1849 he was chosen Professor of Greek in Union College, where he remained until his death. He lectured there on ancient philosophy and poetry, and gave instruction in the Oriental tongues. The degree of LL. D. was conferred on him by Union College in 1844. In 1855 he published the "Six Days of Creation," his best-known work, maintaining, on philological grounds, the harmony of the Scriptures and geology. In reply to criticisms upon this work he published "The Bible and Science" (1856). "The Divine Human in the Scriptures" (1860) applies the same ideas to the whole Bible, maintaining that the language is phenomenal, that it may be intelligible, while the thought is divine. Dr. Lewis wrote many of the articles in *Harper's Magazine* under the title of "The Editor's Table," for nearly five years (1851-'56), and contributed largely to other periodicals, discussing topics of theology, philology, and present social and political interest. He also published "State Rights, a Photograph from the Ruins of Ancient Greece" (1864), and "Heroic Periods in a Nation's History" (1866); with G. B. Cheever, "Defense of Capital Punishment" (1845); and with E. W. Blyden and Theodore Dwight, "The People of Africa: their Character, Condition, and Future Prospects" (1871). He translated Lange's Commentary on Ecclesiastes, and, with Dr. Gosman, that on Genesis.

LITERATURE AND LITERARY PROGRESS IN 1877. The causes which have limited the market for books for two or three years past have continued to restrict literary production. In the struggle for existence, no doubt, the fittest survive. But the "fittest," in the relation here contemplated, means fittest for selling, which includes, at one extreme, works that are an honor to American letters, and, at the other, productions scarcely entitled to be called literature, but which find purchasers and readers in incalculable numbers. The literary product of the past year is, therefore, small in quantity as compared with some previous years, and in average quality it, perhaps, affords no compensation. Of "literary progress," in the meaning naturally suggested by the words, the evidence is not obvious. But if giving to the world works in different departments of learning and literature that are worthy of the world's attention—some of them the introduction to the public of writers new to authorship, or those before unknown or little known—be a mark of progress, the past year is not without its title to honor in this respect.

HISTORY.—The third and last volume of "The Rise and Fall of the Slave Power in America" (Osgood), left unfinished by the late Vice-President Wilson, and completed from his manuscripts by his private secretary, concludes a work of permanent value, for the historical facts embodied in it, a value not impaired by the point of view from which it is written. For one who was a personal observer of much that he records, and a prominent actor in the

later scenes, the author must be allowed to have written generally with moderation. Dr. Mahan's "Critical History of the Late American War" (Barnes) is a courageous work, which, without hesitation or misgiving, reviews and reverses the public judgment of the actors in the great struggle, and discloses the fact that the author was generous with his advice to the President and Secretary of War during its progress. It shows much knowledge of military science, but closet criticism of operations in the field lacks the qualities which are required to make it of practical value. Mr. Francis Parkman continues his history of French colonization in America with undiminished industry in research and grace of literary exposition, in his "Count Frontenac, and New France under Louis XIV." (Little, Brown & Co.). It fully sustains his reputation, and goes to confirm the estimate which places him among our eminent historians and the conspicuous ornaments of American literature. The celebration of the centenary of Burgoyne's campaign, defeat, and surrender, called out two monographs, one by William L. Stone (Munsell), and one by John Austin Stevens (Randolph). The celebrated "General History of Connecticut," by the Rev. Samuel Peters, which has been the occasion of a good deal of angry controversy, has now been placed within the reach of readers who desire to read on both sides, by a republication, edited by S. Jarvis McCormick (D. Appleton & Co.). A needed work, of a sort to interest an annually-increasing class of readers, is the "History of the College of New Jersey," by John McLean, tenth president of the college (Lippincott). Other publications, historical, or in the nature of historical criticism, are the following:

Alexander Hamilton. A Historical Study. By George Shea. (Hurd & Houghton.)

History of Cambridge, Massachusetts, 1630-1877. By Lucius E. Page. (H. O. Houghton & Co.)

The Eastern Question Historically Considered. With Notes on the Resources of Russia and Turkey, and an Abstract of their Treaties with the United States. By James M. Bugbee. (Osgood, Boston.)

A Brief History of Russia. By Francis A. Shaw. (Osgood, Boston.)

A Brief History of Turkey. From the German of Dr. Johannes Blockwitz. Translated by Mrs. M. Wesselhoeft. (Osgood, Boston.)

The Principalities of the Danube: Servia and Roumania. Their History, Inhabitants, Governments, and Relations to the Turkish Empire. By G. M. Towle. (Osgood, Boston.)

History of Belfast, Maine, 1770-1875. By Joseph Williamson. (Loring, Short & Harmon, Portland.)

Modern Greece: Its History, People, Institutions, and Relations to Turkey and the Eastern Question. By George M. Towle. (Osgood, Boston.)

Montenegro and Bulgaria. A Brief History of these Provinces, their Inhabitants, Institutions, Governments, Religions, Customs, and Relations to the Turkish Empire. (Same author and publisher.)

Arnold's Campaign against Quebec, 1775. By John Joseph Henry, one of the Soldiers of the Expedition. (Munsell.)

A History of Block Island, from its Discovery in 1514 to the Present Time, 1876. By Rev. S. T. Livermore, A. M. (Case, Lockwood & Brainard Co., Hartford.)

History of Turkey. By J. D. O'Connor. (M. Warren, Chicago.)

Reminiscences of Worcester, from the Earliest Period. By Caleb A. Wall. (Putnam & Davis, Worcester, Mass.)

Sentry, or Beacon Hill; the Beacon and the Monument of 1635 and 1790. By W. W. Wheildon. (Lee & Shepard, Boston.)

The Life of Pius IX., and the Great Events in the History of the Church during his Pontificate. By John Gilmary Shea, LL. D. (Kelly, Baltimore.)

Annals of Staten Island, from its Discovery to the Present Time. By J. G. Clute. (C. Vogt.)

A History of the United States of America, including some Important Facts mostly omitted in the Smaller Histories. By Josiah W. Leeds. (Lippincott.)

Mormonism Unveiled; or, The Life and Confessions of John D. Lee. Also, the True History of the Mountain Meadows Massacre. (Bryan, Brand & Co., St. Louis.)

A Discourse on Western Planting, written in the Year 1584 by Richard Hackluyt. With a Preface and Introduction by Leonard Woods, D. D., LL. D. Edited, with Notes, by Charles Deane. Documentary History of Maine. Second Series. (Maine Historical Society.)

A Handbook of the General Convention of the Protestant Episcopal Church, giving its History and Constitution, 1785-1877. By William S. Perry, D. D., LL. D. (Whittaker.)

BIOGRAPHY.—This department of literature has been enriched by a number of works on subjects of eminent distinction—works worthy, it would seem, to be durably associated with their fame. It may be too soon to attempt to determine what will be the place of Charles Sumner in history, but his "Memoir and Letters," written and edited by Mr. Edward L. Pierce (Roberts), if completed with the skill, taste, and tact, that characterize the two volumes offered to the public, will long hold a high place in literature. "The Memoirs of John Quincy Adams" (Lippincott), selected from his diary, now completed by the publication of the twelfth volume, is a monumental work, of unique biographical value, and a storehouse of materials for history. It is a fortunate circumstance that the writings of Washington, Jefferson, Franklin, Hamilton, the elder Adams, and other eminent men of the Revolutionary age, and now of the younger Adams, as well as those of leading statesmen contemporary with him, have been preserved, collected, and published. The "Life and Letters of George Cabot," by Henry Cabot Lodge (Little & Brown), throws a welcome light upon the political history of a period that has long been obscured by party prejudice, and put "out of mind" by the clamorous urgency of the interests of the present. The "Autobiography of William H. Seward, with a Memoir of his Life, and Selections from his Letters," by Frederick W. Seward (D. Appleton & Co.), is a fitting memorial of a man whose public life is identified with the history of our Government in the most critical period of its existence, and who, perhaps, most completely expressed the spirit of his time. Of a more strictly personal interest, and, for that reason, having a special charm for all admirers of the dis-

tinguished subject, is the "Reminiscences and Anecdotes of Daniel Webster," by Peter Harvey (Little & Brown). The "Biography of Gerrit Smith," by O. B. Frothingham (Putnam's), exhibits a singular career with candor and justice, and with no small measure of ethical discrimination and literary skill. "The Life of Edwin Forrest," by the Rev. William R. Alger (Lippincott), does for the memory of "the American Tragedian" what could be done by an able man, working with command of ample materials; but its literary effectiveness is diminished by a too ambitious style. "The Life of Edward Norris Kirk, D. D.," by the Rev. D. O. Mears (Lockwood, Brooks & Co.), depicts a remarkable character and an influential career, and does it in excellent taste and judgment. A less distinguished career, but a marked character and a good type of a class of divines no longer common, is exhibited in the "Memoir of John Woodbridge, D. D.," by the Rev. Sereno D. Clark (Lee & Shepard). Mr. William D. Howells has introduced to the public a number "Choice Autobiographies" (Osgood). Those of the Margravine of Baireuth, Lord Herbert of Chesham, Thomas Elwood, Alfieri, Goldoni, and Edward Gibbon, have appeared, with introductions that are fine examples of essay-writing. Other works, of various merit as biographies, are the following:

The Life, Speeches, and Memorials of Daniel Webster: containing his most Celebrated Orations, a Selection from the Eulogies delivered on the Occasion of his Death, and his Life and Times. By Samuel M. Smaucker, LL. D. (Lippincott, Philadelphia.)

The Life and Times of Sir Walter Raleigh. By Charles K. True. (Hitchcock & Walden, Cincinnati.)

A Popular Life of Pope Pius the Ninth. By Rev. Richard Brennan. (Benziger Brothers.)

Reminiscences of Friedrich Froebel. By B. von Mahrenholz-Bulow. Translated by Mrs. Horace Mann. With a Sketch of the Life of Froebel. By Emily Sherreff. (Lee & Shepard.)

Memoir and Official Correspondence of General John Stark. By his Grandson, Caleb Stark. (E. O. Eastman, Concord, N. H.)

Biographical Sketches of Living Old Men of the Cumberland Presbyterian Church. By E. B. Crissman, D. D. Vol. 1.

Harriet Martineau's Autobiography, with Memorials. By Mrs. Maria Weston Chapman. (Osgood.)

Worthy Women of our First Century. Edited by Mrs. O. J. Wister and Miss Agnes Irwin. (Lippincott, Philadelphia.)

Letters and Essays of Mrs. E. B. Browning. Edited, with Memoir, by R. H. Stoddard. (Miller.)

"Warrington" Pen-Portraits. A Collection of Political and Personal Reminiscences from 1848 to 1876. By William S. Robinson. Edited, with Memoir, by Mrs. Robinson. (By subscription.)

Camp, Court, and Siege. A Narrative of Personal Adventure and Observation during Two Wars: 1861-'65-'70-'71. By Wickham Hoffmann. (Harpers.)

The Washington-Crawford Letters from 1767 to 1781. With an Appendix containing Later Letters from Washington. By C. W. Butterfield. (Robert Clarke & Co., Cincinnati.)

Reminiscences and Incidents in the Life of a Pioneer Preacher of the Ancient Gospel. To which

are appended a few Characteristic Discourses. By Nathan J. Mitchell. (Chase & Hall, Cincinnati.)

The Biography of Alfred de Musset. Translated from the French, by Harriet W. Preston. (Roberts Brothers.)

Charlotte von Stein. A Memoir. By George H. Calvert. (Lee & Shepard.)

The Narrative of a Blockade Runner. By Captain J. C. Wilkinson, of the C. S. N. (Sheldon.)

Memoir of Rev. Thomas Whittemore, D. D. By Rev. John G. Adams, D. D. (Universalist Publishing House.)

Scenes in my Life, occurring during a Ministry of nearly Half a Century in the Methodist Episcopal Church. By Mark Trafton, D. D. (Nelson & Phillips.)

Sermons in Memorial of Rev. William A. Muhlenberg, D. D. By Rev. E. A. Washburn, D. D. (Whittaker.)

The Supreme Court of the United States: A Series of Biographies, with Portraits engraved on Steel. With an Introduction, by Samuel F. Miller, LL. D., Associate Justice of the Supreme Court. (F. N. Robinson, Philadelphia.)

All for Christ: A Sketch of the Life and Labors of Rev. Charles H. Payson. Edited by his Brother. (Tract Society.)

Personal Relations with the President and Secretary of State. By Charles Sumner. (Lee & Shepard.)

SCIENCE AND PHILOSOPHY.—For reasons obvious to any eye that took in the state of the nation, financially and economically considered, that department of science which is concerned with questions of material prosperity has received special attention. The newspaper and magazine press furnish the principal media of popular discussion, but there have not been wanting the fruits of more deliberate study and more finished literary exposition. "An Introduction to Political Economy," by Prof. A. L. Perry, of Williams College (Scribner), treats in an elementary and popular style the principles of the science which in his larger and well-known work have for some years, and in successive editions, been made familiar to many students. Bastiat's "Political Economy," edited, with an introduction, by D. A. Wells (Putnam's), serves to make that important work accessible to readers only of English. "Lectures on the History of Protection in the United States," by Prof. W. G. Sumner, of Yale College (Putnam's), is a valuable aid to a knowledge of the lessons of experience on a question that must soon have direct practical importance. "Money and Legal Tender in the United States," by H. R. Lindermann, Director of the United States Mint (Putnam's), supplies similar data for the discussion of an urgent question of policy. The subject is looked at from an original (whether or not tenable) ground in "Money and its Laws," by Henry V. Poor (H. V. & H. W. Poor). Coming to more comprehensive and profound treatises, Dr. Theodore D. Woolsey's "Political Science; or, The State, Theoretically and Practically Considered" (Scribner), asserts for itself, and will be assigned by the public judgment, a very high place among works on the science of government. Dr. Woolsey is recognized as a publicist of high authority, and his reputation will

be honorably enhanced by this weighty contribution to political philosophy. A work less inclusive in scope, but of like ability in treatment, is "The United States as a Nation—Lectures on the Centennial of American Independence, given at Berlin, Dresden, Florence, Paris, and London," by Dr. Joseph P. Thompson (Osgood)—lectures designed to aid in diffusing in Europe correct ideas on our form of government, but equally adapted to usefulness at home. "Ancient Society," by Lewis H. Morgan (Holt), embodies researches and speculations conducted in a scientific spirit, and throwing light on questions reaching behind the epochs of "recorded time." In philosophy proper, we note a new edition, prepared under the very competent editorial care of Prof. O. P. Krauth, and with important additions, of Fleming's "Vocabulary of Philosophy, Mental, Moral, and Metaphysical," from the edition of Dr. Calderwood, under the title, "A Vocabulary of the Philosophical Sciences" (Sheldon). It is a manual indispensable to the student and to the general reader who ventures upon that line of reading. "Modern Philosophy, from Descartes to Schopenhauer and Hartmann," by Prof. Francis Bowen, of Harvard College (Scribner), though less complete than the title suggests, omitting the consideration of the British schools of philosophy, is a lucid and well-digested account of the course of speculative thought on the European Continent. Questions on the relations of Religion and Science are discussed in the "Boston Monday Lectures" of the Rev. Joseph Cook (Osgood), which have had an extraordinary popular effect, and may thus be credited with a clear educative utility, though their degree of success in effecting their avowed purpose is yet undetermined. The same line of discussion is carried on, also in a popular way, but with abundant spirit and logical keenness, in the volume of Essays entitled "The Old Bible and the New Science," by J. B. Thomas, D. D. (Tract Society); in "The Origin of the World, according to Revelation and Science," by J. W. Dawson, LL. D. (Harpers), the work of a writer having a recognized position as a scientist; and in a work which essays to plan for the complete reconciliation of the now mutually misunderstood parties, entitled "The Final Philosophy, or System of Perfectible Knowledge issuing from the Harmony of Science and Religion," by Prof. Charles W. Shields, D. D., of Princeton. Dr. Shields does not claim to have formulated the ultimate philosophy, but to show that philosophy is the umpire between Science and Religion, and to point out the way to that goal of thought. In philology, an edition of Mr. J. R. Bartlett's "Dictionary of Americanisms," so enlarged as to have become almost a new work, has no fellow in its class. The titles which are subjoined cover the ground we have surveyed, and more:

Text-Book of Mineralogy, after the Plan and with the Cooperation of Prof. J. D. Dana, including Crys-

tallography and Physical Mineralogy. By Edward S. Dana. (Wiley.)

Philosophical Discussions. By Chauncy Wright. (Holt.)

Electricity and the Electric Telegraph. By George B. Prescott. (D. Appleton & Co.)

The Antelope and Deer of America. By John Dean Caton, LL. D. (Hurd & Houghton.)

Annual Record of Science and Industry. Edited by Spencer F. Baird. (Harpers.)

The Taxation of Personal Property. By John H. Ames. (Mills, Des Moines, Iowa.)

Outlines of Modern Chemistry. Organic. Based in Part on Riché's *Manuel de Chimie*. By C. G. Wheeler. (Jansen, McClurg & Co., Chicago.)

Annals of the Astronomical Observatory of Harvard College. Vol. VIII. Results of Observations made or directed by William Cranch Bond, A. M., George Phillips Bond, A. M., and Joseph Winlock, A. M. Fifty-one Plates. (Ginn & Heath, Boston.)

The Question of Labor and Capital. By John B. Jervis. (Putnams.)

The Scientific Basis of Delusions. By Dr. T. M. Beard. (Putnams.)

Handbook of Electrical Diagrams and Connections. By Charles H. Davis and Frank B. Rae. (Van Nostrand.)

An Elementary Treatise on Practical Chemistry and Qualitative Inorganic Analysis. By Frank Clowes. (H. C. Lea, Philadelphia.)

Tables for Systematic Qualitative Chemical Analysis. By John H. Snively, Ph. D. (C. W. Smith, Nashville, Tenn.)

The American Palæozoic Fossils. A Catalogue of the Genera and Species, with Names of Authors, Dates, Places of Publication, etc. By S. A. Miller. (S. A. Miller.)

Universe of Language: its Nature and Structure, with Uniform Notation and Classification of Vowels adapted to all Languages. By the Late George Watson. Edited with Preliminary Essays, by his Daughter, E. H. Watson. Introduction by William W. Goodwin, Professor in Harvard University. (Authors' Publishing Co.)

Minerals of New England. Where and how to find Them. By F. M. Bartlett. (Dresser, McLehlan & Co., Portland.)

A Treatise, Psychological and Theological, on the Human Will. By Archibald J. Battle, D. D., President of Mercer University, Georgia. (J. P. Harrison & Co., Atlanta, Ga.)

Social Life and Mental Powers of Insects. By A. S. Packard, Jr. (Estes & Lauriat, Boston.)

Theoretical Chemistry. By Ira Remsen, Ph. D., M. D. (H. C. Lea, Philadelphia.)

Alcohol as a Food and Medicine. By Ezra M. Hunt, A. M., M. D. (National Temperance Society.)

Birds of the Northwest. A Handbook of American Ornithology, containing Accounts of all the Birds inhabiting the Great Missouri Valley, and many Others, together representing a Large Majority of the Birds of North America. By E. Coues. (Estes & Lauriat, Boston.)

Life-Histories of the Birds of Eastern Pennsylvania. By Thomas G. Gentry. (Naturalists' Agency, Salem, Mass.)

The Wild-Flowers of America. Illustrations by Isaac Sprague. Text by George L. Goodale, of Harvard University. In Parts. (Hurd & Houghton.)

A Miracle in Stone; or, The Great Pyramid of Egypt. By Joseph H. Seiss, D. D. (Porter & Coates, Philadelphia.)

The Pocket Geologist and Book of Minerals. By H. L. Smith, Civil and Mining Engineer. (Kelly, Piet & Co., Baltimore.)

Geology of New Hampshire. By Prof. C. H. Hitchcock. Vol. 2. (Eastman, Concord, N. H.)

Our National System of Education. An Essay by John C. Henderson, Jr. (Dodd, Mead & Co.)

A Guide to the Determination of Rocks. Being

an Introduction to Lithology. By E. Jannettaz. Translated from the French by G. W. Plympton. (Van Nostrand.)

The Microscope. By Andrew Ross. Fully illustrated. (Industrial Publishing Co.)

Economic Monographs.—I. The Silver Question; or, Dollar of the Fathers *versus* Dollar of the Sons. By David A. Wells.—II. Why we Trade, and how we Trade. By David A. Wells.—III. The Tariff Question, and its Relations to the Present Commercial Crisis. By Horace White.—IV. Friendly Sermons to the Protectionist Manufacturers. By J. S. Moore. (Putnams.)

THEOLOGY AND RELIGION.—The condition of the public mind is such as to attract not a few writers to the discussion of the historical evidences, the philosophical relations, and the distinguishing doctrines of Christianity; of the truths of theism and natural religion as against a naturalistic skepticism; and of various controverted doctrines within the lines of Christian belief. It is not easy to make a clear distinction between philosophical and religious works, and some of the books about to be mentioned might, with almost equal propriety, have been classed in the preceding section.

A work which saw the light last year, but which must represent several years' work, is "The Creeds of Christendom," by Dr. Philip Schaff. (Harpers), embracing the history and the text—original and translated—of the ancient and Catholic, and of the modern confessions, whether Greek, Latin, or Reformed. The bringing together of these authoritative and standard symbols, with indexes and every needed help for reference and comparison, is a unique conception, carried out in a way that is highly creditable to the accomplished editor and his learned collaborators. Dr. Schaff's "Harmony of the Reformed Confessions" (Dodd, Mead & Co.) is an exposition of the points in which the Reformed (Calvinistic) confessions are at one. The essay grew out of the late conference of Presbyterian and Reformed churches at Edinburgh. Dr. Schaff has issued an additional volume of Lange's Commentary—"The Books of Samuel" (Scribner). A new edition of Dr. H. B. Hackett's "Commentary on the Original Text of the Acts of the Apostles" (Draper, Andover, Mass.) has the last corrections and additions of that lamented scholar. Dr. Henry Cowles continues his learned yet popular Biblical expositions by the issue of a "Commentary on the Book of Job" (D. Appleton & Co.). Immer's "Hermeneutics of the New Testament," translated from the German, with additional notes, by A. H. Newman (Draper), is an acceptable addition to our scholars' apparatus of study. Dr. George P. Fisher's "Beginnings of Christianity" (Scribner) presents the fruits of extensive and exact learning in a singularly-attractive and agreeable style, constituting a work which in substance is a contribution to the knowledge, and in style to the literature, of his subject. A work in part covering the same ground, but extending over a larger tract of history, and less critical, is "The Church of the Apostles,"

by the Rt. Rev. W. Ingraham Kip (D. Appleton & Co.). "The Life and Writings of St. John," by the late Rev. John M. Macdonald (Scribner), is honored with an introduction by Dean Howson, one of the authors of the well-known "Life and Epistles of St. Paul," with which a comparison will be provoked, that the later work, though able and creditable to the author, cannot sustain. The "Lectures on Baptist History," by the Rev. Dr. William R. Williams (Baptist Publication Society), adorn his subject with a wealth of erudition and mingled energy and beauty of style that would make any theme interesting. Dr. Williams's reputation seems likely to be chiefly a tradition, sustained by writings that suggest rather than demonstrate their author's place among the scholars of his time. In the "Discourses and Essays" of the late Prof. Henry B. Smith, D. D., LL. D., which are published under the leading title, "Faith and Philosophy," with an introduction by the Rev. Dr. George L. Prentiss (Scribner), we have a very valuable contribution to contemporary thought, which one cannot contemplate without regretting that such powers and acquisitions did not frame a more durable literary monument. The "Manual of Theology and Christian Ethics," by the Rev. Alvah Hovey, D. D., LL. D. (H. A. Young, Boston), is an outline drawn up for the theological class-room, but maturer minds may find in it food for thought, and aids to investigation. "The Religious Feeling, a Study for Faith," by Newman Smyth (Scribner), presents with freshness and force the internal or subjective evidences of Christianity. The subject of "Oriental Religions, and their Relations to Universal Religion," is pursued by Samuel Johnson in a new volume on China (Osgood). His industrious research is manifest to the reader of his work; to criticise it successfully, one should have gained more knowledge of the matter in hand than is possessed by its author, which few can claim. The seventh volume of McClintock and Strong's "Cyclopædia of Biblical, Theological, and Ecclesiastical Literature" (Harpers), sustains the reputation gained by the preceding volumes for fullness, accuracy, and impartiality. "The Reconciliation of Science and Religion," by Alexander Winchell, LL. D. (Harpers), is able, and exhibits familiarity with the matters in controversy, as viewed on different sides. But it has no promise of being the "end of controversy" on the subject.

Some other works might be mentioned as having just claim for distinction; the titles that follow include them with others:

The Spirit of the New Faith, and Other Discourses. By O. B. Frothingham. (Putnams.)

Marvels of Prayer. By Matthew Hale Smith. (Tibbals.)

He will Come. By Stephen H. Tyng, Jr. (H. Hoyt, Boston.)

The American Evangelists, Moody and Sankey, and their Work. With Biographical Sketches of P. P. Bliss and Dr. Eben Tourjée. By Rev. Elias Nason. (D. Lothrop & Co., Boston.)

- From Traditional to Rational Faith; or, The Way I came from Baptist to Unitarian Christianity. By R. Andrew Griffin. (Roberts, Boston.)
- Church Papers, Polemical, Irenical and Historical. By Rev. L. W. Bacon. (Putnam.)
- The Supernatural Factor in Religious Revivals. By L. T. Townsend, D. D. (Lee & Shepard, Boston.)
- New Testament Commentary. Luke. By J. S. Lamar, Augusta, Ga. (Chase & Hall, Cincinnati.)
- The Beauty of the King. By Rev. A. H. Hollo-way, A. M. (Authors' Publishing Co.)
- Great Joy. Sermons and Prayer-Meeting Talks, delivered at the Chicago Tabernacle. By D. L. Moody. (E. B. Treat.)
- The Fatherhood of God in its Relation to the Atonement of Christ. By J. M. Pendleton, D. D. (Baptist Publication Society.)
- The History of Sunday-Schools, from the most Ancient Times to the Present. By Rev. R. S. Duncan. (Southern Baptist Publication Society.)
- The True Tabernacle. A Series of Lectures on the Jewish Tabernacle. By George C. Needham. (Grant, Fairer & Rogers, Philadelphia.)
- Questions awakened by the Bible. By Rev. John Miller, Princeton, N. J. (Lippincott.)
- The Cradle of the Christ. A Study in Primitive Christianity. By O. B. Frothingham.
- Reminiscences and Incidents in the Life of a Pioneer Preacher of the Ancient Gospel. To which are appended a few Characteristic Discourses. By Nathan J. Mitchell. (Chase & Hall, Cincinnati.)
- The Power of Spirit manifest in Jesus of Nazareth. By W. H. Furness, D. D. (Lippincott, Philadelphia.)
- The Children of Light. By Rev. William W. Faris. Second Fletcher Prize Essay. (Roberts Brothers, Boston.)
- Hints on the Formation of Religious Opinions. Addressed to Young Men and Women. By Ray Palmer, D. D. (Barnes.)
- Sermons on the Life of Christ. By Rev. Samuel W. Fisher, D. D., LL. D. (R. Clarke & Co., Cincinnati.)
- What think Ye of Christ? By Gail Hamilton. (Estes & Lauriat.)
- A Narrative of the Great Revival which prevailed in the Southern Armies during the late Civil War between the States and the Federal Union. By William W. Bennett, D. D. (Claxton, Philadelphia.)
- Half-Hours with the Bible. (McLoughlin Brothers.)
- The "Higher Life" Doctrine of Sanctification tried by the Word of God. By Henry A. Boardman, D. D. (Presbyterian Board.)
- The Eastern Question in Prophecy. Six Lectures on the Rise and Decline of Mahometanism and the Events to follow, as presented in the Prophecies of St. John. By Rev. Samuel J. Nicolls, D. D., St. Louis. (Lemoine Brothers, St. Louis.)
- Strength of Men and Stability of Nations. Baccalaureate Discourses, 1873-'77. By P. A. Chadbourne, D. D., LL. D., President of Williams College. (Putnam.)
- Songs in the Night. By W. M. Taylor, D. D. (Randolph.)
- The Origin and Destiny of Man. By H. W. Thomas, D. D. (Pierce, Burton & Co., Aurora, Ill.)
- God's Word Man's Light and Guide. A Course of Lectures on the Bible before the New York Sunday-School Association, by Rev. Drs. Taylor, Briggs, Storrs, Crosby, Booth, Porter, Washburn, and Simpson. (American Tract Society.)
- Rite of Ordination according to the Roman Pontifical. Latin and English Text. By Rev. J. S. M. Lynch. (Benziger Brothers.)
- The Manual of our Lady. (Benziger Brothers.)
- Elements of Ecclesiastical Law, adapted especially to the Discipline of the Church in the United States. By Rev. S. B. Smith. (Benziger Brothers.)
- Systematic Theology. By Miner Raymond, D. D. Two volumes. (Hitchcock & Walden, Cincinnati.)
- God's Guide for Man's Faith and Practice. Being an Arrangement of the Holy Scriptures under the various Aspects of Man's Belief, Duty, and Privilege, in Chronological Order. By J. H. Gilruth. (Nelson & Phillips.)
- Helps to Officiant Members of the Methodist Episcopal Church. By James Porter, D. D. (Nelson & Phillips.)
- The Square of Life. By Stephen H. Tyng, Jr., D. D. (W. Mucklow, Philadelphia.)
- Ways of the Spirit, and Other Essays. By Frederick H. Hedge, D. D. (Roberts.)
- Creed and Deed. A Series of Discourses By Felix Adler, Ph. D. (Putnam.)
- The Story of Creation. By S. M. Campbell, D. D. (Lockwood, Brooks & Co., Boston.)
- Romanism as It is: An Exposition of the Roman Catholic System, for the Use of the American People. By Rev. S. W. Barnum. (Connecticut Publishing Co.)
- The Unerring Guide; or, Scripture Precepts topically arranged. By Henry V. Dexter, D. D. (Lothrop.)
- Creed and Conduct, and Other Discourses. By Octavius B. Frothingham. (Putnam.)
- Christ in the Christian Year and in the Life of Man. Sermons by Right Rev. F. D. Huntington, D. D. (Dutton.)
- Light at Evening Time; or, Jewels from God's Word. With an Introduction by Theodore L. Cuyler, D. D. (Lothrop.)
- Revivals of Religion. By James Porter, D. D. (Nelson & Phillips.)
- The Simple Truth. By Robert Collyer. (Lee & Shepard.)
- The Church of the Household. By Rev. Charles H. Hale, D. D. (Hurd & Houghton.)
- Reason and Religion, with Other Sermons for the Times. By Pierce Connelly, M. A. (Lippincott.)
- God the Teacher of Mankind. A Plain, Comprehensive Explanation of Christian Doctrine. By Michael Muller. Vol. 1. (Benziger.)
- Christianity and Humanity. A Series of Sermons by Thomas Starr King. Edited, with a Memoir, by E. P. Whipple. (Osgood.)
- Concordance to the Book of Psalms in the Authorized Version; together with a Concordance to the Psalter of the Book of Common Prayer, in its Variations from the Authorized Version. (Putnam.)
- The Patriarchal Dynasties from Adam to Abraham shown to cover 10,500 Years, and the Highest Human Life only 187. By Rev. T. P. Crawford. (Ryland & Co., Richmond.)
- Times of Refreshing. A History of American Revivals. By Charles L. Thompson, D. D. (L. T. Palmer & Co., Chicago.)
- Robert Raikes, Journalist and Philanthropist. A History of the Origin of Sunday-Schools. By Alfred Gregory. (Randolph.)
- Lay Effort: its Range and Methods. By the Rev. H. C. Hayden, D. D. (Randolph.)
- Lectures on Preaching, delivered before the Divinity School, New Haven. By the Rev. Phillips Brooks. (Dutton.)
- Pastoral Theology. The Pastor in the Various Duties of his Office. By Thomas Murphy, D. D. (Presbyterian Board.)
- The Lord's Supper and its Observance. By Lucretia P. Hale. (Roberts.)
- At Eventide. By the Rev. N. Adams, D. D. (Lothrop.)
- Mediæval, Papal, and Ritual Principles, stated and contrasted. By the Rev. J. H. Hobart, D. D. (Whittaker.)
- Go up Higher; or, Religion in Common Life. By the Rev. James Freeman Clarke. (Lee & Shepard.)
- Church Papers. By Rev. Leonard Woolsey Bacon. (Putnam.)

GEOGRAPHY, TRAVEL, AND EXPLORATION.—Works under these heads are less numerous than in some former years. Among the books to which passing events give a special interest is "Among the Turks," by Cyrus Hamlin (Carters), recording the observations of a veteran missionary in the East, whose ample means of knowledge and undoubted good faith with his readers make him an authority upon his subject. The Hon. E. G. Squier, a veteran in another field, who has gained a name in the literature of ethnographic exploration among the remains of the extinct races of America, resumes his wonted task in his "Incidents of Travel and Exploration in the Land of the Incas" (Harpers). The Rev. Dr. Henry M. Field continues his circumnavigatory record in a volume entitled "From Egypt to Japan" (Scribner), in which his practised descriptive powers, dealing with less hackneyed topics, have freer play, and with more attractive results. "California Pictures, in Prose and Verse," by Benjamin Parke Avery (Hurd & Houghton), has the merit of shunning the much bewritten portions of California scenery, and thus has an unlooked-for freshness of interest. "Syrian Sunshine," by Thomas G. Appleton (Roberts, Boston), will take an honorable place among those books in which the objects described are subordinate in the reader's appreciation to the literary style and spirit of the work. A prominent feature of the monthly magazines is the description of scenery, familiar or remote, with pictorial illustrations. One magazine (Lippincott's) provides material for four illustrated volumes of this class: "Persons, Places, and Things;" "Wandering in Four Continents;" "Highways and Byways of American Travel;" and "Europe seen through American Spectacles," by Charles O. Fulton. We note also the following:

One Year Abroad. By Blanche Willis Howard. (Osgood.)

The Plains of the Great West, and their Inhabitants. Being a Description of the Plains, Game, Indians, etc., of the Great North American Desert. By Richard Irving Dodge, Lieutenant-Colonel U. S. A. With an Introduction by William Blackmore. (Putnams.)

The New Descriptive Geography of Palestine, with Critical and Historical Notes of all Places whose Names occur in the Scripture, and whose Sites have with any Degree of Probability been identified. By H. S. Osborn, LL. D. (State University, Oxford, O.)

The Great West and Pacific Coast; or, 15,000 Miles by Stage-Coach, Ambulance, Horseback, Railroad, and Steamer. By James F. Rusling, Brevet Brigadier-General U. S. A. (Sheldon.)

Beyond the Sierras; or, Observations on the Pacific Coast. By Rev. A. H. Tevis, A. M. (Lippincott, Philadelphia.)

Summer Rambles in Europe. By Alexander Clark. (Nelson & Phillips.)

To the East, by Way of the West. By Bishop E. M. Marvin. (Bryan, Brand & Co., St. Louis.)

Mexico as It is; being Notes of a Recent Tour in that Country. By A. Zabriskie Gray. (Dutton.)

From Gotham to the Golden Gate. By Mrs. Frank Leslie. (Carleton.)

Arizona as It is; or, The Coming Country. Com-

plied from Notes of Travel during the Years 1874, 1875, and 1876. By Hiram C. Hodge. (Hurd & Houghton.)

The Silver Country; or, The Great Southwest. A Review of the Mineral and other Wealth, the Attractions and Material Development of the Former Kingdom of New Spain, comprising Mexico and the Mexican Cessions to the United States in 1848 and 1853. By Alexander D. Anderson. (Putnams.)

Abroad again. By Curtis Guild. (Lee & Shepard.)

The Old World as Seen by Young Eyes. By Ellen H. Walworth. (D. Appleton & Co.)

POETRY AND THE DRAMA.—Not much of original composition in these lines of invention has graced our literature within a year. Mr. Edmund Clarence Stedman has indeed remembered his friends and the public in the volume, "Hawthorne, and Other Poems" (Osgood); and Mr. Longfellow, Mr. Whittier, and Dr. Holmes, with the Rev. E. E. Hale and the Rev. James Freeman Clarke, make up a collection of "Poems of the Old South" (Gill, Boston), which, if the venerable edifice should be saved from demolition, will doubtless share its perpetuity. Mr. William Leighton, Jr., who all unconsciously found himself competing with Tennyson in the drama, and divided with the Laureate the suffrages of critics, has come out with another drama, "At the Court of King Edwin" (Lippincott), of sustained merit. "Angelo," by Stuart Sterne—a pseudonym, it is supposed—(Hurd & Houghton), has attracted favorable notice. Among collections of poetry, the first place is deservedly taken by Mr. Longfellow's "Poems of Places" (Osgood), which make a steady progress, volume by volume, around the world. A very pleasing minor collection is "Hillside and Seaside in Poetry," by Lucy Larcom (Osgood). The reissue in a compacter library edition of the series of "British Poets," edited by Prof. Francis J. Child, of Harvard University (Hurd & Houghton), is an enterprise which deserves and is understood to have received a welcome from the public. "Tears for the Little Ones; a Collection of Poems and Passages inspired by the Loss of Children," edited by Helen Kendrick Johnson (Osgood), appeals to a numerous class of readers to whom it offers its sympathy.

Two Men of Sandy Bar. A Play. By Bret Harte. (Osgood, Boston.)

Out of the Question. A Comedy. By W. D. Howells. (Osgood, Boston.)

Lotos-Flowers. By Mrs. Chambers-Ketchum. (D. Appleton & Co.)

Ideals Made Real. A Romance in Verse. By George L. Raymond. (Hurd & Houghton.)

Lotos-Land, and Other Poems. By G. S. Ladson. (P. G. Thomson, Cincinnati.)

Pasco, a Cuban Tale, and Other Poems. With an Essay on Music. By R. Rutland Manners. (Hurd & Houghton.)

Robin, and other Poems. By George Percy. (Lockwood, Brooks & Co., Boston.)

The Rock that is Higher than I, and other Religious Pieces. By John Edgar Johnson. (Whittaker.)

Two Women: 1862. A Poem. By Constance Fenimore Woolson. (D. Appleton & Co.)

Christmas Carols, and Other Verses. By the Rev. H. G. Batterson, D. D. (Lippincott, Philadelphia.)

Our Heiress. A Local Buff Opera. By W. Page McCarty. (West, Johnson & Co., Richmond, Va.)

Dreamings of the Waking Heart, with Other Poems. By Rev. Joel Swartz, D.D. (W. P. Swartz & Brother, Harrisburg.)

Poems by Samuel B. Sumner and Charles A. Sumner. (Authors' Publishing Co.)

The Odes of Horace in English Verse. By Caskie Harrison, Professor of Ancient Languages in the University of the South. First Book. (Ginn & Heath, Boston.)

Prometheus. A Poem. By Rev. Samuel P. Putnam. (Putnams.)

Poems. By Louise Chandler Moulton. (Roberts.) The Book of Gold, and Other Poems. By J. T. Trowbridge. (Harpers.)

The Paradox, and Other Poems. By J. Albert Wilson. (Putnams.)

Apple-Blossoms. Poems. By Hattie T. Griswold. (Jansen, McClurg & Co, Chicago.)

ART.—A few works on the philosophy, the history, the applications, and the culture of art, including artist-biographies, have served to show that in a time of financial disaster, and with all the painful economies of such a season, it is not found necessary to sacrifice all the higher to the lower utilities. Of these, original and translated, we note:

Art Education applied to Industry. By George Ward Nichols. (Harpers.)

What is Art? or, Art Theories and Methods concisely stated. By S. G. W. Benjamin. (Lockwood, Brooks & Co., Boston.)

Art Anatomy. By Dr. William Rimmer. Comprising 486 Designs on 81 Heliotype Plates, illustrating Every Portion of the Human Figure, with Descriptive Text. (Little, Brown & Co., Boston.)

Woodward's Artistic Drawing Studies for Artists, Art Students, and Schools. In Parts. (W. H. Stelle & Co.)

Artist-Biographies. Vol. I., Titian. Vol. II., Raphael. Vol. III., Dürer. Vol. IV., Murillo. (Osgood.)

Caricature and Other Comic Art, in All Times and Many Lands. By James Parton. 203 Illustrations. (Harpers.)

Lübke's History of Art. Translated under the Supervision of Edward L. Burlingame. Edited by Clarence Cook. 2 vols. (Dodd, Mead & Co.)

Contemporary Art in Europe. By S. G. W. Benjamin. (Harpers.)

Pottery and Porcelain of All Times and Nations. By W. C. Prime, LL. D. (Harpers.)

Art Education applied to Furniture. By Harriet Prescott Spofford. (Harpers.)

Great American Sculptors. By William J. Clark, Jr. (Gebbie & Borie.)

Raphael and Michelangelo. By Charles C. Perkins. Illustrated with Woodcuts and Heliotypes. (Osgood.)

Theory of Art, and Some Objections to Utilitarianism. By Guy D. Daly. (D. Appleton & Co.)

A Course of Lessons in Modeling Wax-Flowers. By Florence J. Duncan. (Lippincott.)

Engraved Gems: Their Place in Art. By Maxwell Sommerville. (Porter & Coates.)

Among illustrated books, those only are considered to come properly under this head in which the pictorial is paramount to the literary interest. It is not easy to draw the line. The following seem to come in fairly here:

Historic Mansions and Buildings of Philadelphia. With Some Notices of the Occupants and Owners. By Thompson Westcott. (Porter & Coates.)

Gems of the Centennial Exhibition. Consisting of Illustrated Descriptions of Objects of an Artistic Character in the Exhibits of the United States, Great Britain, France, Spain, Italy, Germany, Belgium, Norway, Sweden, Denmark, Hungary, Russia, etc., at the Philadelphia International Exhibition of 1876. (D. Appleton & Co.)

Photographic Souvenirs of the Centennial Exhibition. A Series of Four Quarto Portfolios containing Photographs of Objects of Interest in the Exhibition. (Lippincott.)

Frithiof's Saga. Translated from the Swedish of Tegner, by L. A. Sherman. With Illustrations. (Osgood.)

Silhouettes. A Series of Sixteen Humorous and Characteristic Sketches. By F. T. Church. (Estes & Lauriat, Boston.)

Early New England Interiors. Sketches in Salem, Marblehead, Portsmouth, and Kittery. By Arthur Little. (Williams, Boston.)

Millais Gallery. A Series of Heliotype Engravings of Pictures by Millais, with Biographical Sketch. (Osgood.)

Beauties and Curiosities of Engraving. Selected and edited by J. W. Palmer. In Parts. (Osgood.)

Gatherings from an Artist's Portfolio. By E. L. Freeman. (D. Appleton & Co.)

Life and Habits of Wild Animals. Illustrated by Designs by Joseph Wolf. (D. Lothrop & Co.)

The Gathering of the Lilies. By L. Clarkson. Illustrated by the Author. (Sibole, Philadelphia.)

The Rhine, from its Source to the Sea. From the German of Stieler, Wachenhusen, and Hackländer, by G. C. T. Bartley. 425 Engravings. (Lippincott.)

Golden Songs of Great Poets. Illustrated by Darley, Moran, Hart, Fredericks, Smilie, and McEntee. (S. H. Leggett.)

Christmastide: The River Path, by J. G. Whittier; Excelsior, by Longfellow; The Rose, by J. R. Lowell; Baby Bell, by T. B. Aldrich. Illustrated. (Osgood.) The poems also published separately.

Illustrated India: Its Princes and People. By Julia A. Stone. (American Publishing Co.)

One Summer. By Blanche Willis Howard. (Osgood.)

The Flood of Years. By W. C. Bryant. Illustrated. (Putnams.)

Abide with Me. By Rev. H. F. Lyte. Designs by Miss L. B. Humphrey. (Lee & Shepard.)

The Ninety and Nine. By Elizabeth C. Clephune. (D. Lothrop & Co.)

ESSAYS AND CRITICISM.—This pamphlet and periodical era is favorable to the cultivation of the essayist's art, or rather would be but for the temptations to haste in writing and premature publication. So many succumb to these temptations that few republications of papers from periodicals have enough of substance or of finish to give them permanent value. But several volumes during the past year are so pleasant reading now that no reason is apparent why they should not continue to give like pleasure for an indefinite period. Such a volume is "Hours with Men and Books," by William Mathews, LL. D. (Griggs, Chicago), in which good sense and keen insight are balanced by a large and discriminating knowledge of literature. Dr. Mathews has favored the public also with "Monday Chats, by C. A. Sainte-Beuve, selected and translated from the 'Causeries du Lundi,' with an Introductory Essay on the Life and Writings of Sainte-Beuve" (Griggs). "Birds and Poets, with Other Papers," by John Burroughs (Hurd & Houghton)

is the work of one who loves both Nature and good literature, and by his sympathies with them is enabled to write of them wisely and well. "Table-Talk," by A. Bronson Alcott (Roberts), is not likely to impress the public as deeply as it did those who took it in with their "æsthetic tea," but here is food for thought. "Windfalls," by T. G. Appleton (Roberts), will be deemed better fruit than any that is picked with whatever care from some other trees. Mr. Henry Howard Furness continues his "Variorum Edition of Shakespeare" (Lippincott) by the issue of "Hamlet," with an apparatus for comparative criticism unequaled in any previous publication. It is a colossal undertaking on which he has entered, the value of which can be appreciated only by the few. "Substance and Show, and Other Lectures," by Thomas Starr King, edited with Introduction by Edwin P. Whipple (Osgood), needing no voucher, is countenanced by the best. "Deep-haven," by Sarah O. Jewett (Osgood), describes, with the eye of an artist and the insight of a sympathetic observer, a charming bit of "still-life."

How they strike Me, these Authors. By J. C. Heywood, A. M. (Lippincott.)

Atlas Essays, Biographical and Critical. By E. A. Freeman, E. P. Whipple, Noah Porter, and others. Selected from the *International Review*. (Barnes.)

Domestic Explosives, and Other Sixth Column Fancies from the *New York Times*. By W. L. Alden. (Lovell, Adam, Wesson & Co.)

Satan as a Moral Philosopher. With Other Essays and Sketches. By Caleb S. Henry, D. D. (Whittaker.)

Underbrush. By James T. Fields. (Osgood.)
System of Shakespeare's Dramas. By Denton J. Snider. 2 volumes. (Jones, St. Louis.)

FICTION.—Though prose fiction constitutes a large part of the popular reading, not much of it is of home production. English novels (of which on an average three a week appear during the publishing season) are reprinted here in large numbers. A small but increasing number cultivate this popular species of literature with a success honorable to them and auspicious of honor to American letters. A larger class of writers stoop to gratify lower or more frivolous tastes.

Henry James, Jr., in "The American" (Osgood), sustains his reputation for originality of invention and artistic thoroughness in the working out of his designs. A new candidate for the public favor appeared in "That Lass of Lowrie's," by Frances Hodgson Burnett (Scribner). With some signs of crudeness and inequality of treatment, it is accepted as proof of genuine original power, the further development of which will be scanned with interest. The unauthorized republication of some of her earlier stories has moved her to give renewed currency to "Surly Tim, and Other Stories" (Scribner), which, slight as they are, do not disparage her more important work. Mr. John Habberton has made a first-rate sensation with his pictures of "babies" and "folks," and his

exceeding popularity has multiplied echoes and copyists of his manner. But these are transient "humors." In "The Queen of Sheba" (Osgood) Mr. T. B. Aldrich has done good and characteristic work, but his plot, unlike those of previous productions, does not depend for its final effect upon the shock of surprise. "Nicholas Minturn," by Dr. J. G. Holland (Scribner), shows some advance in design and execution upon his previous works. Measured by the judgment of the literary critics, his works have slender merit. But they are not merely popular, they have a hold upon the popular liking that no criticism can loosen. It is evident that there is a mistake somewhere. Unless people begin soon to show signs that they are weary of his books, critics will have need to reconsider their adverse judgments. "The Story of Avis," by Elizabeth Stuart Phelps (Osgood), embodies and faithfully works out a powerful but unpleasing conception. An anonymous story, "Coronation" (Noyes, Snow & Co., Boston), though in a somewhat overwrought style, discloses some striking merits in characterization and thought. Mr. William Black, in the title of his "Green Pastures and Piccadilly" (Harpers), acknowledges the assistance of an American writer. Our countryman to whom he was so indebted must have divided very unequally with Mr. Black the labor and desert of their joint production, as the reader, uninformed of the partnership, might fail to so much as suspect it.

After Many Days. By Christian Reid. (D. Appleton & Co.)

First Love is Best. By Gail Hamilton. (Estes & Lauriat.)

The Scripture Club of Valley Rest; or, Sketches of Everybody's Neighbors. By the author of "Helen's Babies." (Putnams.)

Other People's Children. Sequel to "Helen's Babies." (Same author and publishers.)

G. T. T.; or, The Wonderful Adventures of a Pullman. By Rev. E. E. Hale. (Roberts Brothers, Boston.)

Hetty's Strange History. No-Name Series. (Roberts.)

Panola. A Tale of Louisiana. By Mrs. Sarah A. Dorsey. (Peterson, Philadelphia.)

They All Do It; or, Mr. Miggs of Danbury, and his Neighbors. By J. M. Bailey, the *Danbury News Man*. (Lee & Shepard.)

Some Folks. By John Habberton. (Derby Brothers.)

Thirty-four Years. A Story of Southern Life. By John Marchmont. (Claxton, Philadelphia.)

Devil-Puzzlers. By Frederick B. Perkins. (Putnams.)

Sunshine among Clouds. A Story of Trust on Trial. By William D. Hedden. (U. D. Ward.)

The Baroness of New York. By Joachim Miller. (Carleton.)

Forbidden Fruit. From the German of F. W. Hackländer. By Rosalie Kaufman. (Estes and Lauriat.)

Echoes from Mist Land; or, The Nibelungen Lay revealed to Lovers of Romance and Chivalry. By Auber Forester. (Griggs, Chicago.)

The Enchanted Moccasins and Other Legends of the American Indians. By Cornelius Mathews. (Putnams.)

Diana. By Susan Warner. (Putnam.)

A Knight of the Nineteenth Century. By Rev. E. P. Roe. (Dodd, Mead & Co.)

A Song and a Sigh. By Rose Porter. (Randolph.)
The Blue Banner; or, The Adventures of a Muslimman, a Christian, and a Pagan, in the Time of the Crusades and Mongol Conquest. By Leon Cahun. Translated from the French by W. Collett Sanders. (Lippincott.)

The Two Circuits: a Story of Pioneer Life. By J. L. Crane. (Jansen, McClurg & Co., Chicago.)

Will Denbigh, Nobleman. (Roberts.)
The Cross above the Crescent. A Romance of Constantinople. By the Rt. Rev. Horatio Southgate. (Lippincott.)

Souci. A Novel. By Mrs. J. H. Twells. (Lippincott.)

Too Rich. From the German of Adolph Streckfuss. By Mrs. A. L. Wister. (Lippincott.)

Mabel Vaughan. By the author of "The Lamp-lighter."

JUVENILE BOOKS.—The corps of purveyors for young people is joined by Mr. Donald G. Mitchell, whose "About Old Story-Tellers; of how and when they lived and what Stories they told" (Scribner), gives his youthful readers information about the authors of "The Pilgrim's Progress," "Robinson Crusoe," and other renowned narratives—information which would be new and instructive to not a few children of larger growth. Another recent recruit is Mr. Edward Abbott, who continues with spirit and interest his "Long-Look Series" (Noyes, Holmes & Co.). Mr. Charles Dudley Warner, in his "Being a Boy" (Osgood), lays under obligation not only all existent boys but all who remember with pleasure having been boys. The old favorites, Mr. J. T. Trowbridge, Miss Warner, Miss L. M. Alcott, Mrs. A. M. Diaz, Mr. Charles Carleton Coffin, Mr. George Cary Eggleston, "Sophie May" and others that might be named with them, keep up a perennial supply of choice reading, in which good work they are joined by a considerable number, less distinguished but of recognized merit.

Bound in Honor; or, A Harvest of Wild Oats. By J. T. Trowbridge. (Lee & Shepard.)

His Own Master. By J. T. Trowbridge. (Osgood.)

The Boy Traders. By Harry Castlemore. (Porter and Coates, Philadelphia.)

Old Tales retold from Grecian Mythology in Talks around the Fire. By Augusta Larned. (Nelson & Phillips.)

The Brown House at Duffield. A Story of Life without and within the Fold. By Minnie Mary Lee. (Kelly, Piet & Co., Baltimore.)

Pine-Needles. By Miss Warner. (Carters.)

Little and Wise. By Rev. W. W. Newton. (Carters.)

A History of France for Children. By Emma Marshall. (Dutton.)

What Tommy Did. By Mrs. Emily Huntington Miller. (Griggs, Chicago.)

Miss Nancy's Pilgrimage. A Story of Travel. By Virginia W. Johnson. (Harpers.)

Pehe Nuee, the Tiger Whale. By Captain Barnacle. (D. Lothrop & Co., Boston.)

Nan, the New-Fashioned Girl. By Mrs. S. C. Hollowell. (Lothrop.)

Good-for-Nothing Polly. By Ella Farman. (Lothrop.)

Camp-Fires of Napoleon. By Henry G. Watson. (Porter & Coates, Philadelphia.)

Battles of the Republic, by Sea and Land. By Henry W. Harrison. (Porter & Coates.)

The Chautauqua Girls at Home. By Pansy. (D. Lothrop & Co.)

Four Irrepressibles and what They did. (Loring, Boston.)

Happy Days for Boys and Girls. Contributions by Louisa M. Alcott and Others. (Porter & Coates.)

The Adventures of Miltiades Peterkin Paul. (Lothrop.)

Parlor Pastime and Picture Puzzles. By G. B. Bartlett and Others. (Lothrop.)

Our New Way round the World. By C. C. Coffin. (Lovell, Adam, Wesson & Co.)

Poems for our Darlings. (Lothrop.)

The Bodleys Telling Stories. By the author of "Doings of the Bodley Family." (Hurd & Houghton.)

The Story of a Hessian. A Tale of the Revolution in New Jersey. By Lucy Ellen Guernsey. (American Sunday-School Union.)

The Wings of Courage. Stories for American Boys and Girls. Adapted from the French. By Marie Field. (Putnams.)

Almost a Man. By A. S. Frost. (Tract Society.)

Coral and Christian: or, The Children's Pilgrim's Progress. By Lillie E. Barr. (Mucklow, Philadelphia.)

Sugar Plums. By Ella Farman. Illustrated by C. A. Northam. (Lothrop.)

My Girls, etc. (No. 4, Aunt Joe's Scrap-Bag.) By L. M. Alcott. (Roberts.)

David Kent's Ambition. By Joy Allison. (Congregational Publishing Society.)

Real Boys and Girls. By Mary C. Bartlett. (Lockwood, Brooks & Co.)

Tom, a Home Story. By George L. Chaney. (Roberts.)

Forest Glen; or, The Mohawk's Friendship. By Elijah Kellogg. (Lee & Shepard.)

Wonder-World Stories from the Chinese, French, German, Hebrew, Hindostanee, Hungarian, Irish, Italian, Japanese, Russian, Swedish, and Turkish. Collected and translated by Marie Fatke and Margery Deane. (Putnams.)

One Happy Winter; or, A Visit to Florida. By Mrs. S. S. Robbins. (Lockwood, Brooks & Co.)

Child Marion Abroad. By William M. F. Round. (Lee & Shepard.)

Jolly Times at School. By P. Thorne. (Roberts.)

Two Years behind the Plough; or, The Experience of a Pennsylvania Farm-Boy. (Claxton, Philadelphia.)

Little Truths for Little Folks. Bible Stories illustrated. By Laurie Loring. (Lothrop.)

Captain Fritz, his Friends and Adventures. By E. Huntington Miller. (Dutton.)

Adrift in the Ice-Fields. By Captain Charles W. Hall. (Lee & Shepard.)

The Signal-Boys; or, Captain Sam's Company. A Story of the War of 1812. By George Cary Eggleston. (Putnams.)

The Jimmyjohns and Other Stories. By Mrs. A. M. Diaz. (Osgood.)

Leoline; or, Captured and Rescued. By Grace Harding. (Dutton.)

Cast away in the Cold. An Old Man's Story of a Young Man's Adventures. By Dr. Isaac I. Hayes. (Lee & Shepard.)

Our Children's Songs. (Harpers.)

From Hand to Mouth. By Miss A. M. Douglass (Lee & Shepard.)

Quinebasset Girls. By Sophie May. (Ib.)

There she Blows! or the Log of the Arethusa. By Captain W. H. Macy. (Ib.)

Good Old Times. By Elijah Kellogg. (Ib.)

Petite's Wand of Lilies. By Harriet B. McKeever. (J. A. Moore, Philadelphia.)

Mother Goose in Silhouette. With 50 Full-page Illustrations by J. F. Goodrich. (Lee & Shepard.)

Our Home Birds. By Ella R. Church. (American Baptist Publication Co.)

Out-Doors at Long Look. By Edward Abbott. Illustrated with Original Silhouettes by Helen Maria Hinds. (Noyes, Snow & Co.)

Poems in Company with Children. By Mrs. S. M. B. Piatt. (Lothrop.)

Leedle Yawcob Strauss, and Other Poems. By Charles F. Adams. (Lee & Shepard.)

Good Times. By Favorite Authors. (Lothrop.)

Happy Hours for Boys. By Favorite American Authors and Artists.—(Companion volume) Happy Hours for Girls. (Lothrop.)

TEXT-BOOKS.—Those who have school-books to purchase complain, and not without reason, of their multiplication. But it is impossible that knowledge should be advanced in all departments of investigation, and the science or art of teaching itself be progressive, without requiring better instruments of teaching. Novelty is not always improvement, but improvement implies a superseding of the old by the new. Among the more noticeable works of this description may be mentioned—in the departments of physical science and its applications: Weisbach's "Manual of the Mechanics of Engineering and of the Construction of Machines," translated by Prof. A. J. Du Bois, of Yale College; an "Elementary Treatise on Physics, Experimental and Applied," translated and edited from Ganot's "Éléments de Physique" by E. Atkinson (W. Wood & Co.); Prof. Wheeler's (of West Point) "Élémentary Course of Civil Engineering" (Kay & Brother, Philadelphia); "A Series of Simple, Entertaining, and Inexpensive Experiments on the Phenomena of Light," by Alfred M. Mayer and Charles Barnard (D. Appleton & Co.); "Elements of Descriptive Geometry, Shadows and Perspective," by Edward Warren (Wiley); and as auxiliary to such studies, "A Course in Scientific German," by Harry Blake Hodges, instructor in Harvard University (Ginn & Heath). In ancient and modern languages: "A Compendious German and English Dictionary," by Prof. William D. Whitney, of Yale (Holt); "Dictionary of the French Language," by Gustave Masson (D. Appleton & Co.); "An English Commentary on the Rhesus, Medea, Hippolytus, Alcestis, Heraclides, Suppliants, and Troades of Euripides," by the late Charles Anthon, LL. D.; Dr. Anthon's *Livy*, edited by Mr. Hugh Craig (Harpers); "Parallel Rules of Greek and Latin Syntax" (Ginn & Heath); "French Classics for Students," edited by Prof. A. Gombert, eight volumes (Putnams); "Seneca, with Notes and Scripture Parallelisms," by Drs. John F. Hurst and Henry O. Whiting (Harpers); "A Systematic Synopsis of German Grammar," by Dr. P. Henn (Steiger); and in the Douglass Series of Christian, Greek, and Latin authors: "Justyn Martyr," edited by B. L. Gildersleeve (Harpers). There was room for an improved manual of rhetoric, and Prof. David J. Hill's "Science of Rhetoric" (Sheldon) may claim the merit of originality in its exposition

of "the laws of effective discourse." In the class of books for instruction in English: Chaucer's "Parlement of Foules," edited by T. R. Lounsbury (Ginn & Heath); Shakespeare's "Macbeth," edited by William J. Rolfe (Harpers); "The Classical English Reader," by the Rev. Henry N. Hudson (Ginn); "Outlines of Etymology," by S. S. Haldeman (Lippincott); and Appleton's "Handbook of Ancient Geography."

Syllabus of Lectures in Anatomy and Physiology for Students of the State Normal and Training School at Cortland. By T. B. Stowell, A. M. (Davis, Bardeen & Co., Syracuse, N. Y.)

Fourteen Weeks' Course in Physiology. By J. Dorman Steele, Ph.D., F. G. S. (Barnes.)

Manual of English History. By E. M. Lancaster. (Barnes.)

Thought and Expression. By S. S. Greene. (Coward-Pearthwaite, Philadelphia.)

Grammatical Praxis. By R. K. Buehrle. (Coward-Pearthwaite.)

How to Teach. A Manual of Methods for a Graded Course of Instruction; also Suggestions relative to Discipline and School Management. By Henry Kiddle, A. M., Thomas F. Harrison, and N. A. Calkins. (Van Antwerp, Bragg & Co., Cincinnati.)

Elementary Perspective. By M. J. Keller. (Clarke, Cincinnati.)

The Grammar School Speller and Definer. By E. D. Farrell. (Catholic Publication Society.)

The Accountant for Public Schools and Academies. By M. R. Powers, M. A. (Barnes.)

Animal Analysis. A Method of Teaching Zoölogy. To which is added, Directions for forming a School Cabinet. By Elliott Whipple, M. A. (Jansen, McClurg & Co.)

The Chorus Choir Instruction-Book. By A. N. Johnson. (Ditson.)

An Outline of General History. By M. E. Thalhimer. (Van Antwerp, Cincinnati.)

Elocution Simplified; with an Appendix on Lipping, Stammering, and other Defects of Speech. By Walter K. Fobes. With an Introduction by Geo. M. Baker. (Lee & Shepard.)

A Complete Course in Physical and Political Geography. Introductory Geography. (Harpers.)

History of France. By John J. Anderson, Ph. D. (Clark & Maynard.)

Cæsar's Commentaries on the Gallic War. With Notes, Vocabulary, and Map. By G. K. Bartholomew. (Van Antwerp, Bragg & Co., Cincinnati.)

Analytical Grammatical Chart of the English Language. By J. Derham. (Santa Rosa, California.)

First Lessons in Latin. By Elisha Jones, M. A. (Griggs, Chicago.)

Students' Topical History Chart-Book. By Ida P. Whitcomb. (Barnes.)

Industrial Drawing. By D. H. Mahan, LL.D. Revised and Enlarged by D. F. Thompson. (Wiley.)

Economics; or, The Science of Wealth. By Prof. J. M. Sturtevant. (Putnams.)

USEFUL ARTS.—Between the fine and useful arts the line is obscured when, as in our time,

there is a fine art of house furnishing, and undreamed-of æsthetic suggestions are found in the contents of a china-closet. Some useful inventions are intimately connected with the results of scientific discovery, and some books in the following list approach the border of that field of knowledge:

A Practical Treatise on Water Supply Engineering. By J. T. Fanning, C. E. (Van Nostrand.)

A Treatise on the Manufacture of Perfumes and

Kindred Tollet Articles. By John H. Snively, Ph. D., Professor in the Tennessee College of Pharmacy. (C. W. Smith, Nashville.)

Village Improvements and Farm Villages. By George E. Waring, Jr. (Osgood.)

New Constructions in Graphical Statics. By Henry T. Eddy, C. E., Ph. D. (Van Nostrand.)

The Theory of Transverse Strains, and its Application to the Construction of Buildings. By K. G. Hatfield. (Wiley.)

Centennial Exhibition. Official Reports of the International Board of Judges. Edited by Francis A. Walker, Chief of the Bureau of Awards. (Lippincott.)

A Treatise on Engineering Construction. By J. E. Shields, C. E. (Van Nostrand.)

The Sanitary Condition of City and Country Dwelling Houses. By George E. Waring, Jr. (Van Nostrand.)

A Concise History of the Iron Manufacture of the American Colonies up to the Revolution, and of Pennsylvania until the Present Time. By John Pearce, A. M., Metallurgist, Engineer. (Allen, Lane & Scott, Philadelphia.)

Practical Treatise on the Properties of Continuous Bridges. By Charles Bender, C. E. (Van Nostrand.)

A Practical Treatise on Lightning Protection. By Henry W. Spang. (Claxton, Philadelphia.)

The Coal Mines of the Western Coast of the United States. By W. A. Goodyear, Mining Engineer. (Bancroft & Co., San Francisco.)

The Progressive Ship-Building. By John W. Griffiths. 2 vols. (A. J. Bicknell & Co.)

Swine Husbandry. By F. B. Coburn. (Orange Judd Company.)

Butter and Butter-Making. By Willis P. Hazard. (Porter & Coates, Philadelphia.)

How to Nurse Sick Children. By Charles West, M. D. (Porter & Coates.)

A Treatise on Belting for the Transmission of Power. By John H. Cooper. (Claxton, Philadelphia.)

The Magnetism of Iron Vessels. With a Short Account of Terrestrial Magnetism. By Fairman Rogers. (Van Nostrand.)

China-Painting. A Practical Manual for the Use of Amateurs in the Decoration of Hard Porcelain. By M. Louise McLaughlin. (Clarke, Cincinnati.)

The Telephone; an Account of the Phenomena of Electricity, Magnetism, and Sound, as involved in its Action. With Directions for making a Speaking Telephone. By Prof. A. E. Dolbean. (Lee & Shepard.)

A Comprehensive Treatise on Perfumery. Containing a History of Perfumes, a complete detailed Description of the Raw Materials and Apparatus used in the Perfumer's Art. By R. S. Christiani. (H. O. Baird, Philadelphia.)

Cable-making and Suspension Bridges. With Special Reference to the Cables of the East River Bridge. By William Hildebrand. (Van Nostrand.)

Fret-Sawing for Pleasure and Profit. (H. T. Williams, author and publisher.)

The House Beautiful. Essays on Beds and Tables, Stools and Candlesticks. By Clarence Cook. (Scribner.)

LAW.—The demands of the profession appear to be pretty constant, and the supply is responsive thereto:

Maritime International Law. By John A. Dahlgren, late Rear-Admiral U. S. N. Edited by Charles Cowley, of the Massachusetts Bar. (B. H. Russell, Boston.)

Historical and Legal Effect of Brevets in the Armies of Great Britain and the United States. By James B. Fry, Colonel and A. A. G. U. S. A. (Van Nostrand.)

Essays in Anglo-Saxon Law. By Henry Adams, H. Cabot Lodge, Ernest Young, and J. Lawrence Laughlin. (Little, Brown & Co., Boston.)

A Treatise on the Law of Fixtures. By Marshall D. Ewell. (Callaghan, Chicago.)

A Treatise on the Law of Executions in Civil Cases. By Abraham Clark Freeman. (Whitney, San Francisco.)

A Treatise on Trial by Jury, including Questions of Law and Fact. With an Introductory Chapter on the Origin and History of Trial by Jury. By John Proffat. (Whitney.)

The True Blue Laws of Connecticut and New Haven, and the False Blue Laws invented by the Rev. Samuel Peters. To which are added Specimens of the Laws and Judicial Proceedings of other Colonies, and some Blue Laws of England in the Reign of James I. Edited by J. Hammond Trumbull. (American Publishing Company, Hartford, Connecticut.)

The Elector's Manual. Constitutional Provisions and Statutes of the United States relating to Presidential Elections, Elections of Senators and Representatives, Citizenship, and the Elective Franchise. With an Appendix showing the Method of Counting the Electoral Votes for President and Vice-President. By Charles Sidney Whitman. (Morrison, Washington.)

A Commentary on the Law of Evidence in Civil Issues. By Francis Wharton, LL.D. 2 vols. (Kay & Brothers, Philadelphia.)

Digest of Law Publications: being a Catalogue of American and British Law Books, classified according to the recognized Legal Titles. With an Index of Authors. (Clarke, Cincinnati, Ohio.)

The New Assignment Law of the State of New York. With full Notes and References. By James L. Bishop.

A Treatise on Slander and Libel. With a Chapter on Malicious Prosecutions. By John Townshend. Third edition, greatly enlarged. (Baker, Voorhis & Co.)

A Treatise on the Law relating to the Office and Duties of Notaries Public throughout the United States. By John Proffat, LL.B. (Hurd and Houghton.)

Liquor Laws of the United States. (National Temperance Society.)

Unwritten Law. An Address before the Phi Beta Kappa Society of Harvard University, June 28, 1877. By Thomas Francis Bayard, of Delaware. (A. Williams & Co., Boston.)

A Complete Practical Treatise on Criminal Procedure, Pleading, and Evidence in Indictable Cases. By J. F. Archbold. Containing all the American and English Cases to the Date of Publication. By John Norton Pomeroy, LL.D. (Banks & Brothers.)

The Practice in the Courts of Law in Civil Cases, founded on Robinson's Practice (1832). By R. T. Barton, of the Winchester (Virginia) Bar. (Randolph and English, Richmond.)

The Divorce Laws of Massachusetts. By L. S. Fairbanks. (Published by the author, Boston.)

Alcohol and the State. A Discussion of the Problem of Law as applied to the Liquor Traffic. By Robert C. Pitman, LL.D., one of the Justices of the Supreme Court of Massachusetts. (National Temperance Society.)

Law for the MARRIAGE: for Every-day Use. By Truman Hastings, Esq. (W. F. Schneider, Cleveland, Ohio.)

Composition in Bankruptcy, with Forms. By O. F. Bump. (Jones & Co., St. Louis.)

Private Corporations for Pecuniary Gain. By George W. Field. (Parsons, Albany.)

A Treatise on the Law of Taxation, Federal, State, and Municipal. By W. H. Burroughs. (Baker, Voorhis & Co.)

American Law. By Francis Hilliard. (Ward & Peloubet.)

The Law of Corporate Securities as decided in the Federal Courts. By C. G. Clemens. (Gilbert, St. Louis.)

New Forms of Practice and Pleading, under the Code of Civil Procedure. By Austin Abbott. (Baker, Voorhis & Co.)

Law of Patents, Trade-Marks, and Copyright. By O. F. Bump. (Ib.)

Jurisprudence, and its Relation to the Social Sciences. By D. C. Heron. (S. Whitney & Co., San Francisco.)

The Law of Fraud and the Procedure pertaining to the Redress thereof. By Melville M. Bigelow. (Little, Brown & Co.)

MEDICINE.—We are, of course, impartial as between the several "schools," and a layman's judgment on the question whether a given book is of value to the faculty, or the practitioner, can have little weight. The list shows considerable activity of authorship:

A Practical Treatise on Diseases of the Skin. By Louis A. Duhring, M. D. (Lippincott, Philadelphia.)

Civil Malpractice. A Treatise on Surgical Jurisprudence, with Chapters on Skill in Diagnosis and Treatment, Prognosis in Fractures, and on Negligence. By M. A. McClelland, M. D. (Hurd & Houghton.)

The Question of Rest for Women during Menstruation. The Boylston Prize Essay of Harvard University for 1876. By Mary Putnam-Jacobi, M. D. (Putnams.)

The Application of Electricity as a Therapeutical Agent. By J. H. Roe. (Boericke & Tafel.)

Headaches: their Cause and Cure. By Henry G. Wright. (Lindsay & Blakiston, Philadelphia.)

The Use of Uterine Supporters. By Clifton E. Wing, M. D.—The Specialty of Diseases of Women. By M. A. Williams & Co., Boston.)

A Manual for Medical Officers of the Militia of the United States. By Edward Jacob Foster, M. D. (Hurd & Houghton.)

Disease of the Mind. Notes on the Early Management, European Progress, Modern Methods, etc., in the Treatment of Insanity. By Charles F. Folsom, M. D. (A. Williams & Co., Boston.)

On the Surgical Complications and Sequels of the Continued Fevers. By W. W. Keen, M. D., of Philadelphia. The Toner Lectures, Lecture 5. (Smithsonian Institution.)

Fat and Blood, and How to Make Them. By S. Weir Mitchell, M. D. (Lippincott.)

The Practitioner's Reference Book. By Richard J. Dunglison, M. D. (Lindsay & Blakiston, Philadelphia.)

Some General Ideas concerning Medical Reform. By David Hunt, M. D. (Williams, Boston.)

Nurse and Patient, and Camp Cure. By S. Weir Mitchell, M. D. (Lippincott.)

The Complete Handbook of Obstetric Surgery. By Charles Clay, M. D. (Lindsay & Blakiston.)

The Student's Guide to the Practice of Midwifery. By D. Lloyd Roberts, M. D. (Lindsay & Blakiston.)

The Student's Guide to Dental Anatomy and Surgery. By Henry E. Sewill. (Lindsay & Blakiston.)

Surgical Emergencies. By W. P. Swain, M. D. (Lindsay & Blakiston.)

Hospitals: their History, Organization, and Construction. Boylston Prize Essay, Harvard University. By W. Gill Wylie, M. D. (D. Appleton & Co.)

Vital Magnetism: its Power over Disease. By Frederick T. Parson. (Adams, Victor & Co.)

A System of Obstetrics on Homœopathies. By W. C. Richardson. (W. C. Richardson.)

Public Hygiene in America. By Henry I. Bowditch, M. D. Together with a Digest of American Sanitary Law. By H. G. Pickering. (Little, Brown & Co.)

Origin and Progress of Medical Jurisprudence, 1776-1876. A Centennial Address by S. E. Chaillé, M. D. (Collins, Philadelphia.)

A Compend of Diagnoses in Pathological Anatomy. By Johannes Orth. Translated by G. H. Sabine, M. D., and F. C. Shattuck, M. D. Revised by R. H. Fitz, M. D. (Hurd & Houghton.)

The Action of Medicine. By Isaac Ott, A. M., M. D. (Lindsay & Blakiston, Philadelphia.)

Tonic Treatment of Syphilis. By E. L. Keyes, M. D. (D. Appleton & Co.)

MISCELLANEOUS.—Some of the works mentioned last year as in series have been continued. Among useful works of reference that, notwithstanding obvious defects, fill a place no other offers to take, is Duyckink's "Cyclopædia of American Literature," and a useful service has been rendered in the editing of it "to date" by Mr. Laird Simons (Rutter, Philadelphia). The "Cyclopædia of Education," by Henry Kiddle and A. J. Schem (Steiger), is a "dictionary of information for the use of teachers, school-officers, parents, and others." The list that follows embraces a variety we will not attempt to classify—including some that might perhaps have been more definitely classed in preceding sections:

Nomisma, or Legal Tender. By Henri Cornuschi. (D. Appleton & Co.)

A Mad World and its Inhabitants. By Julius Chambers. (D. Appleton & Co.)

Rebecca's Journal; or, How We made the Winter Beautiful. By Mrs. Mary Lansing. (McCalla & Stavelly, Philadelphia.)

Papacy and the Civil Power. By R. W. Thompson. (Harpers.)

How to Camp Out. By J. M. Gould. (Scribner.) Students' Commonplace Book: a Cyclopædia of Fact and Illustration. By Rev. Prof. Henry J. Fox, D. D. Interleaved with blanks for additions (Barnes.)

Handbook of Popular Quotations. (Carleton.)

The Eastern and the Western Questions. Turkey and the United States: How they Travel a Common Road to Ruin. By Henry C. Baird. (H. C. Baird & Co., Philadelphia.)

Beauty; or, The Art of Human Decoration. By D. Caznave. Translated from the French by Marie T. Courselles. (Chase & Hall, Cincinnati.)

The Burning of the Convent. A Narrative of the Destruction by a Mob of the Ursuline School on Mount Benedict, Charlestown, as remembered by One of the Pupils. (Osgood, Boston.)

Is our Republic a Failure? A Discussion of the Rights and Wrongs of the North and South. By E. H. Watson. (Authors' Publishing Co.)

Selections from the Speeches and Writings of Hon. Thomas Q. Clingman, of North Carolina, with Additions and Explanatory Notes. (J. Nichols, Raleigh.)

Money: The Way to Make It. By G. Coigne. (World Publishing Co.)

The Jukes. A Study in Crime, Pauperism, Disease, and Heredity. Also Further Studies of Criminals. By R. L. Dugdale. With an Introduction by Elisha Harris, M. D. Third edition, enlarged. (Putnams.)

Famous American Horses. With Sixty Full-page Illustrations. (Porter & Coates.)

The Sportsman's Gazetteer and General Guide. By Charles Hallock. (Forest & Stream Publishing Co.)

A Miracle in Stone; or, The Great Pyramid of Egypt. By Joseph H. Seiss, D. D. (Porter & Coates, Philadelphia.)

Saratoga.—The Battle.—Battle-Ground.—Visitors'

Guide. By Ellen Hardin Walworth. (American News Co.)

Bibliotheca Americana. A Dictionary of Books relating to America, from its Discovery to the Present Time. By Joseph Sabin. In parts. (Sabin.)

Personal Appearance and the Culture of Beauty, with Hints as to Character. By T. S. Sozinskey. (Allen, Lane & Scott, Philadelphia.)

Woman's Work among the Lowly. Memorial Volume of the First Forty Years of the American Female Guardian Society. By Mrs. R. J. Bennett. (Published by the Society.)

Railroad Revenue and its Collection. By Marshall M. Kirkman. (*Railroad Gazette* Office.)

The Tariff Policy of England and the United States Contrasted. By Erastus B. Bigelow. (Little, Brown & Co.)

Isis Unveiled. A Master Key to the Mysteries of Ancient and Modern Science and Theology. By H. P. Blavatsky. (Bouton.)

A Bibliography of Bibliography; or, A Handy Book about Books which relate to Books. Being an Alphabetical Catalogue of the most Important Works descriptive of the Literature of Great Britain and America, and more than a few relating to France and Germany. (J. Sabin, author and publisher.)

Shakespeare from an American Point of View. By George Wilkes. (D. Appleton & Co.)

Wit and Wisdom of the Haytians. By John Bigelow. (Scribner.)

Condensed Classics: Last Days of Pompeii. By Lord Lytton. Condensed by Rossiter Johnson. (Holt.)

Idols and Ideals, with an Essay on Christianity. By M. D. Conway. (Holt.)

REPUBLICATIONS.—The contraction of business shows itself to some extent in the diminished number of English works republished, especially those of recent issue, while a larger comparative circulation has been given to the writings of classic and standard authors. Editions of Shakespeare, Milton, and other British poets; of the works of Miss Austen, Miss Edgeworth, Sir Walter Scott, Lord Lytton, Marryat, Lever, and other novelists; and of such popular authors as De Quincey, Lamb, Macaulay, Sydney Smith, and Carlyle, have sought, and doubtless found, purchasers. Perhaps a purer taste on the whole has been thus promoted than would have been by the sale of an equal number of new books taken in the average.

The "Encyclopædia Britannica," of which a new issue is now in progress, several volumes having appeared, besides the circulation of the English edition to a considerable extent in this country, is also reprinted. The appropriation of the labors of foreign authors, and of the benefit of foreign capital invested in so extensive a work, is an illustration on a large scale of the defects of our copyright laws. Smith (Dr. William) and (Prof.) Wace's "Dictionary of Christian Biography" (Little, Brown & Co.), of which a volume has appeared, gives promise of being a work marked by the same learned and exact research that has characterized the other dictionaries brought out under Dr. Smith's supervision.

Those valuable serials, the Science, Literature, and History Primers (D. Appleton & Co.); the Popular and Advanced Science Series (Put-

nam's); the "Epochs of Ancient and Modern History" (Scribner); a supplementary series of "Ancient Classics for English Readers," and the "Foreign Classics," edited by Miss Yonge (Lippincott), have been circulated here as regularly as they have appeared in England, and have done much to popularize valuable knowledge. Appleton's series of Foreign Authors (chiefly French) has added some striking works of fiction to our native and English supply.

In History and Biography, we have republished the third volume of Martin's "Life of the Prince Consort" (D. Appleton & Co.); Creasy's "History of the Ottoman Turks" (Holt); "Historical Biographies," by M. Creighton (Dutton); the "Life of Count Cavour," by Charles de Mazarde, translated by George Meredith (Putnam's); "History of the City of Rome," by Thomas H. Dyer (Worthington); "Life of Charles Kingsley," skillfully abridged (Scribner); "Turning Points of General Church History," by the Rev. Edward J. Cutts (Pott, Young & Co.); "Letters of Thomas Erskine, of Linlathen," edited by Dr. Hanna (Putnam's); "Life of George Whitefield," by Rev. L. Tyerman (Randolph); "Life of Rowland Hill," by Vernon J. Charlesworth (Tract Society); Rev. William Arnot's "Autobiography and Memoir" (Carters); "Bryan Waller Procter, Barry Cornwall, an Autobiographical Fragment," etc. (Roberts); "Charlotte Brontë," by T. Wemyss Reid (Scribner); "Bernardino Ochino of Siena," by Karl Benroth, translated by Helen Zimmern (Carters).

In Philosophy and Science, we mention "American Addresses," by T. H. Huxley (D. Appleton & Co.); Principal Shairp "On the Poetic Interpretation of Nature" (Hurd & Houghton); Lange's "History of Materialism," translated by Ernest C. Thomas (Osgood); Maudsley's "Physiology of Mind" (D. Appleton & Co.); "Physical Basis of Mind," by George H. Lewes (Osgood); Lecky's "History of European Morals," a new edition (D. Appleton & Co.); "Freethinking and Plain Speaking," by Leslie Stephen (Putnam's); "Inventional Geometry," by William George Spencer (D. Appleton & Co.); "Descriptive Sociology," by Herbert Spencer (Appletons); Bastiat's "Political Economy," the English translation revised by D. A. Wells (Putnam's); "A Century of Invention," by Theodore Vogel (Appletons); "Studies in the Philosophy of Religion and History," by A. M. Fairbairn (Lovell, Adams, Wesson & Co.); Prof. Tyndall's "Lessons in Electricity" (Appletons); "Science of Language," by Abel Hovelague, translated by A. H. Keane (Lippincott); "Effect of Self and Cross Fertilization in the Vegetable Kingdom," and "Different Forms of Flowers in Plants of the Same Species," by C. Darwin (Appletons); "Wonders of the Great Deep," by P. A. Gosse (Lippincott); "Mesmerism, Spiritualism, etc., Historically and Scientifically Considered," by W. B. Carpenter

(Appletons); "Physiological Æsthetics," by Grant Allen (ib.), and "Art of Electro-Metallurgy," by George Gove (ib.).

In fiction, essays, etc., another volume of Mr. Froude's "Short Studies on Great Subjects" (Scribner); Landor's "Imaginary Conversations," complete in five volumes (Roberts); "The Shadow of the Sword," by Robert Buchanan (Appletons); "Studies in Early French Poetry," by W. Besant (Roberts); "Rare Good Luck," by R. E. Francillon (Appletons), and the novels, as fast as they appear, of William Black, R. D. Blackmore, Justin McCarthy, B. L. Fargeon, Anthony Trollope, Miss Yonge, Miss Braddon, Mrs. Oliphant, and others "too numerous to mention," have been set before American readers.

Books of travel have a ready popularity, and successful ones quickly attract the attention of our publishers. Such are "The Prince of Wales in India," by W. H. Russell (Worthington); "Central Africa: Naked Truths of Naked People," by Colonel C. C. Long (Harpers); "Through Persia, by Caravan," by Arthur Arnold (ib.); "Turkey," by James Baker, Lieutenant-Colonel, etc. (Holt); "Across Africa," by N. L. Cameron (Harpers); "Egypt as It Is," by J. C. McCoan (Holt); "The Cruise of H. M. S. Challenger," by W. J. J. Spry, R. N. (Harpers); and "New Lands in the Arctic Circle," by J. Payer (Holt). In Poetry and the Drama, Tennyson's tragedy of "Harold," Theodore Martin's versions of the "Odes of Horace," and the lately recovered volume of "Poetry for Children," by Charles and Mary Lamb, are the most noticeable.

The intimate relations and lively sympathy existing between the religious bodies of Great Britain and their co-religionists in America must cause a constant interchange of religious thought. Hence such works as the Rev. Cunningham Geikie's "Life and Words of Christ" (Appletons); "Supernatural Religion," of which the third and concluding volume has appeared (Roberts); Principal Tulloch on "The Christian Doctrine of Sin" (Scribner); Bishop Alexander's Bampton Lectures on "The Witness of the Psalms to Christ and Christianity" (Dutton); Dr. R. W. Dale's "Lectures on Preaching" (Barnes); Dr. J. Martineau's "Hours of Thought on Sacred Things" (Roberts); "Notes on Genesis," by the late Rev. F. W. Robertson (Dutton); "Pilgrim Psalms," by Samuel Cox (Randolph); and "Christ and Islam, the Bible and the Koran," by W. R. W. Stephens (Scribner), are published simultaneously on both sides of the Atlantic, or follow on this side in quick succession.

LITERATURE, CONTINENTAL, IN 1877. Some of the more interesting features of Continental literature will be found in the following extracts from the correspondence of the London *Athenæum*.

BELGIUM.—Among biographical books, literary and political, there are two or three to be named. A life of the author Loumyer has been

produced by his friend L. Jottrand; and an account of the life and works of André van Hasselt—a Belgian poet noticeable as regards his versification—is given by L. Alvin. "Le Droit International et la Question d'Orient" is a serious political work by G. Rolin-Jacquemyns, and treats of recent events in the Balkan peninsula.

The first of our novels to be named is the "Partie Perdue" of Comte Goblet d'Alviella, which as a literary work deserves praise, and fairly represents one side as regards some important questions lately discussed with asperity in this country. "Un Héros," by Caroline Gravière, is a lively story. The "Contes Bleus" of Karl Grün is a mixture of rural poetry, botany, and natural history, with a dash of geology.

Among voyages and travels "Inde et Himalaya," by Comte Goblet d'Alviella, is noticeable. The author was the Indian correspondent of *L'Indépendance Belge* during the time when the Prince of Wales was in India. "Un Été en Amérique," by Jules Leclercq, is a lively book of travels. "Les Progrès de la Puissance Russe" and "La Rivalité de la France et de la Prusse," both by Théod. Juste, may be classed with our best recent contributions to general history; the latter especially shows research.

In jurisprudence several important publications have appeared. Prof. Laurent, of Ghent, has completed volumes xxiv.-xxviii. of his "Principes de Droit Civil." An extended edition of the "Cours de Droit Romain," by Prof. Maynz, has appeared. "Une Histoire du Droit de Chasse," by A. Faider, is a book of general interest, treating of the game-laws of Belgium, England, France, and other countries.

The history of Flemish literature is partly represented by a "Mirror of the Literature of the Netherlands," a heavy book by Prof. Alberdingh-Thym. There is more freshness and vivacity in the estimates of modern Flemish authors given by Max Rooses in his "Sketch-Book." The "Biographical Dictionary of Literature in the Netherlands, North and South, Holland and Belgium," is now completed. To this work Jos. van den Brande has been one of the chief contributors.

One of the best of the Flemish poets, Theodoor van Ryswyck, has ready for publication a new edition of his poems. Hendrick Conscience, in "The Uncle of Felix Roobeek," has given us new sketches of contemporaneous manners. But the most original of all the Flemish books of fiction for this year is, without doubt, that entitled "In our Flemish Land," by W. G. E. Walter (a pseudonym). His book describes with graphic power the social and religious relations of the peasantry in a majority of the villages of Flanders. The book has made here a profound impression. It is the work of an unknown writer; at the same time it is a masterpiece of its class.

DENMARK.—One of the most considerable

literary productions of the past year—and in the field of fiction, as far as I know, the most considerable—is a remarkable book, entitled “Fru Marie Grubbe.” Its author, J. P. Jacobsen, is a young man, originally a naturalist, who has done service in that department of knowledge, among other things, by translating a couple of Mr. Darwin’s chief works into Danish. In his novel he, with poetical freedom, treats the life of Marie Grubbe, a Danish noblewoman of the 17th century, whose fate carried her through almost all classes of society, from the most refined circles of the court to the rudest sections of the common people. Taking this lady for his chief character, Jacobsen, in a great variety of scenes, has presented a series of wonderfully striking pictures of high and low life in the 17th century. Executed with great poetical fancy, they are based upon a deep study of the whole manner of living and thinking in that age; thus all the conversations in the book are conducted in what is a true imitation of the language and style of the time. We this year have had “The Prisoner in Kallö,” by Carit Etlar; “Himmelbjerget,” by S. Bauditz; a small novel, “Pictures from a Manor-House,” not without talent, by a new pseudonymous author, Henrik Herholdt; “A Free Man,” by Holm-Hansen; “Rich Days,” by Johanne Schjöring.

In the field of literary criticism and history, I must mention that our eminent critic, Georg Brandes, has made a volume, entitled “Danish Poets,” out of some essays, already in part published, of much value about four of our considerable poets. He besides has written a book on our great religious thinker, the wonderfully gifted genius, Søren Kierkegaard.

Our literature of personal history and memoirs has also increased in the past year. Bille and N. Bøgh have edited a collection of letters written to the poet H. C. Andersen (the continuation of whose self-told life has been edited by J. Collin). Many of the letters in this collection are from Andersen’s maternal friend, Fru Signe Læssøe, whose life has been described by N. Bøgh in a book lately published.

FRANCE.—The political phylloxera that goes by the name of the Crisis has raged in Paris and all the departments without exception, from the 16th of May till the 18th of December. For more than seven months not a bookseller has dared to undertake a publication of any importance. MM. Hachette have continued without a break, if not without anxiety, the large and beautiful works which have made their reputation European. The supplement to the “Dictionnaire de la Langue Française” of Littré is approaching its end. It will have the importance of a fifth volume. The “Dictionnaire d’Archéologie” of MM. Daremberg and Saglio, the “Dictionnaire de Botanique” of M. H. Baillon, advance slowly, but they have not been stopped. The “Dictionnaire Universel des Littératures” of M. Vapereau is quite finished. It is full of precise information,

well put together, marvelously arranged. M. Elisée Reclus has completed the third volume of his “Géographie Universelle.” It is a large octavo of some thousand pages, illustrated by maps and drawings of an absolute exactness. It embraces Central Europe. Madame Conrad de Witt, the worthy daughter of Guizot, has given to our children the second and last volume of his “Histoire d’Angleterre,” which ends with the accession of Queen Victoria. The *ouvrages de grand luxe*—those books which the provincial booksellers feared they would never sell, and which they are selling after all—are the splendid edition of the “Ciel” of M. Guillemin, a manual of astronomy that anybody can understand; the “Bords de l’Adriatique et le Monténégro,” by M. Charles Yriarte, a handsome quarto, which, by its shape and decorations, recalls the “Italie” of M. Gourdauld or the “Rome” of Francis Wey; the “Vie Végétale,” a handsome octavo of M. Emery; pictures and scenes from the “Vie des Animaux,” by M. Lesbazeilles, in quarto, richly illustrated; and, finally, two splendid folios, containing Goethe’s “Faust,” translated by M. Porchat, and the “Histoire de Joseph,” printed with the same type as the celebrated edition of the Gospels, and illustrated even more brilliantly, if that be possible, with the etchings and wood engravings of M. Bida.

MM. Hetzel, father and son, have known how to attach to themselves, by ties stronger than those of interest, a certain number of writers justly esteemed, and of whom the most widely read is M. Jules Verne. This lucky popularizer, after having rushed through the deserts of Siberia in company with “Michel Strogoff,” has launched himself, perhaps imprudently, in the planetary world. His new tale, “Hector Servadac,” is more strange than interesting, and I doubt if it will teach anything to its young readers. M. Jules Verne has, if I mistake not, arrived at the limit of useful popularizations. M. Lucien Biart, a traveler, scholar, and man of letters such as France can count few, publishes a translation of “Don Quixote,” a little simplified, *ad usum juventutis*, and an original novel, entitled “Deux Amis.” “Les Enfants,” a book for mothers, illustrated by M. Froment, has its place in all family libraries. The “Histoire d’un Enfant,” a delicious tale of Alphonse Daudet’s, was formerly styled the “Petit Chose.” In its present shape, with the illustrations of M. Philipoteaux, the refined work will find a new circle of readers. I predict the same fortune for “Une Famille pendant la Guerre” (1870–’71), the patriotic novel of M. Baissones, crowned by the Academy, and, which is much better, by the sympathy and esteem of all good Frenchmen. M. Charpentier, the well-known publisher of Musset, of Théophile Gautier, and of Prosper Mérimée, has given us the two romances that, in a year poor in works of imagination, have been the most widely read and widely circulated—“L’Assommoir” and “Le Na-

bab;" the first, in its way, not absolutely a masterpiece, but certainly the masterpiece of its author, M. Émile Zola, who has never shown his own characteristic qualities, both good and bad, more clearly than in this book. It is not a good book—it is neither beautiful nor true; but it has been, for author and publisher, a grand success. The *dilettanti* of realism have, indeed, found in it such powerful attractions, that in the course of the last few months they have called for not less than 30,000 copies. The book calumniates in a brutal manner the working classes of Paris. In this respect it is nothing better than a gross caricature; but with all its faults the book has such charms for the world of readers to whom it is addressed, that it has been one of the great successes of French literature in this year. "Le Nabab," by M. Alphonse Daudet, is a book of a superior class; it is, in fact, the disguised biography of an excellent man of his kind—François Bravay. Especially to be admired in this story are its sketches of several public men, made conspicuous by their relations with the political affairs of the Second Empire. Here you will see the Duc de Morny as well portrayed as M. Bravay himself, and of these two the former is not the less interesting character.

M. Charpentier has also given us this year several romances that should, at least, be named: "Alice," by M. Valéry Vernier; "Trois Roses dans la Rue Vivienne," by M. Gustave Claudin; "Raymonde," by M. A. Theuriet; "Les Nouvelles Campinoises," by M. J. Wilbort; "Les Contes Choisis," by Alphonse Daudet; and (last, not least) "Trois Contes," by Gustave Flaubert, an excellent author, who writes too little. In other departments of literature the same firm has lately given us several noticeable books: the "Théâtre Ohoisi" of Duvert; a continuation of the "Mémoires" of Philarète Chasles.

An able writer and a clever draughtsman, MM. Guimet and Régamey, have conspired together to produce the next book to be noticed, a quarto volume, entitled "Promenade Japonaise," which is instructive, amusing, and picturesque. Above all similar books published in this country, this makes us acquainted with life in Japan in our own times. From the firm of Didot we have "Le Siècle XVIII^{me}," another of their valuable volumes (in large 8vo), containing a continuation of various documents, literary, scientific, and artistic, all belonging to the 18th century, and well edited by M. Paul Lacroix. Here we not only read of facts and events, we also see them. All the rich materials that have been collected by wealth united with intelligence and with good taste have been stored in the old house "de la Rue Jacob," and are now displayed in the series of volumes to which that here noticed belongs. Architecture, painting, sculpture, engraving, and the industrial arts requisite for producing the masterpieces of the fine arts, all are represented well in these splendid volumes issued by the

firm of Didot. They display the final efflorescence, the best artistic result or expression of our whole national life.

Next to M. Charpentier, the firm of M. Lévy has this year succeeded best in producing the books most widely circulated and translated. The first to be named is, of course, the "Histoire d'un Crime," by Victor Hugo, of which not less than 100,000 copies have been sold here, to say nothing of all the translations that have found readers in other lands.

To quite another type of literature belongs the story called "Les Amours de Philippe," which has also been very successful. The author, M. Octave Feuillet, the most amiable and refined, as well as the latest, of all our *romanciers du salon*, has of late made himself conspicuous only by his absence; but now he has reappeared, and all his fair readers are highly delighted to find that still his style is as charming as ever. This book has been a great success for the publishing firm of Lévy.

Two sumptuous volumes, each in octavo size and richly illustrated, have appeared lately, and each deserves at least to be named respectfully. One is "François I^{er}," by M. de Lescure. This book shows extensive reading, and is based upon many studies of original documents. The other, "La Forêt," by M. Eugène Muller, is scientific, but at the same time is poetic, and is richly illustrated with a design on almost every page. The firm of Maurice Dreyfous has given us, first, "Les Ascensions" of M. Gaston Tissandier; secondly, the story of a "Voyage autour de l'Afrique" made by the Austrian frigate *Helgoland*. As regards its authorship, the little book is anonymous. The elaborate book, "Mythologie," by M. Delagrave, must surely be named; for the subject is treated here in accordance with the latest dicta of our modern science, and moreover is illustrated with 600 engravings, from the designs of masters ancient and modern. The author is already a distinguished writer on geography and on military tactics, and generally is a large contributor to such stores of knowledge as are contained in our encyclopædias. The brothers Garnier have now completed, in 20 volumes 8vo, their new edition of Diderot, and it is, I believe, their intention next to produce, in a similar form (in 45 vols. 8vo), the works of Voltaire. The most careful, perhaps, of all the publishers who supply us with elegant reprints is M. Jouaust. He is now issuing a second volume of his edition of Molière, and will republish shortly Voltaire's romances, and "Les Comédiens," by Sarcey.

GERMANY.—If the quality of the literature of the day could be measured by its quantity, then it might be pronounced to be in the highest state of prosperity. According to the *Börsenblatt* of the German book-trade, the number of books that appeared in 1876 amounted to no less than 13,356, that is, 840 more than last year, which numbered 12,516. To come to the different classes: theology has long ago lost the

first place; characteristically enough in a country in which "der Schulmeister Schlachten gewinnt," it is supplanted by school-books and pedagogic literature, which counted in all 1,629 entries, 300 more than in the previous 12 months. Even the second place theology cannot claim; for it has had to yield to jurisprudence and politics, which attained the high figure of 1,329, 152 more than in 1875. On the other hand, history experienced a fall from 708 to 687, geography and travels from 314 to 296, while philosophy, which had of late shown symptoms of recovery, receded, I am sorry to say, from 199 to 178. *Belles-lettres*, with 1,070 against 1,061 in 1875, remained nearly stationary.

So far as a judgment can be formed, 1877 will prove not less productive than 1876.

German lyric poetry has this year lived on its old renown. The most considerable of the new publications are the work either of deceased poets or those of established reputation. Among the plays produced this year are productions of men of high repute, most of whom, however, have distinguished themselves in other walks of literature. The epic poet Hermann Lingg has produced a tragedy called "Macalda," relating to the period of the Hohenstaufens. The most recent tragedy of Paul Heyse, "Graf Königsmark," deals with the unlucky fate of the brother of the beautiful "Aurora," who was made away with in a mysterious way at the Palace of Hanover because the Electoral Prince, afterward George the First of England, suspected him of an intrigue with the Princess Sophie Dorothea. Another play by the same author, "Elfriede," also treats the well-known intrigue of the Anglo-Saxon King Edgar with the wife of his servant Ethelwold. The subject-matter is depicted with glowing colors, and both these dramas surpass in pathos and warmth all the former plays of the author.

The most gifted of living German novelists, Fr. Spielhagen, has, since he printed "Sturmflut," laid aside his pen, and sought in the south to recruit his overtaken strength. G. Freytag, as the fourth part of the "Ahnen," called "Marcus König," shows, is not yet exhausted. But in this story of citizen life, which is laid in the extreme east, in Thorn, on the Polish border, the descendants of Ingo disappear from view.

Neither unity of treatment nor unity of race, but only the prevalence of the same ideas, connects the tales which form the second portion, styled "Das Eigenthum," of the collection which Sacher-Masoch is issuing under the general title of "Das Vermächtniss Kains." This author, who is often roughly treated by German critics, while by Frenchmen he is placed alongside of Turgeneff and Mérimée, possesses an extraordinary power of description, which he usually uses to inculcate ambitious, but at the end conciliatory, social theories.

History and biography have received a notable addition in the "Denkwürdigkeiten des

preussischen Staatskanzlers Fürsten von Hardenberg," edited by L. von Ranke. The veteran historian has not contented himself with merely printing the fragments, which are mostly autobiographical or documentary, but he has furnished explanations and supplements which serve to link events together. Heigel, of Munich, has derived from the archives of that city materials that throw light on the Austrian War of Succession and the election to the imperial dignity of Charles Albert of Bavaria. The eighth volume, which has appeared, concludes Arneth's history of Maria Theresa. Another Austrian historian, Ad. Beer, has endeavored to give a clear exposition of that complicated subject, the finances of Austria in the 19th century. That keen critic, Ottokar Lorenz, has investigated the German sources for the mediæval history of Austria. Arnold Goedeke's account of the policy of Austria in the Spanish question is based upon the Vienna archives and the family papers of the former imperial ambassador at Madrid, Count Harrach. Spain's latest history, from the fall of Isabella to the accession of Alfonso, has been written by Wilhelm Lauser. The Heeren-Uckert collection of histories of European states makes rapid progress under the editorship of W. von Giesebrecht. Of Hertzberg's "History of Greece" another volume has appeared, while Reumont's "History of Tuscany" is finished in the second volume, which is devoted to the princes of the house of Lorraine. The histories of the Papal States, by Lasch, and of Venice, by G. M. Thomas, will follow. The first volume of a "History of Modern France (1830-1871)," by O. Hillebrand, has been issued. Histories of Bavaria (by Riezler), of Württemberg (by Stälin), of Switzerland (by Giss, of Berne), of the Netherlands (by Wenzelburg, of Delft), are announced. In place of the now antiquated "History of the Germans," by Pfister, a new work is to be brought out, in which the various periods have been divided among such scholars as F. Dahn, Giesebrecht, Wegele, Kluckhohn, Dove, Roepell, and Heigel. In military history, besides countless chronicles of regiments, have appeared the continuation of the great work of the Prussian General Staff upon the Franco-Prussian War, down to the capitulation of Metz, and the well-known W. Rüstow's account of the war in Turkey (Serbia and Herzegovina). The handsomely-printed "Festschriften," published by the University of Tübingen, in celebration of its quater-centenary, comprise interesting contributions to the history of German universities and education. An imposing volume contains the original authorities for the history, down to 1650, of the university, which was founded in 1477, by Count (afterward Duke) Eberhard the Bearded, of Württemberg. Another of not less dimensions contains the "Festschriften," properly so called, of which the account of the instructors and instruction in the "Evangelical Faculty of Theology from

the Reformation to the Present Day," by the Rector von Weizsäcker, has the more interest for the general public, as in this faculty originally Melancthon, and in modern days the leaders of the Tübingen School, Bauer and Strauss, labored.

To Goethe literature important additions have been made in the edition of "Briefe Goethes an Soret," edited by Uhde, and still more in the "Briefwechsel des Dichters mit Mariane von Willemer," published by Creizenach. Mariane was the Suleika of the "West-östliche Divan," one of the later loves of the poet—a woman not unworthy of the honor, as several verses from her pen, which were taken from her letters and put in the "Divan," show. Also the "Briefe Goethes aus dem Nachlasse Fritz Schlossers" (a nephew of Goethe's brother-in-law), edited by Frsee, contain much that is new; more especially the amusing fact that Goethe, though doubtless, after Baron Rothschild, the most celebrated man Frankfurt has produced, was not only not made an "Ehrenbürger," but in the year 1808 was deprived of his hereditary rights of citizenship, because he, being then a minister at Weimar, declined to pay income-tax in the imperial city. The Goethe archives at Weimar, so jealously guarded by the heirs of the poet, still conceal many a buried treasure: the complete correspondence of Wolfgang with his noble mother, the classic "Frau Rath," and with his sister Cornelia (who, though plain, was in intellect nearly equal to her brother), the wife of Schlosser. There, too, slumbers Goethe's correspondence with the leaders of the romantic school, A. W. Schlegel, Fr. Schlegel, Tieck, and others. It is to be hoped that its publication may yet be intrusted to the skillful editor of Goethe's scientific correspondence and his letters to the brothers Humboldt, Prof. Bratranek. In Hermann Grimm, the author of the "Goethevorlesungen," which are the outcome of lectures delivered at the University of Berlin, the great German poet has found the first German biographer who has treated him in the spirit of a poet and not as a schoolmaster.

In philosophy it would seem that the star of strong-minded Pessimism and the mysterious Unconscious is waning. To the former Moriz Carriere opposes the inevitable victory and the ideal rule of the "sittliche Weltordnung," in a book written with the noble warmth of feeling habitual to him. The volume is a development of a speech delivered on the day after the battle of Sedan, under the direct impression of that great event in the world's history. Against the latter, and its claims to find support in the natural sciences, the Strasburg naturalist, Oskar Schmidt, has declared war in a cutting criticism based on scientific grounds. The inventor of this philosophy, Herr von Hartmann, has replied by collecting his minor writings, the first half of which contains his autobiography. The author of the famous book is a Prussian, born at Berlin, the son of a

Prussian general, and himself a Prussian officer till a painful affection of the knee forced him to lay aside his sword. Hartmann's device, "Speculative Resultate auf inductivem Wege," is repudiated by naturalists, but both parties uphold the "Allianz der Philosophie und der Naturwissenschaft." In harmony with this principle are the tendencies of the two new periodicals, the philosophical journal started by Avenarius and Göring, and the *Kosmos*, which Otto Caspari will bring out with the help of Haeckel, the author of the "Urgeschichte des Menschengeschlechts." The former represents what its originator, W. Wundt, calls inductive philosophy; the latter styles itself the "Organ des Darwinismus." About the essentials of this "Allianz," however, the views of the philosophical parties continue to differ widely. The avowed and unavowed adherents of the former "Schelling-Hegel'sche Naturphilosophie" understand thereby the transformation of empirical natural science into speculative "Naturphilosophie."

Although his studies are rather of the *feuilleton* type, the merit of making clear the condition of philosophy at the present time cannot be denied to the "Studien über die Philosophie der Gegenwart" of C. Grün, the editor of Feuerbach's remains. From those remains a further selection has appeared, consisting of Feuerbach's correspondence with Christian Kapp, the philosopher and democrat.

HOLLAND.—Novels have not been plentiful this year. I may mention, besides an historical romance of Mr. Huf van Buren, "De Kroon van Gelderland," of which much good is said, Mrs. Bosboom's "Langs een Omweg" ("In a Roundabout Way"). In this novel we miss, however, the verve and originality which are the characteristics of Mrs. Bosboom's immediately preceding novel, "Majoor Frans."

Among the many good books which have been reprinted we must neither forget Mr. Vosmaer's "Rembrandt," a book which is deservedly admired by the art-critics at home and abroad, nor the cheap edition of his "Londinias."

Besides these have appeared new editions of Gorter's essays, Lindo's complete works, and De Génestet's poems. Gorter was one of our best literary critics, to whose good taste we owe some of our most agreeable essays.

One of our earliest poets, Jacob van Maerlant, makes the subject of a still incomplete, though voluminous, essay of Dr. J. te Winkel, in which his various works are treated as the "mirror of his age," the 13th century. To supplement it, his minor poems, "Kleinere Gedichte," were republished, with an introductory essay on his life and character by Dr. van Vloten.

ITALY.—In Italy, during the last two or three years, novels and romances have mostly excelled dramatic works in historical and poetic truthfulness. This is shown even in the most difficult of all the varieties of romance, the

historical—for example, in “Tizio-Caio-Sempronio” and in “Diana degli Embriaci,” both by Antonio Giulio Barrili. Here we have historical poetry or the real combined with the ideal, and the same union is seen in several other romances lately issued. Vittorio Bersezio displays it in “Corruttela,” with all its true portraiture of modern life; Cesare Donati in “Flora Marzia;” and R. Stuart (by birth a Scotchman) in his “Marchesa di Santa Pia.” Cesare Molineri also, in his “Drammi nelle Alpi,” and Salvatore Farina in his charming story, “Prima che Nascesse,” have both shown skill in uniting with poetic treatment the realities of modern society. And with pleasure I would add that several Italian ladies have lately succeeded well or promised fairly in the same style of writing. Cordula (*nom de plume* of the Countess Maria della Rocca, of Turin); Emma (*nom de plume* of Signora Feretti, of Milan); Sofia (a young lady of Milan); Sara (Signora Tardy?); Una Donna (Signora Piatti, of Florence); Fides (the Countess Fantoni, of Florence); the Marchesa Colombi (Signora Torelli-Vollier); Neera (a lady whose true name I do not know); Maria Repetti; Grazia Pierantoni-Mancini; Ludovico de Rosa (Signora Luisa Saredo); Luigia Codemo—here are a dozen gifted women who have lately shown us that they possess both soul and intellect.

The publisher Treves, of Milan, whose books and journals have, perhaps, above all others, aided in spreading widely a wholesome popular literature, has issued lately the second volume of “Constantinople,” by De Amicis—a book that describes scenes on the Bosphorus, and is more than a charming guide; for it is, indeed, like a gallery of splendid paintings. Another work of the same class is a lately published book on Florence, in which Yorick (the pseudonym of the advocate Pietro Ferrigni) leads us through the Tuscan capital and its neighborhood. His style is excellent Tuscan; his observations are at once humorous, correct, and judicious, and his descriptions are simply lifelike.

Barbèra has issued lately “La Storia della Poesia Popolare Italiana,” by Ermolao Rubieri. The materials already collected for this work were abundant. All these collections have been studied by M. Rubieri; he has analyzed their contents, has compared each with the others, has noticed their general characteristics and their special differences, and the result is that he has given us an excellent and compendious book. In the form of a rapid introductory sketch he tells the story of Italian poetry in mediæval times, and connects with this historical notices of our several provinces. Throughout he shows himself at once a conscientious writer and a true patriot, whose main desire is to improve the condition of the people.

Le Monnier, who has issued “Macchiavelli” and the book of Signora Mario, has given us also “Torquato Tasso,” in two volumes, by Dr.

Pier Leopoldo Cecchi. The author has well studied his subject—the man and the poet, viewed in relation to the culture of his times. It is to be hoped that a second edition may be called for, as the book is in substance sound, and shows us especially that Tasso, with all his faults, was a man better than the times in which he had the misfortune to live. Signor Leone Ottolenghi, a young professor in the Lyceum of Casale, has produced a good biography of a philosopher and philologist, Luigi Ornato—a modern Italian Socrates, who won the admiration of such men as Victor Cousin, Gioberti, and Manzoni. In a volume lately issued by Treves, of Milan, the author, Signor Bonghi, gives us a collection of his own important papers (previously published in a dispersed way) on “Pius IX. and his Successor.” This book may be placed beside another, “Lo Stato e la Chiesa,” by Marco Minghetti. The latter is published by Hoepli, of Milan, and sheds clear light upon the ecclesiastical question of the times in Italy. The same firm gives us “I Popoli dell’ Antico Oriente,” an erudite and at the same time an agreeable book. The historian, Cesare Cantù, has completed a new edition of his “Storia degli Italiani,” to which he adds a new and important dissertation, entitled “Le Vicende dei Parlari d’ Italia.”

There remains to be noticed a remarkable book that I have not been able to classify well with any hitherto named. It is written by Prof. Pietro Siciliani, and bears the title, “Filosofia Zoologica del Secolo XIX.” Compared with its scientific aim, the form is odd enough, and even grotesque. It consists of a series of conversations in which almost all the most eminent philosophers or scientific men of our time are the *dramatis personæ*. They gossip here in a vivacious style *de omnibus rebus*, and among their sayings not a few are idle and out of place, while others are dignified assertions of scientific principles. Reduced to a third part of its bulk the book would have been solid, though probably not conducive to the writer’s popularity.

RUSSIA.—To ordinary eyes the year 1877 seems in no way remarkable so far as literary activity is concerned. We are so engrossed with current military and political events, that we have little time or inclination to think of science or art. As a compensation for this, we ought to have a rich harvest of works relating to the Slav races and the Eastern Question; but in reality we have little or nothing of the kind—certainly nothing destined to have more than a very short-lived reputation.

Time was, and not so very long ago, when the Russians delighted in poetry, and many middle-aged men among them can still repeat from memory whole pages of Púshkin and Lérmontof. But since the beginning of the present reign the public taste has completely changed. “Questions” of every conceivable kind—social, political, scientific, philosophical, and economic—so monopolize public attention that the

poet feels himself "out of his element," as a resuscitated alchemist or astrologer might feel at a meeting of the Royal Society. There remains, however, one poet of the former generation, Nekrassof, and he is still listened to with respect and admiration, because he has contrived, while retaining the metrical form, to imbibe the spirit and adopt the tone of the new epoch. For thirty years he has depicted the dark sides of Russian life, and given a voice to the sorrows of the people, but he has never been maudlin or lachrymose. In all his writings there is a ring of energetic protest, which has sometimes brought him into contact with the press censure.

Of the numerous works of fiction in the higher sense, the only ones likely to have more than an ephemeral reputation are "Anna Karenina," by Count Tolstoy, and "Nov" ("Virgin Soil"), by Turgeneff. It is now completed, and will certainly be a lasting monument for the author's reputation. It displays a wonderful power of depicting human characters and analyzing complex human motives. As a work of art it is generally considered inferior to the author's earlier efforts; but it is seldom judged from the purely æsthetic point of view. To understand the reason of this, the reader must know something of a curious episode of Russian literary history, which cannot be more than briefly referred to here. Twenty years ago Turgeneff was one of the idols of the young generation. He had written his "Memoirs of a Sportsman," in which he had shown warm sympathy with the oppressed serfs, and he had been subjected to administrative annoyance in consequence of his Liberal opinions. During the first years of the present reign (1856-'60) he wrote several works which were thoroughly in harmony with the prevailing spirit, and his popularity consequently increased. But in 1861 he published his famous "Fathers and Children" (translated into English some years ago by Mr. Schuyler), and was at once condemned by the young generation as a man behind the age. In vain he declared that his aims and intentions had been misunderstood and misinterpreted. Young Russia continued to hold that he was an antiquated, aristocratic, *dilettante* Liberal of the years 1840-'50, incapable of understanding the new, serious, practical, genuinely democratic Liberalism. It was apparently in order to disprove this accusation that he wrote "Virgin Soil," in which he has represented a little group of revolutionary Liberals at work. That the picture is powerfully drawn there can be no doubt. But is it true to nature? If it is true, why has the author not explained the causes of the phenomena which he describes? These are the questions which have been discussed far more than the question of literary merit.

Turning from fiction to fact, we meet with several important historical works. First comes Solovieff's yearly volume, which appears as regularly as the almanacs. During the last

twenty-six years he has laboriously and conscientiously traced the geographical, political, and intellectual growth of the nation, and now, in his twenty-seventh volume, he relates the history of the years 1766-'68. More likely to attract attention at the present moment is the "History of the Crimean War," by Bogdanówitch, who has had access to many valuable sources unknown to his predecessors. Of works on the history of literature two deserve mention: Dashkévitich on the legend of the Holy Grail, and Vesselóvski's investigations in the poetry of the Middle Ages. Messrs. Py'pin and Spassóvitch are preparing a new and enlarged edition of their "History of Slavonic Literature," a work of great merit.

As usual, we have this year several books on land tenure, a subject which has especial interest for Russians. The emancipation law of 1861 gave to the village communes the perpetual usufruct of the land which they possessed, and thereby transformed the serfs into communal landholders. The preservation of the communal tenure is a curious experiment, on the success of which depends, to a great extent, the future prosperity of the country.

Those who prefer science without any theological alloy have their wants plentifully supplied by native *savants* and by translations from the works of foreign authors. The names of Darwin, Tyndall, Huxley, and Herbert Spencer, are as well known in St. Petersburg as in London, and some of the native investigators are making for themselves a European reputation.

The magazines have long played an important part in Russian literature, and continue to flourish as before. The most serious and weighty is the *Vestnik Evropy* (*European Messenger*), representing what in Russia is considered moderate Liberalism. The *Otétchestvenniya Zapiski* (*Memoirs of the Fatherland*) is of a more "advanced" hue, but often refrains from discussing important political and social questions in consequence of the regulations, or rather the unregulated action, of the press censure. *Dyelo* takes as its specialty sociology and natural science in the popular form. In opposition to these the *Rússki Vestnik* (*Russian Messenger*), published by Mr. Katkoff, in Moscow, is regarded as the organ of the Conservative or Retrograde party. To these must be added the *Sbornik Gosudarstvennikh Znanii* (*Collected Essays in Political Science*), published at irregular intervals by Mr. Bezobrázof, and containing most valuable papers intended for the more serious part of the reading public.

SPAIN.—The intellectual life of Spain during the present year is not unlike that of the preceding ones. The books which have appeared, with some very few exceptions, are not first-rate. The lyrical works of the present year are only of an average merit, while the dramatic works are decidedly inferior; and the

novels, which are improving every year, do so very gradually, and those which are readable are incredibly few. Books on scientific subjects, although their number is small, are somewhat more satisfactory. It is evident that the taste of the public is daily improving; for it is not uncommon to find two and three editions announced of scientific works, even of those which are not used as text-books in the Spanish universities and schools. The public are becoming daily more interested in lectures and conferences, in the provinces as well as at Madrid. Besides those held at the Ateneo of Madrid during the winter months, an interesting and instructive course of lectures has been given at the university upon agriculture; at the Conservatory of Arts on natural science; and at the Geographical Society and Free Institution on a variety of subjects. The conferences held at the Free Institution have been very popular, and have been listened to with great attention by a mixed audience of men and women. For the first time in Spain, the public have paid a small sum on entering to remunerate the lecturer, and women have been seen to take an interest in these subjects.

The most important critical historical work which has appeared this year in Spain is "*La Vida de la Princesa de Eboli*," by Muro. It is rarely that a critical work of this high type is written in Spain, the result of many years of careful study of original documents, and having no other object than to state the exact truth of what had taken place. A great number of excellent critical studies on the leading characters of the reign of Philip II. have been written by Gachard, Pidal, Prescott, Mignet, and Moty, as valuable as this volume by Muro, but none of them is superior to it. The Princess of Eboli, during great part of her life, had great influence over Philip II.; it has always been supposed that the king was violently enamored of her, and that his jealousy caused him to banish and persecute the princess and Antonio Perez in the latter years of her life. Señor Muro gives numerous details of the history of these supposed amours, and comes to the conclusion that not a single document exists by which they can be proved, and, on the contrary, that all the letters and original documents which he has consulted tend to show that no amorous connection ever existed between them. This idea is so new that, if true, it puts an end to a number of theories which have been established on it. The former view of this subject is still upheld by many critics.

The Spanish Government bought, early in 1876, two bronze tablets, engraved with Roman inscriptions of a very high interest. Dr. Berlanga published at the time a pamphlet in which he describes them. Since then he has written "*Los Nuevos Bronces de Osuna*," in which he gives the original text, and translations with extensive learned commentaries. This volume has met with the approbation of

the German critics of such subjects. The tablets found at Osuna contain twenty-two articles of the municipal laws granted to the town of Julia Genetiva. They were engraved a little after the middle of the first century A. D., in the time of Vespasian. The Marquis of Loring has the remaining tablets belonging to this series, found at Osuna, Malaga, and Salpensa; they form a unique collection, and the only one known to exist in Europe on the Roman municipal law. They have been all described by Dr. Berlanga.

A useful book has also appeared, "*Apuntes Biograficos de Escritores Segovianos*," by Baena, in which the biographies collected by Colmenares have been enlarged and improved. "*Recuerdos Historicos de Avila*," by Arias, contains a series of documents which will be useful to illustrate a life of St. Teresa.

Books of travel are becoming most popular in Spain; it is highly probable that in time they will form an important branch of Spanish literature. The best is certainly "*De Madrid a Madrid dando la Vuelta del Mundo*," by Dupuy de Lome, a young diplomatist, who has resided for two years in Japan, and afterward traveled round the world. This book is written in a light and easy style, but with much power of observation and criticism.

LITERATURE, ENGLISH. The year 1877 was distinguished by the appearance of no work of the first order of genius or of merit. Books giving evidence of talent, learning, and research, were not wanting. Of light literature there was the usual quota. Religious and political discussion were as active as ever. The only form of literature that seems to have grown in power and effective influence is that which is cultivated in periodicals. At no former period has an equal amount of ability and knowledge found expression in reviews and magazines. Many of the books that appear are made up of "articles," or set out more at large what had thus been rehearsed in epitome. It is probable that these facts stand in the relation of cause and effect, the more ephemeral gaining at the expense of more durable work. In quantity the amount of publication shows no decline, but an increase rather. The whole number of new books was 4,614, exclusive of American importations and of reprints. The several departments in the order of numerical proportion stand: 1. Fiction; 2. Theology; 3. Education; 4. Juvenile; 5. History and biography; 6. Belles-lettres; 7. Poetry and drama; last in diminishing series, travels, arts, sciences, economics, jurisprudence. The active literary exchange that goes on between England and America brings before the public of either country the best books of the other in simultaneous publication or in prompt reprinting. Having in a preceding article (LITERATURE AND LITERARY PROGRESS, AMERICAN, under the head Republications) referred to the more important of the English books reproduced here, what follows is mainly supplementary to that.

HISTORY AND BIOGRAPHY.—Of works in English history, perhaps the most important is Mr. S. R. Gardner's "History of the Personal Government of Charles the First," a continuation of his very valuable expositions of the Stuart reigns. In European history, the most striking works are "The Renaissance in Italy in the Sixteenth Century," by J. A. Symonds, of which the second and third volumes have appeared, completing it, and Sir Thomas Erskine May's "History of Democracy in Europe," Sir H. M. Elliot's "History of India in the Mohammedan Period" is an installment in an extensive undertaking. Other works of interest are Bisset's "History of the Struggle for Parliamentary Government in England;" "The Rise and Decline of the Rule of Islam," by A. J. Dunn; "The Persecution of Diocletian, an Historical Essay," by Arthur James Mason; and "The Discoveries of Prince Henry the Navigator and their Results," by the Rev. Henry Major.

In biography the first place probably belongs to the "Life and Correspondence of the Rev. Charles Kingsley," of which an abridged edition appeared in this country, and was received with much favor. Mr. Smiles's "Life of a Scotch Naturalist" was a revelation to most readers of a unique and pathetic career. The "Life of Sir William Fairbairn" adds another to the biographies of great engineers. Sir John Bowring's "Autobiographical Recollections," Mrs. Browning's "Letters to R. H. Horne," Scarlett's "Life of the First Lord Abinger," the "Memorials of John Macleod Campbell, D. D.," the "Memoirs of the Rev. Alexander Ewing, Bishop of Argyll and the Isles," "The Letters and Friendships of Mortimer Collins, with some Account of his Life," and Mr. H. Ashworth's "Recollections of Richard Cobden and the Anti-Corn Law League," with some others of less note, have engaged, in various degrees, the public interest.

TRAVEL AND EXPLORATION have a charm for the Englishman. The people who claim to have surrounded the idea of "Home" with the most endearing associations exceed every other in eagerness to explore all practicable places. Among the literary results of their adventurous spirit may be noticed, as of special interest, the Rev. J. P. Mahaffy's "Rambles and Studies in Greece," a book showing less force and originality than his "Social Life in Greece," but that is a work with which few books of travel could sustain a comparison. Captain Warren's "Underground Jerusalem" embodies the result of explorations which have cast great light on some of the dark places in sacred history. Mention should be made also of "Transcaucasia and Ararat," by James Bryce; "A Thousand Miles up the Nile," by Miss A. B. Edwards; "A Year's Housekeeping in South Africa," by Lady Barker; "The Sea of Mountains: Lord Dufferin's Tour through British Columbia," by Molyneux St. John; "Through Norway with Ladies," by H. Mat-

tiu Williams; and Dr. H. Rink's "Danish Greenland," edited by Dr. Robert Brown.

In **RELIGION AND THEOLOGY** there is a steady activity of minds representing every school of thought. The venerable Dr. Pusey has completed his learned labors on "The Minor Prophets," besides contributing to the controversies of the day. The publication of Bishop Thirlwall's "Remains" is still in progress, and will enhance the reputation of that distinguished prelate. Matthew Arnold's "Last Essays on the Church and Religion" have all the literary excellence by which the author is placed among the first masters of English, in combination with an incalculable eccentricity of thought. In "Inner Life of the Religious Societies of the Commonwealth" Mr. Robert Barclay found a rich and unappropriated field of investigation, which he has worked to very good purpose. "The Canon of the Bible," by Dr. John Davidson, arrives by a process of bold criticism at a negative conclusion. The publication of the Rev. John Keble's "Occasional Papers and Reviews" is of interest to all who cherish his memory as a poet, scholar, and divine. To these may be added, "Salvation Here and Hereafter," sermons and essays by the Rev. John Service; "Some Facts on Nature and Life," sermons preached before the Queen, by John Tullock, D. D.; "Through Nature to Christ," by E. A. Abbott, D. D.; "Modern Unbelief," by Bishop Ellicott; "Commentary on the Psalms," by J. G. Murphy, LL. D.; "Studies in the Psalms," by A. R. Fausset; "Critical Lexicon and Concordance to the Greek and English New Testament," by the Rev. E. W. Bullinger; "Addresses at St. Andrews," by Dean Stanley; the Bampton Lectures, on "Christian Evidences viewed in Relation to Modern Thought," by the Rev. C. A. Row; "The Scriptural Doctrine of Sacrifice," by Alfred Cave; "The Wines of the Bible: an Examination and Refutation of the Unfermented Wine Theory," by the Rev. A. M. Wilson; "A New Testament Commentary for English Readers," edited by Bishop Ellicott—vol. i., on the Gospels, by Prof. E. H. Plumptre, D. D., and Rev. H. W. Wilkins, M. A.; "Theism," by Robert Flint, D. D., LL. D.; "New Light upon Old Lines; or, Vexed Questions in Theological Controversy," by Thomas Monk Mason, B. A., T. O. D.; "Independence of the Holy See," by Cardinal Manning; "Authority and Authenticity of St. John's Gospel," by William Cæsar, D. D.; "Dissertation on the Epistle of St. Barnabas," by the Rev. William Cunningham; and "Scripture Difficulties explained by Scripture References," by Thomas Spalding.

In **PHILOSOPHY AND SCIENCE** the more important works are republished here as a matter of course. In addition, we mention "Natural Law, an Essay in Ethics," by Edith Simcox; Caird's "Critical Account of the Philosophy of Kant;" "Pessimism: a History and Criticism," by James Sully; "Discourses, etc., of

Epictetus, translated, with Life, Notes, and a View of his Philosophy," by George Long; "Idiocy and Imbecility," by William W. Ireland, M. D.; "A Fern World," by Francis George Heath; and "Some Articles on the Depreciation of Silver," by the late Walter Bagehot.

A few books on Art deserve notice: a sumptuous work on "The Ceramic Art of Japan," by Audsley and Bowers, publishing in parts; "Drawings of the Italian Masters," reproduced by autotype process from originals in the British Museum, and notes by J. Comyn Carr; "Numismata Cromwelliana, the Medallie History of Oliver Cromwell," by William Henry Henfrey; and "History and Distinguishing Characteristics of Precious Stones and Gems," by Edwin W. Streeter. In the kindred department of literary and dramatic criticisms an important work is "The School of Shakespeare," by Richard Simpson; also "Studies in the Idylls," an elaborate criticism of Tennyson's great work; and "Essays and Reviews," by the late Henry H. Lancaster.

Of POETRY William Morris has given us a volume; among secondary poets, Aubrey De Vere, the Earl of Southesk, Francis Bennoch, Ernest Myers, and others, might be named. The Marquis de Lorn has tried his hand, with no marked success, at versifying the Psalms. The poets that survive, whose names are household words, are veterans, and the younger men who shall be worthy to succeed them. The same may be said of prose fiction. There are a number of clever, some even brilliant writers; but among the novels of 1877, which are likely to have readers in 1887?

CLASSICAL LITERATURE and ANTIQUITIES have always been cultivated with enthusiasm in England, enthusiasm not visibly diminished. "The Roman Poets of the Augustan Age," by Prof. W. T. Sellar; "The Similes of Homer's Iliad, translated with Introductions and Notes," by W. E. Greene, and some excellent translations of Greek and Latin authors, uphold the repute of the English schools for critical learning. Results of successful investigation appear in such works as "The Roman Forum, a Topographical Study," by Francis Morgan Nichols; "University Life in Ancient Athens," by W. W. Capes; "Monotheism, the Primitive Religion of the City of Rome," by H. Formby; "Systematic and Historical Exposition of the Roman Law," by William A. Hunter; "Excavations at Carnac, Brittany," by James Miln, and "Egyptian Texts," by Dr. S. Birch, in a series of "Archaic Classics."

Among numerous publications of a miscellaneous sort may be mentioned a fac-simile edition of "Paradise Lost," edited by Prof. Masson; Bailey's translation of "The Colloquies of Erasmus;" "Waifs and Strays from the Far East," by F. H. Balfour; "The Scottish Gael; or, Celtic Manners," etc., by James Logan; "The New Republic; or, Culture, Faith, and Philosophy in a Country House." Numer-

ous publications have been called out by the Eastern Question: "The Ottoman Power in Europe," by E. A. Freeman, D. C. L.; "A Lecture on the Treaty Relations of Russia and Turkey from 1774 to 1853," by T. E. Holland, D. C. L.; "Turks and Greeks—Notes on a Recent Excursion," by the Hon. Dudley Campbell; "Russian Wars with Turkey," by Major Frank S. Russell; "Twelve Years' Study of the Eastern Question, in Bulgaria," by S. St. Clair and C. Brophy; and Sir George Campbell's "Handy Book on the Eastern Question."

LORIS-MELIKOFF, MICHAEL TARIELOVITCH, a Russian general, was born January 1, 1826. He is descended from a rich family belonging to the Caucasian nobility. Having finished his education in the School of the Guards in St. Petersburg, he entered the army with the rank of cornet. In 1847 he was raised to the rank of lieutenant, and was sent to the Caucasus, where he served as adjutant to Prince Voronzoff, whose favor he soon gained by his excellent military talents. In the numerous expeditions against the natives he took a prominent part, and even defeated the redoubtable Shamyl. In the war of 1854-'55 he played a prominent part in the siege of Kars, defeating the enemy on several occasions in view of the fortress. After the surrender of Kars he was appointed its governor; and upon the conclusion of peace, in 1856, he was created a major-general. In 1863 he rose to the rank of lieutenant-general, and took part for a short time in the operations against the Polish insurgents, was appointed adjutant-general in 1865, and general of the cavalry in 1875. In 1876 he received the command of the corps stationed on the Turkish border, and crossed with this corps into Turkish territory upon the declaration of war. He proceeded to besiege Kars, and although forced to retire at one time, he soon recruited his strength, and, after completely defeating the Turkish army before Kars, took that fortress by storm in November.

LOUISIANA. During the first three months of the year, the two governments claiming to have a legal basis in Louisiana continued nominally to exist. Direct conflict was avoided, owing to the presence of United States military forces, with orders to preserve the peace, and a disposition to await the action of the national authorities regarding disputed questions affecting the State. But it soon became evident that the government headed by Mr. Nicholls alone had support from the people. A large number of the leading business men and clergymen of New Orleans joined in declarations of sympathy and support, and numerous popular gatherings, in various parts of the State, gave voice to the general sentiment. On the 9th of January, the courts, police-stations, and arsenal in New Orleans were peaceably surrendered to the Nicholls authorities. The same day the following proclamation was issued:

EXECUTIVE DEPARTMENT. }
 NEW ORLEANS, January 9, 1877. }

To the People of Louisiana:

I would be most profoundly surprised and disappointed should any citizen of Louisiana, at this moment, so far forget himself as to be guilty of any excesses whatsoever. There is danger in collecting together in large bodies. I urge you, therefore, to retire at once peacefully to your homes.

The greater the wrongs to which you have been subjected, the greater to your credit should you recognize and recollect your own simple and plain duty as citizens. Let no one be injured, however obnoxious he may be, and let the people of the whole country see that we are law-abiding, just, and moderate.

FRANCIS T. NICHOLLS,
 Governor State of Louisiana.

A case in the First District Court, involving the legality of the commission of J. J. Finney as District Attorney, which was signed by Francis T. Nicholls, "Governor of the State of Louisiana," was decided in favor of its validity, on the ground that the Returning Board had transcended its legal powers, and reversed judicial functions, which could not belong to it under the Constitution of the State.

Mr. Nicholls, in a speech at Baton Rouge, and in reply to various inquiries by letter, announced his purpose to secure equal rights and impartial treatment for all classes of citizens. Among his declarations on the subject was the following, in answer to two Republican members of the State Senate:

NEW ORLEANS, January 13, 1877.

GENTLEMEN: I respectfully acknowledge receipt of your communication of this date, in which you ask me whether "I will maintain, as Governor of Louisiana, the equality of all men before the law, and use the influence of my administration to advance the educational, political, and material interests and rights of the colored people, and protect them in the exercise of the rights guaranteed them by the recent amendments to the Constitution of the United States, and the laws in pursuance thereof."

I answer these questions without the slightest hesitation. I have, as a candidate for the position of Governor, at all times, and at all places, stated that I recognized each and every obligation incumbent upon me under the Constitution of the United States, and of the amendments thereto, and the Constitution of Louisiana, and the laws thereunder, that it would be my bounden duty to carry out faithfully and impartially the amendments to the Constitution, as well as the original Constitution itself; that I recognize that all citizens, whether they be white or colored, should be equally entitled to the benefits and protection of the law; that I was utterly opposed to class legislation. Any attempt to legislate so as to deprive the colored people of any of their rights under the Constitution of the United States, and its amendments, would meet with my most determined opposition.

As Governor, I make these same declarations.

I will use my utmost endeavors as Governor, and with all the influence at my command as such, to promote the educational and material interests of the colored people, precisely to the same extent that I will those of the white people.

It will by my constant aim to promote kindness, sympathy, confidence, and justice between the two races in the State. FRANCIS T. NICHOLLS.

General Augur, under instructions from Washington, confined himself to preserving the *status quo* between the rival governments,

and preventing any disturbance of the peace. He requested from Mr. Packard a written assurance that "the President's wishes concerning the preservation of the present status be respected." In his reply, under date of January 16th, Mr. Packard asserted the legality of his claim to the office of the Governor, and charged that the other party had violated the understanding that the existing status was to be preserved, but he concluded as follows:

Inasmuch, however, as I learn that it is the President's wish that the present status should be maintained throughout the State until the Congressional Committees now in Louisiana return, and feeling assured that the legal status of the existing State Government will speedily be recognized, and the wrongs committed in the last eight days will be set right, I give the pledge requested, that no effort will be made on the part of the lawful State Government to forcibly disturb the existing state of affairs, without further communication with you.

This letter was given to the public through the press, and telegraphed to the North before it was received by General Augur. That officer made a sharp reply, in which he said:

Yourself, and the officers in command, immediately under you, have repeatedly stated that it was the intention to seize any favorable opportunity to recover the court-room, and you have repeatedly sent your sheriff to demand that room, and have, twice since that time, made written application to me for troops to assist in such recovery. This does not look as though it was your "understanding that neither side should be permitted to interfere with the status of the other side."

It was the fact of these threats to recover lost ground whenever a favorable opportunity presented itself, that has furnished an excuse for the Nicholls party to keep a force in readiness to resist them; and it was in view of this very condition of affairs that, yesterday morning, I directed two of my staff (one to see you and one to see General Nicholls) to *inquire, not to request*, if some agreement or understanding could not be entered into, by which the *status quo* could be guaranteed until such time as the President should make his decision. Such an agreement would do away with the supposed necessity of keeping up a body of armed men on either side, and diminish very greatly the chances for violence and bloodshed. I made no request in the matter. I had no right to make any request. It was simply a suggestion in the interest, as I thought, of peace, and to give a moment's quiet to the citizens of this excited city. Neither General Nicholls nor yourself thought it advisable to adopt it, and there it ended.

No occasion arose, for some weeks, for the exercise of military authority. On the 1st of March, Mr. Packard sent the following dispatch to President Grant:

EXECUTIVE OFFICE, }
 NEW ORLEANS, March 1, 1877. }

To the President:

Statements are authoritatively made here that you have announced your purpose to withdraw United States forces from the various positions to which they have been assigned in the interest of peace, the public weal of this city and State, so soon as the electoral vote shall have been declared. It is further stated that assurances have been given on the part of Nicholls and his supporters—who, I may state, are identically the same organization, under the name of the White League, that rose in insurrection against the State Government in 1874, and were suppressed by your orders—that if the support of United States

troops be withdrawn, the Government of which I am the head would disintegrate, and Nicholls be installed without violence and bloodshed. It is currently reported and believed here on the other hand that the White League are under orders to attack the State-House, and will attack the State-House as soon as the soldiers are withdrawn from the city, their purpose being, by the annihilation of the officers of this Government, to leave no Republican State for your successor's recognition. The validity of my title as Governor having been passed upon by the only tribunal known to the State laws, and being now confirmed by the decision of the national tribunal, I deem it my duty to maintain the Government by all means at my command. I therefore most respectfully but urgently request to be informed whether any changes be contemplated by you in orders heretofore given to General Augur, commanding this department, in order that I may be able to take such measures as circumstances and my duty as chief executive of the State may seem to require; and I again most respectfully request at your hands the recognition of the legal State Government.

S. B. PACKARD.

The following in reply was sent both to Packard and to General Augur:

EXECUTIVE MANSION,
WASHINGTON, March 1, 1877. }

Governor S. B. Packard, New Orleans, La.:

In answer to your dispatch of this date, the President directs me to say that he feels it his duty to state frankly that he does not believe public opinion will longer support the maintenance of State Government in Louisiana by the use of the military, and that he must concur in this manifest feeling.

The troops will hereafter, as in the past, protect life and property from mob violence when the State authorities fail; but under the remaining days of his official life they will not be used to establish or to pull down either claimant for control of the State. It is not his purpose to recognize either claimant.

C. C. SNIFFIN, Secretary.

The following relates to the same matter:

WASHINGTON, March 3, 1877.

To Governor F. T. Nicholls, New Orleans:

The President says he sent a dispatch to Packard, Thursday, notifying him that troops could no longer be employed to uphold either claimant, and that he does not believe that Packard would attempt any offensive operations.

The President sent the dispatch so that he (Packard) might have time to retire his pretensions, if disposed. The President says instructions have been issued which cancel all orders for the preservation of the *status quo*, and that neither you nor Packard are bound to observe it; that he means the people of Louisiana are as free in their affairs from Federal interference as the people of Connecticut, and that there will be no disposition to interference with them, any more than with the people of New York. The President concurs with us that you immediately issue a proclamation urging protection, amnesty, and peace.

Being asked if a posse executing process of Nicholls's court would be interfered with by the military, he replied: "No more than in any other State." Being asked if Nicholls's officers take possession of the offices in the State without mob violence, would there be military interference, he replied that there would be none; that the military would be used as it had been once in New York, and would be in any of the States, to overcome a mob too formidable for the civil power or State authorities.

We have submitted the foregoing dispatch, of yesterday, to the President, who has revised it with his own hands, and authorizes us to state that in its present form it is absolutely correct.

E. A. BURKE, E. J. ELLIS,
R. L. GIBSON, WM. M. LEVY.

United States Marshal Pitkin sent the following to Packard from Washington on the 2d:

WASHINGTON, March 2d—4.45 P. M.

To Governor S. B. Packard, New Orleans:

In company with Senators Howe, Logan, and others, I have just left three members of the cabinet, all of whom stated that the President's message to you, of to-day, in no manner changes, modifies, or affects the *status quo*. Any aggressive course taken by the Nicholls element will be promptly arrested. Burke and others teased the President to give Nicholls greater margin, but wholly failed. All we asked was a maintenance of the *status quo* till President Hayes's accession. This we have. Hon. W. H. Hunt accompanied the President-elect hither from Ohio, and authorizes me to say to you that Governor Hayes unqualifiedly states that he has given nobody warrant to indicate what will be his policy toward Louisiana. Do not permit your friends to feel any disquietude because Nicholls's agents here dispatch empty fictions by the yard. A member of the cabinet said to me, a few moments ago, "President Hayes would impeach his own title were he to refuse Governor Packard recognition." This is the view not only of all leading Republicans, but even Montgomery Blair editorially admits it.

J. G. R. PITKIN, United States Marshal.

On the 2d Mr. Nicholls had issued the following proclamation:

EXECUTIVE DEPARTMENT,
NEW ORLEANS, March 2, 1877. }

To the People of Louisiana:

I congratulate you upon your law-abiding conduct during the past months of unprecedented anxiety and trial.

The history of that period, so far as you are concerned, has been but the steady exhibition of the highest civic virtues.

The situation of your affairs at this moment demands, more than ever, the exercise of combined firmness, moderation, and devotion to principle.

We now have the assurance that our great commonwealth is about to resume her rightful position in the Union of States, and in the control of her own internal affairs.

You must, therefore, continue to maintain the public peace. Refrain from all violence, and leave to those who are charged with the duties of government the responsibility of enforcing the laws.

In the future history of our State, let us recognize and respect the fact that all class and race distinctions before the law are, and shall remain, abolished.

Let us honestly accord to each citizen, without any distinction, the full measure of his rights, and the equal benefit and protection of the law, to the end that all, under the blessing of God, may contribute to bring about an era of good feeling, peace, and prosperity.

Now, therefore, I, Francis T. Nicholls, Governor of the State of Louisiana, do issue this my proclamation, enjoining upon all persons the maintenance of peace, the observance of law, and a proper regard for the rights of all persons; and I recommend the cultivation of good feeling, and a spirit of harmony among all classes.

FRANCIS T. NICHOLLS,

Governor of Louisiana.

During these weeks prior to the expiration of President Grant's official term, the Congressional Committees which had been sent into the State to investigate the circumstances of the election of 1876 had prosecuted their inquiries, returned to Washington, and made their several reports. Majority and minority reports were made by both the Senate and House Committees, in which a strictly party

view of events was presented, and conclusions reached in accordance with the party predilections of the members. The Republicans were convinced that the action of the Returning Board was legal and right, and the Republican electors and State officers duly chosen, while the Democrats were equally firm in their conviction that the Returning Board had falsified the result of the election.

Meantime, the two bodies, each of which claimed to be the Legislature of the State, remained in session. That which acknowledged the pretensions of Packard continued to occupy the State-House, and the other held its sessions in St. Patrick's Hall. (*See ANNUAL CYCLOPEDIA*, 1876, p. 493.) A legal quorum consisted of 21 in the Senate, and 61 in the House. The Packard Senate had at no time a legal quorum in the Senate, the number present varying from 19 to 13. In the House the maximum number was 68, all holding seats on Returning-Board certificates. On the 10th of January, an election for United States Senator was held in joint convention of the two Houses. There were present 17 Senators and 66 Representatives. All the votes were for William Pitt Kellogg, and the result was announced in the following language:

That the Hon. William Pitt Kellogg, having received eighty-three votes, and that being a majority of the votes cast by a legal quorum of the joint session of the General Assembly of the State of Louisiana, was elected United States Senator from the State of Louisiana for the term of six years, beginning March 4, 1877.

An effort was afterward made to choose a Senator for the unexpired term, for which J. B. Eustis was elected in 1875, but without success. It was impossible to effect legislation for lack of a quorum in the Senate. Several persons were admitted to the House on contests for the seats to which those had been returned who were occupying places in the Nicholls Legislature. Others were expelled for continued absence from their places, and "the Governor" was notified of the vacancies, and requested to issue his proclamation for new elections. But all this time the Senate could do nothing, and several of its members deserted to the rival body. As early as January 13th, two Republican Senators had gone from the State-House to St. Patrick's Hall, accompanied by P. B. S. Pinchback and G. B. Hamlett, a prominent colored man of Ouachita Parish, and had been sworn in there. Hamlett and Pinchback, being accorded the privilege of addressing the Senate, spoke at some length, acknowledging the legality of the Nicholls Government.

The St. Patrick's Hall Legislature continued in regular session until March 1st, and was then immediately convoked for a special session, beginning the next day, which continued until April 26th. At the beginning there were 21 Senators, four of whom had no certificates from the Returning Board, and 62 Represent-

atives, several of whom held their certificates from the Democratic Committee on Returns. So far as numbers went there was a quorum in both branches, and legislation was proceeded with. One of the earliest acts of this body was to issue an address to the people, reviewing the circumstances of the late elections and maintaining its claim to be the legal and duly organized Legislature of the State. A "Declaration and Appeal" to the people of the United States was subsequently adopted, giving assurance of the course to be pursued by Nicholls and his supporters. The following statements were included in the declaration:

1. The maintenance, in the State of Louisiana, of the Government of Francis T. Nicholls will secure domestic tranquility, peace, contentment, and prosperity; and without discrimination insure to every member of the commonwealth full and perfect protection of all his rights as a citizen.
2. Free public education will be fostered, so that every child may receive all the benefits which the resources of the State can afford.
3. Corruption and speculation, whereby taxation has been unjustly increased, depriving the people of their resources, and diminishing their ability to employ and compensate labor, will be eradicated.
4. Labor will be encouraged, the relations of employer and employés be rendered more remunerative, thereby quickening mutual dependence and common interest, and destroying baneful antagonisms.
5. The multiplication of offices whereby the substance of the people has been wasted, and they have been wrongfully impoverished, will be strictly curtailed.
6. None but good, reliable, honest men will be appointed to office, and such only as will always recollect that they are servants, not masters.
7. The fraudulent tax-collecting system now prevailing will be changed, and the enormous charges now imposed be diminished so as to relieve the people and increase the revenue.
8. The expenses of the State will be reduced to their lowest point, and be kept strictly within the limits of the revenues.
9. The State debt, having been fixed by constitutional enactment, will be recognized in good faith, and every energy of the people directed to its prompt payment.
10. All obnoxious laws will be repealed, and the people will be let free to exercise the elective franchise and enjoy their rights under the amendments to the Constitution of the United States without obstruction or molestation.
11. As the executive officer of the State, Francis T. Nicholls will avoid all intrigues and coeries, and as the servant of the people be accessible to every class.

After further assurances as to the result of an administration of State affairs under Mr. Nicholls, the following appeal was made:

Hence, we appeal to the people of the United States to stay the hand of injustice and wrong, and we ask them in the name of what every American holds most sacred—self-government, home government; in the name of the indissoluble link which should bind man to man—liberty; in the name of common justice and of right, to revive kindly feelings, to restore peaceful relations, to establish good government by recognizing that Francis T. Nicholls is the rightful Governor of the State of Louisiana, and by sustaining us in efforts to maintain his government.

Shortly after the assurances given by Nicholls as to the treatment of colored citizens, already referred to, the following resolution was unanimously adopted:

Resolved by the Senate and House of Representatives in General Assembly convened, That the policy of kindness, fair and equitable treatment toward the colored people of Louisiana, announced by Governor Nicholls in his speech at Baton Rouge, and reiterated in his letter to the Hon. P. B. S. Pinchback and others, of date the 18th instant, is fully indorsed, and will be strictly adhered to by the General Assembly of the State.

The following was also unanimously adopted in the House of Representatives:

We, the Representatives of the people of the State of Louisiana, duly elected by and direct from the people, fully aware from positive knowledge of the feeling and determination that impel and control them, do declare that, under no circumstances, will the people of this State pay tribute to any other State Government than that at whose head stands the man of their choice, their endeared and truly elected Governor, Francis T. Nicholls.

And we do further declare the utter impossibility of gathering the taxes by any other authority, and that any attempt to gather them by other authority than the Nicholls Government will not only prove abortive, but lead to lamentable civil strife, if not to bloodshed and actual war.

And we, the Representatives of the people of the State, do solemnly declare that we are in perfect sympathy with the people, and under all circumstances we will aid, encourage, and maintain them in their determination.

The remainder of the regular session was occupied with matters of general legislation. A ballot was taken in joint convention each day for United States Senator, without result.

On the accession of President Hayes, March 4th, it was understood to be his determination to withdraw all military interference from the State, and allow the complications to be settled by the people through such legal agencies as were established. General Grant's avowed purpose of removing the troops from the State-House had been in some way defeated or prevented, and an order issued to General Angur with that intent was never transmitted; but assurances had been given that the new President would not continue the policy of military intervention. This understanding seems to have been brought about through consultation between Mr. Charles Foster and Mr. Stanley Matthews, of Ohio, on the one side, and Mr. John Y. Brown, of Kentucky, and General J. B. Gordon, of Georgia, on the other. The expectation raised by it was generally believed to have an important effect in preventing any persistent opposition in the House of Representatives to the completion of the electoral count under the decisions of the Electoral Commission. The following writing, in connection with this understanding, was afterward made public by Mr. Brown.

WASHINGTON CITY, February 17, 1877.

GENTLEMEN: Referring to the conversation had with you yesterday, in which Governor Hayes's policy as to the status of certain Southern States was discussed, we desire to say that we can assure you,

in the strongest possible manner, of our great desire to have him adopt such a policy as will give to the people of the States of South Carolina and Louisiana the right to control their own affairs in their own way, subject only to the Constitution of the United States and the laws made in pursuance thereof, and to say further, that from an acquaintance with and knowledge of Governor Hayes and his views, we have the most complete confidence that such will be the policy of his administration.

Respectfully,
STANLEY MATTHEWS,
CHARLES FOSTER.

To Hon. JOHN B. GORDON and Hon. J. YOUNG BROWN.

On the 15th of March there was a meeting of white Republicans in New Orleans, which adopted an appeal to the people of the United States, containing the following statements:

The intimidation, violence, outrages, and murders perpetrated upon the Republicans in different parts of the State by the White League Democracy, are now matters of notoriety throughout the civilized world. Their policy has been to mislead the people in other States by reporting daily here what is known to be false: that they have control of the whole of the territory except an acre of ground in New Orleans, and that their authority is alone recognized throughout the State, and they ask to be let alone in order that the people may enjoy local self-government.

The facts are, that an illegal and armed military organization threatens the existence of the lawful government. Instead of Governor Packard's authority being acknowledged only at the St. Louis Hotel, it is recognized in the greater part of the State outside of New Orleans. In at least 28 parishes or counties of the State Republican officers were elected, and are in the exercise of their functions, and they everywhere recognize Governor Packard as the Governor of the State. Thirteen out of 17 District Judges outside of New Orleans were elected by the Republicans, and they have officially recognized Governor Packard. These insurgents boast that they will force the Government of the United States to abandon Governor Packard, and thus to disregard its sacred obligations to the State, or to establish a military government. If the President yields to this threat it will be only to encourage rebellion against the laws.

The question involved here is a question of fact and of law, and not of sentiment. There can be but one lawful government in a State, and when another asserts authority, it is the bounden duty of the President to furnish the needful assistance. It has been boastfully asserted that the tax-payers will pay cheerfully to Nicholls's appointees. The truth is, that not one of his appointees can lawfully collect any taxes, because they have not the tax-rolls; because the licenses, which are collectable at once, have to be indorsed by the State Treasurer, who holds the office from the 1874 election, and who does not recognize Mr. Nicholls's appointees. The funds raised have been by a sort of prestimos or forced loan.

We appeal, therefore, to our fellow-citizens of the loyal States not to heed the slanders published against us, and to exert their influence to hasten the assistance which should have come to us upon its wings of lightning. Justice delayed is oftentimes justice denied.

In conclusion, we respectfully but earnestly ask, as we have a right to demand, that the hand of justice be speedily extended to the lawful government in Louisiana, to the end that the Republicans of the State may not be forced to follow the example of the Nicholls party, and attempt to settle legal questions by the use of the rifle and cannon.

Protests against these and similar statements were made from various quarters.

On the 24th of March Mr. Nicholls issued the following proclamation:

EXECUTIVE DEPARTMENT,
NEW ORLEANS, March 24, 1877. }

To the People of the State of Louisiana:

The State Government being now complete in all its branches, and in full performance of all its functions, it becomes the duty of the people of Louisiana to promptly discharge their pecuniary obligations to it, in order that all just claims against it may be punctually met. To the ordinary motives inducing the payment of taxes is now added that of evincing by such payment confidence in the strength and stability of that Government, and just appreciation of the fact that it is the one chosen by the people. The evidence already received on this point is entirely satisfactory, and I confidently expect a continuance of the same patriotic action throughout the State. The people of Louisiana may rest confidently assured that the Government of which they have chosen me the executive head will not be imperiled or impaired by any compromise of their rights. The Government being now a fixed fact, I desire to publicly acknowledge the services of, and to thank on behalf of the people of Louisiana, the patriotic men, who, on the 9th day of January, 1877, responded to the call of the civil authorities of this State, to prevent the illegal attempts to oust them from their legal possession of the court buildings, and who have since quietly, thoroughly, and most patiently performed their duties as citizens. I desire to say that their great services are fully appreciated, and that in due time I shall seek occasion to make manifest the feeling of the people on this subject.

This was followed on the 26th by a proclamation by Packard, in which he denied the allegations of Governor Nicholls, and claimed that his authority not only had a legal foundation, but was recognized and supported by a large part of the people and the local authorities outside of New Orleans. In closing, he said:

The reign of political terrorism and disorder in this State is, I trust, rapidly drawing to a close. Official information reaches me, that in a few days a National Commission will visit this State and pass upon its condition. Confident of the justice and rectitude of my claim, I have no doubt of the result, and I am encouraged to believe that so soon as the legal State Government shall have received from the national authorities that recognition to which it is justly entitled, it will be enabled to draw to its support the active coöperation of a large class of conservative citizens, whose influence has heretofore been crushed under the tyranny of that intolerant oligarchy whose last desperate effort to govern by a minority we now witness. It will be my earnest purpose to so administer the government as to oppress none, and to maintain the rights of all, and I have confidence that justice will eventually prevail, and right be established.

The administration at Washington had been for some time considering upon its course, its aim being to effect a withdrawal of military interference without precipitating an outbreak of violence which would necessitate its exercise again, and to assist in a peaceful settlement of the existing difficulties. With this view, it was decided to send a commission to New Orleans to represent the President unofficially, and endeavor to carry out his purposes. It was appointed on the 28th of March, and consisted of General Joseph R. Hawley, of Connecticut; Judge Charles B. Lawrence, of Illi-

nois; General John M. Harlan, of Kentucky; Ex-Governor John C. Brown, of Tennessee; and the Hon. Wayne McVeigh, of Pennsylvania. Instructions for their guidance were drawn up by the Secretary of State, dated April 2d, and were as follows:

To the Hon. Charles B. Lawrence, Joseph R. Hawley, John M. Harlan, John C. Brown, and Wayne McVeigh, Commissioners:

GENTLEMEN: I am instructed by the President to lay before you some observations upon the occasion and objects which have led him to invite you, as members of the Commission about to visit the State of Louisiana, to undertake this public service.

Upon assuming his office, the President finds the situation of affairs in Louisiana such as to justly demand his prompt and solicitous attention, for this situation presents, as one of its features, the apparent intervention of the military power of the United States in domestic controversies, which undoubtedly divide the opinions and disturb the harmony of the people of that State. This intervention, arising during the term, and by the authority of his predecessor, throws no present duty upon the President, except to examine and determine the real extent, form, and effect, to which such intervention actually exists, and decide as to the time, manner, and conditions, which should be observed in putting an end to it. It is in aid of his intelligent and prompt discharge of this duty that the President has sought the services of this Commission, to supply, by means of its examination, conducted in the State of Louisiana, some information that may be pertinent to the circumspection and security of any measure he may resolve upon.

It will be readily understood that the service desired of and intrusted to this Commission does not include any examination into, or report upon, the facts of the recent State election, or of the canvass of votes cast at that election. So far as attention to that subject may be necessary, the President cannot but feel that the reports of the committees of the two Houses of Congress, and other public information at hand, will dispense with, and should preclude, any original exploration by the Commission of that field of inquiry. But it is most pertinent and important, in coming to a decision upon the precise question of executive duty before him, that the President should know what are the real impediments to the regular, legal, and peaceful procedures under the laws and Constitution of the State of Louisiana, by which the anomalies in the Government there presented may be put in the course of settlement, without involving the element of military power as either an agent or a make-weight in such a solution. The successful ascertainment of these impediments, the President confidently expects, would indicate to the people of that State the wisdom and mode of their removal. The unusual circumstances which attended and followed the State election and canvass, from its relation to the excited feelings and interest of the presidential election, may have retarded within the State of Louisiana the persuasive influences by which the great social and material interests, common to the whole people of a State and the pride of American character as a law-abiding nation, ameliorate disappointments and dissolve resentments of close and zealous political contests. But the President both hopes and believes the great body of the people of Louisiana are now prepared to treat the unsettled results of their State election with a calm and conciliatory spirit. If it be too much to expect a complete concurrence in a single Government for that State, at least the President may anticipate a submission to the peaceful resources of the laws and Constitution of the State of all their dissensions, at once relieving themselves from reproach, and their fellow-citizens of the United States from anxieties,

which must ever attend a prolonged dispute as to the title and administration of the Government of one of the States of the Union.

The President, therefore, desires that you should devote your first and principal attention to a removal of the obstacles to an acknowledgment of one Government for purposes of an exercise of authority within the State, and a representation of the State in its relations to the General Government, under Section 4, Article 2, of the Constitution of the United States, leaving, if necessary, to the judicial or other constitutional arbitrament within the State the question of ultimate right. If these obstacles should prove inseparable from whatever reason, and the hope of a single Government in all its departments be disappointed, it should be your next endeavor to accomplish the recognition of a single Legislature as the depository of the representative will of the people of Louisiana. This great department rescued from dispute, the rest of the problem could gradually be worked out by the prevalent authority, which the legislative power, when undisputed, is quite competent to exert in composing conflicts in coordinate branches of the Government. An attentive consideration of the conditions under which the Federal Constitution and the acts of Congress provide or permit military intervention by the President, in protection of a State against domestic violence, has satisfied the President that the use of this authority in determining or influencing disputed elections in a State is most carefully to be avoided. Undoubtedly, as was held by the Supreme Court in the case of *Luther vs. Borden*, the appeal from a State may involve such an inquiry as to the lawfulness of the authority which invokes the interference of the President in the supposed pursuance of the Constitution, but it is equally true that neither the constitutional provision nor the acts of Congress were framed with any such design. Both obviously treated the case of domestic violence within a State as of an outbreak against the law and authority of the established Government which the State was unable to suppress by its own strength. A case wherein every department of the State Government has a disputed representation, and the State therefore furnishes to the Federal Government no internal political recognition of authority upon which the Federal Executive can rely, will present a case of so much difficulty it is of pressing importance to all interests in Louisiana that it should be avoided. A single Legislature would greatly relieve this difficulty, for that department of the State Government is named by the Constitution as a necessary applicant when it can be convened for the military intervention by the United States. If, therefore, the disputing interests can concur in or be reduced to a single Legislature for the State of Louisiana, it would be a great step in composing this unhappy strife.

The President leaves entirely to the Commission the conciliatory influences which, in their judgment, formed on the spot, may seem to them to conduce to the proposed end. His own determination, that only public considerations should inspire and attend this effort to give ascendancy in Louisiana to things that belong to peace, is evinced by his selection of commissioners who offer to the country in their own character every guarantee of public motives, and the methods of transaction which they have undertaken. Your report of the result of this endeavor will satisfy the President, he does not doubt, of the wisdom of his selection and his placing trust in the Commission.

A second and less important subject of attention during your visit to New Orleans will be the collection of accurate and trustworthy information from public officers and prominent citizens of all political connections, as to the state of public feeling and opinion in the community at large, upon the general questions which affect the peaceful and safe exercise in the State of Louisiana of all the legal and political principles conferred by the Constitution of the

United States upon all citizens; the maintenance and protection of those rights and privileges by all constitutional means, or by every just, moral, and social influence, are the settled purpose of the President in his administration of the government. He will hope to learn from your investigations that this purpose will be aided in, and not resisted by, the substantial and effective public opinion of the great body of the people of Louisiana. The President does not wish to impose any limit upon your stay in Louisiana that would tend to limit the full objects of your visit. He is, however, extremely desirous to find it in his power, at the earliest day compatible with a safe exercise of that authority, to put an end to even the appearance of military intervention in the domestic affairs of Louisiana, and he awaits your return with the confident hope that your report will enable him promptly to execute a purpose he has so much at heart.

The President desires me to add that the publication of the results of your visit he shall hope to make immediately after their communication to him.

I have the honor to be, with great respect, your obedient servant,
WM. M. EVARTS.

The Commission arrived in New Orleans on the 5th of April. The same day Packard addressed an appeal to the President, in which he maintained at some length that it was essential to determine three points which were not covered by the instructions to the Commission, viz.: 1. Which is the legal Government entitled to recognition? 2. Which is the legal judiciary? 3. Do domestic violence and insurrection prevail, within the meaning of Section 4, Article 4, of the Constitution of the United States? His appeal closed with these words:

I earnestly urge that the investigation by the Committee be not confined to the narrow inquiry how Nicholls can be sustained and Packard starved to death for lack of money to support his Government. If the inquiry be thus restricted, a grave wrong will be done to those by whom I was called to the executive chair, and whose votes, cast often at the peril of their lives, have elevated your Excellency to the Presidency of the American people. In their name and on their behalf, I ask that the instructions given to the Commission may be so amended and enlarged that right can be ascertained, and that the Government thus found to be republican in form and to have been chosen by a majority of the people, according to the legal method sanctioned by the Constitution and laws, may be recognized and sustained.

The scope of the Commission's labors was not, however, extended. On the day after its arrival there was a largely attended mass-meeting of the citizens of New Orleans, to give expression to the popular feeling, and a long series of resolutions was adopted, declaring the loyalty of the people to the Federal Government, claiming the right of local self-government, dwelling on the wrongs and usurpations from which they had suffered, expressing confidence in the right of Governor Nicholls's claim to the office of Governor, and in the good results that would come from its recognition, denouncing Packard's pretensions, expressing satisfaction with the avowed purposes of the President, and welcoming the Commission. The Legislature appointed a committee to wait upon the visitors and extend to them the hospitalities of the State. The efforts of

the Commission were directed mainly to securing a majority of members, whose election was not questioned by either party, in both branches of what was known as the Nicholls Legislature, as there was no hope of effecting the same result in the rival body. On the 16th of April the Legislature adopted the following joint resolution:

Whereas, The people of the State of Louisiana, after years of suffering and misrule, have, with supreme satisfaction, seen the wise determination of President Hayes, as expressed in his inaugural and already happily executed in South Carolina, to restore local self-government to the Southern States, and peace and prosperity to the whole country by a return to a rigid following of the wise principles of constitutional government: therefore, be it

Resolved, by the Senate and House of Representatives in General Assembly convened:

1. That we cordially indorse the policy of the President as enunciated in his inaugural, and we pledge our hearty coöperation, aid, and support, in the execution thereof.

2. That the execution of the said policy in the State of Louisiana will prove the source of inestimable blessings to her people, lift up their burdened spirits, heal their wounded prosperity, renew their wasted fields, bring happiness to their homes, and give to the whole people, without distinction of race or color, a future of progress as well moral as material.

3. That as an earnest of our endeavors, we hereby solemnly declare that it is and will be the purpose of the Government of the State of Louisiana, represented by Francis T. Nicholls as its executive head:

1. To accept, in good faith, the 13th, 14th, and 15th Amendments to the Constitution of the United States, in letter and in spirit.

2. The enforcement of the law, rigidly and impartially, to the end that violence and crime shall be suppressed and promptly punished, and that peace and order prevail, and that the humblest laborer upon the soil of Louisiana, throughout every parish in the State, of every color, shall receive the full and equal protection of the laws in person, property, and political rights and privileges.

3. To the promotion of the kindly relations between the white and colored citizens of the State, upon a basis of justice and mutual confidence.

4. The education of all classes of the people being essential to the preservation of free institutions, we do declare our solemn purpose to maintain a system of public schools by an equal and uniform taxation upon property, as provided in the Constitution of the State, and which shall secure the education of the children of white and colored citizens equally.

5. Desirous of healing the dissensions that have disturbed the State for years past, and anxious that the citizens of all political parties may be free from the feverish anxieties of political strife, and join hands in honestly restoring the prosperity of Louisiana, the Nicholls Government will discountenance any attempted persecution, from any quarter, of individuals for past political conduct.

6. That the Governor be requested to forward a copy of these resolutions to the President of the United States.

These were transmitted to the Commission, with the following letter:

EXECUTIVE DEPARTMENT, STATE OF LOUISIANA, }
NEW ORLEANS, April 18, 1877.

To the Hon. Charles B. Lawrence, Wayne McVeigh,
John M. Harlan, Joseph E. Hawley, John C. Brown.
GENTLEMEN: I have the honor to transmit herewith a copy of joint resolutions adopted by the General Assembly of the State of Louisiana.

In so doing I desire to say that they express not

merely abstract ideas, but the conviction of our people, which will be practically executed by them through their representatives, their courts, and their executive government.

As the chief magistrate of the State it will not only be my pleasure, but my bounden duty, to give every assistance in my power to that end.

I am thoroughly satisfied that any course of political action traced on a narrower line than the good of the whole people, regardless of color or condition, must inevitably lead to disaster and ruin. My views on this subject were fully stated to the Convention by which I was nominated, and to the people by whom I was elected, and every day's experience fortifies me in the belief that any policy founded on these principles must necessarily result in the attainment of the ends for which all just governments are established.

I have earnestly sought to obliterate the color line in politics, and consolidate the people on the basis of equal rights and common interests, and it is a source of gratification to be able to say that this great object is about to be realized. I feel I do but speak the sentiments of the people when I declare that their government will secure:

1. A vigorous and efficient enforcement of the laws, so that all persons and property will be fully and equally protected, and should occasion require it, I will proceed in person where any disorders may menace the public peace, or the political rights of any citizen.

2. The establishment of a system of public education, to be supported by equal and uniform taxation upon property, so that all, without regard to race or color, may secure equal advantages thereunder.

3. The fostering of immigration in order to hasten the development of the great natural resources of the State.

Having thus committed our government and people to these great principles, I desire to add the most emphatic assurances that the withdrawal of the troops of the United States to their barracks, instead of causing any disturbance of the peace or any tendency to riot or disorder, will be the source of profound gratification to our people, and will be accepted by them as proof of the confidence of the President in their capacity for orderly self-government. Enjoying, under the blessings of Divine Providence, the happiness resulting from a government based upon liberty and justice, the people of Louisiana cannot fail to appreciate that their good fortune is largely due to the magnanimous policy so wisely inaugurated and so consistently maintained by the President of the United States.

I have the honor to be your obedient servant,
FRANCIS T. NICHOLLS.

On the 20th of April the object of the Commission had been effected, several persons who had held seats in the Packard Legislature going over to that of Nicholls. The same day the following letter was addressed to the Secretary of War by the President:

EXECUTIVE MANSION,
WASHINGTON, April 20, 1877. }

SIR: Prior to my entering upon the duties of the Presidency, there had been stationed, by order of my predecessor, in the immediate vicinity of the building used as the State-House, in New Orleans, La., and known as Mechanics Institute, a detachment of United States infantry. Finding them in that place, I have thought proper to delay a decision of the question of their removal until I could determine whether the condition of affairs is now such as to either require or justify the continued military intervention of the National Government in the affairs of the State. In my opinion there does not now exist in Louisiana such domestic violence as is contemplated by the

Constitution as the ground upon which the military power of the National Government may be invoked for the defense of a State. The disputes which exist as to the right of certain claimants to the chief executive office of that State are to be settled and determined not by the Executive of the United States, but by such orderly and peaceable methods as may be provided by the Constitution and laws of the State.

Having the assurance that no resort to violence is contemplated, but, on the contrary, the disputes in question are to be settled by peaceful methods, under and in accordance with law, I deem it proper to take action in accordance with the principles announced when I entered upon the duties of the Presidency. You are therefore directed to see that the proper orders are issued for the removal of said troops, at an early date, from their present position to such regular barracks in the vicinity as may be selected for their occupation. R. B. HAYES.

To Hon. GEORGE W. McCRARY, Secretary of War.

This was followed by an order to the general of the army, in these words:

WAR DEPARTMENT, }
WASHINGTON CITY, April 20th. }

General William T. Sherman, Commanding United States Army.

GENERAL: I have the honor to inclose herewith a copy of a communication from the President of the United States, in which he directs that the detachment of United States troops now stationed in the vicinity of Mechanics Institute, in the city of New Orleans, be withdrawn to such convenient barracks as may be selected for their occupation. You are hereby charged with the execution of this order, and will cause the withdrawal to take place on Tuesday next, 24th day of April, at 12 o'clock meridian.

Very respectfully your obedient servant,

GEORGE W. McCRARY,
Secretary of War.

General Sherman gave the necessary directions next day to General Sheridan, commanding the Division of the Missouri, and he issued his order to General Augur, in command at New Orleans. On the 21st of April the Packard Legislature broke up and dispersed. Some of the members took their places in the other body, and others tendered their resignations. After these changes had been effected, there were in the Senate 20 Democrats and 16 Republicans, four seats being vacant; and there were present in the House 64 Democrats and 42 Republicans. The following statement of the membership of the House was furnished by the Clerk of the Commission:

Total number of constitutional House.....	120
Number returned by the Returning Board.....	117
Number thrown out by the Returning Board.....	3
Total.....	120
Number of Returning Board members now answering roll-call.....	86
Returning Board member dead.....	1
Number of members elected and not returned by the Board, but whose opponents have withdrawn and acknowledged their claims.....	11
Number elected and now occupying their seats, but not returned by the Board.....	9
Number elected and returned, but who have not answered to the call of the House.....	13
Total.....	120

The report of the commissioners to the President was made on the 21st of April, before they left New Orleans. It was as follows:

NEW ORLEANS, April 21, 1877.

To the President of the United States.

SIR: In accordance with your request, the undersigned have visited this city and passed the last 16 days in ascertaining the political situation in Louisiana, and endeavoring to bring about a peaceful solution of its difficulties. In view of the declaration in the letter of the Secretary of State, that we should direct our efforts to the end of securing the recognition of a single Legislature, as the depository of the representative will of the people of Louisiana, leaving, if necessary, to judicial or other constitutional arbitrament within the State the question of ultimate right, and in view of your determination to withdraw the troops of the United States to their barracks as soon as it could be done without endangering the peace, we addressed ourselves to the task of securing a common Legislature of undisputed authority, competent to compose the existing political contentions, and to preserve peace without any aid from the National Government. To this end we endeavored to assuage the bitterness and animosity we found existing on both sides, so as to secure public opinion less favorable to such concessions as were indispensable to our success in obtaining such a Legislature and such general acquiescence in its authority as would insure social order.

We have had full conferences with the two gentlemen who claim the gubernatorial office, and with many other members of their respective Governments in their Executive, Judicial, and Legislative departments. We have also conversed very freely with large delegations of men of business, with many of the District Judges, and with hundreds of prominent citizens of all parties and races, representing not only this city, but almost every parish in the State. We have also received many printed and written statements of fact and legal arguments, and every person with whom we came in contact has shown an earnest desire to give us all possible information bearing upon the unfortunate political divisions in this State.

The actual condition of affairs on our arrival in this city may be briefly stated as follows: Governor Packard (we shall speak of both gentlemen by the title they claim) was at the State-House with his Legislature and friends, and an armed police force. As there was no quorum in the Senate even upon his own theory of law, his Legislature was necessarily inactive. The Supreme Court, which recognized his authority, had not attempted to transact any business since it was dispossessed of its court room and custody of its records, on the 9th day of January, 1877. He had no organized militia, alleging that his deficiency in that respect was owing to his obedience to the orders of President Grant to take no steps to change the relative position of himself and Governor Nicholls. His main reliance was upon his alleged legal title, claiming that it was the constitutional duty of the President to recognize it, and to afford him such military assistance as might be necessary to enable him to assert his authority as Governor.

Governor Nicholls was occupying the Odd Fellows' Hall as a State-House. His Legislature met there, and was actively engaged in the business of legislation. All the departments of the city government of the city of New Orleans recognized his authority. The Supreme Court nominated by him and confirmed by his Senate was holding daily sessions, and had heard about 200 cases. The time for the collection of taxes had not arrived, but a considerable sum of money in the form of taxes had been voluntarily paid into his Treasury, out of which he was defraying the ordinary expenses of the State Government. The Nicholls Legislature had a quorum in the Senate, upon either the Nicholls or Packard theory of law, and a quorum in the House on the Nicholls, but not on the Packard theory. The Packard Legislature had a quorum in the House on its own theory of law, but, as already stated, not in the

Senate, and was thus disabled from any legislation that would be valid even in the judgment of its own party. The Commission found it to be very difficult to ascertain the precise extent to which the respective Governments were acknowledged in the various parishes outside of New Orleans, but it is safe to say that the changes which had taken place in the parishes after the organization of the two Governments on the 9th of January, 1877, were in favor of the Nicholls Government. The claim to the legality of the Supreme Court, composed of Chief Justice Manning and associates, who were nominated by Governor Nicholls and confirmed by his Senate, rests upon the same basis as the title of Governor Nicholls and his Senate. The claim to legality of the Supreme Court, composed of Chief Justice Ludeling and his associates, rests either upon their right to hold over in case the Nicholls court is illegal, or upon the legality of the Kellogg-Packard Senate which confirmed the Judges upon the nomination of Governor Kellogg, and while it had a Returning Board quorum.

We have briefly sketched the actual position as we found it. We will now state the legal question, upon which the rights of these respective Governments depend.

The Constitution of the State of Louisiana requires that "returns of all elections for members of the General Assembly shall be made to the Secretary of State." It also provides that "the qualified electors shall vote for Governor and Lieutenant-Governor at the time and place of voting for Representatives. The returns of every election shall be sealed up and transmitted by the proper returning officers to the Secretary of State, who shall deliver them to the Speaker of the House of Representatives, on the second day of the General Assembly then to be holden. The members of the General Assembly shall meet in the House of Representatives and examine and count the votes." It will be observed that this provision of the Constitution requires the returns of votes for Governor and Lieutenant-Governor to be sealed up and transmitted by the proper returning officers to the Secretary of State, and the same provision is made in substance as to the members of the General Assembly. But in 1870 the Legislature passed an act, amended in 1872, which created a body called the Returning Board, consisting of five members to be appointed by the Senate, and to "be the returning officers for all elections in the State." The act provides that the Commissioners of Election at each poll or voting-place shall count the votes, making a list of the names of all persons voted for, and the offices for which the votes were given, the number of votes received by each, the number of ballots contained in the box, and the number rejected, and the reasons therefor, and to make duplicates of such lists, and send one to the Supervisor of Registration of the Parish of Orleans and one to the Secretary of State. The law further requires the Supervisors of Registration to consolidate the returns received from the different polling-places and forward them, with the originals, to this Returning Board. The act further provides that, if there shall be any riot, tumult, acts of violence, intimidation and disturbances, bribery or corrupt influence at any place within said parish, at or near any poll or voting-place, or place of registration, which riot, tumult, acts of violence, intimidation and disturbance, bribery and corrupt influence, shall prevent or tend to prevent a fair, free, peaceable, and full vote of all the qualified electors, it shall be the duty of the commissioners to make a statement of such facts and to forward the same to the Supervisor of Registration, with his returns of the election, and the Supervisor of Registration shall forward the same to the Returning Board. The Returning Board is required to investigate the statements of intimidation, and to exclude from the returns which it makes to the Secretary of State the returns received by it from those polls or voting-

places where a fair election has been prevented by the causes above named.

The same law further declares: "It shall be the duty of the Secretary of State to transmit to the Clerk of the House of Representatives, and to the Secretary of State of the last General Assembly, a list of the names of such persons as, according to the returns, shall have been elected to either branch of the General Assembly, and it shall be the duty of the Clerk and Secretary to place the names of the Representatives and Senators elect so furnished upon the roll of the House and of the Senate respectively, and those Representatives and Senators whose names are so placed by the Clerk and Secretary respectively, in accordance with the foregoing resolutions, and none other, shall be competent to organize the House of Representatives or the Senate."

It is claimed by the counsel for the Nicholls Government that this act, so far as it interposes a Returning Board, exercising these powers of exclusion between the Parish Supervisor of Registration, with his consolidated returns, and the Secretary of State, is, when applied to the election of members of the General Assembly, of the Governor, and of the Lieutenant-Governor, a plain violation of those provisions of the Constitution of Louisiana which say that the returns of all elections for members of the General Assembly shall be made to the Secretary of State, and in reference to the Governor and Lieutenant-Governor, the returns of every election shall be sealed up and transmitted by the proper returning officers to the Secretary of State, and who shall deliver them to the Speaker of the House of Representatives. On the other hand, it is insisted by the counsel for the Packard Government, that the Legislature has power to create this Returning Board and give it the authority with which the act clothes it. It is also claimed by them that the constitutionality of the act has been settled by the Supreme Court of the State. But the Nicholls party denied that the question was decided by the Supreme Court in a manner that could be considered authoritative.

It should be further stated that it is not claimed by the counsel for the Nicholls Government that the Legislature could not create a returning board and clothe it with these powers in regard to the appointment of Presidential Electors, since the provisions of the State Constitution, on which they rely, relate only to the election of members of the Legislature, of the Governor and Lieutenant-Governor. We quote the following sentences from one of their printed arguments:

"Indeed, as to Presidential Electors, then the mode of their appointment is by the Constitution of the United States left to the discretion of the Legislature of a State. Therefore, the General Assembly of Louisiana might create any tribunal whatever, and confide to it the appointment of Electors for President and Vice-President. Consequently it may properly authorize such a tribunal in case of the election of Presidential Electors by the people, to count the votes and decide and declare who were entitled to seats in the Electoral College."

As matters stood on our arrival here, the legal title of the respective claimants to the office of Governor depended upon the question we have stated. There was no judicial tribunal acknowledged to be authority by both parties, by which it could be solved, for reasons already given. The only hope of a practical solution was by the union of so many members of the rival Legislatures as would make a Legislature with a constitutional quorum in both the Senate and House of Representatives whose title to their seats is valid under either view of the law. With a Legislature of undisputed authority a settlement of the other questions could, as stated in the letter of instructions to our Commission from the Secretary of State, be gradually worked out by the prevalent authority which the legislative power, when undisputed, is quite competent to exert in composing

conflicts in the coördinate branches of the Government.

Within the last three days this first great step in restoring peace to the State has been accomplished. In consequence of the withdrawal of members from the Packard to the Nicholls Legislature, the latter body has now 87 Returning Board members in the Senate. Sixty-one members constitute a constitutional quorum in the House, and 19 in the Senate. It is proper that we should say in conclusion that it was in view of the foregoing facts, especially the consolidation of the Legislatures, and our knowledge of the condition of Louisiana, derived from personal contact with the people, that we were induced to suggest in our telegram of the 20th inst. that the immediate announcement of the time when the troops would be withdrawn to their barracks would be better for the peace of Louisiana than to postpone such announcement to some distant day.

The commissioners, holding various shades of political belief, cannot well concur in any sketch of the past or the probable future of Louisiana. We have forborne in this report to express any opinion on the legal questions arising upon the foregoing statement of facts, because our letter of instructions seemed to call for a statement of facts rather than an expression of opinion by the commissioners. We all, however, indulge in the confident hope of better days for all races in Louisiana. Among the reasons for these hopes are the resolutions of the Nicholls Legislature, and the letter of Governor Nicholls, herewith submitted, and which have already been given to the public, with an earnest hope that the adjustment which has been made of the political controversies of Louisiana will be of lasting benefit to that State, and will be approved by the patriotic people of all sections.

We have the honor to be your obedient servants,
CHARLES B. LAWRENCE,
JOSEPH R. HAWLEY,
JOHN M. HARLAN,
JOHN C. BROWN,
WAYNE MOVEIGH.

On the 24th of April the troops were withdrawn to their barracks, and the Nicholls Government, including two branches of the Legislature, took possession of the State-House. Governor Nicholls received congratulations from all parts of the country. On the following day S. B. Packard issued an address to the Republicans of Louisiana, in which he reviewed the events that had occurred since the 1st of January, with more or less of criticism and comment, and concluded as follows:

I therefore announce to you that I am compelled to abstain for the present from all active assertion of my government. I waive none of my legal rights, but yield only to superior force. I am not wholly discouraged by the fact that one by one Republican State Governments of the South have been forced to succumb to force or fraud or policy. Louisiana, the first State rehabilitated after the war, is the last State whose Government thus falls, and I believe it will be among the first to raise itself again to the plane of equal and honest representation. I advise that you maintain your party organization and continue to battle for the rights of citizenship and free government. We strive for these and not for man or men. It grieves me beyond expression that the heroic efforts you have made and the cruel sufferings you have undergone to maintain Republican principles in Louisiana have had this bitter ending. To those who have so gallantly stood by me in the long contest we have passed through I tender my heartfelt thanks. To all I counsel peace, patience, fortitude, and a firm trust that eventually right and justice will prevail. S. B. PACKARD, Governor.

VOL. XVII.—30 A

On the 24th of April, all question of the legality of the Legislature having been removed, Judge Henry M. Spofford was elected to the United States Senate, being the only candidate, and receiving 140 votes out of 153, the rest being blank. There had previously been 89 ballots without result. The 10th of May was observed as a day of thanksgiving throughout the State.

During the regular and special sessions of the Legislature, a considerable amount of important legislation was effected. Many existing laws were repealed or modified and new ones enacted, with a view to greater simplicity, efficiency, and economy in the administration of public affairs. Expenses in various departments of the State Government and in local administration were materially reduced, the saving in the State at large amounting to \$325,000, in the city of New Orleans to \$285,000, and in the several parishes to \$480,000, or \$1,090,000 in all. This was accomplished by cutting down salaries, reducing fees and costs, dispensing with unnecessary offices, and curtailing expenses in a variety of other ways. A new law regulating the assessment and collection of taxes was passed. The Superior Criminal Court of the Parish of Orleans was abolished. New laws were enacted in relation to the drawing of juries, providing for a commission in each parish, the determination of qualifications, exemptions, etc. The following is the comprehensive title of an act intended to bring the financial affairs of the State out of confusion:

An act to enforce effectually the constitutional amendments proposed January 24, 1874, ratified at the general election held on November 2, 1874, relative to the State debt, and the funding thereof; to protect the interests of the State and the holders of the bonds issued by virtue of said amendments; and for that purpose, to amend and reenact an act entitled an act to provide for funding obligations of the State by exchange for bonds; to provide for principal and interest of said bonds; to establish a board of liquidation; to authorize certain judicial proceedings against it; to define and punish violations of this act; to prevent certain officers diverting funds, except as provided by law, and to punish violations thereof; to levy a continuing tax, and provide a continuing appropriation for said bonds; to make a contract between the State and holders of said bonds; to prohibit injunctions in certain cases; to limit the indebtedness of the State, and to limit State taxes; to annul certain grants of State aid; to prohibit the modification, novation, or extension of any contract heretofore made for State aid; to provide for the receipt of certain warrants for certain taxes, and to repeal all conflicting laws, being act 3, approved January 24, 1874; to create a fiscal agent, and to define the duties of said agent; to prescribe and define the duties and powers of the Board of Liquidation, of the State Treasurer, and of the Auditor of Public Accounts, and make certain specific appropriations.

The election law of 1872 was repealed, and a new one was enacted in its place with the title: "To provide the time and manner of holding elections and making returns thereof: to define the powers and duties; to provide

for the appointment of commissioners and other officers of election; to provide for the maintenance of the freedom and purity of elections, and for the punishment of officers and other persons who may violate the election laws by making false returns, or altering returns, or by refusing, or neglecting, or failing to perform their duties; to punish persons for false, fraudulent, or illegal voting, and to punish violence or intimidation; to provide the manner of entering on the rolls of the House of Representatives, and to enforce article 103 of the Constitution, and generally to secure and provide for a free, fair, and peaceable election throughout the State, and to repeal conflicting laws."

This was additional to the very first act of the session, passed on January 8th, which contained the following provisions:

SECTION 2. *Be it further enacted, etc.*, That a Board of Canvassers, to be composed of the Lieutenant-Governor, the Speaker of the House of Representatives, and three Senators to be elected by the Senate from the different parties—a majority of whom shall constitute a quorum—is hereby created and empowered to canvass and make returns of the votes cast at the recent general election in this State for all officers other than Governor and Lieutenant-Governor, and for and against the constitutional amendments.

SECTION 3. *Be it further enacted, etc.*, That the said canvass and return made by the board herein constituted shall be *prima facie* evidence of the election of the candidates returned by them, reserving to all other candidates the right to contest the said election and return by filing a petition for that purpose in the court of proper jurisdiction within their respective parishes, within a delay of thirty days from the official promulgation of the canvass herein provided for.

The sections of the revised statutes relating to public education, and the school act of 1870, were repealed and a new law passed, to regulate public education and provide a revenue for the same. Among the other acts passed was one dividing the parish of Carroll into the parishes of East Carroll and West Carroll; one incorporating Morgan's Louisiana & Texas Railroad and Steamship Company, "to expedite the extension, construction, and maintenance of a railroad between New Orleans, Louisiana, and the State of Texas, and between New Orleans, North Louisiana, and Arkansas," and vesting in it "all powers incidental to and necessary for the building and maintenance of railroads to the State of Texas, and to North Louisiana, and to Arkansas." Concurrent resolutions were adopted, asking aid of the General Government to rebuild and repair levees, and to promote the construction of the Texas & Pacific Railroad. On the last day of the session a joint resolution was adopted providing for the appointment of joint committees to investigate the following matters during the recess:

1. Affairs of the Auditor's office.
2. Affairs of the Treasurer's office.
3. Affairs of the Superintendent of Education's office, division superintendents.

4. Affairs of the Land office.

5. Affairs of the Executive office under last administration.

On June 27th the grand jury of Orleans Parish recommended that "the honorable court will instruct the District Attorney to file the proper information against J. Madison Wells, Thomas C. Anderson, G. Casanova, and Louis M. Kenner, members of the late Returning Board, for perjury, forgery, and altering returns of the parish of Vernon and other parishes of the State." An information was filed on July 5th for uttering forged and counterfeited returns from the parish of Vernon of an election held November 7, 1876, for presidential electors, by which the votes for the Hayes electors were increased from 2 to 180 and those for the Tilden electors decreased from 864 to 469. The accused, on arraignment, pleaded not guilty. They were arrested and brought to trial in January, 1878.

The total State debt of Louisiana, after the funding operations are completed, will stand \$11,785,293.21. It consisted on January 1, 1878, of outstanding consols and fundable certificates issued at par in lieu of fractional parts of bonds, \$11,279,780.66; \$653,800 of old bonds to be funded at 60 per cent., \$392,280; and \$188,720.92 of general fund warrants to be funded at 60 per cent., \$113,232.55. This does not include unpaid interest coupons due January 1, 1874, and earlier, or outstanding interest warrants, amounting in all to about \$100,000. Neither does it include the "Property Bank bonds," which the Board of Liquidation has decided not to be fundable. The State warrants advanced in value from 55 cents in March to par at the end of the year. The assessment of property of the State is about \$180,000,000. There is a levy of 5½ mills on a dollar for payment of interest on the consolidated bonds, and four mills for the general fund. The bonded and floating debt of New Orleans amounts to \$21,894,714.74.

The public school system of the State has been put in operation under the new law, and bids fair to be successfully established. The law authorizes separate schools for white and colored children. In July the School Board of New Orleans decided to separate the schools of that city into white and colored. An injunction was applied for by Paul Trevique, a colored citizen, to prevent the carrying out of this action, on the ground that it was an abridgment of the privileges and immunities of citizens of the United States. An injunction was granted by the Sixth District Court, but afterward dissolved, on the two grounds that the plaintiff's petition disclosed no injury to himself and no cause of action, and the process of injunction was impossible of execution, as it prohibited doing what had already been done.

The Louisiana University and Agricultural and Mechanical College has been newly organized. It receives \$15,000 annually from interest on consolidated bonds formerly belong-

ing to the Agricultural and Mechanical College, and has also 136 \$1,000 bonds of the State, and one of the city of New Orleans, which formerly belonged to the university. No provision has been made for the payment of interest on the latter for some time. The Board of Supervisors of the institution directed the Secretary of State and State Treasurer, who were custodians of the bonds, to present them to the Board of Liquidation for funding, but they refused. A mandamus was obtained requiring them to do so, and then the Board of Liquidation declined to fund the bonds. Steps are to be taken to have the whole subject determined by the Supreme Court.

The Board of State Engineers, created by an act of the last Legislature, has in charge the business of constructing and repairing the levees. There is a three-mill tax specially levied to meet the expense of this work. The board had contracted before the close of the year for the construction of 1,030,000 cubic yards at an average cost of 22 $\frac{3}{4}$ cents per yard. It is estimated that 1,475,000 cubic yards will have to be built in 1878. The contract with the old Levee Company has been annulled, and the settlement of accounts with it has been left to the Board of Liquidation.

There was a slight excitement in the parish of Calcasieu in the early summer, occasioned by the seizure by officers of the United States of timber in the lands of private persons, which, it was alleged, had been taken from government lands. There was at first some slight resistance to the action of the deputy marshals, but it speedily ceased. The timber taken, in the form of logs, was sold on government account, and further depredations prevented.

A meeting was held in New Orleans early in October by the "friends of immigration." A committee was appointed to make arrangements for a convention to be held January, 1878, at which delegates from all parts of the State should be present. The object of the convention was declared to be "to procure such action by the Legislature of the State as will invite, encourage, and foster immigration to the State of Louisiana."

The case of John C. Moncure against Antoine Dubuclet, involving the right to the office of State Treasurer under the election of 1874, to which reference was made in the preceding volume of this work, was decided in favor of Moncure by the Sixth District Court of the parish of Orleans. It was then removed to the United States Circuit Court, on petition of Dubuclet, but in December was remanded to the State court on the ground that no sufficient reason was shown for the transfer. Judge Billings in decision said: "There is no doubt but that the defendant here intended by his affidavit to admit that the laws and methods of proceeding in the courts of Louisiana were without any discrimination on the ground of race, for the laws and the Constitution make them available to all races alike. If there be

any discrimination from other sources than the system of laws, or the methods by which they are put in operation, it would not be a good ground for the removal under the law of Congress."

When the Legislature of 1878 met on January 8th, there were in the Senate 36 members of whom 20 were Democrats and 16 Republicans, the seat of one of the Republicans being contested; in the House there were 64 Democrats, 52 Republicans, and 2 Independents, while returns from two parishes had not been received. The right of six of the Republicans to their seats was contested. Speaking of the circumstances under which the session opened Governor Nicholls said in his message:

To-day peace and quiet prevail throughout the State. Political excitement has ended; the voice of the people is everywhere respected; the rights of all are fully guaranteed; the laws, through the instrumentality of the courts, are properly and impartially administered and enforced; and, in spite of the unpropitious season, which has disappointed the expectations of our agriculturists, and marred to some extent the bright material prospects of 1877, there exists a strong feeling of hope, relief, and content among all classes in Louisiana.

His message closed with the following protest:

I cannot close without entering my solemn protest against the action of a majority of the United States Senate, under the forms of the Constitution, in refusing to Louisiana the representation in that body to which she was entitled, by rejecting the claim to a seat therein of the Hon. Henry M. Spofford, who was elected by you in accordance with the Constitution and laws of this State and of the United States, with exceptional unanimity.

LOWELL, JAMES RUSSELL, appointed Minister to Spain by President Hayes, in June, 1877. Mr. Lowell is a member of one of the oldest and most distinguished families of Massachusetts. It is descended from Percival Lowell, a merchant, who emigrated from Bristol, England, in 1639, and settled in Newbury, where he died, in 1665. Among his descendants are: I. JOHN LOWELL (1743-1802), statesman and judge, who was the son of the Rev. John Lowell, the first minister of Newburyport; II. JOHN, lawyer and political writer, son of the preceding (1769-1840); III. FRANCIS CABOT, merchant, brother of the preceding (1775-1817); IV. JOHN, Jr., founder of the Lowell Institute in Boston, son of the preceding (1799-1836); V. CHARLES, clergyman, son of Judge John Lowell (1782-1861); VI. MARY, authoress, daughter of the preceding, and wife of Samuel R. Putnam, a merchant of Boston, who died in 1861 (1810-); VII. ROBERT TRAILL SPENCER, author and clergyman, brother of the preceding (1816-). VIII. JAMES RUSSELL is the brother of the two preceding, and was born in Cambridge, Mass., February 22, 1819. He graduated at Harvard College in 1838, and recited a "Class Poem," which was printed in 1839, and which contained many strokes of vigorous satire and much sharp wit. He studied law in Harvard University, was admitted

to the bar in 1840, and opened an office in Boston, but soon abandoned the profession and devoted himself entirely to literature. In 1841 he published a volume of poems entitled "A Year's Life," which has never been reprinted, though many of the poems, revised by the maturer taste and judgment of the author, have been incorporated into the subsequent collections of his writings. In January, 1843, he commenced, in conjunction with Robert Carter, the publication, at Boston, of *The Pioneer, a Literary and Critical Magazine*. Three monthly numbers were issued, containing articles from Poe, Neal, Hawthorne, Parsons, Story, and others, besides the editors, when the publishers, involved in debt by other publications, failed, and the magazine was discontinued. Mr. Lowell's next publication was a volume of "Poems" (Cambridge, 1844), comprising "A Legend of Brittany," "Prometheus," "Rhaecus," and numerous smaller pieces, among which were sonnets to Wendell Phillips and J. R. Giddings, expressing decided antislavery sentiments. A volume of prose, entitled "Conversations on Some of the Old Poets" (Cambridge, 1845), next appeared. It is a series of essays, in the form of dialogues, on Chaucer, Chapman, Ford, and poets and poetry in general, interspersed with remarks on politics, slavery, and other topics. A second series of his "Poems" (Cambridge, 1848) contained "The Present Crisis," "Anti-Texas," "On the Capture of Certain Fugitive Slaves near Washington," and others, which obtained great popularity among the opponents of slavery. In the same year were published, at Cambridge, "The Vision of Sir Launfal"—a poem founded upon the legend of the search for the Holy Grail—and the "Biglow Papers"—a witty and humorous satire, consisting of various poems in the Yankee dialect, ostensibly by Mr. Hosea Biglow, and edited, with an introduction, notes, glossary, index, and "notices of an independent press, by Homer Wilbur, A. M., pastor of the first church in Jaalam, and prospective member of many literary, learned, and scientific societies." This satire was mainly directed against slavery, and the war with Mexico in 1846-'47. It has passed through several editions in the United States, with additions, and has been twice reprinted in England. In 1848 also appeared, anonymously, "A Fable for Critics," an ingenious rhymed essay upon the principal living American authors. In July, 1851, Mr. Lowell visited Europe, traveling in England, France, and Switzerland, and residing for a considerable period in Italy. He returned home in December, 1852. In the winter of 1854-'55, he delivered a course of 12 lectures on the British poets. In January, 1855, on the resignation of Mr. Longfellow, he was appointed Professor of Modern Languages and Belles-Lettres in Harvard College. To qualify himself more fully for the duties of the office, he went to Europe in May, and after spending a year in study, chiefly in Dresden,

he returned home in August, 1856. From 1857 to 1862 he edited *The Atlantic Monthly*, in which many of his writings first appeared. In 1863, in conjunction with Charles E. Norton, he assumed the editorship of *The North American Review*, to which he had also been a frequent contributor, and retained the charge of it till 1872. In 1864 he published "Fire-side Travels;" in 1867, a new series of the "Biglow Papers" and "Melibæus Hipponax;" in 1868, "Under the Willows, and other Poems;" in 1869, "The Cathedral," a poem; and in 1870, two volumes of literary essays, "Among my Books" and "My Study Windows." He was appointed to write the poem to be delivered on "Commemoration Day" at Harvard University, when memorial ceremonies were held for alumni of the university who had fallen in the Civil War; and the "Commemoration Ode" then recited, one of the noblest of his poems, was afterward included in one volume with "Under the Willows," etc. In 1872 he again visited Europe, returning in 1874. The degree of LL. D. was conferred upon him in 1874 by the English University of Cambridge.

In 1844 Mr. Lowell was married to Maria White, who was born in Watertown, Mass., in 1821, and died in 1853. A volume of her poems was privately printed in Cambridge in 1855.

In recent years Mr. Lowell has taken a warm interest in public affairs, and in 1876 was a delegate to the Republican National Convention.

LUTHERANS. No complete and trustworthy statistics of the Lutheran Church for 1877 have been collected. A large number of the parishes failed to report their numbers, so that in many of the synods it is impossible to make an estimate which can be relied upon. The *Lutheran Church Almanac* (Lutheran Book-store, Philadelphia, Penn.) gives the following tables, which contain many blanks:

SYNODS.	Minist- ters.	Congre- gations.	Communi- cants.
GENERAL COUNCIL.			
Ministerium of Pennsylvania.....	190	841	62,995
Ministerium of New York.....	67	66	24,643

Danish Evangelical Lutheran Church in America.....	17	45	2,400
German Synod of Maryland.....

Kurtz's *Almanac* (Baltimore, Md.) makes estimates for all the synods, and gives to the General Synod 23 district synods, 812 ministers, 1,204 churches, and 116,299 members; to the General Council, 10 synods, 574 ministers, 1,091 churches, and 154,517 members; to the General Synod, South, 5 synods, 98 ministers, 167 churches, and 13,277 members; to the Synodical Conference, 6 synods, 1,071 ministers, 1,781 churches, and 264,955 members; and counts 12 independent synods, having 350 ministers, 761 churches, and 56,292 members; making the total for the whole Church 56 synods, 2,905 ministers, 5,004 churches, and 605,340 communicants. Some of the estimates of this work have, however, been shown to be so plainly erroneous as to impair the value of the whole calculation.

Brobst's *Lutherische Kalender* (Allentown, Penn.) also fills up the tables, and gives to the General Council, including the German Iowa and the Norwegian-Danish Augustana Synod, 12 synods, 724 ministers, 1,396 congregations, and 201,174 communicants; to the Synodical Conference, 7 synods, 1,079 ministers, 1,798 congregations, and 279,954 communicants; to the General Synod, North, 23 synods, 794 ministers, 1,206 congregations, and 116,484 communicants; to the General Synod, South, 5 synods, 96 ministers, 188 congregations, and

14,667 communicants; and counts 11 independent synods, with 221 ministers, 548 congregations, and 43,253 communicants; making the total for the whole Church 2,914 ministers, 5,136 congregations, and 655,529 communicants. These figures indicate an apparent increase, from 1876, of 133 ministers, 162 congregations, and 26,325 communicants.

The 16 theological seminaries returned a total of 41 professors, and 12 of them report a total of 455 students. Four seminaries, with 11 professors, and having 62 students in two of the seminaries, were attached to the General Council; five seminaries, with 11 professors and 82 students, to the General Synod; three seminaries, with 11 professors and 195 students, to the Synodical Conference; one seminary, with one professor and 13 students, to the General Synod, South. Three seminaries, with 7 professors, were connected with independent synods, of which Augsburg Seminary, Minneapolis, Minn., of the Norwegian-Danish Conference, had 103 students. Thirteen out of eighteen colleges returned a total of 1,724 students. Five of the colleges were connected with the General Council, 4 with the General Synod, 4 with the Synodical Conference, 2 with the General Synod, South, 1 with Grabau's Buffalo Synod, 1 with the North Carolina Synod, and 1 with the Synod of Iowa. The *Lutheran Almanac* gives lists of 22 academies, 7 seminaries for young women, and 74 periodicals, of which 24 are in the English language, 31 German, 9 Norwegian, 7 Swedish, and 3 Danish.

The 28th Convention of the General Synod of the Evangelical Lutheran Church in the United States met at Carthage, Ill., May 30th. More than 175 delegates and clerical visitors were in attendance. The Rev. J. G. Butler, D. D., of Washington, D. C., was chosen president. The boards and committees in charge of the missionary and benevolent enterprises of the Synod presented reports, of which the following are summaries:

Foreign Missions.—The contributions during the past two years had been larger than during any previous similar period; nevertheless, the work had labored under embarrassment occasioned by a deficit in the treasury resulting from erection of new buildings at Muhlenberg station, in Africa. Its indebtedness amounted, in February, 1877, to \$7,000, for the liquidation of which an appeal had been made for contributions of \$50 each. The Children's Foreign Missionary Society, organized in 1873, had been a very efficient auxiliary, and numbered about 16,000 contributors, who had so far given \$9,493. The Iowa Synod had begun the organization of the women of the church for the advancement of the missionary enterprise, and it was hoped that the plan would be generally adopted. In the India Mission, 1,263 communicants were reported, with 111 villages in which native Christians reside; 33 schools or prayer-houses; 1 chapel high-school, with 51

boarders; 3 caste girls' schools, with 101 pupils; and 29 ordinary mission-schools, with 429 pupils. The working-force of the mission embraced 5 ordained ministers, 2 native pastors, 3 catechists, 29 itinerant teachers, 4 colporteurs, and 2 women missionaries. The expenses of the mission for the last two years had been \$20,847.16. The number of baptisms since the mission was begun, 35 years before, had been 4,084, and the number of present candidates for baptism was 320. One hundred and three backsliders were reported. The African Mission, at Muhlenberg, was in good condition. Sixty children were registered as under its care. The expenditures of the mission had been \$15,831 nearly double what had been estimated.

Home Missions.—The total receipts of the Board from 21 synods, and from bequests and other sources, had been \$21,052. The present number of missions was 40, embracing 54 congregations with 3,363 members, 45 Sunday-schools with 4,677 scholars, 37 churches, and 9 parsonages. Forty-six missions had been under care during the two years, of which 3 had become self-sustaining, 2 had been abandoned by the missionaries, and 1 had declined further aid. These missions were distributed in the States as follows: Kansas 6, Missouri 2, Illinois 3, West Virginia 8, Pennsylvania 8, Ohio 6, New York 4, Iowa 6, Michigan, Kentucky, Maine, New Jersey, District of Columbia, and Nebraska each 1, and Massachusetts 2. The missions had contributed for pastors' salaries, church property, and the various funds of the Church, a total sum of \$74,699.58. Twenty-seven applications for aid had been received, ten from old congregations, 7 from Swedish congregations, and 1 from a German congregation, asking for more than \$5,000.

Church Extension.—The receipts of the Board for the two years had been \$17,680, and its expenditures during the same time, \$17,675. The total amount of its assets, consisting of notes due, was \$9,940. Loans to the amount of \$7,575 had been made, and gifts and bequests of \$10,686 had been received since the last meeting of the General Synod. Thirteen applications for aid had been received, which could not be granted on account of the lack of funds. The Board was in debt to the amount of \$14,200, and its report contained an estimate that it would need about \$30,000 during the next two years. Besides the amounts stated in the report of the Board, the reports of the district synods showed that \$6,376 had been contributed by them in one year to the work of church extension.

Publication Society.—The assets of the Society were estimated to amount to \$45,162, and the liabilities to \$15,938. The sales of merchandise for two years had been \$51,712, and the gifts to the Society during the same period amounted to \$3,712. Of the four journals, and lesser papers for Sunday-schools, issued periodically by the Society, the *Lutheran Sunday-*

School Herald, now in its 18th year, had a circulation of 33,000, and the *Augsburg Teacher*, in its 3d year, had a circulation of 5,500 copies.

Pastors' Fund.—The amount of the Pastors' Fund was only a little over \$6,000, the interest of which was disbursed among some needy superannuated ministers.

The committee on Sunday-schools reported no statistical tables, but stated that the schools were generally growing in numbers, intelligence, and efficiency. Three general conventions had been held, with good results. At the last general convention, held at Wooster, O., it was resolved to meet every alternate year, and to ask the synods to encourage synodical conventions in the intermediate years. It was arranged that the general conventions be held in the years between the meetings of the General Synod.

The committee on ecclesiastical correspondence reported that they had received communications from the Southern General Synod, from which it appeared that that body had commissioned the Rev. Dr. S. A. Repass as a delegate with fraternal greetings to the General Synod, on the condition that any existing resolutions of the latter body "compromising the Christian character of the ministers and churches represented by this General Synod (South) be rescinded." Dr. Repass was not present at the General Synod, but was awaiting its action on the subject. The committee, having given the subject careful attention, presented the following report upon it:

The only resolution of any of our General Synods, known to your committee, which would be affected by the request of the General Synod, South, is found on page 81 of minutes of our convention at Lancaster, in 1862. In the deliberate judgment of your committee the language of this resolution does not, either by fair or forced interpretation, compromise the Christian character of our Southern ministers and churches, and, therefore, the way to the completion of this friendly relation contemplated by the General Synod, South, is rendered not only possible but highly desirable. We offer the following:

Whereas, In the judgment of this General Synod, the action of former General Synods was not intended to compromise the Christian character of the ministers or churches of the general Church, South, and is not so interpreted by us; and

Whereas, If there be anything found therein that can rightfully be so construed (i. e., as compromising, etc.), we hereby place upon record the belief that such is not the sentiment of the body: therefore,

Resolved, That the duly commissioned delegate from the General Synod, South, be officially informed of the action, and be cordially invited to consummate the object of his appointment, by presenting his credentials in person.

Resolved, That the officers of this General Synod be and they are hereby authorized to appoint a delegate to return our most cordial fraternal greetings to the Southern General Synod, should the way for such appointment be opened by the acceptance of this overture.

At the last meetings of the Hartwick and Franckean Synods, New York, both of which are connected with the General Synod, committees were appointed by each body to pre-

pare a plan for the union of the two synods. The committees met at West Sand Lake, N. Y., October 30th, and adopted a plan for union to be submitted to the ensuing meetings of the two synods for their approval. The name of the *Hartwick and Franckean Evangelical Lutheran Synod of the State of New York* was selected as the designation of the new synod.

The 11th Convention of the *General Convention* of the Evangelical Lutheran Church was held at Philadelphia, Pa., beginning October 10th. The Rev. Charles P. Krauth, D. D., was chosen president. The Treasurer of the Foreign Mission Fund reported that he had a balance in hand of \$1,529.73. The committee had sent out \$4,000 to India during the past year, a sum which was declared sufficient to meet the deficiency in the previous year's accounts, and the current expenses of the year. The sum of \$1,000 would be sent in advance to meet the current expenses of the first quarter of the next year. The reports of the New York Immigrant Mission and of the Emigrants' House Association of New York stated that a debt of \$19,000 still rested on the Emigrants' House, the payment of which was very desirable, as the saving in interest effected thereby would enable many poor immigrants to continue their journey to the Western States and Territories. The whole amount received from October 1, 1876, to October 1, 1877, was, for the Emigrants' House \$4,434.55, and for the Immigrant Mission \$691.74. The whole amount paid out amounted to \$4,393.19, leaving a small balance in the hands of the Treasurer of the Emigrants' House, while the treasury of the Immigrant Mission was exhausted. The Treasurer of the Board of Home Missions reported that the Board was in debt to the amount of \$1,425.16. The consideration of the proposed constitution for congregations was taken up from the point at which the action of the Council of 1876 ended. The first section of article 5 was adopted, as follows:

The deacons are primarily the executive aid of the pastors in the work of Christ for and in the congregation, and may have assigned them any duties in keeping with this object, and with the divine and unchangeable duties and rights of the people and of pastors. They must be regular communicants, of good and established repute for personal character, wisdom, and energy. They may elect from their number a treasurer and secretary, and, if needed, assistants to both.

The sections of the 4th article which had been passed over by the previous General Council were adopted. They declare that the permanent and ordinary offices of the congregation shall be the pastorate and the diaconate, and that every pastor shall be or become a member of the synod with which the congregation is united. The attention of the Council was principally given to the discussion of the principles and meaning of the declarations on pulpit and altar fellowships adopted by the Council which met at Galesburg, Ill., commonly called "The Galesburg Rule." This declaration

asserted that the rule on those points was that Lutheran pulpits were for Lutheran ministers and Lutheran altars for Lutheran communicants only; that such a rule accorded with the word of God and the confessions of the Church, and that exceptions to it, when they should arise, should be regarded as belonging to the sphere of privilege, and not of right. The Church being divided in opinion as to the scope and meaning of the declaration, the Rev. Dr. Krauth had been requested by the previous General Council to prepare a series of views upon it, to be laid before the present meeting of the Council. The subject was also brought up in the shape of an appeal of the New York Ministerium, supported by the Synod of Michigan and other States, against the practice in regard to the rule within some synods connected with the General Council, "and in particular against the special violation of the rule, which took place in several cases of pulpit fellowship at the last meeting of the Classis of the Reformed Church at Reading, Pa., between members of the venerable Ministerium of Pennsylvania, and members of the Reformed Classis." The Council was requested to declare, in reference to the specified instance, whether such practice was approved. It adopted, by a vote of 29 to 23, the following reply:

Resolved, That while it is the duty of the General Council "to guard the purity of the faith and right administration of the sacraments" (and while it is in accordance with its confessional principles, laid down in the Galesburg Declaration, to disapprove and repudiate all practices endangering the purity of the Lutheran Church doctrine and life), nevertheless the Council "cannot pass its judgment upon any particular case that may be brought before it unless such case is specifically defined in the appeal and clearly comes within the compass of the Council's constitution, and that, as the appeal from the Ministerium of New York is not so defined, the Council cannot pass its judgment upon it in its present shape."

The theses submitted by Dr. Krauth in pursuance of the instructions of the preceding General Council were 105 in number, and gave a minute and complete analysis of "The Galesburg Rule" and a discussion of all its bearings. The discussion by the Council was opened upon the first thesis, which is as follows:

In the Galesburg Declaration the word "rule" is not used in the sense of "prescriptive regulation," but in the sense of "general principle," a principle of intrinsic validity and right. The rule is meant to assert, not legislatively what shall be done, but morally what ought to be held as true. It appeals to conscience, not to disciplinarian authority. The whole affirmation, in common with all that preceded it on the same themes, was meant to be educational, not coercive, to prepare the mind of the Church for right action by the nurture of right convictions.

It was continued during several days' sittings, after which the 2d thesis was taken up, and the Council informally laid the subject over till the next year.

The *Synodical Conference* met at Fort Wayne, Ind., July 10th. Sixty-seven delegates were present, representing the synods of Missouri,

Ohio, Illinois, Wisconsin, Minnesota, and the Norwegian Synod. Prof. W. F. Lehmann was chosen president. The forenoon of each day was devoted to the continuance of a discussion of a series of theses on ecclesiastical fellowship, a number of which had been considered and adopted at previous meetings of the Conference. The following three theses were adopted:

11. It is furthermore inconsistent with confession when an ecclesiastical body is content to have its pastors receive not a regular, but only a temporary, call from their congregations, or when it even itself promotes this disorder by the license system.

12. It is a crying conflict with the Confession when an ecclesiastical body that calls itself Lutheran and wants to be such, manifests no earnestness and zeal in establishing, so far as lies in its power, orthodox congregational schools where these do not exist.

13. It is also in conflict with the Confession when a Lutheran organization does not exercise care that in its congregations only orthodox liturgies, hymn-books, catechisms, and books of instruction and edification are used, or does not use proper diligence to put away books that contain false doctrine and to introduce others that are sound in the faith.

In addition to these theses, the 9th of another series of theses on parochial boundaries, the consideration of which had been begun four years before, was discussed and adopted. Reports were received of the action of the several synods on a proposition which had been submitted the year before, looking to the formation of synods bounded by State lines, and the establishment of a theological seminary. The subject had received general attention, but further action upon it was not deemed necessary. The Conference resolved to begin its missionary operations without delay by establishing a mission among the colored people of the United States.

Scandinavian Lutheran Churches in the United States.—The Scandinavian Lutheran churches in the United States comprised, at the beginning of 1877, eight ecclesiastical bodies, 373 ministers, 1,071 congregations, and 117,552 members. The Swedish Augustana Synod, with 107 ministers, 246 congregations, and 33,265 communicants, is attached to the General Council; the Norwegian-Danish Augustana Synod, with 13 ministers, 53 congregations, and 7,000 members, sends delegates to the General Council, but has no organic union with it; the Norwegian Synod, with 117 ministers, 449 congregations, and 53,800 members, is attached to the Synodical Conference; the Swedish Ansari Synod, with 14 ministers, 10 congregations, and 850 members, is connected with the General Synod; and Hauge's Norwegian Synod, the Conference of the Norwegian-Danish Lutheran Church in North America, the Swedish Evangelical Lutheran Mission Synod, and the Danish Lutheran Church in America, numbering together 122 ministers, 313 congregations, and 22,631 members, maintain an independent position. Of the 13 ministers com-

prising the *Norwegian-Danish Augustana Synod*, four were at the beginning of 1877 laboring in Dakota Territory, whither many of the younger members of the older congregations in Illinois and Wisconsin had emigrated. The Church was reported to be growing fast in this part of the Territory of the Synod, and a larger number of ministers was called for. The Synod had an academy at Marshall, Wis., which had recently been reopened, and was giving instruction to a class of "some seven or more" young men in theology. The *Swedish Augustana Synod*, at its meeting held at Burlington, Io., June 21st, received 18 new congregations into its connection. A report was read from the Rev. J. Teleen, the missionary to the American Indians, giving information in regard to the mission which the Synod had undertaken the year before among these people, to the effect that he had examined the opportunities offered, but had not yet established a mission; after which the Synod resolved to petition the Government for a regular Indian agency, or, if an agency cannot be obtained in a short time, for a station near Fort Sill, and to appoint a special committee to take charge of its application. It also resolved that Indian youths be received and educated at its Augustana College, and that the means for carrying out this purpose be collected through the Sunday-schools. A set of theses were adopted on the subject of divorce, based upon the affirmation of the principle that the only ground for a scripturally legal divorce is adultery.

A Free Diet of the Lutheran Church, "to discuss living subjects of general worth and importance to all Lutherans," was held in Philadelphia, Pa., December 27th and 28th. The programme of the proceedings was privately arranged before the calling of the Diet, and provided for the reading of essays on topics of interest to the Church, by members of several of the bodies into which the Church is divided, and for free discussions of the subject of each essay after its presentation. No subjects were permitted to be discussed other than those of the essays, and no vote was taken on any of the subjects considered. The Diet was understood to be without official or representative character, and to be designed simply to give to members of the different Lutheran bodies an opportunity of exchanging views. Besides the historical and doctrinal papers and discussions, the subjects presented which were of the most general interest were, "The Relations of the Lutheran Church to the Bodies around us," by the Rev. Prof. C. P. Krauth, D. D.; "The Four General Bodies of the Lutheran Church in the United States: wherein they agree, and wherein they might harmoniously cooperate," by the Rev. J. A. Brown, D. D.; and "Education in the Lutheran Church in the United States," by Prof. Valentine, of Pennsylvania College, Gettysburg, Pa.

M

MAINE. The public debt of the State of Maine on the 1st of January, 1878, was \$5,873,900, having been reduced \$46,500 during the year preceding. The sinking-fund amounted to \$911,436.04, having been increased \$120,142.23. This made the net indebtedness \$4,962,464. Of this, \$25,000 falls due March 1, 1878, after which no bonds mature until August 15, 1880. The receipts of the Treasury for the year were \$1,207,738.27, and there was a balance on hand at the beginning of \$394,422.27, making the total resources \$1,602,160.54. The expenditures for the year amounted to \$1,371,627.64, leaving cash on hand, December 31st, \$230,532.90. The sources of revenue were as follows:—

State taxes	\$871,573 49
County taxes	9,132 61
Tax on savings-banks	246,106 44
Tax on railroads	29,098 52
Tax on insurance companies	18,339 89
Land agent	16,691 43
Miscellaneous sources	56,490 84

The State tax is 3 mills on the dollar, a decrease from 5 $\frac{1}{4}$ mills in five years. An increase is regarded as necessary, as the receipts are falling below the expenses. The total resources for 1878, including the balance on hand, are estimated at \$1,241,556.23, or \$130,071.41 less than the expenditures of 1877.

The number of savings-banks in the State is 64, but 4 of these, the Winthrop, Solon,

Bucksport, and Lewiston, have passed into the hands of receivers, paying respectively 40, 85, 40, and 50 cents on the dollar. Of the remaining 60, 6 have paid no dividends during the year. The aggregate of deposits, on the 5th of November, was \$25,092,872.65, a decrease for the year of \$1,633,298.07. This decrease was doubtless due in part to the new law which prohibits the payment of dividends on more than \$2,000 in the name of a single depositor, and limits the dividends on all deposits to 2 $\frac{1}{2}$ per cent. semi-annually. There was a noticeable increase in the amount of United States bonds and bank-stocks held by the banks, and a considerable decrease in railroad securities and loans on real estate.

During the year ending November 30th the land agent conveyed 20,300.66 acres of State lands, contracted 11,970.41 acres to settlers, and sold 77 islands belonging to the State. The number of acres under contract to settlers at the end of the year was 112,805.04. There remain unsold 19,567.39 acres of lands for settlement. The agent paid into the Treasury during the year \$8,000.52 on account of the permanent school-fund, \$6,800.46 on general account, and \$503.76 on account of reserved lands.

The following statement shows the changes in school statistics for the ten years ending with 1876:

STATISTICS.	1876.	1866.	Increase.
Number of children between four and twenty-one years	218,490	212,894	5,656
Number registered in summer schools	126,482	114,828	11,659
Average attendance in summer schools	99,106	88,748	10,368
Number registered in winter schools	123,903	123,756	6,147
Average attendance in winter schools	103,976	97,627	8,149
Average length of schools for year	21 w., 2 d.	18 w., 4 d.	2 w., 3 d.
Number of school-districts	8,972	8,771	201
Number of school-houses	4,461	3,727	534
Number of male teachers employed in summer	209	78	131
Number employed in winter	2,151	1,786	365
Number of female teachers employed in summer	4,284	3,721	563
Number employed in winter	2,351	2,084	267
Wages of male teachers per month, excluding board	\$35 45	\$28 20	\$7 25
Wages of female teachers per week, excluding board	\$4 26	\$2 54	\$1 72
Amount of school-money raised by taxation	\$82,285	477,132	405,153
Amount of permanent school-fund	400,558	214,736	185,822
Income of same apportioned to public schools	24,033	10,873	13,160
Bank-tax apportioned to public schools	123,965	7,626	126,339

The State College of Agriculture and Mechanic Arts had 118 students at the end of the year.

The number of inmates in the Industrial School for Girls, at Hallowell, on the 5th of December, was 38. The whole number received since it opened in January, 1875, is 71, of whom 38 have been sent to homes, and 16 indentured. The Reform School for Boys contains 147 inmates. The annual appropriation for its support is \$15,000. There were 207 convicts in the State-prison on the 30th of November. An extension containing 62 cells

has been built, and the institution has now a capacity for 250 inmates. The sales of carriages during the year amounted to \$47,700, and the sales of harness to \$11,000, but the income from all sources fell \$9,810 short of the expenses. There was also a deficiency on account of the extension and repairs, amounting to \$4,400.

The average number of patients in the Insane Asylum during the year was 411, or more than double the number 20 years ago, although the population of the State has not materially changed in that time. Improvements have

been made in the institution in the last two years, at a cost of \$22,620.23, which has been paid from its income. The price of board has been reduced from \$4 to \$3.75 a week. There is a large farm connected with the hospital, which is profitably cultivated.

The annual session of the Legislature began on the 3d of January, and came to a close on the 9th of February. There were 27 Republicans and 4 Democrats in the Senate, 97 Republicans, 52 Democrats, 1 "Greenbacker," and 1 Independent in the House, making the Republican majority 23 in the Senate, 43 in the House, and 66 on a joint ballot. There were 157 acts and 89 resolves passed. Two amendments to the constitution of the State were prepared, to be submitted to a vote of the people at the regular election in September. They were the following:

ELECTORS.—No person shall vote at any election in this State, unless he has paid a poll-tax within two years preceding the election in which he proposes to vote, provided said tax has been legally assessed upon him.

MUNICIPAL INDEBTEDNESS.—No city or town shall hereafter create any debt or liability, which singly, or in the aggregate with previous debts or liabilities, shall exceed five per centum of the last regular valuation of said city or town; provided, however, that the adoption of this article shall not be construed as applying to any fund received in trust by said city or town, nor to any loan for the purpose of renewing existing loans, or for war, or to temporary loans to be paid out of money raised by taxation during the year in which they are made.

Among the acts of the session, those worthy of mention were: one revising and consoli-

dating all the laws relating to savings-banks; one providing for the organization and management of loan and building associations; one to prevent incompetent persons from conducting the business of apothecaries; one against pool-selling and lotteries; one to encourage the manufacture of beet-sugar, and one increasing the annual appropriation for the normal schools to \$15,000. The savings-bank act provides for a bank examiner, and carefully guards the interests of depositors, by restricting investments and exacting rigid accountability on the part of officers and trustees. The act in relation to loan and building associations limits the capital stock of each to 3,500 shares, and the amount to be loaned on each share to \$200. Each shareholder is required to pay one dollar per month until the value of the whole fund shall be sufficient to divide \$200 to each share, and loans are made according to the premiums offered therefor by any shareholder, and as security he must assign to the association one share of stock for every \$200 borrowed. The act to prevent incompetent persons from conducting the business of apothecaries provides for three Commissioners of Pharmacy to issue certificates of competency, after making examination of applicants therefor. No one is permitted to engage in the business without such certificate, and a fine of \$50 is provided for violations of the law. The act to encourage the introduction of the manufacture of beet-sugar authorizes the Governor and Council to pay a bounty not exceeding one cent per pound on all beet-

PORTLAND.

sugar manufactured in the State, from beets raised in the State, but the amount to be paid in any one year is limited to \$7,000. Rockland was incorporated as a city and the name of the town of Lyndon was changed to Caribou during the session.

The action brought against the Maine Central Railroad Company, for the recovery of taxes assessed in 1875, resulted in a decision in favor of the State, but an appeal has been taken to the Supreme Court of the United States. Other suits for arrearage of taxes

have been brought against the Atlantic & St. Lawrence and the Dexter & Newport Railroad Companies. There were three trials for murder in the State during the year. Ianthe Morgan and Mrs. Sophronia J. Libby, her sister, were found guilty of murder in the first degree, for taking the life of an infant child of the former, and sentenced to imprisonment for life. Isaac N. Cox, fourteen years of age, was convicted of manslaughter for killing his father, and sentenced to six years in the State prison. Edward M. Smith was found guilty of murder in the first degree, for killing Melisse T. Thayer, of Bucksport, in October, 1876. A motion in arrest of judgment in this last case was pending at the end of the year. In speaking of the relation of these cases to the abolition of the death penalty, the Governor expresses anew his "firm belief in its humanity and wisdom."

The volunteer militia of the State consists of one regiment and three unattached companies of infantry, and a battalion of light artillery. The Richards Light Infantry of Gardiner was added during the year. There is a cadet organization in the Colleges and High Schools, and several companies joined in the summer encampment at Augusta.

The marble statue of General William King, the first Governor of Maine, to be presented to the Government of the United States, and placed in the Statuary Hall at the National Capitol, has been completed by the artist, Franklin Simmons, at a cost of \$3,000. It was presented in January, 1878.

A Temperance Convention was held at Augusta on the 23d of January and two following days. Among the resolutions adopted were these:

Resolved, That the manufacture and sale of intoxicating liquor is a tremendous mischief in every community where it is tolerated. It is at war with every legitimate industry, eating out and wasting the wages and earnings of the people, and the wealth and resources of the State. It injures and ruins the health and destroys the lives of the people; and its sole effect is to spread poverty, pauperism, insanity, degradation and crime, broadcast in society. Its influence is to drive out from the community everything that is good, and to substitute for it everything that is bad. It spreads an inexpressible misery and wretchedness among hundreds of homes which would be prosperous and happy but for the malign influence of this active agent of evil.

Resolved, That it is the duty of every good citizen to yield obedience to the laws of the land—because that is necessary to the preservation of good order and peace in society. And that it is also the duty of Government to prohibit and suppress everything that is inconsistent with the welfare and happiness of the people.

Resolved, That more than any other evil—more than all other evils—the liquor traffic inflicts misery and mischief upon society; more than any other crime and more than all others, it deserves the reprobation of all good men and the punishment of law, because it is truly "The gigantic crime of crimes." And we respectfully and urgently call upon the Legislature for such further enactment as will effectually crush the crime.

The State Convention of the Republican party was held at Augusta on the 9th of Au-

gust. The following platform was reported by the Committee on Resolutions, of which Senator Blaine was a member:

The Republicans of Maine, assembled in State Convention this 9th day of August, 1877, make the following declaration of their political aims and principles:

1. The United States constitute a nation and not a mere confederacy. The successful issue of the Revolutionary war founded the nation; the successful issue of the war for the suppression of the Rebellion preserved it. The union of the States as one nation must be maintained for all time, against all foes, at any cost.

2. Citizenship is national. Its allegiance and obligations are national. The property of the citizen is taxed for the support of the National Government; his services are demanded, and if need be his person wounded and maimed and his life sacrificed in its defense. In return it is the most solemn, momentous and imperative duty of the National Government, by the extremest exercise of every constitutional power, to extend cordially protection to every citizen, native and naturalized, white and colored, whether menaced by tyranny abroad or by political persecution now shielded under the heresy of States' Rights at home.

3. Local self-government in all matters that are local must be strictly adhered to. In no community in the world has this been more completely attained than in the town governments common to the New England States, and the experience of wellnigh a century has taught every loyal and liberty-loving citizen that there never can be a conflict between the legitimate powers of the nation and the legitimate powers of each State.

4. The most kindly and fraternal relations should be cultivated between all sections of our common country, and peace, good-will, quiet and harmony have always been most cordially desired and labored for by the Republicans of Maine. They believe these great ends can be secured only by the freest exercise of political opinion, and the most unrestrained liberty of party organization. They view therefore, with solicitude and alarm, the complete consolidation of all political power in the sixteen Southern States in the hands of those who precipitated the rebellion, while white Union men are persecuted into silence or banishment, and the entire colored race so practically disfranchised by force and fear that, in Congressional districts where they have more than two-thirds of the voters, they are unable to elect one of their own race, or a white man in sympathy with their interests. The thirty-five representatives in Congress and the thirty-five electoral votes apportioned to the Southern States by reason of their colored population are thus wrested to the sole aggrandizement of Confederate power in the National Government, and the late rebel soldier in Georgia and South Carolina, in Mississippi and in Louisiana, is thus enabled to exert in the administration of Government more than double the political power of the Union soldier in any Northern State.

5. The action of the Democratic House of Representatives in refusing appropriations for the army, except upon conditions that deprived the commander-in-chief of the discretion vested in him by the Constitution, was wholly unjustifiable, dangerous, and revolutionary. And it is a striking commentary on this evil and perilous course that two of the States, whose entire representation in Congress aided in defeating the army bill, have been since compelled under the pressure and violence of mob-law to call on the National Government for such aid as only the army can render.

6. The Republicans of Maine are now and always have been in favor of every wise and salutary measure tending to the purification, integrity, and in-

dependence of the civil service; and to-day, with especial congratulation, they recall the fact that, during the sixteen years the Republican party has been in power, every appointee of the National Government in Maine has done his duty, and that during the whole period no officer has been guilty of misconduct, nor has a single cent of the public money been withheld, or in any way wrongfully appropriated.

7. The great industrial interests of the country, in agriculture, in manufactures, in mines, and in commerce, are entitled to encouraging legislation, with such incidental protection and development as wise systems of revenue may rightfully and properly afford.

8. A sound currency—based on coin and redeemable in coin—is essential to the prosperity of the people. Its attainment would impart confidence to capital, secure remunerative employment to labor, decrease the expenses of living, remove stagnation from trade, and greatly promote the development of commerce in which Maine is so deeply interested. We therefore demand that in the resumption of specie payment the promise of the National Government be kept in an honest, straightforward manner, and that no backward or sideway step be taken.

9. The Navigation Laws which were enacted in the infancy of the Republic have proved their wisdom by long and varied experience. They embody the matured judgment of three generations of commercial men. Any radical change in these laws, especially in regard to the registry and enrollment of shipping, would be detrimental to the highest interests of American commerce, and a damaging blow to the naval independence of our country.

10. The States of South Carolina, Florida, and Louisiana were fairly and legally carried by the Republicans at the November election of 1876, for the State and National tickets, and the undoubted right of President Hayes and Vice-President Wheeler to the electoral votes of those States was affirmed by the highest and most impartial tribunal that could be organized under the authority of the National Government—a tribunal to which the Democrats in both branches of Congress gave their deliberate assent. For the Democratic party now to raise the cry of fraud is both unmanly and dishonest—and if persisted in must be accepted as an indication that that party in its mad desire for power is willing to incur all the hazards of anarchy and revolution.

11. That we are opposed to any further land grants or subsidies for railroads by the general Government.

Touching matters relating especially to our own State, this Convention declares:

1. That economy, integrity, and fidelity preëminently distinguish all branches of the public service in Maine, of which the strongest proof is the steady reduction of taxation, even under the pressure of burdens inherited from the war for the Union. And, in the wide-spread depression of business and financial interests not only in the United States but throughout Europe, it is matter of sincere thankfulness that the people of Maine have retained as great a degree of comfort and prosperity as any community on the continent.

2. Taxation to be just must be equal and impartial. Our Legislature is renewedly urged to ascertain whether all forms of individual and corporate property within the State are now bearing their equitable share of the public burdens.

3. Our system of non-sectarian public education must be continued, developed and improved so that every child in the State may have, at the public expense, all the culture needed for honorable advancement and success in life.

4. Temperance among the people may be greatly promoted by wise prohibitory legislation; and it is a source of congratulation that the principle of prohibition, always upheld by the Republicans of Maine,

is now concurred in by so large a majority of the people that it is no longer a party question, the Democrats for several years having declined to contest it or dispute it.

5. With entire unanimity and with the most cordial indorsement, this Convention presents Selden Connor as a candidate for Governor. A pure and upright man, a gallant and suffering soldier, a faithful and honorable Executive, he combines in his person and in his history all the characteristics which commend him to the confidence and regard of the people of Maine.

The following resolution was presented by ex-Governor Chamberlain, now President of Bowdoin College, and advocated in a vigorous speech:

Resolved, That we reaffirm our unshaken confidence in the integrity, patriotism and statesmanship of Rutherford B. Hayes; and we cordially approve his efforts to carry out in good faith the principles avowed by the Cincinnati Convention.

Mr. C. A. Boutelle, of Bangor, offered the following as a substitute, and supported it by some spirited remarks:

Resolved, That this Convention declares its belief that Governor Packard of Louisiana and Governor Chamberlain of South Carolina were elected to their respective offices by the same votes that elected Rutherford B. Hayes President of the United States, and that both Governors were clearly entitled to recognition by the General Government; and that the failure to recognize them placed the National Government in the humiliating attitude of surrendering to rebels, threatening with arms in their hands to resist its legitimate authority.

After a conciliatory address by Mr. Blaine, both were laid on the table, and the platform adopted as reported by the Committee. Governor Selden Connor was unanimously renominated by acclamation.

The Democratic Convention was held at Portland, on the 14th of August. Joseph H. Williams was nominated for Governor on the third ballot. The following platform was adopted:

Resolved, That the Democracy of Maine, in Convention assembled, hereby affirm and adopt the platform and principles adopted by the National Democratic Convention at St. Louis, in June, 1876.

Resolved, The reversal of the verdict of the American people, as expressed at the ballot-box in November last electing Samuel J. Tilden President of the United States, was the most monstrous political fraud recorded in history. The Democracy submitted to it in the interests of peace; it must not be repeated, and we call upon Congress to prepare and submit for ratification an amendment to the Constitution, which will render its repetition impossible, and consign conspirators attempting it to condign punishment.

Resolved, That the restoration to the common rights of citizenship of the people of three Southern States, long kept subject to military occupation, is a just acknowledgment of the wisdom of Democratic principles; that the Democratic party acts upon principle, makes no factious opposition, and opposes only what is wrong in an Administration in possession of the Government.

Resolutions were offered condemning the prohibitory liquor legislation of the last twenty years, and demanding legislation that should be in accordance with the bill of rights, and best

promote the cause of temperance, but they were defeated.

The election took place on the 10th of September. The whole number of votes cast was 102,058. Of these, Selden Connor received 53,585; Joseph H. Williams, 42,247; Henry O. Munson, "Greenback" candidate, 5,291; John C. Talbot, 736; other candidates, 199. Connor's plurality over Williams was 11,358; majority over all, 5,112. The proposed amendment of the Constitution regarding the qualifications of electors was defeated, the vote being 20,530 for and 25,242 against it. The amendment relating to municipal indebtedness was ratified by a vote of 39,300 to 5,882. The Governor issued his proclamation on the 20th of December, declaring that the latter would take effect and become a part of the Constitution of the State on the 1st of January, 1878.

MARYLAND. The total receipts from all sources into the State Treasury during the year ending September 30, 1877, were \$2,109,194, which, added to the balance in the Treasury September 30, 1876, of \$401,434, made a total of \$2,510,628. The expenditures during the same time, including the amounts disbursed from the "funds" so called, amounted to \$2,179,814, leaving a balance in the Treasury on September 30, 1877, of \$330,814. The receipts and disbursements of the "funds" comprise the Sinking Fund and Free-School Funds; the revenues from certain stocks held by the State being required by law to be distributed to the Free Schools in addition to the amounts they annually receive from general taxation. The sources from which the general receipts were derived are as follows:

Licenses	\$493,615 57
Taxes	1,038,958 54
Sale of State stock	219,315 00
War claims, United States	51,362 64
Northern Central annuity	90,010 00
Susquehanna canal	30,000 00
State live stock	13,443 00
Tobacco inspection	15,740 21
State wharves	4,055 15
Agricultural college	6,908 00
Baltimore and Ohio dividends	60,918 74
Excess of fees	18,639 82
Interest on debt	17,457 79
Fines and forfeitures	8,223 71
Grain weighers	5,956 83
Interest on bonds	6,300 00
Miscellaneous	2,252 65
Total	\$2,108,191 70

The purposes for which the disbursements were made were as follows: Agricultural societies in counties and State societies, \$6,500; charitable institutions, \$92,474; indigent blind, \$12,550; public buildings (construction and repairs), \$67,608; interest on public debt, \$645,275; redemption of, \$221,176; purchase of, for sinking fund, \$33,396; pensions, \$34,060; reformatory institutions, \$102,327; special appropriation, \$15,281; survey of Baltimore harbor, \$5,000; schools, including colleges and academies, \$647,344; expenses of State Government, including oyster navy, \$296,822; total, \$2,179,814. From the above it will be seen

that, deducting from the total expenditures the sums paid for interest on the public debt, redemption of the overdue sterling debt, and for the support of the public schools, academies, and colleges, amounting in the aggregate to \$1,513,795, there will be left a balance of \$666,018, of which \$369,196 was expended in donations, special appropriations, construction of public buildings, pensions, charitable and reformatory institutions, surveys, etc., and \$296,822 was used to defray the expenses of the State Government.

The treasury has suffered a severe loss during the last two years by the suspension of dividends on the State stock of the Washington branch of the Baltimore & Ohio Railroad, and also from the failure on the part of that company to pay over to the State one fifth of the gross receipts derived from passengers by that route, in accordance with the terms of the contract with the State. The change made by the act of 1876, chapter 248, by which the license to foreign insurance companies was reduced to \$100, has produced a loss to the State of about \$40,000 a year. The Tidewater & Susquehanna Canal Company has, for the last year, failed to pay the interest on the mortgage due to the State, so that the loss to the treasury from the above-mentioned sources may be stated as follows: on State Stock of Washington Branch, two years, \$110,000; from reduction of insurance licenses, two years, \$80,000; Susquehanna & Tidewater Canal, one year, \$60,000; total, \$250,000. The funded debt of the State, September 30, 1877, was \$10,758,078. After deducting \$4,362,355, the value of stocks and bonds held by the State, on which interest is paid, and which are considered productive assets, there is left a net debt, on which interest must be provided, of \$6,396,323. It must be noted that among the assets claimed to be productive are included stock of the Washington Branch of the Baltimore & Ohio Railroad and the mortgage of the Tidewater & Susquehanna Canal. As an offset to the funded debt given above, the State holds unproductive assets estimated at \$20,000,000.

The total valuation of the property of the State under the new assessment, authorized by the law of 1876, is as follows: assessed value, \$478,468,028; aggregate value, \$547,044,270.

The assessed value is the value of the property subject to a State tax; the aggregate value includes railroad property. The value of railroad property, as assessed under the act of 1876, is \$25,532,650. The assessed value of property in 1867 was \$492,653,472, and the aggregate value, \$523,809,534. During ten years there has been an increase of \$25,532,650 in the aggregate value.

A large amount of property, corporate and individual, real and personal, has for years escaped taxation in Maryland from legal exemption or otherwise. The principle sought to be established by the law of 1876 was, to do away with every exemption on which it could oper-

ate and thus recognise in its broadest sense the doctrine of the bill of rights, which declares that "every person holding property in this State ought to contribute his proportion of public taxes for the support of the Government according to his actual worth in real or personal property." The exemption of mortgages from taxation is supposed, by many, to have had a bad effect and to have thrown great burdens upon real estate. For purposes of education, Maryland spends more than \$1,500,000 a year, about one half of which is contributed by the State Treasury from direct taxation, and the rest is levied by the counties and the City of Baltimore upon the taxable basis within their limits. Of this large sum, the whole amount apportioned to the counties is intrusted to the Boards of County School Commissioners, who are required to publish annually a statement of their receipts and disbursements, and to forward a copy of the report to the State Board of Education. The condition of the public schools for the year ending September 30, 1877, is shown in the following statement, which does not include those in the city of Baltimore:

Number of schools.....		1,827
Increase over last year.....	74	
Total number of scholars enrolled during the year.....		104,46
Increase.....	2,280	
Highest number enrolled in one term.....		86,440
Increase.....	1,810	
Average daily attendance.....		47,804
Increase.....	817	
Number of teachers employed.....		2,142
Increase.....	23	
Number of men teachers.....		1,190
Number of women teachers.....		1,012
Total receipts from all sources, including balances on hand at the beginning of the fiscal year, 1877.....		\$1,011,579 87
Increase.....	\$7,425 13	
Total expenditures.....		\$928,225 04
Balance on hand at close of fiscal year.....		88,854 83
Total.....		\$1,011,579 87
Decrease in expenditures as compared with last year.....	\$17,137 87	

This is the 10th year of the present system under the Constitution of 1867. The progress made during this period is shown by the following figures:

	1867.	1877.
Schools.....	1,205	1,827

During the year Dr. C. W. Chancellor, Secretary of the State Board of Health, pursuant to instructions received from Governor Carroll, made an extended inspection of the prisons, almshouses, and reformatories of the State. His elaborate report has attracted wide attention. The report gives details of the shocking condition in which many of the public institutions were found. It says:

In most of these places cleanliness is an unknown luxury; all is filth and misery and the most degrading unrelieved suffering. The inmates, sane and insane, were found in many instances huddled together, without discrimination of age, sex, or condition, commingling in unrestrained licentiousness, and with results shocking to all sense of decency and humanity.

The statistics accompanying the report show that there are in the almshouses and jails of the State more than 500 insane and idiotic persons for whom there exists no proper provision. "It is impossible," says Dr. Chancellor, "to imagine anything worse than the brutal degradation and cruelty to which the insane are subjected in some of the county almshouses." For this he does not reflect specially upon the "keepers," but attributes the fault generally to the system of which they are the agents, and urges as one of the features of a necessary change that every inmate of the establishment, capable of physical exertion, should be set to work as a means of inducing health and morality. For this purpose he recommends the establishment by counties of union almshouses which should also be workhouses. In 1870 the population of the State was 780,894. The number of insane was 733, and of idiotic 362; total 1,095. On May 1, 1877, the total number of insane was 1,051, of whom 752 were paupers. Dr. Chancellor condemns strongly the custom of placing children in almshouses and prisons in company with old criminals, and suggests the establishment of district "asylum schools" for the maintenance and education of pauper-children. Considerable space in the report is devoted to a discussion of the "tramp," who is characterized as a great and growing evil. The most stringent and severe measures, such as those in force among the ancients, are recommended as the best means of ridding society of these "willful paupers." At the Frederick County almshouses 8,000 of these vagrants were fed and lodged between October 1, 1876, and March 1, 1877.

The report says that there is probably no institution in the State so faulty in construction and so poorly adapted to the purposes for which it is used as the House of Refuge, its whole surroundings being gloomy and prison-like. The discipline of the House is, however, excellent, and the place is kept clean and in good order. The State Penitentiary is described as a model of its kind, but its removal from the city (Baltimore) is recommended, the House of Refuge being suggested as a suitable situation, with such additions to the present buildings as may be necessary. The condition of affairs exposed by Dr. Chancellor was brought to the attention of the Legislature of 1878 by Governor Carroll, who remarked that twenty-five years ago the almshouses and prisons of the counties of New York were in a similar condition. Those evils have been removed by the active interest of persons in the various counties who have formed volunteer

societies to visit and inspect the condition of the suffering poor. The presidents of these organizations, composed of both men and women, hold a commission from the Governor, and, while they are not authorized to interfere in any way with the management of the almshouses, are required to visit them regularly, and report to the county authorities any ill-treatment or neglect that may come under their observation, and annually to make a report which is published with that of the State Board of Charities.

If any such organizations could be formed throughout Maryland, and be authorized to report to "the State Board of Health," it cannot be doubted that the existing abuses would soon give place to effective management.

WASHINGTON MONUMENT, BALTIMORE.

The political canvass of the year created no little excitement, and long before the conventions were held general interest was aroused as to the position the respective parties would take relative to the exciting events following the presidential election of 1876 and the administration of President Hayes. The Republican convention met in Baltimore, September 20th, nominated Dr. Gabriel E. Porter for State Controller, and passed the following resolutions:

Resolved, That the President of the United States possesses our entire confidence as a public officer, and commands our fullest respect for his high personal character. His patriotism was demonstrated by a four-years' service in the Army of the Union, and is still attested by the scars of honorable wounds. His probity and purity of character were proven by his blameless conduct and successful administration during three terms of office as Governor of Ohio. In determining upon a policy toward the people of the South, which imposes upon their leaders and public men the responsibility of establishing peaceable relations among all classes in every community, of building up strong and beneficent governments for the several States, under which justice may be impartially dispensed and freedom be universally enjoyed, and of selecting for all public places capable

and right-minded public servants, the President has evinced a praiseworthy desire to put an end to the sad antagonisms of civil strife, with all their attendant evils and disasters. The step taken by him was a patriotic endeavor to carry out in good faith the pledges of the Republican platform of 1876, and the explicit promises of his letter of acceptance. We, therefore, believe it to be due to the President, as well as to the Republican party, to declare that he has our cordial approbation in his undertaking to restore just and salutary governments throughout the South, and the kindest relations among all its inhabitants, so that law may be everywhere obeyed, life may be everywhere held inviolable, and genuine liberty be made the actual possession of the least and lowliest of the American people.

Resolved, That we recognize, in the steady diminution of the premium on gold and the correlative appreciation of national currency, the wisdom and courage of the Republican party in opposing all forms of inflation and repudiation, and that the statesmanship which was based on honesty and a deference to economic laws is surely but gradually bringing about the resumption of specie payments. We are, therefore, unwilling to unite with demagogues in favoring the repeal of the resumption act of 1875, feeling assured by the restoration of prosperity to the country through a revival of our commerce, manufactures and agriculture, of which numerous and healthy signs are already visible, that before January 1, 1879, the resumption of specie payments will be deemed by all honorable and sensible men as absolutely necessary to the stability of our trade and the due development of all our industries. The efforts of the Democratic party to impugn the title of Rutherford B. Hayes as President of the United States is only equaled by their audacity in claiming that John Lee Carroll is the legally elected Governor of Maryland; and while the title of the former was confirmed by a high tribunal, composed of Republicans and Democrats, and created by Democratic votes, the title of the latter has never been acknowledged by any respectable majority of the people in the State, and was only acquiesced in because there was no tribunal in the State that was willing to decide upon the proofs of fraud and violence through which he only became a governor. We denounce as shameful the conduct of the Democratic officials, charged under their solemn oaths faithfully and honestly to administer the election laws.

1. In permitting fictitious names to be placed on the registration lists.

2. In not striking from the lists the names of hundreds of dead men, whose names are annually voted upon by repeaters.

3. In omitting from the lists hundreds of colored and white Republicans, who are thus disfranchised.

4. In appointing partisan judges of election, who either wink at fraud, or are in direct complicity with hired repeaters. In contrast to this shameless conduct of the Democrats, we call attention to the Republican counties of the State, for the fairness with which judges are appointed, the elections conducted, and the election laws enforced, and we appeal to the honest element of the Democratic party to insist that the members of the next Legislature shall repeal the present laws on registration, and enact others providing for a new registration throughout the State, under a registration board in which all parties should be equally represented.

We hold the Democratic party of the State responsible for the high taxes now imposed upon the people. The lavish expenditure of the public money, the creation of useless offices in order to maintain their organizations, compelled it to pass the law of 1876 for a reassessment of property. This law introduced a vast army of officials, who, in order to increase the basis of taxation, have over-estimated the value of real estate, and have taxed divers spe-

cies of personal property heretofore excluded from the tax levies.

We are in favor of a repeal of the laws creating the establishment of the so-called oyster navy. This establishment gives employment to a number of men who are ostensibly engaged in protecting the oyster-beds of the State, but who really fatten on the hard earnings of a poor and worthy class, who have no means of livelihood aside from the catching of oysters.

We also favor a modification of the oyster laws, so far as they apply to citizens of Maryland, because they are oppressive and bear heavily on those who are compelled to pay excessive licenses in order to maintain a superfluous oyster-police force; and we ask for such further legislation as will protect the oystermen from the unnecessary seizures and harsh treatment.

We are in favor of a repeal of the inspection laws of the State, and affirm that the State tobacco warehouses have become nurseries for Democratic repeaters, and the amount annually paid by the grower and producer is a tax paid to maintain useless offices, and retards the free exportation of tobacco.

We are in favor of increased facilities for educating the masses through a uniform system of education. We ask that the school-fund for the several counties shall be increased, so that every child in the State of the proper age shall receive its benefits.

We believe it is better and cheaper to spend the public money in the erection of school-houses, and the employment of competent teachers, than in enlarging our jails and penitentiaries, and in building houses of correction; and that our next Legislature be recommended to so revise the present laws that the election of school commissioners in the counties be vested in the people.

We are opposed alike to exorbitant tolls on the Chesapeake & Ohio canal, and to unjust discrimination in freights on the Baltimore & Ohio railroad. We hold that our great works of internal improvement, whether canal or railroad, were built for the benefit of the people, and that freights and tolls should be so regulated as not to discriminate against local traffic, or for or against special private interests.

We are in favor of obeying all laws, and of suppressing, by force if need be, all lawlessness; that the laws made by the representatives of all classes ought to be observed by all; that we hold in equal respect the rights of capital to control its investments and of labor to regulate its compensations by peaceable means, but we deprecate any resort by any class to any mode of violence to subserve its demands, and we declare it to be the privilege of every man to assert his rights only within the bounds of law. At the same time we remind the voters of Maryland that the Republican party through its protective tariff and other proper legislation has fostered as far as legislation can do so the interests and industries of the laboring classes.

The Democratic Convention was held in Baltimore, September 27th. Thomas J. Keating was nominated for Controller, and the following platform was adopted:

The Democratic Conservative party of Maryland, through its delegates in convention assembled, do hereby declare:

That the platform of principles enunciated by the National Democratic Convention at St. Louis, in 1876, is hereby reaffirmed and adopted.

That we congratulate the Democrats and Conservatives in the Forty-fourth Congress upon their successful efforts in the reduction of the annual expenditures of the various departments of the Government by more than thirty millions of dollars, and we insist upon the most rigid economy in the conduct of all our public affairs.

That it is a cause of congratulation to the country at large, and especially of pride and satisfaction to the Democratic party, that its pacific policy of home-rule and non-intervention in the local affairs of the States has become a cardinal rule of action even in an administration whose title to office is not derived from an election, according to constitutional methods, but exists by the adjudication of a tribunal unknown to the Constitution, but whose award has been acquiesced in by a peace-loving people.

That the withdrawal from the States of Louisiana and South Carolina of the federal army, which had been a standing menace for years to their citizens, and the recognition of the Democratic Governors of those commonwealths as their lawful executives, merit our approval and shall receive our support.

That justice and sound policy forbid the fostering of one branch of industry to the detriment of others, and we demand a revision of our present tariff laws to the end that no more revenue shall be raised than is necessary to defray the expenses of the Government frugally administered, and for the gradual but certain extinction of the public debt.

That we protest against the donations or loans of money, lands or bonds, or the pledge of the public credit, by Congress in aid of associations or corporations engaged or purporting to be engaged in public or private enterprises, and we insist that the opposition of the Democratic party to subsidies of all kinds shall be faithfully carried out by the representatives in Congress whose election is due to the support of the party.

That condemning all lawlessness and supporting the public authorities in the suppression thereof, but acquitting the true workingman of all complicity therein, and sympathizing with those poorly rewarded for labor, we have no new promises to make, but we affirm the resolutions adopted by our State Convention of 1873, in the following words, viz.: "That the wealth of the country is mainly derived from the product of her labor, and every just measure to improve the condition and promote the advancement of the laboring classes should receive sympathy, and will command our cordial support."

That we recommend to the next General Assembly of Maryland proper legislation for the encouragement of colonization in our own State. Thousands of acres are laying waste in our State, and wise measures would not only enhance the value of our property, but give also relief to many who intend to exchange the workshop for the field, and to secure to themselves homes more in accordance with the changed condition of things in our country.

The election resulted in the success of the Democratic ticket, 80,710 votes being cast for Keating, and 50,231 for Porter. The majority of the former, therefore, was 30,479.

The peace of Maryland was greatly disturbed during the past year by the lawless proceedings and riots growing out of the great railroad strike. (*See LABOR STRIKES.*)

In December an important decision was rendered by the Court of Appeals, holding that a negro was not entitled to be admitted to practice as a lawyer in that court. The application was made by Charles Taylor, a colored citizen of the State of Maryland. It was opposed on the ground that the statute of 1876, chapter 264, section 3, limits the privilege of admission to the bar to *white* male citizens above the age of twenty-one years. On behalf of the applicant it was argued that the provision of the statute which excludes colored citizens from the privilege of admission to the bar is repugnant to the fourteenth amendment

of the Federal Constitution, and is therefore inoperative and void. But the court held that they were bound by two decisions of the Supreme Court of the United States, which were against the construction contended for by the applicant. In the "Slaughter-house cases" (16 Wall, 36) the latter court held that the fourteenth amendment had reference only to the rights and immunities of citizens of the United States as such, as contradistinguished from those belonging to them as citizens of a State.

The Supreme Court was again called upon to construe the fourteenth amendment in the case of *Mrs. Bradwell* (16 Wall, 180) who had applied for admission as an attorney in the Supreme Court of Illinois, claiming that the right of admission was a privilege or immunity belonging to her as a citizen of the United States, that it was guaranteed by the Federal Constitution, and that the State could not abridge it. The court held that the right to be admitted to practice law in the courts of a State was not one belonging to the citizens of the United States *as such*, and hence was not within the protection of the fourteenth amendment, but depended on the laws and regulations of the State. The Court based its decision on the principles affirmed in the "Slaughter-house cases," and said:

The right to control and regulate the granting of license to practice law in the courts of a State is one of those powers which are not transferred for its protection to the Federal Government, and its exercise is in no manner governed or controlled by citizenship of the United States in the party seeking such license.

The Court of Appeals held that "these decisions are conclusive of the present case."

They determine that the fourteenth amendment has no application. It follows that the provisions of the code are left in full force and operation, and must control our action. We cannot set aside or disregard the provisions of the statute. The Legislature alone can change the law. The privilege of admission to the office of an attorney cannot be said to be a right or immunity belonging to the citizen, but is governed and regulated by the Legislature, who may prescribe the qualifications required, and designate the class of persons who may be admitted. The power of regulating the admission of attorneys in the courts of a State is one belonging to the State and not to the Federal Government. As said by Mr. Justice Bradley in *Bradwell's case*: "In the nature of things, it is not every citizen, of every age, sex, and condition, that is qualified for every calling and position. It is the prerogative of the legislator to prescribe regulations, founded on Nature, reason, and experience, for the due admission of qualified persons to professions and callings demanding special skill and confidence. This fairly belongs to the police force of the State." (16 Wall, 142.) Application refused.

The increased trade of the city of Baltimore has been a source of pride to the people of Maryland. The total value of the exports from this port has increased from \$24,683,083 in 1875 to \$39,815,286 in 1877. The increase in the receipts of grain for ten months of 1877, as compared with the four preceding years, is shown by the following figures:

GRAIN.	1877. (10 mos.)	1876.	1875.	1874.	1873.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
Wheat...	5,617,945	3,945,247	4,409,670	6,456,834	2,810,917

Total...	23,897,081	29,551,349	15,028,854	17,080,128	12,496,957

The following shows the receipts of grain at Baltimore, both by water and rail, since 1870:

YEAR.	Wheat.	Corn.	Oats.	Rye.
	Bushels.	Bushels.	Bushels.	Bushels.
1870	8,089,357	8,381,676	1,243,720	77,778
1871	4,076,017	5,735,921	1,833,409	88,956
1872	2,457,100	9,045,465	1,959,161	90,938
1873	2,810,917	8,330,449	1,255,972	100,519
1874	6,456,834	9,355,567	1,149,188	118,684
1875	4,409,670	9,567,141	977,514	74,529
1876	3,945,247	24,684,280	810,212	112,160
1877*.....	5,617,945	17,415,682	762,442	101,012

The shipments of petroleum have increased from 3,470,995 gallons in 1873 to 40,812,598 in 1876. All this would indicate a great prosperity, in spite of the depressed condition of business for the past four years.

MASSACHUSETTS. The annual session of the Massachusetts Legislature began on the 3d of January, and came to a close on the 17th of May, having occupied 135 days. There were 252 acts and 69 resolves passed. Of the acts, 217 were of a public character, and 55 related to private property, persons, or corporations. An election of United States Senator, for the term of six years from March 4, 1877, to succeed the Hon. George S. Boutwell, was effected on the 19th of January, after seven ballots in joint convention, occupying several days. On the preliminary vote in the two Houses, George S. Boutwell received 17 votes in the Senate, and 78 in the House; George F. Hoar, 12 in the Senate, and 76 in the House; Josiah G. Abbott, 7 in the Senate, and 55 in the House; Alexander H. Rice, 4 in the Senate, and 15 in the House; A. H. Bullock and Julius H. Seelye, each 4 in the House; and Charles Devens, John E. Sanford, and Henry L. Pierce, each 1 in the House. On the first joint ballot, Boutwell received 95, Hoar 88, Abbot 62, Rice 19, and other candidates 11. On the last ballot, Mr. Hoar received 146 out of 278, Mr. Boutwell having 47, Judge Abbott 62, Governor Rice 19, Bullock 2, Seelye 1, and Paul A. Chedbourne 1.

The amendment of the Constitution, proposed by the preceding Legislature, making officers and instructors of Harvard College eligible to the Senate and House of Representatives, was approved, and submitted to the people for ratification. A new amendment was proposed, giving the "General Court" power "to divide any town into election districts, and prescribe the manner of calling and holding public meetings of the legal voters of such town, in such districts, for the election of officers under the

* Ten months.

Constitution, and the manner of receiving and returning the votes given at such elections."

The subjects which most largely occupied the attention of the Legislature during the session were the regulation of the sale of liquor, the management of the Hoosac Tunnel, and investigations of the management of the Reform School at Westborough, and the construction of the new Insane Asylum at Danvers.

A prohibitory liquor law underwent protracted discussion, but was defeated. Then a local-option measure was introduced and passed as a compromise, but was vetoed by the Governor. He set forth his objections at length, the chief of which was, that the existing law was working well and ought not to be changed. In this connection he presented the following facts, contrasting the results of the license system and that of prohibition, which preceded it:

As already observed, the State issues no licenses whatever; the question being now one entirely of local option. The first inquiry, therefore, is, What proportion of the cities and towns have granted licenses under this option? The whole number of cities and towns in Massachusetts is 342, and of these less than 100, or less than 30 per cent. of the whole number, had granted any licenses at the close of the year 1876. The present law is, therefore, absolutely prohibitory in more than 70 per cent. of the whole number of municipalities in the State. If liquors are sold in these towns, the sale is in violation of law, and the local authorities have power to enforce the penalties. I have not full returns from the cities and towns where licenses have been authorized, but from returns furnished by the Chief Detective of the Commonwealth at the beginning of the present year from the 235 towns and cities, or from some more than two-thirds of the whole number, it appears that the whole number of arrests for drunkenness in these places was

In the year 1874.....	25,740
In the same places like arrests in 1876.....	18,696

Showing a decrease of.....	7,044
between the last year of the prohibitory law and the first year of the license law, in these 235 towns.	

The Chief of Police of Boston sent in the following statistics of results in this city for the year 1876:

Number of arrests for drunkenness in 1874...	11,880
Number of arrests for drunkenness in 1876...	8,564

Showing a decrease of.....	3,316
Total number of prosecutions under liquor law	4,023
Total number of gallons of liquor forfeited....	26,883
Total number of places abandoned as to sale in 1876.....	619

That visible drunkenness has diminished in our streets will be admitted by every candid observer; indeed, an intoxicated person is now seldom seen abroad, and there is a growing sentiment against intemperance. Drunkenness is no longer condoned in respectable society, and the fashion of the times, as well as the moral sentiment of the people of all classes, is forming against it. The use of liquors is no longer considered essential to occasions of public hospitality, and recent significant examples have been given of their entire disuse. It would not be true to attribute the whole of this gratifying progress of temperance to the existing laws; but the law is one of the conditions of society wherein this awakening has taken place; and to me it seems inexpedient to supplant so serviceable and so acceptable an instrumentality in order to try chances in a new field of experiment with the hazard of losing all that has been gained and all that may be reasonably hoped for.

Several new schemes for the utilization of the Hoosac Tunnel were presented and debated at length before committees, where public hearings were given, and in the two Houses. The most conspicuous were the "Crane plan," involving connecting lines of railroad from Boston to Chicago, under State management, and ultimately to be owned by the State, and the "Burt plan," which contemplated free competition through the tunnel, and a new western connection. These were defeated, and a measure continuing the "toll-gate" plan for a term of seven years, in order to make contracts secure for that period, was vetoed by the Governor, which left the subject where it was at first. The question of reforming the system of taxation was also the subject of much debate and several propositions, but no change was effected. Shortly after a strike on the Boston & Maine Railroad, the Railroad Commissioners submitted five separate bills, providing penalties for an abandonment of trains by the employés of any railroad corporation; for obstruction of trains on any railroad; for carelessness or neglect in the management or control of engines or cars; for the use of violence, intimidation, bribery, or other means, against employés of any road, by persons, or combinations of persons, to induce them to leave the employ of such roads; and for refusal to aid in moving the cars or trains of another road over the lines of that on which persons guilty of such refusal may be employed. None of these bills were passed.

A prolonged hearing was given on the question of amending the Constitution, so as to give to women the right of suffrage, and a resolution was reported in favor of the amendment, but it was defeated without a count of votes.

The investigation into the management of the Westborough Reform School was occasioned by charges of cruel and unnecessary punishments. A majority and two minority reports were submitted. Six of the ten members of the joint committee, after reviewing the allegations and evidence, announced their conclusions as follows:

1. Corporal punishment has been too frequently resorted to, and in some cases unnecessarily severe, and the manner of its application in many instances objectionable.

2. The use of what has been called the sweat-box we consider an objectionable form of punishment, liable to abuse, and had better be abandoned, although no boy appears ever to have been injured by its use.

3. The application of water as a punishment for an offense has been used but a very few times, and then not in a manner to do any bodily harm to the boys. We advise its use only to quell insubordination existing at the moment, and for such a purpose we should consider it a most efficient and proper remedy.

4. Too much power and discretion has been allowed to subordinate officers, and we advise that only such officers as are particularly authorized by the trustees should ever administer punishment, and only in such manner as they shall direct.

Finally. We believe the institution is, in most re-

spects, in excellent condition, and the superintendent conscientiously endeavoring, under very trying circumstances, to promote the welfare of those under his charge; and, although the discipline is strict as the law requires, and in some cases unneccessarily severe, we do not consider that it has been, or that it will be, either brutal or cruel.

A change in the discipline of this institution was contemplated as soon as the new building should be occupied, and we believe the suggestions herein offered will render any special legislation unnecessary. We, therefore, report that the accompanying bill ought not to pass.

Three members of the committee joined in a report in which the discipline of the institution was discussed and condemned, and legislation favored. The Chairman of the Committee on the part of the House made a separate report, and submitted two bills, one providing

for a new Board of Trustees, and the other declaring that corporal punishment should be inflicted only under such rules and by such methods as should be prescribed by the Trustees and by direction of the Superintendent, and that in every case a record of the offense and the mode and extent of the punishment should be made and presented to the Trustees. The latter of these was passed.

The Danvers Hospital investigation related to the expense involved in the construction of that institution. A majority of the committee reported that there had been no "jobbery," but there was evidence of bad judgment and extravagance. They recommended that the hospital be turned over to a Board of Trustees to have charge of its management, who should

MATTHEWS HALL (SHOWING ALSO MASSACHUSETTS, HARVARD, AND HOLLIS HALLS), CAMBRIDGE.

also attend to the completion of the building. The minority of the committee justified the action of the commissioners and favored leaving the completion of the work in their hands. A bill passed both Houses in accordance with the recommendation of the majority, turning the institution over to the Board of Trustees in its unfinished condition, but it was defeated by a veto of the Governor. A bill, however, became a law, authorizing the appointment of a Board of five Trustees, to take charge of the government of the institution and all work upon it after the completion of existing contracts.

A Commission for revising the Judiciary System of the State, appointed by authority of the previous Legislature, made a report suggesting a variety of changes. The only one adopted at this session gave general equity jurisdiction to the Supreme Court.

Among the important laws enacted during

the session, was one abolishing the coroner system, and providing for separate medical examinations and legal investigations in cases of death from unknown causes. This provided for medical examiners in each county, with fixed salaries, to make inquiries into the cause of death, and to notify the District Attorney or justice of the local court in case it has resulted from violence. The court is then to prosecute the judicial portion of the investigation, and report when, where, and by what means the death was caused. The justice is also required to issue process for arrest of the person charged in his report with the commission of violence, if he is not already in custody. An amendment of the election law was made, requiring that when the right of a person to vote is challenged, his ballot shall be received, with his name and residence signed to it, and also that of the person making the challenge. An act was passed establishing an Advisory Board

vestment. Twenty companies made no net income. The amount paid in dividends was \$5,429,183.31, for interest \$3,437,026. Only 28 of the companies paid dividends, and these ranged from 1 to 10 per cent., the average being 7.17 per cent. The average earnings per mile was \$11,735.22, average cost of operation \$8,494.18.

The Troy & Greenfield Railroad and Hoosac Tunnel remain under State management. The façade at the eastern portal of the tunnel, the stone arch at the western portal, the brick arching throughout, and all other work connected with the line, with the exception of certain improvements in the station accommodations at Greenfield and North Adams, have been completed. A new method of collecting tolls was adopted on the 1st of July, a percentage of two-thirds of the gross receipts being charged instead of a fixed rate per ton. During the three months following, the receipts and expenses were as follows:

Gross Receipts:

From Fitchburg Railroad.....	\$36,353 80
From Troy & Boston Railroad.....	8,846 15
	<hr/>
	\$45,199 95

	<hr/>
Gain in nine months over preceding year.....	\$35,572 11

The State also has an investment of \$3,600,000 in the New York & New England Railroad, arising from a conversion of what were known as the Berdell mortgage bonds of the Boston, Hartford & Erie Railroad, held by the State as security for loans, into certificates of stock of a like amount of the New York & New England Company. The State also holds a note of the same company for a loan of \$250,000.

On the 1st of November, there were 176 savings-banks in the State, an increase of three for the year, though there were three which went out of business. One of these latter, the Jamaica Plain, voluntarily closed its affairs and paid depositors in full; the other two, the Mechanics', of Boston, and the North Bridge-water, at Brockton, were placed under injunction and compelled to liquidate. Seven others were either suspended or under temporary injunction at the date of the commissioners' report. The total deposits in all the savings-banks, October 31st, amounted to \$244,596,614.18, being an increase of \$1,255,971.45 for the year; the amount of surplus was \$5,182,570.86. The amount deposited during the year was \$42,595,232.58, or \$7,181,538.50 less than during the previous year. The amount of withdrawals was \$47,918,238.87, or \$4,202,285.15 less than the previous year. The number of open accounts at the date of report was

739,757, an increase of 468 for the year. Investments in public funds show a large increase, and loans on mortgages or real estate a considerable decrease. Loans made at 7 and 8 per cent. show a large decrease, and those from 4 to 6 per cent. a corresponding increase. Dividends are limited to 5 per cent., and many of the banks have reduced them to 4 per cent.

The public institutions of the State are in a flourishing condition. The new State-prison at Concord is far advanced toward completion, and it is expected that the property will be turned over to the authorities about April, 1878. The new Hospital for the Insane at Worcester has been finished and occupied. The cost of construction was \$1,102,417.44; of furnishing, \$26,556.99. At the end of the year it contained about 400 patients, most of whom were removed from the old hospital in the same city, which is retained as "a temporary asylum for the chronic insane." The new hospital at Danvers was substantially

APPLETON CHAPEL, CAMBRIDGE.

completed on the 1st of October, when it was transferred to the trustees. It cost \$1,423,843.52 for construction, and the appropriation for furnishing was \$50,000. It was not occupied at the end of the year. It is said to be the most perfect institution of its kind in America. In the old State-prison at Boston, there were, on the 1st of October, 771 convicts. The receipts of the institution for the year preceding were \$85,070.45, expenses \$126,978.38, leaving a deficit of \$41,907.93. The cost of the support of each convict was \$170.57; income for each, \$114.34. The Reformatory Prison for Women, at Sherborn, has been completed, and was opened on the 7th of November. The superintendent, physician, and chaplain are women, the only male officer

being the treasurer and steward. The number of inmates of the Industrial School for Girls, at Lancaster, was 104 at the end of the year. The receipts were \$29,719.53, and a balance of \$1,636.01 remained over. The trustees recommend the erection of new buildings. The State Primary School, at Monson, contained 529 children on the 1st of October; 127 had been placed out in families. The total expenditures were \$47,348.87. New

longing to the several counties of the State is \$3,699,421, and the average number of prisoners in county prisons, jails, and houses of correction, was 2,466.

The total cost of pauperism in the State, for the year ending March 31st, is calculated at \$1,790,624, of which \$1,450,624 was paid by cities and towns. Of the 342 cities and towns in the State, 222 provided for the paupers in almshouses, and the aggregate number in those

establishments for the year was 6,166, and the average number 3,747. The cost of almshouse support was \$453,835, the average per week for each person being \$2.44. One hundred and twenty cities and towns kept the paupers in hospitals or families, the number of persons thus supported being 2,505, and the cost of support \$343,542, or an average of \$3.48 per week for each person. The aggregate number receiving partial support or relief was 74,384, from which, it is estimated, about 12,000 should be deducted for duplications. The expense for relief and partial sup-

GORE HALL, CAMBRIDGE.

officers have been placed in charge of the institution, whose efforts are commended by the inspector. Larger school-rooms, better ventilation, and improved appliances for instruction are recommended by the same official. The Ladies' Advisory Board suggest that the condition of the school is not creditable to the State, and many changes and improvements are recommended. The Lunatic Hospital at Taunton contained 374 male and 402 female patients on the 30th of September, and the whole number of different persons under treatment during the year preceding was 1,244. The daily average was 727, while the institution is designed to accommodate only 550. The expenditures for the year were \$141,694.87. The number of patients in the Lunatic Hospital at Northampton, on the 30th of September, was 475, of whom 229 were men, and 246 women. The whole number treated during the year was 603, daily average 476. The expenditures of the year amounted to \$97,573.45. At the Almshouse at Tewksbury there were 919 inmates at the end of the year. The total number for the year was 3,238, weekly average 924. The gross expenditures were \$96,576.41; cost of support for each person per week, \$2.01. New buildings have been added at an expense of \$5,000. The present valuation of the property is \$372,174.19. The valuation of prison property be-

port was \$728,163.

The cost for overseers, and miscellaneous items connected with care, of paupers, is put at \$82,215, making the whole cost to cities and towns \$1,611,755, from which \$161,131 is deducted for reimbursements.

The whole number of persons in State lunatic hospitals and asylums, on the 30th of September, was 2,539, and the whole number of cases treated during the year preceding 3,688, representing 3,501 different persons. The whole number of insane persons in the State is estimated at 4,000.

A commission was appointed, under an act of the last Legislature, "to inquire into the expediency of revising the system of administration of the public charities and reformatory institutions of the Commonwealth, and all the existing statutes in regard to pauperism, crime, and insanity, with a view to securing greater simplicity, economy, and efficiency, in said administration." The commission, in making its report to the Legislature of 1878, submitted the following recommendations:

1. That the Board of State Charities, the Boards of Trustees of the several State Lunatic Hospitals, of the State Reform and the State Industrial Schools, the Inspectors of the State Almshouse, of the State Workhouse, of the State Primary School, and of the State-prison, the Board of Police Commissioners, and the various Advisory Boards of Women, be abolished.

2. That the government of the several lunatic hos-

pitals be vested in a board of nine trustees, to be appointed by the Governor and Council; the said board to have full control of the hospitals, with power to select their officers, determine all salaries, to transfer from one hospital to another, and to succeed to the trusts, duties, and liabilities, held or exercised by the present boards of trustees of the hospitals at Worcester, Taunton, Northampton, and Danvers.

3. That the government of the State Reform School, of the State Industrial School, and of the State Primary School, be vested in a board of seven trustees, to be appointed by the Governor and Council for five years (two for one year, two for two years, one for three years, one for four years, and one for five years); the said board to have full control of the schools, to select their officers, determine all salaries, and succeed to the trusts, duties, and liabilities of the present boards of trustees or inspectors. Three of these trustees shall be women.

4. That the duties now by law vested in the visiting agent be vested in the board of trustees of the schools; and that they shall have the power to select such officers as may be necessary to comply with the provisions of the law.

5. That the State Workhouse at Bridgewater be abolished, and that the buildings be used as an almshouse for men; that all the male paupers at Tewksbury be transferred to Bridgewater, and that the almshouse at Tewksbury be used entirely for women; and that the government of the two institutions shall be vested in a board of five inspectors, two of whom shall be women, and appointed by the Governor and Council for five years, one member to retire annually; that the said board shall have full control of the almshouses, select their officers, and determine all salaries. Also, that the court at Tewksbury be abolished, and that all cases requiring detention by a sentence be tried before a regular court, where they may have the means of a proper defense; and all cases sentenced shall be sent to the several houses of correction. All cases heretofore sentenced to the workhouse by regular courts shall hereafter be sentenced to houses of correction. Those now in the workhouse, under sentence, to remain until their terms expire.

6. That the chairmen of the Boards of Trustees for the Insane, Schools, and Almshouses (as above), shall be a board in whom shall be vested the authority, powers, and duties now vested by law in the general agent of the Board of State Charities; the said board to have the power to appoint a general agent, and all officers necessary to enable them to comply with the law, and to determine all salaries.

7. That the government of the State-prison be vested in a board of three inspectors, to be appointed by the Governor and Council, with full control, including power to select their own officers and to determine all salaries.

8. That the government of the Reformatory Prison for Women be vested in a board of five inspectors, of whom three shall be women, to be appointed by the Governor and Council, with full control, including power to select their own officers and determine all salaries.

9. That annual appropriations be made from the Treasury of the Commonwealth for the support of all the institutions, and that all income be paid into the Treasury; and that an officer be appointed by the Treasurer of the Commonwealth, whose duty it shall be to act as disbursing officer for the several institutions, paying all bills and pay-rolls, thus relieving the superintendents of receiving and paying out any funds on account of their various institutions.

10. That all the returns now required by law to be made to the Secretary of the Board of State Charities, and the returns from city and county prisons now required by law to be made to the Commissioners of Prisons, be made to the Secretary of the Commonwealth.

A report of the Bureau of Statistics of Labor, presenting the results of investigations in cities and towns producing 86 per cent. of the total products of the State, shows an average decrease in wages since 1875 of about 9 per cent., a general increase in the working time and the number of hands employed, and a considerable increase in the amount of production.

MONUMENT AT LEXINGTON.

The second volume of the census of 1875 has been published, and contains the statistics of mechanical industries in detail. The whole number of manufacturing establishments is 10,915; total value of buildings, \$80,997,503; value of average stock on hand, \$89,061,506; machinery, \$73,434,914. Of the machinery in use, not more than \$5,120,488 in value was imported during the decade 1865-'75, while during the same period not less than \$80,000,000 worth was made in the State. The amount invested in buildings, stock, and machinery, in 1875, was \$243,493,923, the total capital invested in manufacturing industry being \$267,074,802. The number of persons occupied in manufacturing and mechanical industries was 316,459, of which 233,252 were males and 83,207 females. Of the males, 228,469 were above fifteen years of age, 4,725 between ten and fifteen, and 58 below ten; of the females, 77,238 were above fifteen, 5,863 between ten and fifteen, and 106 below ten. The average yearly wages of both sexes and all ages was \$475.76; of males above fifteen, \$568.13; females above fifteen, \$343.42; of both sexes below fifteen, \$146.65. The returns of wages paid are on the basis of 266,339 employes in cities and towns, and show a total for one year of \$126,711,583. The highest average of yearly wages in a single occupation is \$866.09, in the manufacture of musical instruments; lowest, \$249.59, in the manufacture of bags and bagging. In cotton-mills there were 3,859,237 spindles, 80,964 power-looms, and 30 hand-looms; in woolen-mills, 1,383 sets of machin-

ery, 8,412 power-looms, and 181 hand-looms; in making worsted goods, 191 sets of machinery were employed, 5,114 power-looms, and 3 hand-looms; in making linen and gunny cloth, 15,606 spindles and 605 looms; silk-works, 500 spindles; webbing, 288 looms; braiding machines, 2,194; knitting, 82 power and 6 hand machines. The whole number of newspapers and periodicals in the State was 341, including 26 dailies, with an annual circulation of 83,389,028 copies; 222 weeklies, with an annual circulation of 47,650,250; and 58 monthlies, circulating 7,504,224 copies annually; total annual circulation of all periodicals, 141,774,382 copies. The whole number of vessels engaged in fisheries and coastwise and ocean commerce, in 1875, was 2,274, with an aggregate tonnage of 422,895 tons. The amount invested in fisheries was \$7,269,442; annual product, \$7,684,716. The grand total of the value of industrial products in 1875 is as follows: Manufactures and fisheries, \$600,016,678; agriculture and mining, \$43,461,599; total, \$643,478,277. In 1865 it was: Manufactures and fisheries, \$444,524,353; agriculture and mining, \$51,149,576; aggregate, \$495,673,929. Reduced to a gold basis, the aggregate for 1875 is \$574,534,175; for 1865, \$315,715,877: a gain of about 82 per cent. The increase in population at the same time was from 1,267,030 to 1,651,912, a gain of 30.38 per cent.

The educational statistics of the year 1876-'77 are as follows:

Number of public schools.....	5,556
Number of children between five and fifteen years of age.....	296,875
Number of pupils in public schools during the year.....	807,892
Average attendance.....	222,704
Number of children under five years attending school.....	2,058
Number of persons over fifteen attending schools.....	28,190
Number of male teachers in public schools.....	1,176
Number of female teachers.....	7,544
Number of teachers who have attended normal schools.....	1,898
Average term of public schools.....	8 months 15 days
Average wages of male teachers per month.....	\$32 22
Average wages of female teachers per month.....	\$34 20
Amount raised by taxation for support of public schools.....	\$4,331,675 85
Income of funds appropriated for public schools at option of towns.....	\$59,229 01
Expense of superintendence.....	\$131,804 39
Amount of local school funds.....	\$1,898,891 19
Income of local school funds.....	\$119,968 26
Income of State school fund.....	\$76,320 07
Amount expended in erecting and repairing school-houses.....	\$956,488 39
Number of high-schools.....	216
Number of high-school teachers.....	494
Number of high-school pupils.....	19,160
Number of evening schools.....	92
Number of teachers in evening schools.....	545
Average attendance.....	5,805
Expense of evening schools.....	\$73,350 58
Number of incorporated academies.....	44
Average number of scholars.....	3,989
Aggregate tuition.....	\$131,692 99
Number of private schools and academies.....	885
Average attendance.....	15,228
Aggregate tuition.....	\$439,608 11
Total cost of public education.....	\$5,532,519 23

The State Normal Schools are as follows: At Framingham, 180 pupils, cost of support to the State \$12,160.68; at Westfield, 170 pupils, cost of support \$12,397.14; at Bridgewater, 211

pupils, cost \$13,000.03; at Salem, 312 pupils, cost \$13,160.33; at Worcester, 156 pupils, cost \$12,784.99; Normal Art School, Boston, 225 pupils, cost \$9,669.04. Total State appropriation for normal instruction, \$76,000.

The volunteer militia of the State consists of 3,775 enlisted men, and 373 commissioned officers, a total force of 4,148 men. The 61 companies of infantry contain 48 men each; the three companies of cavalry, 81 men each, and the three companies of artillery, 80 men each. The two corps of cadets contain 272 men, and there are 92 non-commissioned and staff officers. There was a full parade of the militia on the 26th of June, on the occasion of the reception of the President of the United States in Boston, and again at the dedication of the Army and Navy Monument, in the same city, September 17th. The enrolled militia of the State numbers 217,239.

The political canvass of the year opened with a convention of the "Greenback" party, held in Boston, on the 5th of September. The following ticket was put in nomination: For Governor, Wendell Phillips, of Boston; Lieutenant-Governor, Dyer D. Lum, of Northampton; Secretary of State, Nathan Clark, Jr., of Lynn; Auditor, H. M. Bearse, of Boston; Treasurer, W. F. Whitney, of South Ashburnham; Attorney-General, Israel W. Andrews, of Danvers.

The platform adopted was as follows:

Whereas, By the vicious and reckless financial policy of our National Administration since the commencement of the late war, *money*, the medium of exchange, the unit and measure of credit and liability in all contracts, has been so reduced in quantity, so rapidly and completely changed and appreciated in value, as compared with property and labor, that all bonds, notes, mortgages, and other money liabilities, have been so increased as to render bankruptcy the only alternative of the debtor class. By the suicidal policy of contraction, increasing the measure of the dollar as a unit of liability, property mortgaged but a few years ago to the extent of two-thirds or one-half of its value, now fails to satisfy the mortgage. The weight of national, State, and municipal debts has been increased nearly 50 per cent. in the last four years. Thus, the real property of the country is rapidly centralizing in the hands of money-lenders, and all the resources of taxation are required to meet the obligations of the public creditors. The increasing scarcity of circulating medium, causing, as it does, the steady depreciation of prices, has made all investments in productive enterprises unprofitable, reduced production to the limited demand of absolute daily necessity, and brought upon us the paralysis of trade, and the destitution and enforced idleness of the laboring classes.

1. We demand the immediate and unconditional repeal of the specie resumption act of January 14, 1875, and the rescue of our industries from the disaster and ruin resulting from its enforcement; and we call upon all patriotic men to organize in every congressional district of the country, with the view of electing representatives to Congress who will legislate for and a chief magistrate who will carry out the wishes of the people in this regard, and thus stop the present suicidal and destructive policy of contraction.

2. We believe that to the legal tenders we owe the successful termination of the war. We do not believe that a currency so potent in disaster is worthless in times of peace. Neither do we believe it right or expedient to pursue further a policy, every step of which

is marked by failure and distress; which has crippled every industry, trade, and profession, except that of the money-lender on real estate, at one-third of its value, who is rapidly acquiring the property for default of interest and taxes. We believe that the consolidation of property now going on under this policy is dangerous; that if persevered in it will end in revolution.

3. We believe that any and all money issued by the Government, whether of gold, silver, or paper, should be a full legal tender, and at all times convertible into Government bonds, bearing a low rate of interest, not over 3 $\frac{1}{2}$ per cent.; said bonds to be convertible into such lawful money. And we hold that it is the duty of the Government to provide such a circulating medium, and we insist, in the language of Thomas Jefferson, "that bank paper must be suppressed, and the circulation restored to the nation, to whom it belongs."

4. It is the paramount duty of the Government, in all its legislation, to keep in view the full development of all legitimate business, agricultural, mining, manufacturing, and commercial.

5. We most earnestly protest against any further issue of gold bonds, for sale in foreign markets, by means of which we would be made, for a longer period, hewers of wood and drawers of water for foreign nations.

6. We demand that the silver dollar, which has been a full legal tender for all debts, both public and private, from 1792 until February 12, 1873, which was demonetized at the suggestion and in the interest of the foreign creditors of the nation, be restored to its original position as a full legal tender, and that its free coinage and circulation be encouraged.

7. *Resolved*, That the present system of taxation on mortgaged property is unjust, as against the person holding the fee in the property, and should be abolished.

8. *Resolved*, That we demand a reduction of public expenditures, the rapid payment and extinction of all outstanding State and municipal debts, to the end that the burdens of taxation borne by the present and future generations may be reduced to the lowest possible limit.

9. *Resolved*, That we demand the abolition of all class legislation; of the iniquitous system of land grants and subsidies to corporations and private individuals, which has spread the sinister influence of the lobby, and sown the seed of official corruption throughout our whole political fabric, which has subjected the public welfare and the general good to a hostile and dangerous oligarchy of private interests.

The nominations of the "Greenback" party were afterward accepted by the Labor Reform and Workingmen's parties.

The Prohibitionists held a convention, at Worcester, on the 12th of September. Judge Robert C. Pitman, of New Bedford, was nominated for Governor; Elijah A. Morse, of Canton, Lieutenant-Governor; D. B. Gurney, of South Abington, Secretary of State; Orin T. Gray, of Hyde Park, Attorney General; D. N. Skillings, of Winchester, Treasurer. The following resolutions were adopted:

Resolved, That we congratulate the Prohibitionists of Massachusetts upon the increasing signs that our party is making good the declaration of last year, that we organized not merely for the campaign but for the war.

Resolved, That we meet for political action against a traffic which obstructs every object of good government—a traffic which makes paupers, increases taxes, promotes crime, disturbs the public peace, enslaves labor, destroys the home, impairs the purity of the ballot, and imperils every interest of the Commonwealth.

Resolved, That the policy of the State toward a traffic so deadly to its interests, and at the same time so powerful, can never be settled without an open avowed party issue and a distinct, unquestioned decision at the polls.

Resolved, That no such issue can be made inside of a party that is divided between license and prohibition; that a party so divided can accept neither one side nor the other without losing the votes of the minority; that it will therefore make no such issue; that when compelled to act it can never act higher than its average sentiment, and must at the best adopt a weak, wavering, undecided, and inefficient policy, and that for this reason a political party making the suppression of the liquor traffic an open, avowed issue is an indispensable necessity.

Resolved, That no State issue is presented to the people of the Commonwealth except that which we present, and that no incidental effect of the State election upon national politics, even if there were any well defined issue between the old parties, could in any way justify the indorsement or even the tolerance by a Christian people of the dram-shop system now upheld by the Commonwealth of Massachusetts.

Resolved, That in the deliberate judgment of this Convention, assembled at a time when the rights and interests of labor and capital are the special subject of national consideration, it is incumbent on us to say distinctly and with emphasis, in the language of the illustrious French Republican, Gambetta, that "capital and labor are the inspirers of each other," and with the heartiest sympathy for the great industrial community we emphatically declare that the real remedy for the distress of the times and for the relief of labor and industry, as well as of capital, is to save by legal prohibition the annual waste of \$700,000,000 now spent by the country at large in the demoralizing liquor traffic.

Resolved, That the career of Governor Rice has confirmed all that was said by us at the outset, and that his proposed renomination should be regarded as an open challenge to every Prohibitionist still remaining in the Republican party, and should be responded to as such with alacrity.

Resolved, That we bid God-speed to the Women's Temperance Union and to the reform clubs of the State. There can be no higher or holier work than theirs. But under a licensed liquor traffic reformed men can never be safe; that reform will be temporary and spasmodic; that the traffic will shortly regain its supremacy, keep up its quota of victims, until it shall be abolished by the omnipotent moral suasion of votes and the educational discipline of law.

Resolved, That we are pledged to the ballot for women not only by past affirmations but by present convictions and the clearest self-interest.

Resolved, That while it is a satisfaction to us to present the name of our tried friend, Robert C. Pitman, and with him to place before you as his associates men of character and ability, we ask you to lift this contest far above all personal considerations, and give them one and all a vote worthy of the cause for which they stand.

A resolution approving of the administration and policy of President Hayes was defeated. The candidates of the Prohibitionists were accepted by the Women-Suffrage party, at a convention held in Boston on the 9th of October. On the same occasion the following resolutions were adopted:

Resolved, That this Convention reaffirms the principles of universal justice and impartial liberty as the basis on which we claim equal rights for women as for men.

Resolved, That the Democratic party, by the silence of its Convention, the vote of its members in the last

and previous Legislatures, and the pronounced opinions of most of its leaders, has proved itself false to those principles of true Democracy upon which the party professes to be founded.

Resolved, That the Republican party is now recalcitrant to its former avowed principles and promises, and has proved its degeneracy by acting in direct opposition to its professed principles, and by breaking its solemn promises as made in its previous platforms.

Resolved, That while thus the Democratic and Republican parties have ignored the woman-suffrage issue, and have nominated candidates hostile to the suffrage movement, the Prohibitory party has unequivocally adopted woman-suffrage as one of the leading issues, has invited women to participate in its caucuses and conventions on equal terms with men, and nominated avowed suffragists for its candidates; by this action it has irrevocably made itself a woman-suffrage party.

MEMORIAL HALL, CAMBRIDGE.

The Democratic Convention was held at Worcester, on the 13th of September. The ticket put in nomination was as follows: For Governor, William Gaston, of Boston; for Lieutenant-Governor, William R. Plunkett, of Pittsfield; for Secretary of State, Weston Howland, of Fairfield; for Treasurer and Receiver-General, David N. Skillings, of Winchester; for Auditor, John E. Fitzgerald, of Boston; for Attorney-General, Charles P. Thompson, of Gloucester. The following platform was adopted:

We reaffirm and announce the National Democratic platform of 1876 as the authoritative exposition of the principles of our party, and we congratulate our political brethren of the whole country that these principles were indorsed in the national canvass by the suffrages of a decided majority of the American people.

We believe the people fairly elected a majority of the Electoral College in favor of the Democratic candidates. And while in the high interest of the public tranquillity we submit to the authority of the constituted Federal Administration, we denounce upon the guilty Republican party stern retribution for the great public crime by which the public were defrauded of their right to be governed by rulers of

their choice and the elective principle was wounded in its most vital part. We challenge for it the opprobrium of history and the indignant judgment of all honest men.

We congratulate the country and the supporters of free government everywhere upon the happy results of restored public order and reviving industrial prosperity, in inaugurating the new reign of domestic peace and liberty regulated by law in the Southern section of the Union, that have ensued upon the adoption of Democratic principles and measures of administration by the Executive Department of the Federal Government in reference to the Southern States.

We recognize in these auspicious results the signal vindication and practical triumph of the constitutional doctrines so faithfully contended for by the Democracy in late political contests, and the statesmanship of the wise fathers which seeks the welfare of the public by the support of the coequal rights and dignities of all the States in the Federal Union. We trust that hereafter there will be no Southern policy, no Northern policy, but one common policy for the whole Union in the equality of the rights and duties of all men before the law.

Resolved, That the present depression of industrial, commercial, and financial interests of the country is largely due to our inability under present laws to dispose of the surplus products of our industry—products which the other countries want, and which, but for restrictions and injurious legislation, the United States would to a great extent produce and sell cheaper than any other nation.

Resolved, That the interests of the Commonwealth require the removal of the obstacles to our extended reciprocal trade with foreign countries. The opening of

the liberal reciprocity with Canada and Mexico would promote our productive energies and stimulate our carrying trade by land and sea, enlarge the markets of all the varied industries of the Commonwealth, and give to her merchants, mariners, and laborers a valuable accession of employment.

Resolved, That we are in favor of the honest payment of the public debt, and of a currency on a gold basis.

Resolved, That the practice of borrowing money for other objects than those of strict public necessity has generated schemes of extravagant expenditure, until taxation has become wellnigh an intolerable burden. Honesty, economy, and "pay as we go" should be the rules in all appropriations of the people's money. The power of the State, counties, cities, and towns to borrow money ought to be rigidly limited, so that an end may be put to the system which "anticipates the labor of coming ages and appropriates the fruits of it in advance; which coins the industry of future generations into cash, and snatches the inheritance from children yet unborn."

Resolved, That the present system of taxation in Massachusetts is unequal, unjust, and oppressive, and manifestly inconsistent with principles of political economy, and the time has come for a thorough reformation of the laws regulating the levying of taxes.

Resolved, That we are opposed to the reenactment of the prohibitory law.

Resolved, That we view with concern the depression under which the laboring interests of this Commonwealth now suffer. We recognize the fact that the condition of labor and the welfare of the laboring men, the just relations of capital and labor, are pressing questions yet to be solved. We favor such measures as will tend to the great consummation—the elevation of labor and the improvement of the condition of the laboring man—and we oppose all legislation with regard to labor and capital which gives an unjust preference to either over the other, or tends to make labor dishonorable.

Resolved, That we regard with alarm, as dangerous to the best interest of the people, the insidious and constant measures of the Republican party in our Legislature, in restricting the right of suffrage. The exercise of this right instead of being checked should be encouraged; the registry laws should be so framed as not to be the means of disfranchising citizens, to the end that the largest possible portion of the community may be brought under the educating influences of a participation in public affairs, and of a proper voice in the making of the laws by which they are governed.

There is imperative need in this Commonwealth of progressive administrative reform, and to that end we appeal to all good citizens of Massachusetts, regardless of their politics or party associations, to join in sustaining the nominations of this Convention, in whose integrity, virtue, and capacity they have the fullest confidence.

The Republican Convention took place, at Worcester, on the 19th of September. Governor Rice and the entire board of State-officers were renominated as follows: Governor, Alex. H. Rice, of Boston; Secretary of State, Henry B. Pierce, of Abington; Auditor, Julius L. Clark, of Newton; Treasurer, Charles Endicott, of Canton; Attorney-General, Charles R. Train, of Boston. The platform adopted was as follows, by a nearly unanimous vote:

Resolved, That we reaffirm first of all our unwavering allegiance to the fundamental truths and principles which have inspired the triumphs of the Republican party. We accept the responsibility of national administration, again committed to Republican hands, as a trust to be exercised for the welfare of all the people, without distinction of race, color, locality, or creed. The armed struggle for the Union and equal rights is at an end. The grand results attained are accepted facts in the national history. Watchfully guarding and firmly maintaining all that has been achieved, we do not propose to abandon the helm or drift with the tide, but to address ourselves with vigor and courage to pending issues, and to insist upon their settlement in the interest of good government, national progress, and enduring union.

Resolved, That we congratulate the country upon

NEWBURYPORT.

the rightful accession of a Republican President whose conspicuous integrity, honesty of purpose, wisdom, moderation, and firmness deserve and command the confidence of the people for the assurance of a firm, economical, and beneficent administration of public affairs, and thus afford the opportunity and encourage the prospect of a speedy restoration of confidence and the revival of business activity.

Resolved, That we hail with unspeakable pleasure every sign and promise of the final and permanent pacification of the Southern section of the country under local self-government, based upon the full recognition of the equal rights of all by all; and we cordially approve the spirit and measure of the Administration as wisely adjusted to hasten this result, as dictated by a just sense of constitutional right and duty, as tending to promote a spirit of peace and conciliation between citizens of all sections, and as already largely justified by the bettered feeling and condition of the country.

Resolved, That the faith of the nation is solemnly

pledged to the early resumption of specie payments. Public honor and private interest alike demand the fulfillment of this pledge. We approve the steps already taken and rejoice at the progress already made. We insist upon the adoption of all measures necessary to insure resumption on a day not later than that now fixed by law, and that it is the duty of the Government to maintain its coin and currency at all times at par with the gold standard of the commercial world.

Resolved, That the work of reforming and improving the civil service, which the Republican party has undertaken and to which it alone stands fully committed, ought to be persistently and resolutely carried forward. We fully indorse the utterances of the Cincinnati platform and of the letter of acceptance of President Hayes on this subject: That nomination to office ought to be made upon the sole responsibility of the Executive Department, without the dictation or control of members of Congress; that honesty, capacity, and fidelity constitute the

only claim and qualification for office; that partisan service should not be expected or desired from public officers, who should give their whole service to the Government and the people; and that tenure of office should depend upon untarnished personal character and the satisfactory performance of official duties, and not upon political changes; and we cordially sustain and approve the policy and action of the President in conducting his administration in fulfillment of his distinct pledge, upon these principles, recognizing that the work of correcting the abuses that have crept into the civil service is only begun, and that much remains to be accomplished in Massachusetts as well as elsewhere in order to show convincingly that the principle of civil service reform is accepted as an enduring principle and not a temporary method of administration. We call upon all departments of the Government to give the President their cordial and effective support in making the reform thorough, radical, and complete.

Resolved, That the order recently promulgated by the President for the purpose of restraining executive officers of the Government from exercising an undue and improper influence upon the action of the people in the election of candidates for office, and in the management of political affairs, is in accordance with the principles and practice established by the founders of the Government. We heartily indorse the order as the first and a most important step toward a practical reform of the civil service, and we assure the President of our cordial support in its enforcement.

Resolved, That the Congress of the United States has already passed a reasonable limit in grants of land and money in aid of private enterprises, that the nation demands that no more grants shall be made either from the public domain or the public Treasury as subsidies to private corporations, and that appropriations for Government works shall hereafter be limited by the strict rule of necessity.

The main issue in the canvass was the approval of the national Administration and the Southern and civil service policies of the President. The election occurred on the 6th of November, and resulted in the choice of the Republican candidates. The total vote for Governor was 184,454, of which Rice received 91,255; Gaston, 73,185; Pitman, 16,354; Phillips, 3,552; and all others, 108. The vote for Treasurer was: 87,532 for Endicott, 83,456 for Skillings, 1,689 for Whitney, 858 for John C. MacCreedy, of Cambridge, 345 for Lum, and 260 for all others. The amendment of the Constitution making the officers and instructors in Harvard College eligible to seats in the Legislature was ratified by a vote of 23,839 to 6,505. The Legislature of 1878 consists of 35 Republicans and 5 Democrats in the Senate, and 171 Republicans and 69 Democrats in the House; the Republican majority being 30 in the Senate, 102 in the House, and 132 on a joint ballot.

The town of Marblehead was visited by a disastrous conflagration, on the 25th of June, which destroyed 30 shoe-factories and 42 dwellings. The total value of property destroyed was about \$500,000; insurance, \$200,000.

MCCLELLAN, GEORGE B. The canvass made by General McClellan, in 1877, for the Governorship of New Jersey, and his election to that office, brought him again prominently before the public. (For the particulars of his

nomination and election *see* NEW JERSEY.) The career of General McClellan has been a remarkable one. He was born in Philadelphia, December 3, 1826. He studied at the University of Pennsylvania, and in 1842 entered the Military Academy at West Point where he graduated second in his class in 1846, and was assigned to duty as brevet second-lieutenant in the corps of engineers. He served with distinction during the Mexican War, and was successively brevetted as first-lieutenant and captain. In 1851-'52 he was assistant engineer in the construction of Fort Delaware; in 1852-'53 chief engineer in the Department of Texas, having in charge the surveys of the coasts of that State; in 1853-'54 engineer for the exploration and survey of the western division of the proposed Pacific Railroad; and in 1854-'55 he was on special service in collecting railroad statistics for the War Department. In 1855-'56, having been made captain of artillery, he was a member of the Military Commission to visit the seat of war in the Crimea. He resigned his commission June 16, 1857, to take the post of chief engineer of the Illinois Central Railroad, of which he was chosen vice-president in 1858. In 1860 he became president of the St. Louis & Cincinnati Railroad.

At the opening of the Civil War he was commissioned as Major-General of Ohio Volunteers, and was placed in command of the Department of the Ohio, comprising the States of Ohio, Indiana, Illinois, and the western parts of Pennsylvania and Virginia. He was made major-general in the regular army May 14, 1861, and commanded in several engagements in Western Virginia, which resulted in clearing that region of the Confederate forces, for which he received, on July 15th, the thanks of Congress. On July 22d, the day after the Federal defeat at Bull Run, he was summoned to Washington and was placed in command of the division of the Potomac, and shortly after of the Army of the Potomac. On the retirement of General Scott, November 1st, he was appointed General-in-chief of the Armies of the United States. He took the field in March, 1862, and having in the mean time been relieved of the command of all the forces except the Army of the Potomac, he set out for the peninsula of Virginia, and laid siege to Yorktown, which was abandoned by the Confederates as soon as his batteries were ready to open fire. The retreating Confederates, under General J. E. Johnston, made a stand at Williamsburg (May 5th), long enough to enable their trains to get off, and fell back toward Richmond; McClellan, moving slowly, reached the Chickahominy about May 20th, and opened the campaign against Richmond, which was brought to a virtual close by the battle of Malvern Hill (July 1st), after which he fell back to Harrison's Landing, where he intrenched himself. General Halleck, having in the mean time been made General-in-chief, ordered McClellan, August 24th, to return with his whole army to Fortress Monroe and York-

town. General Lee, almost simultaneously, moved from Richmond to threaten General Pope, who had been placed in command of the Union forces in Northern Virginia. The result was the defeat of Pope at Bull Run, August 29th and 30th. Pope, at his own request, was relieved from the command of the forces at and about Washington, which was conferred upon McClellan. The Confederates then undertook the invasion of Maryland, which was brought to a close by the battle of Antietam, September 16th and 17th. They then crossed the Potomac, and fell leisurely back toward the Rapidan. Great dissatisfaction was felt at the slowness with which McClellan followed them, and on November 7th, when he appeared to be making preparations for an attack in force, he was superseded in command by General Burnside. McClellan was directed to proceed to Trenton, N. J., there to await future orders, and took no further part in the war. (See ANNUAL CYCLOPEDIA, 1861 and 1862.)

The Democratic National Convention, held in Chicago in 1864, nominated him for the Presidency. He received only the 21 electoral votes of Delaware, Kentucky, and New Jersey, the remaining 212 electoral votes admitted being cast for Abraham Lincoln. Of the popular vote 2,223,035 were cast for Lincoln and 1,811,754 for McClellan. The latter resigned his commission in the army on the day of the election, November 8, 1864, took up his residence in New York, and afterward went to Europe. In 1868 he returned and took up his residence near Orange, N. J., and engaged in practice as an engineer. By the will of Mr. Edwin A. Stevens, he was placed in charge of the Stevens floating battery which had for a number of years been in course of construction at Hoboken. He was also made superintendent of the construction of the railroad bridge over the Hudson River near Poughkeepsie, N. Y., and superintendent of docks and piers in the city of New York, but resigned the latter office in 1872.

General McClellan has translated from the French "A Manual of Bayonet Exercises," adopted for the use of the United States Army (1852), and written a volume of the Government reports of the Pacific Railroad Surveys (1854); a volume of the reports of the European Commission, "The Armies of Europe," etc., printed by order of Congress (1861), and "Report on the Organization and Campaigns of the Army of the Potomac" (1864).

MCCLOSKEY, JOHN, an American cardinal, born in Brooklyn, N. Y., March 20, 1810. He graduated at Mount St. Mary's College, Emmetsburg, Md., and studied theology in the seminary there. Having been raised to the order of priest, January 9, 1834, he was sent to Rome, studied for two years in the Roman College, spent another year in France, and on his return was appointed assistant priest of St. Joseph's Church, in New York, and six months after became priest of the parish. In 1841 Bishop Hughes nominated him first president

of St. John's College, Fordham, but in 1842 he resumed the charge of St. Joseph's. At the solicitation of Bishop Hughes, he was appointed his coadjutor, November 21, 1843, with the title of Bishop of Auxerre, and was consecrated March 10, 1844. In the division of the diocese of New York which took place in 1847, Bishop McCloskey was nominated first Bishop of Albany, May 21st. His zeal, eloquence, and popularity obtained him the means of building churches in every city and town, and of creating institutions of charity and education. He introduced into his diocese the Sisters of the Sacred Heart, the Sisters of Charity, the Sisters of Mercy, the Gray Sisters, Hospitalers from Montreal, the Sisters of St. Joseph, and those of the third Order of St. Francis; also the Jesuits, Oblates, Augustinians, Franciscans, and Capuchins. He began and completed the cathedral of Albany, devoting to it a large part of his own income. During his last years in that city, he purchased extensive buildings in Troy, destined to be used for a general theological seminary for the dioceses forming the ecclesiastical provinces of New York, and obtained for it from the University of Louvain a staff of trained professors. After the death of Archbishop Hughes he was appointed to the See of New York, May 6, 1864, and took possession of it August 21st. Besides a large number of spacious churches built in the city and elsewhere, the archbishop has established a foundling asylum in Sixty-eighth Street, an asylum for female deaf mutes at Fordham, homes for destitute children and young girls attached to St. Stephen's and St. Ann's Churches, homes for aged men and women, and new orphan asylums outside of New York City. To direct these institutions and to cooperate with the secular clergy, he has established communities of Dominicans, Franciscans, Capuchins, "Little Sisters of the Poor," and German Franciscan Sisters for the German hospital. He has also labored strenuously to complete the new cathedral begun by his predecessor, for which he has given \$10,000 from his own private purse, and to procure materials for which he visited Rome in 1874.

On March 15, 1875, Archbishop McCloskey was made a Cardinal of the Order of Priests, he being the first American cardinal ever appointed. On the death of the Pope, in February, 1878, he was summoned to Rome to attend the conclave of cardinals for the election of a successor of Pius IX.

McCRARY, GEORGE W., Secretary of War, was born at Evansville, Ind., in 1835, and the next year went with his parents to Wisconsin Territory. After receiving a common-school education, he was admitted to the bar in 1856, and began practice at Keokuk, Iowa. He at once took a prominent position in that city, and in 1857 was elected to the State Legislature. From 1861 to 1865 he was a member of the State Senate, and took an active part in the legislation of that period. He resumed the

practice of his profession, which he continued until 1868, when he was elected to Congress. He was reelected in 1870, 1872, and 1874, but was not a candidate in 1876. At different times during his congressional career he was chairman of the Committee on Elections and of that on Railways and Canals, and he served on the Committees on Naval Affairs, Revision of Laws, and the Judiciary. On December 7, 1876, Mr. McCrary introduced into the House the bill which was the first step in the legislation for creating the Electoral Commission. The resolution, which provided for a joint committee of Congress to consider the mode of counting the electoral vote, was referred to the Judiciary Committee, of which he was a member. It was passed, and Mr. McCrary became a member of the joint committee on the part of the House. He advocated the Electoral bill, and appeared before the Electoral Tribunal. He was one of the first to support the Republican position in the Florida case, and argued against the power of Congress to go behind the returns. When President Hayes formed his cabinet, Mr. McCrary was chosen as Secretary of War. He is the author of a work recently published on the "Law of Elections."

MECHANICAL IMPROVEMENTS AND INVENTIONS. There has not been any remarkable event to chronicle in the history of mechanical engineering for the past year. No year passes, however, without many improvements and inventions, and a steady progress in the understanding of mechanical principles, and new victories over the forces of Nature. No art or science can show more plainly a progress from year to year; no art can chronicle more certain, conspicuous, and important annual advances than mechanical engineering. Considerable attention is being paid in Europe to the various forms of continuous brakes, and careful experiments have been made with them. There has been much debate as to the relative merits of the English and American types of railroad engine. The English engine, with a rigid wheel-base, in which the entire dead-weight is supported by the driving-wheels, is, no doubt, much more economical on such straight and level roads as are found in England, and in some parts of the Continent; but in no other part of the world is it adapted to the railroads as they are now laid; and as the American bogie engine, of flexible wheel-base, has supplanted the other form in Canada, and other British colonies, and is now preferred in Russia, so will it probably be found preferable in India, and all countries where engineering works cannot be as thoroughly made as in England. The progress made in machine puddling is not rapid, and the attention of iron-masters is more taken up with the progress in the manufacture of steel, or steel-process iron, which may yet entirely supplant puddled iron.

The study which has been given to the steam-engine of late years is leading to a bet-

ter knowledge of the true properties and action of steam. Isherwood first pointed out that the limit to the economy of fuel by the application of the principle of expansion was soon reached. The Gallatin experiments proved that considerable loss resulted from a measure of expansion as great as 10 to 1. The construction of boilers which preserve the steam from condensation is the aim now of engineers, and this end is best subserved by the use of jackets of a proper kind, and cylinders with the thinnest possible walls, and by a double set of ports for the ingress and escape of steam. The advantages of steam-jacketing, which was invented by Watt, have been of late rejected in favor of the illimitable benefits which were hoped for from working steam expansively, and for the greater work which it was supposed could be obtained from high pressure. Recent experiments show that the economy in properly steam-jacketing the cylinder is very great, that the same work can be attained under a much lower head of steam, by preventing condensation and keeping the interior of the cylinder dry, and by perfecting and increasing the vacuum. The jacket is most efficient when the cylinder walls are the thinnest, and is almost useless when they are as thick as they often are, and when the cylinder covers are not included in the jacket. Hirn, experimenting with a vertical cylinder engine, found that under the same pressure, and the same measure of expansion, the steam-filled jacket gave 23.5 per cent. more power; and he calculated the actual economy at 22.2 per cent. Hallauer, with duplicate Corliss engines, at Mulhouse, found an economy in the weight of steam consumed per hour per total horse-power of 23.75 per cent.; and Leloutre, in recent experiments under various conditions, at the same place, reports an economy of 15 to 25 per cent. in favor of steam-jacketing. M. Cornut, an eminent French engineer, reports, as the result of a careful trial, that a saving of 15 to 20 per cent. can be obtained by the employment of a well-constructed jacket, receiving its steam direct from the boiler, when the steam is cut off at $\frac{1}{4}$ to $\frac{1}{16}$ of the stroke from the beginning.

The Belgian commissioners for the inspection of boilers ascribe interior corrosion, which appears in small separated circular holes, often near the centre of an otherwise perfect plate, to the presence in the feed-water of chlorides or alkaline salts, and not to acids in the water. External corrosion, which is one of the principal elements in the decay of boiler walls, they declare to be caused by the deposit on the plates of soot impregnated with sulphuric acid; the soot adheres only to damp portions of the plates.

The report of the Special Committee of the United States Board of Supervising Inspectors of Steam Vessels, in a series of experiments made in September, 1875, on the principal forms of safety-valve in use, shows that under

ordinary conditions the common safety-valve is as effectual in relieving the pressure and closing quickly as any of the special forms. The special devices were divided into six classes: reactionary, having a lip or stricture, that the reaction may push the valve farther from its seat; disk safety-valves, having a disk of greater area than the valve-opening; annular, with two seats and an annular opening; double-seated combination safety-valve, with small secondary valves, or a combination of levers; piston safety-valves, with a piston to assist the valve to rise. The rule adopted by the committee for calculating the evaporation per hour, in pounds, was as follows: Multiply the number of square feet of grate-surface by 112 for natural draught, and by 168 for forced draught. The area of valve-opening required, according to the rules of the committee, for a pressure of 70 lbs., is 10 inches. (Rankine's rule gives 12 inches; that of the English Board of Trade, 11.8; Molesworth's, 18.88; the French Government's rule, 6.75; Thurston's 1st rule, 8.3; his 2d, 29.) Common valves should be of sufficient size, but not to exceed 10 square inches; and when a greater area is required, two or more should be used. In the experiments with the common valves, the pressure gradually increased to the maximum after the valve had opened, and the valve promptly closed when the pressure fell to the point at which it was set. Several of the special forms, of larger area than the common valves, allow the pressure to increase as much as or more than the common valves before opening; and nearly all of them allow the pressure to fall below the opening point before closing again. Of the special devices Ashcroft's, Crosby's, and Richardson's reactionary valves gave the best results. For marine engines in rough weather, and for locomotives, some of the special forms may be employed to advantage.

Several devices for mechanical stoking are now in use in England. The Frisbie feeder, and Holroyd Smith's helix stoker, supply the fuel upward from the bottom of the furnace, the latter continuously. The advantages of this method are, that the gases and smoke are consumed in passing up through the burning coal. Regan's stoker, for small coal, feeds the furnace from a hopper above the bars, which rotate slowly. Regan's joggle-bar furnace, for marine engines, permits of a constant shaking of the bars, which are placed transversely, and are easily removable. Henderson's stoker has a hopper from which the crushed coal is thrown evenly upon the fire by fans, while the bars are given an oscillating motion. In Dillwyn Smith's stoker two grates are placed crosswise, one above the other, in the same fire, so that the gases escaping from the first are completely consumed in the second. In some stokers even the filling of the hopper is accomplished by mechanical means.

No important improvements have been made in mechanical appliances for street-car traction.

The use of superheated water, tried by Mr. Lamm, in America, and Mr. Bede, in Brussels, is attended with some difficulties, which render it less practicable than the other methods; fireless steam locomotives have, however, been in use for many months in New Orleans. They are built by Theodore Scheffler, of Paterson. The hot water is held in a cylinder containing 300 gallons; the whole weight of the engine, charged, is 8,700 lbs. The driving-wheels are 39 inches in diameter, and the leading-wheels 20 inches. The cylinders are $4\frac{1}{2}$ inches in diameter and 10 inches long. The valve-gear consists of the main valve, which always works at full stroke and controls the exhaust, and a steam-valve on top which controls the admission; a single link works both valves. The tank is charged from a stationary sectional boiler, the water having a temperature of 390° , which gives a pressure of 220 lbs. per square inch. The engines thus charged can draw a street-car with an ordinary load six miles, the final pressure being 40 lbs. per inch. The peculiar valve-gear, patented by Mr. Scheffler, regulates the supply of steam by the cut-off alone, the separate cut-off allowing a wider range of cut-off. Scott-Moncrieff's car, driven by compressed air, has a valve-gear which allows the compressed air to escape from the reservoir at a constantly uniform pressure, which can be varied at the will of the driver. The air is always exhausted at the atmospheric pressure, which prevents the production of excessive cold in the exhaust, which prevents also all noise, and utilizes the power to the utmost. The reservoir and machinery are by no means bulky. On the Vale of Clyde tramway the Scott-Moncrieff car performs a journey of $1\frac{1}{2}$ miles each way at every charge of air. Mekarski's compressed-air tram-car allows the pressure, at which the compressed air issues, to be regulated by the driver. Hot water is used to keep up the temperature of the exhausted air. A special cylinder is employed in starting, and the impetus acquired in descending grades is turned to account in providing additional compressed air. Mr. Lamm proposes a new kind of stored-up heat. A cylinder on the top of the car, which is filled with hot water, will inclose another cylinder containing liquid ammoniacal gas, obtained from sal-ammoniac heated by the action of the hot water, with hydrate of lime. The gas, thus generated, passes into working cylinders, and then is conducted into the hot-water chamber, imparting heat, as it is absorbed, to the water, which rises in temperature, instead of falling, during the trip. Steam propulsion, however, has on the whole proved so far the most satisfactory for street-cars. The Grantham car, in which the boiler and condensers are placed in the middle of the carriage, and the cylinders and machinery underneath, is one of the most successful form yet tried. It has two pairs of wheels, one pair for driving and one pair provided with a radial axle for preventing

strains on the curves. It can be run backward or forward, and is provided with brakes which stop it almost instantly. By an improvement a bogie truck at the opposite end from the driving-wheels reduces the rigid wheel-base to three feet, and has an apparatus connected by which the car can be guided upon the sidings without employing movable switches, and can also be turned off the rails when necessary and brought back upon them again. The exhaust steam is conducted into a copper chamber fixed in the uptake of the boiler, and expands and escapes superheated. The arrangement for condensing the steam makes the car noiseless. A comparison of expenses has been made which shows that steam tram-cars of either the Grantham or Merryweather pattern afford a saving of 33 to 50 per cent. over horse-traction. A novel device, which has been worked up by General John A. Imboden, consists in a steam motor which can be attached to an ordinary horse-car. It has four driving-wheels, with a wheel-base of four feet. It can be attached to a car by a pivot, after removing a pair of the car-wheels.

The tooth-wheel system of locomotive engine, in which cogs in a central wheel under the locomotive fit into indentations in a third track, has proved the best so far for grades too steep for the adhesion of the wheels on a smooth track. This system, which has been many years in use on the excursion roads up the Righi in Switzerland and up the side of Mt. Washington, has never until the present been utilized for goods transportation since the very infancy of steam locomotion, when, in 1811, the Englishman Blankinsop constructed a tooth-wheel locomotive which propelled a coal-train up an incline of 7 in 100. After the triumph of Stephenson's system this method of propulsion was forgotten, until, in 1852, Baldwin constructed a similar engine in America, and in the same year Marsh proclaimed his project for a tooth-wheel track up Mt. Washington, with an inclination of 1 in 3; this scheme was treated as the greatest folly, and it was not until 1868 that it was carried out. In the mean time Riggensbach had been advocating a railroad up the Righi, and when it was known that the American road had been built, his scheme was first listened to. In 1871 the Righi inclined railroad was built, according to the models patented by Riggensbach in 1862. Between two ordinary rails is a third one, similar to a ladder, with teeth, in which the cogs of the toothed wheel catch. The power required to pull the train, with this arrangement, is considerably less than where the propulsion is by friction, and the weight of the engine can be greatly reduced. An incline of 1 in 4 can be ascended with a tooth-wheeled locomotive, and on lesser grades a much greater load can be drawn. This system has lately been employed on the Höllenthal Railroad in Germany. The engines are calculated to draw $3\frac{1}{2}$ times their weight up a grade of 5 in 100. The

locomotives are constructed to run on ordinary roads by means of common driving-wheels, the toothed wheel remaining then idle. The velocity, when the toothed wheel is in use, is much less than on the level road, but the ascent is made in as short a time as, or shorter than, if the road had been built with an ordinary grade in a serpentine course, while the amount of fuel consumed, the wear and tear of the machinery and road, and the cost of construction, are very much lessened.

The great importance of the continuous system of railway brakes to the security of the traveling public is being recognized in Europe, where continuous brakes have not yet been generally introduced. The Governments of Germany, Great Britain, and Belgium instituted experiments on the different forms of brake offered in the market, which have been performed within the year, and the general results of which are given below. The Smith and Westinghouse brakes, which are rivals for the supremacy, are both of them American inventions; the former has been some time in use in England. The report of a Belgian commission appointed to examine into the merits of safety railroad brakes designates the Westinghouse automatic and Smith's vacuum brakes as the most perfect. The Westinghouse in five experimental trips brought the train to a standstill in an average distance of 781 feet, while running at an average speed of 39 miles an hour; while the vacuum brake, applied at an average rate of speed of 38.5 miles, arrested the train at an average distance of 1,153 feet: they thence calculated the retarding force of the automatic brake as 728 kilogrammetres, and of the vacuum as 437 kilogrammetres. The cost of the vacuum brake is more than 40 per cent. less than the automatic, but the commissioners consider that the difference is more than counterbalanced by the greater expense of keeping in repair and working the former, which requires a greater amount of steam and fuel. A British commission appointed for the same purpose by the Board of Trade in 1874, reported recently that it was necessary to introduce continuous brakes on British roads, without recommending any special kind. Sir Henry Tyler, who was the first to introduce this question, 12 years ago, has estimated that during the 12 years past as many as 600 deaths have resulted from railway accidents of a kind which might have been prevented by the use of continuous brakes. A case in which two trains were saved from serious accidents by the use of the Westinghouse brake occurred on the Midland Railway in August. In a trial of continuous brakes at Cassel, made at the command of the German Government, special attention was paid to the rapidity with which the brake affects the speed of a train. The experiments were made with the Westinghouse automatic, Smith's vacuum, Steel's, and Heberlein's brakes, upon a down grade and on a level, at 75 and 90 kilometres (46.6 and

55.9 miles) an hour, and other speeds, and under differing brake pressure, and other varying conditions. Under a brake pressure of 50 per cent. of the tire pressure of the wheels, on a declining grade of 1 in 125, at the speed of 46.6 miles an hour, the loss by momentum in 133 metres (437 feet) was, with the different forms, as follows: With the Westinghouse, 17.82 per cent.; Heberlein, 13.65 per cent.; Steel, 12.26 per cent.; Smith, 11 per cent. At a speed of 55.9 miles per hour, distance 656 feet on a level, the retarding effect was registered: Westinghouse, 25.74 per cent.; Steel, 21.93 per cent.; Smith, 20.4 per cent.; Heberlein, 19.96 per cent. At 46.6 miles an hour, and 87 per cent. brake pressure, the results were: Westinghouse, 59.43 per cent.; Steel, 40.85 per cent.; Heberlein, 39.67 per cent. At a speed of 46.6 miles on a level, after a distance of 984 feet, brake pressure 50 per cent., the results were as follows: Westinghouse, 54.70 per cent.; Smith, 41.89; Heberlein, 39.13; Steel, 35.13.

The wire tramway, invented by Mr. Hodgson, is a very useful contrivance for transporting light goods over short distances, which is coming into general use in England. An improvement, consisting of a peculiar kind of grip, which prevents the load from slipping on the rope when ascending or descending a grade, allows of the tramway being worked on inclines as steep as 1 in 3. It has been successfully applied to the loading and unloading of vessels whose anchorage is too distant from shore to admit of the construction of a pier. The terminus is connected with a group of piles placed in deep water; the wooden posts which support the ropes are driven at distances of 60 yards apart. The power which works the carrying ropes can be transmitted over them at the same time, so as to work the cranes at the terminus which are used in shipping or unshipping the cargo.

Laing's overhead sewing-machine is an English invention, by which the ordinary stitch of hand-sewing is reproduced, the thread passing through and around the edges of the seam. The needle is of spiral shape, passing three times around a central spindle; the thread is caught by a hook at the latter end of the needle, and by a special apparatus, when the thread on a spool is exhausted, another spool is automatically brought in place, and the needle threaded without any stoppage of the work. The stitch is precisely identical with hand-sewing, but beautifully and perfectly regular. The fabric is fed by a spiked chain with a velocity which can be regulated at pleasure; the greater the velocity the longer being the stitch, the elasticity of the needle allowing it to elongate. The length of feed can be regulated, and the depth of the edging of the seam is determined by a guard on the feeding-plates.

An English inventor, George Jenkins, has planned a system of hydraulic machinery for

lifting ships up inclined slips, by which the action is consecutive, and the injurious intermittent arrests accompanying the strokes of the ram in the ordinary apparatus are avoided. It consists of two pairs of hydraulic cylinders, one before the other; the rams of each pair are connected with a crosshead, through which the traction links pass; two posts are placed on each crosshead, connected above by a horizontal bar, in the centre of which is keyed a double segment; at one end of the horizontal shaft it is worked by a hand-lever; one arm of the segment has a weight, and the other an iron stopper attached to a chain, which fits, when the segment is lowered, between pairs of links placed at proper intervals in the traction rod. When the stopper of one pair of cylinders is lowered into position between a pair of links, and against the crosshead, the rams are set in motion, and before the stroke is completed the stopper connected with the other pair of rams is inserted between the next pair of links, the weight drawing out the first stopper as the force of the second pair of rams carries the traction rod farther and relieves the strain on the first stopper. When the second pair of rams have nearly completed their strokes, the first stopper is again lowered, and the first pair of rams, which have been in the mean time run back, carry the cradle up the distance of another interval between the links in the traction rod.

The Berlin pneumatic postal dispatch system comprises 15 stations, and 26 kilometres of tubing, which is laid about one metre below the surface of the ground. The pipes are of wrought-iron, with a diameter of 65 millimetres. Letters and cards to be sent are to have a fixed size; they are inclosed in iron boxes made to hold 20 each; 10 or 15 boxes form a train, with one behind with a leather ruffle to fill the tube and prevent the passage of any air. Exhausting machines and apparatus are placed at four of the stations. Both condensed and rarefied air, or a combination of the two, are employed in propelling the load. Steam engines of 12-horse power, two at each of the four stations, are required to condense and rarefy the air, the condensing and rarefying apparatus being connected with large reservoirs. The condensed air has a tension of three atmospheres; the rarefied air of 35 millimetres of mercury. The reservoirs are surrounded by water to cool the condensed air, which is heated by the operation to a temperature of 45° C. The velocity with which the messages are transmitted averages 1,000 metres per minute; the loads are dispatched at intervals of 15 minutes. The system is divided into two circuits, each of which is traversed in 20 minutes, including stoppages. The estimated cost of the entire work is a million and a quarter marks.

Jablochkoff, whose electrical candle already assumes a high position among artificial illuminators, has made important improvements in his

invention. He has discovered a method of subdividing the electrical current, so that a large number of small lights can be produced, whose intensity depends upon their number. In these smaller candles carbons are not used. The current can be indefinitely subdivided, and the lights made of any desired intensity, and each one is as steady and uniform as any known source of illumination. By his former process no more than eight lamps could be illuminated by an ordinary Gramme machine. His first experiment on a non-combustible substance was to pass the current generated by the dynamo-electric machine through the inner wire of a Ruhmkorff induction-coil, and allowing it to act upon small bars of kaolin, placed between the terminals of the outer coil. Obtaining a low degree of luminosity, he improved his conductors, connecting them with the edge of the kaolin bar, which became white hot, emitting a fine light, a very small portion of the substance being consumed. The light thus produced by the secondary wire of the induction-coil has the form of a luminous band, and is considerably larger than the spark produced through the Ruhmkorff coil alone. By employing different sizes of induction-coils, the intensity of the light may be varied from 1 to 15 Argand burners. When machines producing alternate currents are employed, no contact breakers or condensers are needed for the coils; around the primary wire of the Ruhmkorff coil as many secondary coils may be wound as there are lights required, and each of these may be extinguished or lighted independently.

Mr. Van der Weyd has devised an apparatus for the utilization, for photographic purposes, of the electric light generated by a magneto-electric machine. The light is placed in the focus of a parabolic reflector turned toward the object to be photographed, which has a diameter of 40 inches. The direct rays are stopped by a metal disk, while the reflected rays are concentrated on the object by a Fresnel lens (one constructed by the superposition of concentric rings of prisms), which covers the mouth of the reflector.

A new process of electro-plating has been invented by Prof. A. W. Wright, of Yale College. In a hollow vessel, from which the air has been partially exhausted, are placed opposite to each other the two poles of an induction-coil, between which the article to be electro-plated is suspended. A small piece of the metal which is to be deposited on the article is attached to the negative pole. Grove cells of 3 to 6 inches are used to produce a spark 2 to 3 inches long, which renders gaseous, or volatilizes, a portion of the metal. The volatilized metal, as it condenses on the cooler surface of the object of glass or other material, forms a perfectly clear and even deposit, which can be made as thin or as thick as is desired by continuing the action of the electricity a shorter or longer time. By this

important new process mirrors of the most brilliant and uniform character have been produced with gold, silver, platinum, bismuth, and iron. Prof. Wright obtains curious colors from the metals, which vary according to the thickness of the deposit. Gold has been laid on in a film of only .000183 mm. in thickness, and platinum in a layer only .000174 mm. thick. Prof. Wright can produce, by his process, unalterable telescopic and heliostatic mirrors, by precipitating a layer of platinum upon silver. In the glass globe, within which the operation is performed, a vacuum is maintained with an air-pump. Iron, when thus spread in an exceedingly thin coating, exhibits a singular chemical stability, not oxidizing when exposed for several months to moist air, and withstanding for a few moments the action of nitric acid; and even when exposed to nitro-hydrochloric acid, it only exhibited the same behavior as platinum.

Mr. Egerton, who planned a ship built on pontoons, for conveying trains of cars across the British Channel, has invented a tidal pier, which will permit of trains running directly on board at any tide. His pier is built in sections, supported at the points of connection by pontoons, which are set in guides, and can be protected from the action of the waves by a breakwater. The roadway is connected with the pontoons by a huge kind of lazy tongs, which changes its position at every change in the tide, and affords a perfectly straight though not rigid road. The inventor claims that the same principle can be applied with great utility to all piers, and also to bridges; and he proposes it for the Thames, as a relief for the overcrowded London Bridge, and for the Mersey, between Liverpool and Birkenhead.

Sir William Thomson exhibited before the British Association an instrument of his invention, with which soundings can be taken on a steamer or other vessel at full speed. Ordinarily it requires half an hour's time, and a quarter of an hour's actual detention, to take a sounding of less than 100 fathoms. With this machine soundings have been made in 100 fathoms, on steamships making over 15 knots an hour, in five or six minutes. The depth is indicated by the pressure of the water upon a column of air in a glass tube, instead of by the length of line paid out. The 22-lb. sinker is attached, by a 9-foot rope, to a steel piano-wire 380 fathoms long, connected by an iron ring with the rope. The sinker is furnished, as usual, with tallow, to receive a specimen of the bottom, or an impression if it is a rocky bottom. Sir William Thomson also called attention to the necessity of having continuously-moving magnets connected with the compass on iron ships, to counteract the changes in magnetism which occur on all iron vessels in different latitudes and through the lapse of time, and also to correct the compass when it is disturbed, as frequently happens, by the firing of guns. He showed a magnetic com-

pass with an arrangement of magnets for corrections according to this principle.

William de Normanville, an English inventor, has produced a new ship's log or speed-indicator, which exhibits the vessel's rate of sailing on a dial-plate, with numbers which give the number of knots made per hour. A screw or rotator, with a shaft 12 inches long by 1 inch in diameter, is drawn after the vessel by a line about 150 feet long, which conveys the rotary motion to the indicator on the deck. The screw travels through the water about 8 feet below the surface. The mechanism of the instrument is rather complicated, but the principle is quite simple. The rotary motion of the line is communicated to an axis through a coiled spring which acts as a regulator, giving the mean rate of rotation free from sudden changes. In the middle of the axis are pivoted at their centre two arms, with weights at each end. The centrifugal action of these arms, as they diverge more or less, according to the velocity of rotation of the axis to which they are attached, compresses a set of springs connected with the arms, moving a collar on the axis, which bears, through the medium of a friction roller, on a lever connected with a small chain which moves the index.

MEHEMET ALI PASHA, the successor of Abdul Kerim Pasha, as commander-in-chief of the Turkish armies in Bulgaria, is the son of a poor trumpeter in Magdeburg, Germany, named Detroit, and was born about 1830. While yet a boy, he ran away to sea, and, during the stay of his ship at Constantinople, he escaped on board a konak belonging to Ali Pasha, the celebrated statesman. The latter afforded him his protection, and in 1850 sent him to the Military School, where Mehemet Ali distinguished himself by diligence and intelligence. He entered the army in 1853, and took part in the campaign of the Danube against the Russians. At Oltenitza he was under fire for the first time, and soon gave proofs of intrepidity and even daring, winning universal commendation. Omer Pasha noticed the conduct of the young officer, and placed him on his staff; and in this capacity he went through the Russian war, and, later, the campaigns in Montenegro, Arabia, and Bosnia. He became a colonel in 1863, and in 1865 was made a pasha, with the rank of liva or brigadier. He was employed with distinction during the insurrection in Crete, and again on the Montenegrin frontier. In 1873 he was given the chief command of the forces in Thessaly, in order to put an end to the excesses of the banditti, which had become intolerable. Mehemet Ali acquitted himself of this difficult task with great ability. He remained here until, in 1875, the insurrection broke out in the Herzegovina, when he was called to Bosnia. During the war with Serbia he had his headquarters at Sienitza. In 1877 he was intrusted with the invasion of Montenegro from the northeast. At the close of June he led his troops in forced

marches from the Montenegrin border around the southern point of Serbia, up to Nissa, from there to Sophia, and from there to the southern slope of the Balkans. Here he was met by the order to repair to Constantinople, where he arrived on July 18th. He was received by the Grand Vizier and Safvet Pasha, who led him directly to the Sultan, who announced to him his totally unexpected appointment to the chief command. On October 4th, however, he was removed to make way for Suleiman Pasha. In November he was put in command of the army of Sophia.

METALS. Allotropic Gold.—Investigations made by Julius Thomsen go to show that gold presents allotropic modifications, according to the nature of the solutions from which it is obtained, and the reagent from which it is precipitated. The modifications examined by him are gold precipitated from solution of the chloride and bromide respectively by sulphurous acid, and that precipitated from the sub-chloride, sub-bromide, and sub-iodide. These modifications differ in the amount of heat evolved by each in similar reactions. As the energy shown by the gold precipitated from solution of the chloride by sulphurous acid is less than in the other cases, this amount is taken as the standard. The energy of the gold precipitated from the bromide is greater by 3.2 heat-units, and that precipitated from the sub-chloride, sub-iodide, or sub-bromide by 4.7 heat-units per atom.

Crystallization of Metals under the Action of Galvanic Currents.—The crystallization of metals under the action of galvanic currents was the subject of a report made by Shidlovsky to the Russian Chemical and Physical Society. Placing on the object-glass of the microscope two fine metallic plates, the edges of which are about one-quarter of a millimetre distant, immersing them in a drop of water, and passing a current through, the author watched the growth of small ramified threads of metallic crystals transported from the cathode to the anode plate. The growth of these tree-like agglomerations goes on with great rapidity; their branches spread out to the anode plate, vibrate on reaching it, and collapse, while another ramified tree grows from the cathode, spreading out to the anode; this goes on until the space between the plates is filled with a spongy metallic mass. Each of the metals experimented on—lead, silver, zinc, tin, copper, and iron—gives its own characteristic ramifications, and if the two plates be of different metals, the tree has ramifications characteristic of the metal of which the anode plate is made. Gold and platinum do not exhibit any appearance of crystalline trees, nor does the crystallization appear when the anode is gold or platinum. Iron submitted to a continuous current does not show a transport of crystals, but the phenomenon appears immediately when the currents are originated by a Ruhmkorff coil or by a Holtz machine. Iron-powder sus-

pended in water undergoes a rapid motion under the influence of a strong induction-current, forming threads which spread out from the cathode to the anode plate.

New Method of obtaining Copper from Copper Pyrites.—A new process of obtaining copper from copper pyrites with the aid of two waste products is offered by Mr. H. M. Wilson. First, burnt ore from the pyrites kilns is treated with waste chloride of manganese liquor from the chlorine stills, which is pumped on to a layer of the ore several successive times. Much of the copper in the ore is thus extracted by the free acid always present in the still liquor. The chloride of copper solution is then run on to a sufficient quantity of soda-waste to convert the whole of the copper into sulphide by means of the sulphureted hydrogen disengaged from the waste. The manganese and calcium salts now in solution can easily be separated from the sulphide of copper, which is thrown on to a drainer, well washed, and afterward heated on iron plates in order to convert it into sulphate of copper, which is then treated with boiling water and allowed to crystallize. At chemical works, where the chloride of manganese liquor is treated according to Weldon's method, a modification of the above would be necessary, as that liquor could not in that case be employed. The burnt ore might be ground fine and calcined with common salt in a blind roaster furnace, and then, after separating the copper chloride by lixiviation, the treatment continued as above described.

The pyrites used in charging the burners for the above process should be treated in the following manner: The large lumps are crushed in a stone-crushing machine, and the dust and smaller portions sieved away from the larger pieces, which are then ready for use. The dust and smaller lumps are ground into a paste with water, spread on iron plates, and allowed to dry at a gentle heat. Before the mixture of pyrites and water is dry it can be marked out into the required size for charging the kilns, viz., about two inches square. The sulphur ore thus prepared has the advantage of being uniform in size, of burning spontaneously as it were, no additional heat being required to decompose it when once the burners are red-hot, and of costing no more to obtain it in that form than by adopting the ordinary process of breaking the large lumps with hammers.

A modification of the process described is being carried on on a small scale; but it is not generally known, or it would be extensively adopted, owing to the simplicity and efficiency of its nature.

Increasing the Elasticity of Metals.—Uchatius's invention of "steel-bronze" cannon rests on the observation that "all metals—lead and zinc excepted—gain an increase of elasticity, after undergoing a continuous weighting above their first limit of elasticity." Later experiments by the inventor of the steel-bronze cannon appear to show that even homogeneous

bronze is capable of a great increase of its elasticity, through simple stretching without condensation. It is only a stretching of the metals beyond their limit of elasticity, whereby the molecules, brought to a state of flow, glide over each other, and assume a wholly new position, more favorable to resistance, that causes the increase of elasticity. A simple condensation produces merely an increase of the absolute solidity and diminution of the tenacity, but no real increase of elasticity. The limit of elasticity may be raised nearly to the breaking consistence, so that, in many cases, it is six and seven times the original. Mere stretching for a short time is of little use; the tension must last a considerable time. It is also well to apply a gradually-increasing weight.

New Method for Toughening and Hardening Copper.—In order to add hardness, toughness, and homogeneity to copper and copper alloys, Mr. W. E. Everett, of Birmingham, takes oxide of manganese—preferably the black oxide—in a state of fine powder, in the proportion of from 1 to 6 parts by weight to 100 parts of the copper or the alloy to be operated on. He puts the two together into the melting-pot, and when the copper is melted, stirs the oxide of manganese well into it. When the dross and scum have risen to the surface, the copper or alloy is ready to be poured into moulds. In treating brass he proceeds as described with respect to copper, adding the required percentage of zinc to the melted copper. The alloys of copper to which the invention is specially applicable are alloys of copper and zinc, but it may be applied to all alloys of which the essential metal is copper. Besides rendering copper and alloys of copper tougher, harder, and more homogeneous, the treatment described facilitates the rolling of alloys of copper at a red heat, and thereby effects an economy of time and labor in the rolling process. Copper and brass treated according to the invention are admirably fitted for the manufacture of steam boiler-tubes, bearing shafts or axles, axle-boxes, sheathing for ships, and bolts and nails for the same, as well as for sheet-brass and brass-wire. Although in practice he has found the native black oxide of manganese to answer well, yet he does not limit himself to the use of that particular compound of manganese, as other oxides of that metal, or compounds which on being heated yield oxide of manganese, may be employed with like results.

Wearing Qualities of Aluminium.—The comparative resistance of aluminium to change of color and wear, when brought into daily use, has been made the subject of observation by Dr. O. Winkler, who finds that it is inferior to silver in retaining color and lustre, being about on a par in that respect with German silver; while it wears more rapidly than silver, but less rapidly than German silver. Spoons made of all three materials, each having exactly the same weight, were used a year under precisely similar conditions, being

placed in the same soups, sauces, sour salads, etc., and exposed alike to hot, acid, and alkaline solutions, and subjected to similar methods of cleaning. The aluminium turned to a dead bluish-gray color, and lost its lustre; the German silver changed to a grayish-yellow; the silver lost only in color, retaining its lustre. Weighed at the end of the year, the silver spoon had lost 0.403 per cent., the aluminium spoon 0.630 per cent., and the German-silver spoon 1.006 per cent. For small coins, Dr. Winkler thinks that aluminium is to be preferred to either nickel or silver alloys.

Nickeliferous Iron Ores of Brazil.—An analysis of some native iron from Brazil, made by M. Damour, shows an extraordinarily high proportion of nickel, namely 38 per cent., or considerably above the ordinary proportion in meteoric iron. The metal, which has a very fine grain, and a lustre like that of steel, exhibits the so-called Widmanstätten figures when its polished surface is acted on by an acid. Strange to say, it resists for an indefinite length of time the combined action of air and water, without showing the least sign of oxidation. The results of Damour's experiments with this iron having been laid before the Paris Academy of Sciences, Boussingault remarked that, according to Berzelius, meteoric iron is not oxidizable by moist air. He also called attention to certain experiments he had himself formerly made with a view to render iron unoxidizable by incorporating with it nickel. Having added successively 5, 10, and 15 per cent. of nickel, he very unexpectedly found that the alloy was more oxidizable than pure iron. But if 38 per cent. of nickel—the proportion found in the iron from Brazil—be added, the alloy is absolutely unoxidizable. M. Stanislas Meunier hereupon observes that if Berzelius's proposition be true then Boussingault's explanation is insufficient, for in meteoric irons the nickel is in the proportion of only 8 per cent., and of course they should be very oxidizable. Some specimens of the Brazil iron were presented to the Academy by M. Daubrée. They are of interest, owing to the intrusion of magnetic pyrites, or pyrrhotine, which they present. These specimens were broken off from great masses of the iron found in the province of Santa Catarina. The iron appears to be of terrestrial origin.

The Melting-points of Metals.—The following method of determining the melting-point of metals, and other good conductors of heat, is offered in *Poggendorff's Annalen*, by Dr. Himly: First a U-shaped tube, with arms about 10 centimetres long, is required, the glass of which, for the sake of durability, should not be too thin. The arms should be parallel and close to each other. The bore of the tube should not be much larger than the bulb of the thermometer employed. The metal or alloy to be experimented upon is to be cast in the form of small bars, about the same thickness as the bulb of the thermometer. Besides

this, an iron bowl or crucible is wanted, which can be slowly heated by means of a spirit-lamp or a gas-burner. The thermometer itself is made with a thin ogival bulb, which latter is chemically coated with silver. As the silver coating is very easily damaged, it is well to strengthen it with a coating of copper in the ordinary way, by means of a weak galvanic current and a solution of sulphate of copper. Before this, however, a fine annealed copper wire is to be wound round the thermometer tube a little above the bulb. The wire is then to be laid along the side of the thermometer tube and fastened to it by an India-rubber band, to avoid all jerks on the wire, as the latter is afterward to be connected with a galvanic cell. The coating of copper is allowed to extend above the point where the wire is attached, by which means a better metallic contact is insured. For the determination of the melting-points of metals, or alloys and good conductors of electricity, the copper coating may be somewhat thicker for the sake of durability, while in the case of investigations with non-conductors, the copper coating should be thin, or may be dispensed with altogether.

According to the height of the melting-point to be determined, the crucible is to be filled with mercury or some fusible alloy. To carry out the experiment, the thermometer with its attached wire is to be placed in one arm of the U-tube, and the small bar of metal to be tested in the other. The bar should be pushed in quite up to the bend, so that the bar and the bulb of the thermometer are as near together as possible without touching. A conducting wire reaching down to the bend of the tube is placed by the side of the metal bar, the wire being of such a length as to admit of being conveniently connected with a galvanic element. The whole arrangement with the U-tube is attached to a convenient support with clamp, so that the U-tube can be immersed in the bath of mercury or melted alloy. An electric bell (with galvanic element) is inserted in the circuit between the two wires attached to the thermometer bulb and metal bar respectively. The complete circuit is therefore only broken at the bend of the U-tube, and as long as this interruption lasts the bell is silent. When, however, the heating of the metallic bath in which the U-tube is immersed has gone so far that the metal bar in the tube melts, then the melted metal closes the electric circuit. At the same instant the bell rings, and the reading of the thermometer is taken. When it is considered that the thermometer and the metal bar are exposed under perfectly similar conditions to the source of heat, the accuracy of the melting-point thus determined must be self-evident. This method of experimenting is of course applicable only to substances which are conductors of electricity, and whose melting-points are such as to permit the use of a mercurial thermometer. This principle would also be applicable to metals with high melting-

points, provided the U-tube were made of some refractory material, and a suitable pyrometer substituted for the thermometer.

The New Metal Lavæsium.—The discovery of a new metal, called *lavæsium*, in honor of Lavoisier, was announced to the Bordeaux Society of Natural Sciences, by M. Prat. Lavæsium is of a silvery-white color, malleable and fusible. It forms crystallizable and colorless salts. Some of its reactions are as follows: When treated with potassa, a hydrated white precipitate is obtained, insoluble in an excess of the precipitant. Ammonia gives a precipitate very soluble in excess. Ferrocyanide of potassium gives a characteristic precipitate similar to the color of the petals of *roses du Bengale*. With hydrosulphuric acid, a brown coloration is first obtained; the precipitate afterward changes to a fawn color. Tannin gives a deep yellow-green precipitate. In the spectroscope the new metal gives: 1. In the indigo-blue two sets of characteristic lines. 2. In the bright-green two other sets of simpler lines, also characteristic. 3. Some blue, violet, and green secondary lines; in all twenty-three lines. These characteristic lines exactly coincide with those of copper, which would seem to show that the new metal contains copper. Its silvery-white color, however, and some of its reactions, especially those with ammonia and ferrocyanide of potassium, constitute properties which distinguish it from any other known metal. According to M. Prat this body is much more common than he at first supposed, it having been found in many minerals, and especially in iron pyrites.

Determination of Nickel.—A new and ready method for the estimation of nickel in pyrites and mattes is offered in the *American Journal of Science*, by Margaret S. Cheney and Ellen S. Richards. The authors point out the difficulties and disadvantages of the methods in common use. These methods require considerable analytical skill, and the operations they involve are very tedious; besides, the ore or matte to be operated on is limited to inconveniently small quantities. Among the numerous tests made by the authors for a more ready way were those depending on the solubility of the sulphates in alcohol, and upon the behavior of the oxalate; but no satisfactory results were reached in this way. Finally, a systematic series of tests were made with the phosphates, in the course of which it was found that phosphate of nickel is completely soluble, while phosphate of iron is almost insoluble, in acetic acid, in the presence of an excess of phosphate of soda. Upon this fact the authors' process is based. It is as follows:

The ore or matte is dissolved in hydrochloric acid, with the addition of a little nitric acid. All the metals of the arsenic and copper groups, if present, are separated by means of hydrogen sulphide. The filtrate is boiled to drive off the excess of hydrogen sulphide, the iron is oxidized by nitric acid, and ammonium hydrate is added until a permanent precipitate begins to form, but not until complete pre-

cipitation is effected. Acetic acid is then added until the precipitated ferric hydrate is redissolved, and the liquid is of a deep-red color, though not transparent. To this boiling-hot solution ordinary phosphate of soda is added in excess, and the nearly white precipitate is filtered and washed with hot water containing acetic acid. The filtrate is heated nearly to boiling, and caustic potash added until the odor of ammonia is distinctly perceptible. The apple-green precipitate of phosphate of nickel is partially washed, dissolved in a little diluted sulphuric acid, the solution rendered strongly alkaline by ammonium hydrate, and the nickel precipitated by the battery. If the ore contains more than 3 per cent. of nickel, it is necessary to dissolve the precipitate of phosphate of iron in hydrochloric acid, dilute this solution somewhat, render it nearly neutral by ammonium hydrate, add 25 or 30 cubic centimetres of acetic acid, and reprecipitate by phosphate of soda. The filtrate is added to the first filtrate. The advantages of this method are: 1. The concentration of the solution. It may contain 10 to 15 grammes of ferric oxide in a half litre, instead of 1 gramme as in the basic acetate method, and thus larger quantities of a poor ore may be operated on. 2. A great saving of time. The nickel may be weighed in 8 or 10 hours from the time the ore is pulverized and ready for solution. This saving of time is mainly due to two causes: 1. Less care is required in case of precipitating as phosphate than as basic acetate. 2. In precipitating phosphate of nickel by caustic potash it is not necessary to concentrate the solution nor to expel all the ammonia as is the case in precipitating as hydrated oxide. An unexpected advantage is the more ready battery precipitation of the nickel from the solution of the phosphate. Two of the so-called quart carbon cells, each half filled with the solutions (bichromate of potassium and sulphuric acid) were found quite sufficient to precipitate the nickel completely in 2 hours. If a strong current was used, the nickel was precipitated in a black, spongy form. A solution containing .375 gramme Ni as chloride, and 1.183 gramme Fe as chloride, was made up to 250 c. c.:

	Found.	Theory.	Per cent.
100 c. c. of which.....	.1486	.150	99.06
100 c. c. ".....	.149	.150	99.88
50 c. c. ".....	.0748	.075	99.73

To the first portion, the phosphate of soda was added first, and the acetic acid afterward.

METHODISTS. I. METHODIST EPISCOPAL CHURCH.—The following is a summary of the statistics of the Methodist Episcopal Church, as they are given in the "Annual Minutes of the Conferences" for 1877:

CONFERENCES.	Traveling Preachers.	NUMBERS IN SOCIETY.		
		Members.	Probationers.	Totd this Year.

The traveling preachers are classified as follows: Preachers on trial, 1,065; in full connection, 8,292; supernumerary, 719; superannuated, 1,193. The footings of other items of the statistics are as follows: Number of local preachers, 12,537; of Sunday-schools, 19,868 $\frac{1}{2}$; of teachers in the same, 216,902; of Sunday-school scholars, 1,493,718; of baptisms of children, 55,834; of adults, 76,248; number of churches, 16,200 $\frac{1}{2}$, valued at \$70,239,441; number of parsonages, 5,355, valued at \$9,175,480.

The *Theological Institutions* of the Methodist Episcopal Church include 4 regular theological schools in the United States, viz.: the Boston University School of Theology, founded at Concord, N. H., as the Methodist General Biblical Institute, in 1847, and removed to Boston, Mass., in 1867, which had, in 1877, 6 professors, 108 students, and 5,000 volumes in its library; the Garrett Biblical Institute, Evanston, Ill., founded in 1855, which had 5 professors, and several non-resident lecturers, with a working-library of 3,500 volumes, and a reference-library of 30,000 volumes; Drew Theological Seminary, Madison, N. J., founded in 1867, which had 6 professors; and the Scott Centenary Biblical Institute, Baltimore, Md., opened in 1872. Theological classes are also taught in several of the colleges and academies of the Church. Two theological schools are in successful operation in connection with the missions of the Church, viz.: the Martin Mission Institute, Frankfurt-on-the-Main, Germany, founded at Bremen in 1858, and removed to Frankfurt in 1863, having 2 professors and 13 students, and property valued at \$30,000; and the India Conference Theological Seminary, at Barulley, India, having a principal, or director, property valued at \$15,000, and a scholarship endowment of \$55,000. Other theological institutions are in contemplation, to be connected with various missions, and nearly all of the missions already report small classes who receive theological instruction from the missionaries.

The fifty-ninth annual meeting of the *General Committee of the Missionary Society of the Methodist Episcopal Church* was held in New York City, beginning November 14th. The treasurer of the Society reported that his total receipts for the year ending October 31, 1877, had been \$628,977.25, showing an increase of \$34,788.37 over the receipts of the previous year, and his total expenditures had been \$560,055.40. Of the expenditures, \$258,781.27 were on account of foreign missions, and \$254,927.60 on account of domestic missions. The amount of the indebtedness of the Society had been diminished by \$92,979.70 during the year, and stood on November 1, 1877, at \$169,375.86. The total amount of appropriations for the ensuing year was fixed at \$676,907.

The tenth anniversary of the *Freedmen's Aid Society* of the Methodist Episcopal Church was held at Springfield, Mass., December 10th. The total receipts of the Society for the year ending July 1, 1877, were \$70,269.44, and its total

expenditures for the same period were \$70,-442.65. The amount of \$652,449.55 had been collected and disbursed during the ten years of operation.

The annual meeting of the *General Committee of Church Extension* was held in Philadelphia, Pa., November 21st and 22d. The corresponding secretary of the Society reported that his receipts for the first ten months of the year 1877 had been \$109,003.15 of funds available for use, against \$85,499.64 received during a similar period in 1876. The estimates for the ensuing year were fixed at the sum of \$137,000.

From a report officially published by the Book Committee of the Methodist Episcopal Church, it appears that the bishops, book-agents, and the principal editors of the Church papers at New York, Cincinnati, Chicago, and St. Louis, receive each a salary of \$3,000 a year, with an additional allowance for house-rent, varying according to locality; and that the editors of the other Church papers receive salaries ranging from \$1,500 to \$3,000, with allowances for house-rent to the editors at Syracuse, N. Y., and Atlanta, Ga.; but not to those at Pittsburg, Pa., San Francisco, Cal., and Portland, Oregon.

The eighth annual meeting of the Executive Committee of the *Woman's Foreign Missionary Society* of the Methodist Episcopal Church was held at Minneapolis, Minn., May 10th. The New England, New York, Philadelphia, Baltimore, Cincinnati, Northwestern, and Western branches of the Society were represented. The total receipts for the year had been, as far as was reported, \$67,688.37. The periodical of the Society, the *Heathen Woman's Friend*, had a circulation of 13,312 copies, and reported a balance in hand of \$1,826.62.

II. METHODIST EPISCOPAL CHURCH, SOUTH.—The annual meeting of the *Board of Missions* of the Methodist Episcopal Church, South, was held at Nashville, Tenn., May 4th. The collections for Foreign Missions for the last twelve months had amounted to \$69,000. The sum of \$78,662 was appropriated for the ensuing year—June 1, 1877, to June 1, 1878.

The sum of \$100,000 was assessed upon the Conferences for the purpose of meeting their estimates.

The following is a summary of the statistics of the Indian, German, and Foreign Missions of the Board: *Indian Mission Conference*, embracing the Cherokee, Muskogee, Choctaw, Chickasaw, and St. Paul districts: white members, 482; Indian members, 4,142; colored members, 181; local preachers, 90; adults baptized, 438; infants baptized, 459; Sunday-schools, 44; teachers in the same, 149; Sunday-school scholars, 972; amount of contributions for missions, the support of preachers, and other purposes, \$1,620.82. Two prosperous schools are situated at New Hope, Choctaw nation, and Eufala, Creek nation.

German Mission Conference of Texas and Louisiana: missions, 20; churches, 22; value

of the churches, \$78,850; members, 1,012; infants baptized, 156; members received during the year, 130; Sunday-schools, 23, with 774 scholars; missionary money collected, \$941.80. The German missions in Richmond, Va., and Baltimore, Md., reported 101 members, 2 local preachers, 3 Sunday-schools, with 30 teachers and 365 scholars, and 39 baptisms.

Cuban Mission (Spanish) at Key West, Fla.: 69 members; 35 Sunday-school scholars.

China Mission—four districts, the Shanghai, Naziang, Karding, and Soochow districts, with another, the Chingpoo district, about to be formed: 3 missionaries, 6 native preachers, 6 other native helpers, 5 churches, and 5 rented preaching-places, 104 members, 141 Sunday-school scholars, \$61.40 contributed to missions.

Mexico City Mission: 2 native traveling preachers, 1 church, 70 members, 30 children in the Sunday-school, and 65 in the day-school.

Mexican Border Mission (of the West Texas Conference): 11 stations, or circuits, 10 native missionaries, 253 members, 208 Sunday-school scholars.

Brazil Mission: 2 American missionaries; 1 church of English-speaking American emigrants, at Santa Barbara, with 38 members. Preparations are making to prosecute the mission work among the Portuguese.

III. METHODIST PROTESTANT CHURCH.—The Methodist Protestant Church was founded, in 1830, by a number of ministers and members of the Methodist Episcopal Church, who withdrew from that body on account of dissatisfaction with its polity in not admitting the laymen to representation in the Annual and General Conferences, and with the Episcopal form of government. The articles of religion and order of worship were similar to those of the Methodist Episcopal Church, except that the laymen were given an equal voice with ministers in the law-making assemblies, the presiding elders and the bishops were abolished, and the election of its own presiding officer was given to each Annual Conference. The Church was divided in 1858, on a question connected with slavery. The 12th article of its constitution restricted the right of voting and being elected to office to "white ministers, preachers, and male members." A petition was presented to the General Conference sitting in that year, from the Western Conferences, for a change in the article by leaving out the word *white*. This being refused, the Western Conferences amicably suspended official relations with the other Conferences, and two General Conferences were formed, with the same name. At the General Conference of 1866, an effort was made to unite the Northern and Western branch of the Church with the Wesleyan Connection in America. To facilitate this object, the word "Protestant" was dropped from the name of the Northern branch of the Church, and the name of "Methodist Church" was assumed by it. Negotiations for a reunion of the Northern or Methodist Church with the

Southern or Methodist Protestant Church were opened in 1874, the result of which was the appointment of a commission to frame a basis of union, to meet at Pittsburgh, Pa., in October, 1875, and the call of conventions of the two bodies to meet at Baltimore, Md., in 1877, to complete the union if it should be agreed upon. The committees on the basis of union met according to their appointment, and agreed upon a basis which seems to have given satisfaction to both branches of the Church, and which has already been noticed in the *ANNUAL CYCLOPÆDIA* (see *ANNUAL CYCLOPÆDIA* for 1875).

The Conventions of the Methodist Protestant and Methodist Churches met at Baltimore, Md., May 10th. The Rev. L. W. Bates, D. D., of Maryland, was elected permanent Chairman of the *Methodist Protestant Convention*. The Rev. S. B. Southerland, of the Commission of Union of the two Churches, made a statement of the proceedings of the Commission, which was submitted, with the basis of union which had been agreed upon, to the action of the Convention. A discussion ensued upon a question concerning the powers of the Convention, which was settled by the adoption of a resolution

That the powers of this Convention are defined in the text of the legal call for its assembly, made by the requisite number of Annual Conferences, as follows:

"To make such changes in the 2d, 10th and 14th Articles of the Constitution of the Methodist Protestant Church as may be deemed by said Convention necessary, together with such other alterations in all other articles of the Constitution and Book of Discipline as they may judge proper; and for the further purpose of taking such action as said Convention may decide to be desirable, upon the basis of union agreed on by the Joint Commission of the Methodist Protestant Church."

In response to an invitation from the Methodist Convention, a Committee of Conference, consisting of seven members, was appointed, who, on the fourth day of the session, presented the following report, as embodying the result of their deliberations:

Resolved, That the basis of union agreed upon by the Joint Commission of the Methodist Protestant and Methodist Churches at Pittsburgh, Pa., be adopted, and that we interpret that basis of union on the condition of receiving members into the Church to be substantially the same as is now in the new edition of the Methodist Book of Discipline, the third item relative to children having been inserted in the published basis of union.

Resolved 1, That the matter of suffrage and eligibility to office be left to the Annual Conferences respectively; provided that each Annual Conference shall be entitled to representation in the same ratio as in the General Conference; and provided that no rule shall be passed which shall infringe the right of suffrage or eligibility to office.

Resolved, That the Joint Committee of Conference recommend to the General Convention of the Methodist Protestant Church and the General Convention of the Methodist Church, now in session, the immediate organic union of the Methodist Protestant and Methodist Churches upon the basis of union set forth in the report of the Joint Commission of the two Churches.

This report was adopted on the next day, Wednesday, May 16th, by a vote of 58 ayes to 5 nays.

The Convention of the *Methodist Church* also met in Baltimore, May 11th. The Rev. Alexander Clark, D. D., was chosen president. A committee who were appointed to ascertain and define the constitution and powers of the Convention made a report, declaring "that this Convention has been regularly constituted, according to the requirements of Article XI. of the Constitution, and that the representatives composing it are clothed with full conventional powers, and that it has power to discharge all the duties of a General Conference, in addition to the particular object for which the Convention has been assembled." The report was adopted. A committee of seven members was appointed to confer with a similar committee of the Methodist Protestant Convention, and report what action might be necessary to expedite and consummate the union of the Conventions and Churches. This committee presented, as the result of the deliberations of the joint committee, the report which has been given in connection with the proceedings of the Methodist Protestant Convention. The report was adopted, Tuesday, May 15th.

In the afternoon of May 16th, the members of the two Conventions met after the adjournment of their respective sessions, and marched in formal procession to a common place of meeting, where the two bodies were organized into one, as the General Convention of the Methodist Protestant Church. The Rev. L. W. Bates, D. D., was elected President of the United Convention. The changes in the articles of association of Adrian College, necessary to secure conformity to the new conditions, were recommended to be made as soon as they could be legally effected. The Missionary, the Ministerial, Educational, and Church Extension Boards of the Methodist Church were adopted as Boards of the General Conference of the Methodist Protestant Church, with the understanding that their charters and titles should be made at the earliest practicable moments to conform with this relationship. An obstacle to the consummation of the union appeared in North Carolina, where three Conferences, one belonging to the Southern branch and two to the Northern branch of the Church, existed in the same territory. This was adjusted by an arrangement which left the three Conferences unchanged, as to their boundaries, and secured to each the prerogative of receiving into its body, by vote, any member from any other Conference. The names, however, of the East North Carolina and West North Carolina Conferences of the former Methodist Church were changed to Deep River and Alleghany Conferences. A communication from the Bishops of the Methodist Episcopal Church calling attention to a proposed Ecumenical Conference of Methodism had been presented to

both the Conventions before the union. The Convention resolved to coöperate in the Council, and a committee of four ministers and four laymen was appointed to represent the Methodist Protestant Church in it. A committee was appointed to extend fraternal greetings to the several Methodist Conferences of Great Britain, to communicate to them the fact of the organic union of the Methodist Protestant and Methodist Churches, and invite further fraternal intercourse by visitation and correspondence. The question of suffrage and eligibility to office was left "to the Annual Conferences respectively, provided that such Annual Conferences shall be entitled to representation in the same ratio in the General Conferences, and provided that no rule shall be passed which shall infringe upon the right of suffrage or eligibility to office." A report was adopted in favor of the early establishment of a theological seminary. The several Annual Conferences, or their presidents, were requested to take measures for the celebration, in their respective districts, of the first half-century of the Methodist Protestant Church, which will take place in November, 1880. It was ordered that the first General Conference of the reunited Church should convene on the third Friday in May, 1880, and every four years thereafter; and that the ratio of representation should be two delegates—one ministerial and one lay delegate—for each 1,500 members, provided that if any district number less than 1,500 members, it should nevertheless be entitled to two representatives.

The following is a summary of the statistics of the two branches of the Methodist Protestant Church as they were published in connection with the official report of the First Convention, held in Baltimore, Md., in May, 1877:

Number of churches in the Methodist Protestant Church, 677; in the reunited Church, 1,351; value of church property in the Methodist Protestant Church, \$1,168,389; in the reunited Church, \$2,662,736.

The receipts of the *Methodist Board of Publication* at Pittsburgh, Pa., for 1876, as they were reported to the Annual Council of the Methodist Protestant Church, held at Springfield, Ohio, in July, were \$23,524, and left a profit in the hands of the treasurer of \$1,912.

The receipts of the *Board of Missions* of the Methodist Protestant Church, Springfield, Ohio, for the year ending June 30, 1877, were \$2,641; the amount of assets on hand at the close of the year was \$3,173, with liabilities of \$148.

The receipts of the *Board of Ministerial Education* of the Methodist Protestant Church, at Pittsburgh, Pa., for the year ending June 30, 1877, were \$3,182, and expenditures, \$1,908, leaving a balance in the hands of the treasurer of \$1,274. The receipts of the Board since its organization, January 19, 1866, to the time of making the report for 1877, were \$38,114, and its expenditures \$37,291; of which \$24,268 had been paid to beneficiaries. The permanent fund amounted to \$4,400; the liabilities of the Board were \$3,800. The assets of the *Board of Church Extension*, on July 3, 1877, were \$166.

IV. WELSH CALVINISTIC METHODIST CHURCH IN THE UNITED STATES.—The following is a summary of the general statistics of this Church, as they were reported to the General Assembly in September, 1877: number of synods, 6; of

ministers, 126; of churches, 161; of members, 11,000. The General Assembly met at Chicago, Ill., September 18th. The Synods of New York, Pennsylvania, Ohio, Iowa, Wisconsin, and Minnesota, were represented by equal numbers of ministers and elders, as delegates. The Rev. Rees Evans, of Cambria, Wis., was chosen moderator. The proceedings of the Assembly were conducted in the Welsh language.

V. METHODIST EPISCOPAL CHURCH IN CANADA.—The following is a summary of the statistics of this Church as compiled from the reports of the three Annual Conferences which were held in 1877:

CONFERENCE.	Members.	Probationers.	Total.
Niagara.....	8,429	1,557	10,086
Ontario.....	6,815	1,275	8,090
Bay Quinte.....	6,853	1,075	7,928
Total in 1877.....			26,104
Total in 1876.....			25,217
Increase.....			887

Total number of preachers in 1877, 270; of Sunday-schools, 394; of officers and teachers in the same, 2,976; of Sunday-school scholars, 16,346; value of church property, \$1,061,964.

VI. WESLEYAN CONNECTION.—The annual meeting of the *Wesleyan Missionary Society* was held in London, April 30th. Mr. S. D. Waddy, M.P., presided. The report stated that the home receipts for the year had been £122,630, and the foreign receipts (those from the Australasian Conference and mission districts), £23,600, making a total of £146,230. The expenditures had been £164,195. The missions of the Society were divided into two classes: 1. The missions under the immediate direction of the principal committee and the British Conference, situated in Europe, India, China, South and West Africa, and the West Indies; and, 2. Other missions of the Society having also relation to Conferences in Ireland, France, and Australasia. The missions of the former class included 328 principal stations, 389 ministers and assistant missionaries, and 81,706 full members; those of the latter class, 350 principal stations, 440 ministers and assistant missionaries, and 58,211 full members.

The mission in Ireland reported 36 ministers, and 3,611 members; that in France, 38 ministers, and 1,987 members. An increase of members was shown in Italy. In Spain the mission was threatened with interruption, but for the present a restricted liberty of worship was allowed. In Portugal, the chapels were filled, the schools were well attended, and some additional members had joined the Church. The German mission had stations in Wurtemberg, Baden, Bavaria, Austria, and Silesia, with 2 English and 20 German ministers, 2,358 members, and about the same number of scholars, with about 10,000 attendants on worship.

In all the Continental missions there were

53 ministers, with 3,902 members, 4,546 scholars, and 13,666 attendants on worship. In India and Ceylon, 90 stations were manned by 95 missionaries, with about 750 subordinate agents, 3,683 members, and 20,000 scholars. In China, 11 missionaries were reported, with about 30 subordinate agents, 301 members, and 419 scholars. In Southern Africa, 100 missionaries and 300 subordinate agents presided over colonial and mission churches, with more than 16,000 church members, 17,000 scholars, and 90,000 attendants on worship. The missions on the west coast of Africa, including the Gambia, Sierra Leone, and the Gold Coast, employed 31 missionaries and 200 agents, and reported 13,345 members, 9,499 scholars, and about 50,000 attendants. Ninety-nine missionaries labored in the West Indian islands (including British Guiana and Honduras), with 270 subordinate agents, 43,920 members, 26,980 scholars, and nearly 150,000 attendants. The High-School in Jamaica promised well.

The one hundred and fourth annual *Conference* of Wesleyan ministers met in Bristol, July 25th. The Rev. William B. Pope, D. D., was elected president. The most important subjects acted upon were those of the representation of the laity in the conference, and of temperance. A committee had been appointed at a previous conference to consider the subject of lay delegation, and prepare a draft of a scheme for such representation for the action of the conference. The scheme prepared by this committee was reviewed by the conference of 1876, referred back for revision, was modified and completed, and was finally presented. It was adopted with but few alterations. It provides for the creation of a conference of two classes, one a conference of ministers only, the other a mixed conference of ministers and laymen, to which different classes of subjects are assigned for consideration.

The number of laymen to be elected in each district is to be determined by the preceding conference. Fifteen subjects are specifically described as coming within the exclusive province of the conference when consisting of ministers only. They are such as relate to ministerial or pastoral affairs, or affect the ministerial and pastoral supervision of the connection. Fifteen other subjects, relating to missions, education, and schools, the trust funds, and other matters of kindred nature, as well as the religious observance of the Lord's Day, temperance, and proposed alterations of districts and circuits, against which there is any appeal, are assigned to the mixed conference. A provincial allocation of ministerial and lay delegates was made for the next conference, and a mixed committee was appointed, to sit during the year and report to the next conference "as to the principles by which in future the number of ministers and laymen to be elected to attend the conference shall be determined." It was decided that the complete scheme of lay

representation be brought into operation at the conference of 1878. A deputation was received, for the first time in the history of the two Churches, from the Methodist Episcopal Church, South. It consisted of Bishop E. M. Marvin and his traveling companion, the Rev. E. K. Hendrix, who had been paying an official visit to the mission stations of the Church, South, in China. The representatives of the Australasian General Conference presented a request that a representative of the British Conference be sent to the next triennial meeting of that body, which is to be held in 1878, indorsed by each of the four annual conferences which constitute the Australasian General Conference. The Rev. Dr. Gervase Smith was appointed such delegate. Of 183 candidates for admission to the ministry presented to the conference, 84 were from the mission fields, and nearly all foreigners, the products of mission work. Among them were Germans, Italians, Portuguese, Cinghalese, Chinese, Africans, and West-Indians.

Irish Wesleyan Conference.—The 96th session of the conference was held at Cork, beginning June 20th. The reports of the committees of management of the various funds were heard at meetings held previous to the opening of the conference. The united committee of the Irish Wesleyans and of the Primitive Wesleyans resolved to recommend to the conference a series of resolutions defining the terms of union, and providing for the management of all connectional interests, and the appointment of ministers to circuit work and connectional offices on terms of perfect equality. The difficulties hitherto existing in the way of union were carefully considered, and the committee recommended that mutual concessions should be made by both bodies, and earnestly desired the cordial reception of these terms by both the approaching conferences, with a view to an easy consummation of the union. These recommendations were unanimously adopted by the conference, and a sum of money was subscribed to aid in the consummation of the union. The same report was also adopted by the Primitive Wesleyan Conference. The conference was for the first time composed of ministers and laymen, the act for the admission of the laymen having been ratified by the British Conference of 1876. The Rev. Alexander McAuley, president of the conference, remarked in his opening address that he was thankful that the admission of the laymen had been effected without the loss of a single member.

METHODISTS IN FRANCE. French Wesleyan Conference.—The 24th annual session of the French Conference was held in Paris, June 22d. The following statistics of the connection were presented: number of chapels and other places of worship, 167; of pastors and candidates for the ministry, 35; of evangelists, 20; of local preachers, 106; of full members, 1,905; of persons on trial, 77; of day-schools,

12, with 409 pupils; of Sunday-schools, 53, with 322 teachers and 2,792 scholars; of attendants on worship, 9,267. The debts on chapels had been diminished by £880, but still amounted to £11,083. A scheme for the representation of the laymen in the conference had been prepared and accepted in 1874. Circumstances seeming to require that some changes be made in it, a committee was appointed to prepare a new scheme for the next conference.

VII. PRIMITIVE METHODIST CONNECTION.—The following is a summary of the statistics of this body as they were reported to the conference in June: total number of members, including those on trial, 180,634, an increase of 3,829; number of ministers, 1,020, an increase of 40; of local preachers, 15,402, an increase of 97; of class-leaders, 10,309, an increase of 97. It was computed that the returns of members in the colonies would swell the increase of members to 4,000.

The annual meeting of the *Primitive Methodist Home and Foreign Missions* was held in London, May 15th. The total income of the society for the year had been £34,494, of which £5,108 had been received from Australia, and £5,166 from Canada. In the provinces of England the society had 107 missionaries; in Wales 5, in London 4, in Scotland 8, in Ireland 9, in the Australian colonies 53 ministers and missionaries; in Canada 75, in West Africa 5, and in South Africa 2; in large towns in England 8. An increase of 800 church-members on the mission stations was reported. Seventeen new chapels and five schools had been built during the year.

The fifty-eighth annual conference of the Primitive Methodist Connection met at Scarborough, June 13th. The Rev. Thomas Smith, governor of York College, was chosen president. The total income of the book depot for the year had been £26,209, and a balance of £1,875 remained in its favor. The total number of Sunday-schools was 3,855. The number included in the Connectional Sunday-school Union was 2,181, and their total income had been £53,000, exclusive of that of many schools whose accounts were mixed up with chapel accounts. The General Chapel Committee reported that 141 chapels had been built during the year, providing sittings for 32,855 persons, at a cost of £129,374, toward which £53,125 had been contributed. The total number of chapels in the Connection was 4,113, which cost £1,871,643, and provided 787,969 sittings. A question was presented concerning the interpretation of a Connectional law which prohibits any person who has become insolvent from being an official member of the Connection without the sanction of the General Committee. One of the District Committees had interpreted the rule so as to include within its provision persons whose insolvency had occurred while they were separated from the Connection; and the General Committee had

reversed its interpretation. The case being referred to the conference, a decision was given sustaining the interpretation of the General Committee; but the law was considered defective, and the committee were directed to frame a suitable amendment during the coming year, and submit their scheme to the next conference. A letter was read from the Rev. C. H. Gough, of the Wesleyan Conference, suggesting that a fraternal address, and, if possible, a deputation, be sent to the forthcoming Wesleyan Conference. Afterward an address was decided upon to all the Methodist Conferences which were about to meet. Addresses were received from the Eastern Conference of Primitive Methodists in the United States, and from the Primitive Methodist Canadian Conference, reporting the condition of their respective Connections. An account was given of the position of the Primitive Methodist Connection in Australia, showing that it stood third in respect to numbers among the Protestant denominations. A fraternal address was for the first time in the history of the Connection received from the Society of Friends, to which a suitable reply was returned. A petition was adopted for presentation to the House of Commons against the Government's "Burials Bill;" and a resolution was passed expressing admiration of the efforts of the Right Honorable W. E. Gladstone in behalf of the Christians of the Turkish Empire.

The twenty-fourth annual meeting of the Primitive Methodist Conference in Canada was held at Aurora, beginning May 25th. The Rev. W. Bee was elected president. The following is a summary of the statistics: Number of ministers, 91; of local preachers, 284; of churches, 216; of leaders, 318; of Sunday-schools, 140; of teachers in the same, 1,211; of Sunday-school scholars, 8,725; of members, 8,008; increase of members during the year, 384; value of church property, \$349,225; ordinary income of the stations, \$30,117.

VIII. METHODIST NEW CONNECTION.—The following is a summary of the statistics of this body as they were reported to the conference which was held at Leeds, in June: Number of chapels, 458; of societies, 435; of circuit preachers, 166; of local preachers, 1,156; of members, 25,324; probationers, 3,039; of Sunday-schools, 436; of teachers in the same, 10,770; of Sunday-school scholars, 74,521. The returns showed an increase of 11 chapels, 10 societies, 1,161 members, 115 probationers, 16 Sunday-schools, 280 teachers, and 1,258 Sunday-school scholars. The increase was shared by all the mission fields, and by every district in England save two.

The Conference of the Methodist New Connection met in Leeds, June 11th. One hundred and twenty-nine ministerial and lay delegates were present. The Rev. J. Medcraft, of Nottingham, was chosen president. The total missionary income of the Connection was reported to have been £12,238, and the

expenditure £7,823. The cost of the entire trust property of the denomination was £721,354; its estimated value, £873,371; and the amount of debt upon it, £160,975. A letter was received by the president and presented to the conference from the Rev. C. H. Gough, a minister of the Wesleyan Conference, inviting the conference to send a fraternal address, and, if possible, a deputation, to the latter body, which would meet at Bristol on the 25th of July. It was decided that a respectful and fraternal reply be sent to Mr. Gough, and that the Annual Committee be requested to consider the subject of his message, and report to the next conference as to what would be the best course to pursue with reference to it. Resolutions were adopted on temperance. It was decided to present a petition to the House of Commons in favor of the enactment of a law embodying the principle of local option.

IX. UNITED METHODIST FREE CHURCHES.—The following is a summary of the statistics of this body as they were reported to the Annual Assembly in July: Number of itinerant ministers, 374; of supernumeraries, 30; of local preachers, 3,501; of leaders, 4,437; of members, 72,997; of members on trial, 6,984; of chapels, 1,311; of preaching-rooms, 208; of Sunday-schools, 1,305; of teachers in the same, 26,205; of Sunday-school scholars, 183,364. The figures show an increase of 24 ministers, 1,680 members, and 6,772 Sunday-school scholars.

The annual meeting of the United Methodist Free Churches, *Home and Foreign Missions*, was held in London, April 23d. Mr. T. Boddington, of Manchester, presided. The total income of the Society for the year had been £17,042, of which sum £4,033 had been contributed through the children. An increase was shown of £500 in the ordinary receipts over those of the previous year. The foreign stations returned, including European and native missionaries, 57 missionaries, 6,540 church members, 157 chapels and preaching-rooms, and 5,943 Sunday-scholars. The total returns of the foreign missions and the churches at home were: 350 ministers, 3,435 local preachers, 71,317 church members, 1,548 chapels and preaching-rooms, and 176,592 Sunday-scholars.

The twenty-first *Annual Assembly* of the United Methodist Free Churches met at Louth, July 25th. The Rev. Andrew Holliday was elected President of the Assembly. The missionary report showed that the total income for the year had been £17,827, a larger sum than for any previous year; of this sum, £11,898 had been for home missions, and £5,899 for foreign missions. The *Chapel Committee* reported that 30 chapels had been built, 69 chapels enlarged, and 12 schools and 11 ministers' houses built during the year, at a total cost of £82,049. The total sum of £65,174 had been subscribed toward the expense of these undertakings, and the reduction of chapel debts, the amount given to the latter purpose

being £26,339. A resolution was adopted to the effect that probationers for the ministry might be permitted to marry in their fourth year at the discretion of the Connectional Committee, but that this permission should not entitle such brethren to any emoluments beyond a probationer's salary. A fraternal address conveying greetings, etc., was adopted, to be sent to the Presidents of the several Methodist Connections, viz.: the Wesleyan Methodist, the Methodist New Connection, the Primitive Methodist, the Bible Christian, and the Wesleyan Reform Union. Replies were received from the Wesleyan and Bible Christian Conferences reciprocating the greetings and expressions of satisfaction. A resolution was introduced recommending to all the ministers of the Free Churches to discontinue the use of the term "Reverend," which excited considerable discussion, but was not acted upon. A resolution was adopted, in which, after describing the growth of ritualism, and denouncing it, the conference declared that it rejoiced that "Nonconformist churches have a clear appreciation of the perils which are thickening around them, and is convinced that the sure corrective and check to these monstrous and menacing innovations are a return on the part of the churches and people to the simple and yet vigorous religious life which has directed and built up our national character, the inalienable right of free speech, and that of private judgment on all matters of conscience, and the disestablishment, speed and complete, of the Church of England."

X. BIBLE CHRISTIANS.—The following is a summary of the statistics of this body, as they were reported to the conference which met in July: Number of local preachers, 1820; of itinerant preachers, 297; of chapels, 911; of preaching-places, 189; of full members, 30,360; of members on trial, 1,917; of teachers, 9,953; of scholars, 52,268. These figures show an increase of 1,415 members during the year.

The fifty-ninth *Annual Conference of the Bible Christians* met at Torquay, July 24th. The report of the *Missionary Society* showed that its income for the past year had been £8,849 18s. 2d., being an increase of £513 16s. 4d over the income of the previous year. The expenditures, however, had slightly increased. The subject of an increased representation of the laymen in the conference was discussed. Laymen are already admitted to the conference, and the body consists every fifth year of an equal number of ministers and laymen. It is desired to reconstitute the conference so as to obtain equal representation every year, but legal difficulties stand in the way of the immediate accomplishment of the object. Arrangements were made to seek a removal of these difficulties.

XI. INDEPENDENT METHODISTS.—The seventy-seventh annual meeting of the Independent Methodist Free Gospel Churches was held at Bolton, in July. Mr. A. Denovan was chosen

president. The financial report showed that the receipts of the Mission and Contingent fund had amounted to £248; those of the Publication department to £209; those of the Hymn-Book department to £155; and those of the Ministers' Assistance fund to £69.

MEXICO (ESTADOS UNIDOS DE MÉJICO), an independent State of North America, extending from latitude 15° to 32° 27' north, and from longitude 86° 34' to 117° west. It is bounded on the north by the United States of America; on the east by the Gulf of Mexico, Caribbean Sea, and Belize, or British Honduras; on the south by the Republic of Guatemala; and on the south and west by the Pacific Ocean.

The question of limits with Guatemala has not been the subject of any correspondence or negotiation since 1876.

In the *ANNUAL CYCLOPEDIA* for 1874 (page 551), and that for 1876 (page 539), respectively, will be found the most recent and comprehensive statistics published, concerning the area, population, etc., of Mexico.

The President of the Republic is General Porfirio Diaz, who seized the power in November, 1876, after the final overthrow of the Lerdist, and was proclaimed on the 5th of the following May.

The cabinet is composed of the following ministers: of the Interior (*ministro de gobernacion*), Licentiate Protasio Tagle; of Foreign Affairs, Licentiate I. L. Vallarta; of Finance, Señor M. Romero; of War, Licentiate and General Pedro Ogazon; of Justice, Public Worship, and Public Instruction, Licentiate Ignacio Ramirez; and of Public Works, General Vicente Riva Palacio.

The President of the Supreme Court (and thereby, according to the terms of the constitution, Vice-President of the Republic) is Señor Don Antonio Vallarta.

The Governors of the several States, etc., were as follows in 1877:

Aguas Calientes	Señor Don F. G. Hornado.
Campeachy	" " M. Castillo.

Pending the recognition of the present Gov-

ernment of Mexico by that of the United States, there is no Mexican Minister accredited to this country. Señor Zamacona is, however, acting as unofficial envoy to Washington.

The United States Minister-Plenipotentiary to Mexico is the Hon. John W. Foster; and the United States Consul-General at the capital, Dr. Julius A. Skilton.

The army comprises 5,140 horse, including 297 officers; 15,407 foot, including 765 officers; 1,463 artillery, including 148 officers; 93 coast-guard, including 22 officers; and 284 invalids, including 19 officers: total strength, 22,387.

In the absence of recent returns relating to the finances of the Republic, reference may be made to the ANNUAL CYCLOPEDIA for 1876 (page 540).

Minute and interesting details concerning the state of public instruction in the year referred to are likewise to be found in the same volume.

We are also obliged to refer to that volume for the latest commercial statistics, emanating from sources of a trustworthy character.

A report of Mr. Foster, the United States Minister to Mexico, states that there is but one railroad of any extent in Mexico, that which runs from Vera Cruz to the City of Mexico, with a branch connecting the latter place with Puebla, 292½ miles, and another branch running from within 9½ miles of Vera Cruz to Jalapa, 61¼ miles, making the entire length of the Mexican Railway, 353¾. All the other roads in the Valley of Mexico aggregate less than 50 miles. Up to 1865 the surveys only had been made, when the concession for the building of the road was transferred from native hands to an English company, by whom it was completed in 1872. The principal office of the company is in London. The road is managed by a board of 10, elected by the shareholders. The cost of the construction of the road is generalized as follows: Original stock: general shares, \$7,658,450; government shares, \$3,633,100; privileged shares, first issue, 8 per cent., \$12,770,500; second issue, 6 per cent., \$5,059,800. Bonded indebtedness: "A" bonds, 8 per cent., \$2,200,000; "B" bonds, 7 per cent., \$5,380,885. Special indebtedness, \$1,000,000. Total, \$37,702,735. The total earnings of the road during the year 1876 exceeded \$2,000,000, while the working expenses for the same period were only a fraction over \$1,300,000. The number of passengers carried over the road for the year specified was 238,932, the fares amounting to \$354,559. The freight amounted to 123,517 tons. Passenger rates from Vera Cruz to the City of Mexico, 263 miles, first class, \$16; second class, \$12.50; third class, \$7.25. Freight rates per ton over the same route: foreign goods, first class, \$76.05; native goods, \$38.02; foreign goods, second class, \$65.18; native goods, second class, \$32.59; foreign goods, third class, \$54.32; native goods, third class, \$27.16. Fifteen per cent. of the customs dues was set apart

yearly to pay the subsidy due the company on the completion of the road, but the Government, in lieu of this, has agreed to pay \$560,000 yearly for 25 years. In consequence of the steep grade of this road heavy English engines have heretofore been used thereon, but at present the American Baldwin engines are being successfully introduced, and American cars are also superseding the English make. The want of railroads is acutely felt throughout Mexico, and the subject of concessions for their construction will, it is supposed, be a leading topic at the next session of Congress. The capital for their construction must come from abroad to a large extent.

A comprehensive summary of affairs in Mexico during the last two years has been issued at the capital, from which it appears that when President Lerdo, who had succeeded Juarez as Chief Magistrate of the country, withdrew from the capital (November, 1876), after a lengthened struggle with his enemies, it was natural to suppose that, like his predecessor, he would endeavor to establish his government in some part of the Republic whence he could transmit orders, and at the same time be obeyed, although over a limited extent of territory. His first period of office terminated on November 30, 1876, according to the terms of the constitution; and the right to hold the supreme command for another period was only secured by reëlection, while he was invested with powers extraordinary by the Congress.

JORULLO VOLCANO.

The President of the Supreme Court of Justice, appointed by law to become the President of the Republic in the absence of the constitutional President, had declared that the rights of the latter had expired, and several of the States had adhered to this declaration. The President of the Supreme Court established his government in Guanajuato, the troops of which State upheld him, and it was not long before

he counted some thousands of armed men under his command.

Thus, there were three Presidents who considered themselves entitled to exercise power: Lerdo, founded upon his reelection; Iglesias, who, in the defense of his rights, in accordance with constitutional principles, opposed the reelection as being unfair, from having been effected under circumstances that offered no guarantee for free suffrage; and General Diaz, the chief of the anti-re-electionist revolution, who based his claim on the political proclamation made at Tuxtepec, a town of the State of Oajaca.

General Diaz marched from the capital, with numerous forces, toward the interior, for the purpose of attacking the troops sustaining Ig-

some few of the officers either withdrew to private life, or, like General Antillon, former Governor of Guanajuato and leader of the military movement made in favor of Iglesias, voluntarily left the Republic.

General Mendez was temporarily intrusted with the management of the affairs of government during General Diaz's absence on his military expeditions.

In order to cover the first installment of the sum owing by Mexico to the United States, according to the decision of the late International Claims Commission at Washington, a forced loan was raised, no provision having been made for that purpose in the National Treasury, and an arrangement was at once entered into with a mercantile firm of Mexico,

which, on the guarantee of the proceeds of the levy, advanced the sum, to avoid delay in its payment.

The payment was effected at the appointed time; and it was confidently asserted in Mexican circles of undoubted authority that, whoever may occupy the presidential chair in the capital of their country, the annual sum of \$300,000 would be forthcoming as it fell due, until the total amount awarded to the United States by the Commission should have been liquidated; that, under the fostering care of an honest gov-

ernment, economically administered, the national revenue could be raised from \$18,000,000 to \$20,000,000, and that this very respectable aggregate of resources would enable the Republic to meet all her liabilities.

On October 8th, \$25,000 were sent to the United States Government on account of the 1878 installment.

The total amount of the awards in favor of the United States claimants was \$4,000,000; and by the terms of the treaty made in 1868 between the two countries, Mexico is required to cancel that sum by annual payments of \$300,000.

On February 11th General Diaz returned to the capital and again took charge of the presidency; and on that and the following days the elections took place for Deputies to the Congress of the Union, for President of the Republic, and for Magistrates of the Supreme Court of Justice.

Congress assembled on the first day of April; and on May 6th, General Diaz took the oath of office and was duly inaugurated as Chief Magistrate of the Nation.

On June 19th the *Diario Oficial*, the Govern-

THE CATHEDRAL, MATAMOROS.

lesias. Such was the situation, and such the attitude of the different parties when the year 1876 was drawing to its close.

The events which marked the beginning of 1877 were of a nature rather to confirm the apprehensions grounded upon the experience of the year immediately preceding it, than to inspire hopes of peace and tranquillity.

The few troops still faithful to the cause of Iglesias were quickly put to flight, at Union de Adobes, by Diaz; for if the soldiers of Iglesias's government ever had formed the resolution to fight for him, they undoubtedly changed their minds afterward. The military prestige of Diaz, the numerical superiority of the army at his command, and the desire to seek an early solution of the existing difficulties, were powerful motives for the recognition of the "plan of Tuxtepec" (Diaz's plan), as the only remedy likely to prevail amid the general confusion then reigning throughout the country. All military operations may be said to have terminated with the affair of Union de Adobes already alluded to. Indeed, all the troops still remaining under arms and having served under Iglesias went over to the Diaz side; while

ment official organ, published the note of instructions sent by the Minister of War to General Treviño relative to the course he should pursue with respect to General Ord and the troops under his command. Indeed, the tenor of General Ord's instructions from the War Department, under date of June 1st, and especially the clause directing the American commander to pursue Mexican marauders, if necessary, across the Rio Grande, had provoked, as soon as they became known, a universal outburst on the part of the Mexican press at the capital, the instructions having been variously construed as dictated in contemplation either of annexation or of a movement in favor of Ex-President Lerdo, and at all events of a hostile invasion of Mexican territory. The more important features of the dispatch to General Treviño were as follows:

The United States War Department has issued an order on the 1st instant, authorizing the troops of that country to invade our national territory, with the object of pursuing the evil-doers to which it refers, to capture the same, punish them, and recover the property stolen from the United States citizens. Although the Plenipotentiary * of Mexico at Washington, who protested against that order, on account of the offense that it implies toward our country, assures the Foreign Department, by telegraph, that he has received friendly explanations from the American Government, the President thinks that the honor of the country will not be satisfied except with a modification of the said order, in such terms that it shall not be in contradiction, as it now is, with the treaties in force between Mexico and the United States, with the rules of international law, and even with the practice of civilized nations.

Mexico has celebrated with the United States an Extradition Treaty, which was published on May 20, 1862. This treaty is in full force, and you will subject your conduct to the same, whenever any criminals captured by your forces be claimed by the military or civil authorities of the neighboring Republic, and those that may have committed any of the offenses stipulated in the said treaty. . . . You will at once communicate to General Ord, or to the commander-in-chief of the United States forces on the frontier, these instructions, acquainting him at the same time with such measures as you may resort to in order to render them effective. You will also endeavor to confer with the said commander with regard to the operations to be taken in combination with him for the capture and suitable punishment of evil-doers, giving him to understand that the desires of the President on this point have no other restrictions than those imposed upon him by international law, the treaties now in force between the two countries, and the dignity of the Republic. And, as a consequence of those restrictions, you will inform the said commander that, as the Government of Mexico cannot allow a foreign force to enter the national territory without the consent of the Congress of the Union, and much less that the said force shall come to exercise such acts of jurisdiction as are expressed in the order of the United States War Department, you will repel force by force, should the invasion take place.

In dictating this extreme measure, the President of the Republic believes that he faithfully interprets the feelings of the Mexicans, if he accepts the situation in which he is placed rather than the humiliation of an offense which would reduce Mexico to the con-

dition of a barbarous country, and beyond the communion of international law. The President does not wish, however, that the attitude assumed by the soldiers of the Republic, in front of troops trespassing upon our territory, infringing international law, be reputed as an act of hostility toward the United States, but that it be considered as the exercise of the legitimate right of self-defense. Our national honor is herein interested, and it is therefore expected of your patriotism that you will act with the prudence demanded by this serious question, in order to avoid any cause of conflict between the two countries; acting, however, with due energy, and repelling with force the insult intended to be offered to Mexico by the invasion of her territory.

PEDRO OGAZON.

CITY OF MEXICO, June 18, 1877.

The bitter attacks on the American Government, elicited by the instructions to General Ord, called forth, on June 23d, a memorandum from the American Minister, the salient points of which were to the effect that the instructions to General Ord were not the announcement of a new measure on the part of the United States. The depredations committed during the past four years were not common to both sides of the frontier. Mexico took no active, no vigorous measures to prevent the depredations or punish the outlaws. Mexico frequently acknowledged its inability to discharge its duty regarding the preservation of order on the Rio Grande frontier, giving as a reason internal dissension. The instructions to General Ord were misinterpreted by the Mexican Government. Therefore, the declaration made by the Mexican Minister of War was unwarranted in officially asserting that the instructions to General Ord were in contravention of treaties between Mexico and the United States. It might have been supposed that, in the haste with which the order of the Minister of War may have been written, there was no premeditated intent to so grossly question the motives which influenced the Government of the United States; but the intent of the Executive would seem to be deliberate, when, three days after the publication of the order, the Mexican Government had inserted in its official journal the statement that the order of the President of the United States, through the Secretary of War, was brought about by the efforts of a private citizen of the United States and Mr. Lerdo, through sinister motives, and by a group of adventurers and speculators.

In a more recent note (July 27th), Minister Foster renewed his affirmation of the responsibility of the Mexican Government for the editorial declarations of its official organ, that the orders sent to the commander-in-chief of the United States troops in Texas "had been issued by the President of the United States through sinister and disreputable influences."

During an interview between Generals Ord and Treviño, at Piedras Negras, amicable and satisfactory arrangements were made for the suppression of raids. General Benavides was commissioned by the Mexican Government to

* Sr. Mariscal, accredited as minister plenipotentiary during the Lerdo administration, and consequently destitute of any recognized official character in 1877.

make a special and minute study of affairs on the border, and report such measures as might be deemed expedient for the effectual suppression of raids.

By the end of July, party spirit had almost entirely subsided, the only portion of the Republic not having yet fully recognized the authority of General Diaz being a part of the State of Guerrero, where General Alvarez, the former governor, had risen against the military gov-

ernor sent by Diaz, and driven him from the State. Peace was, however, shortly afterward restored, and Alvarez submitted on condition of the appointment of a new military governor to hold office until the elections should be held; and these took place, as usual in Mexico, without disturbance. Popular elections are there rarely participated in by more than an insignificant minority of the legal voters.

The government of General Diaz had, up to

VERA CRUZ.

the month of August, been officially recognized by those of Germany, Guatemala, San Salvador, and Italy; and the American residents were said to be most anxious for the recognition by the Washington Government, as from the suspense considerable advantage accrued to Europeans.

MICHAEL, GRAND-DUKE, the commander of the Russian army of the Caucasus, is the youngest brother of the Czar, and was born October 25, 1832. He received a military education similar to that of his brothers, and, like them, has long been invested with the highest military dignities. He is General of the Artillery, Quartermaster-General, and Imperial Adjutant-General. In 1873 he was appointed Governor-General of the Caucasus, and, as such, is responsible to none but the Emperor himself. As Governor-General he is also commander-in-chief of the troops stationed in the Caucasus, and was, as such, the nominal commander of the forces operating against Turkey in Asia. Having been married, in 1857, to Princess Cécilie of Baden, he made his residence at Tiflis, impressed upon that city the character of European civilization, and took a special interest in promoting civilization in the Asiatic dominions of Russia.

MICHIGAN. The biennial session of the Legislature convened January 3d, and contin-

ued until May 27th. Number of general acts passed, 207; local acts, 364; joint resolutions, 49. Among the latter were two for submitting to the people proposed amendments to the constitution. The first of these proposed to give to the Supreme Court the appointment of its own clerk. He is now elected by popular vote in the county in which the capital is situated. The second proposes to strike from the constitution the following: "The stockholders of all corporations and joint stock associations shall be individually liable for all labor performed for such corporation or association," and substitute, "The stockholders in all corporations and joint stock associations shall be individually liable in an amount equal to the par value of their respective shares which they own or have owned in such corporations or associations for all labor done in behalf of such corporation or joint stock association during the time of their being such stockholders." The proposed amendments are to be voted upon at the April election, 1878. Among the public acts was a very stringent one to prevent and punish cruelty to animals, also acts to preserve the purity of elections. One of these requires the ballot deposited by every person challenged as an unqualified voter to be numbered by the inspectors, so as to be capable of identification in case of a contest,

and provision is made under which the ballot is rejected from the count in case, on trial, the voter is found to have been unqualified. Another provides for punishing with fine and imprisonment persons who shall lay wagers upon the result of elections, or sell pools upon such result. Another defines and punishes bribery in elections. The following cases are specified: 1. Giving or offering money, or other thing of value, to influence votes or to induce voters to refrain from voting. 2. Agreeing to give or procure, or offering or promising to procure, or to endeavor to procure, any office, place, or employment for the like purpose. 3. Making any gift, loan, etc., in order to induce persons to procure, or endeavor to procure, the election of any person to a public office, or the vote of any voter at an election. 4. Agreeing, in consequence of a gift, loan, etc., to procure, or endeavor to procure, the election of any person, or the vote of any voter. 5. Advancing or paying money to be used for bribery, or knowingly paying or causing to be paid moneys in discharge or satisfaction of moneys so used. The penalty imposed is a fine of \$200. Candidates for office, however, are permitted to pay the reasonable cost of printing, advertising, holding meetings, procuring speakers, distributing tickets, "getting out the people" to meetings, and "bringing voters out to the polls." A similar penalty is imposed upon voters who, for a consideration, refrain from voting. Candidates are prohibited from furnishing refreshments to voters in order to influence their action, under penalty of from \$25 to \$200. The election of a voter procured by bribery or corrupt practices is declared void. The sale of spirituous liquors on election days is absolutely prohibited under penalty of fine and imprisonment. Any person who shall threaten to discharge persons in his employ in order to influence votes, "and any priest, pastor, curate, or other officer of any religious association or society, who shall impose or threaten to impose any penalty of excommunication, dismissal, or expulsion, or who shall command or advise, under pain of religious disapproval, for the purpose of influencing any voter at an election," is declared guilty of corrupt practice, and punishable by fine of from \$25 to \$200. To promise office, place, or employment under the Government of the United States in order to influence votes for United States Senator, or the endeavor to procure the same on account of any member of the Legislature having voted or refrained from voting for any person for that office, is made punishable by imprisonment not more than five years in the State-prison, or by fine not exceeding \$1,000. General acts were passed under which corporations may be formed by voluntary associates, as follows: Mutual and coöperative associations; Knights of Pythias; military companies; St. Andrew's societies; temperance reform clubs; eclectic medical societies; for the prevention of cruelty to animals; for receiving,

loaning, and investing money; land companies; coöperative savings societies. By another act, any person selling, giving, furnishing, or causing to be sold, given, or furnished to minors under 18, any intoxicating, spirituous, malt, brewed, or fermented liquors, cider, or wine, or permitting such liquor, etc., to be drunk by such minor on his premises, is made liable for actual and exemplary damages to the father, mother, guardian, master, or other person standing in the place of parent, the recovery to be not less than \$50 in any case. Druggists selling on request of parent, etc., or on the written prescription of a physician, are excepted.

The only general election for the year was for Justice of the Supreme Court and Regents of the University. For the first-named office the vote was as follows: Thomas M. Cooley, Republican, 112,653; Henry F. Severens, Democrat, 85,748; scattering, 1,195; Cooley over Severens, 26,905. For Regents the vote was: Victory P. Collier, Republican, 110,545; Geo. L. Maltz, Republican, 111,230; Anson E. Chadwick, Democrat, 87,600; John Lewis, Democrat, 87,844; scattering, 1,263. Collier over Chadwick, 22,945; Maltz over Lewis, 23,386. Mr. Collier did not qualify, and George Duffield was appointed in his place. The election of United States Senator, to succeed Thomas W. Ferry, resulted as follows:

	Senats.	House.	Total.
For Thomas W. Ferry, Republican	23	71	94
For Charles S. May, Democrat	9	23	32
Ferry's majority	62		

The balance of cash in the Treasury, September 30, 1876, was \$1,064,005.30. Receipts for the year, \$1,833,824.77. Total resources, \$2,897,830.07. Cash payments, \$2,288,058.84. Balance, September 30, 1877, \$609,771.23. The bonded debt of the State is as follows:

Bonds due July 1, 1877, bearing interest	\$46,000 00
" July 1, 1878, "	101,000 00
" January 1, 1878, "	243,000 00
" January 1, 1888, "	623,000 00
" May 1, 1890, "	357,000 00
Non-interest-bearing demands	15,149 97
Total	\$1,391,149 97

There is now on hand, applicable to this debt:

United States bonds, in hands of Fund Commissioners	\$800,000 00
Canal fund	45,000 00
Sinking fund	480,294 53
Total	\$526,294 53
Balance of debt less these items	564,855 44

The receipts into the State Treasury for the year were: For delinquent taxes, tax statements, etc., \$346,435.98; receipts into trust funds, \$164,087.31; taxes, 1876, and redemptions, \$691,127.77; specific taxes paid by corporations, \$512,904.08; interest and penalty, \$58,677.84; sales of reports, etc., \$5,458.45; received for fees in State offices, \$5,761.63; rents, \$200; St. Mary's Canal, \$24,744.38; earnings of State-prison, \$14,866.67; other items, \$8,560.66. Total, \$1,833,824.77. The debt of the State to the several trust funds is as follows:

Primary School fund.....	\$2,307,065 85
Five per cent. fund.....	811,784 14
University fund.....	447,742 23
Agricultural College fund.....	121,164 90
Normal School fund.....	53,421 32
Railroad and other deposits.....	3,334 80

Total..... \$3,244,512 74

The number of acres of lands sold during the year, the prices at which they were sold, the amount received and the amount that is still due thereon, and the class to which they belong, together with lands now in market, are as follows:

CLASS OF LAND.	Acres sold.	Purchase Price.	Amount paid.	Amount due.
Primary School.....	6,856.27	\$25,465 08	\$18,153 60	\$7,311 48
Agricultural College.....	1,884.75	5,504 25	1,417 22	4,087 03
Asset.....	507.95	4,472 04	2,236 02	2,236 02
State Building.....	City lot.	148 80	74 40	74 40
Salt Spring.....	50.00	320 00	240 00	80 00
University.....	40.00	960 00	490 00	490 00
Swamp.....	36,066.14	50,996 43	47,107 90	3,888 58
Swamp (excess on licenses).....	65.12	81 40	81 40
Swamp (homesteads patented).....	5,885.49
Total.....	50,885.72	\$87,968 05	\$69,800 54	\$18,167 51

Lands remaining, owned by the State.....	Acres. 3,049,905.46
Reserved to meet road-contracts and grants.....	1,817,084.25

Now in market..... 1,282,821.21

Under acts of 1877 and former years, the Auditor-General, September 27th, apportioned taxes to the several counties for the following purposes:

For new Capitol.....	\$132,500 00
For University.....	53,000 00
For Normal School.....	47,300 00
For Agricultural College.....	36,886 80
For State Public School.....	50,400 00
For State Reform School.....	26,500 00
For State House of Correction.....	71,258 00
For State-prison buildings and repairs.....	31,500 00
For Michigan Asylum for Insane.....	12,882 00
For Eastern Michigan Asylum for Insane.....	67,000 00
For Institution for Deaf, Dumb, and Blind.....	47,600 00
For Military Fund.....	31,794 50
For Fish Commission.....	7,000 00
For general purposes.....	450,000 00

Total..... \$1,071,021 30

Add, for indebtedness of counties..... 242,957 18

Aggregate apportionment..... \$1,313,978 48

Official reports from all the counties in the State, except nine, show the working of the law taxing dealers in distilled and malt liquors, compared with 1876, as follows:

TAXES.	1876.	1877.
Dealers assessed.....	8,942	4,867
Taxes collected.....	\$881,531 47	\$438,423 22
Taxes uncollected.....	82,821 29	43,876 45

Full returns will show about 4,000 dealers,

with an aggregate tax of about \$385,000—a decrease that speaks favorably of the operation of the law. Under the prohibitory law of 1855, which gave place to the tax-law of 1875, the liquor traffic was substantially free—prosecutions for the sale being few and convictions fewer—and no revenue aided in paying for the support of the paupers and criminals made by the traffic. The friends of regulation are hopeful of the future.

At the State election in November, 1876, an amendment of the constitution was voted upon, which struck out the provision of the constitution which prohibited the granting of a license for the sale of liquors, which had been in force twenty-five years. It was adopted by a majority of 8,072 votes.

The Commissioner of Insurance, in his report for the year ending December 31st, states the aggregate of fire and marine risks written during the year about \$5,000,000 greater than in 1876, with premium receipts reduced by \$170,000, and losses increased by \$335,000. Entire capital stock represented by companies licensed, \$40,565,042.70; admitted assets, \$96,781,279.35; surplus, as regards policy-holders, \$64,625,707.59; surplus over capital, reinsurance fund, and all other liabilities, \$22,590,366.40; total impairments of capital, \$80,627,558. Aggregates of risks, premiums, and losses, with division between Michigan and other companies, were:

COMPANIES.	Risks written.	Premiums received.	Losses incurred.
Michigan companies.....	\$12,186,235 00	\$149,890 57	\$38,570 01
Companies of other States.....	114,022,999 64	1,463,282 85	1,026,866 76
Canadian companies.....	4,423,932 21	65,955 98	95,913 89
Foreign companies.....	15,260,766 07	204,708 68	136,234 90
Aggregates.....	\$145,843,952 92	\$1,883,832 58	\$1,342,585 55

The Commissioner says: "The difference of \$541,244.03 between premiums received and losses incurred in the State cannot be considered as net profit. A deduction of the usual estimate, 33½ per cent. of the gross premiums, in addition to the losses to cover the expenses of the business, would show a net loss in this State on Michigan business for 1877, not estimating any further expense for reinsurance

on risks still in force assumed during the year."

December 31st there were 41 county or local mutual fire insurance companies doing business in the State. These companies reported a membership of 56,880, with aggregate risks amounting to \$106,036,135. These companies are not permitted to take premium notes, and their losses and expenses are paid (save a nomi-

nal membership fee) by direct assessment upon the insured. Insurance in these companies does not exceed, except in infrequent cases, \$2 on the \$1,000 at risk, and the average cost is much less.

There were, December 31st, doing business

under national and State laws, 80 national banks, 14 State banks, and 15 savings banks. From the reports of national banks made December 28th, and of State and savings banks made December 31st, the following table is compiled:

RESOURCES AND LIABILITIES.	National Banks.	State Banks.	Savings Banks.
Loans, discounts, and over-drafts	\$16,645,840 08	\$2,009,965 88	\$4,802,964 85
Bonds, stocks, and mortgages	7,454,947 87	58,444 41	885,277 84
Due from agents and banks	8,181,813 12	818,240 75	575,761 28
Real estate and fixtures	988,465 87	65,842 95	278,870 12
Current expenses and taxes paid	218,753 41	11,455 90	66,543 61
Premiums paid	115,455 48
Cash and cash items	2,992,960 55	884,804 40	884,864 88
Five per cent. redemption fund	272,820 90
Due from United States Treasurer	40,468 98
Total resources	\$31,918,026 26	\$2,843,254 85	\$6,894,282 08
Capital stock paid in	\$9,768,200 00	\$950,000 00	\$1,276,800 00
Surplus fund	2,987,082 09	133,346 40	136,223 34
Other undivided profits	1,561,413 64
Notes outstanding	5,558,606 00
Dividends unpaid	6,029 00
Individual and United States deposits	10,856,088 24	1,688,565 12	5,828,974 91
Due banks and bankers	1,045,897 25	55,958 92
Interest, premium, and exchange	67,718 16
Notes and bills rediscounted	140,997 76	14,800 00
Profit and loss	61,542 88	28,616 70
Bills payable	43,712 28
Liabilities	\$31,918,026 26	\$2,843,254 85	\$6,894,282 08

The cut of pine lumber for the year was in excess of any former year, and, reducing shingle and lath to board measure, aggregated nearly 3,000,000,000 feet. The table on page 518, compiled for the *Saginaw Courier*, comparing the cut with former years, is both suggestive and valuable. The compiler of the table, probably the best authority in the State, says: "As compared with other lumber-producing districts, Michigan produces more than double the quantity of Wisconsin, Minnesota, and the Mississippi Valley together. Our maximum doubtless has been reached, and future years will more likely show a diminution than an increase in the consumption of pine timber."

The following table, from the annual report of the State Salt Inspector, shows the product of salt for the 9 years the inspection laws have been in operation:

YEARS.	Fine.	Packers.	Solar.	Second Quality.	Total.
1869	513,989	12,918	15,246	19,117	561,988
1870	568,326	17,869	15,507	19,659	621,361
1871	655,925	14,677	37,645	19,980	728,175
1872	672,084	11,110	21,461	19,876	724,481
1873	746,702	23,671	32,267	20,706	823,346
1874	960,757	20,090	29,391	16,742	1,026,979
1875	1,027,886	10,238	24,386	19,410	1,081,865
1876	1,402,410	14,238	24,418	21,668	1,462,729
1877	1,590,841	20,858	22,949	26,249	1,560,897
Total for nine years					8,691,821
Previously manufactured					8,278,117
Aggregate to December 1, 1877					11,969,938

The cost of production has decreased from \$1.50 a barrel to 50 cents, and the price at the works from \$1.85 in 1868 to 85 cents per bar-

rel in 1877. The inspector says that a great want is now met by the manufacture of a superior quality of dairy salt, of which he gives the following analysis:

Sulphate of lime	0.57
Chloride of calcium	0.08
Chloride of magnesia	0.09
Chloride of sodium	99.03
Moisture	23

The total product of the copper mines of the Upper Peninsula, for the year ending December 31st, is given by the *Mining Journal* as 24,958 tons and 35 pounds. Total product from 1845 to 1877, inclusive, 289,188 tons. Ingot copper for 1877 (80 per cent. of product), 19,966 tons, valued at \$7,586,480. Total value of product from 1845 to 1877, \$116,928,280. Total assessments since 1845, by working mines, \$3,960,000. Total dividends paid in same time, \$21,870,600. Dividends paid in 1877, \$1,740,000.

The amount of iron ore raised and shipped in 1877, including 57,538 tons consumed by local furnaces, was 1,018,520 tons (of 2,240 lbs.), valued on board of cars at \$3,848,365. Quartz for Bessemer converters, etc., 2,399 tons, valued at \$4,678. The aggregate product of the iron mines (in ore), from 1856 to 1877—21 years—is 10,549,874 tons; and of quartz for Bessemer converters, 6,394 tons. The shipment of pig-iron from the Lake Superior furnaces in 1877 was 29,685 tons (of 2,268 lbs.), valued at \$636,385. Aggregate shipments of pig-iron from 1858 to 1877 inclusive, 684,488 tons.

The following statement of the crops of the State for 1876 was obtained by the census reported this year. A number of townships made

no report; but estimating their production of wheat by the last preceding census, it is believed 1,179,307 bushels should be added to the aggregate given below. Early in the year it was estimated that the yield of wheat for 1877 would exceed that of 1876 by 33 per cent., which was probably below the actual result.

WHEAT RAISED IN 1876:

Acres	1,135,290
Bushels	15,660,169
Average yield per acre in bushels.....	18.75

WHEAT ON THE GROUND IN MAY, 1877:

Acres	1,228,596
-------------	-----------

OTHER GRAINS RAISED IN 1876:

Corn—acres	642,524
Oats	447,223
Barley	51,318

The Fish Commissioners make report but once in two years, but the Superintendent furnishes the following summary of work for 1877: "Within the year we have hatched and distributed over 10,000,000 white-fish, and about 150,000 salmon-trout; have procured 1,500 adult grayling, and from the Hudson River, and distributed in Michigan waters, 250,000 eels. Have now on our trays, a part of the work of 1877, about 12,000,000 white-fish eggs and fry; 500,000 salmon-trout; 100,000 California salmon; 50,000 land-locked salmon; 25,000 brook-trout." Favorable results of the work of former years are reported.

The reports of the graded and primary schools made to the Superintendent of Public Instruction, for the school year ending September 3d, show an increase in the number of persons of school age, and in the attendance upon school, with a decrease in both school taxes and indebtedness. The following are aggregates of the most general interest:

Number of cities and towns.....	1,064
" school districts.....	5,947
" children between 5 and 20 years...	469,444
An increase of.....	9,636
Number of children attending school.....	357,139
An increase of.....	12,043
Percentage of attendance.....	76
Number of graded schools, 295; of ungraded schools, 5,652—total.....	5,947
Average number of months of graded and high schools, 9 7-10; of ungraded schools, 7 4-10.....	
Number of male teachers, 3,731; of female teachers, 9,220—total.....	13,001
Number of months taught by male teachers, 17,295; by female teachers, 43,886—total.....	61,181

DETROIT.

The statistics of the University of Michigan for the year were: Students, literary, 369; pharmacy, 64; law, 309; medical, 285; homœo-

pathic, 51; dental, 33; total 1,110; of whom 97 were females. The proportion of females to males scarcely varies from year to year.

Degrees conferred, pharmaceutical chemist, 28; civil engineer, 5; bachelor of science, 11; bachelor of philosophy, 19; bachelor of arts, 39; doctor of medicine, 84; bachelor of laws, 122; doctor of homœopathic medicine, 13; doctor of dental surgery, 10; second degrees, 30; total, 362. The total resources of the University for the fiscal year were \$140,203.16; expenditures, \$140,046.99; balance in treasury, \$156.17.

The number of students in the Agricultural College for the year was 154. The annual expenses of students at this institution, after deducting what is allowed them for labor, is estimated at from \$80 to \$100. The new dormitory building, to take the place of the one burned, was erected and is now occupied.

UNIVERSITY HALL, MICHIGAN UNIVERSITY, ANN ARBOR.

The students in attendance at the State Normal School for the year were 605. The State appropriated \$30,000 for building purposes, and the school is in every particular prosperous.

The report for the Michigan Asylum for the Insane shows the following facts:

Number patients under treatment September 30, 1876..	617
Received during the year.....	257
Number discharged and deceased.....	209
Number remaining under treatment September 30, 1877.....	665

Those discharged are classified as follows:

Recovered or improved.....	111
Unimproved.....	57
Died.....	41

The causation of mental disease in those admitted is classified as follows: Heredity, 5; defective organization, 16; defective training, 1; previous attacks, 15; intemperance, 13; exhaustion from vicious habits, 7; prolonged drafts on vitality from emotional disturbances, or from physical causes, not including diseases, 79; shock and fright, 3; acute or chronic bodily disorders or injuries, 16; acute or chronic diseases or injuries of the nervous sys-

tem, 5; diseases of the female sexual system, 14; puerperal, 10; epilepsy, 13; popular errors, 4; exposure in the army, 3; unassigned, 53. The number of insane in the State is estimated by the Superintendent at 1,200, and the number requiring asylum treatment about 1,000. The Eastern Michigan Asylum for the Insane, at Pontiac, was not completed so as to be ready for patients at the end of the year.

In the Asylum for the Deaf, Dumb, and Blind, 215 deaf and dumb pupils received instruction during the year, and 51 blind pupils. Cabinet-making, shoemaking, and printing are taught to the deaf and dumb boys, and basket-making and broom-making to the blind.

In the State Public School for Dependent Children at Coldwater, the whole number of students during the year was 509; apprenticed, 204; returned to counties whence they came, 17; sent to the Reform School, 2; absconded, 4; died, 30; remaining in school, 252. In the State Reform School at Lansing, the number of inmates at the beginning of the year was 242; received during the year, 123; released during the year, 103; remaining in school, 262. The percentage of those received was: American, 46; English, 2; Irish, 26; German, 13; Canadian, 19; colored, 6; unknown, 11. The pupils are mainly employed

in making shoes and chairs, and in cultivating the farm. The State House of Correction and Reformatory at Ionia was opened for the reception of prisoners, August 15, 1877. Up to December 31, 1877, there had been received by transfer from State-prison, 116; by sentence from courts, 151; discharged in that time, 59; number remaining, 208. Offenders between the ages of 16 and 25 are sent here, except where the sentence is for life.

The fiscal year at the State-prison closed September 30th. Statistics for the year, as furnished by the warden, are as follows:

Received during the year.....	408
Discharged.....	316
Transferred to State House of Correction.....	86
Died during year.....	4
Pardoned during year.....	21
Prisoners September 30, 1877.....	802
Life convicts received during year.....	3
Average length of sentence of those received during year, 3 years, 5 months, and 22 days..	
Gross earnings for year.....	\$103,590 17

MILAN IV. OBRENOVITCH, Prince of Serbia, was born September 18, 1854, and is the fourth prince of the house of Obrenovitch, that rules over Serbia. At an early age he was sent to Paris to be educated, where he re-

mained until, in 1868, he was elected Prince of Serbia, to succeed his grand-uncle, Michael III., who had been assassinated. He did not assume the government himself, however, until August 22, 1872, up to which time the government was carried on in his name by a regency of three distinguished statesmen. Even at this time the hope was expressed by the Servians that Prince Milan would succeed in establishing an independent Servian Empire free from all connection with Turkey. During the war of 1876, the more ardent Servian patriots believed the time for establishing the independence of Serbia to have come, and Prince Milan was proclaimed King of Serbia by General Tchernayeff's army. The Prince was, however, forced, by the disapprobation of the great Powers of Europe, to disavow this act. Even during the war with Turkey, rumors of conspiracies to place Prince Karageorgevitch—the representative of a rival family, and the reputed author of the assassination of Prince Michael III.—on the throne were floating about; and, after the Servian reverses of 1876, another conspiracy was said to be gaining favor, to unite Serbia with Montenegro under the rule of Prince Nicholas of that country. In 1877, Prince Milan was urged by the public feeling of Serbia to unite with Russia against Turkey, and was evidently only restrained from this step by the influence of Austria. In 1875 he married Natalie de Keshko, the daughter of a Russian officer, by whom he has one son, Alexander, born August 14, 1876.

MINNESOTA. The question of the disputed bonds outstanding against the State was, perhaps, the most important topic of public discussion during the past year. It has claimed the attention of the people of the State for nearly 20 years. The history of this matter is given in the *ANNUAL CYCLOPEDIA* for 1875, article **MINNESOTA**. It will be sufficient to state here that the bonds in question, amounting to \$2,275,000 of the \$5,000,000 being authorized, were issued in 1858, and lent to railroad companies upon the authority of an amendment to the Constitution, made in that year. Soon after receiving them the companies failed to comply with the conditions upon which the bonds were granted, and payment was refused by the State. In 1860, another amendment to the Constitution was adopted, "expunging" the amendment of 1858, and providing that "no law levying a tax, or making other provisions for the payment of principal or interest of the bonds denominated Minnesota State Railroad Bonds, shall take effect, or be in force, until such law shall have been submitted to a vote of the people of the State, and adopted by a majority of the electors of the State voting upon the same." Before this amendment was adopted, the mortgages held by the State had been purchased, and the mortgaged railroads bought by the Government at nominal prices. In May, 1871, a popular vote was taken on a proposition for

settlement by arbitration of these claims, when 21,499 votes were cast against and 9,293 in favor of the proposition, the total vote being less than half the average vote of the State.

The subject was again taken up by the Legislature in 1877, in response to the proposal, made by a holder of a large amount of the bonds, to exchange them for a new issue of bonds, and for an equitable adjustment of the interest due. The total amount of the principal and interest of the disputed bonds exceeds \$7,000,000. The act of the Legislature, approved March 1st, constituted the Governor, Auditor of the State, and Attorney-General, and their successors in office, a Board of "Commissioners of the Public Debt of Minnesota," with power "to do all acts necessary to carry into effect the provisions of this act, whether such duties are specifically prescribed, or are, in the opinion of the Board, incident to their duties." The commissioners were authorized to prepare bonds to be known as the "Minnesota six per cent. bonds," of the denomination of \$1,000 each, dated July 1, 1877, payable in 30 and redeemable in 20 years, with six per cent. interest, payable semi-annually. The terms on which these were to be exchanged for the old bonds were prescribed as follows:

Sec. 4. Whenever the commissioners of the public debt shall have notice that any holder of Minnesota State railroad bonds wishes to make the exchange of bonds provided for in this act, they shall cause to be engraved and printed such number of bonds as they may deem necessary, and when bonds are surrendered for exchange they shall cause to be executed for issue equal to \$1,750 of new six per cent. bonds for each Minnesota State railroad bond so surrendered, and for each bond having attached 35 or more half-yearly-due coupons, and all other coupons pertaining to such bond not due on the first day of July, eighteen hundred and seventy-seven (1877), said commissioners shall deliver to the party so surrendering a new Minnesota six per cent. bond, with full coupons attached, equal in amount to \$1,500, with interest from June 1, 1877, but in case there shall be less than 35 past-due coupons with any bond, the amount of new bonds given in exchange shall be reduced ratably for the missing coupons, and the new bonds so accepted shall be in full of all claims against the State on account of the principal and interest of the bonds so surrendered, and for any portion of \$1,000 that may arise in any adjustment, the commissioners may deliver a full bond and receive the difference in cash, at par, for such fraction, or, at their option, they may pay the holder of such bond or fraction the amount due him in cash at par.

Sec. 5. The difference between the amount of new bonds prepared for issue and the amount required to be delivered in exchange for each of said old bonds, being \$200, shall be reserved for the use of the State, and constitute a fund to provide for and pay interest as it may become payable on such new Minnesota six per cents. as may be issued, and the said commissioners are authorized to sell or hypothecate the bonds so inuring to the State, for the purpose of providing for such interest.

Sec. 6. That the judgments and interest due thereon, referred to and recognized by the Legislature of the State of Minnesota, by chapter one hundred and fifty-two (152) of special laws of 1867, are hereby recognized, and shall be liquidated and treated by the commissioners of the public debt in all

respects as if the Minnesota State railroad bonds had been regularly issued for the same.

Sec. 7. The faith of the State is hereby irrevocably pledged for the payment of interest on the bonds authorized to be issued by this act, at the times and in the manner herein provided, and for the final payment of all of said bonds, and for the faithful performance of all matters relating thereto, beneficial to the holder thereof, as herein provided.

The act provided that no bonds should be issued, or anything done by the commissioners, until the people, at an election to be held June 12th, should ratify an amendment to the Constitution, authorizing an appropriation of the proceeds of 500,000 acres of internal improvement land for the payment of the bonds authorized by the act. At the time appointed the people voted on the proposed amendment, when 17,324 votes were cast in favor of it, and 59,176 against. The bond settlement was, therefore, rejected by a majority of 41,852. About 47,500 voters in the State did not vote.

The prevailing sentiment of the people is manifestly against the repudiation of the disputed bonds, and the belief is general that the day of settlement is merely postponed.

The total receipts into the State Treasury during the year, including a balance of \$116,264 on hand at the beginning of the year, amounted to \$1,271,783; the disbursements were \$1,138,512, leaving in the Treasury, November 30, 1877, a balance of \$133,271. The chief sources of income were: State taxes, \$432,725; taxes from railroad companies, \$135,841; taxes from insurance and telegraph companies, \$27,473; reform school indebtedness, \$15,855; sale of sinking fund bonds, \$99,045; interest on sinking fund bonds, \$6,900; sale of pine on school lands, \$24,835; interest on permanent school fund, \$200,319; redemption of \$77,800 United States bonds and premium on gold school fund, \$80,740; sale of school lands in 1877, \$17,142; sale of school lands in former years, \$39,466; sale of university lands, \$8,451; interest on permanent university funds, \$16,744; sale of internal improvement lands, \$5,340; sale of bonds of inebriate asylum fund, \$16,162. The most important items of expenditure were: legislative, executive, and incidental expenses, \$166,403; printing, publishing laws in newspapers, paper and stationery, \$46,759; support of insane hospital, reform

SAINT PAUL.

school, deaf, dumb, and blind institute, soldiers' orphans, normal schools, and university, \$248,553; enlarging university grounds, \$7,979; inebriate asylum, \$19,150; interest on State debt, \$35,000; apportioned school fund, \$199,981; purchase of bonds for invested funds, \$318,516. The balance in the Treasury at the end of the year was \$133,271.

The total valuation of the taxable property of the State, as determined by the Board of Equalization for 1877, was \$221,000,000, an increase of \$2,500,000 over that of the previous year. The rate of State tax is two mills, and the rate for all purposes, local and general, throughout the State shows an average of about 17 mills, which is a slight increase over that of the preceding year. There was an increase of about

450,000 acres to the total taxable property since the last valuation.

The completion of the report of the commissioners of statistics is necessarily delayed for a considerable time after the close of the year. The wheat acreage of the State was 1,800,840, which produced an aggregate variously estimated at from 30,000,000 to 40,000,000 bushels. The four leading cereals—wheat, oats, rye, and barley—produced an estimated total of 75,000,000 bushels; while the total value of the products of agriculture was believed to exceed \$55,000,000. Although the soil has yielded as generously in some former years, the increased breadth of the several crops, as well as their bountiful product, distinguished the year 1877 as the grandest agricultural year of the State.

The value of flour manufactured in the State in 1877 is estimated at \$15,500,000, and that of manufactures of all kinds at \$42,600,000.

The inquiries of the commissioners have elicited information respecting a variety of sugar-cane which is cultivated on a small scale with great profit, and which, it is believed, can be made an invaluable addition to the general products of the State. The cane is said to yield from 150 to 200 gallons of sirup per acre, which is readily granulated, and experiments have shown it practicable to grow sugar and liquid products valued at \$150 per acre, while, in addition, the leaves of the plant equal in weight and value crops of the best hay as food for stock. The article has excited wide-spread interest for its many uses, and it is the prevalent conviction among inquirers that farmers can profitably produce their own sugar and sirups of a quality equal, when skillfully manufactured, to those of Louisiana. The bountiful crops of last year, coupled with fair prices, have stimulated an extraordinary demand for the cheap and productive lands of the State. Official reports from the several United States land offices show for the year a total absorption of the government domain, under the various modes prescribed, amounting to 850,000 acres, of which 410,900 were taken during the three months succeeding harvest. The same unusual demand for lands is shown by the sales of the several railroad companies, which comprise a total of 223,419 acres, more than two-thirds of which were sold during the latter half of the year. Adding the sales of the State land office, comprising those of school, internal improvement, and other State lands, amounting to 33,531 acres, a grand total of about 1,107,000 acres is shown to have been transferred to individuals during 1877. A far greater part of this is intended for immediate cultivation than was ever before devoted to practical use in a single year. The effect of this land movement has been a rapid increase in the population of the State, which is now estimated at nearly 700,000.

The returns of vital statistics show a total of 24,205 births, and 7,043 deaths, being a continuance of the rare proportion, heretofore shown, of more than three births to one death. These returns also show the deaths to have included no case of small-pox for two years prior to 1877, while of those of the latter year, 213 were caused by old age.

The report of the Superintendent of Public Instruction gives the following summary of common schools for 1877:

Total enrollment.....	162,557
Number of districts.....	3,700
Number of school-houses.....	3,141
Aggregate value of real property.....	\$2,982,516
Whole number of teachers.....	4,742
Amount of Permanent School Fund.....	\$3,378,569

The following summary of the insurance transactions within the State during the year, is given by the Insurance Commissioner:

Fire and inland risks taken.....	\$64,375,681 00
Premiums paid thereon.....	\$972,874 33
Losses incurred.....	\$367,705 26
Number life policies issued.....	1,997
Amount insured thereby.....	\$3,200,964 00
Life premiums paid, including renewals.....	\$432,667 04
Death loss incurred.....	\$259,159 78

The number of persons confined in the State-prison at the close of the year was 235, which is 23 in excess of the capacity of the prison. The current expenses for the year were \$45,075, and the earnings \$23,322, leaving a net cost to the State of \$21,753. This shows an average yearly cost per convict of \$109.86, which is a reduction of \$28 from that of the preceding year. The Governor recommends that "steps looking to the early construction of another prison be immediately taken," and that the convicts be employed in the construction of the buildings.

The number of patients in the Hospital for the Insane is 579, and the full capacity of the institution is limited to 600. "The urgent necessity for immediate action," says the Governor, "looking to the erection of another hospital, was shown in the last Legislature, but the necessary steps for the purpose were not taken. The necessity for action is now still more imperative, and as the preliminary selection of a site combining so many requisites will absorb much time, the matter will admit of no further delay. This requirement, and that of the State-prison before referred to, must of necessity take precedence of the claims of all other institutions."

The railroad facilities of Minnesota are shown in the following statement:

Chicago, Milwaukee & St. Paul:	Miles.
River Division—La Crescent to St. Paul.....	123
Hastings & Dakota Division—Hastings to Glencoe..	75
Iowa & Minnesota Division—St. Paul to State line..	127
Branch—Mendota to Minneapolis.....	9
Branch—Austin to Lyle.....	12
St. Paul & Pacific:	
Main line—St. Anthony to Breckinridge.....	207
Branch—St. Paul to Sauk Rapids.....	76
St. Vincent extension—Sauk Rapids to Melrose....	85
St. Vincent extension—Barnes northward.....	106
St. Vincent extension—Barnes to Breckinridge.....	23

St. Paul, S. & T. F.—St. Paul to Stillwater.....	174
Branches—To Hudson and S. Stillwater.....	6
Stillwater & St. Paul—White Bear to Stillwater.....	13
Minneapolis & Duluth—Minneapolis to White Bear..	15
Minneapolis & St. Louis—Minneapolis to State line..	123
Central Railroad—Mankato to Wells.....	40
Total.....	2,120

Of the above total, 1,900 miles were in operation in 1872, so that only about 220 miles have been completed since that year. About six-sevenths of the entire mileage of the State was built in the eight years from 1865 to 1872 inclusive. There is now in process of construction a narrow-gauge railroad from Wabasha to Zumbrota, a distance of about 35 miles. It is expected that the 62 miles necessary to

complete the St. Vincent extension north of Glyndon to Pembina will soon be built; that the St. Cloud branch of the St. Paul & Pacific will be extended to Alexandria; that the Worthington & Sioux Falls Railroad will be completed to the latter point; and that the Hastings & Dakota will be finished about 25 or 30 miles beyond Glencoe. These enterprises will add about 178 miles to the total length of the railroads in the State.

The Republican Convention assembled in St. Paul, September 27th, and made the following nominations: for Governor, Governor John S. Pillsbury; for Lieutenant-Governor, J. B. Wakefield; for Secretary of State, John S. Irgeus; for Treasurer, William Pfaender; for Attorney-General, George P. Wilson; and for Railroad Commissioner, W. R. Marshall. The following platform was adopted:

1. *Resolved*, That we declare our unswerving devotion to those fundamental principles which gave birth and inspiration to the great Republican party, and in behalf of which the national unity has been preserved at an incalculable cost; that the truth and value of these principles have been attested alike by the achievements of peace and the sacrifices of war, and that in their maintenance and practical enforcement abide the common hope of all men, regardless of creed, color, or nativity. We believe that with the suppression of armed resistance to the national authority the object of our late war was substantially achieved, and that pursuant to the true theory of representative government, which tolerates no subject race among its people, the several States should now be left free to manage their local affairs in their own way, subject only, upon national issues, to the constitutional and paramount authority of the United States, and we hail with gratification the efforts of a wise and patriotic President to promote sentiments of peace and fraternal concord among the people of all the States of this Union, in recognition of the broad principle of national unity, local self-government, and the equal rights of all citizens of one common country.

2. *Resolved*, That the sincere and persistent efforts of President Hayes to redeem the promises made in his letter of acceptance and inaugural message, as well as the repeated pledges of the Republican party in behalf of civil service reform, deserve the cordial support of the Republican party, and commend themselves to the best sentiment of the country at large; and believing as we do, that purity, efficiency, and economy in the administration of public affairs will be in exact proportion as honesty and capability become the qualifications for public, as they are for private service, we recognize the right to make nominations to office as the exclusive prerogative of that power which is responsible for their mismanagement, and we reprobate all unwarrantable interference therewith, as a reproach upon the character of the public service, and detrimental to the public welfare.

3. *Resolved*, That we commend the conservative financial policy by which the national currency is steadily and surely approaching a gold standard, and believe that simple persistence in the practice of that prudence and economy which have long been recognized as the essential conditions of private prosperity, coupled with the healthful business revival already resulting therefrom, now everywhere observable, will lead to that early resumption of specie payments to which both the invariable policy of the Republican party and the faith of the Government are solemnly pledged. [We also hold that all bonds or promises to pay money made by the United States prior to the passage of the Act of Congress of Feb-

ruary 12, 1874, and rightfully payable in either gold or silver coin, as the United States may elect, and that the provisions of that statute by which it is enacted, that the silver dollar shall be a tender only in sums of five dollars or less, ought to be repealed.]

4. *Resolved*, That we demand that all measures hereafter proposed by the Legislature of this State for the adjustment of the so-called State railroad bonds shall be submitted to a popular vote at a general election only, and receive a majority of all the votes cast as provided in said amendment, before it shall have any force or validity.

5. *Resolved*, That if the scourge which has happily passed away from us, has left in its trail any cases of want and suffering, or of inability to commence and carry on farming operations for want of necessary material, that such necessities should be relieved at the public expense, and that legislative aid in all such cases should be invoked and given where proper efforts have been made by the sufferers.

6. *Resolved*, That the efficiency, economy, and ability manifested during the last two years by all the executive officers of the State of Minnesota, are a source of just pride to our party and State, and alike commend their officers and the party to the confidence and support of all good men.

7. *Resolved*, That we are in favor of the remonetization of silver.

FIRST STATE NORMAL SCHOOL, WINONA.

The Prohibitionists met in Convention in Minneapolis, September 11th, and nominated the Rev. A. Willey for Governor, P. A. Jewell for Lieutenant-Governor, M. T. Anderson for Secretary of State, and J. E. Child for Attorney-General. They adopted a platform which demands of the Government complete legal suppression of the traffic in alcoholic liquors of all kinds, to be used for drinking purposes; such legislation to be secured through both national and State Governments, within their respective constitutional powers; declares that as matter of conscience they cannot vote and coöperate with political parties who favor the license system of alcoholic liquors as a beverage, believing this system to be the gigantic "crime of crimes;" favors the resumption of specie payments, the remonetization of silver, post-office savings-banks, and heartily indorses the proposed constitutional amendment of this

State, giving adult women the right to vote on all questions relating to the manufacture and sale of intoxicating liquors; and that the ballot is the right of all citizens qualified by age, irrespective of sex.

The Democratic Convention was held in St. Paul, October 2d, when the following ticket was nominated: for Governor, William Banning; Lieutenant-Governor, L. L. Ames; Attorney-General, John R. Jones; Secretary of State, P. T. Lindholm; Treasurer, John T. Meagher; Railroad Commissioner, H. W. Hill. The resolutions adopted denounced the frauds and crimes by which the people's choice for President and Vice-President was defeated; congratulated the country that President Hayes found it necessary to adopt the Democratic policy of self-government, and to abandon devices of perpetuating sectional jealousy and hatred; accused the Republican party of acting in the interest of capital against labor, by making the public debt, which was promised in legal tender, payable in coin; arraigned it for demonetizing silver, for passing the Resumption Act, for raising, expending, and wasting enormous revenues, and for adopting a high protective tariff; censured Republicans for keeping in Congress men notoriously in favor of high tariffs; and declared gold and silver the only constitutional legal tender, that resumption should come as soon as the business interest of the country would permit, that the demonetization of silver was a step backward, and that the silver dollar of the old commercial value should be restored.

The election resulted in the success of the Republican ticket. The total vote for Governor was 97,632, of which Pillsbury (Rep.) received 57,071; Banning (Dem.), 39,140; and Willey (Prohib.), 1,431; Pillsbury's majority over Banning being 17,931. At the same election the amendments to the Constitution, which had been proposed by the Legislature of 1877, were ratified by the people, and are now a part of the organic law of the State.

Section one of article four was amended so as to provide for biennial instead of annual sessions of the Legislature, no session to exceed the term of 60 days. The vote on this was 37,995 for, and 20,833 against.

Section twenty-four of article four was amended so as to read as follows: "The Senators shall be chosen by single districts of convenient, contiguous territory, at the same time that the members of the House of Representatives are required to be chosen, and in the same manner, and no Representative district shall be divided in the formation of a Senate district. The Senate districts shall be numbered in a regular series; the term of office of Senators and Representatives shall be the same as now prescribed by law, until the general election in the year 1878, at which time there shall be an entire new election of all the Senators and Representatives. Representatives chosen at such election, or at any election thereafter, shall

hold their office for the term of two years, except it be to fill a vacancy, and the Senators chosen at such election by districts designated as odd numbers shall go out of office at expiration of the second year, and the Senators chosen by districts designated by even numbers shall go out of office at the expiration of the fourth year, and thereafter Senators shall be chosen for four years, except there shall be an entire new election of all the Senators at the election of Representatives next succeeding each new apportionment provided for in this article." This was ratified by a vote of 33,072 to 25,099.

Section two of article five was amended so as to read as follows: "The returns of every election for the officers named in the foregoing section shall be made to the Secretary of State, who shall call to his assistance two or more of the judges of the Supreme Court, and two disinterested judges of the District Courts of the State, who shall constitute a board of canvassers, who shall open and canvass said returns and declare the result within three days after such canvass."

The officers here referred to are Governor, Lieutenant-Governor, Secretary of State, Auditor, Treasurer, and Attorney-General. Before amendment the Constitution required the returns of elections to be made to the Secretary of State, and by him transmitted to the Speaker of the House of Representatives, who should cause the same to be opened and canvassed before both Houses of the Legislature, and the result declared within three days after the organization of each House. This amendment was ratified by a vote of 36,072 for, to 21,814 against.

Section three of article eight of the Constitution provides that "the Legislature shall make such provisions, by taxation or otherwise, as, with the income arising from the school fund, will secure a thorough and efficient system of public schools in each township in the State." By a vote of 36,780 for, and 16,667 against, this was amended by adding the following: "But in no case shall the moneys derived as aforesaid, or any portion thereof, or any public moneys or property, be appropriated or used for the support of schools wherein the distinctive doctrines, creeds, or tenets of any particular Christian or other religious sect, are promulgated or taught."

The following amendment, being an additional section to article seven, was rejected by a vote of 32,963 nays and 26,463 yeas: "Any woman of the age of twenty-one years and upward, belonging to either of the classes mentioned in section one of this article, who shall have resided in the United States one year, and in the State for four months, next preceding any election at which the question of selling or restraining the sale, or licensing the selling, or of the manufacture of intoxicating liquors, shall be voted upon in the election district in which she then resides, shall be entitled to vote at such

election on all or any of such questions in such election district; and all laws for the registration of male voters shall apply in all respects to women voting under this section, and also to those voting under section eight (8) of this article."

The proposed amendment of section three of article ten, so as to read, "Each stockholder in any corporation shall be liable only for all unpaid installments on stock owned by him, or transferred for the purpose of defrauding creditors," was rejected by 26,020 nays, to 24,415 yeas.

In January, William Windom was reelected United States Senator for the term beginning March 4, 1877.

MISSISSIPPI. The regular session of the Legislature of Mississippi, which began on the 1st day of January, adjourned on the 1st of February. A large number of acts of a local nature were passed. Among the more important of these were several authorizing counties and cities to fund their floating indebtedness. The city of Vicksburg was authorized to compromise its bonded indebtedness by issuing 5 per cent. bonds with 50 years to run, to take the place of the "ten per cent. improvement bonds," and "the Vicksburg, Pensacola & Ship Island Railroad bonds," at a rate "not exceeding 65 cents of new indebtedness for one dollar of the old, computing for the principal of the latter only, all interest being excluded." Two new counties were created under the names of Quitman and Sharkey. An act was passed providing for a State Board of Health,

composed of two "physicians of skill and ability" from each of the six congressional districts of the State, to be appointed by the Governor, "upon the recommendation of the State Medical Association," and three others from the State at large to act as Sanitary Commissioners. The supervisors of the counties of Harrison, Hancock, and Jackson were also authorized to appoint local boards of health, to establish a quarantine "at all ports of the State in their respective counties." An act to encourage the growing of grapes and the manufacture of domestic wine allowed the sale of such wine put up, in bottles or otherwise, in quantities not less than one gallon, without payment of license-tax. It also made provision against adulteration of such wine. An act to improve the State Penitentiary authorized the superintendent to make necessary repairs at a cost not exceeding \$25,000, and transferred from the commissioners to the superintendent the authority to lease the labor of convicts. An amendment of the registration law was made, depriving county boards of registration of the power to select one of their number to register voters, and requiring the work to be done by a quorum of the board in each case, such quorum to consist of not less than two members. Some unimportant amendments to the school-laws were made, one of them requiring assessors in the several counties to make an enumeration of "educable children in their respective counties" every two years, designating age, color, and sex. An act to revise the laws relating to swamp-lands pro-

NATCHEZ-ON-THE-HILL.

vides for the appointment of a commissioner to dispose of such lands on behalf of the State.

The State tax, which in 1874 was 14 mills on the dollar, in 1875 $9\frac{1}{2}$ mills, and in 1876 $6\frac{1}{2}$ mills, has been reduced to 5 mills. Taxation has also been greatly reduced in nearly all the counties, and their indebtedness either extinguished or materially lessened. The State

debt on the 1st of December, 1876, was \$3,226,847.43, but, excluding the amounts due to school-funds and other permanent State investments, the "debt proper" was \$1,100,605.22. On the 1st of January, 1878, it was less than \$900,000, of which \$608,500 were represented by bonds. These fall due as follows: January 1, 1878, \$145,900; January 1, 1879, \$149,250;

January 1, 1880, \$81,950; January 1, 1896, \$227,150. The warrants of the State have been at par during the year. The receipts of the Treasury for the year were \$865,327.47; disbursements, \$562,084.69.

The number of "educable children" in the State is reported at 324,661, of whom 150,660 are white and 174,001 colored. Reports of attendance from 59 out of the 75 counties show 77,618 white and 69,271 colored children, or 146,884 in all in the schools during the year. The number of teachers employed was 3,761. Receipts for school purposes in 53 counties amounted to \$156,838.24; expenditures, \$443,857.35. The average number of days that schools were in session was 80.7 in cities and towns, and 77.2 outside of cities and towns.

The number of students at the University of Mississippi during the session of 1877-'78 was 391. The institution has a chancellor, 8 professors, a principal of high-school department, 4 tutors, and 4 members of the senior class acting as special tutors. At the Alcorn University for colored students there were 48 at the close of the year. It has a president and three professors. The Normal School at Holly Springs has 88 pupils. The Normal Department of Tongaloo University, which has been under the charge of State Trustees, had an average monthly attendance of 50. The American Missionary Society, which maintains the University, has refused latterly to permit the State Trustees to control the Normal Department, although it has been mainly supported by State appropriation. It is now proposed to withdraw the support and apply it elsewhere. The number of pupils at the Institute for the Blind at the close of the year was 29; at the Institute for the Deaf and Dumb, 41.

The Lunatic Asylum on the 31st of December contained 391 patients. The cost of its support for the year was \$58,900. A new wing has been added, and the capacity of the institution is sufficient for 410 inmates.

On the 1st of December there were 1,012 convicts in the State Penitentiary, of whom 112 were white and 900 colored. Of the whole number 623 were received during the 12 months preceding. The institution is in the hands of lessees who employ the convicts under a contract with the superintendent. They have also taken a contract to repair the buildings, the sum of \$22,391.56 being allowed them for the purpose and credited on their lease.

The State Convention of the Democratic party was held at Jackson on the 1st and 2d of August. Ten ballots were taken before a candidate for Governor was agreed upon, and then Governor John M. Stone was renominated. The other candidates were: for Lieutenant-Governor, W. H. Sims; Secretary of State, Kinloch Falconer; State Treasurer, W. L. Hemingway; Auditor, Sylvester Gwin; Attorney-General, T. O. Oatchings; Superintendent of Education, James A. Smith. The platform adopted was as follows:

The Democratic party of Mississippi, grateful for the success of its past efforts in the cause of reform and of just and honest government, and invoking the blessings of Heaven on their future endeavors in the same cause, do adopt and proclaim the following platform of principles:

Fidelity to the Constitution of the United States, home rule, and the preservation of the State governments, with all their reserved and guaranteed rights unimpaired.

No interference by the military power with the freedom of elections, and with the civil and political rights of citizens of the United States. The protection of the equal rights of all classes—no discrimination on account of race, color or previous condition of servitude, or birthplace, and no special legislation for the benefit of the few at the expense of the many. A strict adherence, in the selection of public agents, to the time-honored Jeffersonian standard, "Is he honest, is he capable, is he true to the Constitution?"

A continuation of the policy of retrenchment and reform so signally inaugurated by the Democratic party, and a reduction of the burdens of taxation to the lowest point compatible with an efficient execution of the laws.

Corporations of every description supervisable within constitutional limits by State authority, and subordinate to State legislation, in the interest and for the protection of the people. As the perpetuity of free government depends upon the virtue and intelligence of the people, we pledge ourselves to the maintenance of our State system of free schools.

We favor the granting of such aid as may be extended without violation of the Constitution of the United States, or departing from the established usages of the Government, to the Texas Pacific Railroad, and for the rebuilding and keeping in repair of the levees of the Mississippi River.

That upon this platform of principles and of public policy we invite the coöperation of all citizens without regard to past differences, in support of the candidates nominated by this Convention.

Resolved, That unity and harmony are essential to victory; that all independent movements are dangerous to the integrity of party organization; that all independent candidates are inspired solely by a lust for office; that they shall be treated as common enemies to the welfare of the people and avowed enemies of the Democratic party of the State of Mississippi.

Shortly after the convention an address to the people was issued by the State Executive Committee, in which the Democratic administration of the Government was reviewed and compared with that which preceded it. The Republicans held no convention and made no nominations. Consequently the election of the Democratic candidates was effected without a contest. The total vote for Governor was 97,550, of which Stone received 96,382 and 1,168 were returned as scattering. The vote on the constitutional amendment abolishing the office of Lieutenant-Governor was 49,910 for it and 15,183 against it, no returns being made on the amendment from six counties. On the amendment providing for biennial sessions of the Legislature the vote as returned was 58,112 for it and 4,005 against. A majority of the average number of votes cast for Representatives in the Legislature was necessary for ratification. As such average was 53,802, the first amendment was rejected and the second adopted. The amendment which was adopted is substituted for section 6 of ar-

ticle 4 of the Constitution, and reads as follows:

The Legislature shall meet at the seat of Government, on the first Tuesday after the first Monday in January, in the year A. D. 1878, and biennially thereafter, unless sooner convened by the Governor.

The time and place of meeting may be altered by law.

These amendments were first proposed by the Legislature of 1876, and approved and submitted to the people by the Legislature of 1877.

Considerable excitement was caused throughout the country by the attack of a mob upon Judge W. W. Chisolm, at De Kalb, in Kemper County, on the 29th of April. There had been a political and personal feud of long standing between Judge Chisolm and certain of his associates and an opposing faction headed by John W. Gully. It had broken out in exhibitions of personal violence more than once, and on the 26th of April Gully was waylaid and murdered by some unknown person. His friends believed that Chisolm and his associates had been instrumental in procuring his death, and warrants were obtained on the evidence of two negroes for the arrest of W. W. Chisolm, J. P. Gilmer, Charles Rosenbaum, and two men by the name of Hopper. The arrest of Chisolm and the Hoppers was made on the morning of April 29th, and at that time a mob of about 200 men entered the village of De Kalb. They insisted that Chisolm, who was in his own house in the custody of the sheriff, be lodged in the jail, and his wife, daughter Cornelia, and son John, a mere boy, accompanied him. When Gilmer and Rosenbaum entered the village in charge of a deputy sheriff, they were set upon by the mob and the former was killed. An attack was afterward made on the jail, during which Judge Chisolm and his daughter received wounds, which proved fatal, and the boy and a man named McClellan, one of the guards, were killed. The deed was very generally condemned, although the local feeling seems to have been strongly on the side of the Gully party. Governor Stone visited the locality a few days after the tragic event, and found everything quiet. He visited the judge of the district and requested him to hold a special term of the circuit court in Kemper County for the purpose of making a thorough judicial investigation. In a letter on the subject, written May 18th, he said:

No one justifies the act by which Judge Chisolm lost his life. Everything that is possible shall be done to arrest and punish the guilty parties. I do not hope to silence the misrepresentations of men who are making political capital out of the unfortunate affair. The South has been too long a victim of misrepresentation for your people to become willing suddenly to hear both sides before condemning.

The recent telegrams and articles that have appeared in Northern papers are based solely upon my refusal to consent to an invasion of Kemper County by a body of men from other counties. The folly of consenting to such a proposition, when no trouble was apprehended, must be apparent to every reasonable person.

No special term of the court was held, but in September the grand jury of the county found indictments against 31 persons as alleged participants in the assassination, six as principals and 25 as accessories. No trials had taken place before the end of the year.

An organization of citizens "for the suppression of lawlessness" was formed in Amite County in December, and a vigilance committee was appointed. Among the "outrages" which it avowed its determination to "put down," were "killing, burning, whipping, ordering off of plantations, intimidating, or otherwise destroying the material interests and civil rights of any person, of any color, age, sex, or condition." Speaking of complaints of lawlessness in "two or three of the Southwestern counties of the State," the Governor, in his message to the Legislature of 1878, said:

The better class of the citizens—who are greatly in the majority in these counties—are opposed to lawlessness, but are powerless to prevent it in many instances. The lawless persons operate secretly, and at night; and before their deeds have become known to those who might pursue them and bring them to justice, they have dispersed, and no trace of them can be found. These persons generally act in sparsely settled communities. Although in the minority, and composed mostly of irresponsible persons, yet these lawless elements should be made to feel the strong arm of the Government, and the guilty parties should be punished with the utmost severity. A few evil, lawless men can bring reproach upon the Government, and cause more harm to its reputation than the entire law-abiding element can repair. I ask the attention of the Legislature to the complaints from the localities mentioned, and suggest rigorous measures to bring the lawless persons to a sense of their duties. The ordinary remedies have, thus far, been inadequate to meet the emergency. It is due, not only to the State's fair name, but to the people in the immediate neighborhoods—who necessarily suffer in person and property—that the lawless bands be broken up, and that such punishment be administered as will force them hereafter to obey the laws and deport themselves as good citizens.

MISSOURI. A census was taken in 1876 by the county assessors, under a law passed in 1875, except for the county of St. Louis, where the assessor declined to act, on the ground that the compensation provided for was inadequate. The returns were made in April of this year, so that the general result was announced to the Legislature, by the Secretary of State, in the following words: "The enumeration was carefully and correctly taken, except in a few of the counties. In these the difference between the returns and the actual population may be estimated at 10,000 less than the returns show. The population of the 113 counties returned is 1,547,030, to which add the deficit of 10,000 and 33,000, the estimated population of St. Louis County, thus making the population of the State, outside the city of St. Louis, 1,590,030. Assuming the population of the city of St. Louis to be not less than 450,000, or more than 500,000, the total population of the State in August, 1876, was between 2,050,000 and 2,100,000." Calculations based

on the statistics of the city directory make the population of St. Louis over 500,000. The increase for the State, except St. Louis County, since 1870, was 176,924, or about 4½ per cent. per annum. Of the total of 1,543,495, the number of white males was 747,274; white females, 692,914; total white, 1,440,188; colored males, 50,683; colored females, 52,624; total colored, 103,307. Of the whites, 833,841 were able to read and write; of the colored population, 13,865 could read and write. Statistics of live stock and farm products are as follows:

LIVE STOCK.

Horses	648,607
Mules	176,654
Jacks	2,707
Jennets	3,002
Cattle	1,462,457
Sheep	1,108,963
Hogs	1,535,251

PRODUCTS.

Bushels of wheat	12,038,289
Bushels corn	123,328,054
Bushels oats	9,794,080
Bushels barley	801,311
Bushels rye	905,144
Pounds tobacco	41,402,156
Pounds wool	2,637,777
Pounds sugar	52,050
Tons hay	1,005,335
Tons hemp	8,479
Gallons whiskey	32,155
Gallons wine	228,034
Gallons molasses	2,443,327

The amount of property in the State subject to taxation, as adjusted by the Board of Equalization, is \$614,716,333, of which \$29,997,158 is railroad property. The tax-levy is 20 cents on the \$100 of valuation for general purposes, one-fourth of which is for the support of schools, and 20 cents for the payment of interest. The semi-annual report of the auditor, for the six months ending June 30th, showed receipts into the Treasury amounting to \$2,474,694.70, and disbursements amounting to \$2,234,828.80, for the half year, including all the various funds. The appropriations for 1877 and 1878, chargeable to the revenue fund, amount to \$2,214,621.04. The amount of school money apportioned by the State among the several counties for the year was \$539,697. The number of children of school age being 725,728, the apportionment was 74½ cents for each child.

The eighth annual report of the Superintendent of the Insurance Department, made in August, covered the business of the year 1876. The number of fire and marine companies making reports was 182, of which only 26 were organized in the State. The capital of the Missouri joint-stock companies was \$3,402,462; assets, \$4,900,908; liabilities, exclusive of capital, \$888,727; income for the year, \$1,935,744; expenditures, \$1,774,585. The mutual companies showed \$4,880,391 of assets, \$111,477 of liabilities; income, \$299,926, and expenditures, \$307,094. The business of both joint-stock and mutual companies showed: Risks, \$147,223,-203; premiums, \$2,183,024. Five insurance companies of other States received \$1,819,142

in premiums in this State, and paid \$639,580 for losses. The life insurance companies doing business in the State include three home organizations and 29 from other States. The assets of the three Missouri companies were \$8,575,-400; liabilities, \$7,963,563; income for the year, \$2,740,601; expenditures, \$3,613,863; number of policies at the close of the year, 14,-872; amount of insurance, \$37,701,952. The outside companies had 16,837 policies in the State, insuring to the amount of \$45,935,862. Their premiums collected for the year amounted to \$1,523,852; claims paid, \$848,783.

The regular biennial session of the Legislature, which began on the 1st of January, continued until the 30th of April. Resolutions were introduced and considered, submitting amendments to the constitution, which made the concurrence of nine jurors sufficient for a verdict, and payment of a poll-tax a prerequisite to the exercise of the right of suffrage; but both were defeated. An act was passed providing for the punishment, by imprisonment for not less than two years in the penitentiary, of any person "who shall knowingly vote at any election held in pursuance of the laws of the State, or any municipality thereof, when not entitled thereto." It also provides that any person attempting so to vote shall be punished by a fine of not less than \$25, or imprisonment in the county jail for not less than 30 days. An act was also passed providing for the punishment of any person who should bribe a public officer, for the purpose of influencing his official action, or in payment for any such action, and the punishment of any public officer who should accept a bribe offered for any such purpose. The penalty in the former case was imprisonment in the penitentiary for a term not exceeding seven years, and in the latter, imprisonment for not more than ten nor less than two years. Another act provides for the punishment of candidates for office who should use money, or other valuable consideration, to secure their nomination. An act was passed requiring that a majority of the Board of Directors of all railroad companies in the State should be residents of the State so long as they remain in office, and that every railroad company organized or doing business in the State shall maintain a public office, where all records of stock, and transfers thereof, shall be open to inspection. Transfers of stock in any such company, made outside of the State since the adoption of the present constitution, are declared invalid. The act of 1873, providing for the organization of counties into municipal townships, was repealed. An apportionment act was passed, redistributing the counties of the State into 13 congressional districts. A change in the school law provides that all colored schools shall be taught by colored teachers, when competent persons can be obtained. An act was passed prohibiting, under penalties, the sale of liquor to students of the State University, and of all other schools and colleges,

except by druggists on the written prescription of a regular practising physician in good standing. The office of State Entomologist was abolished.

The Southern Hotel, in the city of St. Louis, was destroyed by fire, on the morning of the 11th of April, and a number of the guests lost their lives, while many more were injured. The establishment was one of the largest and most expensive in the country. An inquest was held on 11 bodies, occupying 10 days, and involving an inquiry into the causes of the fire, and the means of preventing such disasters. The following suggestions were made in the verdict of the coroner's jury:

1. We should recommend that no hotel, or other public building, be unprovided with means for promptly extinguishing fire.

NEW COURT HOUSE, ST. LOUIS.

2. That a sufficient number of watchmen be employed to detect fire in its incipient stage, and drilled in the use of the means for extinguishing it.

3. That in all large hotels gongs or bells of sufficient power be placed in such positions as, when sounded, to be heard in every room in the house, and, on the first notice of fire, to be continuously used until every guest and employe's safety is assured.

4. That stairways and elevators be placed as far apart as possible, and that the latter be closed on every floor, either automatically, as the platform goes up and down, or at least every night after the elevator ceases running, and that said hatches be made, when practicable, of iron. Had the baggage elevator of the Southern Hotel been so provided, there is no question but that the fire would have been confined to the basement.

5. That the store-rooms, wine-rooms, laundries, carpenter-shops, and other rooms containing inflammable materials, when placed in the basement or first stories of such buildings, shall be rendered as nearly as possible fire-proof, and be closely watched

by men especially detailed for the purpose, night and day.

6. That no gas-meter be allowed inside of such buildings, and that none of such size as the large one destroyed at the Southern Hotel be permitted. Each meter should supply a set of burners, extending from top to bottom of the building, so that, should it become necessary to turn off the gas from any point then endangered, the balance of the house would not be left in darkness.

7. That, in all large cities, the building-inspectors' duties should include the regular inspection of all appliances for extinguishing fires, and that the men employed in their management are efficiently drilled, and be empowered to enforce the laws adopted for the protection of life and property from fire.

The general strike of railroad workmen in July extended to the city of St. Louis, and was the occasion of considerable disorder. On the 24th of that month, the mayor of the city issued

a proclamation, warning all persons against the "commission of acts calculated to excite disturbances and violate the public peace," and inviting "the coöperation of all good citizens in the maintenance of law and order." A Committee of Public Safety was appointed, and a special force organized for police-duty. Meetings of workingmen were held, and violent demonstrations made in the streets during the two following days, but vigorous measures and a display of armed police and military forces led to a suppression of the disorders, and the arrest of the leaders on the 27th of July, after which there was no further disturbance.

The decision of the Supreme Court of the United States in regard to the issue of township bonds under the act of 1868, made in 1876, in what was known as the Bates County case, was virtually reversed this year by the same tribunal in the Cass County case. The constitution of the State in 1868 contained the following section:

ARTICLE XI.—SEC. 14. The General Assembly shall not authorize any county, city, or town, to become a stockholder in or to loan its credit to any company, association, or corporation, unless two-thirds of the qualified voters of such county, city, or town, at a regular or special election, to be held therein, shall assent thereto.

The act of that year, authorizing townships to loan their credit in aid of railroads, required the approval of two-thirds of the qualified voters "voting on the proposition," and not

two-thirds of the whole number. The court held, in the Bates County case, that the law was unconstitutional, and the bonds void, because the issue had not received the approval of two-thirds of all the voters of Mount Pleasant township; but in the Cass County case it was decided that the words of the constitution have the same meaning as those of the statute, "the qualified voters of a township" meaning "the qualified voters of a township voting at the election." The ground of the decision was that the Supreme Court of the State had uniformly held that there was no way of ascertaining the number of qualified voters in a county or township, except by an examination of the poll-books, which take no cognizance of those who do not vote. Chief-Justice Waite said, in concluding his opinion: "It follows that our decision in *Harshman vs. Bates County*, in so far as it declares the law to be unconstitutional, must be overruled."

MONTANA. Governor Potts, in his message submitted to the Legislature on January 8, 1877, uses the following language: "The year that has just closed, brought the people of the Territory a reasonable degree of prosperity. Industry in every calling of life has pursued its legitimate objects with varied success. Education, which is the first concern of an intelligent and prosperous people, has steadily advanced, preparing the youth of the Territory for the duties and responsibilities of citizenship. The ravages of the 'insect' diminished the yield of the harvest, but the labor of the husbandman has been crowned with plenty. Neither pestilence nor famine has entered our borders, and almost unbroken health has blessed our homes."

In view of the rapid increase of county indebtedness, and the decline of county credit, the Governor recommends that the counties should be prohibited by law from contracting debts beyond their annual revenues. The remedy for the existing condition of things, he urges, is reduction of expenses and increase of revenues. "This can be accomplished by consolidating county offices, as heretofore recommended, and reducing fees and salaries. The revenues can be largely increased by placing all classes of property on the tax-list, removing all exemptions, except public property; by imposing a special tax of twenty-five cents on every gallon of spirituous liquors consumed in the Territory, and increasing the license-tax of dealers in spirituous and malt liquors and tobacco."

Some provision for the care, maintenance, and treatment of the insane is urged, and a new apportionment for legislative purposes is recommended. The Historical Society of the Territory has made commendable progress in the labor of preserving the incidents connected with its early history. The first volume of the contributions to the Society was published about the close of 1876. The following are the educational statistics for that year:

Whole number of children of school age.	4,271
Number of school districts.	99
Number of children attending school during the year.	2,734
Per cent. of children enrolled, attending school. .	61
Number of teachers employed.	110
Average length of schools in days.	100
Number of children not attending any school during the year.	1,537
Total amount appropriated for school purposes during the year.	\$35,287 06

The following table exhibits the assessed value of property for two years:

COUNTIES.	1876.	1875.
Lewis and Clarke.	\$2,553,403 00	\$2,807,015 00
Madison.	1,655,985 00	1,693,604 00
Deer Lodge.	1,815,600 00	1,611,488 00
Gallatin.	979,000 00	1,021,268 00

Missoula.	567,803 00	602,685 00
Chouteau.	453,412 00	404,052 43
Totals.	\$9,939,540 55	\$10,062,904 17

The total revenue from all sources during 1876 was \$50,589.08; current expenditure, \$27,821.35. The net indebtedness of the Territory, December 31, 1876, was \$117,584.19. The total indebtedness of the several counties, March 1, 1876, was \$491,318.76.

The financial officers of the Territory (says Governor Potts) have conducted its financial affairs with so much fidelity and ability, that the Treasurer on the 1st day of July last was enabled to place on the market at par the 10 per cent. bonds, authorized by your predecessors, redeeming all the 12 per cent. bonds of 1872; making a saving of \$1,824 of annual interest on the bonded debt.

As no part of the bonded debt can be paid, except at the option of the holders, before July 1, 1878, I recommend that the Territorial Treasurer be authorized to use the money in the Sinking Fund, applicable to the payment of bonds, to purchase outstanding bonds at not exceeding their par value. But in case the Treasurer can not purchase any of the outstanding bonds, before the option of the holders expires, then he should be authorized to apply the money in the Sinking Fund, and all that may accumulate therein, before January 1, 1878, applicable to the payment of bonds, to the payment of outstanding Territorial warrants. The amount now in said fund, applicable to the payment of bonds, is about \$8,000, and will probably reach \$20,000 before the close of the present fiscal year.

The following table gives the number and value of live stock in the Territory as returned by the Assessors for 1876:

ANIMALS.	Number.	Value.
Cattle.	160,647	\$1,812,920
Horses.	26,496	851,674
Mules.	1,688	105,643
Sheep.	51,558	143,894
Hogs.	4,642	20,598
Total.		\$2,939,734

The returns for the year include also 194,-815 bushels of wheat, 11,185 of barley, 302,913 of oats, 112,157 of potatoes, 38,943 tons of hay, 335,867 lbs. of butter and cheese, 105,982 of wool, 30 quartz-mills, 10 grist-mills producing 50,599 sacks of flour, and 32 saw-mills

producing 3,145,000 feet of lumber. The gold yield of Montana is thus stated by W. A. Clark in an address delivered at the Centennial Exhibition:

For 1862.....	\$600,000
" 1863.....	8,000,000
" 1864.....	16,000,000
" 1865.....	18,000,000
" 1866.....	17,500,000
" 1867.....	16,300,000
" 1868.....	15,000,000
" 1869.....	11,200,000
" 1870.....	9,000,000
" 1871.....	8,000,000
" 1872.....	7,000,000
" 1873.....	5,200,000
" 1874.....	4,000,000
" 1875.....	1,100,000
" 1876.....	4,500,000

At the election in November, 1876, Martin Maginnis, Democrat, was elected over E. D. Leavitt, Republican, by a vote of 3,827 to 2,980.

MONTENEGRO, a country of Southeastern Europe: reigning Prince, Nicholas I. (*see* NICHOLAS I.), born October 7, 1841, declared Prince on August 14, 1860, upon the death of Prince Danilo I.; married, in 1860, to Milena, daughter of Petar Vukotitch. Issue of this marriage are one son, Danilo Alexander, born June 30, 1871, and six daughters. According to the official account, the country has an area of 1,614 square miles, and a population of 196,329; according to Goptchevitch the area is 1,666 square miles, and the population 170,000. The entire population, with the exception of about 22,000 Roman Catholics, belongs to the Orthodox Greek Church. The number of Montenegrins living abroad amounts to about 2,000. They are chiefly in Austria, Russia, and Turkey. There are also small Montenegrin colonies in Alexandria, Egypt, and in San Francisco. The largest cities are the capital, Cettigne, with 1,400 inhabitants; Njegos, with 4,000; and Danilograd, with 2,000 inhabitants.

Nothing official is known of the finances of the country, and its condition can only be approximately estimated. The Prince has an income of 3,000 ducats, to which are added a Russian subvention of 80,000 rubles, and an Austrian of from 20,000 to 30,000 florins. The revenue of the country amounts to about 300,000 florins, of which 100,000 are indirect taxes, 20,000 are receipts from the convents, 15,000 from the salt monopoly, 5,000 fines, and 160,000 subventions. The expenditures are estimated at 180,000 florins, of which 35,000 are for the civil list, 14,500 for the chiefs of the tribes, 6,600 for the Senate, 42,000 for education, and 31,900 for miscellaneous expenditures. In 1876 Montenegro contracted a debt of about 400,000 francs in Russia. There is no standing army, but every Montenegrin is liable to military service in one of the three classes which form the army, and which comprise the entire male population. The first class includes all men between the ages of 17 and 48, and numbers about 17,000. The second class comprises all others between the ages of 14 and 60,

and has about 8,000 men; while the third class, including all others from 12 years of age upward, is about 5,000 strong. As every boy carries arms from his tenth year, 3,000 boys can be added in an emergency. The exports are estimated at 2,000,000 florins. The Post-Office is in charge of the Austrian Government, which has a director in Cettigne. There are 114 kilometres of telegraph, besides 60 kilometres of field telegraph.

The state of education is still very low as compared with the other countries of Europe, but great progress has been made during the reign of Prince Nicholas. The first schools were established by Danilo I., who ruled from 1852 to 1860. But even he did not open more than three. His successor, however, Prince Nicholas, completely reconstructed the school system of Montenegro, and at present there are 71 public schools, one higher school for girls, and one teachers' seminary. School-attendance is compulsory for both boys and girls, and books and all other school material are furnished by the Government. The schools are attended by 3,000 boys and 300 girls, and cost annually about 22,000 florins, which sum is taken from the income of the convents. Besides the above, there is also an agricultural school in Danilograd.

For an account of the war with Turkey, *see* TURKEY.

MORAVIANS. The statistics of the American Province of the Moravian Church, as published at the beginning of 1877, show the following totals: *For the Northern Province*—number of churches, 64; of communicants, 8,025; of non-communicants over 13 years of age, 1,349; of children, 4,770; total number of persons connected with the Church, 14,144; number of Sunday-school scholars, 6,372; of officers and teachers in Sunday-schools, 837; number of ministers, 63. *For the Southern Province*—number of churches, 11, besides 3 mission Sunday-schools; number of communicants, 1,187; of non-communicants over 13 years of age, 208; of children, 541; total number connected with the Church, 1,936; number of Sunday-school scholars, 674; of officers and teachers of Sunday-schools, 106; of ministers, 7. *Total for the Province*—number of churches, 75, and 3 mission schools; of communicants, 9,212; of non-communicants over 13 years of age, 1,557; of children 5,311; total number connected with the Church, 16,080; number of Sunday-school scholars, 7,046; officers and teachers in Sunday-schools, 943; of ministers, 70. A table of condensed statistics of the communicant membership of the *Northern Province* of the Church, from 1861 to 1876, shows that, during the period of 15 years, the number of the churches in that Province has increased from 36 to the present number, 64; and the number of communicants, from 4,679 to the present number of 8,025. In 1861 the Province included, according to a note appended to the table, 22 churches entitled to lay

representation, and 12 home missions; in 1876, the number of the former had increased to 27, and the latter numbered 36. At the Synod of 1855, 26 ministers were present, and 18 churches represented, while 8 or 9 missionaries were laboring in the home field; in 1861 40 ministers were serving the Church in pastorates or otherwise.

According to the general statistics of the whole Church, published in the spring of 1877, the German Province consisted of 25 churches in Saxony, the kingdom of Prussia, Switzerland, Holland, Russia, etc., with one church in Australia, with a total membership of 7,791, of which about 5,700 were communicants; the British Province of 40 churches, with a membership of 5,712, of which 3,322 were communicants. The four churches in Bohemia were under the superintendence of the Unity's Elders' Conference, and supported by the entire Unity, and contained 201 members. The following is a summary of the total number of persons connected with the Church:

German Province.....	7,791
In the Baltic Provinces, etc.....	60
Director and teachers in the Moravian school in Switzerland.....	12
Diaspora missionaries and their families.....	100
	<hr/>
The churches in Bohemia.....	7,963
British Province.....	201
American Province.....	5,712
Missionaries in 16 Mission Provinces, together with their families.....	16,080
	<hr/>
Total.....	400
	<hr/>
Total.....	30,356

The work of the Diaspora missions on the Continent of Europe is prosecuted, not with the object of founding new churches, or to extend the borders of the Moravian Church, but to minister to the spiritual wants of the numerous people who, although nominally members of some church, are yet negligent of its privileges, and at the same time neglected by those who should exercise pastoral care over them.

The *Provincial Synod* of the Southern District of the American Province met at Salem, N. C., May 1st. Bishop E. A. de Schweinitz, President of the Provincial Elders' Conference, presided. The report of the Provincial Elders' Conference stated that, no bishop of the Church having been resident in the province since the death of Bishop G. F. Bahnson, in 1869, the Rev. Emil A. de Schweinitz had been nominated to that office, and had been consecrated at Salem, N. C., on the 11th of October, 1877, three of the bishops of the Northern Province officiating.

A charter had been obtained for the conference from the General Assembly of North Carolina. Eight congregations were entitled to representation at the Provincial Synod, all but one of which had received annual assistance from the Sustentation Fund during the last six years, while some had contributed hardly anything toward this purpose.

The annual meeting of the Society for the Propagation of the Gospel among the Heathen (Northern District) was held at Bethlehem,

Pa., September 29th. The receipts for the General Mission Fund for the year had been \$12,000, a larger sum than had ever before been given in a single year. The total assets of the society amounted to \$223,233.03. Two Indian lads were receiving instruction at Nazareth Hall, at Bethlehem, one of whom would enter the Theological Seminary in the next year. A report was presented by the Board of Directors regarding the Indian missions in Canada and Kansas. The Board were instructed to take immediate steps toward commencing new missions among the Indians of the United States.

The annual report of the Mission Department of the Unity's Elders' Conference, for the year ending in July, 1877, shows that the total receipts from all sources during the year were about \$80,000. The largest part of this amount was contributed by the churches of the German and British Provinces, and friends of the cause in Great Britain. About \$18,000 were contributed from the American Province, of which \$11,500 were given by the Society for the Propagation of the Gospel among the Heathen. The total expenses of the mission department had been about \$106,000, leaving a large deficit in the treasury. The entire field in which the missionaries are engaged is divided into sixteen provinces, viz., Greenland, Labrador, the Indians of North America, the Islands of St. Thomas and St. Jan, St. Croix, Jamaica, Antigua, St. Kitts, Barbadoes, and Tobago in the West Indies, the Mosquito Coast, Surinam, the eastern and western provinces in South Africa, Australia, and West Himalaya. The number of stations at the time of making the report was 95, one more than in the previous year, and the number of preaching-places, other than the regular stations, was 16. One hundred and seventy-seven men and 153 women were employed as missionaries, together with a large number of native assistants. The number of communicants was 22,647, showing an increase of 596 during the year, and the number of persons under the spiritual care of the missionaries was 68,476. During the year 1876, 388 adults and 2,471 children had been baptized, and 1,272 persons confirmed. The largest number of adult baptisms was in Surinam, 255. The total increase in the number of persons connected with the missions was 1,063. The number of Sunday-school scholars was 10,749, of whom nearly one-half were adults, and the number of children in the day-schools was 15,068. A theological seminary established in Jamaica several years ago, was in successful operation, although the number of students or candidates for the ministry was still very small.

MORTON, OLIVER PERRY, an American statesman, died in Indianapolis, Ind., November 1, 1877. He was born in Wayne County, Ind., August 4, 1823. The original family name was Throckmorton, the first syllable having been dropped by the Senator's father. He

received his education chiefly at the Wayne County Seminary and Miami University at Oxford, O., which he entered in 1843, and left two years after. He studied law at Centreville, Ind., and began practice there in 1847. During the next 10 years he rose to a leading position at the bar of Indiana. He was elected a circuit-judge in 1852, but remained on the bench only one year. He was a Democrat in early life, but, having strong antislavery sympathies, left the party after the repeal of the Missouri Compromise in 1854. In 1856 he was the Republican candidate for Governor, and made a brilliant canvass of the State with his opponent, Ashbel P. Willard. He was defeated, and returned to his law-practice at Centreville. In 1860 he was nominated on the Republican ticket for the office of Lieutenant-Governor, and during the canvass that followed took strong ground in favor of the coercion of the Southern States into obedience to the Constitution. He was elected, and took his seat as President of the Senate on the 14th of January, 1861, but two days after he took the oath of office as Governor, Henry S. Lane, who was elected to that position, having been chosen United States Senator. During the war, Governor Morton was very active and zealous in raising troops and supporting the efforts of the Government for the suppression of the Southern resistance. In 1863 he was opposed by a Democratic Legislature, which contemplated taking the military power out of his hands and placing it in those of four Democrats. These efforts were defeated by the withdrawal of all the Republican members, leaving both Houses without a quorum. The Governor then borrowed money on his own responsibility to carry on the Government of the State. The Democratic Attorney-General gave an opinion that there was no authority for drawing money from the Treasury to pay State bonds, and that a special appropriation was necessary, and this position was sustained by the Supreme Court. The object was to compel a calling of the Legislature, but the Governor raised the needed funds for meeting the obligations of the State on his own personal responsibility. The obligations which he incurred were afterward assumed by the State. Through them he was enabled to carry on the Government and continue his support of the Federal authority, in spite of the opposition of Democratic Legislature and courts. In 1864 he was elected Governor by a majority of nearly 21,000 over Joseph E. McDonald. In November, 1865, having been stricken with paralysis, he visited Europe. After an absence of about five months, without fully regaining his health, he returned and resumed his executive duties. Soon after his return he delivered, seated in his chair, a political speech of which more than a million copies were circulated in pamphlet form. In January, 1867, he was elected to the United States Senate for the term ending in 1873, and he was reelected

for the term ending in 1879. He at once took a foremost position in the Senate, and was soon recognized as the leader of the Republican party. He took a conspicuous part in every prominent debate, and served on the Committees on Foreign Relations, Agriculture, Military Affairs, Private Land Claims, and Privileges and Elections. He labored zealously to secure the passage of the Fifteenth Amendment in Congress, and was instrumental in securing its ratification by the Legislature of Indiana after certain Democratic members had attempted to defeat it by resigning, in order to render a quorum impossible. In the Senate he was the champion of the administration in the matter of the San Domingo Treaty, and in acknowledgment of his services, President Grant tendered him the English mission; but Senator Morton declined the honor, for the reason that the Legislature of Indiana would elect a Democrat as his successor in the Senate.

During his career in the Senate, Senator Morton favored a stern policy toward the South. He was the champion of the Fifteenth Amendment, the advocate of the Ku-Klux legislation and the Force Acts, and the consistent opponent of amnesty. He was exceedingly popular among the Republicans of the South, and the trusted counselor of the Southern Republican leaders. In the Republican National Convention, held in Cincinnati in June, 1876, Senator Morton's name was presented for the first place on the ticket by R. W. Thompson, the present Secretary of the Navy. The Senator received 124 votes on the first ballot, 111 on the second, 113 on the third, 108 on the fourth, 95 on the fifth, and 85 on the sixth. On the seventh ballot Hayes was nominated, receiving 384 votes, while 351 were for Blaine and 21 for Bristow. Morton received the second highest number of votes cast on the first ballot, and the third highest on the second, third, and fourth ballots. The number of candidates on each of these ballots was eight. During the latter part of his Senatorial career, Senator Morton made earnest efforts to secure an amendment of the law governing the counting of the electoral vote for President; and he rendered valuable service as a member of the Electoral Commission created to settle the disputed questions growing out of the presidential election of 1876. Senator Morton was over six feet tall and had a powerful frame. In walking he was obliged to use crutches or canes, and he had to be carried between the lobby of the Senate-chamber and his carriage. When speaking, especially at any considerable length, it was necessary for him to sit. He was a man of vigorous intellect and iron will, and great energy. He was a popular orator, his eloquence being marked by sturdy force and directness, rather than by elegance. He was the youngest, excepting Sprague, of Rhode Island, of the famous war Governors, and was regarded as the strongest.

MOTLEY, JOHN LOTHROP, was born in Dorchester, Mass., April 15, 1814, and died at Dorsetshire, England, May 29, 1877. He graduated at Harvard College in 1831, and spent a year at each of the Universities of Göttingen and Berlin, after which he traveled in the south of Europe, chiefly in Italy. On his return to America he studied law, and was admitted to the bar in 1836, but he practised little. In 1839 he published a novel entitled "Morton's Hope, or the Memoirs of a Young Provincial." In 1840 he was appointed Secretary of Legation to the American Embassy to Russia, and held the post for about eight months, when he resigned, and returned to the United States. In 1849 he published "Merry Mount, a Romance of the Massachusetts Colony." Meanwhile he contributed various articles to some of the leading reviews. About 1846 he began to collect materials for the history of Holland, writing enough to form two volumes; but, unable to find at home the authorities necessary for the thorough prosecution of the subject, he embarked for Europe with his family in 1851. Dissatisfied with his previous labors, he threw aside all he had written, and began his task anew. In Berlin, Dresden, and the Hague, he passed most of his time during the next five years in the composition of his history, "The Rise of the Dutch Republic" (3 vols. 8vo, London and New York, 1856). It was reprinted in English at Amsterdam, and was translated into Dutch under the supervision of the historian Bakhuyzen van den Brink, who prefixed an introductory chapter. A German translation was published at Leipsic and Dresden; and a French translation, with an introduction by Guizot, was published in 1859 in Paris, and another in Brussels in 1859-'60. It was also translated into Russian. In 1860 Mr. Motley published the first two volumes of the second portion of the work, entitled "The History of the United Netherlands, from the Death of William the Silent to the Twelve Years' Truce, 1609;" and in 1867 it was completed in two additional volumes. This was followed in 1874 by "The Life and Death of John of Barneveld, Advocate of Holland; with a View of the Primary Causes of the Thirty Years' War" (2 vols.). He was elected a member of various learned societies in Europe and America, among them of the Institute of France, in place of Mr. W. H. Prescott. In 1860 he received the degree of D. C. L. from the University of Oxford, and that of LL. D. from Harvard College. He also received the degree of LL. D. from the University of Cambridge, England. In 1861 he published in the London *Times* a paper entitled "Causes of the American Civil War," and in 1868 delivered before the New York Historical Society an address on "Historic Progress and American Democracy." On November 14, 1861, he was appointed Minister to Austria, and resigned in 1867. On the accession of President Grant in 1869, he was ap-

pointed Minister to England, but was recalled in November, 1870, when he revisited Holland, and afterward went to England. At the time of his death he was engaged in writing a history of the Thirty Years' War.

MUHLENBERG, WILLIAM AUGUSTUS, an American clergyman, great grandson of Henry Melchior Muhlenberg, was born in Philadelphia, Pa., September 16, 1796, and died in New York City, April 8, 1877. He graduated at the University of Pennsylvania in 1814, was ordained for the ministry of the Protestant Episcopal Church in 1817, and became assistant in Christ's Church, of which Bishop White was rector. In 1821 he accepted the rectorship of St. James's Church, Lancaster, where he was instrumental in establishing the first public school in the State out of Philadelphia. He founded, in 1828, a school at Flushing, Long Island, which was afterward known as St. Paul's College, and for nearly 20 years was its principal. In 1846 he became rector of the Church of the Holy Communion, New York, which was erected by his sister, and was the earliest free Episcopal Church. Not long afterward he began his efforts to secure the founding of St. Luke's Hospital, which was erected in Fifth Avenue and 54th Street, and opened in 1858, Dr. Muhlenberg becoming its first pastor and superintendent, which position he held until his death. In 1845 he organized the first Protestant sisterhood in the United States, and the ladies of this association are in charge of St. Luke's Hospital. He also, within the past few years, made an effective beginning toward establishing an industrial Christian settlement at St. Johnland, Long Island, about 45 miles from New York. He was the author of the well-known hymns, "I would not live alway," "Like Noah's Weary Dove," "Shout the Glad Tidings," and "Saviour, who Thy Flock art feeding." He published: "Church Poetry, being Portions of the Psalms: in Verse, and Hymns suited to the Festivals and Fasts, from Various Authors" (1823); in conjunction with Bishop Wainwright, "Music of the Church" (1852); and "The People's Psalter" (1858). He originated the famous memorial movement in the Episcopal Church, and wrote much on evangelical catholic union.

MUKHTAR PASHA, the Turkish commander-in-chief in Asia, is about forty-five years of age, and is reported to be a natural son of the late Sultan Abdul Medjid, to whom he is supposed to owe his rapid promotion. He was a pupil of the Constantinople Military School, and successively rose to be a professor and governor of that institution. He served as officer on the general staff in the war against Montenegro in 1862, and under Redif Pasha in the petty campaigns against the Arabs and Bedouins. Upon the departure of Redif Pasha for Constantinople, he was appointed Vali of Yemen and commander of the troops of this vilayet. Upon the outbreak of the insurrection in Bosnia, he was

recalled in order to replace Dervish Pasha as Governor-General of Bosnia and the Herzegovina, as the latter had signally failed in his efforts to quell the insurrection. Although at first successful, his defeat in the Duja Pass considerably lessened his military reputation. In 1876 he was equally unsuccessful against the Montenegrins. Upon the outbreak of the war

with Russia, Redif Pasha had been originally intended for the Asiatic command, but, fearing that his departure from the capital would entail a loss of power, he brought about Mukhtar Pasha's appointment. In Asia, he was, on the whole, signally unsuccessful, although for a time the Russians were forced to retreat. (*See TURKEY.*)

N

NAVY OF THE UNITED STATES. According to the report of Secretary Thompson, dated November 30, 1877, the navy consists of 67 steam and 23 sailing vessels, 23 iron-clads, 2 torpedo, 1 ferry, and 26 tug boats. The foreign and ocean service is performed by six squadrons, commanded as follows: European, by Rear-Admiral William E. Le Roy, flagship Trenton; Asiatic, by Rear-Admiral Thomas H. Patterson, flagship Tennessee (ordered home and to be superseded by the Monongahela); North Atlantic, by Rear-Admiral Stephen D. Trenchard, flagship Powhatan; South Atlantic, by Commodore E. T. Nichols, flagship Hartford; North Pacific, by Rear-Admiral Alexander Murray, flagship Pensacola; and South Pacific, by Rear-Admiral George H. Preble.

The active list of the navy is composed of 829 officers of the line, 594 officers of the staff, and 249 warrant-officers. The retired list comprises 135 officers of the line, 103 officers of the staff, 27 warrant-officers, and 4 professors of mathematics. There were in the service on November 24, 1877, 7,012 enlisted men and boys.

The active list of the navy is composed of 1 admiral, 1 vice-admiral, 11 rear-admirals, one of whom, Rear-Admiral John Rodgers, is retained on the list, in addition to the 10 allowed by law, by reason of having received the thanks of Congress for gallantry; 25 commodores, 50 captains, 90 commanders, 80 lieutenant-commanders, 280 lieutenants, 100 masters, 71 ensigns, 77 midshipmen, 43 cadet-midshipmen, and 213 cadet-midshipmen on probation at the Naval Academy, all of whom are officers of the line.

The retired list includes, among others, 41 rear-admirals, 26 commodores, 15 captains, 13 commanders, 14 lieutenant-commanders, 6 lieutenants, 13 masters, and 5 ensigns.

The amount of appropriations applicable to the current expenses for the fiscal year ending June 30, 1877, was \$14,488,974. The expenditures for that period amounted to \$16,077,974. In addition to this there is an aggregate indebtedness, amounting to \$7,083,503, outstanding against the bureau of steam-engineering, the bureau of construction and repair, and the bureau of provisions and clothing. Of the above sum \$3,600,263 was incurred on contracts conditional on appropriations being made for their payment by Congress.

The following is a statement of the number and yearly amount of pensions on the rolls June 30, 1877, and the amount which was paid during the fiscal year:

	On Roll June 30, 1877.	Annual Amount of Roll.	Amount paid for Pensions during the Fiscal Year ended June 30, 1877.
Navy invalids.	1,722	\$195,748	\$200,227
Navy widows and others...	1,717	288,910	327,728
Total.....	3,439	\$479,658	\$527,950

The estimates for the present fiscal year are as follows:

Pay of the navy.....	\$7,350,000
Pay of civil establishment in navy-yards.....	239,785
Ordnance and torpedo corps.....	639,386
Coal, hemp, and equipment.....	1,000,000
Navigation and navigation supplies.....	126,000
Hydrographic work.....	60,000
Naval Observatory, Nautical Almanac, etc.....	61,000
Repairs and preservation of vessels.....	2,250,000
Steam-machinery, tools, etc.....	1,000,000

The long list of casualties during the late war, as well as many failures, have stimulated invention in devising improved methods of attack and defense. In 1869 a torpedo-school was established at Newport, R. I., and upward of 170 officers, of all grades from captain to ensign, have attended the practical exercises and instruction in chemistry and electricity. A complete course of the chemistry of explosives, and of electricity as applied to signaling and lighting, and to exploding subaqueous mines by contact, automatically, or at the will of the operator, has been established. The experience of the war and suggestions of numerous officers have been embodied, and the subject is well advanced, so far as defense is concerned, either of ships from attack or of harbors or passes. The importance of these experiments is demonstrated by the fact that

electric signals from a cordon round a vessel, or moored in channels, denote an approaching adversary and indicate his movements even in fogs or darkness. They, moreover, enable an operator to fire guns laid in advance, or explode at will any torpedo within the radius of whose destructive effect the enemy may pass, while the electric light renders his movements visible. The offensive modes of indirect attack have not made so much progress, being confined thus far to direct methods of attack with small vessels or launches partaking of the nature of a forlorn hope, and with little chance of success against a watchful enemy provided with suitable means of discovery and defense. (See ORDINANCE.)

Under the law authorizing the enlistment in the navy of boys between 16 and 18 years old to serve until 21 years of age, the department has had in operation for two years a training system for the purpose of introducing a class of well-trained young seamen into the navy. There are now 458 of these boys under training, and 324 have passed out of the training-ships into the general service. The English Government has availed itself of this method of training its seamen, and its navy has derived material benefits from it. The Secretary suggests that, as the navy has been reduced by Congress to the low standard of 7,500 men, it should empower the department to enlist 750 boys annually. This number annually enlisted will eventually man the navy, keep it supplied with seamen in time of peace, and form the nucleus of a larger force should it become necessary in time of war.

The present condition of the navy, relatively to other powers, has less aggressive force than at any time during the past third of a century, except during the war, or less power to inflict serious injury upon the commerce of an enemy. Indeed, the fact cannot be concealed, and ought not to be, for it is well known to other nations, that third and even fourth rate powers, almost without exception, are superior to us in this respect.

In discussing whether the navy in its present condition is sufficient to furnish the necessary amount of protection to our commerce, he says: "If you consider our commerce at its present stage of development, or are content to leave it to be transported abroad in foreign ships, and thus deprive the American producer of the profits of his labor, it may be sufficient. But if we are to take the position among the commercial nations to which we are justly entitled, if we are to secure to our own people the right to transport the products of their industry into whatsoever part of the world they may be demanded, so that the profits may be returned to increase the aggregate, then, in my opinion, it is not in such condition. There may be ships enough in number if they were all in proper repair to increase our squadrons to a sufficient size for this purpose. To put them all in repair, however, would re-

quire a larger expenditure than is practicable in the present condition of the Treasury, and probably larger than would be justifiable at any time until our revenue from customs shall be sufficiently increased. As we may expect this from a gradual development of our commerce, so, as this occurs, we may gradually carry the navy up to the point of necessary improvement: a point to be decided by the existing wants of trade."

The Huron, one of the vessels of the navy, was wrecked on November 24, 1877, on the coast of North Carolina, at a point near Nag's Head. She sailed from New York under instructions to make a scientific reconnaissance of the coast of Cuba, and arrived at Hampton Roads on November 17th. On the morning of the 23d she left Hampton Roads, and shortly after 1 o'clock A. M. of the next day struck upon the beach and was wrecked. She encountered a moderate gale and a heavy sea from the eastward, but being in good condition, well manned, and with her engines and machinery in perfect order, it is believed she could have encountered the storm without harm if she had remained out in the open sea. She had 132 officers and men on board, 34 of whom were saved, and the remaining 98 lost, including the commander. A court of inquiry was ordered by the Secretary of the Navy to investigate the facts connected with this unfortunate event.

NEBRASKA. Little of general interest took place in this State during 1877. The Legislature was in session for a short time in the early part of the year, but the acts passed were chiefly of local importance. In January, Alvin Saunders was elected to the United States Senate as the successor of Phineas W. Hitchcock, for the term beginning March 4, 1877. In the fall an election was held for Chief Justice of the State and Regents of the University. Mr. Lake (Republican) was elected to the former office, receiving 25,569 votes, while 15,639 were cast for his Democratic opponent, Mr. Howe. O. A. Holmes and N. R. Pessinger (Republicans) were elected Regents of the University, the former receiving 29,698 votes and the latter 28,937.

The condition of the public schools for the year ending April 1, 1877, as compared with 1876, was as follows:

SCHOOLS.	1876.	1877.
Counties reporting	81	61
Districts organized	797	2,496
Children between 5 and 21	82,589	92,761
Children enrolled in schools	12,719	56,774
Number of graded schools	80	64
Number of ungraded schools	536	2,432
Teachers employed	536	3,392
Average number of days by each teacher	70	98
Average salaries of males per month	\$28 16	\$35 46
Average salaries of females	33 72	31 80
Apportioned, State tax	20,803 23	89,573 90
Apportioned from permanent fund	13,034 96	98,459 39
Paid teachers during year	57,738 43	457,048 70
Total expenditures for all purposes	163,930 84	1,027,192 21
Total value of school property	177,089 17	1,862,285 88

Statistics of the distributable school fund for 1877:

From interest on bonds.....	\$18,975 69
From interest on certificates.....	16,584 20
From interest on private securities.....	145 00
Unpaid principal of school lands.....	54,457 21
Rents of school lands.....	21,958 89
One-mill State tax.....	66,634 09
Normal school endowment fund.....	327 23
Fractional remainder.....	8 75
	\$179,735 56
Deduct sundry appropriations.....	10,453 68

Total amount apportioned in 1877.....\$169,281 88

The receipts of cattle at Omaha during the past two years are shown in the following statement:

Nebraska embraces an area of 75,995 square miles, and has a population of about 260,000. The general surface approximates to a vast plain rising gradually from the Missouri River toward the mountains. The bottoms are level; the prairies, of which the surface mostly consists, are either gently undulating or broken into low hills and ridges. There are few hills of magnitude, and no mountains except at the west and northwest, where the land rises into the Black Hills and Rocky Mountains. No large lakes have been discovered, but lakelets, rivers, and streams are numerous. The only navigable river, however, is the Missouri, which forms the northeast and east boundary line. Entering the State near the northwest corner is the Niobrara, which, after forming a part of the northern boundary, empties into the Missouri near the northeast corner of the State. The Keya Paha, a tributary of the Niobrara, also forms the boundary line for a short distance on the north. The principal river is the Platte, which, rising in the Rocky Mountains in Colorado, flows east through the central part of the State, and empties into the Missouri. It is wide, rapid, and shallow, and passes through a valley which is remarkable for its fertility, and which for 200 miles west from Omaha is from 8 to 10 miles wide. The Platte has numerous tributaries on the north, the chief of which are Wood River, Loup Fork,

and Elkhorn River. It has no important tributary from the south, but that part of the State is well watered by streams flowing into Kansas, the chief being the Republican, Little Blue, West Blue, and Big Blue Rivers. The Great Nemaha and Little Nemaha are small rivers in the southeastern part of the State, flowing into the Missouri.

Excepting that made in 1867, under the direction of the United States Geologist, Dr. F. V. Hayden, there has been no geological survey of Nebraska. But four of the principal geological formations are represented in the State, Carboniferous, Permian, Cretaceous, and Tertiary. Of the Carboniferous strata, only the upper members occur, and these are overlaid, from the longitude of Lincoln west, by the Permian, Cretaceous, and Tertiary deposits. Minerals have not yet been found to any considerable extent. Thin beds of bituminous and block coal exist in the southeast counties, and of lignite in the Cretaceous and Tertiary. The scarcity of coal renders more valuable the extensive beds of peat found in some parts of the State. Some iron ores occur, but the coal yet found is not sufficient to utilize them. Stone for building purposes is found, including limestone, dark yellowish-gray sandstone, and a dark-red freestone. Clay for the manufacture of brick is easily obtained, and good potter's clay is abundant. In the southeast part of the State are extensive saline deposits. The principal basin is in Lancaster County, near Lincoln, and embraces an area of 12 by 25 miles. These springs contain by weight 29 per cent. of remarkably pure salt. The salt is obtained by solar evaporation, which is facilitated by the marked dryness of the atmosphere. Alum has also been discovered.

The eastern part of Nebraska is a rich agricultural region, while the western half is well adapted to grazing. The line of division is about longitude 99° west, although there is a large amount of fine agricultural lands west of this line, and some grazing lands east of it. The agricultural region embraces about 30,000 square miles, extending about 150 miles west of the Missouri, and in the valley of the Platte about 300 miles. It is divided into bottom and prairie lands. The soil of the latter is a rich, black vegetable mould from 2 to 5 feet deep, slightly impregnated with lime, and withstands great extremes of drought. The bottom lands along the river banks have a rich alluvial soil. Wheat, corn, barley, oats, sorghum, flax, hemp, and all vegetables flourish, and below latitude 42° sweet potatoes are easily cultivated. Wild plums and grapes are found in great abundance, while raspberries, gooseberries, cherries, and other small fruits are common. Tobacco also finds a congenial soil and climate. Apples, plums, and pears are cultivated, and peaches succeed south of the Platte River. The wild grasses, of which there are upward of 150 species, grow luxuriously on the bottom and table lands, yielding from 1½ to 3 tons per acre;

many are exceedingly nutritious and admirably adapted to the raising of sheep and cattle. Cultivated grasses, as the blue-grass of Kentucky and timothy, are raised with great success. Large numbers of cattle are brought from Texas and Kansas to be fattened on the grasses of Nebraska, preparatory to sale. The grazing region comprises about 23,000,000 acres, and is generally well watered. Wood is of free, natural growth only on the bluffs and river banks, but the species are numerous. Cottonwood is the most common; oak, elm, maple, black walnut, cedar, hickory, and hackberry are also found. Planted timber grows rapidly on the prairie. Forests of pine are reported to exist in the northwest part of the State.

The climate is dry and exhilarating; the mean temperature in winter is about 22°, and in summer about 70°. The heat of the summer is tempered by the prairie winds, and the nights are generally cool. The Territory of Nebraska was formed in 1854, embracing 351,558 square miles, extending from latitude 40° north to the national boundary, and from the Missouri River west to the crest of the Rocky Mountains. In 1861, 16,035 square miles were set off to the Territory of Colorado, and 2,228,907 to Dakota. In 1863, a part was taken for the formation of Idaho Territory, and Nebraska was reduced to its present limits. In 1860 the question of forming a State government was submitted to the people and disapproved. In 1864 an enabling act was passed by Congress providing for the admission of Nebraska into the Union; but the necessary action for admission was not taken at that time by the Territory. Early in 1866 the Territorial Legislature framed a constitution which was ratified by the people on June 21st. The first Legislature under the new government assembled July 4th. On the 28th a bill for the admission of Nebraska as a State was passed by Congress, but did not receive the signature of the President. In January, 1867, another bill for this purpose was passed, but was vetoed by the President, on the ground that it embraced conditions not contained in the enabling act, that the proceedings attending the formation of the constitution were different from those prescribed, and that the population of the Territory did not justify its becoming a State. The bill, however, was passed over the Executive veto. The act was not to take effect except upon the fundamental condition that, within the State of Nebraska, there shall be no denial of the elective franchise, or of any other right, to any person by reason of race or color, "except Indians not taxed; and upon the further fundamental condition that the Legislature of said State, by a solemn public act, shall declare the assent of said State to the said fundamental condition." This act was ratified by the Legislature, the State was admitted into the Union, and Lincoln was chosen as the seat of government. A new constitution was framed in 1871, but was rejected by the people. In 1875 a new

constitution was adopted. For its provisions see ANNUAL CYCLOPEDIA for 1875.

NEPOKOITCHITZKY, General ARTHUR ADAMOVITCH, chief of the general staff of the Russian Army of the Danube, is of Polish descent, and was born at Slutzk, in the government of Minsk, in 1813. After receiving a full military education, he entered the active service in 1841, in the Army of the Caucasus, where he served for seven years in the campaigns against Shamyl, receiving several promotions and decorations for his gallantry. In 1848 he was appointed chief of the general staff of the Russian contingent which assisted Austria against the Hungarian revolution, and was present at the storming of the pass of the Rothenthurm, and the capture of Hermannstadt and Cronstadt. For his services in this campaign the Emperor of Austria awarded him a decoration, and his own sovereign made him a major-general. During the Crimean War he served at first in the Army of the Danube, with which he participated in the operations at Braila, Matchin, and Silistria, and was afterward, having become a lieutenant-general, chief of staff at Sebastopol. He was appointed president of the Military Council in 1864, and has since been busily engaged in matters pertaining to the reorganization which has been effected in the Russian army. The plans of the later campaigns in Central Asia were arranged by him. More recently, he has served as president of the Commission of Military Codification which has been occupied with the digesting and arrangement of all the military laws and regulations of the empire. He is described as a "short, square-set, active-looking man, hale and hearty, in spite of his seventy years," and appearing as fit to make a campaign as if he were twenty years younger. His name means "the unquiet or restless man," but expresses the opposite of his character, which is one of remarkable sobriety and placidity. He has been called, in the Russian newspapers, the Moltke of Russia.

NETHERLANDS, THE, a kingdom in Europe. King, William III., born February 19, 1817; succeeded his father, March 17, 1849. Sons: 1. William, Prince of Orange, and heir-apparent to the throne, born September 4, 1840; 2. Alexander, born August 25, 1851. Brother of the King: Henry, governor of the grand-duchy of Luxemburg. The area of the kingdom is 12,679 square miles.*

The population was, in December, 1876, officially estimated at 3,865,456. A census is taken every ten years. The last census was taken in 1869, according to which the population was 3,579,529, showing an increase of 285,927. The following table gives the population of the several provinces in 1876, and the percentage of Protestants and Catholics, leaving out of account the Israelites and the minor sects:

* For the area of the several provinces, see ANNUAL CYCLOPEDIA for 1872.

PROVINCES.	PERCENTAGE IN 1869 OF		Population, 1876.
	Protestants.	Catholics.	
Brabant.....	11.6	87.9	456,709
Gelderland.....	62.0	36.8	453,624
South Holland.....	78.8	24.6	763,686
North Holland.....	66.3	27.8	642,073
Zealand.....	73.5	25.9	187,046
Utrecht.....	62.1	37.0	186,164
Friesland.....	90.8	8.2	817,405
Overijssel.....	68.7	29.7	267,826
Groningen.....	90.8	8.2	242,065
Drenthe.....	92.8	5.2	118,773
Limburg.....	1.7	97.7	285,135
Total.....	61.3	36.7	3,865,456

The Israelites and the minor sects constitute two per cent. of the population. The Protestants are a majority in nine and the Roman Catholics in two provinces. The population of the larger cities in December, 1876, was as follows:

CITIES.	Population.
Amsterdam.....	296,200
Rotterdam.....	136,230
Hague.....	104,095
Utrecht.....	66,106
Leyden.....	41,298
Groningen.....	40,589
Arnhem.....	33,017
Haarlem.....	34,797
Maestricht.....	29,083
Leeuwarden.....	27,085
Dordrecht.....	26,576
Tilburg.....	26,103
Bois-le-Duc.....	24,583
Delft.....	24,511
Nimeguen.....	23,509
Helder.....	22,080
Schiedam.....	21,880
Zwolle.....	21,593

The colonies of the Netherlands are considerably larger and more populous than the country itself. The total area is estimated at 641,201 square miles; the population at 24,480,900, divided as follows:

COLONIES.	Population.
1. In the East Indies.....	24,370,600
2. In the West Indies.....	41,024
3. Surinam.....	69,329
Total.....	24,480,900

The army of the Netherlands in Europe consisted, in 1877, of 2,063 officers and 60,867 men; the East Indian army numbered 1,425 officers and 33,996 men.

The navy of the Netherlands on July 1, 1877, consisted of 86 steamers, with 376 guns, and 19 sailing-vessels, with 94 guns: total, 105 vessels, with 470 guns.

The merchant-navy, on January 1, 1877, consisted of 1,749 sailing-vessels, of 449,700 tons, and 86 steamers, of 76,827 tons: total, 1,835 vessels, of 526,527 tons.

The aggregate length of railroads in operation was, on January 1, 1877, 1,695 kilometres (1 kilometre = 0.62 English mile), of which 997 were State railroads.

The aggregate length of the State telegraph lines was, on January 1, 1877, 3,470 kilometres; the aggregate length of the wires, 12,666 kilometres; the number of offices was 335; the number of telegrams carried in 1876 was 2,376,900; the revenue was 773,143 florins; the expenditures, 1,285,320.

The number of post-offices in 1876 was 1,282. The number of inland letters was 37,904,450; of foreign letters, 10,630,120; of postal cards, 9,816,319; and of newspapers, etc., 37,408,638.

In the budget for the year 1877, the expenditures and revenues are estimated as follows:

EXPENDITURES.	Dutch Florins.
1. Royal House.....	875,000
2. Cabinet; Supreme State authorities.....	606,641
3. Ministry of Foreign Affairs.....	658,172
4. Ministry of Justice.....	3,660,962
5. Ministry of the Interior.....	26,240,760
6. Ministry of the Navy.....	13,905,879
7. Ministry of War.....	23,122,601
8. Public Debt.....	26,737,655
9. Ministry of Finances.....	20,554,425
10. Colonies.....	1,516,090
11. Unforeseen.....	50,000
Total.....	117,927,685

REVENUE.	Florins.
1. Direct taxes.....	23,341,226
Land-tax.....	10,480,826
Poll-tax.....	9,078,000
Patent-tax.....	3,782,400
2. Excise.....	33,510,000
On spirits.....	13,700,000
On other liquors.....	14,810,000
3. Taxes on stamps, enregistrement, inheritances.....	19,673,800
4. Customs.....	5,361,799
5. Taxes on gold and silver wares.....	866,200
6. Domains.....	1,675,000
7. Post.....	3,800,000
8. Telegraphs.....	735,000
9. Lottery.....	430,000
10. Taxes on game and fisheries.....	137,000
11. Pilotages.....	850,000
12. Taxes on mines.....	4,013
13. State railroads.....	1,492,500
14. Miscellaneous.....	5,535,613
15. Receipts from the colonial administration.....	9,974,872
Total.....	106,892,923

Deficit..... 11,585,862

The financial estimates are always framed with great moderation, mostly exhibiting a deficit, which in the final account becomes a surplus.

In 1877, the national debt was represented by a capital of 922,192,152 florins, divided as follows:

DIVISION OF DEBT.	Capital.	Interest.
	Florins.	Florins.
Debt bearing interest at the rate of 2½ per cent.....	632,099,602	15,802,490
Debt bearing interest at the rate of 8 per cent.....	91,402,050	2,742,061
Debt bearing interest at the rate of 3½ per cent.....	11,636,000	399,385
Debt bearing interest at the rate of 4 per cent.....	177,054,500	7,082,180
Miscellaneous.....		52,939
Total.....	912,192,152	26,079,055
Bearing no interest.....	10,000,000	
Amortization.....		658,600
Total, 1877.....	922,192,152	26,737,655
Total, 1876.....	922,741,326	26,785,321

The budget estimates of the Dutch colonies for the year 1877 were as follows:

COLONIES.	Revenue.	Expenditures.	Surplus (S.) or Deficit (D.).
	Florins.	Florins.	Florins.
East Indies.....	146,666,146	136,691,274	S. 9,974,872
Surinam.....	1,156,700	1,649,690	D. 492,990
West Indies.....	400,501	517,301	D. 116,800

The imports and exports in 1874 and 1875 were valued as follows:

COUNTRIES.	IMPORTS.		EXPORTS.	
	1874.	1875.	1874.	1875.
Great Britain.....	Florins. 223,059,000	Florins. 241,833,000	Florins. 117,036,000	Florins. 124,748,000
Zollverein.....	186,999,000	155,254,000	222,023,000	226,936,000
Hanse towns.....	7,945,000	6,401,000	10,453,000	11,380,000
Austro-Hungary.....	61,000	140,000	178,000
Belgium.....	86,655,000	105,228,000	76,624,000	79,746,000
Russia.....	83,646,000	37,048,000	8,407,000	20,758,000
Denmark.....	636,000	716,000	1,870,000	5,004,000
Sweden and Norway.....	6,817,000	6,944,000	4,477,000	4,981,000
France.....	11,664,000	16,749,000	6,297,000	7,085,000
Italy.....	2,016,000	1,977,000	10,575,000	5,480,000
Spain.....	1,235,000	1,124,000	41,000	6,000
Portugal.....	3,102,000	1,636,000	1,312,000	826,000
Other countries.....	3,175,000	4,984,000	3,154,000	4,174,000
1. EUROPE.....	527,073,000	580,084,000	462,447,000	489,554,000
United States.....	29,935,000	21,451,000	4,633,000	4,255,000
Cuba and Porto Rico.....	384,000	609,000	168,000	298,000

Other colonies (1873).....	42,436,000	41,869,000

In February, the Second Chamber of the States-General ratified the treaty with Prussia, regulating the connection of the Dutch with the Prussian canals. In reply to an interpellation, the Government stated that war material had been shipped from Curaçoa, at the request of the Government of Hayti, and that it had no official knowledge that these arms were intended for Venezuela. Venezuela had offered to buy the island of Curaçoa, but the Government had refused this offer, and hoped that it would also be refused by all succeeding Governments. The Chambers adjourned on May 20th, after the ministers had been severely censured by the Chamber of Deputies. The elections for one-half the members of this Chamber occurred in the beginning of June, and resulted in a decisive victory of the Liberal party. The sessions of the States-General were opened again

by the King in person on September 18th. In the speech from the throne he stated that the relations of his Government with foreign powers left nothing to be desired. The harvest was sufficient, and the state of the finances satisfactory. He eulogized the conduct of the naval and military forces in Acheen, and pointed out that no operations had been necessary for some months past. It was hoped that after the submission of a few remaining districts it would be possible to reduce considerably the forces. The royal speech announced the presentation of bills for increasing the number of deputies and reforming the system of taxation. The ministerial measures also included bills for the execution of public works in Java, and for increasing the supply of labor in Surinam. The budget for 1878 was submitted to the Second Chamber on September 25th. The Minister of Finance estimated the total expenditure at 121,000,000 florins, and the revenue at 113,700,000 florins. The anticipated deficit of 7,300,000 florins depended mainly upon the charges incurred by the war in Acheen, which in 1876 cost 26,500,000 florins, and would probably cost as much in 1877. This charge would, however, be diminished, should it prove pos-

sible to reduce the number of troops employed. He thought that the eventual deficit could be covered by the issue of Treasury notes, and said

he did not regard the financial condition of the country as unfavorable. The revenue from the taxes was increasing; and the possible deficit

THE PALACE OF AMSTERDAM.

might be considered due to temporary causes and to the wish of the Government to continue the public works now in hand, such as the

by 44 to 28 votes, a paragraph of the address in reply to the speech from the throne, containing the declaration that the Chamber and the Government did not agree on the education question. This was regarded as a vote of want of confidence; and on September 27th the ministry, in a body, asked the King for permission to resign, but did not make known the fact until October 2d. In the beginning of November a new cabinet was formed as follows: M. Kappeyne van de Capello, Chief of the King's Cabinet, Minister of the Interior; Deputy Smidt, Minister of Justice; M. van Heeckeren van Kill, Minister for Foreign Affairs; M. Wichers, Minister of the Navy; M. Gleichman, Minister of Finance; Deputy Deroo, Minister for War; M. van Bosse, Colonial Minister; and M. Tak van Poortvliet, Minister of Commerce, Industry, and Public Works. On November 19th the new ministry, for the first time since their appointment, attended the sitting of the Chamber of Deputies. M. Kappeyne, addressing the House in the name of the cabinet, invoked the good-will of all, and the cordial support of the majority. The ministry would firmly uphold constitutional principles, and had accepted office as a duty toward the country. In conclusion, he announced that several bills would be withdrawn, notably that relating to primary education. In the latter part of December the budget for 1878 was adopted by the Chamber. A bill was also passed providing for a redistricting of the country, by which the number of deputies was increased by six. The Chamber then adjourned.

THE CATHEDRAL OF ANTWERP.

construction of railroads and the completion of the defensive system of the kingdom. On September 26th the Chamber of Deputies adopted,

The Dutch Indian budget for 1878 showed a deficit of 16,500,000 florins, arising chiefly from the outlay on public works and the development of the railway system in Java. The Government proposed to cover this deficit by the issue of a loan of 16,500,000 florins at 4½ per cent., to be charged to the budget of the Dutch Indies.

In May several Catholic bishops petitioned the Government to intercede with Italy for the liberty and the independence of the Pope. The Government rejected the petition as an unwarranted interference in the internal affairs of Italy.

NEVADA. Mining continues to be almost the only important industrial interest of Nevada. During the last three years it has produced more than half the gold and silver yield of the United States, being in 1875 \$40,478,369 out of a total of \$80,889,037; in 1876, \$49,280,764 out of \$90,375,173; and in 1877, \$51,580,290 out of \$98,421,754. The following is a comparative statement of the product of the several States and Territories west of the Missouri River for the year 1877, including likewise Mexico and British Columbia, although not a part of the United States. It will be seen that the aggregate exceeds 90 millions:

STATEMENT OF THE AMOUNT OF PRECIOUS METALS PRODUCED IN THE STATES AND TERRITORIES WEST OF THE MISSOURI RIVER.

STATES AND TERRITORIES.	Gold Dust and Bullion, by Express.	Gold Dust and Bullion, by other Conveyances.	Silver Bullion, by Express.	Ores and Base Bullion, by Freight.	Total.
California.....	\$14,512,123	\$725,606	\$1,202,751	\$1,734,276	\$18,174,716

Mexico.....	72,144	1,020,636	840,212	1,432,992
British Columbia.....	1,165,527	11,653	1,177,190
Total.....	\$24,671,400	\$1,853,931	\$52,600,214	\$19,291,209	\$98,421,754

The following is a comparative statement of the bullion product of the last-named region for eight years:

YEAR.	Lead.	Silver.	Gold.
1870...	\$1,080,000	\$17,320,000	\$33,750,000
1871...	2,100,000	19,286,000	34,398,000
1872...	2,250,000	19,924,429	38,109,395
1873...	3,450,000	27,488,802	39,206,558
1874...	3,800,000	29,099,122	38,466,483
1875...	5,100,000	31,635,289	39,963,194
1876...	5,040,000	39,292,924	42,886,935
1877...	5,085,250	45,846,109	44,880,223

Following is the gold and silver yield of Nevada, by counties, for the year ending June 30, 1877, as certified to by the State Controller (from ores):

NAME OF COUNTY.	Tons.	Pounds.	Value.
Eureka.....	66,873	745	\$2,611,416 49
Esmeralda.....	35,805	748	1,659,905 03
Elko.....	7,213	427	629,410 84
Humboldt.....	5,545	239	190,793 39
Lander.....	6,694	173	793,718 63
Lyon.....	815	...	7,467 21
Lincoln.....	4,335	1,902	276,888 20
Nye.....	22,672	372	790,414 76
Storey.....	564,480	523	84,011,563 72
White Pine.....	10,487	195	442,420 85
Total.....	724,921	1,329	\$41,354,004 23

To this amount must be added 135,887 tons of tailings worked, which yielded \$1,106,172, making a grand total for the year of \$42,460,175.

The coinage executed at the Carson Mint

from its organization, in January, 1870, to June 30, 1877, amounted to 593,702 pieces, valued at \$9,959,590, in gold; and in silver coins, 34,883,761 pieces, of the value of \$10,088,553; making a total of 35,477,463 pieces, worth \$20,048,143.

The following statement gives the value for each year and the totals:

YEARS.	Gold.	Silver.	Total.
1870....	\$110,510	\$19,793 00	\$130,303 00
1871....	230,715	52,375 00	283,090 00
1872....	533,350	95,006 50	628,356 50
1873....	617,400	224,055 00	841,455 00
1874....	1,672,960	469,966 30	2,142,926 30
1875....	2,191,095	2,097,853 00	4,288,948 00
1876....	2,851,525	3,513,000 00	6,454,525 00
1877....	1,722,135	3,556,000 00	5,278,135 00
Total...	\$9,959,590	\$10,088,553 80	\$20,048,143 80

During the same period "fine and separated" bars were manufactured of the value of \$24,543,849.

The profits of the mining business are to be inferred from the dividends paid by the different companies. The Consolidated Virginia began paying in May, 1874, and has disbursed the following amounts in dividends since that time:

In 1874, eight of \$3 per share.....	\$2,592,000
In 1875, two of \$3 per share.....	648,000
In 1875, ten of \$10 per share.....	10,800,000
In 1876, three of \$10 per share.....	3,240,000
In 1876, nine of \$2 per share.....	9,720,000
In 1877, eight of \$2 per share.....	8,640,000
Total.....	\$35,640,000

The California mine began paying monthly dividends of \$2 per share on 540,000 shares, May, 1876, and has continued ever since, having disbursed \$21,600,000 in 20 dividends from May, 1876, to December, 1877, inclusive. Since the discovery of ore in the Comstock lode in 1860, 20 mines, besides the Consolidated Virginia and California, have been located on it. The amount disbursed in dividends is as follows:

Consolidated Virginia	\$35,640,000	
California	21,600,000—	\$57,240,000
Other twenty Comstock mines	47,223,000	47,223,000
Totals	\$104,463,000	\$104,463,000

Of the \$47,223,000 paid by 20 mines other than Consolidated Virginia and California, over \$40,000,000 was paid by 9, as follows:

MINES.	Dividends.	Amount.
Belcher	88	\$15,397,200
Crown Point	50	11,664,000
Chollar-Potosi	44	3,080,000
Hale & Norcross	33	1,595,000
Imperial	40	1,076,500
Kentuck	32	1,252,000
Ophir	22	1,394,400
Savage	52	3,125,000
Yellow Jacket	25	1,460,000
Totals	389	\$40,050,100

None of the 20 have paid any dividends since April, 1876, but they are still working with a fair prospect of future profits.

The following statement shows the increase that has been made in the capital stock of the several mining companies since 1870, the figures representing the number of shares of a par value of \$100.

MINES.	1870.	1877.
Sierra Nevada, shares	15,000	100,000
Union Consolidated	10,000	100,000
Mexican	16,800	100,800

Totals	294,300	3,481,200

A comparatively new mining district has been developed about Eureka, in Eastern Nevada. The two principal mines are the Eureka and Richmond. An interesting matter of litigation has grown out of their conflicting claims, involving a judicial determination of the meaning of "lode." The workmen of the Richmond

mine followed a body of ore until it passed within the ground claimed by the Eureka Company, and the latter brought suit for ejectment. The case was, by agreement, tried at San Francisco before Justice Field of the United States Supreme Court, Sawyer of the United States Circuit Court, and Hillyer of the United States District Court. Distinguished experts were called on both sides. Those for the Richmond Company affirmed that the masses of ore were distinct, and that they were in no manner connected so as to make them a continuous body or lode; they believed that these ore bodies penetrated and filled irregular cavities and seams in the preëxistent rock or limestone—the "country rock," as understood by miners—and that this rock was no part of the lode except as inclosing, holding, or bounding it. On the other hand, the experts called by the Eureka Company testified, in substance, that the limestone is so impregnated with ore in irregular masses, that it may be followed by the miners in search of ore like a vein or lode, and that therefore the whole stratum of limestone rock in which the ore occurs may be regarded as a great lode or a great vein in the proper sense of the word, as used by miners. The judges adopted this latter view, and based their decision upon it, awarding the ground in dispute to the Eureka Company. They decided that the limestone zone between the quartzite on one side, and the shale on the other, constitutes, within the meaning of the acts of Congress, one lode or vein as understood by practical miners.

The Treasury of the State, at the close of the year, presented the unusual spectacle of an embarrassment of riches, in so much that the Controller recommended an extra session of the Legislature to reduce taxes from 90 to 40 cents on \$100 of valuation. There was, on the 1st of January, 1878, a surplus in the Treasury, of \$179,606. A State building fund was created in 1873, for which a tax of 12½ cents per \$100 was established, and this contained about \$75,000 unappropriated. The following is given by the Controller as a statement of the resources of the year 1878, for the General Fund, if the taxes were to be reduced according to his suggestion:

Cash on hand in General Fund, January 1, 1877 ..	\$179,606 00
Transfer from State Building Fund	74,995 19
Amount coming into fund from tax on real and personal property, at 40 cents	57,000 00
Amount coming into fund from tax on proceeds of mines, last quarter of 1877, at 90 cents	49,000 00
Amount coming into fund from tax on proceeds of mines, three quarters of 1878, at 40 cents	37,500 00
Amount coming into fund from poll tax	30,000 00
Amount coming into fund from State licenses ..	30,000 00
Amount coming into fund from State Prison ..	26,000 00
Amounts coming into fund from miscellaneous sources	15,000 00

Total	\$499,101 19
Contra :	
Current expenses of State to January 1, 1879	\$250,000
Expense of called session	40,000
	290,000 00
On hand, in General Fund, January 1, 1879	\$209,101 19

The saving to the taxpayers would be about \$300,000, which will be added to the surplus on hand, if no reduction is made.

NEW HAMPSHIRE. The Republican party of New Hampshire met in State Convention at Concord on the 10th of January, 1877, for the purpose of nominating their candidates for Governor and Railroad Commissioner. Nearly 700 delegates from all parts of the State were present. The nominations resulted as follows: For Governor, Benjamin F. Prescott, of Epping; for the office of Railroad Commissioner, Granville P. Conn, of Concord.

The following platform was adopted by the Convention:

The Republicans of New Hampshire, in Convention assembled, declare:

1. The first and paramount allegiance of the citizen is to the Constitution and Government of the United States.

2. That the United States Government is in turn bound to maintain and protect each and every citizen in full, free, and open exercise of every right and privilege appertaining to citizenship.

3. That we view with alarm and indignation the attempt by the Democratic party of the South, countenanced and upheld by its Northern wing, to rob the freedmen of the elective franchise by intimidation, violence, and murder.

4. We condemn as disloyal, inhuman, and as fraught with the utmost peril to our institutions, the conduct of the late Presidential canvass by the Democrats of the South, in that they undertook, by processes which shame our civilization, to nullify the constitutional amendments adopted to conserve the fruits of victory over the rebellion, and to overturn the large majority against them in several of the Southern States.

5. We also condemn the attitude of the Democratic leaders, especially of the North, since the Presidential election, in striving to secure by illegal and violent means an advantage which does not belong to them, and by such methods to "count in" Samuel J. Tilden as President of the United States. The incendiary appeals and rebellious threats of Northern Democratic orators and newspapers are such as to put to shame any declarations that have thus far emanated from Southern sources, and are deserving of the severest censure and condemnation.

6. We tender our earnest sympathy and pledge our undivided support to the public, members of Congress, and to the National authorities in their endeavors to conserve peace, maintain the laws, and preserve the precedents so essential to the safety and perpetuity of republican government.

7. In Rutherford B. Hayes we have a man who is fully identified with the great principles of the Republican party, and imbued with a proud appreciation of its past services, who is fitted by ability and experience in public affairs for the responsibilities of the high office of President of the United States, and whose name and career are a guarantee of an administration of the government in the interests of all the people upon the principles of honesty, economy, intelligence, and fidelity to public trusts.

8. It is a matter of especial congratulation that in this trying hour of the nation's experience we have in the Presidential chair the great chieftain and distinguished civilian, Ulysses S. Grant. Invincible upon the field of battle, he has proved himself equally courageous and wise in administering the affairs of government, and upon his patriotism, honesty, and courage the hearts of the loyal people of the land rely now, as ever, with unchanging faith and confidence.

9. We welcome all evidences of a disposition on the part of those lately in arms against the Government

to accept in good faith and entirely the reconstruction policy of the nation, and we pledge to all such our sympathy and aid in their efforts at building up the waste places of their section, and cementing anew the bonds of union, harmony, and brotherhood.

10. Inasmuch as a stable currency is an essential factor in the prosperity of any Government, we reiterate our conviction that the nation's promise to resume specie payments in 1879 ought to be redeemed, to the end that the varied industries and interests of the land may regain their normal condition, and be freed from the uncertainties and dangers that inevitably attend a fluctuating medium of exchange.

11. That while we hail with pleasure and bid God-speed to every instrumentality intended to promote the cause of temperance, such as State alliances, temperance unions, reform clubs, we believe that our duty does not end here, but that the cause demands a faithful execution of the laws, and that the time has fully come when temperance should be pressed all along the line, to the end that the last victim to the debasing habit of drink should be rescued.

12. That in the Hon. Benjamin F. Prescott, our nominee for Governor, and Dr. Granville P. Conn, our candidate for Railroad Commissioner, we have a ticket that can confidently be recommended to the voters of the State as worthy of their support, and we hereby pledge them a triumphant election.

STATE SEAL OF NEW HAMPSHIRE.

The local nominations of candidates for State Councilors, representing their respective districts, were as follows: District No. 1, Joshua B. Smith, Durham; District No. 2, John M. Parker, Goffstown; District No. 3, Edward Spalding, Nashua; District No. 4, Francis A. Cushman, Lebanon; District No. 5, George W. Libbey, Whitefield.

In District Conventions, held by the Republicans of the several localities among themselves, the following persons were nominated as candidates for Congressmen: District No. 1, Gilman Marston, of Exeter; No. 2, James F. Briggs, of Manchester; No. 3, Henry W. Blair, of Plymouth.

The Democrats assembled in State Convention at Concord on the 17th of January, 1877; 725 delegates attended.

On the first ballot for Governor, eight candidates were voted for, and the aggregate number of the votes cast was 524. Daniel Marcy, of Portsmouth, who had 385 votes, was de-

clared nominated, and his nomination then made unanimous.

For the office of Railroad Commissioner, Thomas J. Dinsmore, of Alstead, was nominated by acclamation.

The following resolutions were unanimously adopted by the Convention:

We, the Democracy of New Hampshire, in Convention assembled, enunciate the following declaration of political faith as a basis of our political action:

1. We reaffirm our unyielding devotion to the great cardinal ideas of the perpetuity of the Union, supremacy of the Constitution, and maintenance of reserved rights and equality of the States.

2. We declare our firm adherence to the doctrines embodied in the National Democratic platform adopted at St. Louis in June last, and we especially reiterate the demand for administrative reform, so clearly set forth in the platform, and so emphatically indorsed at the polls in the election of Samuel J. Tilden and Thomas A. Hendricks to the Presidency and Vice-Presidency of the Republic, by a popular majority of 250,000, and a decided majority of the electoral vote.

3. We denounce the conspiracy organized at Washington by desperate and unscrupulous men among the leaders of the Republican party to thwart the clearly-expressed will of the people through the action of illegally-constituted and corruptly-controlled Returning Boards at the South, as revolutionary and treasonable in purpose and effect, inasmuch as it strikes at the very life of the elective franchise, which is the basis and the vital principle of the Government.

4. We denounce the conduct of President Grant in giving aid and countenance to conspirators, by the use of Federal troops, in restraining the lawfully elected governments in the States of South Carolina and Louisiana from the free exercise of their legitimate functions, and sustaining in the offices of State and Legislative halls defeated and usurping candidates and illegal bodies, as a flagrant violation of the Constitution and an outrageous usurpation of power, which should receive the emphatic condemnation of every patriotic citizen.

5. We call upon the representatives of the people and the States in the two houses of Congress, standing in the face of the deadly peril which threatens the overthrow of our institutions, to rise above partisanship, and, standing upon the broad area of patriotic statesmanship, to unite their efforts for a just and peaceful solution of the difficulty in which the country is involved, to the end that our constitutional republican government may be perpetuated in its purity and vigor, and the rights and liberties of the people maintained inviolate.

6. While we counsel calmness and moderation on the part of the people in this grave emergency, we claim it to be the unavoidable and paramount duty of every true citizen to maintain and defend the Constitution and form of government under which we have lived and prospered for nearly a century past, and to resist even to the last resort any and every attempt that shall be made to overthrow or subvert that Constitution and Government.

7. We call on all good citizens, without regard to party associations, who believe with us that Samuel J. Tilden and Thomas A. Hendricks have been fairly and legally elected President and Vice-President of the United States, to unite with us in demanding that the will of the people, constitutionally expressed, shall be carried into effect by their inauguration and installation in office.

8. *Whereas*, Recent events have conclusively demonstrated the fact that a standing army in time of peace is a standing menace to the liberties of the people, inasmuch as it is made the convenient instrument of an unscrupulous Executive, we demand the

immediate reduction of the Federal army to the lowest figure absolutely required for garrison duty at the forts and military posts of the Government, and for the protection of our frontiers.

Resolved, That the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or the people, and that neither the President of the Senate, nor the Senate, nor the House of Representatives, nor both houses together, have any authority in respect to the electoral votes not expressly granted by the Constitution, or plainly to be inferred from the powers which are expressly granted by it.

Resolved, That one of the most important rights reserved to the States is the right of appointment of qualified persons as electors of President or Vice-President of each State in such manner as the Legislature thereof may direct, but that since the Constitution of the United States to the extent to which it applies is paramount authority, the appointment of a disqualified person is null and void, and should be so treated by both Houses of Congress.

Resolved, That in entire harmony with and in furtherance of such right of appointment by a State, it is the right and duty of the Senate and House of Representatives, upon the opening of the certificates of the electoral vote, to inquire what are the laws of the State for the appointment of electors, and whether those laws have been substantially complied with.

Resolved, That the appointment of qualified electors being a matter of State regulation, it follows that if the Legislature of any State has by valid law provided a canvassing or returning board of one or more officers to determine the result of an election, and such board has been constituted as required by law, and has kept within its jurisdiction, its findings, however erroneous others may deem them to be, must, in the absence of fraud, be conclusive.

Resolved, That where the Legislature has attempted to confer powers upon a returning board which are expressly forbidden to it by the Constitution of the State, or where the returning board has not been constituted as required by the law of its creation, or has not kept within its jurisdiction, or has willfully and fraudulently, contrary to law, reversed the true majority at the polls, the appointment of electors under such illegal and fraudulent proceedings is not an appointment by the State, but is in fraud of the rights of the State itself as well as of the other States, and should be so treated by both Houses of Congress.

Resolved, That the recent order of President Grant to General Angur falsely assumes that there had been a count of the votes in Louisiana by "a returning board existing in accordance with law, and having judicial as well as ministerial powers over votes," whereas undisputed facts, publicly known, show that the board was not constituted as required by law, in that it consisted of but four members instead of five, and of Republicans only, instead of persons of different politics, and that by the Constitution of that State no judicial power could be conferred on such a board, even if full, and we solemnly protest against any recognition of fraudulent and illegal proceedings of such board so illegally constituted.

Resolved, That the provisions of the Constitution for the return of electoral votes to the seat of Government of the United States, directed to the President of the Senate, make that officer simply the custodian of the votes, and that further provisions, that he shall in the presence of the Senate and House of Representatives open all certificates, and the votes shall then be counted, manifestly restrict his duty and authority to the opening of the certificates, and any declaration of votes by him can be no more authoritative than a like declaration by the Speaker of the House.

Resolved, That by the express language of the Constitution the person having the greatest number of votes for President, "if such number be a majority of the whole number of electors appointed, shall be President," and it is not within the constitutional

powers of the President of the Senate, or of either or of both Houses, to deprive him of his right; and, believing that Mr. Tilden has such majority, we pledge him our hearty and unqualified support in the full exercise of his authority in all proper words in conformity with the Constitution and laws of the land, and the right of Mr. Hendricks as Vice-President shall be held equally sacred and inviolate.

Resolved, That the Supreme Court of the United States upon suits at law or equity regularly brought is final judge in a disputed Presidential election.

For the five State Councilors and three Congressmen, local conventions were held by the Democrats of the respective districts, when they nominated for Councilors—Messrs. Rand, Clark, Hadley, Rounswel, and Blodgett; for Congressmen—Messrs. Jones, Sulloway, and Kent.

The annual State election was held on March 18th, and resulted in an almost complete victory of the Republicans. The entire number of votes cast for Governor was 77,870, of which Mr. Prescott had 40,755, Mr. Marcy 36,721.

Of the five State Councilors, four Republicans were elected; one Democrat—in the fifth district.

The political complexion of the Legislature was as follows: In the Senate, Republicans, 8; Democrats, 4. In the House of Representatives, Republicans, 224; Democrats, 156.

All of the three Congressmen elected were claimed by the Republicans, though concerning the result of the election in the First Congressional District some doubts were raised, the number of votes cast in that district for each of the two competitors—Messrs. Marston and Jones—having been almost equal.

At the same election of March, 1877, the people also voted on the thirteen amendments to the State Constitution. All, except two, were adopted; the two not adopted being the first, "striking out the word 'Protestant' in the Bill of Rights," and the twelfth, "prohibiting the removal of officers for political reasons."

Of the result of the election, Governor Cheney gave official notice to the people by proclamation under date of April 7, 1877, in which he enumerates the eleven amendments adopted, and the two not adopted, in detail.

The new Legislature met for the regular session of 1877 on the 6th of June, when both Houses were promptly organized. In the Senate, Nathaniel Head was chosen President. In the House of Representatives, Augustus A. Woolson, of Lisbon, was elected Speaker by a vote of 217 against 147 given to his competitor, Horatio Colony, of Keene.

On the 13th, the two Houses met in joint convention again for the purpose of electing the Secretary of State, the State Treasurer, the Commissary-General, and the State Printer. The ballots taken thereupon resulted in the choice of the following Republicans:

For Secretary of State, M. B. Thompson, of Concord; for State Treasurer, Solon A. Carter, of Keene; for Commissary-General, William

H. Sise, of Portsmouth; for Public Printer, John B. Clarke, of Manchester.

The condition of public affairs in the State during the fiscal year ending May 31, 1877, was generally satisfactory.

The principal of the State debt, on the 1st of June, amounted to \$3,574,390.87, or \$53,147.62 less than it was at the same date in 1876, this sum having been paid on it within the 12 months intervening. The reduction of the State's indebtedness last year was somewhat smaller than its average for the five next preceding years; which is ascribed to the fact that the State Treasurer had to pay from the year's revenues the extraordinary expenses of the Constitutional Convention held in December, 1876.

In consequence of the long-continued depression in almost all branches of industry, that portion of revenue which flows into the Treasury from miscellaneous sources showed a considerable decrease, especially in the amount of taxes collected from railway corporations. This item alone fell short of that of the previous year by more than \$45,000.

However, the financial condition of the State being sound, and her credit at home and abroad unquestioned, the Governor says, "I think all the expenses liable to arise during the coming fiscal year can be met, and the reduction of our debt to the amount of \$110,000, that matures in July, 1878, made, by raising a State tax of \$400,000."

The number of savings-banks doing business in New Hampshire was last year 67; the aggregate amount of their deposits being nearly \$31,000,000, and the number of their individual depositors, 98,683. During the year there was an increase of \$270,000 in the whole sum of deposits, and of 1,753 in the number of depositors. These institutions pay into the State Treasury a tax of 1 per cent. on their deposits; its amount being now equal to more than $\frac{1}{4}$ of that of the State tax.

The charitable, reformatory, and penal institutions of the State are generally under excellent management in all respects, and realize the objects for which they were severally designed.

Concerning the State Prison, the dilapidated condition of the building, as well as its unhealthfulness, and its total insufficiency for want of room, calls for the attention of the Legislature. There are now 155 male convicts in the prison, with cell accommodations for 119.

The financial condition of the Penitentiary is quite satisfactory. The earnings of the convicts within the past few years, besides paying the current expenses, and the necessary repairs, have left an accumulated surplus amounting now to more than \$40,000; most of which is invested in the securities of the State.

With reference to the education of youth, the present school system of the State seems to have considerable defects in both theory and

practice. Many of the school laws are considered uncertain, inconsistent, and needing revision. The law which requires the attendance of the youth in the schools is not properly enforced, as a large number of children are losing the advantages of the common schools, and grow up in idleness, while ample provision is made by the State for their education. The present school district division, as kept up in most of the towns, employing teachers of inferior qualifications, is believed detrimental to the advance that might or ought to be made in the educational system.

As a means greatly conducive to improve the practice of the school system, and establish uniformity in the methods of instruction throughout the State, it is suggested that the Superintendent of Public Instruction, once a year at least, in each county, hold a meeting where the teachers of the county could meet and compare their own methods of instruction, and receive such information as might be communicated from persons whose eminent qualifications would entitle them to act in the capacity of instructors.

The State Normal School has been steadily advancing in its usefulness and perfecting its teaching. It is now graduating many very competent instructors, whose superior attainments are already seen in their effects in the schools where they are employed.

In the Agricultural College at Hanover, some important innovations have been lately introduced, which are likely to prove of great benefit to that institution and the farmers within the State. The trustees, in September, 1876, placed the farm under the charge of a special superintendent eminently qualified for that position, he being "thoroughly acquainted with the science of farming in all its departments, both practical and theoretical." Within the eight months elapsed from September, 1876, to June, 1877, his presence in the farm had wrought a marked improvement in its condition, to the entire satisfaction of the trustees.

With regard to the purely theoretical instruction given in the college, the trustees at their annual meeting held in April, 1877, have established for the future three distinct professorships, to which the entire instruction is to be confined, yet embracing all that may be of use to know in agriculture.

The geological survey of New Hampshire was completed within the year. Its results are detailed and explained with maps and other local representations in a work of three volumes. The first two volumes having previously been published, the third is now in the course of printing.

A raised map of New Hampshire has also been constructed under the supervision of Prof. Hitchcock, the State Geologist, exhibiting the configurations and extent of the State, together with the inequalities of its surface, in relief, proportionate to the height of their

several projections; the localities of its lakes and ponds, as well as the course of its rivers, creeks, passage-ways, and railroad lines; and designating the places and names of all its cities and towns. After 17 months' uninterrupted work, the map was completed by the end of May, 1877, and placed in permanent position at the State House, in the beginning of June. Its dimensions are, 14 feet 10 inches in length, and about 8 feet in width. It is highly commended for accuracy and finish of workmanship. A copy of one section of it, about one-fifth of the whole, representing the White Mountain region, which was finished first, was sent to the Centennial Exhibition at Philadelphia.

Complaints against the slow pace of legal proceedings in the courts of the State, and in all cases, are general, and the law's delays have long been a by-word, the people commonly asserting "that cases remain on the docket year after year awaiting trial; that parties, exhausted by trouble, anxiety, and cost, abandon their suits and their rights in despair, and go out of court with diminished respect for free government; that many suffer serious wrongs and losses without resorting to the legal remedy, because they believe it is not likely to improve their condition; and that for these reasons the law is employed too much for revenge, and too little for redress."

In 1859, the number of judges was reduced from 8 to 6, while the number of cases, both civil and criminal, has since the late civil war largely increased. An inquiry into the subject, and official statements made by the clerks of the courts, show that one year ago there were 4,400 continued cases, and that on the dockets of the Circuit Court more than 6,000 cases have been entered since that time.

The farming and manufacturing interests in the State continue in their normal condition, with a tendency to advance in their progress.

Respecting the Centennial Exhibition at Philadelphia last year, the State of New Hampshire actively participated in it from the beginning, by liberally subscribing to the stock, and otherwise acting so as to encourage the enterprise, and promote its success. She was also creditably represented there in the several departments of her industries, and compared favorably with the other States of the Union.

The Legislature of 1877 continued in session for about six weeks, and closed it on the 19th of July.

A large number of laws were enacted, having a private and local, as well as a general and public, character. The titles and import of the following acts seem worthy of mention:

"Increasing the number of the Justices of the Supreme Court;" which is hereafter to consist of one chief justice and six assistant justices, instead of five as heretofore.

"Appropriating \$6,000 for the purpose of enabling the New Hampshire Asylum for the Insane to build a new boiler-house, and to

remove thereto its present boilers and engine."

"Providing for the erection of a New State Prison with all the necessary offices, workshops, and other appurtenances, at a cost not to exceed \$200,000, and of sufficient capacity in all its parts and apartments to accommodate and employ 200 convicts."

"Making an annual appropriation of \$5,000 for the support and maintenance of the State Normal School at Plymouth."

"To increase the revenues of the State of New Hampshire." This act lays a specified, differently proportional tax, to be paid by the parties concerned, on every private act hereafter passed by the Legislature, "incorporating, chartering, renewing, or extending the corporate powers of savings and other banks, railroad, insurance, water-power, gas-light, express, steamboat, or any other company, which has for its object a division of profits." Religious, charitable, or educational institutions, agricultural societies, and other associations specified in the act, are declared exempt from its provisions.

"To fix the time when the constitutional amendments, adopted in March last, shall take effect;" for the *second* amendment, relating to the trial of causes in which the value in controversy does not exceed \$100, and the title to real estate is not concerned, without the intervention of a jury; the *seventh*, abolishing the religious test as a qualification for office; the *tenth* and *eleventh*, authorizing the General Court to provide that appeals from a justice of the peace may be tried without the intervention of a jury, and to increase the jurisdiction of justices of the peace to \$100; and the *thirteenth*, prohibiting money raised by taxation from being applied to the support of schools or institutions of any religious sect or denomination. The act appoints the 1st day of August, 1877, as the time in which they shall go into practical operation.

For the several amendments "relating to the change of time for holding the State elections from March to November, and providing that the elections shall be biennial, or only once in two years," the act ordains that they "shall take effect on the 1st day of October, A. D. 1878, and the first election under the said amendments shall be held on the Tuesday next after the first Monday in November, A. D. 1878."

The act further ordains that "all the remaining amendments of the said Constitution, which have been legally adopted, shall take effect on the first Wednesday of June, A. D. 1879;" to which it subjoins the following explanation: "The true intent and meaning of this provision being that these constitutional amendments relating to elections, and the terms of office, shall take effect at such times as there shall be an annual election in March next, under the old Constitution, and that the officers then elected shall hold their offices for one year as they do now; and that at the

election in November, A. D. 1878, all the officers above enumerated shall be elected under the amended Constitution for two years, and shall take their places on the first Wednesday of June, 1879; and that upon the said day all the amendments to the Constitution shall take full effect."

The same act provides "for compiling the Statutes of the State." For this purpose it empowers the Governor, with the advice of the Council, "to appoint and commission three persons learned in the law as soon as may be," specifies the duties of the commissioners in detail, and enjoins them to have their work ready for publication "before the next session of the Legislature in June, 1878, and make report to the said Legislature."

NEW JERSEY. The Legislature of this State met for its regular session at Trenton, on the 10th of January, 1877. The Senate was promptly organized. In the House of Assembly, composed of Republican and Democratic members in equal number, the organization was delayed till the following day. The roll having been called by the Clerk of the last Assembly, and all of the members found present, a resolution was adopted, "That a majority of all the members should be necessary to elect the officers of the House." Two competitors were then put in nomination for Speaker, Rudolph F. Rabe, of Hudson County, Democrat, and Alden C. Scovell, of Camden County, Republican, and the ballot resulted in a tie, 30 votes having been cast for each. Three more ballots were taken, and ended also in a tie. An organization was finally effected on the second day, which gave each party a share of the offices.

STATE SEAL OF NEW JERSEY.

Action was taken by the Legislature at this session for the election of a United States Senator for the full term of six years, to commence with March 4, 1877. The election was effected by the two Houses voting in joint convention on the 24th, when, a motion for that purpose having been made and agreed to, the joint roll

was called with the result that 40 Republicans voted for George M. Robeson, and 41 Democrats for John R. McPherson; upon which the President of the Convention declared Mr. McPherson elected.

On the 13th of February, the two Houses met in joint convention for the purpose of electing a State Controller, the competitors put in nomination for that office being Robert F. Stockton, of Mercer County, Democrat, and Samuel Morrow, of Essex County, Republican. The vote having ended in a tie, and there being no hope to make a choice on that day, the convention adjourned to the 20th of the same month, when they met again, and effected the intended election, there having been 13 votes cast for Samuel Morrow, and 61 for Robert F. Stockton, who was, in consequence, declared elected.

On the same day the joint convention proceeded to elect a State Director of the United Railroads of New Jersey, and the vote resulted in the election of William Patterson, of Amboy County, Democrat; he having received 40 votes against 39 cast for his competitor, Charles A. Butts, Republican.

The Legislature closed its session by final adjournment on the 9th of March, having passed a large number of acts. From among these we mention the following:

An act establishing a State Board of Health. Its provisions do not apply to cities, towns, or boroughs having a local board.

An act supplementary to the General Gas Law. It requires more accurate tests, and a higher standard of gas.

A supplement to the act to ascertain the rights of the State, and of riparian owners in lands lying under the waters of the Bay of New York, and elsewhere in the State.

An act concerning Commissions to regulate Municipal Affairs. It repeals "such parts of all public, special, and local laws as provide for the appointment of Commissions or Commissioners by the Senate and General Assembly of the Legislature, in joint meeting, to regulate municipal affairs in any city of the State;" and substitutes for each of such Commissions a board consisting of three persons to be elected by the people at the charter election in any city, to hold office for two years, and exercise all the powers heretofore conferred upon the said Commissions or Commissioners.

A supplement to an act entitled "An Act regulating Proceedings in Criminal Cases (Revisions approved March 27, 1874)." It was introduced in the Senate at the evening session of February 5th, was immediately passed under a suspension of the rules, and at the morning session, next day, it was passed by the House of Assembly in the same way. The Governor returned it without his approval, and accompanied it with a written message containing his objections, showing at length the evil effects which the bill would produce if

it became a law. Among other things, he characterized it as an "attempt to overturn a law originally adopted in 1795, which has given to our criminal jurisprudence in capital cases a character unexcelled, securing to the accused all just and legal rights, and preventing the guilty from using the delays and processes of the courts, merely as a means of escape." After the reception of this message, the Senate reconsidered the bill on the 12th of February, and sustained the Governor's veto.

Among the more important laws enacted at this session, that which creates District Courts of one judge, in cities of 15,000 or more inhabitants, seems to deserve special notice. Two such courts were established some years ago in the city of Newark, where they have since been in practical and very beneficial operation. This act makes their establishment general in localities of a certain number of residents throughout the State. Its purpose and chief provisions may be summarily stated as follows:

"The object of this act is to create higher courts than those of justices of the peace, yet not superseding them; higher in regard to legal ability, as well as respectability and power. The new courts are limited to cities having 15,000 population and over. In cities between 15,000 and 100,000 there shall be one such court, in cities above the latter number there shall be two.

"The jurisdiction is \$200 in all civil actions, except in cases of replevin, slander, assault and battery, or false imprisonment, or in cases when the title to real estate may come in question. The court has exclusive jurisdiction in actions where the defendant resides in the city. As to territory, it is coextensive with the limits of the city, but its various processes shall run through the county, and the judge may issue subpoenas to any county in the State.

"This court is dignified and strengthened by being made a court of record, with a seal and clerk, but laymen as well as attorneys may practise before it. The jurisdiction of \$200 is exclusive of the costs, which will remain about the same as in cases before justices of the peace. The fees are to be paid into the city treasury. The city provides the quarters for the court. Appeals may be taken to the Common Pleas on questions of law. The salaries are in proportion to the population: in cities not exceeding 30,000 inhabitants, \$2,000; in cities over 30,000 and not exceeding 100,000, \$2,500; over 100,000 (which only applies to Newark and Jersey City), \$3,000. The clerk's salary is \$700. These sums are to be paid from the city treasury. The judges hold office for five years. They cannot practise in courts of their own standard, or in the Common Pleas. They are judges both of law and fact, unless a jury is demanded. The court has no criminal jurisdiction. It is optional to commence suit before this court, except in the one instance

when the defendant resides within the city. Any who choose may go before a justice of the peace."

The power of nominating and appointing the judges who are to sit in the new courts is vested in the Governor, by the advice and with the consent of the Senate.

In order to put the provisions of this law into actual working, and thus realize its purpose without unnecessary delay, Governor Bedle issued a proclamation soon after the final adjournment of the Legislature, convening the Senate for a special session at Trenton, on the 27th of March, that he might present to them for confirmation the names of those whom he thought fit to occupy the seats of the newly created courts.

At the appointed time the Senate met and effected its organization; 19 Senators, or all of them except two, being present. Thereupon the Governor sent to the Senate the following list of names for District Judges in the several localities: Newark, Finley A. Johnson, George F. Tuttle; Jersey City, B. F. Randolph, John A. Blair; Hoboken, Frederick Ogden; Paterson, John Hopper; Elizabeth, Joseph Alward; New Brunswick, Charles J. Rutgers; Trenton, Robert S. Woodruff, Jr.; Camden, Richard T. Miller.

At the first sitting, and others held on the same and the following day, the Senate confirmed all of the Governor's nominations, except that of John A. Blair for one of the two courts in Jersey City. Notwithstanding this rejection, the Governor sent in the name of Mr. Blair a second time, and it was again rejected. He then sent for the same place the name of Isaac Romaine, which also was rejected—nays, 11; yeas, 8; a strict party vote. It was reported that both Mr. Romaine and Mr. Blair were defeated because they are Republicans; the Democrats, who are in a majority of one in the Senate, being resolved that the two District Judges in Jersey City, as those elsewhere, should all be of their party. On being apprised that Mr. Romaine also had been rejected, Governor Bedle sent no further nominations, but put an abrupt end to the extra session, by sending to the Senate a written message, dated March 30, 1877, in which, after stating that a committee of three Senators had called at the Executive Chamber on the 28th of that month, and notified him "that they were authorized to inform him that a caucus of the dominant party of the Senate had adopted a resolution, not to confirm any Republicans for District Judges, if nominated," he sets forth the reasons why he thought it proper and just that one of the two District Judges in Jersey City should be a Republican, as one of them in Newark is of that party, and concludes as follows:

The action of the caucus, of which I was formally notified, and the refusal to confirm, as stated, have precipitated upon me the question whether the Executive of the State shall acquiesce in the previous

determination of Senators to control his official duty in order that a range of ten (10) courts, intended by the Legislature to correct evils in cities under the present elective system of justices of the courts for the trial of small causes, shall be established with an unbroken party aspect, except in Newark, as stated. To my mind there is but one answer, and although regretting the fact of difference, I cannot but conclude, very respectfully, that in view of the policy adopted by the caucus, and the consequent action thereon, there is no further reason for the detention of the Senate.

Respectfully,

J. D. BEDLE.

The reading of this message produced a storm of indignation on the part of the Democratic Senators, and the document was not allowed to be spread upon the journal of the Senate. A motion made to that effect was lost. On a motion to adjourn, the vote stood, yeas 11, nays 8; and the special session was closed.

The financial condition of the State appears to be remarkably prosperous. Her assets for property owned, real and personal, of various kinds, including stocks, United States bonds, United Companies bonds, real estate, uncollected taxes, and money in bank, amount to \$10,381,315.05. She has no civil debt, properly so called. The whole of her liabilities is reckoned at \$2,796,376.08, made up by the following items: War debt, \$2,296,800; temporary loans, \$150,000; and unpaid appropriations, \$330,076.08.

The receipts into the State Treasury from all sources during the fiscal year ending October 31, 1877, were \$3,430,974.19. Of this sum, \$1,225,462.48 was school tax, and \$901,806.24 State tax. The public expenditures for the same year amounted to \$2,816,649.88; leaving a balance in bank to the credit of all the State funds, except the sinking fund, of \$214,954.31.

The estimated receipts for the year ending October 31, 1878, are set down at \$1,812,550.23; the expenditures at \$1,540,000.

The whole amount of the taxable property in the State, as shown by the ratables, has decreased \$30,583,010.70 since the last assessment.

The total assets of the sinking fund on October 31, 1877, consisting almost entirely of loans on mortgages, real estate at cost and expense, and cash in bank, amounted to \$1,371,911.09. This fund is set apart for the payment of the war debt, the bonds of which mature in installments of \$100,000 each year up to 1892, and thereafter in unequal sums up to 1902, when the last bonds become payable. The debt at the present time exceeds the amount of cash ready to pay it, by about \$840,000, which might properly be called the State debt on that account.

The sums expended for public instruction during the year were \$1,225,462.48 from taxes levied exclusively for that purpose, and \$100,000 appropriations from the State fund, making a total of \$1,325,462.48.

The normal school, as also the model and Farnum schools, is in most successful operation, and under excellent management.

In the State Agricultural College every opportunity is afforded to students for a thorough scientific and practical education, for which the trustees conduct an experimental farm. The State is entitled to the free education of 40 students at this college, they being apportioned among the counties according to legislative representation. The college has a fund of \$116,000, the proceeds from the sale of Federal scrip for public lands.

In the Asylum for the Insane at Morristown, on October 31, 1877, there were 445 patients. For their support, and the salaries of the employes in the institution, the State expended during the year \$26,441.67. To complete the building of this asylum, and for its furniture, the Legislature, by act of March 7, 1877, appropriated the sum of \$150,000, under certain conditions, depending on the Governor's judgment. The money has been paid and applied as intended, and the building will be completed early in the year 1878.

STATE CAPITOL, TRENTON.

In the Lunatic Asylum at Trenton the number of patients on October 31, 1877, was 510. This institution maintains its established reputation "for thoroughness in its appointments, and efficiency of treatment." For salaries and county patients in this asylum the State Treasury has paid during the year \$37,807.15, including \$11,821.21 expended for insane convicts treated there, at the rate of \$7 per week, clothing included.

Each of these asylums is supported by the revenue from private patients, payments by the counties for public patients, and a further sum from the State Treasury of \$1 per week for every county patient.

The feeble-minded of the State, as well as her deaf mutes and blind, are kept in institutions of other States for education. The respective numbers of persons belonging to these

three classes, and now kept abroad at the charge of the State, are 32, 107, and 47. The sums paid by the State for their support during the year were—for the feeble-minded, \$7,968.60; for the deaf mutes, \$30,368.39; for the blind, \$12,489.58.

The Home for Disabled Soldiers continues to be unexceptionably managed. The payments from the State Treasury for this institution, within the year, amounted to \$44,743.27. The Soldiers' Children's Home is closed.

A law was enacted by the Legislature, and approved March 9, 1877, entitled "An act for the establishment of orphan asylums." It provides that "it shall be lawful for any five or more persons to form themselves into an orphan-asylum association for the purpose of receiving, supporting, and educating orphan children;" declares any such association incorporated in the locality where it intends to establish itself, and entitled to bear the name which it chooses to assume, upon filing in the

office of the Secretary of State a certificate in writing of its organization, previously recorded in the office of the clerk of the county where such asylum shall be located; and vests it, under certain conditions, with power "to apply for and accept the guardianship of orphans, or children who have no mother; to bind out such children as shall have been under its care for more than one year; and to receive and retain such children as may be placed under its charge, subject to such rules, by-laws, and regulations as may from time to

time be passed by the managers of the said association." Each of these associations "shall be governed by a board of managers of not less than five, nor more than fifteen, who shall be elected by the members of the association."

The Reform School for Boys, at the end of October, 1877, had 247 inmates, their average number during the year having been 236. The year's expenditure of the State for this school was \$31,500, \$2,000 of which were for permanent improvements. The works at which the boys are employed are farm labor, making bricks and tiles, manufacturing shirts, and laundry-work.

In the Industrial School for Girls, their number, on November 1, 1877, was 28. Several were indentured abroad during the year. The sum paid from the State Treasury for this school in the year was \$7,000. Ninety-one

girls have been in the school since its opening. It is stated that five-sixths of their number are now living moral and useful lives.

The number of convicts in the State Penitentiary on October 31, 1877, was 805, and their daily average for the year 816, which is an increase of 50 over that of the previous year. The earnings and income of the prison during the year amounted to \$75,611.70, the expenditures to \$123,148.49, showing a deficit of \$47,536.79, or \$34,509.44 less than in the preceding year. The year's earnings of the convicts exceeded the cost of maintenance by \$12,129.26; the account for maintenance including provisions, fuel, light, water, clothing, and all other matters of expense except the salaries of the officers and employés in the prison.

The Independent Greenback party of New Jersey met in State Convention at Trenton on the 14th of August, about 50 delegates being present.

The intended nomination was effected without ballot, Thomas Horsey having been, on motion, declared the nominee of the party for Governor.

The following series of resolutions was adopted by the convention:

1. We demand the immediate repeal of the Resumption Act, which has greatly aggravated the evils caused by contracting the currency \$12,500,000 since the close of the war, and increasing to that amount the bonded debt of the nation; and we condemn the refunding of 5-20 bonds in gold, which by law are payable in currency.

2. That that part of the law of February 25, 1862, authorizing the issuing of the national currency known as greenbacks, which limited their power as a legal tender so as to except duties on imports and interest on the public debt, was disgraceful to the Congress which authorized it, and stamped on every bill partial repudiation.

3. That the act of May 9, 1872, reported to the House of Representatives February 9, 1872, from the Committee on Coinage, Weights, and Measures, by which silver was corruptly, and against the wishes and welfare of the people, demonetized as a legal tender, was an outrage upon the rights and interests of the nation. We demand its unconditional repeal.

4. We demand that the issue of all money, whether paper, silver, or gold, and regulating the value thereof, be made by the Government in pursuance of its prerogative of sovereignty, and that it shall not delegate this power, directly or indirectly, to national banks and corporations; that bank-notes shall be retired from circulation, and the general Government have no connection with banks or banking, and that no paper-money shall be allowed in circulation except that issued by the United States, and sustained by its sovereignty and the entire wealth and credit of the nation.

5. That the letter of the President accepting the nomination, which inconsiderately committed him to an immediate resumption of specie payments, was not the deliberate act of a statesman, but a yielding to the clamor of the money power that should not bind him to the pledge in the face of the fact that at the time there was less than \$55,000,000 in gold as the basis for the redemption of the \$383,000,000 legal-tender notes, \$356,000,000 national-bank notes, \$48,000,000 of fractional currency, \$600,000,000 due depositors in national banks, and \$1,878,000,000 due depositors in savings banks, all or any one of which liabilities in the first hour of a general demand for specie arising from the action of the gold-gamblers

making a corner in gold, or the accident of a panic, would have resulted in national bankruptcy.

6. That the act of March 18, 1869, entitled "An act to strengthen the public credit of the United States," by which the bonds of the Government payable in lawful money were declared to be payable in gold, was a fraud on the nation, imposed upon Congress by a combination of bondholders for selfish purposes. We demand the immediate repeal and the enforcement of the act of February 25, 1862, authorizing the issue of the 5-20 bonds and greenbacks in the following terms: "And such United States notes shall be received the same as coin at their par value in payment for any loans that may be hereafter sold or negotiated by the Secretary of the Treasury."

7. We demand that the cause of the late disturbances shall be removed, by the inauguration of a financial policy which will give money to productive industry, and full employment, at good wages, to labor, instead of an increase of the army; and we condemn the present and past financial policy, which in 10 years has brought the most prosperous nation in the world to a condition bordering on revolution, embarrassed or ruined nearly all our business men, closed half our factories, reduced production one-half, and to-day presents the appalling spectacle of 4,000,000 men idle and starving in the midst of profuse abundance.

8. That in order to consume their products labor must be paid good wages, and that the continued reduction of wages consequent upon contraction has so reduced the power of labor to consume that workshops are closed and millions are idle.

9. That equality and uniformity in taxation is a fundamental principle of constitutional law; that any and every statute which directly or indirectly exempts one class from taxation while it imposes that taxation upon another class, is unjust, arbitrary, and should be resisted; that the exemption of any bond or obligation from taxation by the town, county, city, State, or National Legislature which issues it, is a violation of that equality of rights Government is bound to secure; it is an infringement upon the laws of property which no exigency can secure and no law can justify.

10. That manhood suffrage shall forever be held inviolate, and we condemn the unsuccessful attempt of Republican and Democratic politicians in New York State to enact a bill, already passed in several States, depriving of their votes the hundreds of thousands whom contraction and attempted resumption have reduced to abject poverty, and we warn the impoverished working-men of New Jersey that it is a part of the conspiracy of the money power to first pauperize and then disfranchise labor.

11. Deeming the Independent Greenback party as the true reform party, and believing that all true reformers have a common object, namely, a correction of wrong, and the bettering of the condition of the people, and the relief from burdens existing, in order to combine movements in favor of needed reforms, we cordially invite the tax and labor reformers to unite with us, as we pledge ourselves to secure the election of our candidates, and in their conventions to ratify the same, and in the Senatorial and Assembly districts to coalesce in nominating men who will stand by our united measures of reform in currency, tax reform, and labor reform.

From a special committee of three members, appointed to prepare an address to the people of the State, to be published after the close of the convention, the following was reported before its adjournment:

The Independent Greenback party of New Jersey appeals to the industry of the State to join in protesting against the absurd policy of contraction pursued by the National Administration, under the de-

captive plea of a return to specie payments. Already the cost of this legislation in favor of money and against manhood has been to the industry of the country three times more than the whole national debt, while it has checked the industrial association of the people, stopped their progress toward industrial independence, filled the land with disheartened and impoverished tramps, and so demoralized those placed by the people's suffrage in temporary control of the people's well-being that they dare appeal to the bayonet to silence the popular discontent. An industrious people need no military to force them to their pursuits, while a bankrupt people means a bankrupt Government. By a persistent course of legislation the Republican party in power, aided by the Democratic party, has made banking and bond-holding so preëminently the most profitable business of the country that the producers, on whom the whole charge of interest comes, are disheartened and desperate at finding the results of their labors taken from them, and penury the only legacy they can hope to leave their children. This wasteful disregard of the people's rights thus inaugurated by the Central Government has been imitated by the subordinate State and local administrations, so that a career of speculation, extravagance, and fraud has been carried on until the people, crushed under taxation and deprived of income, are in danger of becoming reckless and violent. Hunger knows no law and order. To put an end to the wholesale robbery of the people, the Independent Greenback party invites all well-meaning persons to carefully consider these resolutions, which were adopted in convention.

The colored men of the State, pursuant to a call issued in the month of July, held a convention at Princeton on the 22d of August, to publicly express their sentiments on matters which especially concern their political and social condition. Several persons of good repute and influence among them addressed the assembly.

Upon the call of the president, the Committee on Resolutions reported the following:

That we renew our fidelity to the principles of the National Republican party, recognizing in them the source and medium of our liberty, enfranchisement, and equality of citizenship.

That we indorse the movement recently inaugurated for the elevation of labor, and will give our aid and comfort in the support of all peaceable and lawful measures that will emancipate the workingmen from the arbitrary tyranny of capital.

That we indorse the civil service reform as approved by the present Administration, which, if successfully prosecuted, will purify parties, and give strength and confidence to the Government.

That the conciliatory policy of President Hayes is an abandonment of the Republican party by which he was elected to the Presidency, and is and ought to be condemned, in that it has given and will continue to give political power and the control of the Government to the very men who sought its destruction.

That we tender our support to the tried friends of liberty in our own State and elsewhere.

These resolutions were taken up by sections for discussion. The first, third, and fifth resolutions were adopted; the second and fourth, tabled.

A number of tax-payers in the State assembled in convention at Trenton on September 3d, their object being "to consult on the course best to be taken to relieve the tax-payers of the State from the burden they have so long

and so patiently submitted to." Claiming that "the tax-reform is not a political but a business one," they intended to nominate their own candidate for Governor, should the convention, on deliberation, have thought fit to pursue that course.

The attendance at this convention, which at first numbered less than twenty persons, on its reassembling after a recess filled the room. Upon the report of the Committee on Organization, the temporary officers of the convention were made permanent.

The following Declaration of Principles was reported from the Committee on Resolutions, and adopted by the convention:

All true reform—no matter by what name called or known, or by whom advocated—has a common object in view, namely, relief from burdens unnecessarily borne and the bettering of the condition of man. That the tax-payers of New Jersey are now suffering from burdens is evidenced in the fact that, while the pay of office-holders and all other expenditures from State, county, township, city, and school treasuries have increased from 200 to 800 per cent. within the past few years; while new offices have been created, and a large number of clerks and other employés have been pensioned upon public treasuries; while, in a word, taxes have been largely increased, the public service has been but little benefited; the resources from which to pay these increased taxes have been greatly lessened by the decrease of income received from labor, from the cultivating of farms, from all kinds of mechanical pursuits, from manufacturing, from merchandise, from professional avocations, from, indeed, all resources from which or through which all tax-payers (save office-holders) usually derive the means with which to pay taxes, and, worse still, the disproportion between the amount demanded and the ability to pay is growing greater. In view of these incontrovertible facts, the tax-payers of New Jersey, irrespective of party politics, and without any intention or desire to injure or to help either of the great political parties (both having failed heretofore to give any relief, and both being so constituted, controlled, and led, that they cannot, or will not, give the needed relief), respectfully but most earnestly demand the following reforms:

1. That in all public business the rule which a prudent man would adopt as his own should be adopted for the public business.

2. That in making appropriations from public treasuries, the interests of the entire community, or of the entire State, shall alone be considered, and not the interests of a few office-holders, office-seekers, or would-be contractors.

3. That the rate of interest in New Jersey shall be reduced from 7 to 6 per cent.

4. That the assessment for taxes shall be equitable and just, and uniform in all parts of the State.

5. That all superfluous offices shall be abolished, all superfluous pensioners be discharged, and the salaries and fees of all office-holders reduced to correspond with present values and present incomes from other pursuits.

6. That all perquisites to office-holders be abolished, and that fixed salaries be substituted for fees, except in court cases, when the fees shall be reduced one-half.

7. That the office of County School Superintendent be abolished; the salary of the State Superintendent reduced; the pay for teachers' institutes be discontinued.

8. That disbursements from the State Treasury for State militia shall not hereafter exceed \$10,000 per annum.

9. That no direct or State tax for State purposes be hereafter levied; but that the ordinary receipts from corporations, interest, and dividends on stocks and bonds held by the State, and other usual resources, amounting last year to over \$600,000, be made to cover all disbursements from the State Treasury.

10. That all estimates to be made hereafter by the State Controller, or other State officer, be based upon the ordinary resources of the State, instead of upon calculations in advance as to how much money can be gotten out of the pockets of the tax-payers.

It was deemed inexpedient to nominate candidates for office.

The Temperance Association met in State Convention at Trenton on the 19th of September, and put in nomination for Governor, Rodolphus Bingham, of Camden County. The platform unanimously adopted by this convention is, in substance, as follows: The preamble sets forth the evils of intemperance "in both social, national, moral, political, and domestic affairs;" and the resolutions are to the effect "that the members of the Temperance Association will no longer give their votes to candidates for office who are not pledged to the entire and absolute prohibition of the liquor traffic; that nominations for State, county, and local officers are to be made in the interest of the temperance cause; that, while proceeding to take separate political action, they recommend the continuance of all the educational and moral means and movements; that the laboring classes of the community are to be called on for their coöperation in this movement; and that they adopt, in its entirety, the declaration of principles adopted by the State Tax-payers' Convention, held at Trenton on the 3d of September, instant, and will use their utmost exertions to give them practical effect."

The Democrats held their State Convention at Trenton on the 19th of September. The number of delegates present was considered the largest ever assembled for any convention in the State. The names of candidates for Governor were proposed by counties, and ten were put in nomination, as follows: W. M. Righter, John McGregor, George B. McClellan, B. F. Carter, Leon Abbott, John T. Bird, John P. Stockton, Wright Robbins, John Hopper, and M. Hardenburg. At the first ballot the highest numbers were: for Mr. Abbott, 304; for Mr. McClellan, 171; for Mr. Stockton, 153; for Mr. Righter, 103. Morris County having then changed all of its votes in favor of Mr. McClellan, its example was followed by most of the other counties, with the result that at the second ballot above four-fifths of the whole number of votes were cast for him—he having received 804; Mr. Abbott, 156; Mr. Stockton, 2; Mr. Carter, 21. The announcement of this result was received with most enthusiastic and prolonged cheering, at the subsidence of which the president formally declared "that George B. McClellan was the nominee of the Democratic party." The following platform was adopted by the convention:

1. The Democracy of the State of New Jersey, in convention assembled, reaffirm the principles contained in the National Democratic platform, adopted at St. Louis in 1876. We denounce the frauds and crimes by which our candidates for President and Vice-President are prevented from occupying the positions to which they were chosen by a decided majority of the popular and electoral vote.

2. We congratulate the supporters of free government throughout the United States on the fact that even the man who was placed in the presidential chair by means of these frauds and crimes has found it necessary, in order to receive the respect and support of any portion of the American people, to adopt the Democratic policy of local self-government in the Southern States, and to abandon all further devices to perpetuate sectional jealousies.

3. The Democratic party, embracing within its ranks all classes of our citizens, the most of whom are workmen, believe that all legislation should have for its object the greatest good to the greatest number. We therefore oppose all special legislation for corporate or individual interests at the expense of the people. We recognize the needs and sympathize with the workmen of the State in the prevalent distress. We advise the enactment of such legislation as will enable us to collect statistical information relating to the interests of labor and capital, with a view to harmonize these interests and place our industries upon a more permanent and scientific basis.

4. Honest toil and legitimate business are the true basis of a nation's prosperity; official salaries ought never to be so high as to be sought after for mere pecuniary gain; salaries, fees, and costs of litigation have, during the past years of Republican legislation, been so largely increased as to become absolutely burdensome to the people; the times demand, and the necessities of the people require, a radical reduction of all such salaries, fees, and costs.

5. The usury laws should be revised and reformed, and six per cent. should be restored as the uniform legal rate of interest in this State, without impairing the obligation of contracts.

The Republicans assembled in State Convention at Trenton on the 25th of September, a large number of delegates being in attendance. The following persons were severally put in nomination by different counties as candidates for Governor: William Newell, Frederick A. Potts, William Walter Phelps, and G. R. Colby. At the first ballot Mr. Newell received 360 votes, Mr. Potts 142, Mr. Phelps 29, and Mr. Colby 31. Mr. Newell was declared the Republican nominee for Governor. The following resolutions were unanimously adopted by the convention:

The Republicans of New Jersey, cherishing a just pride in their past record as a political party, and at the same time recognizing their obligation to deal with new issues as they arise, unite in the following declaration of principles:

1. *Resolved*, That we reaffirm the National Republican platform of 1876, especially its cardinal doctrines:

That the United States constitute a nation and not a league:

That the Republican party is pledged to the complete protection of all citizens in the equal enjoyment of all their civil, political, and public rights:

That the national faith is sacredly pledged to the maintenance of the national credit, and the speedy resumption of specie payments:

That the invariable rule in appointments to the civil service should require honesty, fidelity, and capacity in the appointees; having due regard to

representing the policy of the party in power, but making the efficiency of the public service the first object:

That the public revenue should be largely raised by a tariff adjusted as far as possible so as to promote the interests of American labor and the prosperity of the whole country:

That no further grants of public lands should be made to corporations and monopolies, but that the national domain shall be used for the equal benefit of all the people. Until these great principles are perfectly secured, the mission of the Republican party will not be ended. For their accomplishment, we demand the full enforcement of all existing laws: if these are not sufficient, we demand additional legislation, and, if necessary, additional amendments to our Federal Constitution: and, finally, we affirm it to be the bounden duty of the General Government to protect all citizens in all States in their civil and political rights.

2. *Resolved*, That the President of the United States, holding his high office by a majority of the electoral votes cast at the last election, and by virtue of the decision of the most august tribunal ever created by Congress, is entitled to the support and respect in his office of every law-abiding citizen, and the puerile efforts of some portions of the Democratic party to throw discredit upon a tribunal largely of their own creation are an exhibition of folly and bad faith which deserve the reprobation and contempt of all right-minded citizens.

3. *Resolved*, That we cordially recognize the earnestness and sincerity with which President Hayes is laboring to promote the reconciliation of all sections of the country, and to secure an efficient and economical administration of the business of the Government. We are united in desiring the accomplishment of these great objects, and we pledge our hearty support to every wise measure calculated to secure the lasting unity and prosperity of the whole country, on the basis of impartial justice and equal rights for all citizens of all sections.

4. *Resolved*, That we congratulate the country upon the progress made toward the resumption of specie payment, and demand the adoption of all measures necessary to insure the restoration of a standard, uniform throughout the world, at a date not later than that now fixed by law.

5. *Resolved*, That the Democratic party of this State, by nominating as their candidate for Governor one who is in no sense identified with the agricultural, commercial, manufacturing or other interests of the State, nor familiar with its people and their wants, and who has twice within the past two years been a candidate for office in an adjoining State, have disregarded the uniform practice of both political parties, have shown themselves to be willing to sacrifice the most important interests of New Jersey to the demands of a designing and ambitious political "ring," and have insulted the just State pride of every citizen.

6. *Resolved*, That the extravagance of Democratic administrations in this State for nine years past has become a glaring abuse, confessed by the late Democratic Convention, and demanding a prompt and complete reformation. The State House has become the centre and headquarters of partisan intrigue; the public interests have been subordinated to schemes of personal ambition; the public money has been squandered in useless and expensive parades, excursions, and displays; inordinate fees for officials have become the rule rather than the exception; the cost of the administration of justice has become burdensome and oppressive; and the whole system of State administration is infested with old abuses, which nothing but a radical change of men and measures can correct. We demand a simplification and reduction of official powers and perquisites, a reduction of fees, a revision of the tax-laws, and a general lightening of the burdens of the people; and the

Republican party pledges itself and its candidate for Governor to labor incessantly for these ends.

7. *Resolved*, That the reduction of the rate of interest to 6 per cent. is the obvious demand of sound public policy and should be accomplished by explicit legislation at the earliest possible moment.

8. *Resolved*, That we reaffirm an approval of the principles asserted and established by the recent amendment to our State Constitution which prohibits the use of public funds for any sectarian purpose, and we are unalterably opposed to the interference of religious sects in civil affairs and to any division or diversion of the public school funds for their benefit.

9. *Resolved*, That we point with pride to the evidence which the history of the Republican party affords of its devotion to the interests of labor. It has secured to 4,000,000 oppressed people a proper reward for their toil, and through the agency of a reasonable tariff has sought to protect the American workman against the hurtful competition of the ill-paid labor of foreign lands; that the past record of the party is a guarantee that the future policy will be one of justice to workmen as well as to other classes of the people, and which, by the adoption of wise financial measures and the encouragement of industrial interests, will, so far as it can be accomplished by legislation, tend to open new avenues for the use of capital, and employment, and labor.

10. *Resolved*, To the candidate named for the office of Governor by this Convention we pledge our earnest and undivided support.

The result of the canvass was the election of the Democratic candidate for Governor by a majority of 12,743 over the Republican. The aggregate votes then polled in the State numbered 190,134, of which George B. McClellan received 97,837, William Newell 85,094. The nominees of the Greenback and Temperance parties had 5,058 and 1,438 votes respectively. The number of scattering votes was 37, and 690 ballots were rejected by the Board of Canvassers.

Of members returned to the State Legislature, there were 12 Democrats, 9 Republicans, for the Senate; and 33 Democrats, 27 Republicans, for the House.

The various material interests of the State, in regard to agriculture, manufactures, and the other branches of industry, though more or less affected by the long-continued depression in commercial affairs, seem to be in a satisfactory condition.

For the year 1876, the aggregate numbers of marriages, births, and deaths appear from official statement to have been as follows:

Marriages (several counties made no returns).....	5,471
Births: males, 9,364; females, 8,755; sex not reported, 732.....	18,851
Deaths.....	13,346

In the city of Newark alone the births in 1876 numbered 3,723, the deaths 3,722.

The proportional number of persons who died within the same periods of human life, distributed into decades of years, is exhibited in the following summary: Deaths, total number in the State, 13,346. Ages, under 5 years, 4,935; 5 and under 10, 1,112; 10 and under 20, 908; 20 and under 30, 953; 30 and under 40, 881; 40 and under 50, 827; 50 and under 60, 806; 60 and under 70, 896; 70 and under

80, 888; 80 and under 90, 466; 90 and under 100, 83; over 100, 6.

The grants of lands under tide-water, executed by the Riparian Commissioners during the year up to December 1, 1877, amounted to to \$43,257.86; and the principal sums of the leases of the same lands at a yearly rental of 7 per cent., to \$43,529; making together \$86,786.86. All of these grants and leases have been executed in favor of riparian owners at the respective localities. A disposition to avail themselves of the State's title seems to be increasing among them, as they have by law the primary right of purchase or lease. The whole amount of these grants made by both the Legislature and the Commissioners since April 16, 1864, is \$1,268,754.29; and of the leases, in principal sums, \$817,839.77; making a total of \$2,086,594.06.

In accordance with the joint resolution passed by the Legislature on March 30, 1876, the State Attorney-General filed a bill in the Supreme Court of the United States against the State of Delaware, to settle the question of the boundary line between the two States on the River Delaware. The case is in progress.

The Geological Board has presented a final report on the clay district of Middlesex County, giving a full description of the rich deposits of clay and other materials, for pottery and like wares. It is estimated that New Jersey has within its borders three-fourths of all the potteries for making fine earthen-ware in the United States, and the largest establishment for manufacturing fire-bricks.

By authority of an act passed by the Legislature on March 29, 1872, the New Jersey Historical Society engaged in the work of compiling a history of New Jersey as a colony and as a State. With reference to the first part of this compilation, the Society, in the year 1877, has received from England 39 folio cases containing copies of the correspondence passed between the home government and the province, from 1703 to 1776; also copies of the minutes of the council, both legislative and privy, and of various miscellaneous documents previous to 1776. Two of these cases have been left with the State Librarian for examination.

The extensive and costly improvements undertaken by the Delaware, Lackawanna & Western Railway Company, on its track between Newark and Hoboken, namely, the tunnel through Bergen Hill, the iron bridge on the Hackensack Marsh, and the ship-canal at Hoboken, to facilitate and increase the shipping of coal, after an uninterrupted work of above three years, have been in 1877 almost entirely completed. The total length of the tunnel's bore, not including approaches, is 4,280 feet, fully four-fifths of it being arched with brick, to avoid the possibility of accident from the falling of rock. There are in it seven shafts, and four of these measure the full width of the tunnel. The bridge across the Hackensack is 600 feet long, its length of draw 200 feet.

The three piers supporting it have foundations of masonry 35, 32, and 25 feet under water, respectively. The ship-canal at Hoboken is 3,000 feet in length, 100 feet in width, and of sufficient capacity and depth to admit steamships directly from the river to extensive wharves and coal-chutes alongside. The facilities for shipping coal were sufficient heretofore for the delivery of 2,000 cars, or 10,000 tons, per day. The enlargement caused by the said canal, and the necessary works connected with it, will increase that capacity to nearly 13,000 tons. The aggregate sums expended for these improvements by the Delaware, Lackawanna & Western Railway Company are reckoned at about \$3,000,000.

An earthquake took place in New Jersey on the 10th of September, 1877, within two minutes of nine o'clock in the forenoon. The shock was felt, with a little difference in the degree of its violence, in Burlington and a portion of Mercer, Ocean, and Monmouth Counties.

On January 3, 1877, the centennial anniversary of the capture of Princeton by General Washington, was celebrated at Princeton by a mock fight, the Newark and Pennsylvania militia taking part in it.

The memorable railroad strike, so called, and the riots consequent thereon, which injuriously affected so many States in July, 1877, produced no serious disturbance or other evil effects in New Jersey. This was owing to the precautionary measures employed by Governor Bedle, who ordered the whole of the military force of the State to be put under arms, and timely distributed for actual service at probable or possible points of danger.

The State military force was thus employed from July 22d to August 9th, when the last detachment was discharged.

The whole amount paid for that service from the Treasury was about \$55,000.

The State militia, under the name of National Guard, has been reduced, in accordance with the act passed for that purpose on March 9, 1877. As appears from the official inspection made of it in October, it now consists of 193 officers and 2,865 enlisted men; the whole being organized into 47 companies, and these assigned to seven regiments, composing two brigades and one division. The two cavalry companies heretofore existing have been disbanded. The company of artillery remains. The minimum of each company is now fixed at 50 enlisted men, instead of 40, as it was before.

NEW JERUSALEM CHURCH. The General Convention of the New Church was held at Cincinnati, Ohio, beginning June 8th. The president, in his annual report, called attention to the general diffusion of members of the Church throughout the country, there being comparatively few localities where a representative of the Church could not be found. The operations of the American Swedenborg Publication Society, and of the American Tract and

Publication Society, were commended in the same document, and it was asserted that more work had been done during the past year in the dissemination of the doctrines of the New Church than ever before in the same time. Reports were heard from the various State associations, of which the following is a summary :

Canada Association, 5 societies, 4 ministers.
Illinois Association, 1 new minister, 1 new society organized in Chicago, meetings held at Peoria.

Massachusetts Association, 21 societies, 14 of which reported 1,397 members, 21 ministers, 2 licentiates. The work of the New Church Union had involved an expenditure of \$4,162.68. The rooms and library of the union in Boston were well maintained, and the publication of the *New Jerusalem Magazine* had been revived.

Minnesota Association, 2 societies, 1 pastor, 78 members in the whole State.

Ohio Association, 12 societies, 7 ministers, and 3 licentiates. There were also 3 societies in the State not connected with the association. Missionary work was vigorously carried on. The Urbana University had graduated its first class of students since its reorganization.

Maryland Association, 3 societies, 5 ministers. An agent of the association had visited Norfolk, and would visit other places in Virginia at an early day.

Maine Association, 1 ordained minister. The acceptance of the New Church doctrines by a clergyman of another denomination was reported.

Missouri Association: The missionary of the association had visited 25 different places, and preached 88 times.

Pennsylvania Association, 7 societies, about 250 members. Reports were also read from societies in San Francisco, Cal., and Detroit, Mich.

The Committee on Foreign Correspondence presented a report of the progress of the Church in other countries, which showed that it had a permanent hold in Germany, Switzerland, and Austria, as well as in France, Italy, and the three Scandinavian countries. The trustees of the Rice legacy reported that the fund amounted to about \$7,000; that the income from it had been \$419.12, and the expenditures, chiefly in distributing Swedenborg's works, had been about \$273.90. The present amount of unexpended income of this fund was \$937.15. The Rotch legacy fund amounted to \$20,234.20. The income had been \$1,057.46, and the expenditures, chiefly in revising and stereotyping the works "The Divine Providence," and "The True Christian Religion," had been \$1,274. The trustees of the Theological School reported that the receipts of the institution had been \$563.25, and the expenditures \$607.20. The amount of \$32,844.94 was due from the former treasurer of the board, for the recovery of which legal proceedings would be instituted. Four students had attended the school. The convention ordered a subscription to be taken for the assistance of the seminary. The question of a new translation of the Bible had been referred by the previous convention to the Committee on Ecclesiastical Affairs. The committee presented two carefully prepared reports, which were read and ordered to be published under the title, "A Discussion of the Principles which should govern a New Trans-

lation of the Word of God for the Use of the New Church." The annual conference of the New Church in England was held in Birmingham. Twenty-three ministers were in attendance, who represented 64 societies, with an aggregate of 4,765 registered members. A new rite, analogous to that of confirmation, was proposed and discussed, and reports were received of the organization of the Church in Germany, Austria, and Italy.

NEW MEXICO. Governor Axtell, in his message submitted to the Legislature on January 7, 1878, uses the following language :

The general condition of the Territory is far more prosperous and promising now than it has ever been before. Railroads are rapidly approaching us from the north and the west; the telegraphic wire has been extended the entire length of the Territory, and connects us with Colorado, Texas, Mexico, Arizona, and California. Improved wagon-roads have given us cheaper freights and quicker communication with our neighbors. Postal service has been extended to every important town in the Territory, and daily mails increase the intelligence and stimulate the desire for knowledge among our people. With the exception of Taos and a portion of Rio Arriba County, our crops have been abundant; and in all parts of the Territory the increase of our flocks and herds, both in quality and quantity, has been everything we could desire. Our mines have yielded fair returns for the labor expended, and our citizens are generally prosperous and contented.

With the exception of some difficulties attendant upon the removal of the Hot Spring Indians to Arizona, which inflicted severe injuries upon Grant County, we are at peace with all the tribes, and have suffered but very little at the hands of Indians during the past two years. We are constantly receiving valuable additions to our population by immigration.

The Territory is nearly free of debt, and our rate of taxation, about 1 per cent., is exceedingly low compared with other States and Territories. The New Mexican people are conservative; their age and traditions make them so. They are old-fashioned enough to desire to keep out of debt, and do not consider that change is necessarily improvement; yet when fully convinced that progress demands radical changes they will make them with alacrity.

The counties are largely in debt, and have little public property to show for it.

On the subject of education, he says:

Parents who have the means can and ought to select their own schools and adopt their own methods of education; but it is the duty of your honorable body to provide schools for the poor. Former legislative assemblies have already generously set apart one-fourth of all the taxes for the support of public schools. You are to consider if this fund is properly expended and whether or not the laws in relation to it need any amendments.

I respectfully suggest that you appoint a committee to compile all the laws relating to this subject, and that you diligently consider whether any improvements can be suggested to existing laws, or any new laws passed to render the system more efficient. Most, if not all, of our States and Territories have an officer known as Superintendent of Education, whose duty it is to visit all the counties and inspect personally the condition of the public schools. Would it not be wise for us to follow their example in this respect?

I also recommend that you abolish the county boards of school commissioners and impose the duties

which they now perform upon the county commissioners. This will save some expense and probably secure the best men in each county.

In the north the Utes roam at will over the country; in the south the Mescalero Apaches extend their depredations into the settlements of Texas, and even to the cities of Mexico. These tribes only remain at their agencies long enough to receive their annuity, goods, and rations. The Navajos have a reservation some 30 by 90 miles in extent, yet they roam at will and pasture their flocks in all parts of the Territory. In some localities the army is also needed to restrain bad white men, and it is urged that Congress be memorialized to permit the regular army to aid the civil authorities of New Mexico in preserving the public peace. Prisoners are now confined in the county jails, which, as a rule, are filthy and insecure. Governor Axtell, therefore, recommends that measures be taken for the erection of a Territorial prison.

In view of the danger of traveling unarmed in the Territory, the repeal of the statute against carrying arms is recommended. The repeal of the law allowing jurors to fix the penalty in criminal cases is also recommended. The total expense of the Territory for the past two years has been \$12,653.72. The total amount paid into the Treasury from the 16th of November, 1875, to the 30th of November, 1877, is \$118,088.36½. Of this amount \$33,395.05½ was received for licenses and fines, and \$84,643.31 for property taxes. The licenses are too high, enterprise is taxed and property escapes, and many men, by paying both license and property tax, pay double taxes. Of this total amount collected there has been paid back to the counties for jurors, witnesses, bailiffs, fees of district and attorney-general, sheriff, clerks' fees, and commissions of county assessors, the total sum of \$41,179.82½. Add to this Territorial expenses elsewhere stated, and the balance of the amount collected has been paid for interest on bonds and to redeem outstanding warrants. Two years ago the outstanding warrants amounted to \$29,394.70. Coupons unpaid \$9,650, and \$59,800 bonds.

On the 30th day of November last the account stood as follows:

Bonds unpaid.....	\$45,500 00
Warrants outstanding.....	913 98
Coupons.....	895 00
Total.....	\$47,308 98
Cash in the Treasury.....	1,210 76
Total debt.....	\$46,098 22

There is due from the counties to the Territory from 1870 to 1877 the sum of \$76,461.61½.

The great increase of population and wealth in the extreme northern and southern counties, within the last two years, makes a new apportionment absolutely necessary. The counties of Doña Ana, Grant, and Lincoln together elect one member of the Council, Taos alone elects two. Grant County should have a member of the House, and the three counties named another Senator. Their total voting population is about 2,000, while Bernalillo, with a vote of only 1,560, has two Senators and three Representatives.

Some important events in the recent history of the Territory may be noted. In 1875, the United States military telegraph was completed from Santa Fé to Mesilla, and in 1876 from Mesilla to Tucson, Arizona. In May, 1876, the Denver & Rio Grande Railroad was completed to near the Territorial line at Trinidad, and in 1877 to Fort Garland. In December, 1877, a tri-weekly passenger coach line was started between Santa Fé and Garland City; time 30 hours. The same year direct telegraphic communication was extended to San Diego, California, and El Paso, Mexico. There

STREET SCENE IN SANTA FÉ.

are 86 post-offices in New Mexico. The following are the newspapers of the Territory:

New Mexican (daily and weekly), Santa Fé; *News and Press*, Cimarron; *Gazette*, Las Vegas; *Advertiser*, Las Vegas; *Revista Catolica*, Las Vegas; *Revista Evangelica* (monthly), Las Vegas; *Eco*, Las Cruces; *News*, Mesilla; *Independent*, Mesilla; *Herald*, Silver City; *Review*, Albuquerque; *Santa Fé Illustrated Monthly*, Santa Fé.

NEW YORK. The aggregate balance in the Treasury of all the funds, October 1, 1876, was \$8,923,053.78. The aggregate receipts,

during the year ending September 30, 1877, amounted to \$25,055,818.69, and the payments to \$26,219,436.25, leaving in the Treasury, at the end of the fiscal year, a balance of \$5,759,434.22. The several funds from which these aggregate results are drawn are the Canal Fund, the Free School Fund, the Elmira Female College Educational Fund, the General Debt Sinking Fund, the Bounty Debt Sinking Fund, the General Revenue Fund, the Long Island Railroad Company Sinking Fund, the Common School Fund, the Literary Fund, the United States Deposit Fund, the College Land Scrip Fund, the Cornell Endowment Fund, and the Military Record Fund. The receipts into the Treasury on account of the general revenue fund during the year were \$5,603,432.85; and the payments, including \$805,647.31 transferred to the bounty debt sinking fund, amounted to \$5,935,808; deficiency of the revenue, September 30, 1877, \$332,375.16. The balances due from county treasurers September 30, 1877, on account of taxes of 1876, amounted to \$755,879.81, to which is to be added \$770,598.22, the amount paid on account of 1877 appropriations, included in the tax levy of last year, payable into the State Treasury in April and May, 1878. Deducting from these sums the above deficiency of \$332,375.16, and the balances of 1876 appropriations unpaid and in force September 30, 1877, amounting to \$189,637.66, the result is an actual surplus, September 30, 1877, of \$1,104,465.21.

On the 30th of September, 1876, the total funded debt was \$23,315,898.58, classified as follows:

General fund.....	\$3,092,238
Contingent fund.....	5,000
Canal ".....	10,081,660
Bounty ".....	10,187,000
Total.....	\$23,315,898

On September 30, 1877, the funded debt was as follows:

General fund.....	\$926,694
Canal ".....	9,900,360
Bounty ".....	130,000
Total.....	\$10,957,054

The actual reduction of the debt during the year by cancellation was \$12,358,843.

Deducting the unapplied balances of the sinking funds, the total State debt September 30, 1877, amounted to \$8,707,663. The balances in the sinking funds on that date, including money and securities, were as follows:

General fund.....	\$849,047 81
Bounty ".....	1,270,843 71
Canal ".....	161,611 39
Total.....	\$2,281,002 41

Among the expenditures from the public Treasury during the year were \$3,529,797 for educational purposes, of which \$3,082,834 were the proceeds of a direct tax of 1½ mill for common schools. The expenditures by the State for the support of asylums and hospitals for the deaf, blind, insane, and idiotic, were \$369,-

020, as follows: deaf and dumb, \$131,745; blind, \$88,335; insane, \$112,940; idiotic, \$36,000. These amounts do not include the large sums appropriated for building purposes to the institutions which have been in progress during the year.

The assessed valuation of real estate in 1877 was \$2,376,252,178; personal, \$379,488,140; aggregate, \$2,755,740,318. The total valuation in 1867 was \$1,664,107,725, showing an increase in ten years of \$1,091,632,593. The increase in valuation of 1877 over 1876 was \$289,473,045. The State tax for the current fiscal year is 3½ mills, which will yield \$8,726,511. The levy for schools is 1½ mill; for general purposes 1½ mill; for the new Capitol and other buildings ¼ mill; for canals ¼ mill; total 3½ mills. The rate recommended for the ensuing fiscal year is as follows: for the general fund 1½ mill; for schools 1 mill; for deficiency in canal debt sinking fund ¼ mill; total 2½ mills. This is the lowest annual rate of the last sixteen years, and shows the rapid progress which has recently been made toward a sound and healthy condition of the State finances.

STATE SEAL OF NEW YORK.

The most important event in the finances of the State during the past year was the maturity of the bounty debt. This was created by several laws passed in 1865. Their object was to provide the means necessary for the payment of bounties to the volunteers, to repay towns and counties for bounties paid by them, and to prevent the exercise of the power to create debt by localities, which power had been granted by previous legislation. The amount of the debt to be created under these laws was limited to \$30,000,000, and it reached its highest figure September 30, 1866, when it amounted to \$27,644,000. A sinking fund was provided to pay the loan in twelve years. The debt was gradually reduced until September 30, 1876, when it amounted to \$10,137,000. The loan matured April 7, 1877. Free purchases were made in January and were continued until no more could be procured short of payment in full. The debt has been paid as fast as

presented, and on September 30, 1877, the amount outstanding was, with accrued interest added, \$132,418, on which sum the interest has ceased, the whole amount paid by the tax-payers during the twelve years being \$43,270,337.

The only State debt remaining is the canal debt, which on September 30, 1877, amounted to \$3,630,016, less the balances in the sinking fund. Of this sum \$880,000 became due December 1st, and was paid from the canal debt sinking funds, leaving the total amount of the debt \$7,750,016.

The deliveries at tide-water by the Erie and Champlain Canals, from the opening of the season to November 22d, were, in flour and grain, equal to 43,712,500 bushels, against 28,841,100 bushels for the corresponding period in 1876, being an increase of 14,871,400 bushels. The gross amount of receipts from all sources was \$1,053,361. The expenditures for superintendence, collection, and ordinary repairs, amounted to \$1,050,329, showing an excess of receipts over expenditures amounting only to \$3,032, to be paid into the sinking fund, and leaving a large deficiency to be supplied by taxation. The gross tolls for the calendar year 1876 were \$1,340,000, and for 1877 \$880,000, showing a falling off of \$460,000. This is a lower amount of receipts for tolls than has been known within the last forty-five years. A reduction of expenditures is regarded as an absolute necessity. Of all the canals in the State only the Erie earned during the past year more than expenses; while that yielded the small revenue of \$88,840 over expenses, nearly all the others failed

to produce a fourth of the sums expended to keep them in repairs. All the lateral canals south of the Erie, except the Cayuga and Seneca, are practically abandoned. Those north of the Erie, required by the Constitution to be kept, give very discouraging results. The Oswego shows receipts of \$20,473, and expenditures \$60,984; the Black River, receipts \$15,711, and expenditures \$54,381; the Champlain, receipts \$63,162, and expenditures \$214,339.

The condition of the common schools for the year ending September 30, 1877, is shown in the following:

Total receipts, including balance on hand September 30, 1876.....	\$12,110,903 63
Total expenditures.....	10,976,234 45
Amount paid for teachers' wages.....	7,916,633 51
Amount paid for school-houses, repairs, furniture, etc.....	1,858,404 35
Estimated value of school-houses and sites...	30,856,243 00
Number of school-houses.....	11,833
Number of school districts, exclusive of cities.....	11,267
Number of teachers employed for the legal term of school.....	19,737
Number of teachers employed during any portion of the year.....	30,161
Number of children attending public schools..	1,023,715
Number of persons attending normal schools.....	6,045
Number of children of school age in private schools.....	117,154
Number of volumes in the school district libraries.....	765,546
Number of persons in the State between the ages of five and twenty-one years.....	1,566,234

The recent change in the management of the State-prisons, by vesting their superintendence in one person, has been attended with encouraging results. The expenditures and earnings of each of the prisons for the year ending September 30, 1877, were as follows:

PRISONS, ETC.	Advances from the Treasury.	Received from Earnings.	Excess of Expenditures.
Auburn.....	\$185,986 65	\$84,024 25	\$101,962 40
Clinton.....	163,650 84	67,314 71	96,336 13
Sing-Sing.....	302,598 16	161,401 93	141,491 13
Miscellaneous expenditures not distributed, including transportation of convicts.....	29,898 87	29,898 87
Total.....	\$682,429 02	\$312,740 94	\$369,688 08

The excess of advances from the Treasury over receipts from earnings was \$704,379 in 1876, \$545,550 in 1875, and \$588,537 in 1874. The total number of convicts in the three prisons was: 3,567 in 1877, 3,509 in 1876, 3,481 in 1875, and 3,060 in 1874. The State reformatory, at Elmira, approaches completion and contains about 140 convicts. When completed it will afford accommodations for 500 inmates.

The number of inmates in the several State asylums for the insane is as follows: Utica, 578; Willard, 1,270; Poughkeepsie, 235; Middletown, 115; total, 2,198.

Probably no State Convention held in recent years has attracted wider attention and caused more universal comment than that of the Republican party, which assembled at Rochester on the 26th of September. Senator Roscoe Conkling was chosen permanent chair-

man of the Convention, but declined to serve, and nominated Thomas C. Platt, of Tioga County, who was chosen for the position.

The resolutions as reported and adopted did not indorse the National Administration. Earnest efforts were made by the minority of the delegates to secure the adoption of a resolution for that purpose, and the following was offered by Mr. George William Curtis, as a substitute for the second clause of the platform:

The lawful title of Rutherford B. Hayes to the Presidency is as clear and perfect as that of George Washington. We gladly recognize his eminent patriotism, proved in the field and in civil life. We heartily commend his efforts in the permanent pacification of the Southern section of the Union, and for the correction of the evils and abuse in the Civil Service as strictly conformed to his own pledges, and to the declarations of the Convention that nomi-

nated him, and as tending to the promotion of the public welfare. Recognizing that the work is but begun, we shall hail with satisfaction its prompt and vigorous prosecution, in which the President may confidently rely upon the cordial support of the country.

The passage of this was advocated by Mr. Curtis, but it was voted down by a vote of 295 to 105. The Convention was led by Senator Roscoe Conkling, who attacked Mr. Curtis, and defended the platform as reported and adopted.

The platform adopted was as follows:

The Republicans of New York, true to the achievements of an unequalled history, and faithful to the demands of an uncompleted mission, make the following declarations:

1. The office of government is to conserve order, peace, and safety, and to protect every citizen in the enjoyment of every right implied by the Constitution and the laws. Unity and fraternal relations in all States and sections, and between all States and sections, are of the first and highest importance, and

the Republican party of New York will heartily support every measure, authorized by law, adapted to establishing and maintaining commercial and industrial prosperity and tranquillity, justice, and obedience to lawful authority. The Constitution ordains that "the United States shall guarantee to every State in this Union a republican form of government." The only republican government known to the constitution of any American State is a government chosen by the people. The question whether a case has arisen requiring the President to employ military force to protect lawful State authority against domestic violence is, by the Constitution, committed to his decision and to his responsibility. Taking no issue with any decision of this kind which has been made by the National Executive in respect to the employment of troops, and expressing no opinion in regard to the methods and attendant proceedings employed in any instance, we cherish the hope that the action taken in relation to the Southern States will result in peace, tranquillity, and justice, and no act of the Republicans of New York, conducive to its good effects, shall be withheld.

2. We insist on purity, frugality, and efficiency in every branch of the public service, National and State. To that end we hold these requirements

VIEW OF ALBANY FROM GREENBUSH.

practical and just: 1. No needless office or officer, or public agent, should exist. 2. Compensation for official service should be fair and just, but in no case excessive. 3. Fit men, and no others, should hold public trusts. 4. Every official, high or low, should be required at all times faithfully to perform his duty, and the whole of it. 5. No official or office-holder should be subject to political or partisan assessments, or to interference in any way with his political rights or action, and plain laws should forbid and punish all attempts to make or enforce such assessments, or to control or to abridge, in any respect, the absolute freedom in political action which in this country belongs to all voters alike.

In connection with the subject we recur with satisfaction to that portion of the letter of acceptance of Mr. Hayes, wherein he declares that the founders of our Government meant that the officer should

be secure in his tenure as long as his personal character remained untarnished, and the performance of his duty satisfactory. In furtherance of this view, we commend, as worthy of consideration, legislation making officers secure in a limited fixed tenure, and subject to removal only as officers under State laws are removable in this State on charges to be regularly and openly preferred and adjudged.

3. We hold honest service or labor the best and highest exertion for American citizens; and those who labor for others, whether for the Government or for private employers, are as fully entitled as any citizen can be to absolute freedom in all political, civil, and religious affairs. They owe the full service they agree to render, and to their employers they owe nothing more. The Constitution of the United States and of the State of New York, and the laws, establish equal rights for all citizens and

all voters, and we deprecate, as unwarrantable and hurtful, all attempts by employers, whether representing capital or political power, to encroach upon or coerce others in the enjoyment of any of the rights or the exercise of any of the duties of citizenship.

4. In the State of New York the whole number of National office-holders, including clerks and subordinates of every degree, is 7,465. This is one National official or subordinate to 152 votes. Of State, county, and town officials, there are, in this State, 133,513. This is one State, county, or town official to every 8½ voters. When the potential functions of local officers are taken into account, their nearness to the citizen and their power over his property, taxes and interest, their relative influence becomes

even greater than the numbers indicate. The exclusion of public servants from political action would disfranchise a great body of our fellow-citizens. The laws make no such exclusion, and we deny, as an imputation upon the people of New York, that they are, or have been, dominated by the Nation's subordinate officials, and we can conceive of no condition of affairs, short of the extinction of manhood and patriotism, in which a postmaster or a clerk could subdue to his partisan will 152 other electors, or exert any other influence, beyond such as his character might give him.

5. Public faith, honest industry, and the general prosperity demand a sound currency of coin and paper convertible into coin, and the already near approach of specie payments enforces the wisdom

THE NEW CAPITOL AT ALBANY.

and duty of faithfully pursuing the necessary steps to full resumption within the time now fixed by law.

6. We oppose any further land grants or subsidies to corporations and monopolies, and hold that the public domain should be reserved for the free homes of industrious settlers.

7. That we regard with alarm and disapprove the demands coming from the promoters of various schemes, that profuse appropriations and grants shall be made, and the National credit used to carry on works of various kinds, local and sectional in character, and not of urgent National importance. New York, with one-tenth of the population, is the source of about one-quarter of all the National revenues, and we call upon the burdened tax-payers of this State to watch and defeat all attempts, however specious, to increase the public debt, or to obtain their money for remote and questionable purposes,

which, if feasible, appeal to State action and private enterprise. Such attempts are the more indefensible when sustained by the votes of sectional minorities, adding to the burdens of the more heavily-taxed portions of our country.

8. We recognize equally the rights of property and the manliness and dignity of labor, deprecating any resort to violence in the name of either. We insist at all times upon the supremacy of the law, and the maintenance of public order. The advancement of American industry and enterprise depends upon the harmonious coöperation of capital and labor; and the adjustment of their material relations, whether left to the reason of the parties or effected by legislation, should be governed by a considerate regard for the rights of the one and the just claims of the other.

9. In the affairs of our great State, always vital to the people, and at this time of paramount impor-

tance, we declare the Republican party the only hope of thorough reform and frugal government, and arraign the Democratic party for false pretenses, for perpetuating existing abuses, and for slavish subservience to the most corrupt and dangerous influences. In support of this declaration we appeal to these facts: That Republican rule, by extinguishing the public indebtedness, insured the large reduction which has been effected in State taxation; that the Constitutional Amendments, carried by the Republicans, enforced and secured a large decrease of expenditures; that the recent unparalleled delinquencies, frauds, and robberies in State, city, and public judiciary trusts, have imposed high duties upon the prosecuting authorities of the State, and the most thorough and adequate laws have armed them with full powers. Yet the official report of the present Attorney-General, made in obedience to the call of the last Legislature, shows that his office, besides its regular costs, has expended nearly \$40,000 in extra fees on prosecutions in which not one offender has been punished, not one dollar recovered, and no return of any kind made to the State, a record which merits public rebuke, and demands that the trust shall be placed in more capable and successful hands; that because the present Executive found his will unable to place a conspicuous resident of another State in the high public trust of Superintendent of Public Works in defiance equally of the law which contemplates that all officers shall be chosen from among our own citizens, and of the Constitution which devolves the appointment upon the coordinate branches, he has assumed to disregard and still nullifies the great Constitutional reform in the canal management which the people adopted a year ago by an overwhelming vote; that in the last Legislature the Republican majority passed two Constitutional Amendments, and other important measures of municipal retrenchment and reform, reducing salaries, abolishing sinecures, simplifying the administration, and effecting an annual saving of hundreds of thousands of dollars, every one of which measures of law was resisted by the Democratic minority, and vetoed by the Democratic Executive at the behest of Tammany Hall, thus willfully continuing oppressive abuses of local administration; that the Tammany government of New York has increased the debt of that city four-fold, until it exceeds the enormous sum of \$130,000,000, and is three times as much for every citizen under its burden as the National Debt; and the same grasping ring plots, through the control of Legislatures and Governors, to extend over the State the baleful rule which imposes these glaring abominations on the metropolis. With these decisive truths attesting the high purpose and fidelity of the Republican party, and proving the Democratic party unworthy of confidence, we meet the questions which address themselves to the people of this State.

We favor an equitable apportionment—just to all parts of the State, and giving undue preponderance to none—and with the Executive belonging to one party, it is important to an impartial adjustment that the Legislature should be in the hands of the other.

We pledge ourselves to renewed and unyielding efforts for the correction of municipal abuses and for economy and reform in every branch of administration; and

We summon all good citizens to unite with us in achieving these high objects.

On the second day of the Convention, the following nominations were made: for Secretary of State, John C. Churchill, of Oswego; Controller, Francis Sylvester, of Columbia County; Treasurer, William F. Bostwick, of Ithaca; Attorney-General, Grenville Tremaine, of Albany; State Engineer, Howard Soule, of Onondaga County.

The Democratic Convention assembled in Albany on October 3d, and nominated the following ticket: for Secretary of State, Allen C. Beach; Controller, Frederic P. Olcott; Treasurer, James Mackin; Attorney-General, Augustus Schoonmaker, Jr.; State Engineer and Surveyor, Horatio Seymour, Jr.

The following resolutions were adopted:

The people having, in the last Presidential contest, elected by an overwhelming popular and a clear electoral majority the Democratic candidates for President and Vice-President, and the will of the nation, thus constitutionally declared, having been wickedly and boldly nullified by means of the grossest usurpation and frauds of Returning Boards, protected and adopted, if not instigated, by the party in possession of the Government, and rendered practicable by a threatening array of military force:

Resolved, That at this, the first Convention of the Democrats of this State held since the consummation of this great crime, it is not only just and fit, but it is the plain duty in the interest of constitutional government, and in the vindication and preservation of the sacred right of the majority to choose their rulers, to denounce with the warmest indignation this stupendous wrong, and we do hereby denounce, condemn, and hold it up to universal execration.

Resolved, That this duty of setting a mark of infamy upon this transaction, and preventing any quick forgetfulness or easy condonation of it from raising a tempting precedent for future outrages, rests especially and peculiarly upon the Democratic party of this State, one of whose most illustrious leaders was the President actually chosen by the nation.

Resolved, That the late House of Representatives deserve the thanks of all patriots and lovers of liberty for their just refusal, in the exercise of the most ancient and valuable privilege belonging to representatives of the people in all constitutional governments, to appropriate money for the support of soldiers to be used in the illegal and despotic oppression of citizens in any portion of the Republic.

Resolved, That the present National Administration, by its withdrawal of the troops from the South, and its cessation from the mischievous, unconstitutional, and oppressive interference with the internal affairs of States, has, in that respect, reversed the vicious precedents of the Republican party, followed the course marked out by the Federal Constitution, and to which the Democrats stand pledged, and it is therefore entitled, in that particular, to the approval of all good citizens.

Resolved, That the Democratic party of New York reaffirm the following principles set forth in their platform adopted in 1874, now thrice indorsed by large majorities of the voters of this State: Gold and silver the only legal tender; no currency convertible with coin; steady steps toward specie payments, no step backward; the honest payment of the public debt in coin; a sacred preservation of the public faith; revenue reform, a tariff for revenue only; no Government partnership with protected monopolies; home rule to limit and localize most jealously the few powers intrusted to public servants, municipal, State, and Federal; no centralization; equal and exact justice to all men; no partial legislation; no partial taxation; official accountability enforced by better civil and criminal remedies; no private use of public funds by public officers; corporations chartered by the State always supervisable by the State in the interest of the people; the party in power responsible for all legislation while in power; economy in the public expense, that labor may be lightly burdened.

Resolved, That we are opposed to the granting of subsidies by the Government to corporations or individuals for the construction of railroads or other internal improvements, as unnecessary, beyond the

scope of Federal power, and inevitably producing corruption.

Resolved, That we congratulate the whole people of this State that, notwithstanding the suffering to which the laboring classes have been for years subjected, in spite of their failure to obtain remunerative employment, and the bitter privations which have been imposed on them thereby, they have endured these calamities for the most part with patience, without disorder, or violation of the public peace; and we declare that it is through the beneficent operation of equal and just laws, favoring no one class at the expense of another, a stern refusal on the part of legislative bodies to yield to the schemes of grasping monopolies, and the decrease of public expenditures and taxation to the lowest practicable point, that the laboring classes of the country (with whom the Democratic party has always strongly and intelligently sympathized) are mainly to find effectual and permanent relief.

Resolved, That we favor a uniform and equitable excise law, having regard for and protective of the rights of all the people, accompanied by stringent provisions punishing its violation.

Resolved, That we demand more complete protection for the savings of the industrial classes by the stricter supervision and control of savings banks, insurance companies, and other institutions in which the people's money may be invested, and the enactment of laws providing severe and certain punishment of all official neglect, extravagance, or fraud, by which the people's earnings may be endangered or lost.

Resolved, That the deliberate refusal of the Republican majority in the State Legislature during two sessions, in open defiance of the plainest and most peremptory mandates of the Constitution, to apportion the representation of the people of the State in the Senate and Assembly in accordance with the census, is a reckless disregard of duty

INTERIOR OF GRAND CENTRAL DEPOT, NEW YORK CITY.

hitherto without precedent in our history, and aims a blow at the very root and foundation of representative government. That this act, the most revolutionary and lawless ever ventured upon even by that revolutionary and lawless party, renders it indispensable to the preservation of the right of representation that the legislative power should be wrested from its hands at the coming election. That the hypocritical promise of apportionment appearing in the resolutions of the recent Rochester Convention is upon its face a mockery and insult to the Constitution. It boldly calls for a direct violation of the organic law, in demanding that the amount of population should be disregarded and a system of rotten boroughs maintained, to prevent "a preponderance" of the inhabited over the uninhabited portions of the State.

The Democracy of New York, in Convention assembled, again pledge themselves, their nominees, and their representatives in the Senate and Assembly, to follow where an honest and fearless chief magistrate has dared to lead in reforming the administration of our great canals, so long despoiled in their construction, maintenance, repairs, and revenues; to carry on with unwavering purpose and fidelity wise measures to increase the efficiency of

all the departments of public works and service, and to persist in reducing our State tax. As proof of their devotion to this work they point to the fruits of the illustrious administrations of Governors Tilden and Robinson. The civil service of the State has been purified. Economy and prudence have been introduced in every department. Offenders against the law, defaulters in the public funds, embezzling county treasurers, profligate boards and trustees, swindling contractors, and those who have debauched legislation and political justice, have been relentlessly prosecuted.

A State Convention of Workingmen or Labor Reformers was held in Troy, October 9th, and adopted a platform, of which the following is a synopsis:

1. We favor a currency of gold, silver, and United States Treasury notes, which shall be a full legal tender for all debts, public and private, and the retirement of national-bank bills.
2. That labor has a perfect right to an equal share of the wealth which it creates.
3. That the invention of labor-saving machinery should have the effect of reducing the hours of labor.

4. We oppose the granting of public lands to railroad corporations, and favor their distribution to actual settlers, with such Government aid as may be necessary to occupy and improve them, taking a lien upon the land as security for the same, to be paid in annual installments in a period of ten years.

5. Assessments upon taxable property made on the cumulative principle, increasing the rates according to the amount of property actually owned, with just discrimination against unproductive property.

6. Gratuitous administration of justice in all courts of law.

7. The establishment of a bureau of labor statistics by the State as well as by the National Government, the officers of these bureaus to be taken from the ranks of labor.

8. We favor the abolishment of the contract system in the prisons and reformatory institutions of the State as soon as practicable, the said institutions to be managed in the interests of the people, and the goods manufactured therein to be sold at no less than the market rates.

9. We believe the public good demands, and the business interests, as well as the welfare of producers and consumers, require, that railroad lines of communication should be under the control and management of the State through which they pass, and that the transportation of freight and passengers should be done for the cost, or as near as possible, paying a reasonable interest to the stockholders, and providing for a sinking fund sufficient to keep the road and rolling-stock in good condition.

10. We hold the right of suffrage to be sacred, and will oppose any candidate for the Legislature who does not pledge himself to vote against that portion of the proposed Constitutional Amendment which aims to establish a board of finance and restrict the right of suffrage in the various cities of the State. We oppose an increase of the standing army.

11. We favor a law for the protection of life and limb of employés in factories, or in the erection of buildings; the abolishment of tenement-house factories, and a weekly settlement in current funds for wages or compensation.

12. We shall steadily labor for the abolishment of unnecessary offices and the reduction of exorbitant salaries.

13. No centralization.

14. We favor the prosecution of necessary public works, the wages paid to be settled by arbitration from time to time.

15. Defalcations in office and bribery of electors, legislators, or officers, to be defined by statute as infamous crimes; every offender, either as principal or accessory, to be punished by imprisonment at hard labor, debarred from holding office, voting, or witnessing in courts; excluded from Executive clemency, and posted as an infamous person by proclamation in all the official papers in the State.

The candidates of this party were John J. Junio for Secretary of State, George Blair for Controller, Samuel G. Rice for Treasurer, Warren T. Worden for Attorney-General, and Walter Griswold for State Engineer and Surveyor.

Nominations for State officers were also made by the Prohibition party and by the Greenback party, and an independent German, or "German American," ticket was circulated bearing the names of three of the Republican and two of the Democratic nominees. The views of the Greenback party were expressed as follows:

1. We demand the immediate and unconditional repeal of the Specie Resumption act of 1875, and call

for the action of all patriots to elect Congressmen on this issue.

2. We believe that United States notes issued directly by the Government and convertible on demand into United States obligations, bearing an equitable rate of interest not exceeding 1 cent a day on each \$100, and interchangeable with United States notes at par, will afford the best circulating medium ever devised. Such United States notes should be a full legal tender for all purposes except the payment of such obligations as are by existing contracts expressly made payable in coin; and we hold it to be the duty of the Government to provide such circulating medium, and insist, in the language of Jefferson, "that bank paper must be suppressed and circulation restored to the nation to whom it belongs."

3. The permanent duty of the Government is to legislate for the full development of all legitimate business.

4. We protest against the further issue of gold bonds for foreign market sales.

5. We also protest against the sale of Government bonds to buy silver as a substitute for paper currency.

The election resulted in the success of the Democratic ticket. The vote was as follows:

SECRETARY OF STATE.

Allen C. Beach (Democrat).....	853,062

The Legislature continued in session from early in January till the latter part of May. Among the laws passed was one providing that the Superintendent of State-prisons shall have the management and control of the prisons and the convicts therein, and of all matters relating to the government, discipline, police, contracts, and fiscal concerns thereof. It further provided that the system of labor in the State-prisons shall be by contract or by the State, or partly by one system and partly by the other, the matter being left to the discretion of the Superintendent. By another act the Superintendent is authorized to appoint a State agent for discharged convicts, whose duty it shall be to visit from time to time the various penal institutions and reformatories of the State, and to confer with all convicts whose terms of imprisonment are soon to expire, for the purpose of inducing them to proceed at once from their place of confinement to suitable homes and places where employment will be secured for them. The agent is empowered to furnish discharged convicts with transportation, food, clothing, and necessary tools and advice, so that they may enter upon employment.

The act to prohibit the selling of intoxicating liquors to children provides that no minor under the age of 14 years shall be admitted to or allowed to remain in any saloon or place of entertainment where any intoxicating liquors are sold, or at places of amusement, concert-saloons, or dance-houses, unless accompanied by parent or guardian.

A law was passed providing that boards of education in cities and villages shall designate the text-books to be used in the public schools under their charge. In the other school-districts of the State the text-books are to be designated by a two-thirds vote of all the legal voters voting. When a text-book has been so adopted it cannot be changed or superseded within five years from its adoption, except by a three-fourths vote of the Board of Education or of the annual school-meeting.

An important bill was passed providing for

the sale of the lateral canals. Under its provisions the Chenango Canal extension is to be discontinued after May 1, 1878. The Chemung and the Genesee Valley Canals are to be abandoned after September 30, 1878, while the Crooked Lake Canal ceases to exist as a State water-way.

Among important bills vetoed by the Governor were "an act to secure better public administration of the city of New York," popularly known as the Woodin charter; an act reducing the departments and commissions in Brooklyn to a single head; an act relating to

TRINITY CHURCH, NEW YORK CITY.

education in the city of New York; and the bill conferring additional powers upon the insurance department. The act for the government of New York City had consumed considerable time of the Legislature, and the subject had been much discussed by the general public. Governor Robinson vetoed it for the following reason:

It would be a bulky addition to the existing mass of New York City statutes. It seeks to regulate many details of administration, and some of its provisions are, on their face, unobjectionable and wholesome,

but the objectionable features more than counterbalance all these. It is one of a series of bills passed by the Legislature professedly in the interest of economy and reform, but which, after their introduction into the Legislature, were so changed as to make them mere cloaks of mischievous provisions, which would have led to greater evils than those which they profess to remedy. There is very little doubt that in practice it would lead to increased rather than diminished expenditures on the part of the city. There are, moreover, several provisions in it which are palpably unconstitutional, and others which are incongruous and subversive of all sound principles of municipal government. It is immensely long, and would constitute a large volume by itself. The pressure of other duties prevents the specification in detail of all the objectionable features of the bill. It would simply add to the confusion now existing in the laws relating to the city, already so great that the judges of our highest court acknowledge their inability to construe them intelligently. What New York City needs above all things at present is to be let alone by the Legislature until that body is ready to enact a wise and complete charter to stand as a permanent form of local government, and to be coupled with a thorough revision of existing laws. The evils of these frequent changes in the law are greater than the suffering from any minor defects in existing laws.

The most important subject which engaged the attention of the Legislature was that of amending the State Constitution. Six amendments were agreed to, and, if approved by the Legislature of 1878, will be submitted to a vote of the people at the fall election of that year. The most important is a new article (XVII.) relating to the organization and government of cities. It provides that city elections shall be held separately from the State and national elections, and in March or April; the legislative power conferred on a city is to be vested in a board of aldermen, who are to have none of the powers vested in the board of finance. The board of aldermen are empowered to pass measures over the mayor's veto, provided that such vote be taken at the next meeting of the board after the communication of the veto. The executive power of every city shall be vested in the mayor and in such executive officers and departments as may be created by law. The mayor, with the consent of the board of finance, is to appoint the chief financial and law officers; and he is empowered to appoint the head or chief officers of the other executive departments. With the written approval of the Governor, he may remove any of these officers. He is also empowered to investigate their accounts and proceedings, and may examine the officers and their subordinates under oath. He shall also have power to veto any legislative act of the board of aldermen. The mayor may be removed for cause by the Governor, who, in such case, shall appoint a mayor to act until the next succeeding election, when a mayor for the full term shall be elected. The Legislature shall provide for the filling of a vacancy in the office of mayor otherwise occurring, until the next ensuing city election, and also for the discharge of the duties of the mayor during his temporary absence or disability. Heads of departments shall have power to appoint and

remove their subordinates; but the Legislature may regulate by law the qualifications for such appointments and the conditions of such removals.

Every city is to have a board of finance, to consist of not less than six nor more than fifteen members, who shall possess the qualifications required for electors of members of said board. The qualifications prescribed for electors are as follows:

SECTION 6. In cities having a population, according to the State census next preceding the election, of over one hundred thousand inhabitants, the board of finance shall be elected by the electors of the city (otherwise qualified under Article II. of the Constitution), who shall, for two years next preceding the election, have paid an annual tax on property owned by them, and officially assessed for taxation in such city, of the assessed value of not less than five hundred dollars, or shall have actually paid during the same period a yearly rent, for premises in said city occupied by them for purposes of residence or lawful business, of not less than two hundred and fifty dollars. In cities having a population, according to the State census next preceding the election, of not more than one hundred thousand inhabitants, the board of finance shall be elected by the electors of the city (otherwise qualified under Article II. of the Constitution), who shall, for two years next preceding the election, have paid an annual tax on property owned by them, and officially assessed for taxation in such city, or who shall have actually paid during the same period a yearly rent, for premises in said city occupied by them for purposes of residence or lawful business, of not less than one hundred dollars. In cities having a population, according to the State census next preceding the election, of not more than twenty-five thousand inhabitants, the board shall consist of six members. In cities having a population of over twenty-five thousand inhabitants, and not more than fifty thousand, it shall consist of nine members. In cities having a population of over fifty thousand inhabitants, and not more than one hundred thousand, it shall consist of twelve members; and in cities having a population of over one hundred thousand inhabitants it shall consist of fifteen members. At the first election one-third of the board shall be elected for a term of one year, one-third thereof for a term of two years, and one-third thereof for a term of three years; and thereafter the term of office shall be three years. The existence of any vacancy in the board shall not of itself suspend the exercise of its powers and duties. The Legislature shall, at its first session after the adoption of this article, and thereafter from time to time, as may be necessary, provide by general law for the registration, in every city, of electors qualified to vote for the board of finance, and for filling vacancies in said board, and may change the number of members of which the said board shall consist in any city, provided that the number shall not, in any case, be less than six, and that one-third of the board shall be elected annually.

The board is to make annual estimates of the sums to be raised by taxation, and to submit the estimates to the mayor, who shall within 10 days return the same to the board with his approval or his objection in writing, specifying the items objected to; and the items thus objected to, and no others, shall be reconsidered and finally determined by the board. The board shall, after the return of the estimates by the mayor, and the action of the board upon the items objected to, if any, or in the event of the failure of the mayor to return the same as

above required, proceed by resolutions to declare the estimates to be final and adopted, and the several sums of money therein estimated as necessary shall be appropriated for the departments and officers therein mentioned, and for the objects and purposes therein mentioned.

Section 8 provides that "no debt or liability shall be incurred by any department, board, or any other officer in any city, unless there shall be at the time an unexpended appropriation applicable thereto sufficient to satisfy the same and all debts and liabilities previously incurred and payable out of such appropriation; and all contracts and engagements in contravention thereof shall be void. Nor shall any debt or liability of the city be paid except out of money in the treasury appropriated to the purpose of paying such debt or liability. No city government, or any department thereof, shall grant any extra compensation to any officer, servant, agent, contractor, or employé.

The Legislature shall have no power to pass any law for opening, maintaining, or improving streets, parks, docks, or other city improvements; but all authority for such purposes must be conferred by law on the city government. Nor shall the Legislature impose any charge on any city or civil division of the State containing a city, except by a two-thirds vote of all the members elected to each house. Any local improvement in or for a city, the cost of which is to be wholly paid by the city at large, must be authorized by resolution, passed by the vote of two-thirds of all the members elected to the board of aldermen and board of finance respectively.

Section 10 relates to the borrowing of money and the creation of debts.

No change is to be made in the organization of any city except by an act of the Legislature, on application of the city, through a resolution by the boards of aldermen and finance, approved by the mayor.

The other amendments empower the Legislature to provide for minority representation in city boards; provide that the duties of making contracts, procuring supplies, or creating, auditing, or allowing county charges, shall be performed exclusively by the county boards of finance; provide for an additional Justice of the Supreme Court; provide for the education of all persons between 5 and 21 years of age, for a period of at least 28 weeks in each year; prohibit the use of public money, property, or credit in the support of sectarian schools; prohibit the loan or use of public money for pri-

vate purposes, and restrict the indebtedness of counties, cities, towns, and villages.

An important event of the year was the commencement of the operation, on September 1st, of the new code of civil procedure. In 1848, the old system of practice at law and equity was abolished, and in its stead was enacted the code of civil procedure. In 1870 the Legislature passed an act authorizing certain commissioners to "revise, simplify, arrange, and consolidate all statutes of the State of New York, general and permanent in their nature," and in performing this duty to bring "together all

ROMAN CATHOLIC CATHEDRAL, NEW YORK CITY.

statutes and parts of statutes, which, from similarity of subject, ought to be brought together, omitting redundant or obsolete enactments, and making such alterations as may be necessary to reconcile the contradictions, supply the omissions, and amend the imperfections of the original text."

The commissioners prepared and submitted a new and voluminous act, entitled "The Code of Remedial Justice." Part of it, including 1,496 sections, was enacted by the Legislature of 1876, with a provision that it should not take effect until May 1, 1877. At its last session,

the Legislature changed this date to September 1, 1877, since which time that part of the revised system has been in operation, under the name of "The Code of Civil Procedure." The remainder of the proposed code, containing 1,800 sections, was passed by the Legislature, and sent to the Governor with more than 250 other bills to be acted upon during the 30 days following the adjournment. Through want of time to read the act, the Governor did not approve it, and it failed to become a law.

The Legislature, at the session of 1877, appropriated \$500,000 for the new Capitol. It is now about 10 years since the construction of this building was begun. Up to December 15, 1877, \$8,276,615 had been expended on it, and there is not a department of it yet completed.

During the year the returns of the census

lation of the State, were born within the counties where they were enumerated; 301,240 were born in other States of the Union, and 1,195,658 in foreign countries. Of the latter, the State has received 73,340 from Canada, 119,090 from England, 367,351 from the German Empire, 517,337 from Ireland, 27,364 from Scotland, and 91,176 from other foreign countries.

Of the total population of the State, 1,267,522 were males of the voting age—21 years and upward. Of these, 747,280 were native of the United States; 394,182 were naturalized citizens, and 126,060 were aliens. Subtracting the latter, it leaves 1,141,462 as the aggregate population of the State entitled to vote, unless disfranchised for crime.

Of the entire population, there were 956,874 males between the ages of 18 and 45, or the usual period for military service. The number between the ages of 5 and 18 is about equally divided: 639,980 males, 639,477 females, making an aggregate of 1,279,457 persons in the State of school age.

The number of blind returned was 2,256; deaf and dumb, 2,483; idiotic, 2,392; insane, 8,091. The total mortality of the State, as returned for the year ending June 1, 1875, was 53,860, or about 1.15 per cent. of the total population.

The population of the State is set down in 995,502 families, occupying 712,388 separate dwelling-places; making 6.60 persons to an inhabited dwelling, and 4.72 persons to a family. There were 598,013 frame dwellings in the State, which had a total value of \$996,320,437; brick dwellings to the number of 98,298, and valued at \$1,049,873,803; stone dwellings to the number of 19,718, which were valued at \$417,800,721; and 12,659 log dwellings, valued at \$1,038,673. About one-quarter of the dwellings in New York City are frame structures.

There were in the State on June 1, 1875, 6,320 ecclesiastical organizations of all denominations, occupying 6,243 edifices, which furnished sittings for 2,537,470 people, and having an enrolled membership of 1,146,537. The aggregate value of the church edifices and the lots which they occupied is returned at \$101,105,765, and the value of other real estate belonging to the various denominations at \$16,491,385, making an aggregate of ecclesiastical property of \$117,597,150. The sums annually paid for salaries of clergymen are returned at \$5,308,231, or an average to each organization

VIEW IN WEST MAIN STREET, ROCHESTER.

taken in 1875 were completed, and the results published. The total population of the State, June 1, 1875, was 4,698,958—an increase upon the Federal census of 1870 of 316,199, or 7.21 per cent., representing an average annual increase of 1.4 per cent. From computations based on the rate of increase in the population since 1790, it is estimated that the total population of the State will be 5,032,225 in 1880, 5,348,450 in 1885, 5,641,642 in 1890, 5,905,939 in 1895, and 6,136,000 in 1900. The population of 1875, according to nativity, race, and sex, is classified as follows:

Total population.....	4,698,958
Native.....	3,508,300
Foreign born.....	1,195,658
White.....	4,642,837
Colored.....	56,121
Males.....	2,320,178
Females.....	2,378,780

Of the total population, 3,202,060 were born within the State, leaving a population of 1,496,898 born in other States and countries; 2,505,710, or a little more than half the entire popu-

of \$839.91. The three denominations having the largest membership are the Roman Catholic, 518,714; the Methodist Episcopal, 180,782, and the Presbyterian, 111,660. The three denominations having the largest amount of church property are the Protestant Episcopal, \$24,601,370; the Roman Catholic, \$22,668,080; and the Presbyterian, \$19,114,170.

The population of the 24 cities of the State is as follows:

Albany.....	86,541
Auburn.....	19,649
Binghamton.....	15,518
Brooklyn.....	482,498
Buffalo.....	184,557
Cohoes.....	17,493
Elmira.....	20,436
Hudson.....	8,784
Kingston.....	20,445
Lockport.....	12,553
Long Island City.....	15,587
Newburg.....	17,322
New York.....	1,041,886
Ogdensburg.....	10,353
Oswego.....	22,428
Poughkeepsie.....	20,022
Rochester.....	81,722
Rome.....	12,251
Schenectady.....	12,759
Syracuse.....	48,255
Troy.....	48,531
Utica.....	82,496
Watertown.....	9,992
Yonkers.....	17,237

Of the population of New York City, 595,843 were born in the United States, and 446,043 in foreign countries, including 3,979 born in Canada, 26,923 in England, 165,011 in the German Empire, 199,084 in Ireland, 7,635 in Scotland, and 43,411 in other foreign countries.

A little more than one-tenth of the population of the State were proprietors of land. The number of farms was 241,839. Of these 90,496 contained between 100 and 500 acres, and 71,118 contained between 50 and 100 acres. There were 39,973 farms of from 20 to 50 acres, and 38,970 of less than 20 acres. The aggregate of land in farms was 25,659,266 acres, of which 15,875,552 were returned as improved, and 9,783,714 unimproved. The five counties having the largest average of farm lands are: St. Lawrence, 712,717; Jefferson, 556,616; Steuben, 503,014; Oneida, 501,099; and Erie, 458,343. The cash value of these farms, improved and unimproved, is returned at \$1,221,472,277. The aggregate value of farm buildings other than dwellings was \$148,715,775; of stock on farms, \$146,497,154. The chief agricultural productions (for the year 1874) were as follows:

Buckwheat, bush.....	3,992,386
Indian corn, ".....	20,294,800
Oats, ".....	87,908,429
Rye, ".....	8,046,846
Spring wheat, ".....	1,170,330
Winter wheat, ".....	9,017,737
Beans, ".....	1,076,453
Pease, ".....	410,460
Potatoes, ".....	36,639,601

Butter, ".....	111,087,486
Cheese, ".....	98,725,172
Wool, clipped, " (1874).....	7,369,983
" (1875).....	6,603,806
Number of sheep shorn (1875).....	1,846,711

No compilation of the returns of manufactures has been made. They were found to be so incomplete and inexact as to be worthless for statistical purposes, and their compilation was therefore abandoned.

The aggregate amount of public debt, including State, county, and municipal, was \$226,318,308.

The debt of New York City on August 1, 1877, was as follows:

Funded Debt.....	\$121,319,183 80
Less Sinking Fund.....	29,667,568 59
Net Funded Debt.....	\$91,651,515 21
Temporary Debt—Assessment Bonds.....	22,144,400 00
Temporary Debt—Revenue Bonds.....	18,800,977 01
Total.....	\$132,096,892 22

Only a few years ago the value of real estate belonging to the corporation was appraised at nearly \$250,000,000. There has been a great shrinkage in values, but at the same time large accessions have been made to city property, through expenditures for various public purposes, such as the docks, the Croton aqueduct and reservoirs, the Brooklyn bridge, etc. The actual value of City property may therefore be fairly estimated now at over \$200,000,000, or more than double the amount of the net funded debt.

By the decision of the Court of Appeals in September, all legal obstacles to rapid transit in New York City were removed, and the construction of two lines, from the lower to the upper part of the city, was promptly begun.

NICHOLAS, Grand-Duke, the second brother of the Emperor of Russia, was born August 8, 1831. He received a thorough military education like all his brothers, and at present combines in his person four of the highest military offices in Russia, being General of Engineers, Inspector-General of the Cavalry, Commander-in-Chief of all the Imperial Guards, and of the military district of St. Petersburg. Unlike his brother Constantine, he never strove to play a political part, but devoted himself assiduously to his military offices. Being so regarded among the brothers of the Emperor, it seemed but natural that he should be chosen to command the Russian armies in Europe. Even the St. Petersburg journal *Ruski Mir*, which is as strongly opposed to the Government as is possible in Russia, says that he is the *beau idéal* of a commander-in-chief.

NICHOLAS I., Prince of Montenegro, was born September 25, 1841. After having studied in Cettigne and Trieste, Prince Danilo sent him to Paris in 1855, where he entered the Military Academy. In the spring of 1860 he returned to Cettigne, and after the assassination of Prince Danilo was proclaimed Prince of Montenegro. During his reign he made four journeys to

Western Europe and Russia, visiting Austria, Germany, Italy, and France, being always a welcome guest at the courts of these countries. While in St. Petersburg he was treated almost like a member of the imperial family. He has received an excellent education, speaking Servian, French, Italian, German, and Russian fluently. Under his government the country has made decided progress. He has reformed the civil administration, has raised the standard of education by establishing schools of different grades throughout the country, and has effectually reorganized his army. In the war of 1876, against Turkey, he was completely successful, while in 1877 he also succeeded in forcing the Turks to leave his country. In 1860 he married a daughter of the Waywode Petar Vukotitch, by whom he has had one son, Danilo, born June 17, 1871, and six daughters.

NORTH CAROLINA. The events of the year in North Carolina furnish little worthy of record. There has been a uniformly peaceful and undisturbed condition of affairs, and as no elections were held, the State has been free from political excitement. Official terms and periods being for two years, and no session of the Legislature occurring in 1878, there are no official reports from which statistics of the various interests of the commonwealth may be derived.

The session of the Legislature which began in November, 1876, continued until the 3d of March following. One of the most important measures adopted was an act to regulate elections, which consolidated, revised, and amended the existing provisions on the subject. It provides for a general election on the Tues-

an entirely new registration if they think proper, on giving 30 days' notice thereof. No elector is allowed to register or vote, except in the township or precinct of which he is a *bona fide* resident on the day of election. No certificates of registration are to be given, but on the Saturday preceding any election the books are to be open for inspection, and opportunity given for challenges. The registrars and judges of election determine, after due examination, the right of the challenged person to vote. The judges of election are appointed by the Board of Justices of the Peace, and are four in number for each precinct, two of whom must be "of a different political party, where possible, from the registrars." The judges of election are required to keep poll-books in which the name of every man voting at an election is to be entered. Qualified voters under this act are male citizens of the United States, twenty-one years old and upward, who have resided in the State one year, and in the county 90 days, except idiots, lunatics, and persons guilty of felony or infamous crime committed after January 1, 1877, whose rights of citizenship have not been restored. Fraudulent registration or voting is made an infamous crime, punishable by fine not exceeding \$1,000, or imprisonment not exceeding two years, or both. An oath as to residence or other qualifications must be administered, when demanded by any elector. A person removing from one precinct to another must bring a certificate of the removal of his name from the list in the former before he can be registered in the latter. A person's right to vote may be challenged on election day, when such person shall be required to make oath as to his qualifications. Even then the judges may refuse to take his vote if satisfied by other evidence that he is not a legal voter. Votes are to be counted by the registrars and judges of election, in the presence of as many electors as choose to attend, reading aloud the names on each ballot. The judges of election must appoint one of their number to attend the Board of County Canvassers, and he must be furnished with the original statement of the result of the election in his own precinct. These members of the township or precinct boards constitute the County Board of Canvassers, who are required to meet at the courthouse on the second day after the election, and, after taking oath for the faithful performance of their duties, to make an abstract of the vote for the entire county. Three copies of such abstract are to be made, one to be delivered to the sheriff of the county, one filed in the office of the register of deeds, and the other forwarded to the Secretary of State. The original returns are to be delivered after the county canvass is completed, to the Clerk of the Superior Court, to be placed on file. The person having the greatest number of votes for any office is to be declared elected. The statement of the vote of each county for State

STATE SEAL OF NORTH CAROLINA.

day after the first Monday in November, 1880, and every four years thereafter. The Board of Justices of the Peace in each county is authorized to establish polling places, and appoint registrars of voters in each precinct. The registrars are required to keep their books open for 30 days prior to any election, for the purpose of revising the lists of qualified voters, but the Board of Justices of the Peace may direct

officers is to be forwarded to the Speaker of the House of Representatives. The returns are to be opened and published in the presence of the two Houses. Appropriate penalties are provided for neglect of duty by officials concerned in receiving or making returns of votes, as also for bribery or improper influence in securing votes. The State Board of Canvassers consists of the Governor, Secretary of State, Attorney-General, and two members of the Senate, one of each political party, to be selected by the Governor. They must canvass the county returns publicly in the Hall of the House of Representatives on the third Monday after the election. Special provision is made for the election of Presidential electors and the return and canvass of the votes cast therefor. The county canvassers are required to ascertain the number of votes for each candidate "by faithful addition," and the result must be proclaimed by the Sheriff from the State-house door. The county returns must be canvassed by the State Board in the presence of such persons as may choose to attend in the Hall of the House of Representatives, and the Secretary of State shall certify to the Governor the names of as many persons receiving the highest number of votes for electors of President and Vice-President as the State may be entitled to in the Electoral College. Provision is also made for the meeting of the electors, and any elector chosen, "with his own consent previously signified," is made liable to a forfeit of \$500 if he fail to attend. The making, delivering, or transmitting of any false return, or making any erasure or alteration in the poll-books, are made an infamous crime, punishable by imprisonment for not less than one year, and a forfeit of \$500. It is further provided that the next general election shall be held on the first Thursday in August, 1878; but thereafter, until otherwise provided, the general elections shall be held on the Tuesday next after the first Monday in November.

An act was passed establishing a Department of Agriculture, Immigration, and Statistics, and for the Encouragement of Sheep Husbandry. It is placed under the control of a board, consisting of the Governor, State Geologist, Master of the State Grange of the Patrons of Husbandry, President of the State Agricultural Society, and the President of the Agricultural College, and two agriculturists, to be selected by the board. The board is also required to appoint a Commissioner of Agriculture, prescribe his duties, and regulate his pay. Further provisions are made regarding the collection and distribution of statistics and information, and the encouragement of agricultural interests. The geological survey is closely connected with the agricultural department, and the improvement of fertilizers, the propagation of fish, the registration of mining statistics, and the encouragement of immigration, are placed under its charge.

An act was passed to revise and consolidate

the school laws. This made no very important changes in the law. The State Board of Education and the Superintendent of Public Instruction, the county boards and county examiners, and the local school committees, still constitute the official organization. White and colored schools are separate, and funds for their support are separately apportioned.

An act was also passed providing for uniform county governments. The counties are to be divided into convenient districts, to be known as townships, but without corporate powers. The treasurer, register of deeds, and surveyor, in each county, are to be elected biennially by the people; but the justices of the peace, three for each township, the official term of one expiring every two years, are to be chosen by the Legislature of the State, and the justices of the peace elect the county commissioners. Among the other acts passed was one authorizing the county authorities to farm out convicts, and "an act to prohibit the sale of liquors in certain localities." These localities were quite numerous, and, for the most part, in the vicinity of schools or churches.

On the subject of adjusting the State debt, the following report was made and acted upon:

The committee on the debt of the State, and to whom have been referred various propositions on the subject, have carefully considered the whole matter, and recommend that no action be taken at the present time. It is unnecessary for us to declare our faith in the integrity and honesty of the people of North Carolina. Our State has ever borne an honorable name for her fidelity to her engagements, and we are sure her character in this respect has not degenerated.

It can be said of our people as a body that they are as true to their obligations as any in the world; and as a general thing the course of public events has manifested a jealous purpose to foster the sense of individual and of public honesty, and to strengthen the force of those great principles on which society is founded. It has been our uniform policy to promote habits of probity and sincere regard for the right; and in the great and trying emergency through which we have been for years passing, the State has uniformly shown a disposition to adhere to her honorable traditions.

In the opinion of the committee the State is not now in a position to offer her creditors such a settlement as they would likely accept. At the same time the committee are of opinion that it is very desirable to have the debt settled upon principles of equity and justice.

We therefore recommend that a commission be appointed, to be composed of the Governor, Treasurer, Attorney-General, and two members each from the Senate and House of Representatives, to consider the whole matter and report to the next meeting of the General Assembly, and we hope some plan of settlement will be reported acceptable to the bondholders and not too burdensome to be willingly sanctioned by the people of North Carolina.

The next General Assembly does not meet until January, 1879.

The Board of Education, having been authorized to establish a normal school for white males in connection with the State University, provided for a brief summer term of six weeks during the vacation of the college, and females as well as males were invited to attend the

courses of instruction laid out. No charge was made for tuition or the use of dormitories in the university building. The expenses were paid in part from the Peabody Fund.

The following are statistics of the North Carolina peanut crop for four years:

	Bushels.
1876-'77.....	125,000
1878-'79.....	100,000
1874-'75.....	120,000
1873-'74.....	60,000
Total, four years.....	405,000
Average, four years.....	101,250

The following letter from Governor Vance, published shortly after the inauguration of President Hayes, sufficiently explains itself, and vindicates the attitude of a certain class of Southern Democrats toward the new administration:

RALEIGH, March 27, 1877.

Editors Chronicle and Constitutionalist.

DEAR SIRS: Your letter has been received, asking my views as to the position the Southern Democracy should occupy toward Mr. Hayes, and whether they should apply for or hold office under his administration, etc.

Briefly and simply, then: In everything, except the mere forms of law, I regard Mr. Hayes as a usurper. By maintaining armed intervention, in States recently declared by the commission, under which he claims to be so sovereign, that no act of theirs could be impeached or even inquired into, though tainted by a fraud that would have voided any other human transaction in any court in Christendom, he is flagrantly defying the Constitution of his country. Every day that United States troops are kept in and about the State-houses of South Carolina and Louisiana by Mr. Hayes's order, he is guilty of crucifying the Constitution afresh, and putting it to open shame. And all men who hold office under him of political significance are holding his garments while liberty is bayoneted to death. The plea of uniting

with evil-doers for the purpose of controlling them is as contemptible as it is stale. It lost its efficacy in the service of renegade native Southerners, who joined the Radicals in time to participate in the reconstruction era of plunder.

The duty of the Southern Democrats, as well as of the Northern Democrats, and of Democrats and friends of constitutional liberty everywhere, is to wage open war against Mr. Hayes and all other men who disregard the plain provisions of that great charter of the rights of the States and of the people. Especially is it the duty of the Democracy to see that not another dollar is voted to the support of the army until guarantees are given that it shall no longer be used to destroy the States, and shear them of their just powers.

I see no objection to Democrats filling subordinate positions to which no significance is attached, except in so far as the sense of obligation to the appointing power may weaken the blows which an honest man should always be ready to strike the enemies of his country's honor and welfare. Yours respectfully,

Z. B. VANCE.

In January, 1878, William Nathan Howell Smith was appointed Chief Justice of the Supreme Court of the State, to fill a vacancy until after the regular election in August of that year. He is a native of the State, having been born at Murfreesboro, September 24, 1812. He graduated at Yale College, and studied in the law school of that institution, and afterward practised with great success in his native State. He figured prominently in politics as a Whig, and held numerous State offices before the war. He was elected to Congress in 1859, and was the Southern candidate for Speaker of the House of Representatives, being defeated by only one vote. He remained in his seat until after the inauguration of President Lincoln, but was afterward a member of the Confederate Congress. His political disabilities were removed in February, 1873.

OBITUARIES, AMERICAN. ABERCROMBIE, General JOHN J., died January 3d, at Roslyn, L. I., aged 73 years. He graduated at West Point in 1822, and in the same year was brevetted second-lieutenant of the First United States Infantry. He served with distinction during the early Indian and Mexican wars, was promoted to the rank of brigadier-general of volunteers for his efficient service in the late civil war, and at its close he was made brevet brigadier-general.

ADAMS, ALVIN, the founder of Adams Express Company, died at Watertown, Mass., September 1st, aged 73. He was a native of Vermont, and began the express business in Boston, in 1840.

ALBERGER, FRANKLIN A., born in Baltimore, Md., January 14, 1825; died at Buffalo, N. Y., August 24th. In early life he was a merchant in the latter city, and was alderman in 1854-'56 and 1859. He was Mayor of Buffalo in 1860 and 1861, State Canal Commissioner from 1862 to 1867, and member of Assembly from 1871 to 1874.

AMES, OLIVER, died at Easton, Mass., March 9th. He was born there in 1806; his father being the extensive manufacturer of shovels at that place. On the death of their father the two brothers Oakes and Oliver carried on the business with great energy and realized large profits from the large quantities of swords and shovels supplied to the Government during the civil war. They derived great wealth from the Union Pacific Railroad, in building which they took part. In 1870 the firm failed, their liabilities exceeding \$8,000,000 while their assets amounted to about \$15,000,000. They obtained an extension of time from their creditors and resumed business. On the death of his brother, in 1873, Oliver became head of the firm. For some years he was a director of the Union Pacific Railroad.

ANDERSON, LOUISE, Mrs. H. W. JOHNSTON, actress, died in Boston, Mass., October 24th.

ANTHON, Prof. GEORGE C., born at Red Hook, on the Hudson, N. Y., March 19, 1820; died at Yonkers, N. Y., August 11th. He was the eldest son of the late Rev. Henry Anthon,

and nephew of Dr. Charles Anthon, of Columbia College, from which he graduated in 1839. He was admitted to the New York bar, but soon began teaching in New Orleans. He was connected for a short time with the University of the City of New York, and in 1854 he founded the Anthon Grammar School in that city, of which he became principal.

ANTHONY, ALLARD, died at Poughkeepsie, N. Y., August 12th. He was a member of the Dutchess County bar, and was twice elected District Attorney, and once as County Judge.

ANTHONY, Prof. JOHN G., died at Cambridge, Mass., October 16th. He was born in Providence, R. I., in 1804, and for 35 years was engaged in business in Cincinnati, Ohio. In 1863 the late Prof. Agassiz induced him to take charge of the conchological department of the Agassiz Museum in Cambridge, Mass., which position he held at the time of his death. He accompanied Prof. Agassiz on his scientific expedition to Brazil, and was a frequent contributor to scientific journals.

BADGER, Dr. GEORGE, son of the late Rev. Dr. Badger, of New York City, died at Aspinwall, June 16th. He was surgeon of the steamship *Bienville*, which was destroyed by fire on her passage from New York to Aspinwall, and he contributed greatly to the safety of the passengers by his firmness and courage.

BAILEY, GEORGE A., died at Deering, Me., December 26th, aged 57 years. He was publisher of the *Congressional Globe*.

BAIRD, MATTHEW, a well-known citizen of Philadelphia, for many years connected with the Baldwin Locomotive Works, died May 19th.

BAKER, Rev. GARDNER, an eminent and aged minister, died at Thousand Island Park, N. Y., August 12th.

BALCH, THOMAS, died in Philadelphia, Pa., in April. He was born in Leesburg, Va., July 23, 1821, was graduated at Columbia College, New York, and admitted to the Philadelphia bar, of which he was for several years a leading member. For twenty years he was occupied on his work "Les Français en Amérique." In September, 1876, he read before the Social Science Association, at Saratoga, a paper in favor of a double standard in coinage, and, before a similar organization in Philadelphia, read an essay on "Free Coinage and a Self-Adjusting Ratio."

BANGS, GEORGE S., was born in Milan, Ohio, February 22, 1825, and died at Washington, D. C., November 16th. At the age of 9 years he entered the office of the Akron (Ohio) *Beacon*, as a "printer's devil," and, after working for several years as a journey-man printer, in 1850 he went to Chicago. After spending some time at farming he finally purchased a number of local papers and consolidated them in the *Aurora* (Ill.) *Beacon*. President Lincoln appointed him postmaster at *Aurora* in 1861; he was made Assistant Superintendent of the Railway Mail Service in 1864, and General Superintendent of the Railway Postal Service

in 1869. In 1875 he succeeded in establishing a fast mail train system between the East and the West, which was a great convenience to business men, but after several months' trial it was finally abandoned. In 1876 he was appointed Assistant United States Treasurer at Chicago, and after holding that position about a year he resigned and became connected with the American Express Company.

BARGER, Father, died at Bloomington, Ill., January 5th. He was born in Culpepper County, Va., in 1801, and went West in 1832, where he was noted for his early experience in Methodism. He was one of the oldest divines living since the death of Peter Cartwright.

BEACH, ex-Judge ELIAS J., was born at Woodbury, Conn., and died at Glen Cove, N. Y., May 18th. He was a prominent Democrat and was twice Judge of Queens County.

BEATON, Mrs. RUTH, *alias* FANNY WALLACE, died at Vernon County, Wis., June 1st, aged 45 years. She was seven feet four inches in height, and weighed 585 pounds.

BEEKMAN, JAMES W., died in New York City, June 15th. He was born on November 22, 1815, and graduated at Columbia College in 1835. He was chosen State Senator from that city in 1850 and served two terms. In 1861 he went to Washington as a delegate of the Peace Convention. He was Vice-President of the New York Hospital, President of the Woman's Hospital, and a director of the New York Dispensary. He was also a member of the Historical Society, of the Century Club, and President of the St. Nicholas Society.

BENEDICT, Mrs. J. T., died in New York City, March 26th. She was for many years identified with the education of women in that city. She began teaching at Leroy, N. Y., in her fifteenth year. At the Albany Female Academy, where she graduated, she gained the gold medal in French and mathematics. From the Academy at East Bloomfield, N. J., where she spent several years, she was called to the school of Prof. J. T. Benedict in Burlington, Va., where she was married in 1849. In 1850 she and her husband opened a private school in New York City.

BLAIR, Mrs., died near Silver Spring, Md., July 5th. She was the wife of the late Francis P. Blair, Sr., and mother of the Hon. Montgomery Blair and the late Francis P. Blair, Jr.

BLANCHARD, J. W., died at Syracuse, N. Y., September 14th. He was a brigadier-general in command at New Orleans during the civil war.

BLANCHARD, WYATT, a lawyer and politician of Baltimore, Md., died there August 29th, aged 48 years.

BLEDSE, Dr. A. T., died at Alexandria, Va., December 8th, aged 69 years. He was a distinguished minister, editor of the *Southern Review*, and was formerly a professor of the University of Virginia.

BLITZ, Signor, the well-known ventriloquist

and prestidigitateur, died in Philadelphia, Pa., January 28th. He was born in the town of Deal, Kent, England, in 1810. When he was in his thirteenth year, he began his public career in Hamburg, and in 1834 came to the United States.

BLODGETT, FOSTER, died in Atlanta, Ga., November 12th. He was born in Augusta, January 15, 1826. He was elected mayor in 1859, reelected in 1860, and was an unsuccessful candidate in 1861. From 1856 to 1861 he was Ordinary of Richmond, and during the war he was captain of the Blodgett Artillery from Augusta; but after the war he joined the Republican party, and was appointed postmaster in 1865, was removed in 1868, and reinstated in 1869. He was President of the Union Republican Club of Augusta in 1867; the same year was again appointed mayor, remaining in office until December, 1868. In 1867 he was elected a delegate to the Constitutional Convention. In 1870 he was chosen to the United States Senate, but was not admitted.

BOARDMAN, Rev. Dr. GEORGE S., one of the oldest pastors of the Presbyterian Church, died at Cazenovia, N. Y., February 7th, aged 88 years.

BRADY, Mrs. ROSA, was born in the county of Cavan, Ireland, in 1774, and died in New York City, May 4th, being 103 years old at the time of her death.

BROOKS, JOSEPH, died at Little Rock, Ark., April 29th. In 1874 he was arrayed against Baxter in the exciting struggle for the governorship of Arkansas, a full account of which is given in the ANNUAL CYCLOPEDIA for 1874, under the title ARKANSAS.

BROOKS, LEWIS, died at Rochester, N. Y., August 9th, aged 84 years. He settled in Rochester when he was 29 years old, and first engaged in the manufacture of woollen cloth, and later in the mercantile business, but retired from active business forty years ago, devoting his time chiefly to investing his money and looking after his real estate. He made various charitable bequests, among which was \$10,000 to the Rochester City Hospital, a like sum to St. Mary's Hospital, and \$5,000 each to the Industrial School and the Female Charitable Society. He also bequeathed \$120,000 to the University of Virginia, \$31,000 alone being expended on the work of collecting a cabinet. Numerous other gifts were made to several societies, and in no case was the name of the generous giver known.

BROWN, DAVID S., died in Philadelphia, Pa., July 6th, aged 77 years. He was the head of the house of David S. Brown & Co., and was the founder of some of the most important industrial enterprises in Philadelphia.

BUDD, Dr. C. A., died in New York City, May 17th. He held two important professorships in the University of the City of New York.

BUGBEE, S. C., a prominent architect in San Francisco, Cal., died there September 1st. He

was born in New Brunswick, in 1812. He practised his profession several years in Boston, Mass., and in 1854 removed to San Francisco.

BURLEIGH, JOHN H., died December 6th. He was born in South Berwick, Me., in 1822, served several years in the State Legislature, and was twice elected to Congress.

CALDWELL, CHARLES H. B., died at Waltham, Mass., November 30th. He was born in Massachusetts, in 1838 was appointed to the navy from Connecticut, in 1844 was promoted to passed-midshipman, and in 1852 was commissioned lieutenant. From 1855 to 1857 he was lighthouse inspector, afterward served on board the Vandalia in the Pacific Squadron, and in 1858 he defeated a tribe of cannibals at Irega, one of the Feejee Islands, and burned their town. During the late civil war he served on the steamer Keystone State in 1861, and on the West Gulf blockading squadron in 1862, besides taking part in the bombardment of Forts Jackson and St. Philip and Chalmette batteries, and the capture of New Orleans. He was made commander in 1862, captain in 1867, chief of staff of the North Atlantic Fleet in 1870, and was commissioned commodore in 1874. He served in all parts of the world, and was in service 38 years.

CAMPBELL, THOMAS COOPER, the only son of Allan Campbell, died at Alexandria Bay, Thousand Islands, August 16th. He was born in New York City in 1846, and graduated at Columbia College in 1865, and from the Columbia Law School in 1868. He was a consistent Democrat, and in 1871 worked energetically to overthrow the Tweed Ring. In 1874 he became connected with Tammany Hall, was a member of the General Committee, and in the fall of that year was elected to the Legislature, where he worked vigorously for all reform measures. He introduced the bill for the organization of the Society for the Prevention of Cruelty to Children, and advocated that in relation to the fund for the Catholic Protector. He supported Governor Tilden in his efforts to break up the Canal Ring, was one of the first to advocate him for President, working zealously to further his interests at the St. Louis Convention, and organized the Tilden and Hendricks Central Association, at the Hoffman House, New York.

CARLISLE, JAMES MANDEVILLE, died at Washington, D. C., aged about 65 years. He was a leading member of the old Bar of the District of Columbia, also of the Supreme Court of the United States, and was counsel for several foreign governments.

CAREPENDER, Commodore EDWARD W., died at Shrewsbury, N. J., May 16th, aged 81 years. He was born in the State of New York, and entered the United States Navy July 10, 1813, when about seventeen years of age. Ten years later he received his commission as lieutenant, and was attached to the Mediterranean Squadron in 1827. He was an officer of the sloop Falmouth, of the West India

Squadron, in 1829-'30; was attached to the rendezvous at Boston in 1833 and 1834, and was with the Pacific Squadron in 1840. He received his commission as commodore July 16, 1862, and in 1864 and 1865 he was a prize commissioner at Key West. Under the act of 1855, he was retired from the navy, having been connected with it nearly sixty-four years.

CASWELL, ALEXIS, D. D., LL. D., died at Providence, R. I., January 8th, aged 78 years. In 1822 he graduated from Brown University, and for a time was Professor of Languages in Columbia College, Washington. He was Professor of Mathematics and Natural Philosophy in Brown University from 1828 until 1850, and of Mathematics and Astronomy from 1850 until 1864. During 1840 he was president *pro tempore* of the college, and succeeded Barnas Sears, D. D., LL. D., to the presidency, who resigned in 1867, he in turn retiring in 1872. He was a member of the Board of Fellows at the time of his death, also a member of the Advisory Committee of the Alumni.

CHRISTIE, DANIEL M., was born at Antrim, October 15, 1790, and died at Dover, N. H., in January. He graduated at Dartmouth College in 1815. After practising law in Berwick, Me., he removed to Dover in 1823, where he resided until his death. He held a seat in the State Legislature during eleven sessions, being elected to that body in 1826, and was a Presidential elector on the Lincoln ticket in 1864. He declined the office of Chief Justice of the State, which was twice offered him. He was a director of the Boston & Maine Railroad, and held official positions in several banking institutions.

CLARKE, Dr. EDWARD H., died in Boston, November 30, aged 57. He graduated at Harvard College in 1841, and at the medical department of the University of Pennsylvania in 1846. From 1855 to 1872 he was Professor of Materia Medica in the Harvard Medical School. He prepared the articles on Materia Medica in the new edition of the AMERICAN CYCLOPEDIA, and was the author of "Sex in Education," which attracted wide attention.

COBB, CARLOS, died at Tarrytown, N. Y., September 16th, aged about 60 years. He was admitted to the bar in Rochester, N. Y., where he practised law for several years; subsequently he was engaged on the survey of the north shore of Lake Superior, and made a geological report to the Canadian Government. He entered into the produce commission business in Buffalo, N. Y., in 1848, and removed to New York City in 1862, where he resumed the commission business. For several years he was a member of the Board of Managers of the Exchange, and at one time Chairman of the Committee on Grain of the Produce Exchange.

COFFIN, LEVI, died at Avondale, Ohio, September 16th, aged 75 years. He was a prominent antislavery man, and was well known

in the *ante bellum* days as President of the "Underground Railroad."

COLT, JOHN, was born at Lynne, Conn., June 12th, 1786, and died at Seabright, N. J., July 8th. He was a son of Peter Colt, of Lynne, Conn., and a cousin of Colonel Samuel Colt, the revolver patentee. In 1812 he took charge of a nail and rolling mill at Paterson, N. J., and in 1825 he started a factory for the manufacture of cotton-duck, and for nearly thirty years he supplied all the cloth for most American vessels. He retired from business in 1867.

CONRAD, TIMOTHY ABBOTT, a noted geologist, died in Trenton, N. J., August 8th, aged 74 years. He was a member of the Imperial Society of Natural History of Moscow, and was well known in Europe. He wrote "Fossil Shells in the Tertiary Formations of the United States," "The Paleontology of the Pacific Railroad Survey and of the Mexican Boundary Survey," and "Monography of the *Urionidæ* of the United States."

CRANE, Rev. JONATHAN, died at Middletown, N. Y., December 25th. He was born in Schenectady, N. Y., and graduated from Union College and the Auburn Theological Seminary. He was settled for 19 years at Attleborough, Mass.; for 3 years in New York as pastor of the Twentieth Street Congregational Church; from 1860 to 1868 at Middletown, N. Y., over the First Congregational Church; and after serving 1 year at St. Joseph, Mo., and 5 years at Kalamazoo, Mich., he was recalled to his old pastorate at Middletown, where he remained until his death.

CRANSTON, HIRAM, was born in Stephentown, N. Y., September 18th, 1815, and died in New York City, September 17th. He began life by teaching school, and in 1836 became clerk in the Troy House at Troy. In 1839 he kept the Pacific Hotel in New York City, a year later the Pavilion Hotel at Rockaway, and later was connected with Davis, Brooks & Co., now engaged in the management of California steamers. In 1846, for a short period, he managed the Eutaw House in Baltimore, Md., and from 1854 to 1867 was connected with the New York Hotel, from which he retired for 10 years, when, having lost heavily in stocks, he again took charge of that hotel. Mr. Cranston's Southern sympathies cemented to him a large Southern patronage, and the New York Hotel was above all others the Southern Hotel of the city.

CROSBY, Dr. ALPHEUS BENNING, was born at Gilmanton, N. H., February 22, 1832, and died at Hanover, N. H., August 9th. In 1853 he graduated from the academic department of Dartmouth College, and from the medical department in 1856, having been, the year previous, an assistant surgeon in the Marine Hospital at Chelsea, Mass. He began practice at Hanover, N. H., and became surgeon of the First New Hampshire Volunteers in 1861, being promoted to brigade-surgeon. He served at Ball's Bluff, at the second Bull Run, when,

resigning in 1862, he resumed practice at Hanover and assisted his father, who was then Professor of Surgery and Anatomy in Dartmouth College, becoming his successor upon the death of the latter. He also held a professorship at the University of Vermont and in the Long Island Medical College, and four years ago was appointed Professor of Anatomy at Bellevue Hospital. In June, 1877, he presided at the annual meeting of the New Hampshire Medical Society, and delivered a valuable address upon "The Ethical Relations of Physician and Patient." Many of his interesting medical lectures have been published.

DANIEL, RALEIGH TRAVERS, died at Richmond, Va., August 16th. He was born at Falmouth, Va., October 15, 1805, and for 40 years was one of the leading public men of the State, being at the time of his death Attorney-General, to which office he had been elected in 1873.

DARBY, Prof. JOHN, was born at North Adams, Mass., in 1804, and died in New York City, September 18th. He graduated from Williams College in 1831, where he remained some time as an instructor. He afterward accepted a professorship in the Wesleyan Female College at Macon, Ga., which position he left to become Professor of Mathematics in Williams College, but in 1845 he was obliged to go South on account of his health. He was connected with the educational departments of the States of Georgia and Florida, was the founder of the Culloden Female College, and afterward became Professor of Natural Science in Auburn College, Ga. In 1869 he was elected President of the Wesleyan University of Kentucky, but in 1875 he was compelled to resign on account of ill-health. He then removed to New York City. He was a regular contributor to the religious press, and was the author of several educational and scientific works, including "The Botany of the Southern States" (1840), and his "Chemistry" (1860).

DAVIS, GEORGE T., died in Portland, Me., June 17th. He was born in Massachusetts in 1810, graduated at Harvard College in 1829, became a lawyer, was a member of the Massachusetts Senate in 1839-'40, and of Congress 1851-'53.

DAYAN, CHARLES, died December 25th, at his home in Lowville, N. Y. He was born at Amsterdam, N. Y., in 1792, became a lawyer, was a State Senator in 1827-'28, acting Lieutenant-Governor in 1829, member of Congress 1831-'33, and of the State Assembly 1835-'36. He was afterward District Attorney for Lewis County. In politics he was a Democrat.

DE BAR, BENEDIOT, actor, was born in London, November 5, 1812, and died in St. Louis, Mo., August 14th. He made his first appearance at the Theatre Royal, Margate, Kent, England, in 1832, and came to America in 1834, appearing in 1835 at the St. Charles Theatre, New Orleans, as *Sir Benjamin Backbite* in the "School for Scandal." In 1837 he opened the

old National Theatre in New York City, and in 1838 played at the old St. Louis Theatre, and afterward in various cities in the West. In 1840 he appeared as *Mose* in a "Glance at New York," at the Standard Theatre, London, and in the same year returned to New York, where he appeared at the Old Bowery Theatre. He became proprietor of the Chatham Theatre in 1849, retaining it for 3 years, and afterward went on a four years' starring tour, playing in the principal cities of the United States. In 1853 he purchased the St. Charles Theatre, New Orleans, and the St. Louis Theatre in 1855, leasing this theatre in 1873, when he bought a large interest in the Grand Opera House in that city. Through shrewd management Mr. De Bar had acquired a large fortune; he was public-spirited and was highly esteemed both as actor and manager.

DENISON, General ANDREW W., for nearly 8 years Postmaster of Baltimore, Md., died there February 24th, aged 46 years. In 1862 he entered the Union service as Colonel of the Eighth Maryland Volunteer Infantry; and for his gallantry at the battle of Laurel Hill, Spottsylvania County, Va., where he was in command of the Maryland Brigade, he was brevetted brigadier-general. He was afterward brevetted major-general for his services at White Oak Ridge.

DE WITT, ROBERT M., died at Stratford, Conn., April 16th. He was born in New York City in 1825. In early life he was engaged in the magazine business in that city, and was afterward associated in the publishing trade with William Graham. He formed the publishing firm of De Witt & Davenport in 1852, and failed during the panic of 1857. At the time of his death he was a large stockholder in the New York News Company, and was one of its original incorporators; he also conducted a large publishing and bookbinding establishment.

DISTURNELL, JOHN, was born at Lansingburg, N. Y., October 6, 1801, and died in New York City, October 1. He began life as a printer in Albany, N. Y., but soon removed to New York City, where he opened a bookstore. "The Traveller's Railroad Guide," printed and compiled by him in 1840, was the first railroad guide published in this country. He was also the author of "New York as it was and as it is," "Sailing on the Great Lakes and Rivers," and "The Influence of Climate in North and South America." For 20 years he published the "United States Register, or Blue Book," and was one of the vice-presidents of the Association for the Advancement of Science and Art.

DIX, Colonel JOHN W., son of ex-Governor John A. Dix, was born in Albany, N. Y., in 1832, and died April 21st. He was an efficient officer in the Assistant Treasurer's office, and was secretary of legation with his father in Paris, and private secretary at Albany while his father was Governor of the State.

DRESSER, HORACE, died January 27th. He graduated at Union College in 1828. He became a lawyer, was noted for his defense of fugitive slaves, and wrote much on constitutional questions.

DRIGGS, JOHN F., died at East Saginaw, Mich., December 17th. He was born at Kinderhook, N. Y., in 1813, removed to East Saginaw in 1856, and after serving two years in the State Legislature was elected to Congress in 1862. He was twice reelected.

DUNHAM, DR. CARROLL, died at Irvington-on-Hudson, N. Y., February 18th. He was President of the American Institute of Homœopathy, and for many years was Dean of the New York Homœopathic Medical College. The high standing of that institution was largely due to his efforts. His great labors in connection with the World's Homœopathic Convention held in Philadelphia, Pa., were the means of hastening his death.

EASTMAN, COLONEL MACARTHUR EASTMAN, was born in Gilmantown, N. H., June 8, 1810, and died at Manchester, N. H., September 3d. His grandfather, Ebenezer Eastman, served with distinction as lieutenant at the battle of Bunker Hill, and his wife, Mary Butler, was the heroine of one of the most romantic stories of the Revolution. While engaged in the manufacture of woolen goods at Roxbury, Mass., he acquired an interest in a patent spinning-jenny, which he introduced into England, and in 1856, after the breaking out of the Crimean War, he secured the patent of a breech-loading cannon and sold it to the British Government. With the proceeds of these ventures he purchased the estate known as Riverside, in Manchester, N. H., which is the most elegant country-seat in the State. At the breaking out of the late civil war he contracted for the manufacture of a large number of carbines, and subsequently furnished firearms to the United States and foreign governments. In 1869 he planned the direct (ocean) cable, an enterprise which required a capital of \$6,500,000 in gold, and which was met, from the first, by a powerful corporate opposition. He secured the needed legislation after nearly five years of effort, and the cable was laid, the American end being landed at Rye Beach in July, 1874, amid much national rejoicing.

EATON, AMOS B., the father of Prof. Eaton, of Yale College, died at New Haven, February 21st. He was born in New York, and graduated at West Point Military Academy in 1826. He took part in the Seminole War, was appointed chief commissioner of subsistence of General Taylor's army at the breaking out of the Mexican War, and was brevetted major after the battle of Buena Vista. He was depot commissary and purchasing commissary in New York from 1861 to 1864, when he was appointed commissary-general of the Subsistence Bureau in Washington. Having been promoted to the ranks of lieutenant-colonel, colonel, and brigadier-general, he was appointed

brevet major-general in 1865, and was placed on the retired list in 1874.

ELLIOT, JAMES HABERSHAM, D. D., died at Charleston, S. C., June 18th, aged 57 years. He was born in Beaufort in 1819, and was a graduate of the South Carolina College. For a few years he practised law in Charleston, but, after studying for the Episcopal ministry, he was ordained at Beaufort and became Rector of the Episcopal Church at Grahamville, S. C., where he remained several years. He was elected assistant minister of St. Michael's Church, Charleston, where he remained until the close of the war, when he became rector of a church at Greensboro, Ga. While filling the pulpit of the Episcopal Church at Brookline, Mass., he had charge for four years of the *Christian Witness*, a religious paper published by the Episcopal Church, in Boston, Mass. In 1871 he was called to the pastorate of St. Paul's Church in Charleston, S. C., where he remained until his death. In 1871 he received a large vote for bishop of the diocese. He was elected a delegate from this diocese to the last general convention, and a delegate-elect to the general convention which met in Boston.

EVE, PAUL F., a distinguished physician and surgeon, died at Nashville, Tenn., November 3d, aged 71. He was born in Augusta, Ga., and received his medical degree from the University of Pennsylvania in 1828. He held professorships at different times in the Medical College of Georgia, Louisville University, Missouri Medical College, University of Nashville, and was a surgeon in the Confederate army. He had successfully performed many difficult operations in lithotomy.

FISH, REV. HENRY O., died at Newark, N. J., October 2d. He was born in Halifax, Vt., January 27, 1820, and graduated from the Union Theological Seminary in New York City, and from the Theological Seminary, June 25, 1845, and the next day was ordained pastor of the Baptist Church at Somerville, N. J. In December, 1850, he was installed as pastor of the First Baptist Church in Newark, N. J. The degree of D. D. was conferred on him in 1858, by the University of Rochester, N. Y. Among his numerous works was "Bible Lands Illustrated," the fruits of an eight months' journey abroad.

FORSYTH, COLONEL JOHN, editor of the *Mobile Register*, was born in Georgia, and died at Mobile, Ala., May 2d, aged about 66 years. He was the son of John Forsyth, Secretary of State under Jackson and Van Buren. He was appointed Minister to Mexico by President Buchanan, in 1856. In 1861 he, in company with Martin J. Crawford, appeared in Washington as Commissioner to the Government of the United States from the Confederate States of America.

FOX, GEORGE L., pantomimist, died at Cambridge, Mass., October 24th, aged 52 years. He was first conspicuous many years ago at the old Chatham Street Theatre, New York, where

he brought out several pantomimes, and he afterward became manager of the Old Bowery, and later was associated with Lingard, at the New Bowery Theatre. His most celebrated part was the clown in "Humpty-Dumpty," which he played for several months at the Olympic Theatre, in New York. In 1876, while playing at Booth's Theatre, he was stricken with paralysis. As a pantomimist he ranked first in this country, his acting being remarkable for its versatility and abundance of animal spirits.

FRANCIS, LEWIS, died in Dublin, Ireland, in August. He was born in New York City, August 24, 1814. Since 1847, he had been a member of the firm of Francis & Loutrel, prominent dealers in stationery. He was the inventor of Francis's "Manifold Letter Writer," "Printers' Rollers," and "Copying Ink."

GALLAHER, JOHN S., formerly Third Auditor of the Treasury, and well known as a journalist, died at Washington, D. C., February 4th, aged 81 years.

GALLAUDET, MRS. SOPHIA FOWLER, died at Washington, D. C., May 13th. She was born a deaf mute, in New England, in 1798, and at the age of twenty became the pupil of Thomas H. Gallaudet, the father of deaf-mute instruction in this country. Subsequently she became his wife, and was ever after a hearty promoter of the cause which is indissolubly associated with his name. In 1851 she was left a widow with eight children, and in 1857 she, with her youngest son Edward, who was then twenty years of age, removed to Washington, D. C., where they were invited by Mr. Amos Kendall to take charge of the proposed school for mutes and blind, of which he was the projector. For twenty years Mrs. Gallaudet was identified with this institution, and her son has become permanently associated with it.

GARRISON, Major A. F., was born in New Jersey, and died at Hermosillo, Mexico, August 5th, aged 70 years. He was senior United States Vice-Consul at Guaymas, Mexico. He served his country during the Seminole War, the war with Mexico, and the late civil war.

GIFFORD, C. L. C., died in Newark, N. J., March 29th. He was born there in November, 1825, and graduated from the Yale Law School in 1844. In 1850 he was admitted to the bar, and for four years was deputy collector for the port of Newark. He was elected to the House of Assembly in 1857, was appointed State Senator in 1858, which position he held for two years, and was chosen President of the Senate during the second year. In 1862, although a Democrat, he received the Republican nomination for mayor, but was defeated, and from 1872 to 1874 was Presiding Judge of the Essex County Court of Common Pleas.

GILBERT, Prof. GEORGE A., a prominent artist in water-colors, died at Hartford, Conn., in December, aged 62 years.

GRACE, FREDERICK J., died April 2d. He was a pioneer telegrapher, and had been editor

of *The Journal of the Telegraph* for several years.

GREENE, Colonel ENOCH W. C., publisher of the *Sunday Transcript*, died in Philadelphia, Pa., December 27th, aged 55 years.

GREENE, NATHANIEL, died in Boston, November 29th. He was born in Boscawen, N. H., 1797. He became a printer; in 1821 founded *The Massachusetts Statesman*, which became the leading Democratic journal of the State. He was at different times connected with several other papers, among which were *The Concord Gazette*, *The New Hampshire Gazette*, *The Haverhill Gazette*, and *The Essex Patriot*. He was Postmaster of Boston from 1829 to 1841, and from 1845 to 1849. In the latter year he went to Europe, and resided in Paris until 1861, when he returned to Boston. He published a "History of Italy" (1836), translated from the Italian; "Tales from the German" (2 vols., 1837); "Tales and Sketches from the German, Italian, and French" (1848), and "Improvisations and Translations" (1852).

GREGORY, Dr. H. H., died in New York City in May. He was a prominent Mason and a Knight-Templar.

GRENELL, GEORGE, died November 20th. He was born at Greenfield, Mass., in 1786; graduated at Dartmouth College in 1808, and was admitted to the bar in 1811. He was a member of the State Senate from 1824 to 1827, and of Congress from 1829 to 1839, and was Probate Judge of Franklin County from 1849 to 1853. He received the degree of LL. D. from Amherst College in 1854. For more than twenty years he was a member of the board of trustees of that institution.

GRIFFETH, Captain JOSEPH E., died at Iowa City, Io., July 7th, aged 37 years. In 1862 he enlisted as a private in the Twenty-second Infantry Regiment of Iowa Volunteers, and in 1863 was promoted to the rank of lieutenant. He graduated at West Point Military Academy, and was then promoted in the army to be second-lieutenant in the engineers, afterward serving as assistant engineer on the survey of the northern lakes.

HAGUE, MRS. SUSAN, was born in Pennsylvania, and died in Philadelphia, Pa., July 5th, aged 106 years.

HAINES, DANIEL, died January 26th, at Hamburg, N. J., aged 73 years. In 1847 he was elected Governor of New Jersey, and was one of the Judges of the Supreme Court for many years. He was President of the Sussex County Bible Association, a member of the Prison Reform Association, and a trustee of Princeton College.

HALL, EDWARD, died in Warrenton, N. C., December 3d, aged 80. In 1840 he was appointed by the Governor one of the Judges of the Superior Court of the State.

HALL, Rev. EDWIN, D.D., Professor of Theology in the Auburn Theological Seminary, died September 8th.

HALL, EZRA, was born at Marlboro, Conn.,

and died at Hartford, Conn., November 3d, aged 42 years. In 1862 he graduated at Wesleyan University, and soon after began the practice of law in Hartford. He was elected to the Connecticut Senate in 1863; was re-elected in 1871, when he became, by seniority, one of the Fellows of Yale College. In 1864 he served as one of the commissioners to collect the votes of the Connecticut soldiers in camp, and from 1866 to 1867 was a member of the Republican State Central Committee. In 1867 he became one of the proprietors of the *Hartford Evening Post*, and three years ago he was admitted to the bar of the United States Supreme Court.

HALSTEAD, OLIVER S., was born at Elizabeth, N. J., and died at Lyons Farms, N. J., August 29th, aged 85 years. He graduated at Princeton College in 1810, and was admitted to the bar in 1814, afterward practising law in Newark, N. J., where, at one time, he was mayor, first recorder, and once city counsel. From 1845 to 1852 he served as First Chancellor of New Jersey. He translated the book of Job, and published "The Theology of the Bible," both books evincing profound research.

HARRIS, Colonel S. D., died at Hudson, Ohio, April 26th. He was for many years editor of the *Ohio Farmer*.

HARVEY, PETER, died in Boston, June 27th. He was well known as the intimate friend of Daniel Webster. His "Reminiscences" of Webster was published after the death of the author in 1877.

HAWES, RICHARD, died in Bourbon County, Ky., May 25th. He was born in Caroline County, Va., February 6, 1797. He emigrated to Kentucky in 1810; was educated at Transylvania University; became a lawyer; was a member of the Legislature in 1828, 1829, and 1834, and of Congress from 1837 to 1841. In early life he was a Whig, but afterward became an ardent Democrat. When the civil war began, he advocated the Southern cause, and favored Kentucky joining the Southern States. In 1861 he left Kentucky with Breckenridge and others, and, upon the death of George W. Johnson at Shiloh, he was elected to succeed him as provisional Governor of Kentucky. When Bragg entered the State, he came with him to Frankfort, and on October 4, 1862, he was installed as Governor of the State, but he was compelled to retire immediately in consequence of the advance of a division of Buell's army. At the close of the war he returned to Paris, and in 1866 he was elected county judge, which office he held until his death.

HAYDEN, JOSIAH, died in September. He was born in New York State in 1802. In 1827 he began the business of making looms and weaving broadcloth with his brother, Joel Hayden, at Haydenville, Mass. Four years later, they began making japanned buttons and button moulds, and in 1839 Josiah began the manufacture of steel pens, and, in 1845, of gold ones. He subsequently was in the business of making

horn buttons, and in the hardware trade, and from 1888 to 1846 was in partnership with his brother at Haydenville.

HEATON, —, died in Chicago, Ill., December 26th. He was Chief Justice of the recently organized Appellate Court of that city.

HEDSTROM, Rev. O. G., was born near Colmar, Sweden, May 11, 1803, and died in New York City, May 5th. In 1827 he obtained the position of petty officer on a Swedish man-of-war, and arrived in New York, where he subsequently became an itinerant Methodist preacher, and was for thirty years connected with the Scandinavian Floating Bethel. He established many branch missions, and also helped to build the Swedish Church in Brooklyn.

HENNINGSSEN, General CHARLES FREDERICK, died in Washington, June 14th, aged 62. He was born in England, of Swedish parents, and when 19 years of age joined the Carlist army in Spain, where he rose to the rank of lieutenant-colonel. After the peace convention he returned to England, but when the war again broke out he went back to Spain, re-entered the revolutionary army, and was made colonel. He afterward joined Kossuth in the Hungarian revolution, and subsequently came to the United States and joined the Nicaragua expedition under General Walker. He was made major-general, and distinguished himself in the defense of Granada and the victory of Quaresma. On the breaking out of the civil war, he entered the Confederate army. He was the author of "Twelve Months in Spain," "The White Slave," "Eastern Europe," "Revelations of Russia," and other works.

HERON, MATILDA, actress, was born in Londonderry, Ireland, December 1, 1830, and died in New York City, March 7th. On February 17, 1851, she made her first appearance on the stage at the Walnut Street Theatre, Philadelphia, as *Bianca* in "Fazio," and in 1853 she played at the American Theatre in San Francisco, Cal. After a starring tour through the country, in 1857 she appeared at Wallack's old theatre, New York, in the title rôle of *Camille*, which she adapted from the French of Dumas, with Mr. Sothorn as *Armand*. Her success was phenomenal, and she is said to have received not less than \$190,000 for her appearances in that character. She married Robert Stoepel during her engagement at Wallack's, he being the leader of the orchestra. In 1861 she went to London, where she impersonated *Rosalie Lee* in "New Year's Eve," at the Lyceum Theatre. On her return to this country she renewed her triumphs as *Camille*, and was also successful as *Medea*, which she adapted from the Greek of Euripides. In 1874-'75 she played her last engagement in New York, at Booth's Theatre, where she appeared as *Lady Macbeth*. Her last public appearance was in April, 1876, on the occasion of the benefit of her daughter, Bijou Heron.

HEWITT, EDGAR A., died in New York City,

June 2d, aged 39 years. At the age of 19 he graduated at Yale College, and was for 10 years editor of the *Insurance Chronicle*. He represented the Hartford Life and Accident Insurance Company, and was a general agent of the Union Mutual Life Insurance Company. He was a member of the New York Press Club, the Liberal Club, the Astor Lodge of Masons, and the Knights of Pythias. He delivered an address at Atlanta, Ga., before the Underwriters' Convention of the South.

HONE, MRS. ELIZA, died in Philadelphia, Pa., April 29th, aged 81 years. She was the widow of Mr. Isaac S. Hone, and daughter of Chancellor Kent.

HOPKINS, JAMES C., died at Madison, Wis., September 4th. He was born at Pawlett, Vt., in 1819, began the practice of law at Granville, N. Y., and was elected to the State Senate in 1853. He removed to Madison in 1856, and in 1870 was appointed Judge of the United States District Court.

HORN, EPH., minstrel, was born in Philadelphia, Pa., in 1818, and died in New York City, January 3d. He went to that city in 1854, and made his first appearance as "end man" at Burton's Olympic Theatre, and afterward became manager of various combinations. In 1871 he went to England, playing in London and Liverpool, and after his return to America was associated with Dan Bryant's, Kelly & Leon's, and Horn & Bray's minstrels.

HOSMER, WILLIAM H. C., was born at Avon, N. Y., in 1814, and died there May 23d. He was educated at Temple Hill Academy and at Geneva College, and received the degree of A. M. both from Hamilton College and the University of Vermont. He practised law at Avon until 1854, when he was appointed to a position in the Custom House in New York City. In 1836 he traveled in Wisconsin, and in 1838 in Florida, for the purpose of discovering the manners and customs of the American Indians. His principal works are "The Fall of Tecumseh: a Drama" (1830), "The Themes of Song" (1834), "The Pioneers of Western New York" (1838), "The Prospects of the Age" (1841), "Yonondio, or the Warriors of the Genesee" (1846), "The Months" (1847), "Bird Notes," "Legends of the Senecas," and "Indian Traditions and Songs" (1850), and his complete "Poetical Works," collected in one volume in 1853.

HUGER, General BENJAMIN, died in Charleston, S. C., in December. He was born in that city in 1805. He graduated at West Point in 1825, during the Mexican War was chief of ordnance to General Scott's army, and, with Generals McClellan and Mordecai, was a commissioner to report to the Government on military operations in the Crimean War. Soon after the civil war was begun, he entered the Confederate service, was appointed a brigadier-general, and assigned to a command in Virginia, where he soon became major-general, and took part in the Peninsular battles. He

also participated in the early battles around Richmond. At the close of the war he was on duty in the trans-Mississippi department.

HULL, WILLIAM HOPE, a prominent lawyer of Augusta, Ga., died in New York in September, aged 57. He was appointed Assistant Attorney-General of the United States by President Buchanan.

INGLIS, Rev. DAVID, D. D., LL. D., died in Brooklyn, N. Y., December 15th. He was born in Scotland in 1842, graduated from the Edinburgh University, and before he had attained his majority came to this country, and was installed pastor of the Washington Heights (New York) Church. He became pastor of a church in Montreal in 1857, and after holding a pastorate for 17 years at Hamilton, Canada, he was appointed Professor of Theology in the Theological Seminary of Toronto. He was settled over the Henry Street Church, Brooklyn, in 1872.

IRVING, J. BEAUFRAIN, painter, died in New York City, April 20th, aged nearly 50 years. Losing his fortune during the late civil war, he turned to painting as a profession, art having been the pastime of his youth. His work soon attracted the attention of several art-patrons, and "The End of the Game" secured the beginning of his reputation.

JACKSON, ISAAC W., LL. D., was born at Cornwall, N. Y., in 1805, and died at Schenectady, N. Y., July 28th. He graduated at Union College in 1826, and remained in that institution from that date as tutor and professor. He was the author of works on conic sections, optics, mechanics, and trigonometry, which were highly esteemed by scientists, and some of them were adopted in foreign universities. He was the means of developing the art of landscape gardening and horticulture; and, through his famous garden, he contributed largely to the introduction, perfecting, and distribution of the choicest fruits and flowers. He was an earnest and devoted educator of the youths under his charge.

JACQUES, Dr. D. H., died near Fernandina, Fla., August 28th. He was the author of several works on agriculture, and the late editor of *The Rural Carolinian*.

JANNEY, ASA M., was born in Virginia, and died in June, aged 74 years. Like his brother, Samuel M. Janney, the philanthropist, he was prominent in the Society of Friends, and was engaged in work with the Indians for many years.

JEWETT, Colonel EZEKIEL, died at Santa Barbara, Cal., May 18th. He was an eminent scientist, and for many years curator of the State Museum at Albany, N. Y.

JONES, Dr. JOSEPH S., died in Boston, Mass., December 30th, aged 68 years. Early in life he became an actor, and was at different times proprietor and manager of the old National, Tremont, and other theatres in Boston. In 1843 he graduated from the Harvard Medical School, and held the office of city physician for

several years. He wrote about 200 plays; the most popular among them were "Solon Shingle," "Eugene Aram," "The Liberty Tree," "The Fire Warrior," "The Siege of Boston," "Moll Pitcher," "Stephen Burroughs," "The Carpenter of Rouen," with its sequel in "The Surgeon of Paris; or, The Mask of the Huguenots," "Job and Jacob Gray," "The Last Dollar," "The People's Lawyer," "The Sons of the Cape," "Zofara," "Captain Lascar," and "Paul Revere." "The Silver Spoon," in which Mr. William Warren, of the Boston Museum, made his great hit as *Jefferson Scattering Batskins*, was revived at that theatre through many seasons. He also dramatized "The Three Experiments of Living," by Mrs. Lee.

KENT, EDWARD, LL. D., died at Bangor, Me., May 19th. He was born at Concord, N. H., January 8, 1802, and graduated at Harvard College in 1821. In 1825 he began the practice of law at Bangor, forming a partnership with Jonas Cutting. He was Chief Justice of the Court of Sessions of Penobscot County in 1827, represented Bangor in the Legislature from 1829 to 1833, and was mayor of that city in 1836 and again in 1837. In 1838 and 1840 he was Governor of Maine, and in 1843 he was one of the United States commissioners for settling the northeastern boundary dispute, under the Ashburton Treaty. He was consul at Rio Janeiro for four years, and returned to Bangor in 1854, where he resumed the practice of law. He was appointed Associate Justice of the Supreme Court of Maine, was reappointed in 1866, retired in 1873, and was chosen President of the Constitutional Commission of Maine, which was his last public service. The degree of LL.D. was conferred upon him in 1855 by Waterville College, now Colby University.

KINNY, Mrs. MARY COGSWELL, died in Washington, D. C., April 7th, aged 62 years. She was the eldest daughter of the late Rev. Dr. Cogswell, of New Jersey, and his first wife Elizabeth Abbot. On both sides she was descended from two of the oldest families in New England. She was educated in New York City, and occupied a prominent position in the best society there and in Washington. Her only daughter married Count Gianotti, aide-de-camp to Prince Humbert, King of Italy.

LADREYR, Prof. CASSIMER, died in Boston, Mass., July 4th, aged 80 years. He was born in France, and was the author of many textbooks and other publications. He had been a resident of this country about 40 years.

LAHRBUSH, Captain FREDERICK, died in New York City, April 3d, aged, it is supposed, 111 years. He served in the British army from an early age until he was 52 years old, taking part in the battles of the Peninsular War, and keeping guard over Napoleon at St. Helena.

LAMATER, Dr. JOHN, died in New York, December 21st. He was born in that city in 1792, and was one of its oldest residents. From 1824 until his death, a period of 53 years, he was connected with the common schools, as commis-

sioner, inspector, or trustee, the last 20 years of his life being devoted to the schools in his own ward. He acquired reputation and fortune as a master-builder, and represented the Ninth Ward as assistant alderman in 1832 and 1834, and as alderman in 1834 and 1835. During the first term of Mayor Havemeyer he was the Whig representative to devise the system of the Tax Commissioners, and was a director of the Greenwich Bank and the Greenwich Savings Bank.

LEE, JOHN D., executed at Mountain Meadow, Utah, March 23d. He was indicted in September, 1874, for murder committed by him on September 16, 1857, when he took part in the "Mountain Meadow Massacre." At that time 120 emigrants, men, women, and children, were passing through Utah, on their way from Arkansas to California. At Mountain Meadow they were attacked by Mormons and Indians, and all of the emigrants who were old enough to disclose any facts relating to the massacre were killed on the spot. Seventeen small children were spared. Lee was tried for his part in this crime in July, 1875, when the jury disagreed. He was again tried in September, 1876. He was found guilty, and was sentenced to be shot January 26, 1877, he being permitted by the laws of Utah to choose the mode of his execution. A stay of proceedings was obtained for purposes of appeal, and the sentence of the court was carried into effect March 23d. Lee left a written document, in which he confessed the crime charged against him, and said that the massacre had been ordered by the Mormon Church; that Brigham Young was privy to it, and that most of the effects plundered from the victims of the massacre had been turned over to the Mormon Church. Brigham Young stoutly denied the statements made against him. Lee was born in Kaskaskia, Ill., in 1812. He joined the Mormons at Fairwest, Mo., in 1837; rose to a high position in the Mormon Church, and became a member of the Legislature and Judge of Washington County, Utah. He said that he was an honored man in the church, flattered by Brigham Young and the apostles until 1868, when he was "cut off from the church, and selected as a scapegoat to suffer for and bear the sins" of his people. Lee had been married to 18 wives, and was the father of 64 children, of whom 54 were living at the time of his death.

LELAND, HENRY, the young American painter, died at Paris, December 5th.

LE VERT, Madame OCTAVIA WALTON, died in Augusta, Ga., March 13th. She was born in Georgia, about 1820, and was a granddaughter of George Walton, one of the signers of the Declaration of Independence. Her father, also George Walton, was at one time Governor of Florida. She had remarkable linguistic talent; and while in Washington, D. C., in 1833-'34, she made admirable reports of the Congressional debates, to which Webster, Clay, and Calhoun frequently referred. In 1836 she

married Dr. Henry S. Le Vert, of Mobile. She was an extensive traveler, and numbered among her friends many eminent men, among whom were Lamartine and Washington Irving. She published "Souvenirs of Travel" and other works.

LINDSAY, THOMAS N., was born in Campbell County, Ky., December 22, 1807; died in Newport, Ky., November 22d. He began the practice of law in that city, where he resided 43 years, and attained a front rank at the bar. He was President of the Branch Bank of Kentucky and the Farmers' Bank; member of the State Senate in 1853-'55, and was a representative from Franklin County in 1857-'59. He also did service in the Constitutional Convention which framed the present Constitution of Kentucky.

LORD, Rev. JOHN C., died at Buffalo, N. Y., January 21st. He was born in Washington, N. H., August 9, 1805, and was a graduate of Hamilton College. He went to Buffalo in 1825, and was admitted to the bar in 1828. He discontinued the practice of the law, and in 1833 graduated from the Auburn Theological Seminary, and became pastor of the Presbyterian Church in Geneseo, N. Y. In 1835 the Pearl Street Presbyterian Congregation was organized in Buffalo, and he accepted the call to fill the pastorate; the relations thus formed continued for 38 years.

LOPEZ, Captain P. M., died in New Orleans, April 10th. He was born in Caracas, Venezuela. In 1851 he accompanied his unfortunate uncle, General Narcoiso Lopez, as captain of a company in the military expedition organized by the former against the Spanish Government in Cuba. General Lopez was executed at Havana, and Captain Lopez was sentenced to hard labor for life, but was released from imprisonment through the intercession of the wife of the then minister of Madrid.

LYONS, Rev. J. J., died in New York City, August 12th. He was for forty years rabbi of the oldest Hebrew congregation in America, that of Shearith-Israel in New York.

MAOY, R. H., died at Paris, March 29th, aged 60 years. He was born in New England and served for a number of years in the navy, but finally engaged in the dry-goods business in Boston, Mass. In 1857 he opened a small dry-goods store on Sixth Avenue and Fourteenth Street, on the site of the present immense establishment. He began with four assistants, and at his death nearly four hundred persons were in his employment.

MARVIN, ENOCH M., D. D., LL. D., Bishop of the M. E. Church South, died in St. Louis, December 3d. He was born in Warren County, Mo., in 1823, and at the age of 19 he entered the itinerant ministry in the Missouri Conference. During the war he was settled in Texas, but remained a member of the Missouri Conference till 1866, when he was elected to the episcopal office by the General Conference which met in New Orleans. In 1876 he was chosen by the College of Bishops to go to

China and Japan to examine the missionaries there and ordain a number of native preachers. He returned in August, 1877.

MATSELL, GEORGE W., died in New York City, July 25th. He was born in England in 1806, and came to this country in 1812. In 1845 he was appointed Chief of Police—holding the position until 1857. With the support of Mayor Havemeyer he raised the standard of discipline and soon had a regularly uniformed force. In 1873 he was again made Superintendent of Police, and was afterward appointed President of the Board of Police Commissioners, from which position he was removed. He was also editor of the *Police Gazette*.

MCCARTHY, Rev. PATRICK, was born in New York City, and died there August 9th. In 1850 he was ordained priest at St. Patrick's Cathedral. His first mission was at Perth Amboy, where he remained for two years. He was then called to St. Peter's Church in New York, and finally he took charge of the parish of the Holy Cross, where he remained for 22 years.

MCCOOK, GEORGE W., died December 28th. He was born at Carrollton, Ohio, in 1822, studied law, and became reporter of the Supreme Court of Ohio in 1852, and afterward Attorney-General of the State. On the breaking out of the war he entered the Union service, was appointed State commissioner by Governor Denison, and afterward became colonel of volunteers. In 1871 he was an unsuccessful candidate for Governor of Ohio, General Noyes being elected.

MCELROY, Rev. Father JOHN, died in Frederick, Md., September 12th. He was born in Inniskillin, Ireland, in 1782, came to America in 1803, and was ordained priest at Georgetown, D. C., in 1817. He built the Church and College of the Immaculate Conception in Boston, where he was stationed for some years, and also built the elegant church at Frederick. He was one of the two chaplains who accompanied the American army in Mexico, and at the time of his death he was the oldest Catholic divine in the United States.

MCGRAW, —, died May 4th, aged 62 years. He was extensively engaged in the lumber business in Wisconsin and Iowa, and was the head of the well-known Michigan lumbering firm of McGraw & Co., whose saw-mill at Saginaw is one of the largest establishments of the kind in the world. He was one of the original trustees of the Cornell University, and erected at his own expense, at a cost of \$150,000, the McGraw Building, for the accommodation of the extensive library and museum of the university.

MCVICKAR, Rev. Dr. WILLIAM A., was born April 24th, 1827, and died in New York City, September 24th. His grandfather, Dr. Samuel Boree, was one of the founders of the City Hospital, and his father was the Rev. Dr. John McVickar, a prominent Episcopal clergyman,

and a professor in Columbia College. William A. studied at the General Theological Seminary in New York City, and after his ordination acted as assistant to the Rev. Mr. Rankin, and became rector of St. Barnabas, at Irvington, N. Y. Failing health induced him to seek a milder climate, and he acted as rector of the American Chapel at Nice, France, where he remained until 1876, when he became rector of Christ Church, New York. He was the author of the "Life of John McVickar."

MEIGGS, HENRY, was born at Catskill, N. Y., July 7, 1811, and died in Peru in October. He came to New York in 1835, engaged in the lumber business, and failed in 1837. In 1838 he started a large lumber yard at Williamsburg, and was at one time President of the Board of Trustees of that place. In 1842 he again failed, but, attracted by the discoveries of gold in California, in 1848, he engaged in shipping lumber there, and in a few years built a fleet of sloops and schooners to convey lumber from different points on the coast. At length a financial crisis in San Francisco forced Mr. Meiggs to accept large loans from bankers; the crash finally came and he left the State. He next appeared in Chili, as a builder of bridges on the Valparaiso & Santiago road, and by 1858 he had effected a contract with the Chilean Government by which he cleared a profit of \$1,300,000. One of his many public works was the improvement of the environs of Lima, in Peru, and he contracted for the construction of six railways in that country, the most remarkable among them being the building of the Callao, Lima & Oroya Railroad, which ranks among the most daring achievements of modern engineering. He was enabled to meet his claims in California, which were paid in full and with interest. He was a connoisseur in art, and was, at one time, president of a prominent musical society in New York City.

MILES, MARCUS H., died at St. Clair, Mich. He was born in Fabius, Onondaga County, N. Y., in 1813, and after his admission to the bar began the practice of law at St. Clair. He aided in organizing the Republican party in Michigan, and held various public positions, including that of Judge of Probate, Circuit Court Commissioner, member of the State Legislature for several terms and of the Constitutional Convention of 1867. After being appointed Draft Commissioner in 1862, and later provost-marshal of his district, he resigned in 1863 to accept the position of Quartermaster of the Eleventh Michigan Cavalry. From 1864 until the end of the war he served as Judge Advocate of the Military Commission and General Court-Marshal for the District of Kentucky, and in 1870 he was appointed United States Inspector of Customs, at Toronto, Ont., holding the office for five years, when failing health compelled him to resign.

MOSES, Chief Justice, of the Supreme Court of South Carolina, died at Columbia, S. C.,

March 6th, aged 70 years. He was the father of ex-Governor Moses.

MUMFORD, REV. THOMAS J., the editor of the *Christian Register*, died at Dorchester, Mass., August 29th. He was of the old Newport family of Mumfords, but his early years were spent at the South, where he was educated. He became a most zealous abolitionist after he removed to the North.

NEWCOMB, W. W., died in New York City, May 2d. He was a well-known negro minstrel and delineator.

NEWTON, Prof. HENRY, died at Deadwood, Dak., August 5th, aged 32 years. His father, Isaac Newton, was one of the pioneers of steam navigation, and his brother, Isaac Newton, the engineer, was well known for his introduction of iron-clads during the war. Henry Newton graduated at the College of New York in 1866, and three years later took his degree at the Mining School of Columbia College as engineer of mining. After his graduation he was appointed Assistant Professor of Geology, which position he filled until called to make the geological survey of Ohio, under Prof. Newberry. He was appointed geologist to the United States exploring expedition two years ago; his report of this survey is soon to be published by the Government. In 1876 he received the honorary degree of Doctor of Philosophy from Columbia College, and shortly before his death he was appointed Professor of Geology and Mining Engineering in Ohio. He was the author of many original and striking papers; the one on the Geology of the Black Hills, read before the Academy of Sciences in 1876, attracting much attention.

ODLIN, PETER, died in Dayton, Ohio, October 19th. He was born in New Jersey in 1798, and began the practice of law in Somerset, Ohio, but subsequently removed to Dayton, then a small settlement, and contributed much to its development. He attained a high reputation as a lawyer, and was influential both in the Ohio Senate and in other important positions.

O'MAHONY, JOHN, died in New York City, February 6th. He was born in Mitchelstown, County Cork, Ireland, in 1816, and was a student at Trinity College, Dublin. In 1848 he took an active part in the Smith O'Brien rebellion, and became a leader in another rising in Tipperary and Waterford, which was quickly suppressed. In 1856 O'Mahony and John Mitchel were the leaders of a large body of Irish Nationalists in New York City known as the Emmet Monument Association, and in 1858 he with James Stevens established the Irish Revolutionary Brotherhood in Ireland and in this country, O'Mahony being at the head of the American Branch of Fenians. He raised the 99th Regiment of New York in 1864, and was appointed to its command. In 1866 he relinquished the leadership of the Fenians, resumed it in 1872, and retained it up to the time of his death. He started and edited *The Irish People* for two years, contributed also to *The*

Phoenix and *The Irish Citizen*, and in the beginning of 1872 delivered a lecture on the history of Fenianism, at the Cooper Union in New York City. In 1857 he translated "Keating's History of Ireland."

PALMER, Captain NATHANIEL B., died at San Francisco, Cal., June 21st, aged 78 years. He was born in Stonington, Conn., and was the discoverer of Palmer's Land in the South Pacific Ocean, and had been identified with the shipping and commercial interests of the country for over half a century.

PARROTT, ROBERT P., died at Cold Spring, N. Y., December 24th. He was born in Lee, N. H., October 5, 1804, graduated at the West Point Military Academy in 1824, and became a second-lieutenant of artillery. From 1824 to 1829, he was Assistant Professor of Mathematics and of Experimental Philosophy at the Academy, and was afterward with his regiment at Fort Constitution and Fort Independence. In 1834, being detained for ordnance duty, he acted as a staff-officer in the war against the Creeks; was made a captain in the ordnance corps in 1836, but resigned shortly after and became Superintendent of the West Point Iron and Cannon Foundry, at Cold Spring, N. Y. While there he invented and perfected the rifled gun which bears his name. He was first Judge of the Court of Common Pleas for Putnam County from 1844 to 1847.

PEEPLES, CINCINNATUS, Judge of the Superior Court of Atlanta, Ga., died there June 1st.

PERINCHIEF, Rev. OCTAVIUS, was born in the island of Bermuda, in 1829, and died at Bridgeport, Pa., April 29th. He graduated at Trinity College, Hartford, in 1854, and afterward at the Episcopal Theological Seminary in New York City. His first parish was the Church of the Messiah, Brooklyn. After remaining there for two years, he went as a missionary to Wisconsin and Kansas. His second regular parish was at Cumberland, Md., and he was also engaged as a missionary among the coal laborers at Mount Savage. In 1867, he became rector of St. John's Church, Georgetown, D. C., and was afterward Secretary of the Evangelical Educational Society at Philadelphia. For two years he had charge of the Memorial Church, Baltimore, Md., then of the old Swedes' Church at Bridgeport, Pa., where, after short interruptions, he remained until his death.

PERKINS, JONATHAN COGSWELL, died at Salem, Mass., December 12th. He was born at Ipswich, Mass., November 21, 1809, and graduated at Amherst College in 1832. After pursuing his law studies in the office of Rufus Choate, and at the Harvard Law School, he was admitted to practice in 1835. He was appointed Judge of the Court of Common Pleas of Massachusetts, served in the State Senate, and was an able and voluminous commentator and writer on law subjects. He edited "Chitty's Criminal Law," "Chitty on Contracts," "Jarman on Wills," "Abbott on Shipping," "Dan-

iel's Chancery Practice," "Collyer on Partnership," "Chitty on Bills and Notes," "Arnould on Insurance," "Angell on Water Courses," "Chitty on Pleadings," several volumes of chancery reports, and nine volumes of Massachusetts reports.

PETER, Mrs. SABAH, mother of Rufus King, died in Cincinnati, Ohio, February 6th. In 1854, while in Europe, she was converted to the Catholic faith. She had crossed the ocean nine times on special visits to the Pope, and founded not fewer than twenty convents in Philadelphia, Pa., and Cincinnati. She bestowed the bulk of her wealth upon charitable institutions. She brought from Europe a number of relics, among which were the bodies of several saints, which she presented to the different Catholic churches in Cincinnati.

PETIT, JOHN, died at Lafayette, Ind., June 17th. He was born at Sackett's Harbor, N. Y., in 1807, and went to Lafayette in 1831. He served as a Representative in Congress from 1843 to 1847, and as a Senator from 1853 to 1855, having previously been a member of the State Legislature, and United States District Attorney. He was a member of the State Constitutional Convention of 1850, was Presidential elector in 1852, and served as Judge of the Circuit Court. In 1859, President Buchanan appointed him Chief Justice of Kansas, and in 1864 he was a delegate to the National Democratic Convention in Chicago.

PHILLIPS, Dr. JOHN B., died at St. Paul, Minn., April 17th, aged 56 years. He was born in Kennett, Pa., studied medicine in Paris, France, and in 1855 settled in St. Paul. He was Commissioner of Statistics of Minnesota. About the year 1851, while traveling in Europe, he was declared to be the Italian revolutionist Mazzini, and was seized and thrown into prison at Basel, Switzerland. He was released through the efforts of Mr. Fay, the American Minister at Berne, and Switzerland paid 2,000 francs damages. He translated a number of sonnets from Heine and other German poets.

PLACIDE, THOMAS, brother of the late Henry Placide, died at Tom's River, N. J., July 20th. He was born in Charleston, S. C., in 1808, and made his first appearance on the stage in 1828 at the old Park Theatre, New York, playing there almost continuously until it was burned down. In 1832 he first appeared at the Arch Street Theatre in Philadelphia, left for the South in 1849, and was manager of the Varieties Theatre in New Orleans about 1850 to 1854. He played an engagement at Wallack's old theatre in 1855, traveled with the Wallack-Davenport combination in 1862, and afterward played brief engagements through the country, but during the last ten years he had not appeared at all. His line of business was low comedy, in which he achieved considerable popularity.

PRATT, DANIEL D., died at Logansport, Ind., June 17th. He was born in Palermo, Me., in

1813, graduated at Hamilton College in 1831, and in the following year removed to Indiana. After teaching school for some time, he began the practice of law at Logansport in 1836. He became a member of the Legislature in 1851, and was reelected in 1853. In 1860 he was a delegate to the Republican National Convention. In 1868 he was elected to succeed Schuyler Colfax as a Representative in Congress, but before taking his seat he was in January, 1869, chosen United States Senator. After the expiration of his Senatorial term in 1875, he was appointed, by President Grant, Commissioner of Internal Revenue, which office he resigned in July, 1876.

PREDEGRAM, AUGUST, musical director and conductor of the Oates Opera Troupe, died in Wheeling, W. Va., December 4th.

PRESTON, SEEPHANIAH, father of the Rev. T. S. Preston, Chancellor of the Roman Catholic Archdiocese of New York, died at Hartford, Conn., May 19th. He was one of the founders of the Connecticut Mutual Life Insurance Company, and at the time of his death was its vice-president.

QUINOY, EDMUND, died in Dedham, Mass., May 17th. He was born in Boston, Mass., February 1, 1808, and graduated at Harvard College in 1827. He was the grandson of Josiah Quincy, the Revolutionary patriot, and the son of the late Josiah Quincy, the President of Harvard University. He was one of the early Massachusetts abolitionists, was a constant contributor to the New York *Anti-slavery Standard*, having at one time some editorial supervision of its columns, and he was also for several years a Boston correspondent to the New York *Tribune* over the signature of "Byles." In 1853 he published in *Putnam's Magazine* his novel of "Wensley, a Story without a Moral," and in 1867 appeared his Memoir of his father, Josiah Quincy, a selection of whose speeches in Congress he also edited. His last public effort was a lecture delivered at Dedham, Mass., in aid of the Old South Preservation Fund, entitled "Glimpses of Colonial Life."

RAWSON, GEORGE W., died at Lyons, N. Y., December 13th. He was born at Farmington, Ontario County, N. Y., was admitted to the bar at Rochester, N. Y., in 1851. He was elected Surrogate of Monroe County in 1859, and Special County Judge in 1864, and was twice reelected. In 1876 he was elected Justice of the Supreme Court for the Seventh Judicial District.

REDFIELD, HEMAN J., died at Batavia, N. Y., July, aged 88 years. He was the agent of the Holland Land Company, and a pioneer settler at Batavia. He was a member of the "Albany regency," and one of the "immortal seventeen" State Senators. He was at one time Collector of the Port of New York, and for 50 years was proprietor of the Batavia *Times*.

REED, Rev. JOSEPH, died at Hartford, Conn. He was born in Waterbury, Conn., ordained

as Catholic priest at Troy, N. Y., May, 1869, and after supplying a mission at Birmingham, Conn., and serving as curate at the cathedral in Providence, R. I., was appointed by the late Bishop MacFarland secretary and chancellor of the Catholic diocese of Hartford.

RICE, Rev. N. L., died in Kentucky in June, aged 71 years. He was born in Garrard County, Ky., and was ordained a Presbyterian minister, and after laboring in Kentucky he accepted a call, in 1844, from the Central Presbyterian Church in Cincinnati, Ohio. He afterward accepted a call from St. Louis and Chicago, and finally succeeded Dr. Alexander in the Fifth Avenue Presbyterian Church, New York. After resigning, he accepted a professorship in an educational institution at Fulton, Mo., and was afterward Professor of Theology in Danville Seminary. He published several books, among which was "Romanism not Christianity."

ROGERS, Dr. DAVID L., died in New York City, November 10th, aged 78 years. He graduated from the College of Physicians and Surgeons, and he attained marked success in difficult surgical operations. He was the first in America to remove the upper jaw, and the first to remove an ovarian tumor. During the late war he organized a volunteer corps of surgeons from New York State, and served in the battles of Virginia, and afterward on the staff of General Banks.

ROSS, SOBIESKI, died at Coudersport, Pa., October 24th. He was born there in 1828. In 1872 he was elected as a Republican to Congress, and was reelected in 1874.

RUGGLES, Prof. WILLIAM, LL. D., died at Schooley's Mountain, N. J., in September. He was born at Rochester, Mass., about 1800, and graduated at Brown University. For over 50 years he was Professor of Mathematics at Columbia College, Washington, D. C.

RYAN, GEORGE P., perished on board the U. S. sloop man-of-war Huron, of which he was commander, and which was wrecked off the coast of North Carolina, November 24th. He was born in Boston, Mass., May 8, 1842, was appointed midshipman September 30, 1857, and graduated as ensign at the Naval Academy at Newport, R. I., in 1860. He was engaged on the blockade and active duty throughout the war, received his commission as lieutenant in 1862, and was promoted to the rank of lieutenant-commander in 1866. From 1867 to 1869 he was Professor of Chemistry and Physics at the Naval Academy at Annapolis, was then ordered on special service on the frigate Sabine, and was promoted to the rank of commander in 1874. On June 7, 1874, he accompanied the American Commission to take observations of the transit of Venus, when he commanded the division at Kerguelen Island.

SABINE, LORENZO, an American author, was born in Lisbon, N. H., February 28, 1803, and died in Boston, Mass., April 14, 1877. He had

been a merchant and bank officer, and was for some time Secretary of the Boston Board of Trade. He was three times elected to the Maine Legislature from Eastport; was an agent of the United States Treasury Department in Massachusetts, and was a member of Congress from that State in 1852-'53. He published a "Life of Commodore Preble" (1847); "Biographical Sketches of the Loyalists of the American Revolution" (1847; enlarged edition, 2 vols. 8vo, 1864); a "Report on American Fisheries" (1853); "Notes on Duels and Duelling" (1855); and an "Address on the One Hundredth Anniversary of the Death of General Wolfe" (1859).

SCHMITZ, GUSTAVUS, died in New York City, April 6th. He was born in Westphalia, Germany, in 1833; came to this country at the age of 15 years, and began his musical studies with Wallenhaupt. He was the organist of St. Patrick's Cathedral in New York; was a member of the Philharmonic and Liederkrantz Societies, the Catholic Union, and musical director of the Xavier Union, and of the Sodality connected with the Church of St. Francis Xavier. For 16 years he was Professor of Music at the Convent of Mt. St. Vincent. His compositions included eight masses, one of which was dedicated to Cardinal McCloskey.

SEARS, GEORGE B., was born at Danbury, Conn., and died in Newark, N. J., November 17th. He was Superintendent of Public Schools in that city for 19 years.

SEYMOUR, EDWARD, died at Bloomfield, N. J., April 28th, aged 48 years. He graduated at Yale College in 1860, was employed for a number of years on the *New York Times*, and in 1868 he entered the employ of the publishing firm of Scribner, Armstrong & Co., of which he became a member two years later. He edited and condensed the memoirs of Canon Kingsley, and frequently contributed critical articles to *Scribner's Monthly*.

SHANNON, WILSON, died at Lawrence, Kansas, August 31st. He was born in Belmont County, Ohio, in 1802. He became a lawyer; was elected Governor of Ohio in 1837, and again in 1842; went as minister to Mexico in 1844, and was a member of Congress in 1853-'55. In 1855 President Pierce appointed him Governor of Kansas Territory, which office he held from September of that year till August, 1856.

SHEPHERD, Dr. THOMAS PERKINS, died May 5th, aged 60 years. He was born in Salem, Mass.; graduated at Brown University in 1836, and afterward at the Harvard Medical School. He pursued his studies in Europe, and on his return settled in Providence, R. I., where he passed the remainder of his life. In 1848 he was elected a member of the Common Council of that city; in 1850 was chosen its president, and in 1853 was elected to the State Senate. He was the president and one of the founders of the Rhode Island Hospital, a member of the corporation of Brown University, also on the

committee for constructing its laboratory, and was on the commission for the erection of a new court-house. He also engaged in the manufacture of chemicals with eminent success.

SMITH, CYRUS PORTER, was born at Hanover, N. H., April 5, 1800, and died in Brooklyn, N. Y., February 13th. In 1824 he graduated from Dartmouth College, in 1827 was admitted to the bar, and in the same year became a resident of Brooklyn. From 1833 to 1835 he was clerk of the village board of trustees, and from 1835 to 1839 corporation counsel of the city. He was chosen mayor by the aldermen, in 1839, and reelected by the people in 1840, holding the office until 1842. In 1836 and 1837 he was Supervisor, and in 1848 the organization of Brooklyn's first gas company was largely due to his efforts. For 20 years he was President of the Board of Education; in 1856 and 1857 he represented the city in the State Senate, and since 1855 he was Managing Director of the Union Ferry Company. In 1869 he was appointed the Acting President of the Brooklyn City Railroad Company. During his first term as mayor he established a city hospital, which under his fostering care became the present Brooklyn City Hospital.

SMITH, JOSEPH, rear-admiral, died in Washington, D. C., January 17, 1877. He was born in Roxbury, Mass., March 30, 1790; appointed a midshipman from his native State January 16, 1809; commissioned as a lieutenant July 24, 1813; and served with distinguished gallantry at the battle of Lake Champlain, September 11, 1814, and at the capture of Algerine vessels in 1815. In 1827 he was promoted to the rank of commander, had control of the Boston Navy Yard until 1830, when he was ordered to the command of the frigate *Guerrière*, then attached to the Mediterranean Squadron. In 1834 he was again in command of the Boston Navy Yard, when he was commissioned as captain in 1837, and placed in charge of the Ohio, then with the Mediterranean Squadron. He was appointed Chief of the Bureau of Yards and Docks in 1847, and retained that position until 1869, when failing health compelled him to resign. On July 16, 1862, he was promoted to the rank of rear-admiral, and was on special duty for some time at the Navy Department, Washington, until relieved by act of Congress upon his retirement, when he stood at the head of rear-admirals, until his death. During the late war his son was commander of the Congress, and was killed at the engagement which ended in the Monitor defeating the Merrimac.

SMITH, Prof. NATHAN R., M. D., died in Baltimore, Md., July 3d. He was born at Concord, N. H., May 21, 1797, graduated at Yale College in 1817, studied medicine under his father at Yale College, and graduated in 1823. In 1824 he began the practice of surgery at Burlington, Vt., in the following year was appointed Professor of Surgery and Anatomy in

the University of Vermont, and in 1827 was called to the chair of surgery in the School of Medicine in the University of Maryland. He resigned in 1838, and accepted the chair of the practice of medicine in the Transylvania University, Lexington, Ky., but in 1840 he again resumed his chair in the Maryland University, resigning for the second time in 1870. He invented the instrument for the easy and safe performance of the operation of lithotomy, and also Smith's anterior splint for treatment of fractures of the thigh. He published "Surgical Anatomy of the Arteries," and a treatise on the "Treatment of Fractures." He also published, under the name of "Viator," a small volume entitled "Legends of the South."

SPENCE, THOMAS A., died in Washington, D. C., November 10th. He was Assistant Superintendent of the Railway Mail Service, and had previously been Assistant Attorney-General for the Post-Office Department. He graduated at Yale College, in 1829, and was a representative in Congress from Maryland, in 1843-'45.

SPRING, REV. SAMUEL, D. D., died at East Hartford, Conn., December 13th, aged 85 years. He was the oldest Congregational clergyman in the State.

STEINWAY, ALBERT, died in New York City, May 14th. He was born in Germany, in 1840, came with his family to this country in 1850, and was the youngest of the three brothers comprising the prominent piano firm of Steinway & Sons. Early in the war he served with the Seventh Regiment, afterward becoming a captain in the Fifth, and colonel of the Sixth Regiment, New York. He was also brigadier-general on Governor Hoffman's staff.

STEINWEHR, ADOLPH AUGUST, Baron von, died in Buffalo, N. Y., February 25th. He was born at Blankenburg, in the duchy of Brunswick, September 22, 1822, and entered the army in 1841, as a lieutenant. Six years later he resigned, came to the United States to offer his services to the Government in the war with Mexico, but failing to receive a commission in the regular army, he returned to his native country. In 1854 he again came to the United States, and at the outbreak of the late war he organized the Twenty-ninth Regiment of New York Volunteers, and commanded it at the battle of Bull Run. He was commissioned a brigadier-general in 1861, served under General Fremont in the Mountain Department, and he became head of the Second Division when General Sigel assumed command of the corps. He also commanded a division at the battle of Chancellorsville, and served until the close of the war. After the war he prepared a system of school geographies, which had a large sale.

STOCKTON, JOHN D., died in Philadelphia, Pa., October 3d, aged 41 years. At an early age he was employed on the *Philadelphia Press*, and became its manager under Mr. Forney.

He obtained a position on the New York *Tribune* in 1866, assumed the editorship of the *Philadelphia Post* in 1867, of which he became one of the proprietors, but, surrendering his interest in 1872, he became the dramatic and musical critic on the New York *Herald* in 1873, which position he held until his death. He wrote a comedy entitled "Fox and Geese," for John S. Clarke, the comedian, which ran for 100 nights in New York City, and over 300 nights in London.

TENNEY, Prof. SANBORN, died at Buchanan, Mich., July 9th. He was born at Stoddard, N. H., in 1827, graduated at Amherst College in 1853, and was Professor of Natural History in Vassar College until 1868, when he was appointed to the same position in Williams College. He had just started on a scientific expedition to the Rocky Mountains when he died. He was eminently successful as a teacher and as a lecturer, and for several years took a prominent part in the Massachusetts Teachers' Institute, and gave two series of lectures before the Lowell Institute, in Boston. He was a frequent contributor to periodicals, and the author of several text-books, among which were "Geology for Teachers, Classes, and Private Students" (1859), and a "Manual of Zoölogy" (1865).

TREAT, REV. SELAH B., died in Boston, Mass., March 28th. He was born at Hartford, Conn., February 19, 1804; graduated at Yale College in 1824; practised law until 1833, and graduated at the Andover Theological Seminary in 1835. He became pastor of the Presbyterian Church, Newark, N. J., in 1836, resigned in 1840, when he was made editor of the *Biblical Repository* and *American Eclectic*. In 1843 he was Secretary of the American Board, and was transferred to the corresponding-secretaryship in 1847, continuing that work until his death.

TURNER, REV. DR. JOHN, died in Brooklyn, N. Y., July 21st. He was born there, and graduated at St. Mary's Academy, Emmetsburg, Md. In 1856 he was ordained a Catholic priest in Brooklyn by Bishop Laughlin, and for the past fifteen years had been vicar-general of the diocese.

TUTHILL, JOSEPH H., died at Ellenville, N. Y., July 27th. He was born in 1811. He had been clerk of Ulster County, N. Y., and held many important positions of trust. He was active in raising troops during the war, and was elected to Congress in 1870.

VANDERBILT, JOHN, was born at Flatbush, N. Y., in 1819, and died there May 16th. He graduated at Columbia College, was admitted to the bar in 1842, and in 1844 he was appointed first Judge of the Court of Common Pleas of Kings County. In 1852 he was elected to the State Senate, and in 1853 he was nominated for Lieutenant-Governor on the Democratic State ticket, but was defeated. He projected the old Coney Island plank-road, and was a member of the Senatorial Commission which

investigated the encroachments over the harbor of New York by builders.

WARE, JAIRUS died at Salem, Mass., August 27th. He was ex-Justice of the Supreme Court of Massachusetts, and the author of several legal works.

WAUGH, WILLIAM B., died May 18th. He was the son of the late Bishop Waugh of Maryland, and Chief of the Civilization Division of the Indian Bureau. He entered it in 1846, resigned in 1857, but reentered the service in 1865.

WEBSTER, ALBERT F., died at sea, on his way to the Sandwich Islands, in February. He was a journalist and writer for the magazines, and the author of "Boarding-House Sketches," which appeared APPLETONS' JOURNAL.

WEBSTER, JOHN A., senior officer of the United States Revenue Service, died in Harford County, Md., aged 91 years. When the British fleet bombarded Fort McHenry in 1814, he commanded the six-gun battery on the Ferry Branch and repulsed the enemy, and was presented with several swords for gallant services in this action. He retired from active service a few years ago, but with full pay.

WELLS, Captain ELIJAH, died in Baltimore, Md., October 12th, aged 60 years. He was one of the oldest journalists in Maryland, and established the Port Tobacco Times, of which paper he was editor and proprietor more than thirty years ago.

WESTERN, PAULINE LUCILLE, actress, died in Brooklyn, N. Y., January 11th. She was born in New Orleans, January 8, 1843, and made her first appearance on the stage with her sister Helen as "change" artist at her father's theatre in Washington, D. C. In 1859 or 1860 she appeared at the Holiday Street Theatre, in "East Lynne," achieving her first success. During the war she traveled with a combination troupe, playing *Nancy Sykes* in "Oliver Twist," with E. L. Davenport as *Bill Sykes*, and J. W. Wallack, Jr., as *Fagin*. In 1865 she played in Philadelphia under Colonel Sinn's management, appearing in "Eleanor's Victory," "Lucretia Borgia," "Jane Eyre," "The Child Stealer," "Mary Tudor," "Cynthia," besides the two plays already mentioned. She appeared in the principal theatres in the United States, and at the time of her death was playing a star engagement at the New Park Theatre, Brooklyn.

WHITE, EDWIN, died at Saratoga Springs, N. Y., June 7th, aged 60 years. He was born at South Hadley, Mass., and in 1849 he was elected a member of the National Academy of Design, and in the next year pursued his studies in painting in Paris, where he remained four years. He revisited this country, but only for a short period, and returned to Europe, where he labored for many years, becoming well known in London, Paris, and Antwerp. In 1875 he took a studio in the Young Men's Christian Association Building. His genre

paintings were numerous, and his best-known historical works are the "Evening Hymn of the Huguenots" and the "Signing of the Compact on Board the Mayflower." At the National Academy of Design in 1876 he had on exhibition "Giotto sketching the Head of Dante," "Chapel in Church of St. Egidius, Nuremberg," "Café at Cairo," and "Moonlight on the Arno."

WILLETT, Colonel JAMES M., died at Buffalo, N. Y., June 6th, aged 46 years. He was born in Washington County, N. Y., graduated at the Law School in Albany, 1856, and began the practice of law at Batavia in 1857, and was elected District Attorney of Genesee County in 1859. In 1862 he entered the army, and was made major of the 128th Regiment of New York Infantry, and afterward became its colonel. Subsequently he was placed in command of the First Brigade of the Second Division of the Second Army Corps, which he retained until the close of the war. He was an unsuccessful Democratic candidate for Congress in 1864, and for the State Senate in 1876. For several years he was manager of the State Asylum for the Blind at Batavia, and was one of the vice-presidents of the State Bar Association.

WILSON, Captain ANDREW, died at Montgomery, N. Y., aged 88 years. He was the oldest ex-member of the Legislature of New York; represented Orange County in the Assembly in 1819; was a veteran of the war of 1812, and one of the founders of the Orange County Bible Society.

WILSON, Lieutenant THOMAS P., died at Santa Barbara, Cal., March 10th, aged 32 years. He entered the Naval Academy, September 30, 1861, and was appointed from New York. He served throughout the late civil war, and became lieutenant-commander in 1869.

WINANS, ROSS, died in Baltimore, Md., April 11th. He was born in Sussex County, N. J., in 1796, and laid the foundation of his fortune by raising horses and by the large sales of a plough of his own invention. He projected a railway for cars drawn by horses, invented the friction-wheel for cars, was the first to construct eight-wheeled cars, established the largest railway machine shop in the country, invented the "camel-back" locomotive, and build the cigar-shaped steel boat which was to cross the ocean in four days. He built the first successful locomotive used on the Baltimore & Ohio road; but his greatest work was the building of railroads in Russia, particularly the line from St. Petersburg to Moscow. During the war he took an active part in politics, and was elected to represent Baltimore in the extra session of the State Legislature in 1861, but on the following day was arrested and imprisoned at Fort McHenry, but was soon liberated. He wrote a religious work entitled "One Religion—Many Creeds."

WOOD, WILLIAM, died in New York City, April 9th. In 1822 he was admitted into the publishing house of William Wood & Son,

which his father, Samuel Wood, an English Quaker, had established, and the house soon secured a reputation among medical men by its publication of medical works. He established the *Medical Record* and the *American Journal of Obstetrics*, and was also one of the founders and original directors of the Mercantile Library. He retired from business in 1868.

WOODBRIDGE, REV. JONATHAN EDWARDS, died in Hartford, Conn., November 18th, aged 75 years. He graduated at Williams College in 1822, was at one time connected with La Salle Seminary at Auburndale, Mass., and formerly editor of the *Boston Recorder*, a Congregational organ.

WYCKOFF, DR. WM. H., died in Brooklyn, N. Y., November 2d. He was born in New York, September 10, 1807, and graduated at Union College in 1828. He was the principal of the classical department of a collegiate school in New York City, and his successive partnerships in school management had the names of Wyckoff & Rand, and Forrest & Wyckoff. From 1839 to 1846 he was the editor of the *Baptist Advocate* (now the *Examiner and Chronicle*), a paper of great denominational influence, and of which he was the founder. In 1846 he was ordained by the Laight Street Baptist Church. For many years he was President of the Young Men's City Bible Society, of the Baptist Domestic Mission Society, a member of the American Sunday-School Union, an originator of the American and Foreign Bible Society in 1835, and its corresponding secretary from 1846 to 1850. In the latter year he aided in founding the American Bible Union, of which he was the secretary. He published "The Bible Question, or the American Bible Society and the Baptists;" "The Bible, its Excellence;" "The Bible Primer;" "The Early Guide to Knowledge;" "Rollin's Ancient History Condensed;" and a popular "Scripture School Reader," of which Rev. Dr. Everts was joint author. He received the degree of LL. D., and he possessed unusual linguistic and literary acquirements.

WYLIE, ROBERT, a well-known American painter, died at Pont-Aven, France, February 4th. In 1872 he received a medal at the Paris Salon.

OBITUARIES, FOREIGN. AB DY, SIR THOMAS NEVILLE, Bart., born December 21, 1810; died July 20, 1877. He was an unsuccessful candidate for Malden in 1841, but represented Lyme Regis in the House of Commons from 1847 to 1852. He was created a baronet in 1849, and is succeeded by his oldest son, Sir William Neville, born in 1844.

ACHTERFELDT, JOHANN HEINRICH, a German theologian, born June 17, 1788; died May 4, 1877. He studied theology in Cologne and Münster, was ordained as preacher in 1813, and in 1817 was appointed Professor of Theology in Braunsberg, where he remained until 1876. In that year he received a call to Bonn, and

there published the "Christkatholische Dogmatik" of Prof. Hermes, to whose most ardent followers he belonged. In consequence of this publication he was eventually removed from his position in Bonn.

ADAM, EDMOND, a French Senator, born in 1816; died June 21, 1877. In 1848 he was appointed a member of the Council of State, but resigned in December, 1851. In October, 1870, he was for a short time prefect of police, and in 1871 was elected to the National Assembly from the department of the Seine. In 1875 he was elected a Senator for life by the National Assembly, by 315 votes. Both in the Assembly and in the Senate he acted with the Extreme Left.

ALBUQUERA, LOUIS NAPOLEON SACHET, Duc de, a French Bonapartist politician, born May 23, 1813; died July 22, 1877. He entered the army in his youth, sat in the French Parliament as a peer of France from 1838 to 1848, was a member of the Corps Législatif under the Empire, and in 1870 was a prime mover in bringing about the favorable result of the plébiscite. He was one of the founders of the Suez Canal Company and other similar enterprises.

ALENCAR, JOSÉ MARTINIANO DE, a distinguished Brazilian, died in Rio de Janeiro, December 12, 1877, at the age of 48 years. He was the son of a priest, and was born in Ceará. He displayed great talents from early youth. Having completed his law studies at São Paulo with distinction, he settled in Rio, and became a frequent contributor to the journals of that city. He also wrote various dramas, poems, and romances, some of which, such as his poem of "Iracema," and his romances of "The Guarany" and "Urabijara," all founded on Indian legends of Brazil, rank among the finest literary productions of the country. In 1868 he was elected deputy for Ceará as a Conservative, and entered the Cabinet as Minister of Justice. Two years later, when a candidate for Senator from Ceará, he was returned as one of the triple list, but was not appointed by the Emperor. He thereupon resigned, went into opposition to the Government, and displayed much hostility to the Emperor. From this time forward, with the exception of one session, he continued in opposition, speaking rarely, but with great ability and acceptance.

ALEXANDER, Grand-Duke of Russia, born August 31, 1875; died April 16, 1877. He was the son of Grand-Duke Vladimir, the second son of the Emperor Alexander.

ALLARD, NELZIR, a French general, born October 27, 1798; died October 26, 1877. He was educated at the Polytechnic School, and while yet a mere boy took part in the defense of Paris against the allies. In 1825 he was promoted to a captaincy. During the Algerian campaigns he was distinguished for his gallant conduct, and became aide-de-camp to General Balazé, and was subsequently engaged on the fortifications of Paris. He was created gen-

eral of division in 1857, and commander of the Legion of Honor in 1858. In 1847 he was elected a deputy, acting with the Left Centre. In 1876 he was again elected a deputy for the department of Deux-Sèvres.

ALLEN, WILLIAM FERNLEY, a British journalist and politician, born in October, 1816; died May 22, 1877. He was the proprietor and publisher of *Allen's Indian Mail*, had been Sheriff of London in 1857, lord-mayor in 1867, and at the time of his death held the office of alderman.

ALVENSLEBEN, CONSTANTIN VON, a Prussian general, born August 26, 1809; died April 16, 1877. He entered the great general staff as major in 1853, and in 1860 received an appointment in the Ministry of War. He took part in the war of 1866 as major-general, and in that of 1870 as lieutenant-general, commanding the Third Army Corps. He distinguished himself particularly at the battle of Vionville.

AMALIE AUGUSTA, ex-Queen of Saxony, born November 13, 1801; died November 8, 1877. She was a daughter of Maximilian I., King of Bavaria, and consequently a sister of ex-Queen Maria, who died a few months earlier. In 1822 she was married to King John of Saxony, whom she survived four years. Like her husband, she was highly beloved by all her subjects. The court circle which she drew around her at Dresden during the nineteen years of her reign was a very charming one, distinguished alike for its high moral tone and its patronage of the arts, literature, music, and the drama.

ANGELIS, PHILIP DE, an Italian ecclesiastic; born April 16, 1792; died in May, 1877. He was created Archbishop of Fermo in 1842, and, in 1849, cardinal. At the death of Gregory XVI., he was spoken of as his probable successor. In 1867 he became the first cardinal-priest, and was appointed by the Pope Chamberlain of the Roman Church and Arch-Chancellor of the University.

ANSON, Colonel AUGUSTUS HENRY ARCHIBALD, a British soldier, born March 5, 1835; died November 17, 1877. He served before Sebastopol, for which he received several orders. As aide-de-camp to General Grant, he was at the siege of Delhi, the relief of Lucknow, and several other important affairs. For his gallantry in the field, he was given the Victoria Cross. He was in Parliament for Lichfield from 1859 to 1868, and for Bewdley from 1869 to 1874.

ARNOLD, THOMAS JAMES, a British barrister and author, died at an advanced age in May, 1877. He was called to the bar at Lincoln's Inn in 1829, and was appointed a police magistrate, being, at the time of his death, the oldest and senior magistrate. He was the author of many works, notably on Municipal Corporations, Justices of the Peace out of Session, Labor Laws, etc.

AURELLE DE PALADINES, LOUIS JEAN BAPTISTE, a French general and Senator, born

January 9, 1804; died December 17, 1877. (See ANNUAL CYCLOPEDIA for 1875, page 315.)

AUTRAN, JOSEPH, a French poet; born in June, 1813; died March 6, 1877. He first appeared before the public with an ode to Lamartine, to whose school he belonged. His collections of poems, "*La Mer*" (1835), "*Poèmes de la Mer*" (1852), "*Laboureurs et Soldats*" (1854), "*La Vie Rurale*" (1856), "*Epîtres Rustiques*" (1861), and "*Poèmes des Beaux Jours*," made him well-known throughout France. His tragedy, "*La Fille d'Eschyle*," produced in the Odéon theatre in 1848, gained for him the great prize of Monthyon. The war of 1870 caused him to write a patriotic poem, the "*Légende des Paladins*." He was elected a member of the French Academy in 1868.

BAGEHOT, WALTER, a British journalist and writer on political economy, born February 3, 1826; died March 24, 1877. He was educated at the University College, London. Early in life, under the care of his father, he became intimately acquainted with the banking business, and was led to devote special attention to commercial and financial subjects. His marriage to a daughter of Mr. James Wilson, for some time Indian Finance Minister, and founder of the *Economist*, brought him into close contact with the management of that paper. On the death of his father-in-law, he became the proprietor and editor of the paper, and in his hands it was conducted with very great ability and success. He also contributed a number of valuable papers to the *National* and *Fortnightly Reviews*. He was the author of "*The English Constitution*" (1872), "*Physics and Politics*" (1872), and "*Lombard Street*" (4th ed., 1873). He was for some time Examiner in Political Economy in the University of London.

BAHADOUR, Sir JUNG, an Indian statesman; died at an advanced age February 25, 1877. He was Prime Minister of Nepaul, of which state he had been the actual ruler for over 30 years. In 1850 he came to England as a special envoy of the Nizam, and spent there several months. During the Sepoy mutiny, he rendered the English effectual aid by sending them an auxiliary force, thus contributing a great deal toward suppressing the mutiny. For his services on this occasion, he received from the British Government the Grand Cross of the Order of the Bath, and afterward that of the Star of India.

BAIN, ALEXANDER, died January 2d, at Glasgow. An electrician and inventor, he made important improvements in telegraphy. He invented, or re-invented, the method of making use of "bodies of natural waters to complete the electric circuit by laying a single insulated wire between the given stations, having at each end a metallic brush immersed in water." This principle was promulgated in a patent of 1841. In 1846 he patented the electro-chemical telegraph, and soon found his system capa-

ble of great speed; he was thus led to the invention of automatic methods of transmitting signals, of which one is the basis of the most improved process now used. He invented electrical clocks, and in 1843 constructed the earth-battery. In 1844 he patented ingenious apparatus for registering the progress of ships, and he also devised electrical methods of playing keyed instruments at a distance. He was struck down with paralysis some years ago, and died at the age of sixty-six in a "Home for Incurables." A government pension of eighty pounds a year was all that saved him from pauperism.

BAITER, JOHANN GEORG, a Swiss philologist; born May 31, 1801; died October 10, 1877. He studied in Munich, Göttingen, and Königsberg, was appointed in 1833 a teacher in the Gymnasium of Zurich, and was its prorector from 1843 to 1845, and again from 1849 to 1865. He was also appointed a professor in the university in 1833, but resigned this position in 1849. He published, partly alone, and partly together with Orelli and others, editions of many of the Latin and Greek authors.

BAKER, Rev. Sir HENRY WILLIAMS, a British clergyman, born in 1821; died in February, 1877. He was the originator and principal editor and proprietor of "Hymns, Ancient and Modern," and one of the most active workers in the committee which carried out that successful publication. He himself contributed a number of original hymns and translations to the collection.

BALLANTINE, JAMES, a British author, born in 1808; died December 18, 1877. Among his works are "The Gaberlunzie's Wallet," "The Miller of Deanhough," "An Essay on Ornamental Art as applicable to Trade and Manufactures," a volume of poems, etc.

BANDON, FRANCIS BERNAED, Earl of, a British nobleman, born January 3, 1810; died February 17, 1877. He was in Parliament for Bandon from 1842 to 1856, succeeded his father in the latter year, and was elected a representative peer for Ireland in 1858. He was Lieutenant and Custos Rotulorum for the County and City of Cork. His son, James Francis, succeeds him.

BARRIÈRE, THÉODORE, a French dramatic author, born in 1823; died October 16, 1877. His first play, "Rosière et Nourrice," appeared in 1843 in the Palais Royal, and was very favorably received. After that he worked chiefly in partnership with others, and has contributed about 50 plays to the French stage, almost all of which have been favorably received. Among them are "Les Parisiens," "Les Faux Bons-hommes," "Les Filles de Marbre," etc.

BAETH, JEAN BAPTISTE PHILIPPE, a French surgeon and medical writer, born in 1812; died December 4, 1877. He began his medical studies in the Paris hospitals in 1832, and at the general examination in 1835 won the gold medal. His principal work, written together with Henri Roger, was a "Practical Treatise

on Auscultation." Among his other works are "Medical History of the Cholera," and a treatise on "Ulceration of the Air Passages." He was decorated with the Legion of Honor in 1847, and was a member of several medical societies.

BAUDET, PAUL, a French Senator of the Empire, born in 1800; died November 18, 1877. He took an active part in the political strifes of the present century, being a member of the Chamber of Deputies from 1834 to 1848. In 1839 he was created general secretary of the Department of Justice, and a councillor of state. After the revolution of 1848, he was elected to the Constituent Assembly, and during the intrigues of Louis Napoleon for the overthrow of the Republic invariably voted with the Élysée. He protested against the *coup d'état*, but soon after was the recipient of marked favors from Napoleon. In 1863, he was called to the Ministry of the Interior in the place of M. de Persigny. In 1865, upon retiring from that office, he was created a Senator; soon after he became secretary of the Senate, and subsequently one of its vice-presidents.

BAUER, CAROLINE, a German actress, born May 28, 1808; died October 18, 1877. She entered upon the stage in her thirteenth year at the Court Theatre in Carlsruhe, and soon became one of the most popular German actresses. In 1829 she contracted a morganatic marriage with Prince Leopold of Saxe-Coburg, but was divorced from him when he ascended the Belgian throne in 1831. In 1844 she was again married to Count Broël-Plater.

BEAUBIEN, J. C., a Canadian statesman, born March 24, 1825; died November 7, 1877. He sat for Montmagny in the Canadian Assembly from 1857 until the Union, and for the same seat in the House of Commons from the Union until 1872, when he was defeated. He was a member of the Executive Council and Commissioner of Crown Lands from 1867 to 1873. In the latter year he was appointed a director of the Pacific Railroad.

BECKER, KARL FERDINAND, a German musician and writer of music, born July 17, 1804; died October 26, 1877. He received his musical instruction from Schicht and Friedrich Schneider, and made his first public appearance in concerts at the age of 14. He was afterward employed as organist in several of the best-known German churches, and from 1843 to 1856 was Professor of the Organ and of Harmony in the Conservatory of Leipsic. As a writer on music he was eminently successful. Among his best-known works are "Die Hausmusik in Deutschland im 16., 17. und 18. Jahrhundert" (1840), and "Die Tonkünstler des 19. Jahrhunderts" (1849). He was for many years the editor of the *Allgemeine musikalische Zeitung*, and contributed to Schumann's *Neue Zeitschrift für Musik*.

BELCHER, Sir EDWARD, a British admiral, born in 1799; died March 18, 1877. He entered the Royal Navy at the age of 13, was

present at the battle of Algiers, and served afterward on the African station, whence he returned home invalided in 1820. Having next served on the North American station for three years, he was selected in 1825 as assistant surveyor to Captain F. W. Beechey, then about to sail for Behring's Straits on his voyage of discovery. In the next few years he was actively engaged in Spain, Africa, South America, on the Indian station, and in China, where he obtained the thanks of the admiral in command for his gallantry, especially at the reduction of Canton. He was rewarded with a commission as post-captain and the companionship of the Order of the Bath in 1841, and was knighted in 1843. From 1842 to 1849 he was engaged chiefly on the East Indian station. His last important naval employment was in command of an expedition in search of Sir John Franklin, which ended in the abandonment of his two ships. He was nominated a Knight Commander of the Bath in 1867. He wrote "A Voyage round the World in H. M. Ship Vulture in the Years 1836-'42," and a "Treatise on Nautical Surveying."

BELL, General Sir GEORGE, Knight, a British general, born in 1794; died July 12, 1877. He received his first appointment in 1811, and served with the Duke of Wellington in the Peninsula. He was afterward employed in Ceylon and the East Indies; in 1837-'38 served in the rebellion in Canada, and had command of a regiment in the Crimea. Toward the close of his life he published a book entitled "Rough Notes by an Old Soldier during Fifty Years' Service."

BELLY, LÉON AUGUSTE ADOLPHE, a French painter of some note, died in March, 1877. He mostly chose for his subjects scenes from the Orient. Among his more recent paintings are "The Nile near Rosetta," "The Canal of Mahmoudieh near Alexandria," and a "Religious Festival at Cairo." He received the medal of the third class at the Exposition of 1867, and was decorated with the Legion of Honor in 1862.

BERTIN, LOUISE ANGÉLIQUE, a French painter, poetess, and composer, born January 15, 1805; died in the latter part of April, 1877. She was the daughter of Louis François Bertin, the founder of the *Journal des Débats*. She composed the operas "Le Loup-garou" (1827), "Fausto" (1834), and "Esmeralda" (1836; words by Victor Hugo). She also published a volume of poems, "Les Glanes" (1842), which received a prize from the Academy.

BETHMANN-HOLLWEG, MORITZ AUGUST VON, a German jurist, born April 10, 1795; died July 14, 1877. He studied law in the Universities of Göttingen and Berlin; went in 1819 as Privatdocent to Berlin, and was afterward appointed professor. In 1829 he went to Bonn, and resigned in 1842. In 1845 he was named councillor of state, and in the following year was a member of the General Synod of the Church held in Berlin. He had been a member of both Chambers of the Prussian Diet, and from 1858

to 1862 was Minister of Public Worship. Among his principal works are "Ursprung der lombardischen Städtefreiheit" (1846), "Ueber die Germanen vor der Völkerwanderung" (1850), and "Der Civilprocess des gemeinen Rechts in geschichtlicher Entwicklung" (vols. 1-5, 1864-'74). His last was "Das 20. Buch der Pandekten als Beispiel klassischer Jurisprudenz für Studierende erläutert" (1877).

BIZZARI, GIUSEPPE ANDREA, an Italian cardinal, born May 11, 1802; died August 27, 1877. He was created a cardinal in 1863.

BONAPARTE, Prince ANTHONY, born October 13, 1816; died in the latter part of March, 1877. He was the third son of Lucien, Prince of Canino, and his second wife, Alexandrine Laurence de Bleschamp.

BOURBEAU, LOUIS OLIVIER, a French Senator, born March 2, 1811, died in October, 1877. In 1847 he became *maire* of his native town, Poitiers, and his administration during the stormy period of 1848 was so firm and patriotic that he was elected a deputy to the Constituent Assembly. Since 1841 he had been professor in the faculty of law at Poitiers, and in 1866 was elected dean of the faculty. In 1869 he was elected to the Corps Législatif, and a few months afterward was created Minister of Public Instruction. After the establishment of the Republic, he devoted himself exclusively to his duties as a professor, not returning to public life until January, 1876, when the department of Vienne elected him to the Senate. In politics he was a Bonapartist, although of a very moderate kind.

BOUTELL, CHARLES, a British clergyman and archæologist, died in August, 1877. He was educated at St. John's College, Cambridge, and graduated B. A. in 1834. He was shortly after incorporated at Trinity College, Oxford. He first became known as an antiquary by his works, "Monumental Brasses and Slabs" (1847), and "Monumental Brasses of England and Wales" (1849). These were followed by his "Manual of British Archæology" and his most successful book, "Heraldry, Historical and Popular." In 1867 he published a more popular treatise, "English Heraldry," and, in 1869, "Arms and Armor."

BOVY, FRANÇOIS ANTOINE, a Swiss engraver of medals, born in 1803; died in October, 1877. He studied under M. Pradier in Paris, and first exhibited in the Parisian Salon of 1831. Among his works, which are well known to collectors, are "Le Jubilé de la Reformation," François Arago, The Empress, Cuvier, Napoleon I., Goethe, Liszt, Chopin, The Battle of the Alma, the medal of the Exposition in 1855, and four medals commemorative of the Exposition of 1867. He received a medal of the second class in 1835, one of the third in 1855, and was decorated with the Legion of Honor in 1843.

BRUNN, ALEXANDER, a celebrated German botanist, born May 10, 1805; died March 29, 1877. He was at first Professor of Botany in the University of Freiburg; went, in 1850, in

the same capacity to Giessen, and in 1852 to Berlin, where he was also appointed director of the botanical garden. His most important work is "Betrachtungen über die Erscheinung der Verjüngung in der Natur, insbesondere in der Lebens- und Bildungsgeschichte der Pflanze" (1851), which has done much to promote the knowledge of the lower cryptogams. Among his later works are, "Beitrag zur Kenntniss der Gattung Selaginella" (1865), "Die Characeen Afrikas" (1867), and "Neuere Untersuchungen über die Gattungen Marsilia und Pilularia" (1870). In 1876 he contributed a chapter on the "Characeen Schlesiens" to the "Kryptogamen-Flora von Schlesien," by Prof. Ferd. Cohn.

BRION, GUSTAVE, a French *genre* painter, born October 24, 1824; died November 6, 1877. He was a pupil of M. G. Guérin, and painted almost exclusively country scenes from Alsace. He exhibited in the Paris Salons for over 20 years, and, in 1863, received a medal of the first class, and was decorated with the Legion of Honor. Among his best paintings are his two funerals, the one in the Vosges Mountains on sleighs, and the other on the Rhine in boats.

BROCKHAUS, HERMANN, a German scholar, born January 28, 1806; died January 5, 1877. He was the last surviving son of Friedrich Arnold Brockhaus, the founder of the great German publishing house of that name. He studied Oriental and, principally, Indian literature in the Universities of Leipzig, Göttingen, and Bonn, and also attended for some time the Universities of Copenhagen, Paris, London, and Oxford. In 1839 he received an appointment in the University of Jena, and in 1841 went to Leipzig, as Professor of the Language and Literature of Ancient India. He published "Prabodha chandrodaya," by Krishna Misra (1835); "Kathā-sarīt-sāgara," a collection of tales, by Somadeva Batta (Sanskrit and German, 1839); the "Vendidad-Sade" (1850), and "Die Lieder des Hafis" (1855). Since 1853 he edited the *Journal* of the German Oriental Society, and since 1856 the "Allgemeine Encyclopädie" of Ersch and Gruber.

BROMLEY, VALENTINE WALTER, a British artist, born February 14, 1848; died in the first week of May, 1877. At the age of nineteen he was elected an Associate of the Institute of Painters in Water Colors, and shortly afterward became also an Associate of the Society of British Artists. His painting, "The Big Chief's Toilet," in the Crystal Palace Exhibition of 1877, carried off the gold medal.

BRÜHL, MORITZ, a German writer, born in 1819; died January 13, 1877. He spent some time in England as reporter for a London journal, and after his return to Germany was employed on various newspapers. Being by birth a Jew, he afterward joined the Roman Catholic Church. He was the author of a considerable number of works, among them "Walter Scott und seine Freunde" (5 vols., 1841), and "Irlands Zustände in alter und neuer

Zeit" (1845). His most important work was a German edition of Cantus's "General History."

BULOZ, FRANÇOIS, a French journalist, born near Geneva, in 1803; died in Paris, January 12, 1877. In 1831 he founded the *Revue des Deux Mondes*, and soon made it one of the leading reviews of Europe. Personally without any considerable literary capacity, he possessed a sharp eye for the talent of others, as well as the capacity to secure it for himself and the *Revue* at the lowest possible price. His parsimony was proverbial, it being well known throughout Paris that he would never pay for the first contribution of a new writer, no matter how valuable. For more than 30 years, the most talented writers of France put up patiently with his eccentricities; for the *Revue* had in this time become, from a popular geographical magazine, for which it had been originally designed, the most widely circulated, most learned, and best known periodical collection of literary labors of all kinds. Only in recent times has a change in this respect become perceptible. Some of the younger writers have begun to oppose the tyranny of the *Revue*, and many rival publications have thus been established.

CABALLERO, FERNAN, a celebrated Spanish authoress, died April 7, 1877. (The announcement of her death in 1876 was premature.) Speaking of a visit to her in Seville, Lady Herbert says: "Her tenderness toward animals, unfortunately a rare virtue in Spain, is one of her marked characteristics. She has lately been trying to establish a society in Seville for the prevention of cruelty to animals, after the model of the London one, and often told one of our party that she never left her home without praying that she might not see or hear any ill-usage to God's creatures. Her playfulness and wit, always tempered by a kind thoughtfulness for the feelings of others, and her agreeableness in conversation, seem only to have increased with lengthened experience of people and things. Nothing was pleasanter than to sit in the corner of her little drawing-room and hear her pour out anecdote after anecdote of Spanish life and Spanish peculiarities, especially among the poor."

CANARIS, CONSTANTINE, a Greek naval officer and statesman, born about 1785; died September 15, 1877. He was captain of a small merchant vessel at the outbreak of the Greek war of independence. He took an active part in this struggle and greatly distinguished himself by his bravery. Under King Otho, and afterward under King George, he was on various occasions Minister of the Navy, and also several times prime minister. Belonging to the opposition, he refused in 1861 the title of vice-admiral and a pension of 12,000 francs granted him by the Chambers. In 1865 he retired from public life, definitely as he thought, but in 1877 he was again called upon to form a new ministry. (See GREECE.)

CANTEBURY, JOHN HENRY THOMAS MANNERS

SUTTON, Viscount, born May 27, 1814; died April 24, 1877. He was M. P. for Cambridge Borough from 1841 to 1847, and Under-Secretary of the Home Department, 1841-'46. He had been Lieutenant-Governor of New Brunswick, Governor of Trinidad, and Governor and Commander-in-Chief of Victoria, and at the time of his death was Registrar of the Faculty Court. He succeeded his brother in 1869, and is himself succeeded by his son Henry Charles, born in 1839.

CAPALTI, HANNIBAL, an Italian cardinal, born January 21, 1811; died October 18, 1877. He was created a cardinal-deacon in 1868. He was one of the Presidents of the Œcumenical Council, in which he strongly attacked the group of French, German, Hungarian, and Oriental bishops who opposed the dogma of infallibility.

CARPENTER, Miss MARY, a British philanthropist, born in 1807; died June 15, 1877. She took an active part in the reformatory movement, more especially in Bristol, where she founded and superintended a reformatory institution for females. In 1866 she visited India for philanthropic purposes, and returned to England the following year. She subsequently visited India in 1868-'69, and again in 1869-'70, to promote female education. She continued to devote her attention to this work up to her death. She was the author of "Reformatory Schools for Children" (1851), "Juvenile Delinquents, their Condition and Treatment," "Our Convicts" (1864), and "Six Months in India" (1867). In 1871 she founded the National Indian Association, and became the editor of its *Journal*.

CASTELNAU, ALBERT, a French deputy, born September 25, 1823; died October 5, 1877. He was elected to the National Assembly from Hérault, in 1871, and to the Chamber of Deputies in 1876, and in both bodies voted with the Extreme Left. He was one of the 363 presented by the Republicans for reelection in 1877.

CAUCHY, EUGÈNE, a French lawyer, died at an advanced age in April, 1877. He was Secretary of the Archives in the Luxembourg, was an officer of the Legion of Honor, and a member of the Academy of Moral Sciences. He was the author of a number of legal works. In 1862 he received from the Academy the first prize, 1,500 francs, for a "Mémoire sur les Origines, les Variations et les Progrès du Droit Maritime International."

CAVENTOU, JOSEPH BIENAIMÉ, a French chemist, born June 30, 1795; died May 5, 1877. In 1820, while engaged in chemical researches, he, together with Pelletier, discovered the sulphate of quinine. But instead of keeping this valuable discovery to themselves, they used all possible means to make it known, and in 1837 they were rewarded with the grand prize of Montyou, consisting of 10,000 francs. He was a member of the Academy of Medicine, and an officer of the Legion of Honor. He had written

a number of books, and had contributed to various chemical journals.

CHANGARNIER, NICOLAS ANNE THÉODULE, a French general, born April 28, 1793; died February 14, 1877. He was educated at St.-Cyr, which he left in 1815 to join as a simple private one of the privileged companies of Louis XVIII.'s body-guard. In 1823 he took part in the Spanish campaign, and in 1825 obtained the rank of captain. His promotion was very slow, until his exploits in Algeria earned him distinction, General St.-Arnaud styling him the "African Massena." Becoming successively lieutenant-colonel, colonel, major-general, and general of division, the Duc d'Aumale, on becoming Governor of Algeria in 1847, resigned into his hands the chief military command. After the revolution of 1848 he returned to France. Lamartine offered him the Berlin embassy, but he preferred his profession to diplomacy, and on the outbreak of the Paris disturbances in April he spontaneously placed himself at the head of the available forces and restored order. In June, at the next supplementary elections, he was elected deputy for the Seine, though he had then succeeded Cavaignac in Algeria, and the latter, on becoming head of the Government, gave him the command of the Paris National Guard, which suppressed more than one outbreak. This post he retained until 1851, when, after incessant attacks from both Bonapartists and Radicals, the Prince-President removed him. He was one of those arrested on December 2d, and banished from France. He took up his residence at Mechlin, refusing to profit by the permission to return home until the amnesty of 1859. Not until the eve of the war of 1870 did he offer his services, which Marshal Leboeuf courteously but firmly declined. After the first disasters the Emperor was touched at the arrival of the aged soldier and allowed him to join the staff. On Bazaine taking the command, Changarnier remained with him at Metz. In October he was sent to Prince Frederick Charles to negotiate for the free departure of the garrison for Algeria, or for an armistice. He accompanied the army into captivity, and at the close of the war was elected deputy by three departments. He took his seat on the Right Centre, and though he had long been M. Thiers's friend and admirer, he took an active part in his overthrow, his impetuous interpellations and interruptions making him a prominent member. He promoted the fusion of the Legitimists and Orleanists; but, on the Comte de Chambord's letter rendering monarchy impossible, he proposed the renewal of the Marshal's power for ten years, a term eventually reduced to seven. He voted steadily with the Right and against the new Constitution, but his voice was scarcely heard after the summer of 1874, when he advocated an early prorogation. He was elected a Senator for life by the Assembly in 1875.

CHARLES WILLIAM LOUIS, Prince of Hesse,

born April 23, 1809; died March 20, 1877. He was the brother of the reigning Grand-duke, and as such the prospective heir to the grand-duchy. He was married to Princess Elizabeth of Prussia, a cousin of the King. His oldest son, Prince Ludwig, became in his place heir-apparent to the throne, and on June 12th became Grand-duke of Hesse, on the death of Ludwig III. (See LUDWIG III.)

CHAVÉE, HONORÉ JOSEPH, a Belgian scholar, born June 13, 1815; died July 16, 1877. In 1844 he went to Paris, where he was professor at the Collège Stanislas and the Athénée. He was the author of a considerable number of works, the most important of which is the "Lexicologie Indo-Européenne" (1849). He also contributed a number of articles to the *Revue du XIX^{me} Siècle*, and to the *Revue de Linguistique*, which he founded himself in 1867.

CHISHOLM, MRS. CAROLINE, a British philanthropist, born about 1810; died March 25, 1877. She showed at an early age a philanthropic character, and upon being married to Captain Chisholm, of the Indian army, she found her field of usefulness considerably extended. Her attention being directed in Madras to the neglected and dangerous condition of the soldiers' daughters, she established for them an industrial home. Her husband soon after going to Sydney for his health, she accompanied him there. Here she entered upon that career of usefulness which has made her name known throughout the British Empire. She took charge of the emigrants who arrived friendless and penniless, and secured for them situations in the interior, making many journeys for that purpose. She established an office in Sydney, at which all persons needing employment might attend daily; and by her disinterested efforts placed many thousands in positions of respectability and comfort. She returned to England in 1846, receiving a testimonial of £150 upon her departure; there she established the Family Colonization Society, by which passage money was paid in weekly installments, and did much to relieve emigrants of the poorer class. She returned to Australia in 1854, and went back again to England in 1866. She wrote "Voluntary Information of the People of New South Wales," and "Perils in the Polar Seas: True Stories of Arctic Adventure and Discovery" (1874).

CHRISTIDES, a Greek statesman, died January 20, 1877. He had been Minister of Finance on several occasions, and at the time of his death was a deputy for Syra.

CIBOT, FRANÇOIS BARTHÉLEMY MICHEL EDOUARD, a French painter, born February 11, 1799; died in February, 1877. He exhibited for the first time in 1827. He painted a large number of views from France, among them "The Valley of Sceaux," "The Banks of the Sarthe," and others.

CLARKE, CHARLES COWDEN, a British scholar, born in 1788; died March 20, 1877. He wrote

"The Riches of Chaucer" and "Tales from Chaucer, in Prose." Together with his wife he edited a "Concordance to Shakespeare," and an edition of the great dramatist's plays, published by Messrs. Cassell. He was likewise the author, in association with Mrs. Clarke, of some delightful books for the young, and during the last few years contributed largely to the *Gentleman's Magazine*, in which he completed shortly before his death an interesting set of reminiscences of his celebrated friends.

CLAUSEN, HENRIK NIKOLAI, a Danish statesman and theologian, born April 22, 1793; died March 28, 1877. He spent several years in Germany, Italy, and France, and was considerably influenced in his theological views by Schleiermacher. After his return to Denmark he was appointed professor in the University of Copenhagen. He was a member of the provincial diet in Roeskilde from 1840 to 1848, and its president during the last 3 years; was a member of the Constitutional Assembly of 1848-'49, from 1848 to 1851 privy counselor and a minister without portfolio, and since then was a member of the Riksdag. He was the author of "Katholicismens og Protestantismens Kirkeforfatning, Lære og Ritus" (1825), "Det Nye Testaments Hermeneutik" (1840), "Udvikling af de christelige Hovedlærdomme" (1845), "Christelig Troelslære" (1853), and "Dat evangeliske Kirkelivs Nutid og Fremtid" (1859). He was the editor since 1831 of the *Zeitschrift für ausländische theologische Literatur*.

CLIFFORD, SIR AUGUSTUS, a British admiral, born May 24, 1788; died February 8, 1877. He entered the navy in 1808, saw some severe service on the coasts of Egypt and Italy, and obtained post-rank in 1812. He sat in Parliament for Bandonbridge in 1818, for Dungarvan in 1820, and again for Bandonbridge in 1831. In 1832 he was appointed Gentleman Usher of the Black Rod, an office he held up to his death. He was created a baronet in 1838. He was the senior flag-officer on the retired list, his commission as captain dating from 1812; rear-admiral, 1848; vice-admiral, 1855; and admiral, 1860.

COBBETT, JOHN MORGAN, a British lawyer, born in 1800; died February 13, 1877. He was called to the bar, at Lincoln's Inn, in 1830, entered Parliament at the general election of 1852, as one of the members for Oldham, which his father had represented before him, and continued to hold his seat until 1865, when he was defeated. He was again sent to Parliament in 1872 by his former constituents. He published a selection from his father's political works, and also wrote the preface to a recent edition of the "Legacy to Laborers."

COBDEN, MRS. RICHARD, the widow of the eminent statesman, died at an advanced age April 17, 1877. She was the daughter of Hugh Williams, of Gellygoch, Montgomeryshire, and in 1840 married Richard Cobden, whose widow she was left by his death, twelve years ago. After the death of her husband, she published,

at her own expense, his "Political Writings," in two volumes.

COULSON, WILLIAM, a British physician, born in 1799; died April 7, 1877. He studied at St. Bartholomew's Hospital, became a member of the Royal College of Surgeons in 1826, and in 1843 was elected one of the honorary fellows of the college. In 1851 he obtained a seat in the council, and in 1860 was appointed Hunterian orator. He translated from the German Blumenbach's "Comparative Anatomy," and from the French Edwards's "Manual of Surgical Anatomy."

COULTHURST, WILLIAM, a British banker, born in 1792; died February 10, 1877. He was the senior partner of the banking-house of Coutts & Co., London, one of the largest and oldest banking-houses of England.

CYRIL II., Patriarch of Jerusalem, born on the island of Samos about the year 1790; died August 30 (18), 1877. He went to Jerusalem in 1818, being then a priest, was consecrated Metropolitan of Sebaste in 1830, Metropolitan of Lydda in 1838, and in 1845 was made Patriarch of Jerusalem. In 1872 he was deposed and excommunicated by the Synod of Constantinople, on account of his sympathy with the Bulgarians. This sentence was annulled in 1876.

DELOD, TAXILE, a French writer and politician, born November 25, 1815; died in May, 1877. He had been connected with the *Charivari*, the *Siècle*, and *L'Avenir National*. In 1871 he was elected a member of the National Assembly for the department of Vaucluse. He was the author of a number of works, among which a "History of the Second Empire" is best known.

DEUTSCH, SIMON, a German scholar, born in 1822; died March 23, 1877. He studied in Vienna, but the events of 1848 led him into politics, and he took a prominent part in the political associations of those days. When Windischgrätz surrounded Vienna, he demanded the surrender of Deutsch as one of the hostages. But Deutsch succeeded in escaping to Paris, and here devoted himself to banking. During the war in the Crimea he went East, and then entered into communication with the chiefs of the Young Turkish party. In the latter part of 1876 he went to Constantinople, and when his friend Midhat Pasha was banished, the new Government permitted him to remain, contrary to his expectations.

DEVRIENT, PHILIPP EDUARD, a German actor and author, born August 11, 1801; died October 4, 1877. He devoted himself at first to singing, but was forced to leave this branch, as he completely lost his voice. He then devoted himself to the drama. In 1844 he became director of the Court Theatre in Dresden, and in 1852 assumed the same position in Carlsruhe, and afterward became general director in the same place. After having celebrated his 50th anniversary in 1869, he resigned his position

in 1870 on account of his health. He was the author of a number of opera texts and plays, as well as different works on the drama, of which he was considered one of the best authorities. His principal work is "Geschichte der deutschen Schauspielkunst" (Leipsic, 5 vols., 1848-'74).

DRUMMOND, JAMES, a British painter, born in 1816; died August 12, 1877. He exhibited his first painting at the age of nineteen, in the Royal Scottish Academy, and since contributed to each of the following exhibitions. He excelled particularly in historical painting.

DUMONT, LÉON, a French scholar, born in 1838; died January 7, 1877. He was considered one of the most learned and most profound of the French philosophers of modern times. Among his works are: "Les Causes de rire" (1862), "Le Sentiment du Gracieux" (1863), "La Morale de Montaigne" (1866), "Antoine Watteau" (1867), "De l'Éducation des Femmes" (1868), "Haeckel et la Théorie de l'Évolution en Allemagne" (1872), and his principal work, "Théorie Scientifique de la Sensibilité" (1876). He also contributed a number of articles to the *Revue des Deux Mondes*, the *Revue Scientifique*, and the *Revue Philosophique*.

DUNDAS, Sir DAVID, Knt., born in 1799; died March 30, 1877. He was educated at Westminster School and Christ Church, Oxford, was called to the bar at the Inner Temple in 1823, and went to the northern circuit. He was made a Q.C. in 1840, and in the same year was elected member of Parliament for Sutherlandshire in the Liberal interest. He represented the county till 1852, and sat for it again from 1861 to 1867. He was Solicitor-General under Lord John Russell from 1846 to 1848, and Judge-Advocate-General from 1849 till he retired from office with his party in 1857. He was, with the exception of Lord Chelmsford, the senior bencher of the Inner Temple. He was knighted in 1834.

DURHAM, JOSEPH, a British sculptor, born in 1821; died October 27, 1877. The work which first brought him into public notice was a bust of Jenny Lind, exhibited in the Royal Academy in 1848. His Memorial of the Exhibition of 1851, in the Horticultural Gardens, Kensington, is the greatest of his out-door works. His best classical group, "Leander and the Siren," was exhibited in the Royal Academy in 1875. In portraiture his busts and figures are well known and very numerous. He was elected A. R. A. in 1868.

DUVERGIER DE HAURANNE, LOUIS PROSPER ERNEST, a French writer and politician, born March 7, 1843; died August 16, 1872. He contributed a large number of articles to the *Revue des Deux Mondes*, among them "Eight Months in America," "Cuba and the Antilles," "Democracy and the Right of Suffrage," and "President Johnson and Congress," and also published the brochures "La Coalition Libérale" (1876), and "Le Gouvernement Personnel"

(1870). He was a member of the National Assembly, and in 1876 was elected to the Chamber of Deputies from Cher. In both bodies he voted with the Left Centre.

EICHENS, FRIEDRICH, EDUARD, a German engraver on copper, born May 27, 1804; died May 5, 1877. He studied under Buchhorn in the Berlin Academy, and afterward in Parma under Toschi. After his return to Berlin he became professor of drawing in the city schools. Among his more important works are engravings of "The Three Magi" by Raphael, "St. Magdalena" by Domenichino, and "Frederick the Great as Crown-Prince" by Pesne.

ELWART, ANTOINE AMABLE ÉLIE, a French composer, born November 18, 1808; died in October, 1877. He studied in the Conservatory of Music under Lesueur and Fétis, and there gained among others the Roman prize, in consequence of which he went to Italy in 1834. After his return he was appointed a professor in the Conservatory. He published several works for instruction in music, among them "Sol-fège Enfantin" (1836), "Méthode de Chant," and "Petit Manuel d'Harmonie" (1839; 4th ed., 1853). Among his masses and operatic works are "Les Catalans" (1840), "Les Trois Jérusalem," and "La Visière." Besides these works he published numerous symphonies, oratorios, a mystery entitled "Les Noces de Cana," and other works. As a musical author he wrote "Traité de Contrepoint et de Fugue" (1840), "Théorie Musicale" (1840), "Histoire de la Société des Concerts du Conservatoire Impérial de Musique" (1860; 2d ed., 1863), and other works. He also wrote a didactic poem entitled "L'Harmonie Musicale" (1853).

ERMAN, GEORG ADOLF, a German scholar, born May 12, 1806; died July 12, 1877. He first became known by a journey around the world with the object of making magnetic observations. His experiences on this journey enabled Gauss and Weber to establish the theory of earth magnetism. His last large work, "Grundlagen der Gauss'schen Theorie, und die Erscheinungen des Erdmagnetismus im Jahre 1829" (1874), he published together with H. Petersen. In 1874 he was elected a member of the Royal Society of London.

ETTMÜLLER, ERNST LUDWIG, a German scholar, born October 5, 1802; died April, 1877. He studied in Leipzig, established himself as lecturer (Privatdocent) in the University of Jena in 1830, and in 1833 went to Zurich as Professor of German Language and Literature in the gymnasium. He soon, however, resigned this for a position in the university. He edited a large number of works in middle High-German, ancient Low-German, and ancient Scandinavian. Among the former are "Kuneech Lurarin" (1829), "Sängerkrieg uf Wartbure" (1830), "Sant Oswaldes Leben" (1835), and "Heinrichs von Meissen des Frouwenlobes Lieder, Leiche und Sprüche" (1843). Of Low-German poems he edited "Theophilus" (1849), "Dat Spil van der Upstandinge" (1850), and "Wizlâwes

IV., des Fürsten von Rügen, Lieder und Sprüche" (1852). He also published a valuable "Lexicon Anglo-Saxonicum" (1851), and an Anglo-Saxon chrestomathy, "Engla and Seaxna Scôpas and Bôceras" (1850). Of Norse literature he produced a German version of the "Vauluspa" (1830), of the "Songs of Edda" (1837), and of "Beowulf" (1840). He also produced several original poems, among them "Deutsche Stammkönige" (1844) and "Das verhängnissvolle Zahnweh, oder Karl der Grosse und der heilige Goar" (1852). He also published a valuable handbook of German literature (1847), and together with Lünig a Norse reader (1861).

FABER, PETER CHRISTIAN FREDERIK, a Danish poet, born October 7, 1810; died in the second week of May, 1877. Among his numerous poems, his patriotic song, "Den tappr Landsoldat," gained for him great popularity.

FENTSCH, EDUARD, a German poet, born in 1815; died February 12, 1877. He edited for a number of years the almanac *Cornelia*, for German ladies, and contributed to it every year a novel and a number of poems. In 1853 the King of Bavaria engaged him to compile a history of the memorable events of the kingdom. In 1870 he published two novels, "Aus der Tiefe" and "Non Possumus" (3 vols.), which were well received.

FERGUSSON, SIR WILLIAM, a Scotch surgeon, born March 20, 1808; died February 10, 1877. He was at first intended for the legal profession, but when 17 years of age he abandoned the study of law, and became a pupil of Robert Knox, and in two years became a licentiate of the College of Surgeons of Edinburgh, and took the fellowship in the following year. In 1836 he was elected Surgeon to the Royal Infirmary, and began to divide the surgical practice of Edinburgh with Mr. Syme. In 1840 he came to London, having been appointed Professor of Surgery at King's College. On the death of Mr. Key he was in 1849 made Surgeon in Ordinary to Prince Albert, Surgeon Extraordinary to the Queen in 1855, and Sergeant-Surgeon to the Queen in 1867, having been created a baronet in 1866.

FITZGERALD, SIR JOHN FORSTER, a British field-marshal, born about 1785; died March 26, 1877. He received his early education at Manchester and in Ireland, and obtained his first commission in the army in 1798, so that he had held a commission upward of 83 years. In the following year he was appointed to a captaincy in the 79th Foot, but he does not appear to have actually joined the army till the year 1801, when, at the age of 16, his name appeared as captain in the 46th Foot. He commanded a light battalion and also a brigade in the Peninsula. More recently he had served for some years on the staff at Bombay. He attained field-rank in 1830, was nominated a Knight-Commander of the Bath in 1831, and Knight Grand Cross in 1862. He was created a field-marshal in 1875. He had held a seat

in the House of Commons in one Parliament only, from 1852 to 1857, as one of the members for the county of Clare in the Liberal interest.

FOLTZ, PHILIPP VON, a German painter, born May 11, 1805; died August 5, 1877. Among his earlier paintings, the "Greek Nurses on the Battle-field" is well known. Having spent a few years in Rome, he decorated the bath-room of King Maximilian II. of Bavaria, and, with scenes from the tales of the Rhine, the Schönborn Palace. Among his latest works are "Frederick Barbarossa and Henry the Lion," "The Age of Pericles," and a "Woman with a Child."

FORD, REV. JAMES, a British clergyman and author, died at an advanced age on February 18, 1877. He graduated at Oriel College in 1818. During his earlier years, he published many sermons and tracts; but his chief work on religious subjects was "The Gospels Illustrated from Ancient and Modern Authors" (4 vols., 1848-'59). He also published similar volumes on the Acts of the Apostles and St. Paul's Epistle to the Romans, and translations of "The Quaresimale" (1865) of P. Paolo Segneri, of Dante's "Inferno" (1865), and of the "Divina Commedia" (1870).

FORDCOE, SIR JOHN, a British general, died at an advanced age in March, 1877. He obtained his commission as second-lieutenant in 1822, and served his entire life in India, taking part in almost all the important campaigns in that country. He received numerous decorations, and was nominated Knight-Commander of the Bath in 1873. He obtained the rank of major-general in 1861, and lieutenant-general in 1872.

FOURNIER, FÉLIX, a French bishop, born May 8, 1803; died June 9, 1877. In 1870 he was ordained Bishop of Nantes, and at the time of his death was in Rome with a company of pilgrims from Brittany.

FRANGLIEU, PASQUIER, Marquis de, a French Senator, born in 1810; died October 14, 1877. Born in the Pyrenees, he was trained up by Legitimist parents in the belief that the French Revolution was a great calamity, and through life was a devout believer in the divine right of the elder Bourbons to govern France. Elected from the Hautes-Pyrenées to the National Assembly in 1871, he soon became a marked man from the intensity of his devotion to the Legitimist cause, and his scathing denunciations of the Bonapartists and Orleanists, whom he detested even more than the partisans of the Republic. His vigorous sallies were always applauded by the Republicans, and on several occasions he said, "If the choice is only between the Republic and Empire, better a thousand times the Republic." On the adoption of the constitution in 1875, he was elected to the Senate, and in 1877 voted for the dissolution of the Chamber of Deputies. During the electoral struggle that ensued, however, he expressed his dissatisfaction with the conduct of the Bona-

partists in the strongest language, and was considered by many as likely to abandon the coalition of Bonapartists, Orleanists, and Legitimists, which supported the De-Broglie-Fourtau ministry.

FROST, WILLIAM EDWARD, a British painter, born in 1810; died June 7, 1877. He first devoted himself to portrait painting, producing upward of 300 portraits within 14 years. In 1839 he won the gold medal of the Academy with his "Prometheus Bound." Several of his paintings are in possession of the Queen. For Prince Albert he painted "The Disarming of Cupid." Among his many works one of the most prominent is "By the Waters of Babylon," painted in 1869.

FUNK, HEINRICH, a German landscape painter, born December 12, 1807; died November 22, 1877. He received his art education in the Academy of Düsseldorf, and in 1854 went to Stuttgart as professor of landscape painting in the art school in that city. His best works are scenes from the valley of the Inn in the Tyrol.

GERLACH, ERNST LUDWIG VON, a German politician, born March 7, 1795; died February 17, 1877, in consequence of injuries received by being run over by a coach. He was for many years the leader of the Conservatives in the Prussian Chambers, having been a member of either the Upper or Lower House from 1849 to 1858. In 1873 he was again elected a member of the Prussian Diet, and in January, 1877, of the German Reichstag. He was President of the Court of Appeals in Magdeburg from 1844 to 1874, when he resigned this position in consequence of being convicted of a press offense.

GLAIS-BIZOIN, ALEXANDRE, a French politician, born March 9, 1800; died November 7, 1877. He was a member of the Chamber under Louis Philippe, and of the Constituent Assembly in 1848. In 1863 he was elected to the Corps Législatif, but was defeated in 1869. In 1870 he was a member of the Government of National Defense. He was accused of embezzlement, was arrested by the Commune in May, 1871, and, after its overthrow, was arrested by the Versailles Government, but was immediately released. At the elections of February 8, 1871, for the National Assembly, he was a candidate in the Côtes-du-Nord, but withdrew shortly before the election. He was an unsuccessful candidate at a supplementary election, held in the same year in Paris, and after that retired to private life. He was a man of great wit and eccentricity, and was a favorite with the Chamber of Deputies. He wrote several theatrical pieces, but all of them were so ultra-republican in their tendencies that the censors of the Empire never allowed them to be brought out in France. He always produced them in Geneva, and went from Paris with troops of friends to see them. His experience as a member of the Government of National Defense he described in "La Dictature de Cinq Mois."

GOLDSCHMIDT, PAUL, a German Orientalist, born in December, 1850; died May 7, 1877.

He studied in the Universities of Heidelberg, Tübingen, Berlin, and Göttingen. His studies were interrupted by the war of 1870, in which he took part. At the close of the war he resumed his studies, devoting himself to Indian philology, and particularly to the study of Prâkrit. In 1873 he received an appointment to collect and publish the inscriptions of Ceylon. It was while engaged in this work that he was attacked by malaria, to which he finally succumbed. He published two reports on his labors in 1875 and 1876, which are full of interesting material.

GRASSMANN, HERMANN GÜNTHER, a German mathematician, born April 15, 1809; died September 26, 1877. He succeeded his father as Professor of Mathematics in the Gymnasium of Stettin, and gained with his "Ausdehnungslehre" (1844; 2d ed., 1862) a great reputation. He was also distinguished as an Orientalist, and published a dictionary of the "Rig-Veda" (1873-'75), and a complete German translation of the same.

GUSTAVUS, Prince of VASA, born November 9, 1799; died August 4, 1877. He was the only son of King Gustavus IV. Adolphus of Sweden, who, in 1809 was dethroned by his uncle, Duke Charles of Södermannland. The latter then ascended the throne as Charles XIII., and as he was old and without issue, he adopted, first, Prince Christian of Augustenburg, and upon the latter's death the French Marshal Bernadotte, who ruled Sweden as Charles XIV. John. Prince Gustavus entered the Austrian army, although he never resigned his claim to the Swedish throne. His daughter Carola is the present Queen of Saxony.

HACKETT, Sir WILLIAM, Chief Justice of Ceylon, born in 1824; died at Colombo, of cholera, in May, 1877. He was called to the bar at Lincoln's Inn, in 1851. In 1861 he was appointed Queen's Advocate on the Gold Coast, and was Acting Chief Justice from 1861 till confirmed in 1863. In the following year he was appointed Lieutenant-Governor of the Gold Coast. In 1866 he became Recorder of Prince of Wales's Island, in which year he was also knighted, and in 1871 was appointed Acting Chief Justice of the Straits settlements. In 1875 he became Chief Justice of Feejee, and member of the Legislative Council, and in 1876 Chief Justice of Ceylon.

HACKLÄNDER, FRIEDRICH WILHELM, a German novelist, born November 1, 1816; died July 5, 1877. After having devoted himself for a short time to commercial pursuits, and after having served in the army, he went to Stuttgart, when he published his "Das Soldatenleben im Frieden," which soon made his name popular. Among his best-known novels are "Europäisches Sklavenleben" (4 vols., 1854), "Künstlerroman" (5 vols., 1866), and "Der letzte Bombardier" (4 vols., 1870). In 1855 he established, with Hofer, the magazine *Hausblätter*, and in 1857, with Edmund Zoller, *Ueber Land und Meer*, which soon became

one of the most widely-circulated magazines in Germany.

HALLIDAY-DUFF, ANDREW, a British writer, born in 1830; died April 10, 1877. He was educated at Marischal College and University, Aberdeen. His education completed, he came to London, and devoted himself to literature. His first engagement was with the *Morning Chronicle*; he afterward wrote for the *Leader*, and his essays having attracted the notice of Thackeray, he was invited to write for the *Cornhill Magazine*. Since 1861, he contributed largely to *All the Year Round*, and many of his papers have been republished in a collected form. One paper from his pen, entitled "My Account with Her Majesty," explaining the working of the Post-Office Savings Bank, enjoyed a very wide circulation, and was reprinted by the Post-Office Department for the information and encouragement of depositors. Later on he devoted himself almost entirely to dramatic literature. Among his more recent productions of this class are a dramatized version of Scott's "Lady of the Lake" (1872); "Heart's Delight" (1873); a drama in four acts from "Dombey & Son;" "Richard Cœur de Lion" (1874), founded on Scott's "Talisman;" and "Nicholas Nickleby" (1875).

HAMILTON, Sir WILLIAM, born February 14, 1790; died February 14, 1877. He entered the navy in 1803, was a prisoner of war in France from 1805 to 1814, was appointed vice-consul at Flushing and Middleburg in 1817; at Antwerp, and afterward at Ostend, in 1818; at Newport in 1820; and at Boulogne in 1822. He was appointed consul there in 1826, and retired on a pension in 1873, and was knighted for his long official services the same year.

HAMMERICH, FREDERIK, a Danish theologian, born August 9, 1809; died February 9, 1811. Having completed his studies he traveled through Sweden and Germany, and having acted for some time as preacher, he was appointed Professor of Theology in the University of Copenhagen. He was the author of a number of historical works, among them: "Denmark in the Age of the Waldemars" (2 vols., 1847-'48), "Denmark at the Time of the Northern Union" (2 vols., 1849-'54), and "Denmark under Feudatory Rule" (1849), besides a number of sketches from the wars in Schleswig. Among his works on Church history, the most important are "St. Bridget and the Church in the North" (1863), and his "History of the Christian Church" (3 vols.; 2d ed., 1872-'73).

HANFSTÄNGL, FRANZ VON, a German lithographer and photographer, born March 1, 1804; died April 18, 1877. He came to Munich, where he completed his studies and in 1829 was appointed professor. He resigned this position four years later in order to open a lithographic establishment. In 1835 he received an order from the Saxon Government to lithograph the

finest paintings in the Dresden Gallery. This work, completed in 1852, comprised 190 large plates, all of which he engraved himself. In 1848 he turned his attention almost exclusively to galvanography, and in 1853 again changed, this time to photography. His productions in this branch soon gained him great fame, and at the exhibitions in Munich and Paris he obtained the first medals.

HANSEN, JENS ANDERSEN, a Danish Radical, born in 1807; died May 8, 1877. He was originally a working shoemaker, but by steadiness and hard work he gradually reached a most important position in the Lower House, where he was the head of the Radical party.

HEIS, EDUARD, a German astronomer, born February 18, 1806; died June 30, 1877. He studied in the University of Bonn, received an appointment in 1827 in the Gymnasium of Cologne, and in 1837 in that of Aix-la-Chapelle, and in 1852 was appointed Professor of Mathematics and Astronomy in the University of Münster, where he remained up to his death. He was the author of a large number of works, some of them going through many editions. Among them are "Die periodischen Sternschnuppen" (1849), and "Sammlung von Beispielen und Aufgaben aus der allgemeinen Arithmetik und Algebra" (47th ed., 1877). Together with Eschweiler he published "Lehrbuch der Geometrie" (vol. i., "Planimetrie," 6th ed., 1876; vol. ii., "Stereometrie," 3d ed., 1874; vol. iii., "Trigonometrie," 2d ed., 1875). Among his other works are "Neuer Himmels-atlas" (1875), and "Zodiakallicht-Beobachtungen in den letzten 29 Jahren, 1847-'75" (1875). From 1858 to 1875 he was the editor of *Wochenschrift für Astronomie*.

HERBECK, JOHANN, Ritter von, a German musical director and composer, born December 25, 1831; died October 28, 1877. After holding several positions as musical director, he was, in 1866, appointed musical director to the court in Vienna, from which position he retired in 1875 on account of his health. He composed numerous masses, symphonies, quartets, and songs, and one opera.

HEROULANO DE CARVALHO E ARAUJO, ALEXANDRO, a Portuguese scholar and historian, born in 1796 (according to "Meyer's Conversationslexicon;" according to Vapereau, "Dictionnaire des Contemporains," on March 28, 1810); died September 14, 1877. He studied in Paris, and having returned to his native country he joined the Liberal party and became the editor of the paper *Panorama*. In the poem "A Voz de Propheta" (The Voice of the Prophet) he painted the future of his country in sombre colors. This was followed by a collection of his earlier poems under the title of "The Harp of the Faithful." His novels "Eurich, the Priest of the Goths," and "The Monk of Cister," took a high place in Portuguese literature. The "Historia de Portugal" (4 vols., 1845-'52) was remarkable for its breadth of ideas, its purity of style, and its sharp criti-

cism. In 1841 he became a member of the Cortes, and was afterward appointed librarian to the King. Among his other works, the most important are: "History of the Origin and Establishment of the Inquisition in Portugal" (3 vols., 1854-'59), and "Studies on Civil Marriage" (1866).

HICKLIN, JOHN, a British writer and journalist, died January 13, 1877. He had been the editor of the *Nottingham Journal*, the *Chester Courant*, and other journals, and was the author of "Church and State," "Literary Recreations," and other works.

HILL, Mrs., a daughter of Robert Southey, born in 1808; died in April, 1877. It was this daughter to whom the poet often affectionately alluded in his correspondence as his "Little Bertha." She was married to her cousin, Rev. Herbert Hill.

HIRZEL, SALOMON, a German publisher, born February 13, 1804; died February 8, 1877. In 1830 he became one of the proprietors of the publishing house of Weidmann & Co., in Leipsic, but separated himself from it in 1853 in order to establish a business for himself, in which he was quite successful. He was considered to possess an intimate knowledge of the works of Goethe, as well as the most complete Goethe library. On the basis of this he published, in 1848, his "Verzeichniss einer Goethe-Bibliothek" (3d ed., 1874), which, although published for distribution among his friends only, is probably the most complete catalogue of the kind printed.

HOECK, KARL CHRISTIAN FRIEDRICH, a German scholar, born May 18, 1793; died January 10, 1877. He was Professor of Classical Philology and Ancient History in the University of Göttingen, and at the same time librarian-in-chief of the university library. He was the author of a work on Crete (3 vols., 1823-'29), and of a Roman history (1841-'50).

HOFFMANN, JOHANN CHRISTIAN CONRAD VON, a German theologian, born December 21, 1810; died December 20, 1877. He was connected with the University of Erlangen after 1834, with the exception of a short period from 1842 to 1845, when he was Professor of Theology in the University of Rostock. His most important works are: "Weissagung und Erfüllung" (2 vols., 1841-'44), "Der Schriftbeweis" (2d ed., 1857-'60), and "Die Heilige Schrift des Neuen Testaments, zusammenhängend untersucht" (7 vols., 1862-'75).

HOFMEISTER, WILHELM, a German botanist, born May 18, 1824; died January 12, 1877. He was originally intended for a commercial business, but in his leisure hours diligently studied natural sciences, paying particular attention to physiological botany. In 1863 he received a call as Professor of Botany to Heidelberg, and in 1872 to Göttingen. He was the author of "Die Entstehung des Embryo der Phanerogamen" (1849), and "Vergleichende Untersuchungen höherer Kryptogamen und der Koniferen" (1851), besides numerous contri-

butions to the *Journal* of the Saxon Society of Sciences, of which he had been a member since 1852. In 1865 he began with De Bary, Irmsch, and Sachs the publication of a "*Handbuch der physiologischen Botanik*," of which he wrote the first volume, entitled "*Lehre von der Pflanzenzelle*," and "*Allgemeine Morphologie der Gewächse*" (1867-'68).

HOENTHAL, Countess CAROLINE, born January 9, 1820; died February 27, 1877. She was united in morganatic marriage to the Elector William II. of Hesse, who died in 1847, and in 1851 married the Saxon Envoy Count Hoenthal.

HÜBNER, OTTO, a German statistician and political economist, born July 22, 1818; died February 5, 1877. He was originally intended for a commercial career, but in Paris and London, where he spent some time, he began to devote himself to the study of political economy, and since 1842 was one of the most active members of the German Free Trade party. Having been appointed agent of the Austrian Lloyd, he conducted the negotiations for the transportation of the Anglo-Indian overland mail. At the outbreak of the revolutionary movements of 1848, he was elected from Austria into the Committee of Fifty. In 1849 he was banished from Austria for his German sentiments. He then went to Berlin and established there the *Statistische Centralarchiv*, which received statistical information from all civilized governments. In 1862 he established in Berlin the *Preussische Hypothekenversicherungs-Gesellschaft*, which continued to prosper under his management. He was the author of numerous statistical works, among them a work on Banks (2 vols., 1854). The best known of his works, however, is his "*Statistische Tafel aller Länder*" (1851; 27th ed., 1877).

HUNT, GEORGE WARD, a British statesman, born July 30, 1825; died July 29, 1877. He was educated at Eton and Christ Church, Oxford, graduating B. A. in 1848, and receiving the degree of M. A. in 1851, and that of Honorary D. C. L. in 1870. He was admitted to the bar in 1851, and practised in the Oxford Circuit, relinquishing his practice, however, when he entered Parliament. His first attempt to reach a seat in the House of Commons was made in 1852, in the borough of Northampton, in the Conservative interest, and was unsuccessful, a result which also attended his second effort in 1857. In December, 1857, on the death of Augustus Stafford, he was returned for the northern division of the county of Northampton, and continued to represent that constituency up to his death. He was an exceedingly active business man in Parliament, and in 1866 became prominent in that body by introducing a bill for dealing with the cattle plague, which he pressed forward with indomitable energy, keeping pace with the progress made by the bill on the same subject introduced by the administration. On the accession of the Earl of

Derby to power, in 1866, Mr. Hunt was appointed Financial Secretary of the Treasury, and was Chancellor of the Exchequer from February to December, 1868. He was sworn a member of the Privy Council when he was appointed Chancellor of the Exchequer. When Mr. Disraeli formed his cabinet in 1874, Mr. Hunt was appointed First Lord of the Admiralty, which post he continued to fill up to the time of his death.

HYETT, WILLIAM HENRY, a British gentleman, born in 1792; died March 10, 1877. He was educated at Westminster and Christ Church. In 1832 he was elected to Parliament from Stroud, but resigned after two years, and for the rest of his life devoted himself to the public business of his own locality. In 1844 he conducted a series of experiments upon the changes which could be produced in growing trees by watering them with various chemical solutions, and he thus succeeded in obtaining wood of increased hardness and durability, and of many different colors. He also took a prominent part in the educational and philanthropic undertakings in his parish, by establishing schools, asylums, and infirmaries.

JACOBY, JOHANN, a German politician, born May 1, 1805; died March 6, 1877. He studied medicine in the Universities of Königsberg, Berlin, and Heidelberg, and in 1830 settled in Königsberg and began the practice of his profession. Up to 1840 he was prominent in local politics, wrote for the radical journals, and often came into conflict with the censorship. In 1841, Jacoby published anonymously a pamphlet which was read throughout Germany. He sent a copy to the King, avowing the authorship, and was promptly arrested and tried for high treason. He was convicted, but the sentence was set aside in a higher court. He immediately took up his pen again, and sent out a series of bold, trenchant, and effective pamphlets. These publications led to another prosecution, but he was again acquitted. In 1848 he began his political career, being elected at the same time to the Lower House of the Prussian National Assembly, and to the German Parliament at Frankfurt. As a member of the National Assembly he supported the popular cause. He was a member of a deputation which called on the King at Potsdam. They presented an address to the King, which he received in silence and turned to leave. Jacoby then stepped forward. "We are not come," said he, "simply to present this address, but also to render your majesty a report on the state of the country. Will you listen to us?" The King answering, "No," Jacoby turned to the deputies and said in loud, bold tones: "This is the misfortune of Kings; they are not willing to hear the truth." The dissolution of the National Assembly followed the conflict which this incident foreshadowed. Jacoby was subsequently one of the faithful little band who followed Dr. Loewe to Stuttgart, and there organized the "Rumpfparla-

ment." Being accused of high treason, he boldly returned from Switzerland, stood his trial at Königsberg, and was once more acquitted, despite the most strenuous efforts for his conviction. In 1863, having passed the intervening period in retirement, he entered the Lower House of the Prussian Legislature, and there vigorously resisted the measures of Bismarck. In 1870 he publicly denounced the annexation of Alsace and Lorraine, for which he was arrested without legal warrant and imprisoned for three weeks. In 1871 he declined an election to the German Reichstag. His collected writings and speeches appeared in two volumes in 1877.

JAMES, Sir HENRY, a British lieutenant-general, born in 1803; died June 15, 1877. He had been director of ordnance surveys of Great Britain and the topographical and statistical department of the War Office. He was knighted in 1860.

JEJEEBHoy, Sir JAMSETJEE, Bart., born October 9, 1811; died in July, 1877. He was the eldest son of Jamsetjee Jejeebhoy, a Parsee merchant of wealth and ability, and a great philanthropist, who was created a baronet in 1857. He succeeded to the baronetcy on his father's death in 1859, and the following year relinquished his original names, Carsetjee Jamsetjee, for those of his father, under a special act of the Council of India, authorizing all successors to the title to bear the names of the first baronet.

KAVANAGH, JULIA, a British authoress, born in 1824; died October 28, 1877. She began her literary career in 1844, when she wrote some novels for journals. In 1877 she began the publication of a series of novels, of which "Madeleine," a story of peasant life in France, was one of her earliest as well as best works.

KETTLER, WILHELM EMANUEL, Freiherr von, a German prelate, born December 25, 1811; died July 13, 1877. After having studied law, and been engaged in the civil service at Münster for several years, he devoted himself to the study of theology, and was ordained priest in 1844. In 1848 he was elected to the Frankfort Parliament, where he gained considerable celebrity by a speech delivered at the funeral of Prince Lichnowsky and Auerswald, who had been murdered by a mob on September 18, 1848. In 1850 he was appointed Bishop of Mentz. In this position he became known as one of the active Ultramontanes. He founded numerous institutions and religious orders and communities, and exerted himself for the protection of Roman Catholic interests in Germany. Aided by the Grand-Duchess of Hesse-Darmstadt, and the prime minister Dalwigk, he secured, in virtue of a secret convention of August 23, 1854, special prerogatives for his diocese. This convention was afterward abrogated, but Bishop Ketteler retained the privileges he had secured until after the overthrow of the Dalwigk cabinet in 1871. At the Vatican Council he was one of the bishops who op-

posed the promulgation of papal infallibility as inopportune, but he submitted immediately after the promulgation. In 1871 he was for a short time a member of the German Reichstag. Both as a writer and as a parliamentary speaker, Bishop Ketteler was looked upon as one of the most influential Catholic bishops of Germany.

KRUG, ANNA CHARLOTTE, a German authoress, born June 20, 1805; died May 3, 1877. She was a sister of the celebrated artist Julius Schnorr von Carolsfeld. Among her poetical works, "Anna und Lisbeth" (1853), and "Der Alpensee" (1858), are her largest as well as her best. Her novels appeared under the title of "Aus vergangenen Tagen."

LADOUÉ, THOMAS CASIMIR FRANÇOIS DE, a French prelate, born July 23, 1817; died July 23, 1877. He was appointed Bishop of Nevers in 1873, and during 1877 had obtained considerable celebrity by his pastoral letters, and his letter to President MacMahon, calling upon the latter to interfere in behalf of the Pope.

LANFREY, * PIERRE, a French Senator, born in 1828, died November 15, 1877. His historical works on the Popes and on Napoleon I. made his name well known, even during the Empire. He did not occupy an official position at that time, owing to his republican ideas, and even after the revolution of 1870 his personal relations with Gambetta, which were very bitter, prevented him from taking part in public affairs. In 1871 he was, however, elected to the National Assembly from Marseilles, and was soon after appointed by President Thiers ambassador to Switzerland, which position he resigned in 1873 upon the accession of President MacMahon. He then returned to the National Assembly, by which he was elected a life Senator in 1875, receiving 350 votes. In both the Assembly and the Senate he acted with the moderate Left.

LATOUR, ISIDORE, a French dramatic author, called after his native village *Latour de Saint-Ybars*, born about 1809; died in May, 1877. He was the author of a number of dramas, having for their subjects incidents from ancient history. Among them are: "Virginie" (1845), "Le Tribun de Palerme" (1842), "Le Syrien" (1847), and "Alexandre le Grand" (1868). He was also the author of a volume of poems entitled "Chants du Néophyte" (1837).

LAUZANNE DE VAUX-ROUSSEL, AUGUSTIN THÉODORE, Chevalier de, a French author of vaudevilles, born November 4, 1805, died in October, 1877. He began by writing a burlesque parody in verse of the drama "Hernani," entitled "Harnali, ou la Contrainte par Cor," which, owing to its sprightliness and humor, had a long and successful run. M. de Lauzanne became from that time the collaborator of M. Duvent, whose daughter he married. Numerous triumphs resulting from this literary partnership joined the names of these two writers in an inseparable manner. He was decorated

* See ANNUAL CYCLOPEDIA for 1875, page 320.

with the Legion of Honor in 1853. His principal plays were "M. Chapotard" (1831); "The Assassin" (1832); "La Filature" (1834); "M. and Madame Galochard" (1836); "The Housekeeper" (1839); "The Robber Chief" (1846); "The Poetry of Love" (1849); "The Prayer of Tantalus" (1850); and many others.

LEFFEVRE-DURUELÉ, NOËL JACQUES, a French manufacturer and politician, born February 19, 1792; died in the first week of November, 1877. In 1824 he established a cloth factory at Elbeuf, which soon became very extensive. Under Louis Philippe he was elected to the Chamber of Deputies, and in 1849 to the Legislative Assembly. After the *coup d'état*, in 1851, he was called by Napoleon to the consultative commission, and in January, 1852, became Minister of Agriculture, Commerce, and Public Works. In July of the same year he resigned this position, in order to take his seat in the Senate, to which he had been appointed. He was a grand officer of the Legion of Honor.

LEFRANC, PIERRE JOSEPH, a French Senator, born in 1815; died June 16, 1877. In 1848 he was elected a member of the Constituent and Legislative Assemblies, and voted constantly with the Republicans. After the *coup d'état* he retired to private life. In 1871 he was elected a Deputy and in 1876 a Senator for the Eastern Pyrenees.

LEHMANN PASHA, a Turkish general, born at Torgau, Germany, in 1821; was killed in the Shipka Pass in September, 1877. He went to Constantinople in 1851, entered the Turkish army as instructor, and during the Crimean War distinguished himself at the siege of Sebastopol. At the beginning of the present war he was in charge of the laboratory near Constantinople. When the Russians crossed the Balkans, he was put in command of the artillery under Rauf Pasha, which decided the battles of Yeni and Eski Sagra. He was then raised to the rank of a Pasha, and sent to the Shipka Pass, where he was killed.

LELEIOHOKU, WILLIAM PITT, heir-apparent to the throne of the Sandwich Islands, born January 10, 1855; died April 10, 1877. He was the brother of King Kalakaua, and as such heir-apparent to the throne.

LENNOX, LORD HENRY CHARLES GEORGE GORDON, born in 1821; died February 21, 1877. He was the second son of the 5th Duke of Richmond, and brother of the present duke. He had been *précis* writer to the late Earl of Aberdeen, when Secretary of State for Foreign Affairs, Secretary to the Admiralty from 1866 to 1868, M. P. for Shoreham from 1841 to 1846, and for Chichester from 1846 up to his death, and for some time a Lord of the Treasury. In 1874 he was appointed First Commissioner of Works and a Privy Councillor.

LEUCHTENBERG, SERGIUS, Duke of, Prince of Romanoffski, born December 20 (old style, 8), 1849; was killed on the Lom, October 24, 1877. He was the third son of Duke Maximilian of

Leuchtenberg and the Grand-Duchess Marie, the oldest daughter of the Emperor Nicholas of Russia. Like his brother Eugene he was attached to the lancers of the Russian Guard; and riding out along the Lom, during a reconnaissance, he was instantly killed by a Turkish bullet.

LEVERRIER, URBAIN JEAN JOSEPH, a French astronomer, born March 11, 1801; died September 23, 1877. Having studied in the Collège Louis le Grand and in the Polytechnic School in Paris, he was for a time engineer in the Tobacco Bureau, and then became a teacher in the Collège Stanislas, and in 1846 was elected to the astronomical section of the Academy of Sciences. At the instigation of Arago he had devoted himself to speculative astronomy, and had calculated the passage of Mercury in 1845 and the course of Faye's comet. He then began his investigations on the course of Uranus, and in 1846 came to the conclusion that the variations of this planet must be caused by a planet situated beyond it, and indicated the position where this planet could be found; and where it was found on September 23, 1846, by Galle. In 1849 he became a member of the Legislative Assembly, in 1852 Senator of the Empire, and in 1854 director of the observatory. He was also a member of the Superior Council of Public Instruction. In consequence of dissensions with his colleagues he was removed from his position as director of the observatory in 1870, but was reappointed in 1873. The planet which he discovered, Neptune, was called for a short time by his name. He continued his studies of the heavens to the last, devoting the latter years of his life principally to the subject of the four large planets.

LICHTENFELS, THADDÄUS FEITNER, Freiherr von, an Austrian jurist and politician, born May 6, 1798; died October 2, 1877. He studied law in the University of Vienna, was appointed in 1841 councillor in the highest court, in 1850 attorney-general, in 1853 chief of a section in the Ministry of Justice, in 1860 second president of the Supreme Court, and was pensioner in 1865. In 1866 he was appointed to the increased Reichsrath, and in 1861 president of the newly formed Council of State, from which position he retired in 1865. In 1861 he was created a life member of the Herrenhaus, where he distinguished himself as an orator. He was also a member of numerous committees, and was well known for his able reports to the House.

LINDSAY, J. WILLIAM SHAW, a British M. P., born in 1816; died August 28, 1877. He was in Parliament for Tynemouth from 1854 to 1859, and for Sunderland from 1859 to 1865. In 1842 he published "Our Navigation and Mercantile Marine Laws," and recently "A History of Mercantile Shipping."

LITBROW, KARL LUDWIG VON, an Austrian astronomer, born July 18, 1811; died November 16, 1877. In 1831 he became the assistant of his father Joseph Johann von Littrow, and

in 1842 succeeded him as director of the Vienna observatory. He furnished a new method of determining the longitude at sea, translated Airy's "History of Astronomy in the Beginning of the Nineteenth Century," and was the author of a "Popular Geometry."

LONGMAN, WILLIAM, a British publisher and author, died August 18, 1877, at an advanced age. He was the second son of the head of the celebrated publishing house of Longmans, Green, Reader & Dyer. This house was virtually established by Thomas Longman, who, in 1725, became a partner of John Osborn, a bookseller and stationer in Paternoster Row, London, the same site being occupied by his successors up to the present day. They published a number of the best productions of English literature. William Longman was also the author of numerous works, the principal of which are "The History of the Life and Times of Edward III.," and "Lectures on the History of England from the Earliest Times to the Death of King Edward II."

LUDWIG III., Grand-Duke of Hesse, born June 9, 1806; died June 12, 1877. On March 5, 1848, he was appointed coregent of the duchy, and was received with great enthusiasm, as he was considered an opponent to the clerical and absolutistic tendencies of those days. He succeeded to the throne on June 16, 1848, and in 1850 changed his policy completely, appointing a reactionary ministry. In 1866 he took part in the war against Prussia, and was saved only by his relationship to the Emperor of Russia, whose nephew he was, from being dethroned. He was married to Princess Mathilde, daughter of King Ludwig I. of Bavaria, who died in 1862. Dying without issue he is succeeded by his nephew Ludwig, his younger brother Charles having died a few months before him.

LUSHINGTON, SIR STEPHEN, a British admiral, born in 1803; died May 28, 1877. He entered the navy in 1816, was promoted to the rank of captain in 1829, was superintendent of the Indian navy in 1848-'52, served with distinction during the Crimean War, and commanded the naval brigade on shore at the capture of Sebastopol. From 1862 to 1865 he was Lieutenant-Governor of Greenwich Hospital. He obtained flag-rank in 1858, was promoted to vice-admiral in 1865, and in the same year was placed on the reserved list. In 1867 he was created a G. C. B.

MADOU, JEAN BAPTISTE, a Belgian painter, born in 1796; died April 3, 1877. His *genre* paintings have gained for him considerable reputation, both at home and abroad. He was the founder and president of the Belgian Association of Water-colors. Among his paintings are "The Wandering Musicians," "Much Ado about Nothing," and "The Feast at the Chateau."

MANSTEIN, GUSTAV VON, a German general, born August 24, 1805; died May 11, 1877. He entered the Prussian service in 1822, and ad-

vanced slowly, becoming major-general in 1859. In 1863 he was placed in command of the Sixth Infantry Division, and at the same time was created lieutenant-general. As such he took part in the campaigns against Denmark in 1863 and Austria in 1866, in both of which he greatly distinguished himself. In 1867 he was appointed to the command of the Ninth Army Corps, and in the following year was created a general of infantry. In the war with France in 1870 he also distinguished himself, and after the restoration of peace retained the command of the Ninth Corps, until, in 1872, he was pensioned, at his own request. He was decorated with numerous German and foreign orders.

MARIA, ex-Queen of Saxony, born January 27, 1805; died September 14, 1877. She was a daughter of King Maximilian I. Joseph of Bavaria, and in 1833 married King Frederick August II. of Saxony, who died August 9, 1854, without issue, and was therefore succeeded by his brother, the father of the present King.

MARIE LUISE ALEXANDRINE, Princess of Prussia, born February 3, 1808; died January 18, 1877. She was the daughter of the Grand-Duke Charles Frederick of Saxony, and a sister of the Empress Augusta. In 1827 she was married to Prince Charles, the brother of the Emperor William. She leaves three children, one son and two daughters. The former, Prince Frederick Charles, has established for himself a reputation as one of the ablest German generals.

MARTIN, NICOLAS, a French poet, born July 7, 1814; died in August, 1877. He wrote a number of poems for newspapers, which were collected under the title of "Les Harmonies de la Famille" (1837), which was followed by a collection of poems and songs, "Ariel" (1841), and a poem, "Louise" (1842). He also published "Les Poètes Contemporains de l'Allemagne," "Contes Allemands," imitations of Hebel and Simrock, and a translation of the "Family Tales" of the Grimm Brothers.

MAXWELL, LADY CAROLINE ELIZABETH SARAH, an English authoress, better known as Mrs. Norton, born in 1808; died June 15, 1877. From a very early age, she showed considerable taste for authorship, and produced the "Dandies' Rout," with illustrations from her own designs. She was married to the Hon. George C. Norton, a brother of Lord Grantley. This union did not prove a happy one, and Mr. Norton died in 1867, having long been separated from his wife. March 1, 1876, she was married to Sir William Stirling Maxwell. Her most widely known poem is "Bingen on the Rhine."

MELLISH, SIR GEORGE, born in 1814; died June 15, 1877. He was educated at Eton and University College, Oxford; was admitted to the bar at the Inner Temple in 1848; was appointed a Queen's counsel in 1861, and in 1877 was elevated to the bench as Lord Justice of

Appeal, and sworn a member of the Privy Council.

MICHELL, Dr., an English scholar, born in 1805; died March 29, 1877. His Oxford career commenced with a first class in 1824. He was Vice-Principal of Magdalen Hall for nearly 20 years, and, when Dr. McBride died, he succeeded him as principal. When the Hall was incorporated as Hertford College, he retained the principalship.

M'LEAN, Sir DONALD, a New Zealand statesman, born in 1819; died in January, 1877. In 1841 he received an appointment from Governor Fitzroy, and for 33 years continued in the public service. In 1869 he was appointed Minister of Native Affairs in the Fox-Vogel Ministry, and held this office until a few weeks before his death. In 1874 he was made a K. O. M. G. He was highly esteemed by the natives, conciliating and cultivating their confidence, and, in consequence, great reliance was placed in him both by the governors and the colonial governments.

MOLESWORTH, Rev. WILLIAM NASSAU, a British clergyman and writer, born November 8, 1816; died in April, 1877. He was educated at Canterbury and Cambridge; was for a time incumbent of St. Andrew's, Manchester, and in 1844 was appointed Vicar of Rochdale. He was the author of a "History of the Reform Bill of 1832" (1862), "A New System of Moral Philosophy" (1867), "Prize Essay on Education" (1867), and a "History of England from 1830" (3 vols., 1871-'74), which is his best-known work.

MONNIEE, HENRI, a French author and artist, born June 6, 1799; died January 3, 1877. He studied painting under Girodet, and soon gained considerable celebrity in delineating the middle and laboring classes of France. This he did in "Scènes Populaires" (1830), "Nouvelles Scènes Populaires" (4 vols., 1835-'39), and "Les Bourgeois de Paris" (1854), which he illustrated himself with exquisite caricatures. He also wrote, and personated the principal part in, "Grandeur et Décadence de M. Joseph Prudhomme" (1852), and "Roman chez la Portière," but he was unsuccessful as an actor.

MORESBY, Sir FAIRFAX, a British admiral, born in 1787; died January 21, 1877. He entered the navy in 1799, took part in the West Indian expedition of Lord Nelson against the united fleets of France and Spain in 1805, and was afterward employed in the Mediterranean, where he took an active part at the siege of Trieste. In 1821 he was appointed commander of Mauritius, and in 1837 to the command of the Mediterranean station. He was created a G. C. B. in 1865, and at the time of his death bore the title of Admiral of the Fleet.

MORIARTY, DAVID, Bishop of Kerry, born in 1810; died September 30, 1877. He was consecrated in April, 1854, and succeeded to the bishopric of Kerry in 1856. He was very popular both with Protestants and Catholics,

although for many years he was held in extreme popular disfavor for his denunciations of the leaders of Fenianism, of whom he said, on one occasion, that hell was not hot enough, nor eternity long enough, to give adequate punishment for the manner in which they had misled the people.

MORIER, DAVID, a British diplomatist, born in 1784; died July 13, 1877. He began his career in the East, in missions to Ali Pasha at Janina, to Mehemet Ali Pasha at Alexandria, and with Sir Stratford Canning at Constantinople. He was engaged under Lord Castlereagh in the negotiations in Paris and Vienna in 1814 and 1815, and, after filling the office of consul-general as long as it lasted, was for 20 years minister in Berne. He resigned in 1847, after which he lived quietly in England. He was a brother of James Morier, a well-known author.

MOSENTHAL, SAMUEL HERMANN, a German poet, born January 14, 1821; died February 17, 1877. He studied in the University of Marburg, and in 1851 received an appointment in the Ministry of Education, and was created a Royal Councillor. He was the author of the dramas "Deborah" (1850), "Cecilie von Albano" and "Der Sonnenwendhof" (1857), "Pietra" (1869), "Isabella Orsini" (1870), "Maryna" (1871), "Die Sirene" (1875), and many others. His collected poems appeared in 1866.

MUNSTER, WILLIAM FELIX, a member of Parliament, born in 1849; died April 11, 1877. In 1872 he was returned for Mallow, and kept his seat till the dissolution of February, 1874, when he retired. He was in the Southern Hotel, St. Louis, Mo., at the time of the fire, and was saved; but, having become separated from his wife, who was reported to have been burned, he shot himself. His wife was afterward found to be saved.

NÖGGERATH, JACOB, a German geologist, born October 10, 1788; died September 13, 1877. In 1814 he became commissioner of mines in the Ourthe department in France, and from 1816 to 1864 was employed by the Prussian Government in the mining service. In 1818 he was appointed Extraordinary and in 1870 Ordinary Professor of Mineralogy in the University of Bonn. This position he retained up to the time of his death. His writings on mineralogy, geology, earthquakes, landslips, etc., are to be found in all the mineralogical and geological journals since 1816. Among his larger works are: "Das Gebirge in Rheinland-Westphalen" (1821-'36, 3 vols.); "Die Entstehung der Erde" (1843); "Die Entstehung und Ausbildung der Erde" (1847); and the article on geology in "Die gesammten Naturwissenschaften" (3d ed., 1877).

NORTON, Mrs., see MAXWELL, Lady.

ODGER, GEORGE, an English workingman and agitator, born in 1820; died March 11, 1877. He was apprenticed to a shoemaker at an early age, and having afterward settled in London,

he there joined the Society of Cordwainers. He was connected with many movements to improve the condition of the workingmen, and gained particular celebrity as a member of the Reform League. During the American conflict he was a warm and earnest supporter of the North.

O'DWYER, ANDREW CAREW, an Irish politician, born in 1800; died November 15, 1877. He was called to the Irish bar in 1830. He soon became one of the leading political adherents of O'Connell, and from 1833 to 1835 was M. P. for Drogheda. He held at one time the office of Secondary of the Exchequer in Ireland, which was abolished shortly after his appointment.

O'LOGHLEN, Sir COLMAN, Bart., born September 20, 1819; died July 22, 1877. He was called to the Irish bar in 1840, and became Queen's Counsel in 1852, and Sergeant-at-Law in 1865. In 1868 he was appointed Judge-Advocate-General, but resigned in 1871. He sat in Parliament for the county Clare since 1863, a member of the Irish and subsequently of the Home-Rule party, and was instrumental in passing many useful bills affecting his native country, particularly with reference to its systems of judicature.

OXENFORD, JOHN, a British dramatic author, born in 1812; died in February, 1877. He published a number of pieces for the stage, as well as translations from the German and French. About five years before his death he visited the United States, and wrote a series of interesting letters on the theatres of New York City. His translation of the "Marseillaise" during the German-French War was deemed a masterly production. He was also widely known as the dramatic critic of the London *Times*.

PARISEL, Dr. FRANÇOIS, a French Communist, born in 1840; died in Newark, N. J., July 6, 1877. After having graduated from the Medical School in Paris with high honors, he settled as a physician in Paris. During the war with Germany he was appointed surgeon-in-chief to one of the infantry regiments. When the Communists began to reign in Paris, he was appointed Minister of Commerce, with instructions to make arrangements for the provisioning of the city, then besieged by the Versailles, and to protect its mercantile interests. This position was not congenial to him, and after holding it for a short time he was superseded at his own request by Viard. He was soon after appointed Chief of the Scientific Bureau, having in charge the preparation of the munitions of war. He also gave a great deal of attention to the balloon department, these constructions being used to disseminate the proclamations of the Commune and explain its objects. When Paris was captured by the Government troops, he escaped in the disguise of a priest. After living for a time in Liverpool, he came to New York, where he remained about a year, and having helped to organize the Society of the Refugees of the

Commune, he established himself as a physician at Newark. He was buried by the members of the French Commune in New York, and his remains were covered by the red flag.

PARLATORE, FILIPPO, an Italian naturalist, born in 1816; died September 9, 1877. The Grand-Duke Leopold II. appointed him Professor of Botany in the University of Florence, and in 1851 sent him on a scientific expedition to the north of Europe, from which he brought back valuable collections. His most important work was the "Flora Italiana," which, however, he was not able to finish.

PASSERINI, LUIGI, an Italian writer, born October 31, 1816; died January 3, 1877. He was the author of a large number of works, treating of the history and monuments of Florence, and of genealogical works. Among them are a "History of the Charitable Institutions and the Primary Schools of Florence" (1853), "Historical and Artistical Curiosities of Florence" (2 vols., 1866-'75), and an illustrated "Description of the Arms of Tuscan Communities" (1861). He also contributed largely to the *Archivio Storico*.

PETRELLA, ENRICO, an Italian composer, born in December, 1813; died in April, 1877. He received his musical education at the Naples Conservatory, where, at the age of 17, he composed the operette entitled "Il Diavolo Color di Rosa." After this he composed several operas of a light character, including "Le Precauzioni," "Elena di Tolosa," and "Marco Visconti."

PICARD, LOUIS JOSEPH ERNEST, a French Senator, born December 24, 1821; died May 13, 1877. He was received as an advocate in 1844, began practice at the Paris bar under the auspices of M. Lionville, whose daughter he afterward married. In 1858 he was elected to the Corps Législatif, and very soon took an active part in the discussions of important measures. In the session of 1860, he was one of the deputies known by the name of "The Five," and attracted the attention of the Chamber by the keen satire that pervaded his speeches. He was reelected in 1863 and 1869. In 1870 he was Minister of Finance under the Government of National Defense, and afterward became a member of the National Assembly. Under M. Thiers's administration he was first Minister of the Interior, and then ambassador to Brussels. In 1875 he was elected a Life Senator by the National Assembly, the sixteenth, by 348 votes.

PICHOT, AMÉDÉE, a French author, born in 1796; died in February, 1877. He resided for a time in Great Britain, and in 1843 succeeded M. Galibert as editor of the *Revue Britannique*, to which he contributed several articles. He translated part of Macaulay's "History of England," and Thackeray's "Great Hoggarty Diamond" and "Snob Papers." Among the works he wrote or compiled are "Voyage en Angleterre et en Écosse" (3 vols., 1825), "Les

Beautés de Lord Byron," and the "Galerie des Personnages de Shakespeare."

PISTORIUS, HERMANN ALEXANDER, a German poet and clergyman, born in 1811; died in May, 1877. He gained great celebrity in 1870 by his "Kutsche-Lied," which was translated into almost all modern languages. He received a golden medal from the Grand-Duke of Mecklenburg-Schwerin, and another from the Germans of Chicago, as the author of the most popular war poem.

POGGENDORFF, JOHANN CHRISTIAN, a German scientist, born December 29, 1796; died January 24, 1877. He studied chemistry and natural philosophy in Berlin, and devoted himself particularly to galvanism. In the course of his researches he invented the magnetometer, so called by Gauss. He was Professor of Natural Philosophy in the University of Berlin from 1834 up to his death, and from 1824 to 1874 was the editor of the *Annalen der Physik und Chemie*. He was also the author of a large number of valuable works.

POLDING, JOHN BEEDE, Roman Catholic Archbishop of Sydney, died March 16, 1877. He was consecrated in 1834 as Vicar Apostolic of New South Wales and Van Diemen's Land, and was nominated to Sydney in 1842.

POWYS, HORATIO, an English bishop, born in 1805; died May 31, 1877. He was the third son of the second Lord Lilford, and was educated at St. John's College, Cambridge. He was Rector of Warrington from 1831 to 1854, was in 1854 consecrated Bishop of Sodor and Man, and resigned that see a few months before his death.

PÜTZ, WILHELM, a German writer of school-books, born in 1806; died June 4, 1877. He was the author of a large number of historical, geographical, and literary handbooks for schools, many of which have been translated into almost all the modern languages. The best known among them are "Grundriss der Geographie und Geschichte der alten, neuen und mittleren Zeit" (15th ed., 1877), "Lehrbuch der vergleichenden Erdkunde" (10th ed., 1877), and "Leitfaden bei dem Unterrichte in der vergleichenden Erdbeschreibung" (16th ed., 1877).

REICHLIN-MELDEGG, KARL ALEXANDER, Freiherr von, a German scholar, born February 22, 1801; died February 15, 1877. He studied in the University of Freiburg, was ordained as priest in 1822, and in 1825 received an appointment in the University of Freiburg. In consequence of his teachings he soon came in conflict with the Church, and in 1832 left the Catholic Church. In the same year he was appointed Professor of Philosophy in Heidelberg, where he remained up to his death. Among his best known works is his "Geschichte des Christenthums."

REINHART, KARL AUGUST, a German painter and author, born April 25, 1818; died August 11, 1877. He devoted himself at first to landscape painting, but afterward turned his at-

tention to caricatures, and furnished a large number of excellent ones to the leading humorous papers of Germany. He was the author of the novel "Der fünfte Mai" (4 vols., 1869), and a number of humorous tales published under the title of "Dintenklexe" (2 vols., 1869). In 1874 he established the humorous paper *Der Calculator an der Elbe*.

ROBERTSON, JAMES BURTON, a British scholar, born November 15, 1800; died in February, 1877. He was educated in the Catholic College of St. Edmund, near Ware, which he quitted in 1819, and afterward visited France and Germany. In 1855 he was appointed to the chair of Modern History at the Catholic University of Dublin, to which was afterward added that of English Literature. He was the author of "Lectures on Various Subjects of Ancient and Modern History" (1858); "Lectures on Spain in the 18th Century; on the Life, Writings, and Times of Chateaubriand; and on the Freemasons, Illuminati, Jacobins, and Socialists" (1864); and "Lectures on the Life, Writings, and Times of Edmund Burke" (1868). He also translated a number of works from the German, of which that of Schlegel's "Philosophy of History" (1835) was very successful.

ROGERS, HENRY, a British scholar, born in 1806; died August 20, 1877. He was educated at Highbury College, was for a few years pastor of an independent congregation, afterward became Professor of English Language and Literature in University College, London, and in 1858 was appointed principal of the Lancashire Independent College. He contributed a large number of articles to the *Edinburgh Review* and to the "Encyclopædia Britannica."

ROUS, HENRY JOHN, a British admiral and sportsman, born in January, 1795; died June 21, 1877. He entered the navy in 1808, and distinguished himself on various occasions by his bravery and gallantry. In 1841 he was elected to Parliament from Westminster, and was rejected in 1846. Notwithstanding his defeat, Sir Robert Peel appointed him a Lord of the Admiralty. As a sportsman he was well known throughout England. He had been steward of the Jockey Club almost uninterruptedly since 1838, and as such he was almost supreme as an authority on the turf; and his work on "The Laws and Practice of Horse Racing" procured for him the title of the "Blackstone of the Turf."

RUNEBERG, JOHAN LUDVIG, a Finnish poet and scholar, born February 5, 1804; died May 6, 1877. He graduated from the University of Åbo in 1827, and in 1830 was appointed tutor of Roman literature in the new University of Helsingfors. In 1831 his poem "Grafven i Perrho" gained the second prize of the Swedish Academy. In 1832 he published an idyl, "Elgskytterne" (The Elk Hunters), which is considered one of his finest and most spirited writings. In 1837 he was appointed to the chair of Classical Literature in the College of

Borga, and from 1847 to 1850 was rector of the college. Besides a number of fine lyric poems and epics published after this period, he wrote the "*Fänrik Ståls Sägner*" (1st series, 1848; 2d series, 1860), in which he described the heroism and sorrows of his people at the time of the war between Sweden and Russia, which ended in the cession of Finland, and which are considered the finest lyrics in the Swedish language.

SANDBORN, JOHN SEWELL, a Canadian judge, born in Gilmanton, N. H., January 1, 1819; died July 18, 1877. Having graduated from Dartmouth College in 1845, he went to Canada, and in 1847 was admitted to the bar in Montreal. In 1850 he was elected to Parliament for Sherbrooke County, and was reelected in 1852 and 1854. He was subsequently elected from Compton County, and remained a member until 1857. In 1863 he was elected to represent the Division of Wellington in the Legislative Council, and served until the Confederation. He was then appointed a Dominion Senator, and held the office until 1873, when he was elevated to the Bench as Judge of the Superior Court at Sherbrooke, by the Sir John A. Macdonald administration, to which he was opposed politically. In 1874 he was elevated to the Queen's Bench. In politics he was a Liberal, but always moderate in his views. In 1863 he was made a Queen's Councillor.

SANFORD, JOHN LANGTON, a British historian, born in 1824; died July 27, 1877. Though incapable of sustained labor, weakened by a latent heart disease, which ultimately carried him off, and for the later years of his life irremediably blind, his work was considered, by many, of the highest order. His book on the Commonwealth is regarded by critics as a standard work, while his "*Characteristics of English Kings*" called forth warm commendations from men like Mr. Freeman and Prof. Stubbs.

SANSAS, PIERRE, a French Radical, born in 1803; died January 6, 1877. He was one of the *vieilles barbes*, the Democrats of 1848, and was banished after the *coup d'état*. He went to Spain, but returned after a short time and was then transported to Algeria. The Government of September 4, 1870, appointed him attorney-general for Bordeaux, from which post he was, however, removed by Thiers. He was elected a member of the National Assembly and afterward of the Chamber of Deputies for the Gironde, in both of which bodies he acted with the small number of *Intransigentes* led by Louis Blanc.

SANTINI, GIOVANNI, an Italian astronomer, born June 30, 1786; died June 28, 1877. He graduated from the University of Pisa, was appointed professor in 1824, and rector of the University of Padua in 1825. His principal works are "*Decimal Arithmetic*" (1808), "*Elements of Astronomy*" (1820), "*Logarithms and Trigonometry*," and "*Optical Problems*" (1821-'23).

SCHERR, GREGOR VON, a German Catholic prelate, born June 22, 1804; died October 24, 1877. He was ordained a priest in 1824, and in 1856 was created Archbishop of Munich. He was loved and respected by all for his noble character and his goodness of heart. In the Ecumenical Council of 1870, he opposed the declaration of the dogma of papal infallibility.

SCHMID, THEODOR, a German philologist and teacher, born December 10, 1798; died January 12, 1877. He possessed an intimate knowledge of the works of Horace, and published an edition of the epistles of this poet in two parts (1828-'30). He was a contributor to a number of pedagogical journals.

SCIALOJA, ANTONIO, an Italian statesman and political economist, born in 1817; died October 18, 1877. He was admitted to the bar in Naples, in 1845, was successively Minister of Agriculture, Commerce, and of Ecclesiastical Affairs, in the kingdom of Naples in 1848, after which he was elected deputy and continued to serve until the dissolution of the Chamber in 1849. He then reentered his profession, and, becoming implicated in the insurrection of 1849, he was banished from Naples. He then went to Turin, and was elected a deputy to the National Parliament from the province of Casale in 1859. In 1860 he was recalled to Naples as Minister of Finance, and in 1862 was sent to Paris to negotiate a new treaty of commerce between France and Italy. In 1865 he became Minister of Finance in La Marmora's cabinet. In this position he resorted to various extraordinary measures to provide for the expenses, and was succeeded in 1867 by Signor Cambray-Digny. He was the author of several works on political economy.

SFORZA, SISTO RIARIO, an Italian cardinal, born December 5, 1810; died September 29, 1877. He was admitted by Pope Gregory XVI. among his chamberlains, was consecrated Bishop of Aversa in 1845, and in 1846 was created Archbishop of Naples and cardinal. He was distinguished for his piety and goodness of heart, and was truly beloved by the people of Naples. As an instance of his charity it is related that when, during the reign Ferdinand II., Naples was visited by the cholera, and when all who could leave the city had gone to Gaeta, the archbishop alone remained. He sold his horses and his carriage and almost everything belonging to himself, and with the proceeds aided the poor. Soon, however, this source failed him, and the archbishop requested the king by letter to go security for him at the bank of Naples for a note of 60,000 ducats. The king, who disliked the archbishop on account of his popularity, flatly refused. The latter then applied to the Baron Rothschild, then residing at Naples, who instantly indorsed his note for 100,000 francs. In the course of a year the archbishop paid his debt.

SIMON, MARIE, a German philanthropist, born in 1824; died February 21, 1877. In the wars of 1866 and 1870, she labored unceas-

ingly for the care of the wounded soldiers, both friends and foes, and gained among the soldiers the *sobriquet* of Mother Simon. She laid down her experiences in "Erfahrungen auf dem Gebiete der freiwilligen Krankenpflege im deutsch-französischen Kriege," and "Die Krankenpflege."

SLADE, Sir ADOLPHUS, a British admiral, born in 1803; died November 13, 1877. He entered the navy in 1815, passed his examination in 1822, and obtained his commission as lieutenant in 1827. He traveled extensively in Turkey and Russia during the campaign of 1828-'29, and wrote an account called "Records of Travels in Turkey," which has gone through three editions. In 1834 he was appointed additional lieutenant to the flag-ship *Caledonia* in the Mediterranean, and for the next three years, with his knowledge of Turkish, was employed in confidential diplomatic missions. In 1841 he was promoted to the rank of commander, and in 1846 was appointed to take the first iron ship in the navy, the *Recruit*, on an experimental cruise. In 1846 he attained post rank, and shortly afterward was selected by the Foreign Office to proceed to Turkey, when a breach seemed imminent between that country and Austria, on account of the Hungarian refugees. Shortly afterward he was "lent" to the Porte by the British Government for the purpose of reorganizing the Turkish navy, in which labor he was engaged 20 years, including the Crimean War. He thus laid the foundation of the present Turkish fleet. He rose to the rank of admiral in the Turkish navy, and received the title of Muchaver or Consulting Pasha. He was appointed rear-admiral in the British navy in 1866, when he quitted the Turkish service, and was placed on the list of retired vice-admirals in 1873. He was the author of "Turkey and the Crimean War," and was decorated with many British and foreign medals.

SMEE, ALFRED, a British surgeon, born in 1818; died in January, 1877. He possessed a thorough knowledge of electricity, and invented a galvanic battery which bears his name. He was surgeon of the Bank of England, and devised the paper on which the bank notes are printed at present. He was the author of "Electro-Metallurgy," "Sources of Physical Science" (1843), "Electro-Biology," "The Potato-Plant, its Uses and Properties" (1846), "The Principles of the Human Mind" (1849), and other works.

SMIRKE, SYDNEY, a British architect, born in the beginning of the present century; died December 11, 1877. He gained great reputation in his profession, winning the gold medal of the Royal Academy in 1819. He was employed on various club-houses and churches in London, partly alone, and partly with his brother, Sir Robert Smirke. Among his best works are the Carlton Club, and the restoration of Temple Church, the Lichfield Cathedral, and the York Minster. In 1847 he succeeded his

brother as architect of the British Museum, was elected Associate of the Royal Academy in 1848, a full member in 1860, Professor of Architecture in the Academy in 1861, and Treasurer in 1862. He was Trustee of the Royal Academy and of the Soane Museum, and had been a Fellow of the Royal Institute of British Architects for many years.

SMITH, Lady PLEASANCE, born May 11, 1773; died February 3, 1877. In 1796, she was married to Sir James Smith, the founder of the Linnean Society, who died in 1828. She was cherished by all who knew her for her charity, kindness of heart, and intelligence.

SOPHIA, Queen of the Netherlands, born June 17, 1818; died June 3, 1877. She was the daughter of King William I. of Würtemberg and his second wife, the Grand-Duchess Catherine of Russia. She was married to the Prince of Orange, who succeeded his father in 1849, and by whom she left two sons. She was one of the most learned and best educated women that ever occupied a throne, and was throughout her lifetime the warm friend and protectress of John Lothrop Motley, who died before her but a few days. She was also a true friend and sympathizer of Napoleon III.

SOUST DE BORCKENFELD, ADOLPHE VAN, a Belgian poet, died April 23, 1877. He was one of the most prominent champions of the Flemish movement. In 1871 he published "*Année Sanglante*," a poetic glorification of the German victories.

STEINMETZ, KARL FRIEDRICH VON, a German field-marshal, born in 1796; died August 4, 1877. He commenced his military career in 1812 in the wars against Napoleon. In 1848, at the outbreak of the revolution, he was in command of one of the regiments of the Royal Guard stationed at Berlin, and greatly distinguished himself in the struggle with the populace. At the close of the same year he commanded a regiment in the war against Denmark. Although it was his earnest desire to participate in the campaign of 1864, he was ordered elsewhere, and remained inactive. In the Austro-Prussian campaign of 1866 he commanded the Fifth Prussian Corps, and defeated three different Austrian corps in the space of four days, from June 25th to 29th, at Nachod, Skalitz, and Schweinschaedel. On the outbreak of the war with France he commanded the first army sent to operate in the neighborhood of Metz against Marshal Bazaine. During the progress of the siege his position was rendered very uncomfortable through various causes, and he finally asked to be relieved from his command. The Emperor acceded to his demand, and appointed him on September 12, 1870, Governor-General of Posen. From that period to his death he lived in comparative retirement.

STEVEY, GUSTAV, a German artist, born in 1823; died March 18, 1877. He studied in the academies of Berlin and Paris, and after short residences in various cities, he finally settled in

Düsseldorf. He excelled in portrait and historical painting, but chiefly in church decorations.

ST. GERMAN, EDWARD GRANVILLE ELIOT, Earl of, a British statesman, born August 29, 1798; died October 7, 1877. He was educated at Westminster, and at Christ Church, Oxford. Prior to his accession to the peerage on January 19, 1845, he sat in Parliament for Liskeard from 1824 to 1832, and for East Cornwall from 1837 to 1845. He was Secretary of Legation at Madrid from 1824 to 1833, and a Lord of the Treasury from 1827 to 1832. In 1835, being then Lord Eliot, he went as envoy to Spain, and concluded the famous Eliot Convention. In 1841 he was made Chief Secretary for Ireland, and in 1845 Postmaster-General. From December, 1852, to March, 1855, he was Lord-Lieutenant of Ireland; and twice—1857 to 1858, and 1859 to 1866—Lord Steward of the Household. His administration of Ireland was characterized by fairness and ability, and gained for him the esteem of all parties. He is succeeded by his son, William Gordon Cornwallis, born in 1829.

STRANDBERG, C. W. A., a Swedish poet, born in 1818; died February 5, 1877. His first volume of poems, entitled "*Sångar i Pansar*" (1845), was mostly of a political character. A second volume, which appeared some time after, also contained mostly patriotic poems. He also furnished a number of excellent translations of foreign poems, among which that of Byron's "*Don Juan*" is considered the best.

SWINHOE, ROBERT, a British naturalist, born in 1836; died October 28, 1877. He was educated at King's College, and in 1854 received an appointment in the British Consular Service in China. While in China, he was actively engaged in exploring the zoölogy of the country. His first essay was "*Notes on the Fauna of the Amoy*;" and since then he contributed uninterruptedly to various journals. He had commenced a complete work on the ornithology of China, but was interrupted in its preparation by death. He was a Fellow of the Royal and a number of other societies.

TALBOT, WILLIAM HENRY FOX, a British author, born February 11, 1800; died September 21, 1877. He was educated at Harrow and Cambridge, and represented Chippenham in the Liberal interest in the first Reform Parliament. In his "*Pencil of Nature*" (6 parts, 1844-'46) he related the steps by which he was led to the discovery of the photographic art, for which he received, in 1842, the medal of the Royal Society. Of late years he devoted himself to the task of deciphering cuneiform inscriptions. Among his principal works are "*Illustrations of the Antiquity of the Book of Genesis*" (1839) and "*English Etymologies*" (1846).

THOLUCK, FRIEDRICH AUGUST GOTTFRED, one of the foremost theologians in Protestant Germany, born in Breslau, March 30, 1799; died June 10, 1877. He became in 1820 Privat-

docent and in 1824 extraordinary Professor of the Theological Faculty of Berlin; but his great influence upon the Protestant theology of Germany began with his appointment as ordinary Professor of Theology at the University of Halle. As it was known that he was appointed to this position for the special purpose of attacking and repressing the "Old Rationalism," which had its chief seat in Halle, all the professors of the theological faculty signed a petition to the Government, praying for the repeal of the appointment, as it was sure to disturb the peace of the faculty. It was, however, not repealed, and the theological school of which Tholuck was one of the chief representatives continued to enjoy exclusively for many years the patronage of the Prussian Government. Tholuck saw, in the course of time, the ascendancy of his views at Halle, as well as in many other theological faculties, and in many church boards. As Tholuck's religious system was to be those of the Moravians and the Pietists, based on a religion of the heart rather than on strict orthodoxy, he could not reconcile himself with the new school of Lutheran orthodoxy which of late has regained great influence in Germany; and he deeply regretted that it was joined by large numbers of his pupils. The principal works of Tholuck have been translated into the languages of all Protestant nations, and into French, and have found a large circulation. His lectures at the university were discontinued many years before his death.

TITIENS, THERESA, a celebrated operatic singer, born at Hamburg in 1834; died at London, October 3, 1877. She made her first appearance on the operatic stage at Hamburg, in 1849, in the character of *Lucrezia Borgia*, in Donizetti's opera of that name. She afterward appeared with great success at Frankfort and Vienna, and made her *début* in England as *Valentine*, in "*Les Huguenots*," at Her Majesty's Theatre, in 1858. From that time up to her death, she was the most popular *prima donna* on the English stage. In 1875 she made a brilliant tour of the United States. In 1876 her health began to fail her, and she was compelled to retire from the stage. Among her different rôles, her *Norma*, *Donna Anna*, *Semiramide*, *Lucrezia*, *Valentine* and *Agatha* were declared by many to be unrivaled.

TOBLER, TITUS, a Swiss Orientalist, born June 25, 1806; died January 21, 1877. He studied medicine, and afterward settled in his native town, where he soon obtained an extensive practice. His "*Appenzellischer Sprachschatz*" (1837) is considered one of the best contributions to the study of Swiss dialects. He made three journeys to Palestine, on which he published a considerable number of works. Among them are "*Lustreise in's Morgenland*" (1839), "*Plan von Jerusalem*" (1839), "*Bethlehem*" (1849), "*Golgotha*" (1851), "*Die Siloahquelle und der Oelberg*" (1852), "*Denksblätter aus Jerusalem*" (1852), and his princi-

pal work, "*Die Topographie von Jerusalem und seinen Umgebungen*" (1858-'54).

TREVISANATO, JOSEPH, an Italian cardinal, born February 15, 1801; died April 28, 1877. He was ordained a priest in 1824, and was for seven years Professor of Exegesis in the Patriarchal Seminary. He became Bishop of Verona in March, 1854; Archbishop of Udine in September, 1852; Patriarch in 1862, and Cardinal of Venice in 1863. In 1854, the Emperor Francis Joseph conferred on him the Order of the Iron Cross, and created him a Privy Councillor. He was also Primate of Dalmatia, Metropolitan of Venice, and Abbot of St. Cypres, all honorary titles.

TSCHABUSCHNIGG, ADOLF, Ritter von, an Austrian politician and poet, born July 9, 1809; died November 1, 1877. In 1861 he was elected to the Austrian Chamber of Deputies by the Diet of Carinthia, and remained a member of that body until 1870. In the Ministry under Count Potozki, he was Minister of Justice, but resigned in 1871, together with the rest of the Ministry. In 1870 he was created a member of the Herrenhaus. His collected poems appeared in 1833 (3d ed., 1864). He also published a number of humorous and other novels.

VOIGTS-RHETZ, CONSTANTIN BERNHARD VON, a German general, born July 16, 1809; died April 14, 1877. He entered the Prussian army in 1827, was appointed to the general staff with the rank of captain in 1841, became chief of the staff of the Fifth Army Corps in 1852, and in 1858 commander of the Ninth Infantry Brigade. In 1859 he was appointed director of the general war department in the Ministry of War, and as such took an active part in the reorganization of the Prussian army. In 1860 he was appointed commander of the Federal fortress of Luxemburg, and in 1864 of Frankfort. In the Austrian war of 1866 he was chief of the general staff of the First Army Corps, and in the war of 1870 was in command of the Tenth Army Corps, in both of which positions he distinguished himself considerably.

VOLKMANN, ALFRED WILHELM, a German physiologist, born July 1, 1801; died April 21, 1877. After having studied medicine and the natural sciences in the University of Leipzig from 1821 to 1826, he spent some years in London, and returned to Leipzig in 1828, receiving an appointment as extraordinary professor in the university in 1834. In 1837 he received a call to the University of Dorpat, but a quarrel with the Russian Government caused him to resign, and in 1843 he went to the University of Halle as Professor of Physiology, to which was afterward added the chair of Anatomy. The best known of his works are: "*Neue Beiträge zur Physiologie des Gesichtssinnes*" (1836), and "*Physiologische Untersuchungen im Gebiete der Optik*" (1863-'64). He also contributed a large number of articles to Poggen-dorff's *Annalen*, Wagner's "*Physiologisches Wörterbuch*," and Müller's *Archiv für Physiologie*.

WACKENAGEL, PHILIPP, a German scholar,

born in 1800; died June 20, 1877. He was principally known by his work "*Das deutsche Kirchenlied von der ältesten Zeit bis zu Anfang des XVII. Jahrhunderts*" (4 vols., 1864-'74).

WAHALA, AUGUSTIN, a Roman Catholic bishop, born January 23, 1802; died September 10, 1877. He was appointed Bishop of Leitmeritz in Bohemia in 1866. He took a prominent part in the political struggles of Bohemia, being one of the most ardent Czechs.

WARREN, SAMUEL, a British author and jurist, born May 23, 1807; died July 31, 1877. He was educated at the University of Edinburgh, was called to the bar at the Inner Temple in 1831, and was made a Queen's Counsel in 1851. In the following year he became Recorder of Hull, which position he filled until 1874, when he resigned. In 1856 he was elected to Parliament for Midhurst; but being appointed in 1859 Master in Lunacy, he resigned his seat. He wrote a number of novels, of which "*Ten Thousand a Year*" was considered by far the best. He also wrote a number of legal works.

WEEKES, HENRY, a British sculptor, born in 1807; died May, 1877. He was a pupil of William Behnes and Sir Francis Chantrey, to whose studio, in Pimlico, he succeeded. While still a student he was a constant exhibitor at the Royal Academy, and in 1837 he completed the first bust of Queen Victoria made after her coronation. Among his works are the statues of Cranmer, Latimer, and Ridley, executed for the "Martyrs' Memorial" at Oxford; of Dr. Goodall, at Eton; of the Marquis Wellesley in the India House; of Lord Bacon, at Trinity College, Cambridge; of Lord Auckland for Calcutta; and of Sir E. Barnes for Ceylon. Among his later works are busts of Lord Truro, Dean Buckland, and the Duke of Marlborough, and statues of John Hunter, Harvey, one of the groups in the Albert Memorial, and of Charles II. for the House of Lords. In 1850 he exhibited "*The Suppliant*," and in 1852 "*A Shepherd*." In the latter year he was awarded the medal offered by the Society of Arts, for the best treatise on the fine art section of the Great Exhibition of 1851. He was elected A. R. A. in 1850, R. A. M. in 1864, and Professor of Sculpture in the Royal Academy in 1873.

WEISKE, JULIUS, a German jurist, born in 1801; died March 10, 1877. He was Professor of Law in the University of Leipzig, and was the author of a number of valuable works, among them a "*Law Dictionary*" ("*Rechtslexikon*").

WILDERMUTH, OTTILIE, a German authoress, born in 1817; died June 12, 1877. She was well known throughout Germany by her pleasant sketches of home life. Among her best known works are "*Schwäbische Pfarrhäuser*," "*Auguste*," "*Heimath der Frau*," and "*Aus dem Frauenleben*." She also wrote a large number of stories for girls.

WRANGEL, FRIEDRICH HEINRICH ERNST, Count

von, the oldest officer in the Prussian service, born April 13, 1784; died November 1, 1877. He entered the Prussian army in 1796, took part in the campaigns against Napoleon, commanded the allied troops against Denmark in 1848, resigned his command September 8th to quell the revolution in Berlin, and having succeeded in this was created general of cavalry in 1849, after having been major-general since 1823, and lieutenant-general since 1838. In 1856, on the occasion of the sixtieth anniversary of his military service, King William created him a field-marshal. With him a large part of old specific Prussian history passed away. A regimental cadet when King William was born, decorated for valor in the field in the first days of the present century, a colonel at Waterloo, and a general over fifty years ago, it was thought very probable that this extraordinary veteran, of whom the Berliners said, "He has forgotten how to die," might outlive his sovereign. He was one of the curiosities of Berlin, and when he would ride through the Thiergarten and Unter den Linden, carefully strapped to his horse, he would be followed by numerous *gamins* to whom he would throw coins. "Papa Wrangel," as he was called, was in every sense a true child of Berlin, having even that disregard for the rules of the German language so common among the lower classes of that city.

WUNDERLICH, KARL AUGUST, a German physician, born August 4, 1815; died September 25, 1877. He studied medicine in the University of Tübingen, where he commenced to lecture in 1840, and in 1850 went to Leipzig as Professor of Clinics. He was the author of "Handbuch der Pathologie und Therapie" (3 vols., 1846-'54; 2d edition, 1853), "Ueber die französische und deutsche Medicin" (1841), "Versuch einer pathologischen Physiologie des Blutes" (1844), "Geschichte der Medicin" (1859), and "Ueber die Eigenwärme in Krankheiten" (1868). In 1841 he established, together with Roser, the *Archiv für physiologische Heilkunde*.

WYATT, SIR MATTHEW DIGBY, a British architect, born in 1820; died May 21, 1877. In 1851 he superintended the erection of the Crystal Palace in London, in 1852-'54 the fine art department and decorations of the Crystal Palace at Sydenham, was appointed surveyor to the East India Company, and in 1859 was knighted and appointed the first Professor of Fine Arts in Cambridge. He was the author of a large number of works, among them, "The Industrial Arts of the XIXth Century" (2 vols., 1851; with 160 plates), "Fine Art" (1870), and "An Architect's Note Book in Spain" (1872).

ZIMMERMANN, KARL, a German theologian, born August 23, 1803; died June 12, 1877. He was one of the principal founders and promoters of the "Gustav-Adolf-Verein," established for the purpose of founding Protestant communities in strictly Catholic parts of Ger-

many. He was also the author of a considerable number of works, and the editor of various educational and theological journals.

ZITZ, FRANZ, a member of the German Parliament, born in 1803; died April 30, 1877. In the revolutionary movements of 1848 he took an active part, and was a prominent member of the German National Assembly. He was forced, however, to flee from Germany, and having gone to the United States, he established himself in New York as notary public with Friedrich Kapp. He returned to his native country in 1868.

ZÖPFEL, HEINRICH MATHEUS, a German jurist, born April 6, 1807; died July 4, 1877. He studied in the University of Würzburg, and afterward lectured in the University of Heidelberg, becoming an ordinary professor in 1842. In 1850 he was elected a member of the first Chamber of Baden, and from there was sent to the State House of the Union Parliament of Erfurt. He was the author of a number of works, the best known of which are "Grundsätze des allgemeinen und deutschen Staatsrechts" (1839; 5th edition, 1863), and "Deutsche Rechtsgeschichte" (3d edition, 1858).

ZWYSEN, JOHN, a Dutch Catholic prelate, died in October, 1877. He became Bishop of Utrecht in 1852, and of Bois-le-Duc in 1868. He was one of the most active of the Dutch Catholics, and in 1853 had contributed materially to the restoration of the Episcopate in the Netherlands.

OGDEN, WILLIAM B., died in New York City, August 3d. He was born in Delaware County, N. Y., in 1805. At the age of 21 he entered a large mercantile firm, and in 1834 he was a member of the New York Legislature, where he gave special attention to the bill providing for the construction of the Erie Railway. In 1835 he removed to Chicago, where he established a Land and Trust Agency; in 1837 he became the first mayor of the city, and in 1860 he was elected to the State Senate. His lumbering establishment, situated in Peshigo, Wis., was one of the largest in the world; and he was among the first to bring mowing and reaping machines into general use, at his suggestion the first reaper being sent to the London Exhibition in 1851. He was President of the National Railroad Convention held in 1850, to take measures in reference to building the Pacific Railroad, was also President of the Galena & Chicago Union Railroad Company, the Northwest Railroad Company, the Illinois & Wisconsin Railroad Company, the Buffalo & Mississippi Railroad Company, and in 1862 he became the first President of the Union Pacific Railroad Company, but soon retired from that position. He was the first President of Rush Medical College, and gave timely aid to the Theological Seminary of the Northwest, the Historical Society of Chicago, the Academy of Sciences, the Astronomical Society, the University of Chicago, and the

Chicago Women's Home. In 1854 and 1855 he visited Europe, and his examination of the canals of Holland suggested to him the practicability of the Sturgeon Bay & Lake Michigan Ship Canal. He devised a plan for an underground railroad in New York City, in connection with the question of rapid transit. Since 1866 he has resided in New York City.

OHIO. The financial condition of the State at the end of the fiscal year 1877 was as follows:

On the 15th of November, 1876, the funded debt of the State was.....\$6,484,505 30
The redemptions during the year were: Loan of 1875.....5,000 00
Balance outstanding November 15, 1877.....\$6,479,505 30

The funded debt is divided as follows:

FOREIGN DEBT, PAYABLE AT NEW YORK.

Loan payable July 1, 1868, not bearing interest.....\$2,500 00
Loan payable after December 31, 1875, not bearing interest.....2,700 00
Loan payable after June 30, 1881, six per cent. interest.....4,072,640 30
Loan payable after December 31, 1881, six per cent. interest.....2,400,000 00
Total foreign debt.....\$6,477,940 30

DOMESTIC DEBT, PAYABLE AT COLUMBUS.

Canal loan, not bearing interest.....\$1,665 00
Total funded debt.....\$6,479,505 30

The local indebtedness of the State, on the first day of September, 1877, was as follows:

Net debt of counties.....\$2,909,462 27
Net debt of townships, including debts created by boards of education other than for separate school districts.....208,382 58
Net debt of cities (first and second class).....83,762,186 07
Net debt of incorporated villages.....979,351 15
Net debt of school districts (special).....1,469,287 03
Total.....\$39,328,569 10

The amount of reimbursable debt, therefore, is:

State.....\$6,479,505 30
Local.....89,328,569 10

Total.....\$45,808,074 40
Irreducible debt (school fund).....4,281,404 58

Aggregate debts in the State.....\$50,089,478 98

The local indebtedness in this statement is reckoned to September 1, 1877, and the State debt to November 15, 1877.

The balance in the State Treasury on the 15th day of November, 1876, was.....\$585,829 04
The receipts, including draft for \$300,000 of taxes payable in 1878, for fiscal year ending November 15, 1877, were.....5,127,594 38

Total amount of funds in the treasury for the year (\$300,000 of revenues anticipated as above).....\$5,713,428 42
The disbursements during the year have been.....4,726,414 06

Balance in treasury November 15, 1877.....\$987,009 36

The Auditor of State estimates the receipts, including the balance on hand November 15, 1877, for the current year, from all sources, at.....\$5,563,388 36

The disbursements at:

Revenue.....\$814,930 06
Asylum.....2,136,448 28
Sinking.....1,100,262 98
School.....1,540,872 00

Total.....\$5,592,513 32
Leaving estimated deficit in treasury November 15, 1878.....29,124 96

The taxes levied in 1876, collectible in 1877, were:

State taxes.....\$4,626,620 54
County and local taxes.....23,894,685 98
Delinquencies and forfeitures.....1,448,929 20

Total.....\$29,965,185 72

The taxes levied in 1877, and collectible in 1878, are:

State taxes.....\$4,560,379 63
County and local taxes.....22,954,271 16
Delinquencies and forfeitures.....2,001,096 74

Total.....\$29,525,749 53

The State Auditor's report contains the valuation of property in Ohio since 1800. Up to 1826 real property only was assessed for State taxes. The county and town taxes were raised by a poll-tax, licenses, and various special taxes. The whole property assessed for State purposes during fifty years was as follows:

YEARS.	Real.	Personal.
In 1827.....	\$47,206,386	\$12,875,336
In 1837.....	75,782,176	25,890,566
In 1847.....	306,798,780	58,964,490
In 1857.....	535,620,682	268,798,597
In 1867.....	673,993,767	464,761,022
In 1877.....	1,064,415,378	490,190,867

The two periods, one including the war, and the other since, show the following ratios of increase:

YEARS.	Realty. Per Cent.	Personality. Per Cent.
From 1857 to 1867.....	15	80
From 1867 to 1877.....	61	5

Thus, since the war, realty has increased fourfold, and personality scarcely at all. The whole value of property (that is, assessed value) in the last three periods was:

In 1857.....\$849,414,579
In 1867.....1,183,754,779
In 1877.....1,574,645,765

The total increase of assessed values in three periods is nearly the same.

A comparison of taxation for the last three decennial periods shows the following:

YEARS.	State Tax.	Total Tax.
In 1857.....	\$2,609,395	\$6,678,298
In 1867.....	3,931,099	20,258,615
In 1877.....	4,560,379	27,514,650

Deducting the State tax from the total tax, it will be seen that the local taxes are fourfold more than the State tax, and they increase much faster. In fact, the State tax is not now increasing at all. From 1867 to 1877 the State tax increased only \$579,280, while the local taxes increased \$7,261,035. The aggregate

taxes have considerably more than doubled since 1861, the commencement of the war.

The total indebtedness of the State, funded, irreducible, and local, aggregates \$50,039,478.93. Two-thirds of the whole amount is made up of debts of cities, and of this sum two-thirds is the debt of Cincinnati. The total amount of all public debts in Ohio is a little over one-third of the debt of the city of New York. Adding the mortgage debts and the commercial debts, it will be found that Ohio is less in debt than any of the large States; and, as a consequence, its business is stable, and its property comparatively little liable to fluctuation. The total real value of property in Ohio is at least \$2,300,000,000. The total public debt is less than 3 per cent. on that. Excluding railroad mortgages, the

mortgage and commercial debts do not exceed \$100,000,000. If all the debts of Ohio, excluding railroads, are put at \$200,000,000, it will be above the mark; that is, about 9 per cent. on the entire property of the State, and at least half of this is due among its own citizens.

Out of \$27,000,000 levied by taxation, only a little more than one-sixth is for State expenses. In fact, the expenses of the State of Ohio are very small, comparatively. The State tax is $2\frac{2}{3}$ mills, and is one-sixth part only of the whole tax, the other five-sixths being for local purposes. Of the whole State tax, only one-seventh part is for State expenses properly; that is, four-tenths of a mill, or one thirty-ninth part of the total taxes. The highest expenditure by the State is for the asylums. The Columbus Central Asylum has

SUSPENSION BRIDGE OVER THE OHIO AT CINCINNATI.

been several years building, and has cost a great sum of money. The furnishing of that asylum alone has cost \$100,000. There are now six asylums for the insane, and the expenses for them are very large. The school tax has been constantly diminishing, the great cost of schools being now thrown on the local municipalities. The school expenses of Cincinnati amount to half of all the school tax of the State. The sinking-fund tax is paying the interest and part of the principal of the State debt. In a short time the whole State debt will be paid.

The number of animals returned for taxation was:

Horses	741,841
Cattle	1,485,978
Sheep	8,724,040
Hogs	2,139,910
Mules	27,222
Total	8,118,091

This is claimed to be the largest number in any State in the Union. Cincinnati is the largest horse market in the country, and the second largest pork market.

The annual report of the Commissioner of Railroads and Telegraphs shows that an impetus has been given to railroad building, the increase during the year being 263 miles, making a total in the State of 4,722.8 miles of main track. The following aggregates comprise some of the most important features of the report:

During the year 16,992,589 passengers were carried by the railroads running through or into Ohio, which is 684,063 less than were carried in 1876.

The freight tonnage for the year aggregates 30,338,004 tons, which is an increase over former years of 990,205. The gross earnings of operated lines for the year were \$58,095,489.87, a decrease of \$5,165,650.70.

In net earnings there is a falling off compared with the last year of \$2,997,214.05. The total, which was \$14,832,223.66, is 2.56 per cent. upon the total paid in stock, bonds, and other debts of the companies owning lines.

The earnings from passengers aggregate \$1,559,214.32, a decrease of \$884,718.45.

The freight earnings amounted to \$38,678,746.65, a falling off of \$3,765,327.82.

The total paid-in capital stock of the various roads doing business in Ohio aggregates \$273,310,568.02.

The outstanding bonds amount to \$282,283,130.09, and the other net debt to \$24,978,540.21, making a grand total of \$580,572,246.32.

The interest paid during the year on bonds amounted to \$9,830,682.94, and on the floating debt \$645,123.96. The dividend paid upon preferred stock aggregates \$580,029.75, and on general stock \$3,940,388.05.

The proportions of the above aggregates for Ohio are:

Capital stock paid in.....	\$156,288,960
Funded debt.....	152,408,441
Other debt, net.....	17,696,107
Total stock and debt.....	226,888,510
Miles of main track.....	4,722
Miles of double track, sidings, etc.....	1,219
Total earnings.....	81,017,686
Net earnings.....	8,073,320
Number of employes (a reduction of 438).....	26,000

Ohio railroads, like those of the West generally, suffered during the year from the general depression in business. Of 57 roads doing business in the State, but 13—less than one-fourth—paid any dividends, and nine of these owe their apparently prosperous condition to the fact that they were leased at favorable figures, leaving only four to pay dividends out of the business actually done on the roads. Of the 13, two paid dividends only on preferred stock, while four were able to pay small dividends on both common and preferred stock, and all these were leased roads. This shows that leasing roads is, under some circumstances, more profitable than operating them, though the fact that the lessees actually lost money would indicate that it would scarcely be possible to make such favorable terms now. The following are the losses of the operating companies on some of the leased lines:

Central Division of the Baltimore & Ohio, \$123,197.36; Cleveland & Pittsburgh, \$292,845.47; Little Miami, \$338,412.58; Pittsburgh, Fort Wayne & Chicago, \$276,138.56; Toledo, Canada Southern & Detroit, \$127,296.61; and the Toledo & Woodville Road, \$32,165.96. The two oldest narrow-gauge roads in the State show a deficit in their earnings. The average cost of operating railroads in Ohio is about 71.47 per cent of the gross earnings; that is, in order to earn \$100 it is necessary to spend \$71.74.

The report of the State Commissioner of Common Schools presents the following statistics:

Grand total of receipts, including balance on hand, September 1, 1876.....	\$11,632,493 85
Amount of salaries to teachers.....	4,957,254 00
Grand total of expenditures, including salaries of teachers.....	8,086,620 32
Number of teachers employed.....	23,003
Number of pupils enrolled.....	722,240
Average monthly enrollment.....	554,928
Average daily attendance.....	448,100
Total value of school property.....	\$21,145,527
Number of school-houses erected during the year.....	490

The report of the State Mine Inspector places the number of fatal accidents in Ohio coal-mines during the year at 30; the coal out-put (estimated) is equal to 5,125,000 tons, which is one fatal accident for every 170,666 tons of coal mined. The number of underground miners employed during the year is estimated at 13,000, making one death for every 433 men employed. As a means of comparison, statistics of British mining for the same period are given. The deaths in British collieries were 933, being one for every 159,688 tons of coal, or one life lost for each 551 persons employed.

The public works of the State, originally costing \$16,000,000, but a portion of which had been abandoned, or suffered to fall into decay, were some years since leased to a company, which operated them subject to the general inspection of the Board of Public Works. On the 23d of June the lessees notified the board of their intention to abandon the lease on the 1st of December, on the ground that certain acts of the Legislature, authorizing the filling-up of part of the canal basin in the city of Hamilton, operated as an eviction of them from what they claimed to be a valuable part of the leased property. The board took no action, and when the canals were abandoned on the 1st of December, refused to receive them, and directed the attorney-general to bring suit upon the lessees' bond for the six months' rent due in advance. By consent of both parties, two receivers were appointed, one on behalf of the State, and the other for the lessees, to take charge of and operate the canals until action should be taken by the courts or the Legislature.

The adjourned session of the sixty-second General Assembly began January 2d, and closed May 7th, with the *sine die* adjournment. A large number of acts were passed, among those of most general importance being the compulsory education act, which compels every parent, guardian, or other person having control or charge of a child between the ages of 8 and 14 years, to provide it with a good common school education, at least twelve weeks in each school year; an act providing for the appointment of two commissioners to investigate into the cause, pathology, and best means for prevention and cure of any epidemic disease affecting the live stock of the State; an act to authorize free banking, provided the act should be ratified by the people at the next State election; an act submitting to the people an amendment to the Judicial Article of the Constitution; an act for the protection of wool-growers, and the confiscation of dogs; an act providing for the incorporation of farm laborers' associations; an act creating a bureau of statistics of labor; an act providing for the registration of voters; an act establishing a school of mines and mine engineering in the Ohio Agricultural College; an act making important changes in the militia law; and a series of acts adopting the penal part of the codified statutes.

On the 12th of January the General Assembly appointed a joint commission of five Representatives and three Senators to investigate the cause of the bridge disaster on the Lake Shore Railroad, at Ashtabula, on the 29th of December previous. The commission reported, March 22d, that the disaster was caused by defects in the original construction of the bridge, which might have been discovered at any time by careful inspection. A joint resolution was adopted, March 30th, indorsing the pacification policy of President Hayes, and

expressing full confidence in his patriotism, honor, and honesty. A joint resolution was adopted, April 24th, asserting "that common honesty to the tax-payer, the letter and spirit of the contract under which the great body of its indebtedness was assumed by the United States, and true financial wisdom, each and all demand the restoration of the silver dollar to its former rank as lawful money."

During the session, an election for United States Senator was held, to fill the vacancy in the unexpired term of Senator Sherman, who had accepted a seat in the Cabinet of President Hayes, as Secretary of the Treasury. Hon. Stanley Matthews was elected by the unanimous vote of the Republican members, the Democrats voting blank.

The political events of the year commenced with a Democratic State Convention, held at Columbus, January 8th, for the purpose of influencing the action of Congress on the pending question as to the result of the Presidential election. The Convention was presided over, at its assembling, by General H. A. Warner, of Marietta, and the permanent president subsequently chosen was General Durbin Ward. Speeches were made by both, and also by Hons. G. H. Pendleton and Thomas Ewing and General G. A. Morgan. The following resolutions were adopted:

Resolved, 1. That the Government of the United States is republican in spirit as well as in form; it is a Government of law, not of arbitrary force; it is founded on universal suffrage, lawfully exercised, and its existence depends on good faith and sincere obedience to the laws.

2. That the votes cast on the 7th of November, and duly certified at the close of the election on that day by the officers authorized to receive and record them, alone determine the result of the election held in any precinct, county, or State, and that whatever may be the returns then duly and properly certified, they cannot lawfully be changed by any officer authorized to canvass them and announce the result.

3. That while clear in the conviction that Samuel J. Tilden and Thomas A. Hendricks have received not only a large majority of the popular vote, but a majority of the electoral vote, and are therefore elected President and Vice-President, we yet declare that any decision made by the Senate and House of Representatives will be cheerfully acquiesced in by the whole people, and that any attempt to inaugurate a President simply upon the proclamation of the President of the Senate will be an act of usurpation that will be resisted by the people to the last extremity, even should that extremity be an appeal to arms.

4. That the impudent and unfounded charge that those who protest against the exercise of illegal and arbitrary power desire to foment strife and incite civil war, is made by conspirators to withdraw the public mind from their own evil design to frustrate the sovereign will of the people as expressed through the ballot box on the 7th of November last.

5. That we denounce the action of President Grant in following the example of the military chieftains of Mexico, in interfering by armed force in the elections of the people, in preventing the lawful organization of State Legislatures, and in massing troops at Washington, with the apparent purpose of preventing the free action of Congress respecting the Presidential election. It evinces a purpose to render the military independent of, and superior to, the

civil power, and calls for outspoken condemnation by every friend of republican government.

6. That the inauguration as President of a candidate rejected by the people and counted in by fraud, is revolution, and, if acquiesced in, fatal to republican government.

7. That the National Democratic committee be requested to call a National Democratic Convention to meet at Washington City, February 12, 1877.

The first political party in the field with a State ticket was the Prohibition, which met at Columbus, February 22d, and nominated the following ticket:

For Governor, Henry A. Thompson, of Franklin County. For Lieutenant-Governor, George K. Jenkins, of Jefferson County. For Treasurer of State, Arza Alderman, of Morgan County. For Attorney-General, David W. Gage, of Cuyahoga County. For Supreme Judge, David C. Montgomery, of Knox County. For School Commissioner, Joseph W. Lindsey, of Delaware County. For Clerk of Supreme Court, George Dodds, of Greene County. For Member of Board of Public Works, Amos Miller, of Logan County. The following resolutions were adopted:

1. The protection of life, property, and home by the legal prohibition of the liquor traffic of the State, is the most important duty of the law-making power.

2. That no government should contravene the purpose of its formation, by taking into public service those who are connected with the liquor traffic, or addicted to the dangerous vice of drinking.

3. That since the work of legislation is political, and all other parties fail to advocate or promise prohibitory action, a special prohibition party is demanded.

4. That the right of suffrage rests on no mere circumstance of color, race, former social condition, sex, or nationality; but inheres in the nature of man, and when from any cause it has been withheld from citizens of our country who are of suitable age and mentally and morally qualified for the discharge of its duties, it should be speedily restored by the people in their sovereign capacity.

5. Since virtue, education, and intelligence are necessary to the well-being of republican institutions, we would foster the free school system, denying to all religious sects and other associations control or management of the funds for its maintenance, and enforcing by proper legislation the education of all the children of the State.

6. We favor the free use of the Bible, not as a ground of religious creeds, but as a text-book of the purest morality, the best liberty, and the noblest literature in our public schools, that our children may grow up in its light, and that its spirit and principles may pervade our nation.

7. The Christian Sabbath, moreover, was ordained for the good of man, and Christians in a Christian country should not be deprived of its peaceful enjoyment by the carousals of liquor-drinking and liquor-selling transgressors.

The Democratic Convention was held at Columbus, July 25th. The ticket placed in nomination was as follows:

For Governor, Wm. M. Bishop, of Hamilton. For Lieutenant-Governor, Jabez W. Fitch, of Cuyahoga. For Supreme Judge, John W. Okey, of Franklin. For Clerk of Supreme Court, R. J. Fanning, of Franklin. For Attorney-General, Isiah Pillars, of Allen. For Treasurer of

State, Anthony Howells, of Stark. For School Commissioner, J. J. Burns, of Belmont. For Member of Board of Public Works, Martin Schilder, of Ross. The following platform was adopted:

The Democratic party of Ohio, in State Convention assembled, renews its pledges of devotion to the Union and the Constitution with its amendments. It declares, as essential to the preservation of free government, faithful adherence to the following principles: Strict constitutional home rule; supremacy of the civil over the military power; separation of Church and State; equality of all citizens before the law; liberty of individual action, unvexed by sumptuary laws; absolute acquiescence in the lawfully expressed will of the majority; opposition to all subsidies; preservation of public lands to the use of actual settlers; maintenance and perfecting of the common school system.

Pertinent to the issue now pending before the people—

Resolved, 1. That we look on the inauguration of R. B. Hayes to the high office of the Presidency of the United States, in spite of the majority of the electoral and popular vote being given by the people to Samuel J. Tilden, as the most dangerous encroachment upon popular rights that has ever been attempted in this or any other free country. A repetition of the fraud will not be tolerated.

2. The destruction of the industry of the country and pauperism of labor are the inevitable fruits of the vicious laws enacted by the Republican party.

3. That as a means of relieving the distressed por-

tions of the community and removing the great stringency complained of in business circles, we demand the immediate repeal of the resumption act.

4. That we denounce as an outrage upon the rights of the people the enactment of the Republican measure demonetizing silver, and demand the passage of a law which shall restore to silver its monetary power.

5. That we favor the retention of greenback currency as the best paper money we ever had, and declare against any further contraction.

6. We congratulate the country upon the acceptance by the present Administration of the constitutional and pacific policy of local self-government in the States of the South, so long advocated by the Democratic party, and which has brought peace and harmony to that section of the Union.

7. The registry law framed by the last Legislature is burdensome and expensive, and discriminates unjustly against the poorer classes of voters, and we therefore demand its immediate repeal.

8. We favor tariff for revenue only.

9. We favor the issue by the General Government alone of all circulating mediums, whether paper or metallic, to be always of equal tender and interconvertible.

10. That we condemn the acts of the Federal Administration in using regular troops of the United States to interfere with the elections and other political affairs of the States as an unconstitutional, unlawful, and unjustifiable destruction of the rights of the people and States.

11. We recommend the ticket this day formed by the Convention to the favorable consideration and support of all citizens of the State.

CLEVELAND, FROM THE RESERVOIR.

The Republican Convention was held in Cleveland, August 1st, the following ticket being placed in nomination:

For Governor, William H. West, of Logan. For Lieutenant-Governor, Ferdinand Vogeler, of Hamilton. For Supreme Judge, William W. Johnson, of Lawrence. For Treasurer of State, John M. Millikin, of Butler. For Attorney-General, George K. Nash, of Franklin. For

Clerk of Supreme Court, Dwight Crowell, of Ashtabula. For School Commissioner, J. F. Lukens, of Portage. For Board of Public Works, A. W. Luckey, of Ottawa. The following platform was adopted:

The Republicans of Ohio, in Convention assembled, congratulate the people that during the long term of their control of the affairs of the State no stain has been found upon their record as a party;

that their management of local affairs has been true to the moral and industrial interests of the people, and therefore they confidently point to their past as the best evidence of their intentions for the future.

On the national questions the Republicans of Ohio claim the same fidelity to right principles and practices that they have exhibited in local and State affairs.

Appealing to the determination of the people to maintain republican principles and practices, they offer for the candid consideration of the voters of Ohio the following platform of principles:

Resolved, That we reaffirm and adopt the platform and resolutions of the National Convention of the Republican party adopted in the Convention at Cincinnati in June, 1876.

Resolved, That the Republicans of Ohio reaffirm their unflinching confidence in Rutherford B. Hayes as a statesman, patriot, and Republican, and cordially approve and support his efforts for the pacification of the country and the establishment of its civil service upon a basis of purity and efficiency.

Resolved, That we reaffirm it as the unalterable purpose of the Republican party to maintain and enforce the provisions of the recent amendments to the Federal Constitution, guaranteeing the equal rights of all citizens before the law, irrespective of race or color, and to insist upon the full and effectual performance by the Federal Government, in the execution of all its powers, of its Constitutional obligations in that behalf.

Resolved, That we are in favor of both silver and gold as money, that both shall be a legal tender for the payment of all debts except where otherwise specially provided by law, with coining and valuation so regulated that our people shall not be placed at a disadvantage in our trade with foreign nations, and that both metals shall be kept in circulation as the money of the nation, as contemplated by the Constitution, and we therefore demand the remonetization of silver.

Resolved, That we are opposed to any further grants of public lands, or money subsidies, or the extension of the public credit of the General Government, to aid in the construction of railroads.

Resolved, That we are opposed to the renewal of patents by acts of Congress which are burdensome and oppressive to the masses of the people, and especially to the laboring classes.

Resolved, That we view with alarm the present disturbed condition of the country as evidenced by the extensive strikes of workmen, and followed by destruction of life and property in different parts of the country; and while we deprecate each and every resort to violence and disorder, and cordially approve the action of our National and State authorities in their efforts to enforce the supremacy of the law, yet we do most heartily sympathize with the condition of the honest and industrious laborers who are willing to work, but remain unemployed, or are employed at wages inadequate to comfort and independence, and as an earnest of our desire to find a remedy for their condition, we recommend:

1. That Congress establish a National Bureau of Industry.

2. That Congress exert its authority over all national highways of trade by prescribing and enforcing such reasonable regulations as will tend to promote safety of travel, secure fair returns for capital invested and fair wages to the employes, preventing mismanagement, improper discriminations, and the aggrandizement of officials at the expense of stockholders, shippers, and employes.

3. That provision be made for statutory arbitrations between employers and employes, to adjust controversies, reconcile interests, and establish justice and equity between them.

At a meeting of the representatives of the labor interests, held in Cincinnati, a partial State

ticket, designated the Workingmen's ticket, was put in nomination and resolutions adopted, repudiating the older political organizations, as not properly caring for the interests of labor. The meeting was not one of delegates chosen from the several counties, but rather of the nature of a mass meeting. Changes were afterward made in the ticket, which finally stood thus: For Governor, Lewis H. Bond; for Lieutenant-Governor, Frank Skarda; for Clerk of the Supreme Court, Henry Arnsperger; for Treasurer of State, Lucius A. Hine; for State School Commissioner, Peter H. Clark; for Member of the Board of Public Works, Peter J. McGeeney.

A Greenback Convention was also held, and a full State ticket nominated; but a split having occurred in the ranks of the Workingmen, a large part of that organization repudiating the action of the Cincinnati gathering, a meeting was held in Columbus, September 13th, between the representatives of the disaffected faction of the Workingmen's party and the Greenback Executive Committee, at which the latter consented to withdraw their State ticket and unite with the new movement, if their ideas of currency reform were heartily acquiesced in, which was agreed in open convention. A platform was adopted without discussion, demanding the payment of bonds at or before maturity, according to the laws under which they were issued, the remonetization of silver coin, the immediate repeal of the resumption act, non-sectarian schools, wholesome control by the Government over all corporate bodies, and the fostering of the resources of the country to the end that labor may be fully and profitably employed. It declared in favor of graduated income tax; that Government land should be reserved for actual settlers; deprecated all efforts to redress wrongs by violence, and denounced the payment of store scrip for labor, and called for laws to prevent this swindle. The financial plank declared it to be the prerogative of the Government to issue and provide money, both metallic and paper, for the convenience of trade, and that this power should not be delegated to corporations or individuals. It also demanded that legal tender currency be fully restored and made legal tender, and continued without contraction, and that the national bank law shall be repealed. The following ticket was nominated: For Governor, Stephen Johnson, of Miami; Lieutenant-Governor, Christopher Lewis, of Franklin; Supreme Judge, Milton L. Clark, of Ross; Treasurer, Joseph Jenkins, of Tuscarawas; Clerk of the Supreme Court, E. P. Pitkin, of Clark; Attorney-General, George A. Duncan, of Huron; School Commissioner, John O. Logan, of Mahoning; Board of Public Works, C. C. Strong, of Defiance.

Thus there were five regular tickets in the field. At the election, October 9th, the total number of votes for Governor was 555,060, which is a falling off from the total vote for

Secretary of State in 1876 of 75,879, and from the vote for President in 1874 of 103,589. The following is the vote of the various officers, with plurality of successful candidates:

GOVERNOR.

Bishop (Democrat).....	271,625
West (Republican).....	249,105
Bond (Workingmen).....	12,489
Thompson (Prohibition).....	4,886
Johnson (Greenback and Workingmen).....	16,912
Scattering.....	98
Bishop's plurality over West, 22,520.	

LIEUTENANT-GOVERNOR.

Fitch (Democrat).....	268,606
Vogeler (Republican).....	241,437
Skarda (Workingmen).....	12,571
Jenkins (Prohibition).....	10,925
Lewis (Greenback and Workingmen).....	16,975
Scattering.....	448
Fitch's plurality over Vogeler, 27,169.	

JUDGE OF THE SUPREME COURT.

Okey (Democrat).....	271,393
Johnson (Republican).....	251,758
Montgomery (Prohibition).....	4,577
Clark (Greenback and Workingmen).....	12,132
Scattering.....	594
Okey's plurality over Johnson, 20,635.	

CLERK OF THE SUPREME COURT.

Fanning (Democrat).....	269,957
Crowell (Republican).....	252,076
Arnsperger (Workingmen).....	12,545
Dodds (Prohibition).....	4,622
Pitkin (Greenback and Workingmen).....	16,760
Scattering.....	765
Fanning's plurality over Crowell, 17,881.	

ATTORNEY-GENERAL.

Pillars (Democrat).....	269,506
Nash (Republican).....	252,155
Gage (Prohibition).....	4,640
Duncan (Greenback and Workingmen).....	16,705
Scattering.....	579
Pillar's plurality over Nash, 17,351.	

TREASURER OF STATE.

Howells (Democrat).....	270,461
Milliken (Republican).....	250,746
Hine (Workingmen).....	12,618
Alderman (Prohibition).....	4,623
Jenkins (Greenback and Workingmen).....	16,985
Scattering.....	241
Howells's plurality over Milliken, 19,715.	

SCHOOL COMMISSIONER.

Burns (Democrat).....	269,646
Lukens (Republican).....	250,844
Clark (Workingmen).....	12,515
Lindsey (Prohibition).....	4,493
Logan (Greenback and Workingmen).....	17,005
Scattering.....	526
Burns's plurality over Lukens, 19,802.	

MEMBER OF THE BOARD OF PUBLIC WORKS.

Schilder (Democrat).....	269,499
Luckey (Republican).....	251,131
McGeeney (Workingmen).....	12,589
Miller (Prohibition).....	4,915
Strong (Greenback and Workingmen).....	16,504
Scattering.....	354
Schilder's plurality over Luckey, 18,368.	

THE FREE BANKING ACT.

For.....	69,291
Against.....	214,515
Majority against, 145,224.	

THE JUDICIAL CONSTITUTIONAL AMENDMENTS.

For.....	54,896
Against.....	263,478
Majority against, 213,582.	

During the summer the disturbances on the railroads of the country extended into Ohio, and several of the leading lines were for some days partially or wholly blocked by the strik-

ing employés. Two proclamations were issued by Governor Young, who, as Lieutenant-Governor, had succeeded Governor Hayes on the latter resigning to be inaugurated President of the United States: one on the 20th of July, in response to an application from the Sheriff of Licking County, and the other five days later, aimed chiefly at the strikers on the lines of railroad centring in Cleveland. In the former case troops were sent to prevent the threatened riots, but in the latter the law-abiding citizens were called upon to organize themselves into a volunteer police force. The result of this prompt and judicious action was that the danger was averted without the loss of a single life or the destruction of any property. (*See LABOR-STRIKES.*)

OKLOBJIO, IVAN DEMETRIYEVITCH, the commander of the Russian Rion corps (*see* TURKEY), was born in Dalmatia in 1816. He is the son of an Austrian colonel, his name originally being Oklobtsio von Kuekburg. He received his education in the military institutions of Austria, and afterward studied law in the University of Padua. He began his military career in the service of Austria, but in 1846 entered the Russian service as second-lieutenant. For seven years he fought with great bravery against the insurgent tribes of the Caucasus, took part in 1854 in the siege of Silistria, and in the following year was in Sebastopol during the siege. After this he was for several years inspector of the Caucasian troops of the line and military and civil governor of the Caucasus. In 1862 he was raised to the rank of major-general, and afterward to that of lieutenant-general. As such he received the command of the Rion corps at the beginning of the war with Turkey.

OLD CATHOLICS. In *Germany*, the Old Catholics held their fourth synod in May, at Bonn, under the presidency of the bishop of the church, Dr. Reinkens. The synodal council presented the draft of a service of general confession, intended for congregational use for holy communion. This service, though not proposed as a substitute for private confession, which is left to each man's conscience, is expected to largely supersede it. The service is in the form of a litany, short, and generally in the words of the Scripture. The synod adopted the service and authorized the congregations to use it. In regard to the question of the abolition of priestly celibacy, the synod resolved by a large majority that the council should ascertain what, if any, legal hindrances stood in the way of the abolition, and should report on this and on the various motions presented to the next synod. The congregations were permitted to use certain portions of the mass service in a German translation, with the consent of the synodal council. According to the statistical report of the synodal council, the number of ascertained, inscribed adherents of the cause in Germany reached 53,640, as against 49,908 last year, an increase of 3,732.

This increase was constant throughout. The largest gain was, as usual, in Baden, but also Bavaria produced 770 more members. The numbers were thus divided: Prussia, 35 congregations, and 21,797 souls; Baden, 44 congregations, and 18,866 souls; Bavaria, 34 congregations, and 11,338 souls; Hesse, 5 congregations, and 1,155 souls; Oldenburg, 247 souls; Württemberg, 237 souls. The number of priests was 59, of whom 55 were actively engaged in parochial work; since the last synod there were five accessions (two newly ordained), and as many departed. In Prussia, 25 priests are at work, in Baden 18, in Bavaria 12.—The sixth Old Catholic Congress of Germany was held at Mentz, in September. The president of the former congresses, Dr. von Schulte, being absent on account of ill-health, Herr Schwartzmann, the president of one of the high state courts of the grand-duchy of Baden, was elected president. It had been previously arranged that no reference should be made to the two controversies which mostly divide the new church, the abolition of priestly celibacy and the liturgical question. The congress adopted resolutions denouncing the efforts made by Rome to obtain a controlling influence upon the state schools as injurious to the best interests both of the school and the state; but at the same time expressed a decided opinion that religion should continue to be an obligatory part of public instruction. Other resolutions recommended an active interest in the wider circulation of the Old Catholic papers, especially the *Deutsche Mercur* and the *Alt-katholische Bote*, and the support of sick clergymen and the students of Old Catholic theology. Like its predecessors, the congress received letters expressive of cordial sympathy from representative men of other religious denominations, in particular from bishops of the Old Catholic churches of Switzerland and the Netherlands, and of the Church of England.

In *Switzerland*, the third synod of the Christian Catholic Church was held in Berne, in May. The attendance of the synod was more numerous than that of the German synod, 51 priests and 89 lay delegates being present. The ritual proposed by the liturgical commission was adopted provisionally for one year. The German Catechism of the late Catholic Bishop Salzmann, revised by Bishop Herzog, was recommended to the German-speaking parishes. The revision of the missal and the reestablishment of the communion in both kinds was also discussed, but the synod voted to defer action until its next meeting. The synodal council consisted of three priests, Abbé Michaud, the bishop's vicar-general, Pfarrer Schröter, of Rheinfelden, and Pfarrer Hassler, of Olten, and five laymen, among whom were Herr Keller, formerly Landammann of the canton of Aarau, and Herr A. Vigier, formerly Landammann of the canton of Solothurn. The number of the students of Old Catholic theology at the University of Berne was 17.

In *Austria*, the Old Catholics obtained on October 18th, by the rescript of the Minister of Public Worship and Education, the legal recognition as an independent organization, under the name "Old Catholic Church." At this time three congregations were fully organized, at Vienna, Wernsdorf, and Ried, with an aggregate membership of about 36,000.

In *Italy* the Bishop-elect of the National Catholic Church, Luigi Prota-Giurleo, had not, up to the end of the year, received the episcopal consecration. It was reported from St. Petersburg that he had applied for consecration to the Russian Church, expressing his full concurrence with the doctrines of that Church.

In *France* a paper was established for promoting the interests of Old Catholicism, entitled *La Reforme Catholique*, but no progress was made toward the establishment of Old Catholic congregations.

ORDNANCE. Within a generation the mechanical improvements in the instruments of warfare have been so great as to revolutionize all the established principles of military tactics, and to almost reduce war to a trial of the excellence of the rival inventions of engines of destruction. It is a physical impossibility for soldiers armed with the best small-arms known a few years ago to stand in battle against a force provided with weapons of precision of the newest device. The artillery cast in the workshops of Krupp and Armstrong, and in arsenals of the different Governments, can pierce any armor yet found out that will not sink a ship, and render fortifications practically useless. The employment of gun-cotton and the compounds of nitroglycerine, whose efficacy as secret and terrible agents of destruction was first proved to the world by their employ of offensive torpedoes in the American civil war by the Confederates, has been so perfected in the Harvey, Whitehead, Thorneycroft, and Lay systems of torpedoes as to make the question of an adequate defense against them the great problem in marine warfare. Contrary to expectations there were few examples of the successful use of the new torpedoes in the Russo-Turkish war, and none of the latest methods of torpedo defense. (*See TORPEDOES.*) The frequent and costly improvements in weapons impose greater expenses for war materials, on the Governments who keep their military resources on a war-footing in time of peace, than formerly; but the actual burden of wars of the same magnitude is doubtless less exhaustive than in other times, because the same military objects can be more rapidly accomplished with the deadlier and more irresistible engines of modern warfare; so that modern wars are generally fought in a single campaign, and great conflicts, expensive and enormous in their preparations, are ended in a few weeks or months, which might once have spread their debilitating effects over many years of time and through all the provinces of an invaded country.

In small-arms the breech-loading rifles have supplanted the old muzzle-loaders, and constant advances are made in the qualities of rapidity of firing and ease of adjustment, the velocity of the shot or their carrying power, and the durability of the necessarily complex and somewhat delicate mechanism for locking the breech and firing, and the ease with which damaged parts can be replaced or repaired.

The musket with which the Turkish army was armed in the late war is the weapon known as the Martini-Henry rifle. The guns were manufactured in American shops. The Providence Tool Company executed a contract for the Turkish Government amounting to \$17,-

MARTINI-HENRY RIFLE.

000,000, employing 2,500 men in the work, and turning out 600 finished arms a day, or 200,000 per annum. This company were three years in preparing for this vast work. The guns were packed for shipment in cases made with great accuracy by machinery specially constructed for the purpose; these were furnished by the Excelsior Box Company of Providence. Each box contained 20 guns, which were laid in the grooves for the muzzle tip and shoulder piece, without further packing. American contractors furnished the Turkish Government with 600,000 of these rifles. The Martini-Henry arm was furnished to nearly every body of infantry, both regular and reserve, in the Turkish army. The firing arrangement and the breech-lock were invented by the Swiss manufacturer Martini, of Frauenfeld; the repeating apparatus was devised by the English mechanic Henry. The load is $5\frac{1}{2}$ grammes of powder; the ball has a calibre of .45 inch, or 11 millimetres. The flight of the ball is exceedingly direct; it possesses a remarkable force of penetration at the distance of 1,800 metres, and hits with accuracy at a mile's distance. The rifling is that of Henry, used in the British army guns, with seven grooves, the twist being 22 inches. The Martini breech action is on the block system, and is very similar to that of the Peabody. In the Russian attacks on the redoubts at Plevna and other Turkish strongholds the assailing troops melted visibly away before the sure and rapid fire of these rifles. The Turkish arm was almost certain for 200 or 300 yards. An expert marksman can load and fire this weapon once a second.

The Turks possessed some thousands of the

Winchester repeating rifles, called also revolver or magazine rifles, made according to the system of Henry Winchester. This arm was used with effect in the American war. There are two barrels, one over the other; the lower of the two is the magazine which holds the 15 cartridges. The cartridges descend one after the other, as they are used, to the back of the barrel, and are then lifted up and inserted into the firing barrel by the repeating apparatus. The supply of cartridges can easily be replenished in the magazine barrel at any time, which can be filled up from the side with facility before the whole charge has been exhausted. The locking apparatus is too complicated for ordinary field practice, consisting originally of 42 different parts; Vetterli, in Neuhausen, Switzerland, has, however, improved and simplified the lock, so that it now consists of only 25 pieces, as made for the Swiss army, and is a strong and good campaign weapon. The Turks possessed also a good number of Snider guns, made over out of muzzle-loaders; the Snider loading apparatus, which was added, was sometimes after the English pattern, and sometimes the French model, called the *tabatière*.

The Russian infantry in the European army, with the exception of the guard, were provided with the Kruka musket, named after its inventor, an Austrian gunsmith. It is locked by a bronze snap-lock, containing a needle, which is driven against the cap in the metallic cartridge by an ordinary percussion-hammer. This firing apparatus has been screwed on to the muskets with which the Russian infantry

GORIOFF RUSSIAN BREECH-LOADER.

were before armed. These were made on the Enfield system and have a calibre of 14.5 millimetres. The shot is too heavy for the small charge of powder which the gun allows, and the course of the ball is a high curve; it can therefore, like the needle-gun, only be aimed with accuracy when the distance of the object is known. The maximum force of penetration is within 800 paces.

The brigades of infantry and sharp-shooters in the guard are the only bodies of Russian soldiery which were provided with good modern weapons. They carried Berdan rifles, made after the second system of Colonel Hiram Berdan of the American army. This gun has a calibre of 11 millimetres. It is provided with a common pointed bayonet. The chief

objection to this rifle is that it is too light and delicate for ordinary service, and that the loading mechanism cannot be taken apart and put together again without much difficulty. The breech action is on the bolt system. Picked troops of cavalry in the guard also used the same gun as a carbine or Cossack rifle. The infantry of the Russian army in Asia carried for the most part the Carlé musket. This is a questionable improvement on the Dreyse needle-gun system. Paper cartridges are used in this gun, which has a large calibre.

The Soper rifle, which excels the Martini in rapidity of firing and safety in handling, has a breech-block somewhat similar to that of the Snider rifle, which locks by a bolt passing through its centre. The lock and breech action is so arranged that the rifle cannot be fired unless the breech is closed and the bolt fastened. The escape of any gas from a faulty cartridge backward toward the firer's face is impossible, as the pressure of the discharge forces the breech-block against the breech-shoe; the breech-block thus operates as a self-acting valve. The lock is like that of the Snider rifle, except that it is mounted in the centre of the rifle and hits the striker in a direct

SNIDER BREECH-ACTION RIFLE.

line with the axis of the barrel. The extracting slide acts with such force as to throw out the cartridge-case toward the rear. The breech-block, lock, and extracting actions are all operated by a single lever on the right side of the rifle, whose handle is just between the thumb and forefinger when the gun is in position for firing with the firer's middle finger on the trigger. An important advantage in this position of the lever is that a marksman, when lying down or resting his piece on earthworks, need not lose his aim in refiring, but can reload any number of times without disturbing the direction of the barrel, and can continue firing effectively after the object of his fire is hidden by clouds of smoke from his sight.

In heavy artillery, experiments have lately been made with a gun weighing 81 tons in England and with one of 100 tons weight in Italy. These monsters have shown themselves superior to the thickest iron ship-armor, and a plate which can withstand the projectiles of a ton's weight cast by the 100-ton guns has yet to be found; steel-plates will repel them, but only by being shattered in the effort, and probably

the question of defensive armor against the heaviest projectiles is to be solved in a combination of outside steel plates with soft iron, by which the cracked and broken steel shield will adhere to the iron upon which it is bedded.

The results of the trials of the 100-ton gun at Spezia showed that steel was the only material for armor plates of sufficient strength and lightness to withstand such heavy shots. But the old objection to steel armor, which brought it into disrepute in former years, still held good, namely, that it split on the impact of shot, and could be broken up and rendered useless by the continued firing of comparatively light guns. The Spezia experiments proved that steel plates, though cracking, still effectively stopped the huge projectiles, which would have passed through iron plates of the same thickness. A compound plate, designed by the English engineer Alexander Wilson, consisting of wrought-iron and steel combined together by fusion, was tested at Shoeburyness. A plate 9 inches thick, with the facing of steel 5 inches deep and the back of wrought-iron 4 inches thick, broke up a shot of 115 lbs. weight, with a striking velocity of 1,456 feet per second, into minute fragments; the shot's point penetrated to the depth of $3\frac{1}{2}$ inches, the steel portion of the plate splitting in 5 long radial cracks, while the iron part remained uninjured, a slight bulge, about $\frac{1}{4}$ of an inch, being noticed in the back. As long as the fusion of the steel and iron is perfect, the starting of the steel face does not impair the efficiency of the armor; but if the steel and iron should separate the armor would be worthless. Experiments with Mr. Wilson's plates showed that the junction was not the part where the plate cleaved apart most easily. Another kind of steel-plate armor, designed by Sir Joseph Whitworth, consists of a solid shield of soft steel, in which holes are drilled at intervals of a few inches, for the reception of plugs of hard steel of high quality, which are screwed into the holes in such close proximity that a shot cannot strike the plate without coming in contact with some of them. The hard steel plugs or pins are intended to break the shots, while the holes prevent the spread of star cracks. Other methods of combining iron and steel have been proposed, as a steel face fused in furrows on an iron back, so as to prevent cleavage, and an armor composed of alternate horizontal layers of each metal, to localize the cracks. Experiments were made more recently on the British ship *Nettle* at Portsmouth, on two compound plates of 9 inches thickness, composed of soft iron backs $4\frac{1}{2}$ inches thick and faces of equal thickness, one of low and one of harder steel. Three 250 lb. balls were sent against each plate with 50-lb. charges of powder. None of the shots penetrated, but both plates were badly cracked up. The fusion of the metals was found to be perfect. In the Spezia trials the targets, solid or variously compounded of chilled and wrought iron and

steel, proved utterly inadequate to withstand the 2,000-lb. Palliser shell, fired with 341 or 342 lbs. of powder. Each plate had 29½ inches of wood, and 22 of metal, besides an inner skin of iron 1½ inch thick, and the projectiles penetrated the 23½ inches of iron and 29½ inches of wood with ease. In the trials at Shoeburyness with the 80-ton gun in February, 1877, a charge of 370 lbs. of powder was used, and a 1,700-lb. projectile, against a target of 32 inches of iron and 15 inches of wood. The iron was disposed in 48-inch plates with 5 inches of teak sandwiched between, in three thicknesses. The Spezia projectile had 1,500 feet velocity per second at striking, equal to 31,200 foot-tons or 584 per inch of circumference of stored-up work, while the English shot had 1,496 feet striking velocity, and but 26,400 foot-tons or 525 per inch of circumference penetrating power. The shot buried itself in the Shoebury target. The base was broken, the left segment being found 7 inches and the rest 5 inches from the face, while the back of the target was bulged out 7 inches and cracked through; the point of the projectile remaining 6½ inches from the rear face. The shot was split in quarters by 4 longitudinal cracks. In May another trial was made with the 80-ton gun at Shoeburyness upon the same target. The chamber of the gun had been enlarged to 18 inches diameter, capable of receiving a charge of 425 lbs. of powder, the diameter of the bore being 16 inches; the weight of the shot was the same as before, 1,700 lbs. The shot penetrated to within 5 inches of the back of the target; the back was starred, and the point of the projectile was visible through the large fissures; the rear plate was bulged out nearly 14 inches. The projectile was badly broken up; the hole made in the face of the target was larger than at the other trial. A shell fired from a 38-ton gun in March exhibited the same behavior as that fired at the first trial of the 80-ton gun, breaking up into 4 longitudinal segments. A 39-ton breech-loader, made by Sir William Armstrong, which could be loaded and fired by one man, gave better results than the 38-ton gun at Shoeburyness, a 700-lb. projectile receiving a velocity of 1,615 feet per second with 160-lb. charges of pebble powder. The Armstrong gun had a 12-inch bore. The gas-check consisted of a steel cup resting against the breech-screw. The breech is closed by interlocking the threads in the breech-screw and in the worm of the gun, which pass each other by channels slotted in the threads. A turn of 1.6 of a revolution locks the breech. The rotation of the projectile was induced by the breech-cup. In the new Armstrong pieces and generally on the Continent of Europe the sharp twist in the breech which imparts the rotation is made of 1½ calibre. A second 80-ton Fraser gun was cast at Woolwich with a polygroove bore, having 32 grooves, for a projectile without studs, but provided with a copper gas-check at the base.

The first 100-ton gun was returned to Elswick, after the trials at Spezia, for the purpose of being chambered and having its bore enlarged. The Italian Government has commissioned Sir W. G. Armstrong & Company to manufacture 8 of these great guns, two more of which have been completed this year. The guns have a calibre of 17½ inches, and a powder chamber of 19½ inches. The greatest charge of powder fired at the Spezia trials was 397 lbs.; the projectile weighed 2,000 lbs. The new guns are to be fired with a charge of 470 lbs. and projectiles of 2,280 lbs. weight. The Fraser 80-ton gun was fired with a greatest powder charge of 425 lbs., and a projectile weighing 1,700 lbs., the bore of the gun being 16 and the powder chamber 18 inches. The guns furnished to the Italian Government are provided with the hydraulic gearing and carriages designed by George Rendel. These great guns are to be mounted on turret ships, similar to the British Inflexible, two of which, the Duilio and the Dandolo, are built; they are plated with steel armor, rolled in the foundry of M. Schneider, of Creuzot. The German Government have had a gun of 124 tons weight made by Krupp; it has a calibre of 46 centimetres, or 18½ inches, and is of steel, hooped in different parts.

Guns have been made recently of steel without blows, in the French arsenals, which prove equal in strength to the best forged steel cannon. A tube of steel, with a wall 1½ inch thick and a bore of 5 inches, cast in Terrenoire, was tested with charges of powder and ball nearly to the muzzle without rupturing; and all the different tests to which the metal was put exceeded the requirements for French ordnance. The French now make their heavy artillery of three materials: a body of cast-iron or cast-steel; a central tube, usually of hammered cast-steel; and the fretes, around the portion where the rending effect of the powder is felt, of puddled-steel, whose action is to permanently compress the interior parts.

Considerable improvements have been made in the manufacture of projectiles for heavy artillery. Shells made of steel without blows have been made in recent trials to penetrate plates of thickness equal to their diameter at an angle of 50°. The use of copper gas-checks around large projectiles is a great improvement; the retarding effect of the gas escaping by windage can be appreciated from the fact that it has been found to compress the central part of a shell to the extent of 4 per cent. of its diameter. In British arsenals shells are now cast of such perfect smoothness that it is unnecessary to turn off the outer surface, as was formerly done; this remarkable improvement in the process of casting steel, which should be made public property and applied in other foundries, was developed when it was found that the loss of the outer skin of the casting entailed a great sacrifice in the strength of the projectiles.

The Krupp factory at Essen has been very busy of late in making heavy field-guns for the Russian Government. Besides numerous heavy guns for coast batteries and for the fleet, which Herr Krupp has supplied, the Czar has ordered 1,200 field-pieces of two calibres, one of 8.7 centimetres, or 3.42 inches, and the other of 10.7 centimetres, or 4.2 inches. This latter gun is but little heavier than the present 24-pounder of the Russian army, whose weight is 12.2 cwt. The guns are 6 feet 11 inches in length, and are rifled with 24 parallel grooves, the length of the rifling being 5 feet 2 inches. They are all breech-loaders. The powder chambers are 11 inches in length and have a maximum diameter of 4.64 inches. A copper band encircles the projectile near its base, which cuts its way along the grooves as the shot is driven forward, rotating the ball and acting also as a gas-check. Another copper ring of less diameter placed in front fits to the bands of the bore and keeps the shot true to the axis of the gun. The weight of the loaded shell is 12.6 kilogrammes, or nearly 28 lbs.; the powder charge is 4.4 lbs. of large-grain powder. The velocity is a little greater than 1,300 feet per second at 50 yards from the muzzle, and 950 feet per second at 1,640 yards. The Russian army has always been noted for using heavy field-guns, and the cavalry is often equipped with traces to assist in moving them. The projectile of this formidable new piece is a shell with a bursting charge of 1 lb. of powder. It is a double-walled shell, the outer wall enveloping a peculiar arrangement of cast-iron rings; each ring is double, consisting of an outer one cast about a smaller one, after the latter has become cool; these rings are composed of many wedge-shaped pieces, those of the outer ring pointed inward and fitting into those of the inner ring. There are 14 of these double rings, each of which breaks up into 20 wedge-shaped pieces. The bursting charge lies along the axis of the shell. Although the velocity of the projectile is not great, the accuracy of the new gun at long ranges is remarkable.

A distance-calculator or range-finder, invented by the German general H. Berden, consists of two powerful telescopes, with their sights 1 metre. The telescopes are about $1\frac{1}{2}$ metre long; when they are brought to bear on a common object, its distance is indicated on a wheel connected with one of the glasses. The instrument is mounted on a carriage, and can be unlimbered and a distance found in 2 minutes, or in less time than any gun or battery can be made ready. Range-finders have lately been introduced into the British service; they are chiefly of Nolan's design, which is made of small enough compass to be attached to a saddle; Watkin's range-finder is also used to some extent. The Nolan instrument, when in use, is mounted on a tripod.

An improvement in the manufacture of dynamite, invented by G. Fahnehjelm, of Stock-

holm, Sweden, consists in the use of a highly porous kind of wood charcoal as the absorbent of the nitroglycerine, instead of the infusorial earth usually employed. The new explosive is called sebastin. In the explosion a partial combustion of the charcoal takes place, which is rendered more perfect by the admixture of nitrate of potassa. The explosive effects of the new compound are vastly greater than those of ordinary dynamite, on account of the large development of carbonic acid, and on account of the greater tension of the gases, caused by the heat produced. The inventor claims that the dynamic force of the stronger quality of sebastin is between three and four times greater than that of No. 1 dynamite, and only about one-seventh less than pure nitroglycerine. The strongest sebastin is composed of 78 per cent. by weight of nitroglycerine, 14 per cent. of charcoal, and 8 per cent. of nitrate of potassa; a second grade contains 68 per cent. of nitroglycerine, 12 parts of nitrate of potassa, and 20 of charcoal. The peculiar kind of charcoal used consists of young shoots or striplings of poplar, hazel, or alder, carbonized in an open fire; the coal is pulverized, though not too finely, in a wooden mortar. Its absorptive capacity is very different from that of common charcoal; it will absorb five or six times its weight of nitroglycerine without any danger of the separation of the oil.

A new explosive compound for heavy artillery, invented by Captain Charles A. L. Totten, of the United States Army, consists of large grains of gunpowder with a nucleus of gun-cotton. The inventor asserts that the combined powder and gun-cotton with lighter charges is $4\frac{1}{2}$ times more effective than gunpowder. The gun-cotton nucleus is spherical and about half an inch in diameter; the powder envelope has a quarter of an inch thickness. The combustion of large-grained powder is far from instantaneous, the grain burning in continuous layers toward the centre, the nucleus of the grains being blown out of the gun still burning after the projectile has been expelled. Captain Totten asserts that 60 per cent. of the powder is saved, and the tension of the gas on the projectile is greatly increased, by the employ of the gun-cotton nucleus, which explodes in a larger area, later than the powder, and exerts little strain on the gun.

OREGON. The leading products of industry in Oregon are wheat, wool, and salmon, and these are largely exported from the city of Portland. The total amount of wheat and flour shipped during the year, reckoning a barrel of flour equivalent to 2.7 cents of wheat, was 3,383,473 cents, or 5,639,121 bushels, valued at \$7,310,520. Far the largest portion of this was sent to Europe, mostly to British ports, though a considerable amount was shipped to San Francisco, and a small quantity to Honolulu, China, and British Columbia. The following is a comparative statement of the exports of wheat for four years:

YEARS.	Cents.	Values.
1874.....	2,812,581	\$4,549,992
1875.....	2,095,532	3,610,172
1876.....	2,894,722	4,405,029
1877.....	3,353,473	7,310,529

The wool product of the year, according to the best judgment, founded on careful estimates, was 5,000,000 pounds. The following is a comparative statement of the products of five years:

YEARS.	Pounds.	YEARS.	Pounds.
1873.....	2,000,000	1876.....	3,150,000
1874.....	2,250,000	1877.....	5,000,000
1875.....	2,500,000		

The salmon fisheries of the Columbia River constitute one of the most important interests of the State, the revenue derived therefrom amounting to about \$2,500,000 annually. The fish is largely canned for exportation, and during the year 380,692 cases were shipped to England and San Francisco, little more than one-third going to the former country. A fish-propagating company has been organized with a view to replenishing the waters of the State and keeping up the stock. Works have been established for hatching and distributing salmon in large numbers. Among the other products of the State shipped to San Francisco during the year were 146,050 cents of oats, 73,282 boxes of apples, 37,081 sacks of potatoes, 37,090 hides, 15,612 cases of canned beef, etc.

The question of improved means of transportation by railroad and water continues to occupy attention, but little progress was made during the year. The aid of the Federal Government for the construction of the Northern Pacific and the Portland, Dalles & Salt Lake Railroads, and the improvement of the Columbia River and the harbor of Portland, is generally favored by the people. The removal of the large bar at the mouth of the Columbia is especially demanded. The Portland Board of Trade and other organizations concerned in commerce and transportation have given expression to the general sentiment in favor of government aid for railroad and navigation improvements.

The canal around the cascades of the Columbia River, for which Congress has made an appropriation of \$90,000, has been surveyed, and it is expected that work will begin at an early day. The dimensions will be as follows:

	Feet.
Total length, including breakwater.....	7,200
Width in cutting at surface at low water.....	53
Width in cutting at bottom at low water.....	50
Depth at high water over mitre sill.....	63
Depth at low water over mitre sill.....	8

The total fall from the upper to the lower landing, a distance of about $5\frac{3}{4}$ miles, is $38\frac{4}{5}$ feet; 26 feet of this is in the first $1\frac{1}{4}$ mile, the rest being distributed over a distance of $4\frac{1}{2}$ miles. The fall of 26 feet at low water will be overcome by two locks, of lifts of 12 and 14 feet respectively; these locks will be 300 feet long by 50 feet wide, the walls of solid masonry, the lower lock 72 feet high.

The State University, organized in 1876, occupied the building at Eugene which was erected by the Union University Association of that place, and began its first term on the 16th of October of that year. J. W. Johnson was chosen by the regents as president and professor of the ancient classics, Mark Bailey professor of mathematics, Thomas Condon professor of geology and natural history, and Mrs. Mary P. Spiller principal of the preparatory department, with Mary E. Stone as an assistant. During the academic year there was an attendance of 56 males and 24 females in the collegiate department, and 32 males and 42 females in the preparatory department. The expenditures amounted to \$9,336.25, which exceeded the income by \$2,625.25. The basis of the university fund is a grant of 46,080 acres of public lands, made 20 years ago by Congress; but of these only 17,946.70 acres have been sold thus far, and those at a very poor advantage, realizing \$38,604.90. At present the fund amounts to \$76,263.71, but \$10,625.40 of this is interest in arrears, and \$18,494.75 is in suit for collection upon notes of doubtful value. The principal of the fund which can be relied on as reasonably secure amounts to about \$55,000. The building at Eugene, which was erected by an association of the citizens of that place, is not entirely finished, and only the lower part is furnished. Including a broad portico at each end, it is 112 feet long, and its breadth is 57 feet. It consists of a basement and three stories, and is surmounted by a Mansard roof. It is substantially built of brick, and has a commanding site consisting of 18 acres of land. The regents recommend that the State take steps to enlarge the grounds to fifty acres, complete the furnishing of the building, and provide for a more substantial income for the institution.

The number of prisoners in the State Penitentiary at the end of the year was 124. During the preceding 12 months 82 had been received and 56 discharged.

The valuation of property for purposes of taxation in the city of Portland for the year was \$9,622,750. The city debt is \$76,500, the receipts and expenditures of the year \$112,760.24.

In political matters there has been no interest or activity, as no general election was held. An investigation of charges of bribery, in connection with the election of Governor Grover to the United States Senate, was carried on early in the year, but no report of the result can be made until the meeting of the Legislature in 1878. The circumstances connected with the appointment of presidential electors in 1876 and the giving of a certificate of election to E. A. Cronin, one of the candidates receiving only a minority of votes, were investigated by a committee of the United States, by whom a report was made in February. As conclusions of law the committee found: "First, conceding Watts to have been ineligible, this

fact could not under any possible state of circumstances operate to elect Cronin, a minority candidate; that Governor Grover acted without his jurisdiction, and his action was *ultra vires* and void; that the certificate of the Governor is no part of the appointment of an elector, being simply evidence of an appointment, but not a conclusive one, and may be inquired into by the counting tribunal and disregarded or set aside, either in whole or in part, for mistake and fraud; that the action of the Secretary of State in canvassing the vote for electors was conclusive as to the persons appointed electors, and cannot be questioned either by the Governor in issuing a certificate or by any tribunal; that the record made to the President of the Senate through the certificates of the College of Electors represented by Odell, Cartwright, and Watts, the persons declared by the Secretary of State to have received the highest number of votes, is conclusive upon the point as to whether there was any vacancy in the college, and as to how and by whom such vacancy was filled, and cannot now be questioned by the President of the Senate, either House of Congress, or the Electoral Tribunal; that the resignation of Watts as an elector having created a vacancy in the office of elector, it was legally filled by Watts's reelection; that conceding Cronin to have been an elector (which we deny), his refusal to exhibit or deliver to the College of Electors his certificate from the Governor, and his withdrawing and organizing a college of his own, was upon his part such a 'refusal to act' within the meaning of the statute of Oregon as to occasion a vacancy in the office which Odell and Cartwright could under the statutes of Oregon legally fill, and which it was their duty to fill."

Fossil bones of the elephant, camel, horse, elk, and smaller quadrupeds, and numerous remains of birds and fishes, have been discovered in mounds of lava, a few miles to the northwest of the Fossil Lakes in Lake County. Little study has as yet been given to the deposits, but they are presumed to have considerable scientific interest.

ORTON, JAMES, an American naturalist, died while crossing Lake Titicaca, *en route* for Puno, on September 24th. He was born at Seneca Falls, N. Y., April 21, 1830, and graduated at Williams College in 1855, at the Andover Theological Seminary in 1858, and, after traveling in Europe and the East, was ordained a Congregational minister in 1860. In 1866 he became instructor in the natural sciences in Rochester University, and in 1867 led an expedition from Williams College across South America, by Quito, the Napo, and the Amazon, discovering the first fossils found in the Amazon Valley. Since 1869 he had been professor of natural history in Vassar College. In 1873 he made a second journey across South America, from Pará up the Amazon to Lima and Lake Titicaca. He published "The Miner's

Guide and Metallurgist's Directory" (New York, 1849); "The Proverbialist and Poet" (Philadelphia, 1852); "The Andes and the Amazon" (New York, 1870); "Underground Treasures: how and where to find them" (Hartford, 1872); "The Liberal Education of Women" (New York, 1873); and "Comparative Zoölogy" (1875).

OSMAN PASHA, the Turkish commander at Plevna, was born about 1830. When his name first became prominent, in 1877, by the successful defense of Plevna, his identity was for a time in doubt. It was stated that he was Marshal Bazaine, the defender of Metz, then that he was a Prussian renegade, and finally some American papers stated that he was an American soldier of fortune, by the name of Clay Crawford. These stories were all refuted by the Turkish minister to the United States. According to this statement he is a Turk by race, by birth, and education. He received his early education under the direction of his brother, Hussein Effendi, for many years professor of Arabic in the Preparatory School of Constantinople. He afterward entered the Military Academy, and completed his studies in 1853, just in time to take part in the Crimean War. He was appointed on the staff and sent to Shumla. From that time little is known of him until the Cretan insurrection, during which he was promoted to a colonelcy for his bravery. At the outbreak of the Serbian war he was chief of staff of the fourth Turkish army corps, and was at once assigned to the command of the Widin division, with which he captured Saitchar. After the conclusion of peace he was raised to the rank of Mushir (Field-Marshal). It is also stated that at all times, and under every circumstance, he succeeded in obtaining the esteem and approval of his superiors, and that he is well known for coolness and military capacities. For an account of his career during the war of 1877, see TURKEY.

OWEN, ROBERT DALE, an American author, eldest son of Robert Owen, an English social reformer, died at Lake George, N. Y., June 24th. He was born in Glasgow, Scotland, November 7, 1801, and his early years were spent at New Lanark, under the care of a private tutor. In 1818 he was sent to Fellenberg's school at Hofwyl, Switzerland, where he remained upward of three years. He accompanied his father to the United States, in November, 1823, lived for some time at New Harmony, Ind., and in the autumn of 1828 commenced at New York, in partnership with Miss Frances Wright, a weekly paper called *The Free Inquirer*, which was continued for three years. He then removed to New Harmony, where he was three times (1835-'38) elected a member of the Indiana Legislature. In 1843 and 1845 he was elected to Congress as a Democrat, serving till 1847. He took a leading part in settling the northwest boundary dispute. In 1845 he introduced the bill organ-

izing the Smithsonian Institution, and in 1846 became one of its regents and chairman of its building committee. In 1850 he was elected a member of the Convention which amended the Constitution of Indiana, and became chairman of its revision committee. In that Convention, and afterward in the Legislature, he introduced measures securing to the women of Indiana independent rights of property. In 1853 he was appointed *chargé d'affaires* at Naples, and in 1855 minister, remaining there till 1858. In the spring of 1860 he had a discussion on divorce with Horace Greeley, which appeared originally in the *Tribune*, and afterward in a pamphlet which obtained a circulation of 60,000 copies. During the civil war he published various letters to members of the cabinet, and to the President, advocating the policy of emancipating the slaves. In 1863 he published an address to the citizens of Indiana, showing the disastrous consequences that would follow from the success of the effort then making by certain politicians to reconstruct the Union with New England left out. Of this address the Union League of New York published 50,-

000 copies, and the Philadelphia Union League 25,000 copies. He was for many years a prominent believer in the phenomena called spiritualism. His principal works are: "An Outline of the System of Education at New Lanark" (Glasgow, 1824); "Moral Physiology" (New York, 1831); "Discussion with Origen Bachelor on the Personality of God and the Authenticity of the Bible" (1832); "Pocahontas," an historical drama (1837); "Hints on Public Architecture," with 113 illustrations (1849); "Footfalls on the Boundary of Another World" (Philadelphia, 1860); "The Wrong of Slavery, and the Right of Emancipation" (1864); "Beyond the Breakers," a novel (1870); "The Debatable Land between this World and the Next" (New York, 1872); and "Threading my Way," being 27 years of autobiography (1874). His "Footfalls" treats of the spontaneous phenomena of spiritualism, and "The Debatable Land" opens with an address to the Protestant clergy on the present attitude of the religious world, while the body of the work sets forth the evidences of spiritual phenomena in general.

P

PECCI, JOACHIM, was born at Carpineto, in the Diocese of Anagni, in Italy, on March 2, 1810, and is descended from an ancient and illustrious house. As soon as he was of the proper age, he was sent to the Roman College, where he completed the usual course of studies, and entered the Academy of Ecclesiastical Nobles, and pursued the studies of law and theology until he entered the priesthood. On March 16, 1837, he was appointed, by Pope Gregory XVI., domestic prelate and private referendary, and received the title of Protonotary Apostolic. Subsequently he was sent by the same Pope as the Delegate to direct the government of Benevento. This was the smallest of the Papal districts ruled by a Delegate, containing 50 square miles, and about 24,000 inhabitants. The customs service there was paralyzed, and travel, except by the contrabandists, attended with the greatest danger. By his firmness and decision the Delegate soon restored complete order. He was soon removed to the charge of Spoleto, a district 20 times larger; thence he was afterward advanced to be Delegate at Perugia. In 1843, he was preconized Archbishop of Damietta, Egypt, and sent as Apostolic Nuncio to the King of Belgium. His health becoming affected, he solicited a recall from Belgium. The Pope on January 19, 1846, preconized him Bishop of Perugia, transferring him from the see of Damietta, and on December 9, 1853, he was created by Pius IX. a Cardinal of the order of Priests, and assigned to the Congregations of the Council of Immunity, of Rites, and of Regular Discipline. On February 20th, the second day of the Conclave,

after a duration of 40 hours, he was, on the third ballot, elected Pope, having received the vote of 61 Cardinals.

PEDRO II., DE ALCANTARA (John Charles Leopold Salvador Bibiano Francis Xavier de Paula Leocadio Michael Gabriel Raphael Gonzaga), Emperor of Brazil.* His Majesty, with the Empress and suite, returned to Petropolis, near Rio de Janeiro, on September 24, 1877, after an absence of nearly eighteen months spent in visiting the United States, Europe, the Holy Land, Egypt, etc. Immediately after his return, important reforms were projected in the various branches of the Government, one of the most noteworthy being the calling of the Liberal party to power, on January 5, 1878. Senator Sinimbu was appointed Minister of Agriculture and President of the new cabinet. Reduction of expense is the order of the day; and of the success likely to be achieved in this direction, an idea may be formed from the fact that, instead of a deficit of \$4,500,000 in the new budget, as proposed by the Conservatives, there will be a surplus of \$1,500,000. It may be mentioned in this connection that the new iron-clad, built in England at such an enormous cost for the Brazilian Government, and likely to prove as useless as expensive, was sold to the British for £600,000.

PENNSYLVANIA. The Legislature of this State opened its session of 1877 at the beginning of January. Soon after their first meeting the two Houses passed the following joint preambles and resolutions concerning a peace-

* For biographical notice, see ANNUAL CYCLOPEDIA for 1876, p. 615.

able adjustment of the difficulties respecting the counting of the electoral votes for President and Vice-President of the United States:

Whereas, The tranquillity of the country has been disturbed and its business prosperity imperiled by the extraordinary difficulty of ascertaining in the nearly balanced vote that has been the result of the late elections for the election of President and Vice-President;

And whereas, To allay any excitement that may endanger the public peace and precipitate upon the people the calamities of civil war, from which they have been lately delivered, it seems fit and proper that the Legislatures of the States, whose prerogatives and vital interests are involved in the issue, should declare and emphasize those principles embodied in the National Constitution by which the decision of the impending question can alone be safely and lawfully reached:

Resolved by the Senate (the House of Representatives concurring), That the will of the people in electing a President and Vice-President of the United States can only be expressed in the manner prescribed by the Constitution, and the persons having the majority of the votes of the electors appointed by the States of the Union in the manner prescribed by the Legislatures thereof must be by the force of the Constitution and laws declared President and Vice-President respectively, and must be on the 4th of March inaugurated, and thereafter duly respected as such.

2. That all factious opposition, and all threats of violence designed or intended to prevent or imperil the declaration and confirmation of the constitutional election of the President and Vice-President, are unpatriotic in spirit, dangerous and revolutionary in tendency, and merit and should receive the condemnation of an outraged and indignant people.

3. That the lists which the duly appointed electors of the States respectively are required by the Constitution of the United States to make of the persons voted for as President and Vice-President, and the number of votes for each, and which are to be by the electors certified and transmitted by them, sealed, to

the President of the Senate, and which certificates are to be opened by him in the presence of the two Houses of Congress, and counted, are the constitutional evidence of the votes cast for President and Vice-President.

4. That under the Constitution the persons having the majority of all the votes actually cast by the duly appointed electors of the States, respectively, are by force of the Constitution and laws the President and Vice-President from and after the beginning of their term of office, and any attempt to defeat the election of a President or of a Vice-President by either House of Congress upon the pretext that certain persons duly certified to be the electors of any State were not such electors, or by throwing out or refusing to count the legally certified votes of any State, or by impeding the counting of the electoral vote to ascertain the result, or for any other cause than that provided for in the Constitution when no person has a majority of votes of the electors duly appointed, will be a proceeding fraught with danger to the public peace, perilous to the stability of our Government, and exposing our nation to contempt in the general opinion of mankind.

Resolved, That our Senators in Congress be instructed and our Representatives requested to let their action on this question conform to the spirit of this declaration.

Resolved, That the Governor be requested to have a copy of this preamble and resolutions forwarded to each of our Senators and Representatives in Congress as early as convenient.

The foregoing preamble and resolutions have passed the Legislature.

THOMAS B. COCHRAN, Clerk of the Senate.

WILLIAM C. SHURLOCK,

Clerk of the House of Representatives.

One of the two United States Senators from Pennsylvania, Simon Cameron, having vacated his seat by resignation, a successor was chosen by the Legislature. In the Senate, James Donald Cameron received 31 votes; Andrew H. Dill, 7 votes; Heister Clymer, 1 vote.

Obverse.

Reverse.

STATE SEAL OF PENNSYLVANIA.

In the House of Representatives Mr. Cameron had 115 votes; Mr. Dill, 75 votes; Andrew G. Curtin, 1 vote; John Jackson, 1 vote. On the 21st, both Houses met in joint convention to finish the election, and declared "James Donald Cameron duly elected."

The Legislature closed its session on the 23d of March.

The Democratic members of the House of Representatives held a meeting among themselves soon after the adjournment, when they adopted the following preamble and resolution:

Whereas, Speaker of the House Myer, and members of the Republican party of the same, did during the session of the Legislature trample upon the rights of the minority of the House, using means

unparliamentary and unconstitutional to carry party measures; and whereas the Speaker would not recognize the minority; and whereas, when such unparliamentary and unconstitutional measures were to be adopted, he, the Speaker, would attempt to shirk the responsibility by calling to the chair such a Republican member as would carry out their unprincipled measures: therefore, be it

Resolved, That we stamp with our unqualified condemnation the actions of the Speaker and the members of the Republican party of the House of Representatives in forcing through, out of order, such unparliamentary, unconstitutional, and partisan measures.

B. RUSH JACKSON,

H. B. FISH,

D. L. SHERWOOD,

Committee on Resolutions.

During the session of 1877, above 800 bills were introduced in the Pennsylvania Legislature, but scarcely 100 of them passed.

The finances of the State appear to be in a satisfactory condition. The aggregate receipts at the Treasury from all sources, ordinary and extraordinary, during the fiscal year ending November 30, 1877, amounted to \$15,644,500.06—made up by \$5,778,874.29 derived from ordinary sources; \$984,997.62 balance in Treasury on December 1, 1876; \$609,544.38 received from insurance and transportation companies and Government claims, and \$8,271,083.77 proceeds from the sale of bonds issued for the eight-million loan at 5 per cent. per annum, authorized by the act of March 20, 1877. The same year's payments at the Treasury, including \$5,447,258.81 for ordinary disbursements, and \$8,035,194.38 amount of loans redeemed, were \$13,482,453.19; leaving a balance in the Treasury, on December 1, 1877, of \$2,162,046.87.

The estimated ordinary revenue of the State for the year ending November 30, 1878, is \$5,703,300; and the ordinary expenditure, \$6,392,000.

The most abundant source of public revenue in Pennsylvania is the tax on corporation stocks. In 1877 it yielded \$2,086,776.23, which was above \$60,000 less than in 1876. This decrease is ascribed to the working of the act passed reducing the tax on corporation stocks, and assessing a tax on their gross receipts.

The entire nominal debt of the State, on December 1, 1877, was \$22,913,814.31, of which \$820,754.31 bears no interest. Her assets at the same date consisted of the following items: \$1,705,014.87 balance in the sinking fund; \$4,636,413.66 bonds of the Pennsylvania Railroad Company, representing an indebtedness to that amount on January 31, 1878; and \$3,200,000 bonds of the Alleghany Valley Railroad Company; making together \$9,501,427.93. This being deducted from the above stated sum of \$22,913,814.31, the actual State debt unprovided for on December 1, 1877, would be \$13,352,386.38.

The debt of the city of Philadelphia on the 1st of June, 1877, was \$61,394,861.70.

The aggregate value of taxable real estate in

Pennsylvania for 1877 was \$1,648,490,669. In 1876 it amounted to \$1,671,617,691. The decrease of \$23,127,022 within the year is attributed to the general depression in business still continuing. The yearly amounts just stated do not represent the valuation of the property comprised within the corporate limits of the city of Scranton, in Luzerne County. By the provisions of a special law, the property of Scranton is not to be included in the returns of the Revenue Commissioners of that county. The value of property exempt from taxation, as reported by the Revenue Commissioners, of 40 among the 66 counties in the State, amounts to \$91,053,096. From the remaining 26 counties no reports on this species of property were received.

The entire value of personal property subject to taxation for State purposes amounts to \$159,382,242; and the tax assessed on it is \$574,817.86. This valuation and assessment were made by the Board of Revenue Commissioners in 1875, and are to remain the same till their next triennial meeting in 1878.

The condition and extent of public instruction in Pennsylvania are exhibited in the following summary of its school statistics for the year 1877: The whole number of school districts in the State is 2,145; of schools, 17,783; of graded schools, 6,290; of pupils registered, 907,412; attending schools, 575,597; percentage of attendance upon the whole number registered, 74. The average length of school term, in months, was 6.77; and the average cost of tuition per month for each pupil, 89 cents. The entire number of teachers in all the schools was 20,652, at an average monthly salary of \$37 and \$38 for male, and \$30 and \$32 for female teachers. The total cost of tuition for the year was \$4,817,563.35; of building, purchasing, and renting school-houses, \$1,276,578.55; of fuel, contingencies, debt, and interest paid, \$2,389,237.54; sundries, \$100,000; making the expenditures of all kinds for school purposes in 1877 \$8,583,379.44. The State appropriation for schools in the year was \$1,000,000. The estimated value of school property in the State is \$25,460,761.75.

For the several permanent institutions of charity in the State the sums paid out of the public treasury, in 1877, amounted to \$722,597.33; of which \$105 were for the Pennsylvania Institution for the Deaf and Dumb at Philadelphia, and \$12,000 for a like institution at Pittsburgh; \$51,750 for the Pennsylvania Institution for the Blind at Philadelphia, besides \$3,750 for the Working Home for Blind Men, and \$2,000 for the Industrial Home for Blind Women, in the same city; \$31,846.12 for the Training School for Feeble-minded Children; \$143,000 for the Pennsylvania Hospital for the Insane at Warren; \$99,000 for that at Danville, and \$31,750 for the Pennsylvania State Lunatic Hospital at Harrisburg.

By an act passed at the session of January, 1877, the Legislature authorized the appoint-

the year, \$125,789,841.57. The entire number of accidents, resulting in death or serious bodily injury, which occurred on all the said roads during the year 1876, was 1,790, made up as follows: Killed—passengers, 32; employés, 195; others, 362; in all, 589. Injured—passengers, 120; employés, 685; others, 396; in all, 1,201.

The annual State election was for the choice of a State Treasurer, Auditor-General, and an Associate Justice of the Supreme Court.

The Democrats met at Harrisburg on August 22d. After repeated ballots, the nominations resulted as follows: For State Treasurer, Amos C. Noyes, of Clinton County; for Auditor-General, William P. Schell, of Bedford County; for Judge of the Supreme Court, John Trunkey, of Venango County. The following platform was read to the Convention by the chairman of the Committee on Resolutions:

The Democratic party of Pennsylvania, by its delegates in convention assembled, does declare:

1. That the induction of Rutherford B. Hayes into the office of President, notwithstanding the election of Samuel J. Tilden thereto, was a high crime against free government, which has not been condoned and will not be forgotten. The same spirit of patriotism which forbore contest upon the first offense, will resist and punish any attempt at a second.

2. That the immediate happy effect of the application by the Federal Administration of the Democratic policy of non-intervention in the internal affairs of the Southern States amply vindicates our frequent protests against previous violations of the reserved rights of the several States to exercise all power not delegated to the General Government by express constitutional provision.

3. That the purpose to reform the civil service which has been proclaimed by the present Administration is, like its adopted "Southern policy," a confession of the failure of radicalism, and a just tribute to the Democracy, which has long and earnestly demanded the overthrow and punishment of corrupt officials.

4. That capital combined in corporations has been too highly favored by both State and Federal legislation, and its demands for large returns are inconsistent with the depressed condition of the laboring and business interests of the country. We oppose further enactments for its special benefit at the expense of other interests. Labor and capital should have no cause of antagonism, and they should be left free to adjust their own relations. The right to contract freely exists for both parties. That the deprivation of employment of many thousands of industrious citizens and laborers, and the deep distress of themselves and their families, enlist our hearty sympathies, and we declare in the language of Jefferson, the founder of our party, that "a wise and frugal government which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned, is the hope of the people in adversity and their security in prosperity; and that under such a government, which it is the mission of the Democracy to maintain and perpetuate, any resort to force or to violation of law, or invasion of the rights of persons or of property, to redress grievances, is needless and at war with free institutions, under which the only rightful remedy is by frequently recurring elections of representatives of the people in State Legislatures and in the Federal Congress, to accomplish the will of the majority, which should be accepted as the voice of all.

5. That we accept the admonition of Jackson, in saying, "Considering standing armies as dangerous to free governments in time of peace, I shall not seek to enlarge our present establishment, nor disregard the salutary lesson of political experience which teaches that the military should be held subordinate to the civil power," and accordingly the increase of the Federal army, and any attempt to employ it as a partisan agent of Federal authority, or for interference with the sovereign rights of the States, will receive the continued earnest opposition of the Democracy of Pennsylvania.

6. That "many of our rich men have not been content with equal protection and equal benefits, but have besought us to make them richer by act of Congress," and "by attempting to gratify their desires, we have, in the results of our legislation, arrayed section against section, interest against interest, and man against man in fearful commotion," and, therefore, the grant, by the Legislatures of the States or by Congress, of exclusive privileges, and the establishment of odious monopolies under the pretext of public benefit, or of justice to sections of the country, are direct assaults upon the equal rights of the people; and as these monopolies have been contrived to enrich the few while a large number of the people are reduced to want, the Democracy of Pennsylvania protests against subsidies, land grants, loans of the public credit, and appropriations of the people's money to any corporation, as legalized plunder of the tax-producing industries of the country.

7. That we look with alarm and apprehension upon the pretensions of the great transportation companies to be above the fundamental law of this Commonwealth, which governs all else within our borders; and until they accept the Constitution of 1873 in good faith, they should remain objects of the utmost vigilance and jealousy by both Legislature and people.

Resolved, That we hereby reaffirm and adopt the financial resolutions of the National Democratic platform, adopted at St. Louis in 1876.

Upon the conclusion of the reading of this platform, a delegate offered, as an amendment to it, two resolutions favoring silver coin and greenbacks being made legal tenders fully equal with gold, and paying the redeemable United States bonds in legal-tender money, with other details. The offer of these resolutions was opposed, and the president ruled it out of order. The report of the Committee on Resolutions was then agreed to.

The Republicans assembled at Harrisburg on the 5th of September, when the nomination of candidates for the several offices resulted as follows: For Judge of the Supreme Court, James B. Sterrett; for State Treasurer, William B. Hart; for Auditor-General, John A. M. Passmore.

The platform adopted by the Convention was as follows:

1. While we recognize and respect the differences of opinion existing among us as to the course pursued by President Hayes toward the South, we are in hearty accord in honoring the patriotic motives which have guided him, and in hoping that the results of his policy will be peace, good-will, and the complete recognition of the equal rights of all men in every section of the country; and to the efforts of his administration to carry into effect the principles of the platform upon which he was elected, we pledge our hearty and cordial support.

2. The Electoral Commission having been created at the urgent solicitation of the Democratic party,

and after the oft-repeated declarations of its leaders in both Houses of Congress that no faction could cavil at its decisions, we witness, with profound astonishment, the assaults of that party upon the august tribunal of its own creation, because its decisions disappointed their expectations of official patronage. Such assaults, so far as they seek to impair the confidence of the people in the just title of the President to his high office, are equally childish and foolish, but may become extremely mischievous in assisting to diminish the popular respect for the decisions of lawful tribunals.

3. We respectfully, but earnestly, entreat all members of the national and State Legislatures to assist the return of prosperity to this great country by adopting such measures to that end as are in their power; to devote less attention to partisan strife, and more attention to the business interests of the country, in order that wise and proper laws may be passed to lessen the burdens of labor and increase its rewards; to encourage and restore to activity legitimate industrial enterprises, and to enable the country to find a foreign market for its surplus products and manufactures.

4. That the Republican party, in passing the Homestead Law, inaugurated and is firmly committed to the policy that the public lands belong to the people and should be sacredly reserved to actual settlers, free of cost to whoever will occupy them in good faith, and that all laws permitting the acquisition of more than 160 acres of such public land, by any one person, should be repealed.

5. That we are opposed to the policy, heretofore prevailing, of renewing patents by act of Congress, and we favor such a revision of the patent laws as will hereafter prevent the renewal of any patent.

6. That the long and successful existence under the laws of Congress of the double coin standard warrants us in demanding an early repeal of the legislation which demonetized silver and established an almost exclusive gold standard; and we therefore favor a return to the free use and unrestricted coinage of the dollar of 1793, and its restoration to the position it held as a legal tender during the eighty years of our national existence, thus preserving the equality of the commercial value of the silver dollar with the gold dollar, keeping both in circulation.

7. That the administration of Governor Hartranft calls for our warmest approbation. He has established a State policy which has justly endeared him to the people of this Commonwealth, and has amply justified the confidence placed in him. The steady reduction of the State debt during his administration, and the successful refunding of a large portion of the debt at a lower rate of interest, are the best possible evidences that the State has been well and economically governed, and that the people have everything to hope from a continuance of the Republican party in power.

8. We are in favor of law and against lawlessness and anarchy, with all their attendant horrors and crimes. Equal rights in making laws impose equal duties in obeying them when made; and we tender our hearty thanks to Governor Hartranft and the officers and soldiers of his command for the prompt and, we hope, the effectual suppression of the lawless disturbances which recently occurred in this State.

9. That we hold in equal respect the right of capital to control its investments, and of labor to determine the value of its service; that we deprecate any assertion by violence of the rights of either, and we assert it as the duty of all citizens to hold their respective rights within the just limitations of the law, and that any attempt to coerce either by unlawful means should be promptly repressed by such lawful authority as exigency demands.

10. That the Democratic party of Pennsylvania is

afraid to express a decided opinion on any question of present political importance, except in its open declaration of free trade, and that it still cherishes the delusion that expressions of political opinions ought either to mean anything or nothing, as may best tend to secure the restoration of that party to the control of the offices and the treasury of the Commonwealth. We are confident that the intelligent citizens of this great State will continue to intrust the conduct of its affairs to the party which has been zealous in the maintenance of its credit, vigilant in defense of its honor, prompt in the enforcement of its laws, and whose past administration of its Government has been honest and competent, and fearlessly faithful to the best interests of all men, of whatever class, race, or condition, within her borders.

11. That we renew our oft-repeated declarations in favor of adequate protection to American industry, and now that manufacturers are languishing, and workingmen are out of employment, the common interest demands a still closer adherence to the protective policy which the Republicans of Pennsylvania have always sustained. The country has never yet prospered under free trade, as it never can or will; and as all tariffs are levied primarily for revenue, it would be a bad government which is not just enough to its people to arrange its revenue imposts so as to encourage and build up the growth of home manufacture.

12. That we favor such legislation in State affairs as will, first, substitute adequate salaries for fees as a compensation for county officers; second, secure our municipalities from the dangers that attend the existing facilities for contracting debt; and, third, provide adequate guards against a recurrence of the frequent and large losses to which the people who do business with banks and banking institutions have heretofore been subject.

The Workingmen and Labor Reformers' Association, under the title of "The United Labor Party," held their convention at Harrisburg on September 10th, about 30 delegates from various localities being present. The nominations made by this party were as follows: For Judge of the Supreme Court, William L. Elwell, of Columbia County, who subsequently declined; for Auditor-General, John M. Davis, of Pittsburgh; for State Treasurer, James L. Wright, of Philadelphia.

The following platform was adopted:

Whereas, After an experience of over one hundred years under a Government intended by its founders to advance the interests of humanity—as is so clearly set forth in the Declaration of Independence, we as a people find ourselves in worse bondage and suffering under greater ills in this the first year of the second century of the American Republic than our forefathers labored under, when, through oppression, they were compelled to declare their independence and throw off the yoke of tyranny.

And whereas, Believing, as they did, that a government should be of the people, for the people, and to be administered for all the people, and that, when a government or a system becomes oppressive to the majority of the people, they have a natural right to so change and alter it as to them may seem proper, to effect the safety and happiness of the majority. These truths we hold to be self-evident.

And whereas, Society having by mutual consent agreed to be governed by laws, and as the laws, as now constituted, are unjust in an eminent degree, and in many respects antagonistic to the best interests of mankind, as the results so far so clearly prove: it therefore becomes the duty as well as the right of the people to so alter, amend, or abolish

such laws as to them may seem proper, keeping in view the fact that the fundamental principle of all law is justice, giving to every man the right to do right, and to no man the right to do wrong.

And whereas, Knowing, as we do, that the natural resources of the country are ample for the support of all the inhabitants thereof, as well as millions yet unborn, yet we have, through gross mismanagement in the public affairs, unwise legislation, and culpable mismanagement in the financial affairs of the nation, as well as a false and defective system of production and distribution, reduced thousands of our people to starvation, and millions more are helplessly drifting in the same direction; feeling that we have arrived at that point when this excessive taxation and usurious interest which has reduced us to this condition can no longer be borne, and it behooves us as men to change a system which has brought about such dire results, and assert the rights to which nature and nature's God entitle us and our children—the right to labor, and the right to enjoy all the fruits of our labor; feeling that the question we have to decide is whether we will return into the most abject slavery, or assert our rights as men, guaranteed us by the laws of God and the Constitution of the United States, the principles of which we ask you to help us carry out, adopting the following platform:

1. Abolition of the national banking system, the unconditional repeal of the specie resumption act of January 20, 1875, and the issue of currency by the Government, based upon the wealth of the whole nation.

2. Eight hours a normal day's work, and legal punishment for all violators.

3. Sanitary inspections of all conditions of labor, means of subsistence and dwellings included.

4. The enactment of wholesome and permanent tariff laws for the encouragement and protection of American industries against ruinous competition with foreign labor and capital.

5. The establishment of bureaus of labor statistics in all States, as well as by the National Government; the officers of these bureaus to be taken from the ranks of the labor organizations, and elected by them.

6. The equalization of taxes, by taxing every individual and corporation pro rata regulated by his or her income; also taxing real estate and all other taxable property of whatever character equally—excepting only public property.

7. Abolishing completely the contract system in all municipal, State, and national work, thus removing the cause of great fraud.

8. Prohibiting the employment of prison labor by private employers, thus preventing convict labor from injuring the honest workmen.

9. Enacting strict laws, making employers responsible for all injuries to their employes, through the carelessness or neglect of the employer.

10. The public lands to be reserved for actual settlers, and that a fund be created by the General Government from which a loan could be obtained by any head of family wishing to settle thereon, who is a citizen of the United States, or has declared his intentions to become such, to enable him to cultivate and improve said lands.

11. That courts of arbitration be established for the purpose of settling all disputes between capital and labor, or employers and employes, in districts established by the Legislature; these courts to be composed of three persons; one to be appointed by each of the contestants, and one by the court of the district: all persons composing said court to be disinterested parties, as all strikes are equally disastrous to both capital and labor.

12. Compulsory education, and prohibitory laws with penalties attached against the employment of children under fourteen years of age in industrial establishments or workshops.

13. The abolition of all conspiracy laws.

14. Gratuitous education in all educational institutions; candidates for the higher course of studies in colleges or academies for the profession to be selected for merit by competitive examination, irrespective of station or condition of life.

15. That we recommend the principles of coöperation, distributive and productive, as eminently calculated to enhance and improve the condition of the people socially, morally, and pecuniarily.

The following resolution was adopted by this convention, in regard to its nominees' connections with other parties:

Resolved, That all persons nominated by this party for any office shall be required to sever their connection with either of the old political parties, and pledge themselves to the support of our principles.

The Greenback party convened at Williamsport on the 19th of September. Its candidates for the several offices were all nominated by acclamation, as follows: For Judge of the Supreme Court, Benjamin S. Bentley, of Lycoming County; for Auditor-General, J. E. Emerson, of Beaver County; for State Treasurer, James L. Wright, of Philadelphia.

The platform adopted is, in substance, as follows:

That, as a remedy for existing evils, a further contraction of the currency should be stopped at once, and such currency made a full legal tender; silver remonetized; and the so-called Resumption Act of 1875 forthwith repealed. That the property of the Federal-bond holders should be taxed as well as that of the farmer, the manufacturer, the business-man, and the mechanic. That the whole system of bank-note currency should be abolished, and gold and silver supplemented by full legal-tender paper, except where by the terms of the contract it is otherwise provided. That the legal tender substituted therefor should be receivable for all dues public and private, and sufficient for the wants of business; and, in order to give such legal-tender paper a uniform value, it should be made interchangeable with bonds of the Government bearing a low rate of interest, and payable at maturity in coin or legal-tender paper at the option of the holder, but always interchangeable with full legal-tender money. That protective duties should be imposed on all articles for which there is raw material and skill to manufacture. That Congress should adopt a system giving encouragement to American steamships; also pass a law by which the surplus earnings of the people may be deposited under the guarantee of the General Government. That, as between employed capital and labor there is mutual dependence, all disputes about wages, working-time, etc., should be settled by arbitration. That the payment of wages should be made in money, and not in store-orders. That the Common School system should be supplemented by a system of Industrial Schools. That the party denounces the claim made by the banks for exemption from taxation. That the Government should pay no greater interest on its indebtedness than agriculturists can. That the Homestead Acts should be so amended as to make practicable the settlement of the lands by a system of colonization which would enable thousands of families to become self-sustaining.

The Greenback party having nominated as its candidate for State Treasurer the same person whom the United Labor party had pre-

viously declared its nominee for that office, the two parties seem to have subsequently entered into an agreement to the effect that all of the candidates presented to the people in the Greenback party's ticket should be considered common to the United Labor party also.

The Liquor Prohibition party nominated as its candidates for the several offices: For Judge of the Supreme Court, R. H. Winton; for Auditor-General, A. A. Barber; for State Treasurer, Samuel Cornett.

MAUCH CHUNK.

At the election, held on November 6, 1877, the Democratic candidates were chosen, by a comparatively uniform majority. The aggregate votes cast in the State numbered about 550,000, which is above 200,000 less than the whole number of votes polled at the Presidential election in November, 1876. The highest number of votes received by any of the candidates of the same party in 1877 was: Among the Democratic, 251,717 for State Treasurer; among the Republicans, 244,480 for Judge of the Supreme Court; among the United Greenback and Labor nominees, 52,854 for State Treasurer; and among the Liquor Prohibition, 2,997 for Auditor-General.

An interesting decision was rendered by the Supreme Court of the State, on the 4th of October, 1877. The city of Williamsport, empowered by an act of the Legislature to control the improvements of her streets, sewers, etc., and to issue bonds therefor in the sum of

\$200,000, issued bonds to the amount of \$645,000 instead. These bonds are held by private parties in different sections of the State. The validity of the bonds issued in excess of the \$200,000 having been called in question, and the matter brought before the courts, the court of the first instance gave judgment, declaring the over-issued bonds valid. On appeal, the Supreme Court has affirmed the judgment of the court below, on the ground that "the power granted to the municipality to control street and other improvements necessarily implies the raising of means to perform such duties,"

and that "the mere fact that the act limited the issue to \$200,000 does not render the issue of the \$445,000 additional illegal, because the power to issue was an implied one." In affirming judgment, the court also "ordered that the treasurer of the city of Williamsport do forthwith apply any money now in the treasury of the said city, and not otherwise appropriated, to the payment of the accrued interest and coupons overdue on said bonds, known as Series A."

The Chief Justice, and two of the Associate Justices, filed dissenting opinions.

A local explosion of fire-damp, in a mine worked at Pottsville, in Schuylkill County, took place on the 9th of May, 1877, between the hours of 10 and 11 o'clock in the forenoon, killing six men, and bruising and scorching six more.

The ignition occurred in a somewhat retired part of the mine, where about 30 men were at work, and did not communicate itself to the rest, or its effects would have proved far more disastrous.

For the details of the memorable strike of railroad employes in July, 1877, see LABOR-STRIKES.

In Pennsylvania the strike resulted in the deaths of over 50 civilians and 5 soldiers, and the wounding and maiming of 100 or more, and the destruction of millions' worth of property.

By the middle of August all of the railway lines throughout the State were running on schedule time. The military detachments, posted at the several places of danger, were successively withdrawn as a state of permanent tranquillity had been secured. In some localities they were ordered to remain for months. Such was the case with the middle coal-field of

Luzerne County, where the miners, under the prevailing excitement, struck on the 25th of July, and stopped all trains upon the roads running through that region; and at Scranton, on the 1st of August, a large body of men endeavored to drive the workmen out of the railroad shops and factories. In this attempt they were met and defeated by the mayor and his posse; but not without a fierce conflict, in which the mayor was severely injured, three of the rioters were killed, and a number wounded. After the beginning of November, all manifestations of lawlessness had disappeared, and all troops withdrawn.

The State's expenditure on account of the military force employed to suppress these July riots, for pay, sustenance, and transportation of troops, is estimated to exceed \$700,000.

The engineers selected by the Joint Commission of Pennsylvania and New York to survey the boundary line between the two States afresh, and, if necessary, rectify it, began their work in June, 1877, and prosecuted it till after the middle of October, when it was suspended for the season. The newly surveyed line begins at the stone set up on an island in the Delaware as the northeast corner of Pennsylvania and the southwest corner of New York, and ends at a point three miles distant from the Allegheny County line, where the 119th milestone has been set. This is about one-half of the whole extent of the boundary. The new line thus far varies but little from the old one, most of the milestones set up in 1786 having been found. Some of them, that were not so firm and well protected as the others, have been reset.

The slight deviations of the new line from the old one are yet sufficient to cause remarkable changes.

The village of Waverly, till now regarded to be all in Pennsylvania, is passed through and divided into two unequal portions by the new line, which gives one of them to New York. The change made here by the new boundary has been accepted by the local authorities of Waverly, and is an accomplished fact already. Lawrenceville, and the people in it, considered as forming part of Tioga County in Pennsylvania, are now transferred to Chenango County in New York, and *vice versa*. Ceres, formerly believed to be in New York, is now located in Pennsylvania.

PERSIA.* a country of Asia. Reigning sovereign, Nasr-ed-Din, Shah of Persia, born 1830, succeeded his father, Shah Mohammed, September 10, 1848. Heir-apparent, Muzaffer-ed-Din, born in 1850. The area of Persia is estimated at 637,000 square miles. The population, which for some time had been on the decline, is now reliably reported as again increasing, and amounting to from 6,000,000 to 7,000,000.

* For an account of the religious statistics, the political divisions, and the imports and exports, see *ANNUAL CYCLOPEDIA* for 1874.

The ministry formerly consisted of only two functionaries, the Vizier-i-Azem, or grand-vizier, and the Ameen-ed-Doulah, or lord-treasurer; but in more recent times it has been divided into a larger number of departments, after the European fashion. In 1876 it consisted of the following members: Yussuf Khan, Prime Minister; Hussein Khan, formerly grand-vizier, Minister of Foreign Affairs and War and Commander-in-chief of the Army; Mirza Yussuf Khan, President of the Council, and Minister of the Interior and of Finances; Prince Ali Kuli Mirza, uncle of the Shah, Minister of Worship and of the Mines; General Ali Kuli Khan, Minister of Telegraphs; Mirza Ali Khan, Private Secretary of the Shah and Minister of Posts; Mohammed Rahim Khan, Minister of the Royal House; Ali Riza Khan, Minister of Justice; Hassan Ali Khan, Minister of Public Works; Mirza Abdul Wahab Wahab Khan, Minister of Commerce.

CITY GATE, TABRIZ.

In 1876 the receipts amounted to 34,720,000 francs in money and 6,360,000 francs in produce (300 kilogrammes of grain being valued at 15 francs), making a total of 41,080,000 francs. Of this sum, 31,000,000 francs were direct taxes, ground, head, and industrial taxes, and 5,000,000 francs customs duties. The expenses amounted to 40,000,000 francs, of which 16,960,000 francs were for the army, 7,680,000 for the court, 6,000,000 francs for the clergy, 2,000,000 for presents to the first families, the Afghans and others, 700,000 for foreign affairs, 1,500,000 for the other ministries, and the rest for other expenditures. There is no public debt.

According to the law of 1875, the soldiers no longer serve for lifetime, but only for 12 years, and the right of providing substitutes is granted. This new law has been introduced as yet in a few provinces only, but will shortly be extended over the whole kingdom. The regular infantry (Nizam) consists of ten divisions, of ten regiments each. Each regiment shall consist of 830 men; and the entire infantry, therefore, of 83,000 men. In times of peace not more than 30 regiments are generally kept; at present, however, 84 have been called in. The reg-

ular cavalry comprises only the body-guard of the Shah and 3 squadrons—together 500 men. In case of war, however, every tribe is required to furnish a certain number of irregular horsemen, making in all 25,000 to 40,000 men which can be placed in the field. The artillery com-

OLD SOUTH GATE, TEHERAN.

prises 10 regiments of 3 and 4 batteries each, of which each has from 18 to 24 guns, making together 5,000 men with 200 guns. The militia, which can be brought up to 20,000 men, is used only as police and to protect the frontier.

The total foreign commerce amounts to about 3,700,000 toman (1 toman = \$2.25), of which two-thirds are imports and one-third exports. The principal articles of imports are woven goods, principally cotton goods, glassware, paper, iron, copper, sugar, and tea; the principal articles of export are silk, tobacco, hides, wood, carpets, shawls, copper and iron ores, and opium.

Teheran, the capital, is in postal communication with Astrabad, Reshd, Bushire, Yezd, Kerman, Burudjird, Sinna in Kurdistan, and with the Russian and Turkish frontiers. As most of these lines were not opened until 1877, no statistics are as yet at hand.

The aggregate length of the electric telegraph lines in 1876 was 966 kilometres; the wires, 7,646 kilometres. The number of offices was 46.

When the war broke out between Russia and

Turkey, it seemed for a time as if Persia would be an ally of Russia. Russian staff officers were sent to Persia early in the year to organize the army, and large numbers of troops were called out in all the provinces. Persia, however, did not take part in the war, which was, in all probability, owing to the utter unfitness of its army for warlike operations. It has been described by all authorities as being in such a demoralized condition that a few Turkish battalions would suffice to put an entire Persian army corps to flight. It is not so very long ago that 20,000 Persian troops were completely routed by 2,000 Turkomans. This condition of the Persian army has, in all probability, induced the Russians not to secure Persia as an ally.

Among the works of the year containing information on Persia are A. Arnold's "Through Persia by Caravan" (2 vols., London, 1877); H. C. Marsh, "A Ride through Islam" (London, 1877).

PHONOGRAPH. This is a singularly ingenious but very simple machine, invented and recently brought to public notice by Mr. Thomas A. Edison, of Menlo Park, N. J. Its principle and mode of working will be understood by reference to the woodcut, Fig. 1. Here *F* is a cylinder, borne on an axle which passes through the two standards *A* and *B*. On one end of the axle is a crank, *D*; on the other a flywheel, *E*. The portion of the axle toward the crank has a screw-thread cut on it which, working in a nut, *A*, causes the cylinder to move laterally to and fro, when the crank is turned; on the surface of the cylinder is cut a narrow spiral groove corresponding to the screw-thread on the axle. At *F*, Fig. 1, and *A*, Fig. 2, is seen an iron disk about $\frac{1}{16}$ of an inch thick, which can be made to approach or recede from the cylinder by pushing in or pulling out the lever *H G*, which turns in an horizontal plane around the pin *I*. The under

FIG. 1.—EDISON'S TALKING PHONOGRAPH.

side of this thin iron disk *A*, Fig. 2, presses against short pieces of rubber tubing, *X X*, which lie between the disk and a spring attached to *E*. On the end of this spring is a rounded steel point, *P* (the stylus), which enters slightly between the threads scored on the

cylinder. The distance of this stylus *P* from the cylinder is regulated by a set-screw, *S*, against which abuts the lever *H G*. Over the iron disk *A* is a vulcanite disk, *B B*, with a hole in its centre. The under side of this nearly touches the iron disk; its upper surface is cut into a shallow funnel-shaped cavity, leading to the opening in its centre. To operate the machine the cylinder is first neatly coated with a sheet of tin-foil made to adhere by gumming the corners; the stylus *P* is then brought to bear against the foil so that on turning the cylinder it makes a furrow. The mouth is now placed close to the opening in the vulcanite disk, and the metal disk is talked to, the cylinder at the same time being revolved with uniform motion. The voice causes the iron disk to vibrate and the stylus indents the foil, making there a record of the vibrations. If the vibrations given by the voice are those causing simple sounds, and are uniform and regular, the depressions in the foil will also be regular and undulating. But if the vibrations are those causing complex and irregular sounds (like those of the voice in speaking), the impressions will be in like manner complex and irregular. These different effects are seen in Fig. 3, where *A* shows the appearance to the eye of the impressions on the foil produced by singing the sound of *a* in "bat" against the iron disk; the irregular curved line *B* exhibits in profile (magnified) the undulations produced by the vibrations of ordinary conversation. Thus we have a *record* of the sound-vibrations on the foil. It now remains to obtain from these impressions a reproduction of the *aërial vibrations which made them*. To do this the disk *A*, with its stylus *P*, is moved away from the cylinder by revolving the lever *G H* on the pivot *I*. Then by reversing the motion of the crank the cylinder is caused to go back to its original position. The stylus is now brought again up to the cylinder, and a large cone of tin or paper is fixed in the vulcanite plate, to reënforce the sounds; then the crank is steadily turned in the same direction as at first. The elevations and depressions made by the stylus now pass under it, and in so doing cause both it and the iron disk to make over again the self-same vibrations which actuated them when they made

their traces on the foil. The consequence is that the iron disk gives out the vibrations which previously fell upon it, and it talks back what was said to it. The inventor has substituted clockwork in place of the crank turned by hand, thus insuring uniformity of motion, which is essential both for receiving and reproducing correctly the vibrations made in singing or even in speech. It is observed that

FIG. 2.—CROSS-SECTION OF EDISON'S PHONOGRAPH.

even slight irregularities in the velocity of the cylinder destroy the accuracy of the musical intervals, and cause the machine to sing falsetto. So too in speaking, if you make the phonograph talk by giving it a more rapid rotation than it had when you spoke to it, the

FIG. 3.—IMPRESSIONS MADE BY THE STYLUS ON THE FOIL-COVERED CYLINDER.

pitch of its voice is raised; and by varying the velocity of the cylinder the machine may be made to speak the same sentence in a very bass voice, or in a voice of the highest pitch. Sundry modifications in this instrument have been suggested, with a view to making more permanent the record of the sound-vibrations, or of reënforcing the sound as it issues from the vibrating disk. Thus, it has been proposed to

stereotype or electrotype the sheet of tin-foil after it has received the impressions of the stylus. Or the cylinder might be made of a material plastic at first, and becoming hard afterward. A detachable sheet of papier maché might be made to receive the impressions, and could then be sent through the mails, thus conveying to friends at a distance the very words and tones of their correspondents. It is announced that Mr. Edison has now perfected his instrument so that it can be heard distinctly at a distance of 200 feet; and so simple are the conditions of increasing the sounds that there is practically no limit to the improvement of the machine in this direction.

PORTUGAL, a kingdom in Southwestern Europe. King, Luiz I., born October 31, 1838; succeeded his brother, King Pedro V., November 11, 1861; married October 6, 1862, to Pia, youngest daughter of King Victor Emanuel of Italy. Issue of the union are two sons: Carlos, born September 28, 1863, and Alfonso, born July 31, 1865.

The area, according to the "Anuario Estadístico do Reino de Portugal" (1877), was 35,843 square miles; the population, according to the *Diário do Governo*, Nos. 109 and 115 for 1877, 4,429,332. The area and population of the several provinces were as follows:

PROVINCES.	Area in Square Miles.	Population in 1874.
Minho.....	2,321	967,578
Tras os Montes.....	4,292	872,349
Beira Alta.....	4,551	1,314,684
Beira Baixa.....	4,707	
Estremadura.....	6,984	855,351
Alentejo.....	9,425	845,894
Algarve.....	1,876	191,754
Total continental.....	34,606	4,047,110
“ Azores.....	922	261,907
“ Madeira.....	815	120,315
Total kingdom.....	35,343	4,429,332

The area and population of the Portuguese possessions in Asia and Africa were, according to the latest dates, as follows:

POSSESSIONS.	Area in Square Miles.	Population.
I. POSSESSIONS IN AFRICA.		
Cape Verd Islands (nine inhabited).....	1,487	90,704 (1875)
In Senegambia (Bissão, etc.)..	25	9,282 (1873)
São Thomé.....	359	29,441 (1875)
Príncipe.....	58	1,455 (1873)
Ajuda.....	14	4,500 (1873)
Angola, Benguela, Mossamedes.....	312,532	2,000,000
Mozambique, Soala, etc	382,692	300,000
II. POSSESSIONS IN ASIA.		
In India:		
Goa, Salsette, Bardez, etc....	1,395	392,234
Damão and Territory.....	31	33,485
Diu and Gogola.....	10	13,598
Indian Archipelago:

China:		
Macao.....	1.49	71,894 (1871)
Total.....	704,132	3,201,883

The following were the gross sums of the budget estimates for the financial year 1867 (value expressed in contos and milreis: 1 conto = 1,000 milreis; 1 milreis = \$1.08; 5,701:480 means 5,701 contos and 480 milreis):

REVENUE.	
1. Direct taxes.....	5,701:480
2. Register.....	2,704:600
3. Indirect taxes.....	18,637:634
4. National domain.....	2,112:563
5. Interest on bonds in Public Exchequer...	1,105:797
Total.....	25,262:124
EXPENDITURE.	
1. Interest on home and foreign debt.....	10,580:984
2. Ministry of Finance.....	4,559:166
3. “ of Foreign Affairs.....	253:628
4. “ of the Interior.....	2,108:088
5. “ of Worship and Justice.....	562:286
6. “ of War.....	3,698:478
7. “ of the Navy and Colonies.....	1,565:554
8. “ of Public Works.....	3,101:551
Total.....	26,424:685

The public debt of Portugal dates from the year 1796, when the first loan of 4,000,000 milreis was raised. In 1835 it amounted to 55,000,000 milreis; in 1876 to 347,512:700.

TOWER OF BELEM.

The military system is based on the law of June 23, 1864, which has been modified by several decrees of the year 1868, as well as by decrees of October 4, 1869, December 15, 1875, and April 26, 1877. The strength of the army in 1877, on the peace-footing, was computed at 1,609 officers and 32,394 men; on the war-footing, 2,649 officers and 74,141 men. The actual strength of the army on August 31, 1877, was 1,671 officers and 34,062 men.

The navy in 1877 consisted of 27 steamers of 4,255 horse-power and 144 guns, and 12 sailing vessels of 36 guns, together 39 vessels, with 180 guns.

The trade of Portugal in 1874 was as follows (value expressed in contos):

COUNTRIES.	Imports.	Exports.
Great Britain.....	18,297	11,957
France.....	4,401	957
Spain.....	2,252	1,400
Germany.....	661	890
Russia.....	692	860
Sweden and Norway.....	778	469
Netherlands.....	723	808
Brazil.....	3,189	4,271
United States.....	1,286	267
Portuguese colonies.....	840	86
Other countries.....	322	2,004
Total, 1874.....	28,336	22,099
" 1873.....	84,046	28,615
Transit trade and reexports.....	8,173

The following are the chief articles of import and export (value expressed in contos) :

MISCELLANEOUS.	Imports.	Exports.
Cereals.....	1,694	566
Seeds, fruits.....	486	8,168
Colonial produce.....	3,870	959
Beverages.....	191	9,373
Animals and animal provisions.....	2,818	1,595
a. Articles of food.....	8,059	15,661
Minerals.....	983	2,070
Metals.....	4,365	387
Wood.....	1,247	1,678
Hides, skins.....	2,073	1,352
Materials for spinning textures.....	8,365	709
Other manufactured articles.....	2,115	433
Glass and pottery ware.....	298	40
Drugs.....	381	664
b. Raw materials and manufactured articles.....	20,277	7,388
Total.....	28,336	22,999

The movement of shipping in 1874 was :

FLAG.	ENTERED.		CLEARED.	
	Sailing-Vessels.	Steamers.	Sailing-Vessels.	Steamers.
Portuguese:				
Sea-going vessels.....	657	86	1,028	79
Coast.....	5,169	183	4,840	184
Foreign.....	3,402	1,955	3,325	1,964
Total.....	9,228	2,224	9,191	2,227

PLAZA, COIMBRA.

The commercial navy of Portugal consisted in 1876 of 575 vessels, of which 39 were steamers. The total length of railways in operation, in October, 1877, was 968 kilometres, exclusive of 85 miles of railroads in mines. The aggregate length of telegraph lines was 3,608 and of wires 7,788 kilometres; number of stations, 157. The number of dispatches sent in 1876 was 582,827. The number of post-offices in June, 1877, was 669, of which 36 were on the islands. The number of inland letters was 10,470,152; of newspapers 6,021,744; and of printed matter, postal cards, and samples of goods, 137,452. The number of foreign letters, newspapers, etc., was 2,853,864.

A ministerial crisis occurred in Portugal in the first week of March, which resulted in the formation of a new cabinet under the presidency of De Avila, in which De Avila took the departments of Foreign Affairs and of the Interior; Barrose Cunha, Public Works; Mexia Salema, Justice; General de Sousa Pinto, the Army; and José de Mello e Gouvea, the Navy. The old ministry had been in office since 1870, and had asserted that the means for a financial improvement were to be secured by the greatest possible taxation. Their fall was caused by the miserable financial condition of the country, so that it was determined to give De Avila's party a trial. They proposed to secure a reduction of the taxes by a reduction of the expenses.

The Portuguese Cortes, in April, placed at the disposal of the Government £6,600, to send out a scientific expedition to explore the Central African territories between the colonies of Angola and Mozambique, and to study the hydrography of the Congo and the Zambesi. In the Chamber of Deputies, following an interpellation respecting the malpractices charged against Portuguese officials by English travellers, Senhor Thomas Ribeiro carried a proposal for an inquiry into the facts, laying down the following questions: 1. What territories ex-

port slaves to the African coasts? 2. At what ports are slaves embarked? 3. Of what nature are the dealers? 4. Whither are the slaves sent? 5. Do the traders deal on their own ac-

count or for others? 6. What will be the most effectual means for putting an end to the traffic? Foreigners and others acquainted with the Portuguese colonies in Africa, the authorities of

these colonies, the Portuguese legation at Rio Janeiro, and all the Portuguese consulates in Asia, Africa, and America, might be called upon to give evidence in this inquiry. The expedition left Lisbon on July 7th.

A royal proclamation was issued on June 16th, declaring the neutrality of Portugal in the Russo-Turkish war.

PRESBYTERIANS. I. PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA.—The following is a summary of the statistics of this Church by synods, as they are published in connection with the Minutes of the General Assembly for 1877:

SYNODS.	Presbyteries.	Ministers.	Churches.	Communicants.
Albany.....	5	149	126	13,474
Atlantic.....	6	54	114	9,183

Wisconsin.....	5	106	124	5,063
Total.....	175	4,301	5,153	557,674

Number of candidates for the ministry, 672; of licentiates, 321; of licensures, 152; of ordinations, 133; of installations, 240; of pastoral dissolutions, 224; of ministers received, 59; of ministers dismissed, 32.

The *General Assembly* of the Presbyterian Church in the United States of America met at Chicago, Ill., May 17th. The Rev. James Eels, D. D., of California, was chosen moderator. The committee who had been appointed for that purpose by the preceding General Assembly reported a list of the delegates and corresponding members whom they had nominated to attend the General Presbyterian Council which was to meet at Edinburgh, Scotland, in July, which was accepted by the Assembly. A committee had been appointed by the previous General Assembly to continue the consideration of the subject of devising means to reduce the size of the Assembly by a change in the basis of representation, which had been

before the Assembly, in some shape, for five years. This committee presented a report reviewing the whole question, but which made no definite recommendation of a plan for reducing the Assembly. They suggested, however, some propositions for meeting the difficulties by an increase of the number necessary to constitute a presbytery, and by the provision of arrangements for paying the expense of entertaining the members of the Assembly, and expressed the opinion that a wise decision on the subject could not be reached until the presbyteries should have carefully considered the principles and the facts involved in the proposed change.

A report was adopted by the Assembly, proposing two plans to be submitted to the presbyteries, which were styled the synodical plan and the presbyterial plan. The synodical plan is as follows:

The General Assembly shall consist of an equal delegation of bishops and elders from each synod in the following proportions—viz., each synod consisting of not more than fifty ministers shall send one minister and one elder, and each synod consisting of more than fifty ministers shall send two ministers and two elders, and in the like proportion for every fifty ministers in any synod; and these delegates so appointed shall be styled Commissioners of the General Assembly. The commissioners shall be chosen by the synod, with due regard to the rights of the presbyteries. If the synod send three or more ministers and three or more elders to the General Assembly, not more than one-third of its commissioners, and if it send two or more ministers and two or more elders, not more than one-half of its commissioners in any year shall be taken from the same presbytery; and in a series of years equal to the number of presbyteries in any synod every presbytery shall be represented by at least one minister and one elder.

The following is the presbyterial plan:

The General Assembly shall consist of an equal delegation of bishops and elders from each presbytery in the following proportion—viz., each presbytery consisting of not more than forty ministers actually engaged in ministerial work as pastors, co-pastors, pastors-elect, stated supplies, evangelists, missionaries, professors in the theological seminaries, or those assigned to the work of the Church by the General Assembly, shall send one minister and one elder; each presbytery consisting of more than forty and less than eighty ministers, employed as above specified, shall send two ministers and two elders; each presbytery consisting of more than eighty and less than one hundred and twenty ministers, employed as above specified, shall send three ministers and three elders; in like proportion for each additional forty ministers actually engaged in ministerial work; and these delegates so appointed shall be styled Commissioners to the General Assembly.

The Committee on Fraternal Relations made a report reciting the action of the Southern General Assembly of 1876 on the resumption of correspondence with the Northern Church (see *ANNUAL CYCLOPEDIA* for 1876), recommending that the Assembly make a new declaration "that the language specially complained of by the Southern Assembly is a part of that sorrowful past which we in the day of peace and fraternity would wish to forget; and

it is to us a matter of sincere regret that the terms of schism, heresy, or blasphemy should ever have been applied to Southern Presbyterians by any General Assembly of which this Assembly is the successor; "nominating fraternal commissioners to the Southern General Assembly, and inviting that body to send similar commissioners. The recommendations of the committee were rejected, and the following resolution was adopted by a vote of 238 to 97, as a substitute for them:

Inasmuch as the letter from the General Assembly of the Presbyterian Church, recently holding its sessions in the city of New Orleans, presents no suggestion not considered by previous general assemblies of this body, and makes no advance toward the attainment of fraternal relations between the two bodies, and indicates no disposition to forget the past, or pass it over, save upon conditions impracticable for the Assembly: therefore

Resolved, That while this General Assembly is ready at any time to enter into fraternal relations with the General Assembly of the Presbyterian Church in the United States, no further action in this matter on the part of this Assembly is called for at present.

Afterward the following dispatch was received from the Southern Assembly in session at New Orleans, La.:

NEW ORLEANS, May 22, 1877.

This Assembly has adopted, by 109 to 4, a paper which recites the action of our Assemblies at Savannah and St. Louis, which also refers to the communication from your Assembly, received at our present sessions. It concludes with expressions of dissatisfaction with the last-named paper, because it contains no reference whatever to the main part of our paper sent from Savannah to Brooklyn, and declares that the Assembly can add nothing to our action at St. Louis, approving the ground taken by our committee at Baltimore, which approved what the Assembly reaffirmed at Savannah. The paper adopted here concludes thus: "If our brethren of the Northern Church can meet us on those terms which truth and righteousness seem to us to require, then we are ready to establish such relations with them during the present sessions of the Assembly."

JOSEPH P. WILSON, S. C.

The full text of the communication here referred to (which is given in connection with the proceedings of the Southern General Assembly) was received in due course of mail, and was referred by the Assembly to its committee of correspondence.

Sundry reports on important subjects were made by committees, but no final action was taken upon them, but the matters were continued to the next assembly. Only subjects upon which final action was taken are here noticed.

A memorial was presented from the Synod of San Francisco, presenting the importance of the Chinese work in California, and making a number of recommendations for its prosecution and extension, by the Board of Foreign Missions. A report was adopted favoring the objects of the petition, advising the enlargement of the mission by the Board of Foreign Missions encouraging and coöperating with the churches of the Pacific coast, and seeking to educate a native ministry among the Chinese in the United States and China. A case came

up from the Presbytery of Sewickly, which involved the question of the responsibility of members of the Presbyterian Church who are interested in the publication of newspapers issuing a Sunday edition. The Assembly decided that "any voluntary and responsible participation in the publication and sale of Sunday newspapers is inconsistent alike with obedience to the law of God and with membership in the Presbyterian Church," and justified the disciplinary proceedings which had been instituted by the Presbytery in the case under review. A report was adopted on the subject of the evangelization of the German population of the country, which advised a careful study of the difficulties of the work, special attention to young German candidates for the ministry, coöperation in efforts to instruct German church members and other Germans, the appointment of special committees for the German people in each Presbytery or Presbyterian Home Mission Committee, the participation of ministers in German services, and the publication of books and papers in the German language. Committees were appointed to carry out the latter purposes. The report on temperance recommended the practice of total abstinence and the discouragement of social wine-drinking, and advised the exclusion from membership of persons who are engaged in the manufacture and sale of intoxicating drinks as a beverage, or who derive their livelihood from this traffic. A communication from the United Presbyterian General Assembly, inviting the Assembly to send delegates to a meeting to be held at Xenia, Ohio, in October, to devise a plan for united effort in the cause of temperance on the part of the churches, was acted upon favorably, and delegates were appointed to attend the meeting. In answer to several memorials on the subject of the wine to be used at the Communion service, the Assembly decided that the control of the matter be left to the sessions of the several churches, with the recommendation that the purest wine attainable be used.

II. PRESBYTERIAN CHURCH IN THE UNITED STATES.—The following is a summary of the statistics of this Church by synods, as reported to the General Assembly in May:

SYNODS.	Number of Ministers.	Number of Churches.	Number of Communicants.
Alabama.....	44	100	6,142
Arkansas.....	85	83	3,846
Georgia.....	93	172	9,023
Kentucky.....	87	139	9,242
Memphis.....	70	142	6,570
Mississippi.....	80	167	8,437
Missouri.....	73	139	7,845
Nashville.....	67	116	8,338
North Carolina.....	110	216	16,544
South Carolina.....	91	157	10,394
Texas.....	74	133	4,940
Virginia.....	205	276	22,225
Total.....	1,032	1,830	112,550

The following is a summary of the general statistics of the Church as they are given in the table published with the Minutes of the General Assembly of 1877. The table also exhibits the condition of the Church, as was indicated by the reports of 1875 and 1876:

SYNODS, ETC.	1875.	1876.	1877.
Synods.....	12	12	12
Presbyteries.....	64	63	63
Ministers and licentates.....	1,034	1,079	1,115
Candidates.....	137	192	176
Churches.....	1,797	1,821	1,880
Licenses.....	43	41	52

The condition of the funds and benevolent enterprises of the Church is exhibited in the reports of the boards having them in charge.

The *General Assembly* of the Presbyterian Church in the United States met at New Orleans, La., May 17th. The Rev. C. A. Stillman, D. D., of Alabama, was chosen moderator. The following report was adopted on the subject of correspondence with the Presbyterian Church in the United States of America:

Whereas, The General Assembly of this Church, in session at St. Louis in 1876, adopted a paper tendering special thanks, in the name of the whole Church, to our Committee of Conference at Baltimore, for their diligence, fidelity, and Christian prudence, and, in particular, approving and indorsing, as satisfactory to the Southern Church, the condition precedent to fraternal relations suggested by our committee, viz.: "If your Assembly could see its way clear to say, in a few plain words, to this effect, that these obnoxious things were said and done in times of great excitement, and are to be regretted; and that now, in a calm review, the imputations cast upon the Southern Church (of schism, heresy, and blasphemy) are disapproved, that would end the difficulty at once;" and—

Whereas, Our General Assembly, in session at Savannah in 1876, in response to a paper from the

General Assembly of the Presbyterian Church in the United States of America, which met in Brooklyn, adopted the following paper, viz.:

"We are ready most cordially to enter on fraternal relations with your body on any terms honorable to both parties. The Assembly has already, in answer to an overture from the Presbytery of St. Louis, spontaneously taken the following action:

"*Resolved*, That the action of the Baltimore Conference, approved by the Assembly at St. Louis, explains, with sufficient clearness, the position of our Church. But, inasmuch as it is represented by the overture that misapprehension exists in the minds of some of our people as to the spirit of this action, in order to show our disposition to remove, on our part, all real or seeming hindrance to friendly feeling, the Assembly explicitly declares that, while condemning certain acts and deliverances of the Northern General Assembly, no acts or deliverances of the Southern General Assemblies are to be construed or admitted as impugning in any way the Christian character of the Northern General Assembly, or of the historical body to which it is the successor;" and—

Whereas, The said General Assembly at Brooklyn, in response to the foregoing paper adopted by your Assembly at Savannah, adopted the following, which has been communicated to us at our present meeting, viz.:

"The overture of this Assembly having been received by the General Assembly in the South with such a cordial expression of gratification, the committee recommend that the same resolution, declarative of the spirit in which this action is taken, be adopted by this Assembly, viz.: In order to show our disposition to remove on our part all real or seeming hindrance to friendly feeling, the Assembly explicitly declares that, while condemning certain acts and deliverances of the Southern General Assembly, no acts or deliverances of the Northern Assembly, or of the historic bodies of which the present Assembly is the successor, are to be construed or admitted as impugning in any way the Christian character of the Southern General Assembly, or of the historical body or bodies of which it is the successor:"

Therefore be it resolved, by this Assembly, That we cannot regard this communication as satisfactory, because we can discover in it no reference whatever to the first and main part of the paper adopted by our Assembly at Savannah, and communicated to the Brooklyn Assembly. This Assembly can add nothing on this subject to the action of the Assembly at St. Louis, adopting the basis proposed by our Committee on Conference at Baltimore, and reaffirmed by the Assembly at Savannah.

If our brethren of the Northern Church can meet us on those terms, which truth and righteousness seem to us to require, then we are ready to establish such relations with them during the present sessions of the Assemblies.

A report was read of the condition of the institute for the education of colored candidates for the ministry, which had been authorized by the Assembly of the previous year, and established at Tuskealoosa, Ala. It had been under the charge of the Rev. Dr. Stillman, present moderator of the Assembly, with one assistant, and was opened on the 1st of November, 1876. It had at present six scholars, of whom two were regular candidates for the ministry. There were a great many colored men who applied for its benefits, but they had not the means of support, and the institute had not the means of providing it for them. This, it was stated, was the chief difficulty in the way of building up the school. An execu-

tive committee on the education of colored candidates for the ministry was instituted, and provision was suggested for the support of candidates by presbyteries, and by an annual collection to be taken for the purpose.

On the subject of "worldly amusements," a paper was adopted discountenancing "the modern dance in all its forms," as tending to evil, declaring that some forms of this amusement are more mischievous than others, "the round dance than the square, the public ball than the private party, but none of them are good;" urging Christian parents not to send their children to dancing-schools, and leaving the judgment of all cases of offending to the church sessions. The Committee on the Book of Church Order reported that 25 presbyteries had accepted the revised book; 35 presbyteries had voted not to adopt it, but 20 of them had expressed general approval of the work of revision, and asked that it might go on. The committee presented seven points to be submitted to the presbyteries to be voted on separately from the body of the work, and were ordered to put them into suitable shape, to be sent down as an overture. The course of the Committee of Publication, who had suffered a great loss by the defalcation of their recent secretary, in offering to make good the loss, and its efforts to collect money for that purpose, was approved. The Assembly decided to hold its correspondence hereafter with all churches with which it maintains friendly relations by letters, instead of by deputations, excepting the Reformed Church of America, with which a peculiar coöperative alliance exists. Delegates were appointed to the Presbyterian Council to be held at Edinburgh.

III. UNITED AND REFORMED PRESBYTERIANS.

(a.) *United Presbyterian Church of North America.*—The following is a summary of the statistics of this Church as they were reported to the General Assembly in May:

The nineteenth *General Assembly* of the United Presbyterian Church of North America met at Sparta, Illinois, May 28d. The Rev. R. B. Ewing, of Pittsburgh, Pennsylvania, was chosen moderator. A report was adopted on temperance, declaring that every church member should consider himself pledged to total abstinence, that it is "inconsistent with membership in the Church of Christ to be engaged in the manufacture or sale of intoxicating liquors as a beverage, or in any other way aid or abet in the manufacture, sale, or use of intoxicating liquors," and that it is the duty of all Christians to combine in their efforts to promote a reformation on this subject, and condemning the license system. A committee was appointed to meet with committees of other Evangelical churches at Xenia, Ohio, on the fourth Tuesday in October, to devise a plan for united effort in this cause. A request for a change in the basis of representation in the General Assembly, so that the ministers only who are engaged in the actual work of the ministry should be counted in adjusting it, was denied on the ground that it would infringe upon the ordained prerogatives of the ministry. In connection with this action, the Assembly enunciated the doctrine that "the rights and privileges pertaining to the ministerial office are not founded on the exercise of that office. By ordination to the office of the ministry, authority to govern, as well as to teach, is conferred." A request for a more definite deliverance on the law against the marriage of a deceased wife's sister was answered by a declaration that the law on the subject is specific, and is a part of the organic law of the Church, and by an injunction that it be faithfully taught, and that violations of it be dealt with by sessions, consistently with its spirit and design. Four ministers and four elders were appointed delegates to the Council of the Presbyterian Alliance.

(b.) *Synod of the Reformed Presbyterian Church (O. S.).*—The following is a summary of the statistics of this body as reported at the meeting of the Synod in May, 1877: Number of presbyteries (New York, Philadelphia, Rochester, Pittsburgh, Ohio,

Lakes, Illinois, Iowa, Kansas), 9; of congregations, 106; of ministers, 100; of elders, 497; of deacons, 289; of communicants, 10,101; of Sunday-school teachers, 865; of Sunday-school scholars, 7,594; amount of contributions for foreign missions, \$7,966; for home missions, \$3,247; for freedmen's mission, \$2,040; for "national reform," \$4,428; for the theological seminary, \$3,189; for the educational fund, \$1,240; for church erection, \$11,698; for pastors' salaries, \$79,667; miscellaneous contributions, \$49,821; total contributions, \$161,296. The *Syrian Mission* reported 9 missionaries, 85 communicants, 8 day-schools, with 225 scholars; 1 boarding-school, with 53 scholars; 5 Sunday-schools, with 148 scholars; 25 native helpers, 1 station, 8 out-stations, and 9 mission buildings.

The Synod met at Allegheny City, Pa., May 22d. The Rev. J. R. Thompson, of Newburg, N. Y., was chosen moderator. About 85 ministers and 60 elders were in attendance as delegates. The enterprises of the Church had suffered from the pecuniary depression, particularly the educational institutions—Geneva College, Ohio, and the Theological Seminary at Allegheny, Pa. The missionary enterprises of the Church, however, had been well sustained. A report on temperance was adopted, expressing the hope that the liquor traffic would be declared illegal, and urging the duty of total abstinence on all Christians, and the necessity for more stringent legislation. Another report commended the work which the National Reform Association had done in behalf of the Sunday laws and the use of the Bible in the schools, and recognizing the steady progress of the effort to secure a religious amendment to the Constitution. A collection was appointed to be taken up for the association, and the churches were recommended to contribute at least \$4,000 for its work. One of the most interesting discussions in the Synod was on the question of inviting ministers of other denominations to preach in the pulpits of the Reformed Presbyterian Church. A report was adopted declaring that, while desiring to cultivate and cherish the most friendly and fraternal relations with brethren of other Evangelical denominations, it had never been the custom of the Church to invite them to minister to the people in the preaching of the Word, and that there seemed to be "no good reason, in the present condition of the visible Church of Christ, for departing from existing usage."

(c.) *Reformed Presbyterian Church: General Synod.*—This body consists of 6 presbyteries, the Northern, Philadelphia, Pittsburgh, Ohio, Western, and Eastern (in Nova Scotia and New Brunswick) Presbyteries, with 50 churches, 48 ministers and supplies, and 4 licentiates. The General Synod met at Cincinnati, Ohio, May 16th. The Rev. S. M. Ramsey, of Duaneburg, New York, was chosen moderator. The Synod recommended to the members of the Church to contribute to the Foreign

Mission of the Reformed Presbyterian Synod (O. S.), "still aiming, however, to keep before them the idea that efforts should be put forth to locate a mission field, at as early a day as possible, which would be under the immediate direction of the General Synod itself." The Committee on Conference with the Synod of the Reformed Presbyterian Church (O. S.) reported that they had held two conferences with the other committee, but had found the difference which was in the way of union to be such that, for the present at least, it could not be surmounted. The difference relates mainly to the attitude of the two bodies in reference to political affairs, the Synod believing that all participation in political action which involves an oath of allegiance to the Constitution and Government of the United States is wrong, while the General Synod believes that such action is not wrong unless it involves some actual immorality. It was agreed, however, that coöperation between the two churches in regard to matters of public interest, as in the cases of "Foreign Missions" and the "National Reform Movement," was becoming and desirable. The committee was continued.

IV. CUMBERLAND PRESBYTERIAN CHURCH.—The following is a summary of the statistics of the Cumberland Presbyterian Church, as they were reported to the General Assembly in 1877:

Synods.....	26
Presbyteries.....	110
Ministers.....	1,283
Licentiates.....	257
Candidates.....	201
Number of congregations.....	2,251
Elders.....	7,408
Deacons.....	2,251
Members added by profession.....	6,450

Total contributions.....	\$301,559
Total value of church property.....	1,683,780

The *General Assembly* of the Cumberland Presbyterian Church met at Lincoln, Ill., May 17th. The Rev. Dr. A. B. Miller was chosen moderator. The question which excited the most discussion related to the attitude which the Church should maintain toward independent papers published professedly in its interest. The Assembly had, a few years ago, for the purpose of securing to the Church a better and more efficient general newspaper than it had, procured the consolidation of all the journals representing the Church into one, *The*

Cumberland Presbyterian, published officially by the Board of Publication at Nashville, Tenn. Since then movements had been made to start private papers, and the Assembly was asked to discountenance them. A resolution was passed declaring "that the General Assembly disapproves of the publication of weekly papers claiming to be published in the interests of the Church, except the one published by the Board of Publication, in accordance with the action of former General Assemblies, unless the persons desiring to issue such publications shall have first obtained the consent of the General Assembly." For the improvement of *The Cumberland Presbyterian*, the Board of Publication was authorized to employ paid contributors or associate editors, and pay them reasonable compensation. Consent was given to the publication of a paper on the Pacific coast, by private enterprise, if the Board of Publication was not able to undertake it.

V. PRESBYTERIAN CHURCH IN CANADA.—According to the statistical reports submitted to the General Assembly in June, the Presbyterian Church in Canada consisted of 805 congregations, with 1,042 churches, 590 ministers, 3,596 elders, 93,788 communicants, and 72,000 pupils receiving instruction in the Sunday-schools.

The *General Assembly* of the Presbyterian Church in Canada met at Halifax, N. S., June 18th. The Rev. Dr. McLeod, of Sydney, C. B., was chosen moderator. Much interest was exhibited in the discussion of the case of the Rev. D. J. MacDonnell, who was charged with heresy in denying the doctrine of the eternity of future punishment. His case had been in the lower courts of the Church for more than a year, and the previous General Assembly had required of him to report to the present Assembly whether he accepted the teaching of the Church on that subject. His letter in answer to this demand was read to the Assembly. In it he said: "I beg respectfully to state that I hold no opinion at variance with that teaching." A resolution was adopted by the Assembly reciting that, while repeating that he held no opinion at variance with the teaching of the Church, he failed to state that he accepted it, and requiring him to give in writing, before a specified time, a categorical answer to the question propounded to him "in the terms of the deliverance of the last Assembly." Upon the passage of this resolution, Mr. MacDonnell stated: "I have answered as categorically as a minister within the Church who has given his adherence to the Confession of Faith, and still adheres to it, can fairly and constitutionally be required to do on a point on which he is confessedly in difficulty. If my answer is not satisfactory, I request, as I have a constitutional right to do, that the Presbytery of Toronto be instructed to frame a libel according to the laws of the Church." He afterward put the same statement in writing. A committee was then appointed to confer with Mr.

MacDonnell, with a view to the arrangement of the difference without further judicial proceedings. This committee, after having a conference with him, reported that he had intended, in expressing his adherence to the Confession of Faith in his last statement to the Assembly, to be understood as saying: "I consider myself as under subscription to the Confession of Faith in accordance with my ordination vows, and I therefore adhere to the teaching of the Church as contained therein on the doctrine of the eternity or the endless duration of the future punishment of the wicked, notwithstanding the doubts and difficulties which perplex my mind." By unanimous consent this declaration was accepted as satisfactory, and the subject was dropped.

VI. ESTABLISHED CHURCH OF SCOTLAND.—The *General Assembly* of the Established Church of Scotland met at Edinburgh, May 24th, and was opened with the usual state ceremonial by the Earl of Galloway as Lord High Commissioner. The Rev. Dr. Phin, Convener of the Home-Mission Committee, was chosen moderator. The usual gift of the royal bounty of £2,000 was made, "for the propagation of Christian knowledge and the principles of the Reformed religion in the Highlands and Islands of Scotland." The report on Church Extension showed that during the year 18 new parishes had been erected, embracing a population of 66,000, and giving to each parish an average of about 3,660 inhabitants, and calling for a total sum of about £63,000 in endowments. The sum of £22,203 had been received by the committee toward the £150,000 required for the erection of the proposed 100 additional parishes. The report of the committee appointed to procure "full information respecting collections and contributions for religious, charitable, and educational purposes," stated that the information asked for had been obtained from 1,246 out of 1,384 churches, chapels, and stations. The total sum returned as contributed in 1876 was £350,621, while in 1877 the sum had been increased to £384,106.

The most important subject of discussion was the question of providing a formula for the admission of elders to that office which should require a less stringent adhesion to the Confession of Faith than the one now required of them, and which would still be required of ministers. Seven overtures had been sent upon the subject, on the basis of which a motion was made for the adoption for transmission to the Presbyteries for consideration of a new formula acknowledging the Scriptures as the word of God and rule of faith and manners, and professing approbation of the Confession of Faith as the public and avowed Confession of the Church, but not requiring, as now, the candidates to accept it as the Confession of their own faith. It was urged in favor of the proposed change that great difficulty existed in finding laymen to serve as

elders, in consequence of their objections to signing the Confession in its present shape; and that some parishes were entirely without elders on this account. It was also stated in the debate that the subscription at present required was without parliamentary sanction, and that any elder objected to by the Assembly, on the ground that he had not signed the Confession of Faith, could call upon the civil courts to establish him in office. The proposed modification of the subscription was denied, by a vote of 173 to 104. A motion that the Established Church should join with other denominations in securing the inspection of religious instruction in schools was voted down. A committee was appointed to inquire as to the condition of the Church of Scotland in England, with the view of endeavoring to strengthen its position. The fact was pointed out, in connection with this subject, that the congregations in England were in circumstances of extreme difficulty and delicacy. Delegates were appointed to the General Presbyterian Council. The Assembly was visited on Friday, the 1st of June, by the Archbishop of Canterbury, who listened to the debates for about two hours. He was received on his entrance by the moderator and the Assembly rising. On leaving he expressed to the moderator the gratification he felt on having been present. In closing the Assembly, the moderator spoke of the movement for disestablishment as not only unwise and unscriptural, but positively sinful. Even though disestablishment came, he said, it would be the duty of the Church to hold aloof from those sections of Presbyterians who were now working for the destruction of the connection with the State.

VII. FREE CHURCH OF SCOTLAND AND REFORMED PRESBYTERIANS.—The *General Assembly* of the Free Church of Scotland met at Edinburgh, May 24th. The Rev. Dr. Goold, late of the Reformed Presbyterian Church (now united with the Free Church), was chosen moderator. In his opening address, the new moderator spoke at length on the agitation for a revision of the Confession of Faith, in which he agreed against revision, while admitting that the confession was not perfect, and that there might be progress in theological science, in that the truths communicated by God could be more correctly and fully apprehended by men. The principal business before the Assembly was the consideration of the case of Prof. W. Robertson Smith, of the Free Church College, at Aberdeen, who was charged with heresy. Prof. Smith, who was also a member of the Committee for the Revision of the Bible, had contributed an article to the new edition of the "Encyclopædia Britannica" on the Bible, in which he presented as the fruits of modern scholastic research some views on inspiration and the authorship and composition of the Scriptural books, at variance with the doctrines which had been taught in the Church.

The case had been before the Church for several months. It had been referred to the College Committee, who had made a report to the Commission of the Assembly, expressing regret and disapprobation that the article in question did not adequately indicate that Prof. Smith held the doctrine of the Divine inspiration of the Bible, the history of which he had investigated and described, and also that he held that the instruction and laws, which in the book of Deuteronomy appear as uttered by Moses, were post-Mosaic, and could not, in fact, have been given by him. The Presbytery of Aberdeen had considered the questions involved, and had obtained answers from Prof. Smith, which were forwarded to the Assembly. On the case being brought up in the Assembly, Prof. Smith stated that he had determined to ask his Presbytery at its next meeting to cause all charges against him to be reduced to the form of a libel, so that, according to the ordinary operations of the rules of procedure, his functions as a teacher could be suspended till the case was exhausted and decided. The Assembly resolved, by a vote of 491 to 113, to direct the Presbytery of Aberdeen to proceed with the case according to the rules of the Church, and that Prof. Smith should "cease from the discharge of his duties as professor until his case has been fully disposed of." The minority of the Assembly voted for a resolution refraining from expressing any opinion on the case or any of its points, and referring the whole matter to the Presbytery. Fifty overtures had been sent up from the Presbyteries and Synods in favor of the disestablishment and disendowment of the Church of Scotland. On this subject, the Assembly, after a long debate, adopted, by a vote of 460 to 78, a motion:

That the principles of the Claim of Right and Protest of 1843 admit the existing connection between Church and state in Scotland; that the circumstances of the country and the relative position of the Church preclude the present establishment on a scriptural basis of a National United Church; that it is now the duty of the legislature, while making due provision for life interests, to terminate the connection of the state with the existing Established Church and to give facilities for the beneficial adjustment of ecclesiastical matters in Scotland; that a committee be appointed to take suitable means for representing the views of the Church as stated in this deliverance, as occasion may arise, and the Assembly direct the committee to consider and report to a future General Assembly on the whole subject.

The minority voted for a resolution offered by Dr. Begg to the effect that, while not satisfied with the existing relations between Church and state in Scotland, the Assembly held that it was the duty of the Free Church to maintain the supremacy of Christ as King of Nations, whereas the tendency of a policy of mere disestablishment was to subvert the principles of the Reformation. A committee was appointed for the consideration of a proposal to enter into the same federal relations with the English

Presbyterians as exist between the latter and the United Presbyterians. A decision was given on a question of posture at worship in the Inverness High Church, the effect of which is that the standing posture in singing was ruled to be permissible. The Commission of the Assembly were authorized to hear such appeals or dissents as might arise in connection with the preliminary consideration of the case of Prof. Smith by the Presbytery of Aberdeen. The Reformed Presbyterians, who refused to join the Free Church with their brethren in 1876, have commenced legal proceedings against the latter. Their bill recites that the majority of the Reformed Presbyterian Synod, by their union with the Free Church, departed from the distinctive principles of the Reformed Presbyterian Church, and are not, therefore, entitled to the name of that Church or to any of the privileges or advantages belonging thereto.

VIII. UNITED PRESBYTERIAN CHURCH (SCOTLAND).—The following is a summary of the statistical reports of this Church, as presented to the General Assembly in May: Number of congregations, 526, an increase of 4 over the number reported in the previous year (ninety-eight congregations had united with the English Presbyterian Church); number of communicants, 172,170, an increase of 1872; number of Sunday-school teachers, 10,281; of Sunday-school scholars, 79,101. The total income of the Church had diminished slightly in consequence of the loss of the contributions of the English members, who had become connected with the English Presbyterian Church; it amounted to £406,204.

The Synod of the United Presbyterian Church met at Glasgow, May 14th. The Rev. William France, of Paisley, was chosen moderator. The most important question considered was concerning the revision of the standards of the Church. Four overtures had been sent up, asking for a revision, among them one from the session of Gourrock, which was vigorously supported in debate by the Rev. Mr. Macrae, pastor of the church at that place. After an exciting debate, in which it was remarked that no one denied the authority of the Church to revise its standards, the following action was taken on the subject:

The Synod dismisses the overture from the Gourrock Session, and declares (1) its steadfast adherence to the Westminster Confession of Faith and Catechism as containing the system of doctrine taught in the Holy Scriptures; (2) the Synod strongly disapproves and condemns the conduct of those persons who, having solemnly professed to give their assent to those standards, do, notwithstanding, indulge in denouncing them as erroneous and unscriptural, and in impeaching their brethren in the eldership and ministry with not believing and not preaching the doctrines of them; in particular (3) the Synod cannot tolerate the denial or disparagement of those doctrines commonly called the doctrines of grace, which it has been the distinguishing glory of this church in every period of its history to maintain and to preach; (4) in respect of the great importance of the question raised by the overture from the Pres-

bytery of Glasgow, and the difficulties attending it requiring great deliberation (such as the relation of this church to other Presbyterian churches), the Synod appoints a committee to consider the whole subject brought up by the overture from the Presbytery of Glasgow, and report to the Synod in May, 1878.

A resolution was adopted by a vote of 141 to 139, affirming the equal right of elders to participate with ministers in the act of ordination. It was, however, agreed that henceforth the method of procedure should be altered, so that the laying-on of hands should simply be vested in the moderator for the time being, and should be performed with the other members of the Presbytery standing around him.

IX. ENGLISH PRESBYTERIAN CHURCH.—This Church has received a large accession of members and strength by the incorporation with it of the congregations of the United Presbyterian Church in England. The following is a summary of the statistics of the whole Church, as they were reported at the meeting of the Synod in April: Number of presbyteries, 10; of congregations, 258; of communicants, 43,484; of teachers in Sunday-schools, 4,367; of scholars in the same, 42,058. Nearly one-half of the 258 church buildings are stated to be freehold, and to be insured in the amount of £488,690. The churches furnished 106,774 sittings, of which 51,353 were appropriated. The total amount of debts on churches and mansees was £99,955. Besides Sunday-school scholars, the churches reported 6,743 day scholars, 2,933 members of Young Men's Societies, and 5,601 members of Bible classes. The total income of the Church for the year had been £157,455.

X. IRISH PRESBYTERIAN CHURCH.—According to the statistical reports of this Church, presented to the General Assembly in June, the number of communicants was 107,000, or 1,000 less than were returned in 1876. The number of congregations, however, had increased, and an advance was noticed in the financial returns. The number of Sunday-schools was 965, with 8,792 teachers, and an average attendance of 70,832 scholars.

The General Assembly of the Irish Presbyterian Church met at Belfast, June 4th. The Rev. George Bellis was chosen moderator. The report of the Sustentation Fund was presented, and in the discussion of the subject it was stated that the fund had been started 7 years before, and was intended to make good the loss which had followed the withdrawal of the parliamentary grant called the *Regium Donum*. It was originally intended that it should amount to £30,000 per annum, but it had never amounted to more than the present year's income, £24,510, in the neighborhood of which figure it had been nearly stationary for several years. The question of instrumental music in the churches was again brought under discussion. The harmoniums had not yet been removed from some churches, as previous assemblies had requested. A committee was appointed to deal with the congregations which continued to use these in-

struments. Resolutions were adopted declaring that the Assembly continued to adhere to the policy of united non-sectarian education, as opposed to the denominational system.

XI. The *General Council of the Presbyterian Alliance* met at Edinburgh, Scotland, July 4th. The following churches and ecclesiastical bodies were represented in the organization of the Council: *DIVISION I. Continent of Europe.*—

National Reformed Church of France, 4 delegates; Free Church of France, 2 delegates; National Reformed Church of Holland, 4 delegates; Christian Reformed (Free) Church in the Netherlands, 2 delegates; Free Church of Germany and Old Reformed Church of East Friesland, 1 delegate; United Evangelical Church of Belgium, 1 delegate; Reformed Church of Belgium, 2 delegates; National Church of Vand, Switzerland, 1 delegate; Free Church of Vand, 1 delegate; Free Church of Neuchâtel, 1 delegate; Waldensian Church of Italy, 2 delegates; Free Italian Church, 2 delegates; Spanish Presbyterian Church, 2 delegates; Reformed Church of Bohemia, 2 delegates; Reformed Church of Moravia, 1 delegate; Reformed Church of Hungary, 2 delegates. *DIVISION II. Great Britain and Ireland.*—Presbyterian Church of England, 6 delegates; Welsh Calvinistic Methodist Church, 12 delegates; Established Church of Scotland, 26 delegates; Free Church of Scotland, 24 delegates; United Presbyterian Church (Scotland), 12 delegates; Reformed Presbyterian Church (Scotland), 1 delegate; Original Secession Church, 2 delegates; Irish Presbyterian Church, 14 delegates; Reformed Presbyterian Synod, 2 delegates; Associate Synod, 1 delegate. *DIVISION III. United States of America.*—Presbyterian Church in the United States of America, 40 delegates; Presbyterian Church in the United States, 14 delegates; United Presbyterian Church of North America, 12 delegates; Reformed Presbyterian Church (O. S.), 1 delegate; Reformed Presbyterian Church (General Synod), 1 delegate; Associate Reformed Synod of the South, 1 delegate; Welsh Calvinistic Methodist Church, 3 delegates; Reformed Church in America, 11 delegates.

DIVISION IV. British Colonies.—Presbyterian Church of Canada, 16 delegates; Dutch Reformed Church of the Orange Free State, 1 delegate; Dutch Reformed Church in South Africa, 1 delegate; Presbyterian Church of Victoria (Australia), 3 delegates; Presbyterian Church of New South Wales, 2 delegates; Synod of Eastern Australia, 1 delegate; Queensland, 2 delegates; Presbyterian Church of Otago and Southland (New Zealand), 2 delegates; Presbyterian Church of New Zealand, 1 delegate; Ceylon, 1 delegate; New Hebrides Missions, 1 delegate.

The presidents of the different sittings of the Council were chosen from among the representatives of the English-speaking churches whose delegates were in attendance. The Rev. Dr. Stuart Robinson, of the Presbyterian

Church in the United States, presided at the first session. The discussions were opened by the reading of a paper by the Rev. Dr. Philip Schaff, of New York, on "The Harmony of Reformed Confessions." Prof. Godet, of Neuchâtel, followed upon the same subject, and a paper was read which had been prepared by Prof. Kraft, of Bonn, as an attempt to embody in a code of 81 articles a consensus of the Reformed Creeds. After further discussion and consideration of the subject, the Council resolved to appoint a committee with instructions to prepare a report to be laid before the next General Council, showing in point of fact—

1. What are the existing creeds or confessions composing this Alliance? And what have been their previous creeds and confessions, with any modifications of these, and the dates and occasions of the same, from the Reformation to the present day?

2. What are the existing formulas of subscription, if any, and what have been the previous formulas of subscription, used in these Churches in connection with their creeds and confessions?

3. How far has individual adherence to these creeds by subscription or otherwise been required from the ministers, elders, or other office bearers respectively, and also from the private members of the same?

And the Council authorize the committee to correspond with members of the several Churches throughout the world who may be able to give information, and they enjoin the committee, in submitting their report, not to accompany it either with any comparative estimate of these creeds and confessions, or with any critical remarks upon their respective value, expediency, or efficiency.

The next important papers read were on "The Principles of Presbyterianism" (Rev. Dr. Cairnes), "The Churchliness of Calvinism" (Rev. Dr. Stuart Robinson), "Presbyterianism in the United States" (Rev. Dr. S. I. Paine), the latter paper giving a full historical and statistical account of the Presbyterian Churches in the United States. The subject of the second day's discussion was "The Preaching and Training of Teachers," and was introduced by a paper by the Rev. Dr. Howard Crosby, of New York, "On the Work of the Pastor as a Teacher." A number of papers were read relating to the elderships, the functions, qualifications, and training of elders, etc. The third day was occupied with the consideration of subjects relating to foreign missions. Papers were read on "Missionary Obligations" (the Rev. Dr. Jones, of Trevecca College, Wales, and the Rev. Dr. Murray Mitchell, of the Free Church of Scotland), "The True Missionary Spirit" (Dr. Wanzemann, of Berlin), "Jewish Missions" (Dr. Moody Stuart), and numerous addresses were made. A letter was read from the Rev. Dr. Duff, of the Free Church of Scotland, proposing that, as an expression of thankfulness for the great fact of a union of Presbyterianism which girdles the earth, a United Presbyterian Mission should be undertaken to the New Hebrides Islands. A motion was adopted for the appointment of a committee to collect information respecting Foreign Missions, with

a view to founding thereon a basis for the consolidation of Presbyterian Missions, or, that failing, of a more perfect coöperation between them. Doctrinal questions were discussed at the fifth day's session, Monday, July 9th. Papers were read on "The Unbelief of the Present Day" (Rev. Dr. Patton, of Chicago, Ill.), "How Should we View Discoveries in Science and Speculations in Philosophy?" (Rev. Dr. McCosh, of Princeton, N. J.), "The Personality of the Divine Being" (Rev. Dr. Potts, of Belfast, Ireland). The "Helps and Hinderances to Spiritual Life" were brought under review, at the close of which the Council expressed its deep interest in the sanctification of the Sabbath and the suppression of drunkenness, as bearing on the prosperity and spiritual life of the Church; advised the use of effort "to place the duty of sanctifying the Sabbath on the ground of divine obligation, in order effectually to counteract the many plausible efforts made to sap its foundation;" and expressed the conviction that the time had come for the Church to grapple with the evil of intemperance in a more earnest spirit. The representatives of the Reformed Churches on the Continent of Europe gave accounts of the condition of their respective bodies; after which the Council passed a resolution of sympathy and encouragement with the Continental Churches, and ordered a committee appointed to collect information respecting them, and consult concerning their welfare. On the sixth day, a paper was read by Prof. Lorimer, of London, on "The Desiderata of Presbyterian History," after which a committee was appointed, with Prof. Lorimer as convener, to correspond with all the branches of the Church represented in the Alliance, with reference to procuring materials for their history, and report at the next meeting of the Council. A resolution was passed advising coöperation and combined action in missionary operations in Southern and Western Africa. Another resolution commended the importance of the training of the young as a branch of Christian work, as well as the duty of parents. An address was adopted for presentation to the Queen, which contains the following passage:

While we wish success to all efforts put forth in sincerity and faith by any branch of the Christian Church within your territories, in order to promote the knowledge and belief of Scripture truth, we venture to indicate the deep interest which we take that, while residing in Scotland, your Majesty joins in the Presbyterian worship and communion. We are met together through our common interest in the principles of the Protestant Reformation, and we desire to make our Presbyterian polity subservient to the influence of those principles throughout the world.

The Council decided to hold its next meeting in Philadelphia, Pa., in 1880. The following table has been prepared to show the condition and strength of the Churches which were represented in the Council:

DIVISIONS.	Minist- ers.	Chur- ches.	Communi- cants.
Presbyterians in England.....	258	258	48,384

PROTESTANT EPISCOPAL CHURCH.

The table on page 652 gives a summary of the statistics of the Protestant Episcopal Church as they are given in the *Church Almanac* of the Protestant Episcopal Tract Society for 1878.

Number of dioceses, 48; of missionary districts, including Africa, China, and Japan, 13; of bishops, 61, and one bishop-elect; of priests and deacons, 3,211; whole number of clergy, 3,272; of parishes, about 2,900; number of communicants reported in 45 dioceses and 9 missionary districts, 302,069; number of Sunday-school teachers in 11 dioceses and 5 missionary districts, 28,569; number of Sunday-school scholars in 46 dioceses and 5 missionary districts, 266,261; amount of contributions in 41 dioceses and 5 missionary districts, \$6,457,208.62. *Whittaker's Almanac* gives totals of 3,216 priests and deacons, 281,977 communicants, 29,548 Sunday-school teachers, 275,018 Sunday-school scholars, and \$6,734,268.07 of contributions.

The triennial *General Convention* of the Protestant Episcopal Church in the United States met in Boston, Mass., October 3d. The opening sermon was preached by Bishop Williams, of Connecticut. The Rev. Alexander Burgess, D. D., was chosen President of the House of Clerical and Lay Deputies. The committee who had been appointed by the previous Convention to represent the Church at the Provincial Synod of Canada made a report of their cordial reception by the Synod, and the establishment of fraternal relations between the two bodies. A deputation, consisting of the Lord Bishop of Huron and Niagara, the Dean of Huron, the Archdeacon of Niagara, and two lay representatives, was received from the Provincial Synod. The opening sermon of the Bishop of Connecticut contained an exposition of the duty of prosecuting Christian work by and upon individuals and in sympathy with their wants, and of giving prom-

inence to considerations of duty rather than of rights. This led to action by the House of Deputies, with special reference to the large class of laboring men who are separated from the Church, and subject to evil and corrupting influences and dangerous organizations, as well as with reference to the increase of crime among men in higher positions, in which the House unanimously resolved to enjoin the clergy to urge upon all laymen and women the duty of individual Christian labor with individuals; "to ascertain and provide for the spiritual wants of neglecters of their souls, by establishing Bible classes and mothers' meetings;" to promote the establishment of brotherhoods and sisterhoods, and other churchly social agencies; and "to provide frequent

and various services to which all shall be freely invited and cordially welcomed." A special committee was appointed to devise means of carrying out the suggestions contained in these resolutions, who made a report recommending a well-directed effort to secure a more widely extended use of lay services in the work of making known the Gospel, and in taking part in those various ministrations of charity and social efforts which look to the supply of moral and intellectual wants, as well as the care of the bodies of men. The existing systems of lay reading and Sunday-schools were not sufficient. A freer use of brotherhoods and sisterhoods, and the provision of guild rooms or halls, were pointed to as agencies which might be employed with advantage. The House called the attention of the clergy and laity to the facts and suggestions of the report, requested the parochial clergy to select and appoint from their respective cures, with the consent of the bishop, persons specially adapted to act as catechists and teachers, and recommended to the clergy and parochial authorities to consider "whether existing church buildings cannot be used to a greater extent than now they are for the benefit and blessing of the people, and thrown open at times when not occupied by regular congregations for worship to all who would come in for the worship of God and the hearing of His word." Three amendments to the Constitution of the Church had been proposed by the previous General Convention, and came before the present body for ratification or rejection. The first provided that, upon the application of the bishops and convention of an organized diocese, the General Convention might set off a portion of the diocesan territory as a missionary jurisdiction. This amendment was ratified by the House of Deputies, but was non-concurred in by the House of Bishops, on the ground that it was not necessary, as the bishops already possessed the power to create missionary districts. The bishops had consented to the submission of the amendment by the previous Convention, because "grave doubts" had been expressed as to whether they possessed the power they claimed; the debates at the present Convention showed that these doubts had almost entirely disappeared, and the bishops accordingly held to their original position. The second proposed amendment provided that the "General Convention may by canon arrange and set forth a shortened form of Morning and Evening Prayer, to be compiled wholly from the 'Book of Common Prayer.'" The committee to whom it was referred made divided reports upon it, and it was subjected to a full discussion, after which it was rejected by a large majority. The subject of providing brief services for special occasions was afterward referred to the Committee on the Prayer Book, who made a report to the effect that they were of the opinion that such provision could be lawfully made. A canon and rubric

* Numbers reported in 1876.

prescribing the desired shorter form of service were adopted by the House of Deputies, but were non-concurred in by the Bishops. Committees of Conference were appointed to endeavor to adjust the differences between the two Houses, but were prevented, by the close of the Convention before they had completed their work, from effecting their object. The third constitutional amendment proposed by the General Convention of 1874 provided that "the General Convention shall have power, from time to time, to amend the Lectionary, but no act for this purpose shall be valid which is not voted for by a majority of the whole number of bishops entitled to seats in the House of Bishops, and by a majority of all the dioceses entitled to representation in the House of Deputies." This amendment was adversely reported upon by the committee to whom it was referred, but was ratified by the Convention. An alternate Lectionary for Lent, prepared in accordance with the instructions of the previous General Convention, was approved, and the clergy were authorized to use, during the ensuing three years, the Lectionary of the Church of England. Several propositions were introduced looking to the adoption of such amendments to the constitution as should effect a change in the name of the Church by omitting the words "Protestant Episcopal" from its title. None of them found any favor with the Convention; and, finally, a resolution to the effect that a change in the name of the Church is not desirable was adopted by a very large majority. The joint committee appointed by the previous General Convention to consider the subject of the organization of an order of Deaconesses reported favorably to the proposition, and presented the draft of a canon relative to the organization of the order. The two Houses of the Convention failed to agree upon the precise terms of the canon, and the subject was referred to a committee for further consideration, which is to report to the next General Convention. The subject of establishing brotherhoods was also referred to the next General Convention. A joint committee of both Houses, appointed by the previous General Convention to consider and report on the subject of the godly discipline of the laity, made a report, pointing out what it regarded as the deficiencies of the present law of discipline of the Church, and embodying a resolution which was adopted by both Houses: "That it is expedient so to amend the law of the Church, touching the godly discipline of its members, as to make it more explicit in its provisions, and more readily applicable to particular cases." The joint committee heretofore in charge of the subject was reconstituted with reference to convenience of assembling, and continued. A joint committee of both Houses was appointed "to consider and report to the next General Convention what are the several functions of rectors and wardens and vestrymen in

the control and administration of parishes, ascertaining the rights and authorities of each in the premises according to the principles and laws of the Church, and report to the next General Convention what, in their opinion, is the best mode of making those principles and laws of effect." A committee consisting of three persons from each House was appointed "to take such steps as in their discretion may be judicious, toward securing from the Government, for the Indians, the full protection of the 'civil' law." The standing committee on Indian affairs reported that the higher officers of the Government were in favor of affording the Indians such protection, and also all helps to become civilized, and expressed themselves "much encouraged by the past success of the missions of the Church to the Indians." The declaration was inserted in the canon concerning the "deposition of ministers, that 'deposition, displacing, and all like expressions, are the same as degradation.'" The canon relating to the renunciation of the ministry was modified, so as to provide that, when a clergyman leaves the ministry for causes other than those affecting moral character, a distinct statement to that effect shall be made to accompany the record and notice of his deposition. The subject of the formation of provincial councils, with suffragan bishops, was referred to a joint committee of the two Houses, who were instructed to report upon it to the next General Convention. A joint committee of the two Houses was appointed to consider the subject of the admission of ministers of other Christian bodies to the Church. An amended constitution was adopted for the Domestic and Foreign Missionary Society of the Protestant Episcopal Church. The society is considered as comprehending all persons who are members of the Church, and will have connected with it a Board of Missions, composed of the bishops of the Church, and the members of the House of Deputies of the General Convention, who may sit apart as in General Convention, or together, when they shall so decide, and shall meet on the third day of the session of the General Convention, and from day to day; also a Board of Managers, comprising all the bishops, fifteen clergymen, and fifteen laymen, to be appointed by the Board of Missions at every triennial meeting of the General Convention, who shall have charge of the affairs of the society during the interim between the sessions of the General Convention. Provision is also made for auxiliary missionary associations. An amended canon was adopted on marriage and divorce. It pronounces marriages which are not according to God's word unlawful, and prohibits the baptism, confirmation, or administration of the communion to persons who are married "otherwise than as the word of God and the discipline of the Church allow," except after the case has been referred to the bishop for his judgment, *provided*, however, that no "minister shall in any case refuse the

sacraments to a penitent person in imminent danger of death." The subject of the relations of a bishop to churches that have been consecrated was referred to a joint committee to report to the next General Convention. An amended canon was adopted on the subject of the dissolution of the relations between a minister and his congregation. Resolutions were adopted in favor of retaining the Bible in the schools, and declaring it to be the duty of the clergy and laity of the Church to take an active interest in the education provided in their States, with the purpose of infusing into it as much religious influence and instruction as possible. A joint committee of the two Houses was appointed to consider the whole subject of education, and report to the next General Convention. The House of Bishops was requested to have prepared translations into English of the Creed and other acts of the undisputed general councils of the primitive Church. Consent was given to the erection of the new dioceses of Quincy and Springfield, in the State of Illinois, and of the diocese of West Virginia. A resolution was adopted, having especial reference to Church fairs, entertainments, and festivals, requesting the bishops "to express their opinions as to the impropriety of the various instrumentalities adopted for raising funds for the support of the Church." A resolution was offered to the effect that the Church should express its sympathy with the movement made in England toward disestablishment, but it was promptly laid on the table. The joint committee on the preparation of the Prayer Book in the German language reported progress, and was continued. The House of Bishops recommended to all the theological institutions of the Church to introduce, as soon as practicable, a thorough course of instruction on foreign missions, and the present religious condition and needs of the world; resolved henceforth to communicate all sentences of deposition and suspension to the bishops of the Anglican Church in British North America, and approved the plan proposed by Dr. Schereschewsky, Missionary Bishop-elect of Shanghai, to establish in China a collegiate institution "for the educating and training up a native ministry, and for other purposes of Christian education." The committee of the House of Bishops on Correspondence with the Hierarchy of the Holy Eastern Church made a report, and was continued. The Rev. O. C. Penick, D. D., who has been elected by the House of Bishops as Bishop for the Heathen in Africa, was consecrated as *Bishop of Cape Palmas* at St. Paul's Church, Alexandria, Virginia, on the 13th of February. The House of Bishops have nominated the Rev. D. H. Knickerbocker as *Missionary Bishop of New Mexico and Arizona*, in place of Bishop Adams, who has resigned. The Rev. Samuel I. J. Schereschewsky, who had been elected *Missionary Bishop of Shanghai, China*, was consecrated to that office in Grace Church

in the city of New York, on the 30th of October, 1877.

The first diocesan convention of the newly-formed diocese of West Virginia met at Charlestown, December 5th. An election was held for bishop of the diocese, and resulted in the choice of the Rev. J. H. Eccleston, D. D., of Newark, N. J. Dr. Eccleston was elected Bishop of Iowa in 1875; but the legality of the election was disputed, and he declined to accept the office. He also declined, in January, 1868, the tender of the bishopric of West Virginia.

The diocesan convention of the dioceses which the General Convention directed to be formed in Illinois decided to call their dioceses respectively the dioceses of Quincy and of Springfield. The first diocesan convention of the diocese of Quincy met at Quincy, Ill., December 12th, and elected the Rev. Samuel Smith Harris, D. D., of Chicago, Ill., to be bishop. Dr. Harris, however, declined to accept the office. The diocesan convention of Springfield met at Springfield, Ill., December 19th, and elected the Rev. George F. Seymour, D. D., Dean of the General Theological Seminary in New York City, to be bishop. Dr. Seymour was elected Bishop of the diocese of Illinois in 1874, but was rejected by the General Convention of that year on account of his supposed strong ritualistic tendencies.

The fourth *Church Congress* of the Protestant Episcopal Church was held in the city of New York, beginning October 30th. Bishop Potter, of New York, presided, and delivered the opening address, in which he referred to the general character of the topics that were to be considered, and recommended temperance in discussion, moderation in tone, and respect for the opinions of persons of different views. The first subject discussed was "The Church Architecture that We Need," on which papers were read and addresses delivered by Mr. Richard M. Hunt, Mr. Emlen Littell, the Rev. W. A. McVickar, D. D. (read by the Rev. Dr. Neven), and the Rev. C. W. Ward. The second topic of the first day's session was "The Relation of the Christian Church to Local and National Life in America," and was discussed by Bishop Littlejohn, of Long Island, the Rev. Hugh Miller Thompson, D. D., the Rev. J. S. Hancel, the Rev. John Fulton, D. D., the Rev. R. H. McKim, and the Rev. W. W. Battershall. On the second day, the subject of "The Spiritual Forces of Civilization" was considered by the Rev. F. C. Ewer, D. D., the Rev. Francis A. Henry, the Rev. Percy Browne, the Rev. Drs. Abercrombie and Mornher, the Rev. S. D. McConnell, and the Rev. A. S. Noodle; and "The Relation of the Popular Press to Christianity in America," by the Hon. John Jay, the Hon. Erastus Brooks, Bishop Dudley, of Kentucky, Bishop Clark, of Rhode Island, and Bishop Schereschewsky, of Shanghai, China. The first topic for the third day was "The Influence of the Pulpit upon Mod-

ern Thought and Life," and papers were read or addresses made upon it by Bishop Lay, of Easton, Bishop Clark, of Rhode Island, the Rev. F. Courteney, the Rev. Noah Hunt Schenck, and the Rev. J. G. Armstrong. The second topic of the day, "Christianity and Modern Amusements," was considered in addresses and papers by the Rev. W. W. Newton, the Rev. John Vaughan Lewis, D. D., the Rev. T. G. Addison, D. D., and Prof. Cowing, of the University of Louisville. On the fourth day, the topic of "The Organization and Administration of Charity" was presented by the Rev. Henry C. Potter, D. D., and the discussion was continued by the Hon. John Welsh, the Rev. J. W. Brown, D. D., Mr. Lewis Delafield, and the Hon. Erastus Brooks. The other topic of this day's session, and the last considered by the Congress, was "The True Policy toward the Indian Tribes," and was discussed by Bishop Whipple, of Minnesota, Bishop Hare, of Niobrara, Bishop Tuttle, of Montana, the Hon. Felix A. Brunot, and Bishop Clarkson, of Nebraska. The Congress was closed with an address by Bishop Potter congratulatory of its success.

The League in aid of the Mexican Branch of the Church, or the *Mexican Mission League*, is a society of women which was organized in March, 1876, with the object, as defined in its constitution, of enlisting the interest of the churchwomen of New York and other cities in the work of the Church in Mexico, and of furnishing a yearly contribution for its support. Its meetings are held annually, on the Wednesday after the third Sunday of Lent, and the meetings of its executive board are held monthly. Diocesan secretaries have been appointed in several dioceses, and many of the bishops have given the society their approval. The report of the corresponding secretary for 1877 gave the following statement of the condition and work of the Mexican Church: "Three congregations in the capital and sixty-eight in other parts of the republic of Mexico, with from six to eight thousand worshippers, have already been gathered; these are ministered to by a faithful, able, and eloquent band of native

missionaries. Eight church schools have been established, where a very large number of children have been carefully taught the Bible, and have received a good secular education. A theological seminary has been preparing young men for the ministry, and seven candidates are now awaiting holy orders. An orphanage has been started in which are forty girls of from four to fifteen years of age; a periodical, called *The Truth*, is regularly published, and many other religious works have been issued. Tens of thousands of copies of the Spanish translation of the Holy Scriptures have been circulated."

The Board of Missions, in 1876, notified its missionaries in Liberia that the appropriations for the support of their work would be discontinued. The clergy and laity of the Church held a meeting in November of the same year, to decide what course they should pursue. After making an acknowledgment of the debt of gratitude which they owed to the "mother Church" in America, for planting and sustaining their churches and stations up to the present time, the Convention resolved to organize a diocese, to be called "the Diocese of the Protestant Episcopal Church in Liberia," which should be in union with all branches of the Anglican communion in doctrine, discipline, and worship. The new diocese, according to a statement made by its secretary, begins under many disadvantages, with no money to support those engaged in preaching, no schools of its own, its church edifices in bad condition, and its membership for the most part very limited in pecuniary circumstances.

The eleventh annual convocation of the *Episcopal Church of Hayti* was held at Port-au-Prince, May 27th. All of the clergy were present but one, and lay representatives attended from six out of ten missionary congregations.

PRUSSIA, a kingdom of Europe, forming part of the German Empire. King William I., German Emperor and King of Prussia. (For an account of the Royal family, see GERMANY.)

The Prussian ministry was composed in 1877 as follows: President, Prince von Bismarck, Minister of Foreign Affairs and Chancellor of

RAILWAY BRIDGE BETWEEN COBLENZ AND EHRENBREITSTEIN.

the German Empire; Camphausen (appointed October 26, 1869), Minister of Finances; Count zu Eulenburg (December 9, 1862), Minister of the Interior; Dr. Leonhardt (December 5, 1867), Minister of Justice; Dr. Falk (January 22, 1872), Minister of Ecclesiastical, Educational, and Medical Affairs; General von Kammeke (November 9, 1873), Minister of War;

Dr. Achenbach (May 13, 1873), Minister for Commerce and Public Works; Dr. Friedenthal (September 19, 1874), Minister of Agriculture; Von Bülow (June 6, 1876), Secretary of State in the Foreign Office; Hofmann (June 6, 1876), President of the Imperial Chancery.

The area and population of the different provinces was as follows:

PROVINCES.	Area in English Square Miles.	POPULATION IN 1875.		
		Males.	Females.	Total.
Prussia.....	24,115.98	1,548,828	1,650,843	3,199,171
Brandenburg.....	15,408.39	1,659,045	1,567,368	3,126,411
Pomerania.....	11,680.52	718,751	743,589	1,462,290
Posen.....	11,178.66	774,245	881,838	1,656,084
Silesia.....	15,556.23	1,836,322	2,007,377	3,843,699
Saxony.....	9,745.89	1,072,445	1,096,543	2,168,988
Schleswig-Holstein (inclusive of Lauenburg)....	7,218.43	686,776	637,150	1,078,926

Total.....	184,499.30	12,692,370	13,050,084	25,742,404

In the budget for the year 1877-'78 the receipts and expenditures were estimated at 651,-638,414 marks. The sources of revenue were the Ministry of Finance, Ministry of Commerce, Ministry of State, Ministry of Justice, Ministry of Agriculture, Ministry of Worship, Education, and Medicine, etc., as follows:

SOURCES OF REVENUE.	Marks.
1. Ministry of Finance.....	323,019,233
2. " Commerce.....	273,787,420
3. " State.....	517,580
4. " Justice.....	45,377,900
5. " the Interior.....	8,112,292
6. " Agriculture.....	4,454,270
7. " Worship, Education, and Medicine.....	1,365,264
8. " Foreign Affairs.....	4,500
Total.....	651,638,414

The expenditures are divided into permanent (fortdauernde), transitory (einmalige), and extraordinary (ausserordentliche) disbursements. The continuing or permanent are subdivided into current expenditures (Betriebsausgaben), administrative expenditures (Staats-Verwaltungsausgaben), and charges on the consolidated fund (Dotationen). The different branches of expenditures were as follows:

BRANCHES OF EXPENDITURES.	
CURRENT EXPENDITURE.	
Ministry of Finance.....	67,271,890
" Commerce.....	202,090,010
" State.....	509,175
Total current expenditure.....	269,871,075
ADMINISTRATIVE EXPENDITURE.	
Ministry of Finance.....	109,649,135
" Commerce.....	19,712,985
" Justice.....	67,253,300
" the Interior.....	36,020,093
" Agriculture.....	10,459,843
" Worship and Instruction.....	45,469,913
" State.....	2,237,188
" Foreign Affairs.....	411,600
Total administrative expenditure.....	286,944,513

CHARGES ON THE CONSOLIDATED FUND.	Marks.
Additions to the crown dotations of the King....	4,500,000
Interest on public debt.....	45,125,311
Sinking fund of debt.....	17,213,140
Annuities and management.....	1,790,049
Chamber of Lords (Herrenhaus).....	163,110
Chamber of Deputies.....	1,204,520

Total charges on consolidated fund..... 69,995,630

Total ordinary expenditure..... 631,030,267

Transitory and extraordinary expenditure..... 20,558,147

Total..... 651,638,414

The public debt of the kingdom, inclusive of the provinces annexed in 1866, was, according to an official report laid before the House of Deputies, as follows on March 31, 1877:

TITLE OF DEBT.	Marks.
1. Consolidated debt of 1842.....	141,882,500
2. " " 1870.....	503,809,150
3. " " 1873 and 1876.....	100,000,000
4. Non-consolidated loans.....	111,473,200
5. State railway debt.....	46,381,616
6. Preference loan of 1855.....	27,080,000
7. War debt of the Kurmark and Neumark.....	2,743,982

I. Total debt of Prussia..... 933,325,448

II. Debt of Provinces annexed in 1866..... 95,225,024

III. Floating debt called "Schatzanweisungen"..... 30,000,000

Total..... 1,058,550,472

The Prussian Diet was opened on January 12th by the Emperor-King in person. King William, in the speech from the throne, expressed the hope that the endeavors of the Government to supply the wants of the country would meet with firm support in the Diet. The public revenue for 1877, estimated on the whole to equal that of last year, offered the means of satisfying any new and permanent requirements of the State. The King then dwelt in grateful terms upon the proofs of affection and fidelity which he had received from the people on the celebration of his seventy years' military jubilee, and said that he regarded the sentiments then manifested toward him as a sure guarantee that Prussia would con-

tinued to fulfill her political mission in the German Empire, by faithfully carrying out truly monarchical and, at the same time, liberal institutions. The Herrenhaus organized by electing the Duke of Ratibor president, Herr von Bernuth first vice-president, and Herr Hasselbach second vice-president. In the Chamber of Deputies, the National Liberals and the Party of Progress united to organize the House, and, on January 15th, reelected Herr von Bennigsen, a National Liberal, president, and elected for its first vice-president Herr Klotz, of the Party of Progress, and for its second vice-president Count Bethusy-Huc, a Free Conservative. The session was mainly devoted to the consideration of the budget, which passed its third reading in the Chamber of Deputies on February 28th. The Diet adjourned on March 3d. Of other business transacted during this session, the most important was the division of the Province of Prussia into two provinces, East and West Prussia. This law is dated March 19, 1877, and goes into operation on April 1, 1878. Two Danish deputies from Schleswig-Holstein, Kryger and Lassen, refused to take the oath to observe the Prussian constitution. On February 27th, their seats were, therefore, declared vacant.

The Chambers were opened again on October

21st, by Herr Camphausen, the Finance Minister and Vice-President of the Prussian Cabinet, who read the speech from the throne, of which the following are extracts:

Some branches of the public revenue have not in the current year yielded the amount that would have accrued under normal conditions; while, on the other hand, the public works required in the interest of the country will probably consume an amount larger than, in present circumstances, we can hope to collect. For these reasons, and, as public works are profitably carried on at a time when commerce is still depressed, we contemplate being obliged to have recourse to extraordinary measures for the reinforcement of our means. Besides supplementary estimates for the current year, the budget for the ensuing year, and a bill authorizing a loan, will be submitted to you. To complete the administrative reform begun and practically carried out in five provinces, the laws regulating the government of towns in these provinces will have to be modified in what concerns the supervision exercised by the Crown, and the jurisdiction of the Administrative Courts. The Road Construction bill, adapted to the new administrative laws, will be resubmitted. The laws for the protection of fields and forests having long been considered as wholly inadequate, a bill will be introduced, rearranging this important branch of the Executive, in conformity with the Penal Code of the Empire, and the remodeled functions of the administrative authorities.

A ministerial crisis, which had arisen in the latter part of September, in consequence of a

COLOGNE CATHEDRAL IN ITS PRESENT CONDITION.

difference between Prince Bismarck and Count Eulenburg, with regard to the administrative reforms proposed by the latter, led to the resignation of Count Eulenburg, the Minister of the Interior. The Emperor declined to accept the resignation, and instead granted the count a six months' furlough. This matter led to a violent debate in the House, in the course of which Herr Windthorst, late Hanoverian minister, and

the distinguished leader of the Centrum (Catholic party), seized the occasion to make a bitter attack upon the Cabinet. There could be no doubt, he said, that, notwithstanding the ambiguous phraseology used by the ministers, the great work of administrative reform was virtually at an end, or, at any rate, would not be carried through in the spirit in which it had been originally conceived. They certainly had

the declaration of the Vice-President of the Cabinet that he would resign were the progress of the great reform to be completely interrupted; but this meant nothing, Herr Camphausen having taken care to qualify his announcement of eventual self-immolation by the

been given to understand that, in the event of any of the ministers proving refractory, the seats vacated by these recusants would be filled with parliamentary exponents of the Ministerial party?

Herr Camphausen, in reply, repudiated in the most positive manner an assertion made by Herr Windthorst that Prince Bismarck ruled absolutely, and expressed it as his opinion that the dignity of the House and of the Government ought not to allow such observations as those which Herr Windthorst, himself a former minister, had thought fit to make. Herr Lasker, leader of the left wing of the Moderate Liberals, who had so long conferred upon Government the immense benefit of a faithful, but wholly independent and unselfish, assistance, had no hesitation in declaring all attacks on Prince Bismarck to be tanta-

DÜSSELDORF.

mount to attacks upon the nation. He admitted, however, that the apparent determination of the Cabinet to exclude municipal and village government from the range and scope of administrative reform was not in harmony with previous announcements and with what

his political friends regarded as a necessary complement of the bills enacted. His party would watch the course pursued by the Government, and be guided by circumstances. Government had no right to count on the continued support of the Moderate Liberals, unless a straightforward and liberal course was held. At the close of the debate, the anti-Ministerial resolutions introduced by the Centrum and Advanced Liberals were rejected by the Moderates. On the 31st of October, General von Kameke, the War Minister, declared that the decree prohibiting the

export of horses had been issued only when foreign dealers ordered of Germany 30,000 horses fit for war purposes. As such an order interfered with the state of military preparation

UNIVERSITY OF HALLE.

servants of the Sovereign Premier, had bowed to his decision. It was easy to see why the Moderate Liberals in the House imitated the example set by the Cabinet. Had they not

export of horses had been issued only when foreign dealers ordered of Germany 30,000 horses fit for war purposes. As such an order interfered with the state of military preparation

required for the political safety of the country, there remained nothing but to follow the example set by Austria and Russia, and prohibit the export of horses. Not, however, to injure horse-breeders beyond what was necessary, a royal decree reserved to the Government the right to permit export in special cases. This permission having been liberally given, the export has reached the ordinary figure, and, in the last few months, amounted to no fewer than 7,000. After this declaration, the motions censuring the royal decree were thrown out. The House adjourned on December 20th.

The conflict between the Government and the Catholic Church continued during the year. In April, the assistant bishop of Posen, Janiszewski, was removed from his office by the royal court for ecclesiastical affairs. On June 13th the bishop of Limburg, in the province of Hesse-Nassau, was deposed by sentence of the Berlin ecclesiastical court. The bishop was proved to have persistently resisted the Prussian ecclesiastical laws, though he willingly submitted to the stricter supervision of the Nassau and Frankfort authorities in the days of Nassau and Frankfort independence. Being in all fined 45,000 marks for his offenses against the Prussian ecclesiastical laws, he was accused of having managed to evade payment by the alleged transfer of his property to various charities, which allowed him the use of it during life. The bishop did not appear in court.

PRUYN, JOHN V. L., died at Clifton Springs, N. Y., November 21, 1877. He was born in Albany, N. Y., in 1811. He was educated at the Albany Academy and was admitted to the bar in 1832. He was appointed Master in Chancery by Governor Marcy; was chosen a director and counsel of the Mohawk & Hudson Railroad Company in 1835, and afterward became Treasurer of the New York Central. In 1831 he became associated with the Albany Institute, the oldest scientific society of the State, and from 1855 till his death was its president. He was elected a member of the Board of Regents of the University of the State of New York in 1844, and in 1862 became Chancellor of the University. He was a member of the State Senate in 1862 and 1863, and of Congress in 1863-'65 and 1869-'71. Mr. Pruyn suggested the organization of the State Board of Charities, and was its president at the time of his death. He was also president of the Board of Commissioners of the State Survey. He received the degree of Master of Arts from Rutgers College, and that of Doctor of Laws from the University of Rochester. He had devoted much time to the advancement of the educational interests of the State, and to its institutions of charity. He also took much interest in questions of political science, and was a delegate to the recent International Code Congress held at the Hague, in Holland.

PUBLIC DOCUMENTS. *Inaugural Address of President HAYES, delivered March 5, 1877.*

FELLOW-CITIZENS: We have assembled to repeat the public ceremonial, begun by Washington, observed by all my predecessors, and now a time-honored custom which marks the commencement of a new term of the presidential office. Called to the duties of this great trust, I proceed, in compliance with usage, to announce some of the leading principles, on the subjects that now chiefly engage the public attention, by which it is my desire to be guided in the discharge of those duties. I shall not undertake to lay down irrevocably principles or measures of administration, but rather to speak of the motives which should animate us, and to suggest certain important ends to be attained in accordance with our institutions and essential to the welfare of our country.

At the outset of the discussions which preceded the recent presidential election it seemed to me fitting that I should fully make known my sentiments in regard to several of the important questions which then appeared to demand the consideration of the country. Following the example, and in part adopting the language of one of my predecessors, I wish now, when every motive for misrepresentation has passed away, to repeat what was said before the election, trusting that my countrymen will candidly weigh and understand it, and that they will feel assured that the sentiments I declared in accepting the nomination for the presidency will be the standard of my conduct in the path before me, charged, as I now am, with the grave and difficult task of carrying them out in the practical administration of the government, so far as depends, under the Constitution and laws, on the Chief Executive of the nation. The permanent pacification of the country upon such principles and by such measures as will secure the complete protection of all its citizens in the free enjoyment of all their constitutional rights, is now the one subject in our public affairs which all thoughtful and patriotic citizens regard as of supreme importance. Many of the calamitous effects of the tremendous revolution which has passed over the Southern States still remain. The immeasurable benefits which will surely follow, sooner or later, the hearty and generous acceptance of the legitimate results of that revolution, have not yet been realized. Difficult and embarrassing questions meet us at the threshold of this subject.

The people of those States are still impoverished, and the inestimable blessing of wise, honest, and peaceful local self-government is not fully enjoyed. Whatever difference of opinion may exist as to the cause of this condition of things, the fact is clear that, in the progress of events, the time has come when such government is the imperative necessity required by all the varied interests, public and private, of those States. But it must not be forgotten that only a local government, which recognizes and maintains inviolate the rights of all, is a true self-government. With respect to the two distinct races, whose peculiar relation to each other have brought upon us the deplorable complications and perplexities which exist in those States, it must be a government which guards the interests of both races carefully and equally. It must be a government which submits loyally and heartily to the Constitution and the laws, the laws of the nation and the laws of the States themselves, accepting and obeying faithfully the whole Constitution as it is. Resting upon this sure and substantial foundation, the superstructure of beneficent local governments can be built up, and not otherwise. In furtherance of such obedience to the letter and the spirit of the Constitution, and in behalf of all that its attainment implies, all so-called party interests lose their apparent importance, and party lines may

well be permitted to fade into insignificance. The question we have to consider for the immediate welfare of those States of the Union is the question of government or no government, of social order and all the peaceful industries and the happiness that belong to it, or return to barbarism. It is a question in which every citizen of the nation is deeply interested, and with respect to which we ought not to be, in a partisan sense, either Republicans or Democrats, but fellow-citizens, and fellow-men, to whom the interests of a common country and a common humanity are dear.

The sweeping revolution of the entire labor system of a large portion of our country, and the advance of four millions of people from a condition of servitude to that of citizenship, upon an equal footing with their former masters, could not occur without presenting problems of the gravest moment, to be dealt with by the emancipated race, by their former masters, and by the General Government, the author of the act of emancipation. That it was a wise, just, and providential act, fraught with good for all concerned, is now generally conceded throughout the country. That a moral obligation rests upon the National Government to employ its constitutional power and influence to establish the rights of the people it has emancipated, and to protect them in the enjoyment of those rights when they are infringed or assailed, is also generally admitted.

The evils which afflict the Southern States can only be removed or remedied by the united and harmonious efforts of both races, actuated by motives of mutual sympathy and regard; and while in duty bound and fully determined to protect the rights of all by every constitutional means at the disposal of my administration, I am sincerely anxious to use every legitimate influence in favor of honest and efficient local self-government as the true resource of those States for the promotion of the contentment and prosperity of their citizens. In the effort I shall make to accomplish this purpose I ask the cordial coöperation of all who cherish an interest in the welfare of the country, trusting that party ties and the prejudice of races will be freely surrendered in behalf of the great purpose to be accomplished. In the important work of restoring the South, it is not the political situation alone that merits attention. The material development of that section of the country has been arrested by the social and political revolution through which it has passed, and now needs and deserves the considerate care of the National Government within the just limits prescribed by the Constitution and wise public economy. But at the basis of all prosperity, for that as well as for every other part of the country, lies the improvement of the intellectual and moral condition of the people. Universal suffrage should rest upon universal education. To this end liberal and permanent provision should be made for the support of free schools by the State governments, and, if need be, supplemented by legitimate aid from national authority. Let me assure my countrymen of the Southern States that it is my earnest desire to regard and promote their truest interests, the interests of the white and of the colored people both and equally, and to put forth my best efforts in behalf of a civil policy which will forever wipe out in our political affairs the color line, and the distinction between the North and South, to the end that we may not have merely a united North or a united South, but a united country. I ask the attention of the public to the paramount necessity of reform in our civil service, a reform not merely as to certain abuses and practices of so-called official patronage which have come to have the sanction of usage in the several departments of our Government, but a change in the system of appointment itself, a reform that shall be thorough, radical, and complete, a return to the principles and practices of the founders

of the Government. They neither expected nor desired from public officers any partisan service.

They meant that public officers should owe their whole service to the Government and to the people. They meant that the officer should be secure in his tenure as long as his personal character remained untarnished and the performance of his duties satisfactory. They held that appointments to office were not to be made nor expected merely as rewards for partisan services, nor merely on the nomination of members of Congress as being entitled in any respect to the control of such appointments. The fact that both the great political parties of the country, in declaring their principles prior to the election, gave prominent place to the subject of reform of our civil service, recognizing and strongly urging its necessity in terms almost identical in their specific import with those I have here employed, must be accepted as a conclusive argument in behalf of those measures. It must be regarded as the expression of the united voice and will of the whole country upon this subject, and both political parties are virtually pledged to give it their unreserved support. The President of the United States of necessity owes his election to office to the suffrage and zealous labors of a political party, the members of which cherish with ardor, and regard as of essential importance, the principles of their party organization. But he should strive to be always mindful of the fact that he serves his party best who serves his country best.

In furtherance of the reform we seek and in other important respects a change of great importance, I recommend an amendment to the Constitution prescribing a term of six years for the presidential office and forbidding a reelection.

With respect to the financial condition of the country I shall not attempt an extended history of the embarrassment and prostration which we have suffered during the past three years. The depression in all our varied commercial and manufacturing interests throughout the country, which began in September, 1873, still continues.

It is very gratifying, however, to be able to say that there are indications all around us of a coming change to prosperous times. Upon the currency question, intimately connected as it is with this topic, I may be permitted to repeat here the statement made in my letter of acceptance, that in my judgment the feeling of uncertainty inseparable from an irredeemable paper currency, with its fluctuations of values, is one of the greatest obstacles to a return to prosperous times.

The only safe paper currency is one which rests upon a coin basis, and is at all times promptly convertible into coin. I adhere to the views heretofore expressed by me in favor of congressional legislation in behalf of an early resumption of specie payments, and I am satisfied not only that this is wise, but that the interests as well as the public sentiment of the country imperatively demand it.

Passing from these remarks upon the condition of our own country to consider our relations with other lands, we are reminded, by international complications abroad threatening the peace of Europe, that our traditional rule of non-interference in the affairs of foreign nations has proved of great value in past times, and ought to be strictly observed.

The policy inaugurated by my honored predecessor, President Grant, of submitting to arbitration grave questions in dispute between ourselves and foreign powers, points to a new and incomparably the best instrumentality for the preservation of peace, and will, as I believe, become a beneficent example of the course to be pursued in similar emergencies by other nations.

If, unhappily, questions of difference should at any time during the period of my administration arise between the United States and any foreign government, it will certainly be my disposition and

my hope to aid in their settlement in the same peaceful and honorable way, thus securing to our country the great blessings of peace and mutual good offices with all the nations of the world.

Fellow-citizens, we have reached the close of a political contest marked by the excitement which usually attends the contests between great political parties, whose members espouse and advocate with earnest faith their respective creeds.

The circumstances were perhaps in no respect extraordinary save in the closeness and the consequent uncertainty of the result. For the first time in the history of the country it has been deemed best, in view of the present circumstances of the case, that the objections and questions in dispute in reference to counting the electoral vote should be referred to the decision of a tribunal appointed for this purpose. That tribunal, established for this sole purpose; its members, all of them men of long-established reputation for integrity and intelligence, and, with the exception of those who are also members of the supreme judiciary, chosen equally from both political parties; its deliberations enlightened by the research and the arguments of able counsel, was entitled to the fullest confidence of the American people.

Its decisions have been patiently waited for and accepted as legally conclusive by the general judgment of the public. For the present, opinion will widely vary as to the wisdom of the several conclusions announced by that tribunal.

This is to be anticipated in every instance where matters of dispute are made subject of arbitration under the forms of law. Human judgment is never unerring, and is rarely regarded as otherwise than wrong by the unsuccessful party in the contest.

The fact that two great political parties have in this way settled a dispute in regard to which good men differ as to the facts and the law, no less than as to the proper course to be pursued in solving the question in controversy, is an occasion for general rejoicing. Upon one point there is entire unanimity in public sentiment—that conflicting claims to the presidency must be amicably and peacefully adjusted, and that when so adjusted the general acquiescence of the nation ought surely to follow.

It has been reserved for a government of the people, where the right of suffrage is universal, to give to the world the first example in the history of a great nation in the midst of a struggle of opposing parties for power, hushing its party tumults, to yield the issue of the contest to adjustment according to the forms of law.

Looking for the guidance of that divine hand by which the destinies of nations and individuals are shaped, I call upon you, Senators, Representatives, judges, fellow-citizens, here and everywhere, to unite with me in an earnest effort to secure to our country the blessings not only of material prosperity, but of justice, peace, and union—a union depending not upon the constraint of force, but upon the loving devotion of a free people, “and that all things may be so ordered and settled upon the best and surest foundations that peace and happiness, truth and justice, religion, and piety, may be established among us for all generations.”

Message of President HAYES, at the opening of the extra session of Congress, October 16, 1877.

FELLOW-CITIZENS OF THE SENATE AND HOUSE OF REPRESENTATIVES:

The adjournment of the last Congress without making appropriations for the support of the Army for the present fiscal year has rendered necessary a suspension of payments to the officers and men of the sums due them for services rendered after the

30th day of June last. The Army exists by virtue of statutes which prescribe its numbers and regulate its organization and employment, and which fix the pay of its officers and men and declare their right to receive the same at stated periods. The statutes, however, do not authorize the payment of the troops in the absence of specific appropriations therefor. The Constitution has wisely provided that “no money shall be drawn from the Treasury but in consequence of appropriations made by law,” and it has also been declared by statute that “no department of the Government shall expend in any one fiscal year any sum in excess of appropriations made by Congress for that fiscal year.” We have, therefore, an Army in service, authorized by law and entitled to be paid, but no funds available for that purpose. It may also be said, as an additional incentive to prompt action by Congress, that since the commencement of the fiscal year the Army, though without pay, has been constantly and actively employed in arduous and dangerous service, in the performance of which both officers and men have discharged their duty with fidelity and courage, and without complaint.

These circumstances, in my judgment, constitute an extraordinary occasion, requiring that Congress be convened in advance of the time prescribed by law for your meeting in regular session. The importance of speedy action upon this subject on the part of Congress is so manifest that I venture to suggest the propriety of making the necessary appropriations for the support of the Army for the current year at its present maximum numerical strength of 25,000 men, leaving for future consideration all questions relating to an increase or decrease of the number of enlisted men. In the event of the reduction of the Army by subsequent legislation during the fiscal year, the excess of the appropriation could not be expended, and in the event of its enlargement, the additional sum required for the extra force could be provided in due time. It would be unjust to the troops now in service, and whose pay is already largely in arrears, if payment to them should be further postponed until after Congress shall have considered all the questions likely to arise in the effort to fix the proper limit to the strength of the Army.

Estimates of appropriations for the support of the military establishment for the fiscal year ending June 30, 1878, were transmitted to Congress by the former Secretary of the Treasury at the opening of the session in December last. These estimates, modified by the present Secretary so as to conform to present requirements, are now renewed, amounting to \$32,436,764.93, and, having been transmitted to both Houses of Congress, are submitted for your consideration.

There is also required by the Navy Department \$2,003,861.27. This sum is made up of \$1,446,688.16 due to officers and enlisted men for the last quarter of the last fiscal year; \$311,953.50 due for advances made by the fiscal agent of the Government in London for the support of the foreign service; \$50,000 due to the Naval Hospital fund; \$150,000 due for arrearages of pay to officers, and \$45,219.58 for the support of the Marine Corps. There will also be needed an appropriation of \$232,535.22 to defray the unsettled expenses of the United States Courts for the fiscal year ending June 30th last, now due to attorneys, clerks, commissioners, and marshals, and for rent of court-rooms, the support of prisoners, and other deficiencies.

A part of the building of the Interior Department was destroyed by fire on the 24th of last month. Some immediate repairs and temporary structures have in consequence become necessary, estimates for which will be transmitted to Congress immediately, and an appropriation of the requisite funds is respectfully recommended.

The Secretary of the Treasury will communicate

to Congress, in connection with the estimates for the appropriations for the support of the Army for the current fiscal year, estimates for such other deficiencies in the different branches of the public service as require immediate action, and cannot without inconvenience be postponed until the regular session.

I take this opportunity, also, to invite your attention to the propriety of adopting at your present session the necessary legislation to enable the people of the United States to participate in the advantages of the International Exhibition of agriculture, industry, and the fine arts, which is to be held at Paris in 1878, and in which this Government has been invited by the Government of France to take part. This invitation was communicated to the Government in May, 1876, by the Minister of France at this capital, and a copy thereof was submitted to the proper committees of Congress at its last session, but no action was taken upon the subject. The Department of State has received many letters from various parts of the country, expressing a desire to participate in the Exhibition, and numerous applications of a similar nature have also been made at the United States Legation at Paris. The Department of State has also received official advice of the strong desire on the part of the French Government that the United States should participate in this enterprise, and space has hitherto been, and still is, reserved in the Exhibition buildings, for the use of exhibitors from the United States, to the exclusion of other parties who have been applicants therefor.

In order that our industries may be properly represented at the Exhibition, an appropriation will be needed for the payment of salaries and expenses of commissioners, for the transportation of goods, and for other purposes in connection with the object in view; and, as May next is the time fixed for the opening of the Exhibition, if our citizens are to share the advantages of this international competition for the trade of other nations, the necessity of immediate action is apparent. To enable the United States to cooperate in the International Exhibition which was held at Vienna in 1873, Congress then passed a joint resolution making an appropriation of \$200,000, and authorizing the President to appoint a certain number of practical artisans and scientific men, who should attend the Exhibition and report their proceedings and observations to him. Provision was also made for the appointment of a number of honorary commissioners. I have felt that prompt action by Congress in accepting the invitation of the Government of France is of so much interest to the people of this country, and so suitable to the cordial relations between the Governments of the two countries, that the subject might properly be presented for attention at your present session.

The Government of Sweden and Norway has addressed an official invitation to this Government to take part in the International Prison Congress to be held at Stockholm next year. The problem which the congress proposes to study—how to diminish crime—is one in which all civilized nations have an interest in common, and the Congress of Stockholm seems likely to prove the most important convention ever held for the study of this grave question. Under authority of a joint resolution of Congress, approved February 16, 1875, a commissioner was appointed by my predecessor to represent the United States upon that occasion, and the Prison Congress having been, at the earnest desire of the Swedish Government, postponed to 1878, his commission was renewed by me. An appropriation of \$8,000 was made in the Sundry Civil Appropriations act of 1875 to meet the expenses of the commissioners. I recommend the reappropriation of that sum for the same purpose, the former appropriation having been covered into the Treasury, and being no longer available for the purpose without further

action by Congress. The subject is brought to your attention at this time in view of circumstances which render it highly desirable that the commissioner should proceed to the discharge of his important duties immediately.

As the several acts of Congress providing for detailed reports from the different departments of the Government require their submission at the beginning of the regular annual session, I defer until that time any further reference to subjects of public interest.

R. B. HAYES.

WASHINGTON, October 15, 1877.

Message of President HAYES, delivered at the commencement of the second session of the Forty-fifth Congress, December 8, 1877.

FELLOW-CITIZENS OF THE SENATE AND HOUSE OF REPRESENTATIVES:

With devout gratitude to the bountiful Giver of all good, I congratulate you that, at the beginning of your first regular session, you find our country blessed with health and peace and abundant harvests, and with encouraging prospects of an early return of general prosperity.

To complete and make permanent the pacification of the country continues to be, and, until it is fully accomplished, must remain, the most important of all our national interests. The earnest purpose of good citizens generally to unite their efforts in this endeavor is evident. It found decided expression in the resolutions announced in 1876, by the national conventions of the leading political parties of the country. There was a wide-spread apprehension that the momentous results in our progress as a nation, marked by the recent amendments to the Constitution, were in imminent jeopardy; that the good understanding which prompted their adoption, in the interests of a loyal devotion to the general welfare, might prove a barren truce, and that the two sections of the country, once engaged in civil strife, might be again almost as widely severed and disunited as they were when arrayed in arms against each other.

The course to be pursued, which in my judgment seemed wisest, in the presence of this emergency, was plainly indicated in my inaugural address. It pointed to the time, which all our people desire to see, when a genuine love of our whole country, and of all that concerns its true welfare, shall supplant the destructive forces of the mutual animosity of races and of sectional hostility. Opinions have differed widely as to the measures best calculated to secure this great end. This was to be expected. The measures adopted by the administration have been subjected to severe and varied criticism. Any course whatever which might have been entered upon would certainly have encountered distrust and opposition. These measures were, in my judgment, such as were most in harmony with the Constitution and with the genius of our people, and best adapted, under all the circumstances, to attain the end in view. Beneficent results, already apparent, prove that these endeavors are not to be regarded as a mere experiment, and should sustain and encourage us in our efforts. Already, in the brief period which has elapsed, the immediate effectiveness, no less than the justice of the course pursued, is demonstrated, and I have an abiding faith that time will furnish its ample vindication in the minds of the great majority of my fellow-citizens. The discontinuance of the use of the Army for the purpose of upholding local governments in two States of the Union was no less a constitutional duty and requirement, under the circumstances existing at the time, than it was a much-needed measure for the restoration of local self-government and the promotion of national harmony. The withdrawal of the troops

from such employment was effected deliberately, and with solicitous care for the peace and good order of society and the protection of the property and persons and every right of all classes of citizens.

The results that have followed are indeed significant and encouraging. All apprehension of danger from remitting those States to local self-government is dispelled; and a most salutary change in the minds of the people has begun, and is in progress in every part of that section of the country once the theatre of unhappy civil strife, substituting for suspicion, distrust, and aversion, concord, friendship, and patriotic attachment to the Union. No unprejudiced mind will deny that the terrible and often fatal collisions which for several years have been of frequent occurrence, and have agitated and alarmed the public mind, have almost entirely ceased, and that a spirit of mutual forbearance and hearty national interest has succeeded. There has been a general reestablishment of order, and of the orderly administration of justice. Instances of remaining lawlessness have become of rare occurrence; political turmoil and turbulence have disappeared; useful industries have been resumed; public credit in the Southern States has been greatly strengthened; and the encouraging benefits of a revival of commerce between the sections of the country, lately embroiled in civil war, are fully enjoyed. Such are some of the results already attained, upon which the country is to be congratulated. They are of such importance that we may with confidence patiently await the desired consummation that will surely come with the natural progress of events.

It may not be improper here to say that it should be our fixed and unalterable determination to protect, by all available and proper means, under the Constitution and laws, the lately emancipated race in the enjoyment of their rights and privileges; and I urge upon those to whom heretofore the colored people have sustained the relation of bondmen the wisdom and justice of humane and liberal local legislation with respect to their education and general welfare. A firm adherence to the laws, both national and State, as to the civil and political rights of the colored people, now advanced to full and equal citizenship; the immediate repression and sure punishment by the national and local authorities, within their respective jurisdictions, of every instance of lawlessness and violence toward them, is required for the security alike of both races, and is justly demanded by the public opinion of the country and the age. In this way the restoration of harmony and good-will, and the complete protection of every citizen in the full enjoyment of every constitutional right, will surely be attained. Whatever authority rests with me to this end, I shall not hesitate to put forth.

Whatever belongs to the power of Congress and the jurisdiction of the courts of the Union, they may confidently be relied upon to provide and perform. And to the Legislatures, the courts, and the executive authorities of the several States, I earnestly appeal to secure, by adequate, appropriate, and seasonable means, within their borders, these common and uniform rights of a united people, which loves liberty, abhors oppression, and reveres justice. These objects are very dear to my heart. I shall continue most earnestly to strive for their attainment. The cordial coöperation of all classes—of all sections of the country and of both races—is required for this purpose; and with these blessings assured, and not otherwise, we may safely hope to hand down our free institutions of government unimpaired to the generation that will succeed us.

Among the other subjects of great and general importance to the people of this country, I cannot be mistaken, I think, in regarding as preëminent the policy and measures which are designed to secure the restoration of the currency to that normal and healthful condition in which, by the resumption

of specie payments, our internal trade and foreign commerce may be brought into harmony with the system of exchanges which is based upon the precious metals as the intrinsic money of the world. In the public judgment that this end should be sought and compassed as speedily and securely as the resources of the people and the wisdom of their government can accomplish, there is a much greater degree of unanimity than is found to concur in the specific measures which will bring the country to this desired end, or the rapidity of the steps by which it can be safely reached.

Upon a most anxious and deliberate examination which I have felt it my duty to give to the subject, I am but the more confirmed in the opinion which I expressed in accepting the nomination for the Presidency, and again upon my inauguration, that the policy of resumption should be pursued by every suitable means, and that no legislation would be wise that should disparage the importance or retard the attainment of that result. I have no disposition, and certainly no right, to question the sincerity or the intelligence of opposing opinions, and would neither conceal nor undervalue the considerable difficulties, and even occasional distresses, which may attend the progress of the nation toward this primary condition to its general and permanent prosperity. I must, however, adhere to my most earnest conviction that any wavering in purpose or unsteadiness in methods, so far from avoiding or reducing the inconvenience inseparable from the transition from an irredeemable to a redeemable paper currency, would only tend to increased and prolonged disturbance in values, and, unless retrieved, must end in serious disorder, dishonor, and disaster in the financial affairs of the government and of the people.

The mischiefs which I apprehend, and urgently deprecate, are confined to no class of people indeed, but seem to me most certainly to threaten the industrious masses, whether their occupations are of skilled or common labor. To them, it seems to me, it is of prime importance that their labor should be compensated in money which is itself fixed in exchangeable value by being irrevocably measured by the labor necessary to its production. This permanent quality of the money of the people is sought for and can only be gained by the resumption of specie payments. The rich, the speculative, the operating, the money-dealing classes, may not always feel the mischiefs of, or may find casual profits in, a variable currency; but the misfortunes of such a currency to those who are paid salaries or wages are inevitable and remediless.

Closely connected with this general subject of the resumption of specie payments is one of subordinate, but still of grave, importance; I mean the readjustment of our coinage system by the renewal of the silver dollar as an element in our specie currency, endowed by legislation with the quality of legal tender to a greater or less extent.

As there is no doubt of the power of Congress under the Constitution "to coin money and regulate the value thereof," and as this power covers the whole range of authority applicable to the metal, the rated value, and the legal-tender quality which shall be adopted for the coinage, the considerations which should induce or discourage a particular measure connected with the coinage belong clearly to the province of legislative discretion and of public expediency. Without intruding upon this province of legislation in the least, I have yet thought the subject of such critical importance, in the actual condition of our affairs, as to present an occasion for the exercise of the duty imposed by the Constitution on the President of recommending to the consideration of Congress "such measures as he shall judge necessary and expedient."

Holding the opinion, as I do, that neither the interests of the government nor of the people of the

United States would be promoted by disparaging silver as one of the two precious metals which furnish the coinage of the world, and that legislation which looks to maintaining the volume of intrinsic money to as full a measure of both metals as their relative commercial values will permit would be neither unjust nor inexpedient, I must ask your indulgence to a brief and definite statement of certain essential features in any such legislative measure which I feel it my duty to recommend.

I do not propose to enter the debate, represented on both sides by such able disputants in Congress and before the people and in the press, as to the extent to which the legislation of any one nation can control this question, even within its own borders, against the unwritten laws of trade or the positive laws of other governments. The wisdom of Congress in shaping any particular law that may be presented for my approval may wholly supersede the necessity of my entering into these considerations, and I willingly avoid either vague or intricate inquiries. It is only certain plain and practical traits of such legislation that I desire to recommend to your attention.

In any legislation providing for a silver coinage, regulating its value, and imparting to it the quality of legal tender, it seems to me of great importance that Congress should not lose sight of its action as operating in a twofold capacity and in two distinct directions. If the United States Government were free from a public debt, its legislative dealing with the question of silver coinage would be purely sovereign and governmental, under no restraints but those of constitutional power and the public good as affected by the proposed legislation. But in the actual circumstances of the nation, with a vast public debt distributed very widely among our own citizens, and held in great amounts also abroad, the nature of the silver-coinage measure, as affecting this relation of the government to the holders of the public debt, becomes an element, in any proposed legislation, of the highest concern. The obligation of the public faith transcends all questions of profit or public advantage otherwise. Its unquestionable maintenance is the dictate as well of the highest expediency as of the most necessary duty, and will ever be carefully guarded by Congress and people alike.

The public debt of the United States, to the amount of \$729,000,000, bears interest at the rate of 6 per cent., and \$708,000,000 at the rate of 5 per cent.; and the only way in which the country can be relieved from the payment of these high rates of interest is by advantageously refunding the indebtedness. Whether the debt is ultimately paid in gold or in silver coin is of but little moment compared with the possible reduction of interest one-third by refunding it at such reduced rate. If the United States had the unquestioned right to pay its bonds in silver coin, the little benefit from that process would be greatly overbalanced by the injurious effect of such payment if made or proposed against the honest convictions of the public creditors.

All the bonds that have been issued since February 12, 1873, when gold became the only unlimited legal-tender metallic currency of the country, are justly payable in gold coin or in coin of equal value. During the time of these issues, the only dollar that could be or was received by the government in exchange for bonds was the gold dollar. To require the public creditors to take in repayment any dollar of less commercial value would be regarded by them as a repudiation of the full obligation assumed. The bonds issued prior to 1873 were issued at a time when the gold dollar was the only coin in circulation or contemplated by either the government or the holders of the bonds as the coin in which they were to be paid. It is far better to pay these bonds in that coin than to seem to take advantage of the unforeseen fall in silver bullion to pay in a new issue of silver coin thus made so much less valuable.

The power of the United States to coin money and to regulate the value thereof ought never to be exercised for the purpose of enabling the government to pay its obligations in a coin of less value than that contemplated by the parties when the bonds were issued. Any attempt to pay the national indebtedness in a coinage of less commercial value than the money of the world would involve a violation of the public faith and work irreparable injury to the public credit.

It was the great merit of the act of March, 1869, in strengthening the public credit, that it removed all doubt as to the purpose of the United States to pay their bonded debt in coin. That act was accepted as a pledge of public faith. The government has derived great benefit from it in the progress thus far made in refunding the public debt at low rates of interest. An adherence to the wise and just policy of an exact observance of the public faith will enable the government rapidly to reduce the burden of interest on the national debt to an amount exceeding \$20,000,000 per annum, and effect an aggregate saving to the United States of more than \$300,000,000 before the bonds can be fully paid.

I respectfully recommend to Congress that in any legislation providing for a silver coinage, and imparting to it the quality of legal tender, there be impressed upon the measure a firm provision exempting the public debt heretofore issued and now outstanding from payment, either of principal or interest, in any coinage of less commercial value than the present gold coinage of the country.

In adapting the new silver coinage to the ordinary uses of currency in the every-day transactions of life, and prescribing the quality of legal tender to be assigned to it, a consideration of the first importance should be so to adjust the ratio between the silver and the gold coinage, which now constitutes our specie currency, as to accomplish the desired end of maintaining the circulation of the two metallic currencies, and keeping up the volume of the two precious metals as one intrinsic money. It is a mixed question for scientific reasoning and historical experience to determine how far, and by what methods, a practical equilibrium can be maintained which will keep both metals in circulation in their appropriate spheres of common use.

An absolute equality of commercial value, free from disturbing fluctuations, is hardly attainable, and without it, an unlimited legal tender for private transactions assigned to both metals would irresistibly tend to drive out of circulation the dearer coinage, and disappoint the principal object proposed by the legislation in view. I apprehend, therefore, that the two conditions of a near approach to equality of commercial value between the gold and silver coinage of the same denomination and of a limitation of the amounts for which the silver coinage is to be a legal tender are essential to maintaining both in circulation. If these conditions can be successfully observed, the issue from the mint of silver dollars would afford material assistance to the community in the transition to redeemable paper-money, and would facilitate the resumption of specie payment and its permanent establishment. Without these conditions, I fear that only mischief and misfortune would flow from a coinage of silver dollars with the quality of unlimited legal tender, even in private transactions.

Any expectation of temporary ease from an issue of silver coinage to pass as a legal tender, at a rate materially above its commercial value, is, I am persuaded, a delusion. Nor can I think that there is any substantial distinction between an original issue of silver dollars at a nominal value materially above their commercial value, and the restoration of the silver dollar at a rate which once was, but has ceased to be, its commercial value. Certainly, the issue of our gold coinage, reduced in weight materially below its legal-tender value, would not be any the less a

present debasement of coinage by reason of its equaling or even exceeding in weight a gold coinage which at some past time had been commercially equal to the legal-tender value assigned to the new issue.

In recommending that the regulation of any silver coinage which may be authorized by Congress should observe these conditions of commercial value and limited legal tender, I am governed by the feeling that every possible increase should be given to the volume of metallic money which can be kept in circulation, and thereby every possible aid afforded to the people in the process of resuming specie payment. It is because of my firm conviction that a disregard of these conditions would frustrate the good results which are desired from the proposed coinage, and embarrass with new elements of confusion and uncertainty the business of the country, that I urge upon your attention these considerations.

The organization of the civil service of the country has for a number of years attracted more and more of the public attention. So general has become the opinion that the methods of admission to it, and the conditions of remaining in it, are unsound, that both the great political parties have agreed in the most explicit declarations of the necessity of reform, and in the most emphatic demands for it. I have fully believed these declarations and demands to be the expression of a sincere conviction of the intelligent masses of the people upon the subject, and that they should be recognized and followed by earnest and prompt action on the part of the legislative and executive departments of the government in pursuance of the purpose indicated.

Before my accession to office I endeavored to have my own views distinctly understood, and upon my inauguration my accord with the public opinion was stated in terms believed to be plain and unambiguous. My experience in the executive duties has strongly confirmed the belief in the great advantage the country would find in observing strictly the plan of the Constitution, which imposes upon the Executive the sole duty and responsibility of the selection of those Federal officers who, by law, are appointed, not elected; and which, in like manner, assigns to the Senate the complete right to advise and consent to, or to reject, the nominations so made; while the House of Representatives stands as the public censor of the performance of official duties, with the prerogative of investigation and prosecution in all cases of dereliction. The blemishes and imperfections in the civil service may, as I think, be traced, in most cases, to a practical confusion of the duties assigned to the several departments of the government. My purpose, in this respect, has been to return to the system established by the fundamental law, and to do this with the heartiest coöperation and most cordial understanding with the Senate and House of Representatives.

The practical difficulties in the selection of numerous officers for posts of widely-varying responsibilities and duties are acknowledged to be very great. No system can be expected to secure absolute freedom from mistakes, and the beginning of any attempted change of custom is quite likely to be more embarrassed in this respect than any subsequent period. It is here that the Constitution seems to me to prove its claim to the great wisdom accorded to it; it gives to the Executive the assistance of the knowledge and the experience of the Senate, which, when acting upon nominations, as to which they may be disinterested and impartial judges, secures as strong a guarantee of freedom from errors of importance as is perhaps possible in human affairs.

In addition to this, I recognize the public advantage of making all nominations, as nearly as possible, impersonal, in the sense of being free from mere caprice or favor in the selection; and in those of-

fices in which special training is of greatly increased value, I believe such a rule as to the tenure of office should obtain as may induce men of proper qualifications to apply themselves industriously to the task of becoming proficient. Bearing these things in mind, I have endeavored to reduce the number of changes in subordinate places, usually made upon the change of the general administration; and shall most heartily coöperate with Congress in the better systematizing of such methods and rules of admission to the public service, and of promotion within it, as may promise to be most successful in making thorough competency, efficiency, and character, the decisive tests in these matters.

I ask the renewed attention of Congress to what has already been done by the Civil-Service Commission, appointed, in pursuance of an act of Congress, by my predecessor, to prepare and revise civil-service rules. In regard to much of the department service, especially at Washington, it may be difficult to organize a better system than that which has thus been provided, and it is now being used to a considerable extent under my direction. The commission has still a legal existence, although for several years no appropriation has been made for defraying its expenses. Believing that this commission has rendered valuable service, and will be a most useful agency in improving the administration of the civil service, I respectfully recommend that a suitable appropriation, to be immediately available, be made, to enable it to continue its labors.

It is my purpose to transmit to Congress as early as practicable a report by the chairman of the commission, and to ask your attention to such measures on this subject as, in my opinion, will further promote the improvement of the civil service.

During the past year the United States have continued to maintain peaceful relations with foreign powers.

The outbreak of war between Russia and Turkey, though at one time attended by grave apprehension as to its effect upon other European nations, has had no tendency to disturb the amicable relations existing between the United States and each of the two contending powers. An attitude of just and impartial neutrality has been preserved, and I am gratified to state that, in the midst of their hostilities, both the Russian and the Turkish Governments have shown an earnest disposition to adhere to the obligations of all treaties with the United States, and to give due regard to the rights of American citizens.

By the terms of the treaty, defining the rights, immunities, and privileges of consuls, between Italy and the United States, ratified in 1863, either government may, after the lapse of ten years, terminate the existence of the treaty by giving twelve months' notice of its intention. The Government of Italy, availing itself of this faculty, has now given the required notice, and the treaty will, accordingly, end on the 17th of September, 1878. It is understood, however, that the Italian Government wished to renew it, in its general scope, desiring only certain modifications in some of its articles. In this disposition I concur, and shall hope that no serious obstacles may intervene to prevent or delay the negotiation of a satisfactory treaty.

Numerous questions in regard to passports, naturalization, and exemption from military service have continued to arise in cases of emigrants from Germany who have returned to their native country. The provisions of the treaty of February 22, 1868, however, have proved to be so ample and so judicious that the legation of the United States at Berlin has been able to adjust all claims arising under it, not only without detriment to the amicable relations existing between the two governments, but, it is believed, without injury or injustice to any duly naturalized American citizen. It is desirable that the treaty originally made with the North German Union in

1868 should now be extended so as to apply equally to all the states of the Empire of Germany.

The invitation of the Government of France to participate in the exposition of the products of agriculture, industry, and the fine arts, to be held at Paris during the coming year, was submitted for your consideration at the extra session. It is not doubted that its acceptance by the United States, and a well-selected exhibition of the products of American industry on that occasion, will tend to stimulate international commerce and emigration, as well as to promote the traditional friendship between the two countries.

A question arose some time since as to the proper meaning of the extradition articles of the treaty of 1842 between the United States and Great Britain. Both governments, however, are now in accord in the belief that the question is not one that should be allowed to frustrate the ends of justice, or to disturb the friendship between the two nations. No serious difficulty has arisen in accomplishing the extradition of criminals when necessary. It is probable that all points of disagreement will, in due time, be settled, and, if need be, more explicit declarations be made in a new treaty.

The fishery commission, under articles 18 to 25 of the treaty of Washington, has concluded its session at Halifax. The result of the deliberations of the commission, as made public by the commissioners, will be communicated to Congress.

A treaty for the protection of trade-marks has been negotiated with Great Britain, which has been submitted to the Senate for its consideration.

The revolution which recently occurred in Mexico was followed by the accession of the successful party to power and the installation of its chief, General Porfirio Diaz, in the Presidential office. It has been the custom of the United States, when such changes of government have heretofore occurred in Mexico, to recognize and enter into official relations with the *de facto* government as soon as it should appear to have the approval of the Mexican people, and should manifest a disposition to adhere to the obligations of treaties and international friendship. In the present case such official recognition has been deferred by the occurrences on the Rio Grande border, the records of which have already been communicated to each House of Congress, in answer to their respective resolutions of inquiry. Assurances have been received that the authorities at the seat of the Mexican Government have both the disposition and the power to prevent and punish such unlawful invasions and depredations. It is earnestly to be hoped that events may prove these assurances to be well founded. The best interests of both countries require the maintenance of peace upon the border, and the development of commerce between the two republics.

It is gratifying to add that this temporary interruption of official relations has not prevented due attention by the representatives of the United States in Mexico to the protection of American citizens, so far as practicable. Nor has it interfered with the prompt payment of the amounts due from Mexico to the United States under the treaty of July 4, 1868, and the awards of the joint commission. While I do not anticipate an interruption of friendly relations with Mexico, yet I cannot but look with some solicitude upon a continuance of border disorders as exposing the two countries to initiations of popular feeling and mischances of action which are naturally unfavorable to complete amity. Firmly determined that nothing shall be wanting on my part to promote a good understanding between the two nations, I yet must ask the attention of Congress to the actual occurrences on the border, that the lives and property of our citizens may be adequately protected and peace preserved.

Another year has passed without bringing to a close the protracted contest between the Spanish Govern-

ment and the insurrection in the island of Cuba. While the United States have sedulously abstained from any intervention in this contest, it is impossible not to feel that it is attended with incidents affecting the rights and interests of American citizens. Apart from the effect of the hostilities upon trade between the United States and Cuba, their progress is inevitably accompanied by complaints, having more or less foundation, of searches, arrests, embargoes, and oppressive taxes upon the property of American residents, and of unprovoked interference with American vessels and commerce. It is due to the Government of Spain to say that during the past year it has promptly disavowed and offered reparation for any unauthorized acts of unduly zealous subordinates whenever such acts have been brought to its attention. Nevertheless, such occurrences cannot but tend to excite feelings of annoyance, suspicion, and resentment, which are greatly to be deprecated, between the respective subjects and citizens of two friendly powers.

Much delay (consequent upon accusations of fraud in some of the awards) has occurred in respect to the distribution of the limited amounts received from Venezuela under the treaty of April 25, 1866, applicable to the awards of the joint commission created by that treaty. So long as these matters are pending in Congress the Executive cannot assume either to pass upon the questions presented, or to distribute the fund received. It is eminently desirable that definite legislative action should be taken, either affirming the awards to be final, or providing some method for reexamination of the claims. Our relations with the republics of Central and South America, and with the empire of Brazil, have continued without serious change, further than the temporary interruption of diplomatic intercourse with Venezuela and with Guatemala. Amicable relations have already been fully restored with Venezuela, and it is not doubted that all grounds of misunderstanding with Guatemala will speedily be removed. From all these countries there are favorable indications of a disposition on the part of their governments and people to reciprocate our efforts in the direction of increased commercial intercourse.

The Government of the Samoan Islands has sent an envoy, in the person of its Secretary of State, to invite the Government of the United States to recognize and protect their independence, to establish commercial relations with their people, and to assist them in their steps toward regulated and responsible government. The inhabitants of these islands, having made considerable progress in Christian civilization and the development of trade, are doubtful of their ability to maintain peace and independence without the aid of some stronger power. The subject is deemed worthy of respectful attention, and the claims upon our assistance by this distant community will be carefully considered.

The long commercial depression in the United States has directed attention to the subject of the possible increase of our foreign trade, and the methods for its development, not only with Europe but with other countries, and especially with the states and sovereignties of the western hemisphere. Instructions from the Department of State were issued to the various diplomatic and consular officers of the government, asking them to devote attention to the question of methods by which trade between the respective countries of their official residence and the United States could be most judiciously fostered. In obedience to these instructions, examinations and reports upon this subject have been made by many of these officers and transmitted to the department, and the same are submitted to the consideration of Congress.

The annual report of the Secretary of the Treasury on the state of the finances presents important questions for the action of Congress, upon some of which I have already remarked.

The revenues of the government during the fiscal year ending June 30, 1877, were \$269,000,586.62. The total expenditures for the same period were \$238,660,008.93, leaving a surplus revenue of \$30,340,577.69. This has substantially supplied the requirements of the sinking fund for that year. The estimated revenues of the current fiscal year are \$265,500,000, and the estimated expenditures for the same period are \$232,430,643.72. If these estimates prove to be correct, there will be a surplus revenue of \$33,069,356.28, an amount nearly sufficient for the sinking fund for that year. The estimated revenues for the next fiscal year are \$269,250,000. It appears from the report that during the last fiscal year the revenues of the government, compared with the previous year, have largely decreased. This decrease, amounting to the sum of \$13,431,452.54, was mainly in customs duties, caused partly by a large falling off of the amount of imported dutiable goods, and partly by the general fall of prices in the markets of production of such articles as *pay ad valorem* taxes.

While this is felt injuriously in the diminution of the revenue, it has been accompanied with a very large increase of exportations. The total exports during the last fiscal year, including coin, have been \$658,637,457, and the imports have been \$492,097,540, leaving a balance of trade in favor of the United States amounting to the sum of \$166,539,917; the beneficial effects of which extend to all branches of business.

The estimated revenue for the next fiscal year will impose upon Congress the duty of strictly limiting appropriations, including the requisite sum for the maintenance of the sinking fund, within the aggregate estimated receipts.

While the aggregate of taxes should not be increased, amendments might be made to the revenue laws that would, without diminishing the revenue, relieve the people from unnecessary burdens. A tax on tea and coffee is shown by the experience not only of our own country, but of other countries, to be easily collected, without loss by undervaluation or fraud, and largely borne in the country of production. A tax of ten cents a pound on tea and two cents a pound on coffee would produce a revenue exceeding \$12,000,000, and thus enable Congress to repeal a multitude of annoying taxes yielding a revenue not exceeding that sum. The internal-revenue system grew out of the necessities of the war, and most of the legislation imposing taxes upon domestic products, under this system, has been repealed. By the substitution of a tax on tea and coffee, all forms of internal taxation may be repealed, except that on whiskey, spirits, tobacco, and beer. Attention is also called to the necessity of enacting more rigorous laws for the protection of the revenue and for the punishment of frauds and smuggling. This can best be done by judicious provisions that will induce the disclosure of attempted fraud by undervaluation and smuggling. All revenue laws should be simple in their provisions and easily understood. So far as practicable, the rates of taxation should be in the form of specific duties, and not *ad valorem*, requiring the judgment of experienced men to ascertain values, and exposing the revenue to the temptation of fraud.

My attention has been called, during the recess of Congress, to abuses existing in the collection of the customs, and strenuous efforts have been made for their correction by executive orders. The recommendations submitted to the Secretary of the Treasury, by a commission appointed to examine into the collection of customs duties at the port of New York, contain many suggestions for the modification of the customs laws, to which the attention of Congress is invited.

It is a matter of congratulation that, notwithstanding the severe burdens caused by the war, the public faith with all creditors has been preserved,

and that, as the result of this policy, the public credit has continuously advanced, and our public securities are regarded with the highest favor in the markets of the world. I trust that no act of the government will cast a shadow upon its credit.

The progress of refunding the public debt has been rapid and satisfactory. Under the contract existing when I entered upon the discharge of the duties of my office, bonds bearing interest at the rate of 4½ per cent. were being rapidly sold; and within three months the aggregate sales of these bonds had reached the sum of \$200,000,000. With my sanction, the Secretary of the Treasury entered into a new contract for the sale of 4 per cent. bonds, and within thirty days after the popular subscriptions for such bonds was opened, subscriptions were had amounting to \$75,496,550, which were paid for within ninety days after the date of subscription. By this process, within but little more than one year, the annual interest on the public debt was reduced in the sum of \$3,775,000.

I recommend that suitable provision be made to enable the people to easily convert their savings into government securities, as the best mode in which small savings may be well secured and yield a moderate interest. It is an object of public policy to retain among our own people the securities of the United States. In this way our country is guarded against their sudden return from foreign countries, caused by war or other disturbances beyond our limits.

The commerce of the United States with foreign nations, and especially the export of domestic productions, has of late years largely increased; but the greater portion of this trade is conducted in foreign vessels. The importance of enlarging our foreign trade, and especially by direct and speedy interchange with countries on this continent, cannot be overestimated; and it is a matter of great moment that our own shipping interest should receive, to the utmost practical extent, the benefit of our commerce with other lands. These considerations are forcibly urged by all the large commercial cities of the country, and public attention is generally and wisely attracted to the solution of the problems they present. It is not doubted that Congress will take them up in the broadest spirit of liberality, and respond to the public demand by practical legislation upon this important subject.

The report of the Secretary of War shows that the Army has been actively employed during the year, and has rendered very important service in suppressing hostilities in the Indian country, and in preserving peace and protecting life and property in the interior as well as along the Mexican border. A long and arduous campaign has been prosecuted, with final complete success, against a portion of the Nez Percés tribe of Indians. A full account of this campaign will be found in the report of the General of the Army. It will be seen that in its course several severe battles were fought, in which a number of gallant officers and men lost their lives. I join with the Secretary of War and the General of the Army in awarding to the officers and men employed in the long and toilsome pursuit and in the final capture of these Indians the honor and praise which are justly their due.

The very serious riots which occurred in several of the States in July last rendered necessary the employment of a considerable portion of the Army to preserve the peace and maintain order. In the States of West Virginia, Maryland, Pennsylvania, and Illinois these disturbances were so formidable as to defy the local and State authorities, and the National Executive was called upon, in the mode provided by the Constitution and laws, to furnish military aid. I am gratified to be able to state that the troops sent in response to these calls for aid in the suppression of domestic violence were able, by the influence of their presence in the disturbed regions, to preserve

the peace and restore order without the use of force. In the discharge of this delicate and important duty, both officers and men acted with great prudence and courage, and for their services deserve the thanks of the country.

Disturbances along the Rio Grande, in Texas, to which I have already referred, have rendered necessary the constant employment of a military force in that vicinity. A full report of all recent military operations in that quarter has been transmitted to the House of Representatives in answer to a resolution of that body, and it will, therefore, not be necessary to enter into details. I regret to say that these lawless incursions into our territory by armed bands from the Mexican side of the line, for the purpose of robbery, have been of frequent occurrence, and in spite of the most vigilant efforts of the commander of our forces the marauders have generally succeeded in escaping into Mexico with their plunder. In May last I gave orders for the exercise of the utmost vigilance on the part of our troops for the suppression of these raids and the punishment of the guilty parties, as well as the recapture of property stolen by them. General Ord, commanding in Texas, was directed to invite the coöperation of the Mexican authorities in efforts to this end, and to assure them that I was anxious to avoid giving the least offense to Mexico. At the same time, he was directed to give notice of my determination to put an end to the invasion of our territory by lawless bands, intent upon the plunder of our peaceful citizens, even if the effectual punishment of the outlaws should make the crossing of the border by our troops in their pursuit necessary. It is believed that this policy has had the effect to check somewhat these depredations, and that with a considerable increase of our force upon that frontier, and the establishment of several additional military posts along the Rio Grande, so as more effectually to guard that extensive border, peace may be preserved and the lives and property of our citizens in Texas fully protected.

Prior to the 1st day of July last the Army was, in accordance with law, reduced to the maximum of 25,000 enlisted men, being a reduction of 2,500 below the force previously authorized. This reduction was made, as required by law, entirely from the infantry and artillery branches of the service, without any reduction of the cavalry. Under the law as it now stands, it is necessary that the cavalry regiments be recruited to one hundred men in each company for service on the Mexican and Indian frontiers. The necessary effect of this legislation is to reduce the infantry and artillery arms of the service below the number required for efficiency, and I concur with the Secretary of War in recommending that authority be given to recruit all companies of infantry to at least fifty men, and all batteries of artillery to at least seventy-five men, with the power, in case of emergency, to increase the former to one hundred and the latter to one hundred and twenty-two men each.

I invite your special attention to the following recommendations of the Secretary of War:

First. That provision be made for supplying to the Army a more abundant and better supply of reading-matter.

Second. That early action be taken by Congress looking to a complete revision and republication of the Army Regulations.

Third. That section 1258 of the Revised Statutes, limiting the number of officers on the retired list, be repealed.

Fourth. That the claims arising under the act of July 4, 1864, for supplies taken by the Army during the war, be taken from the offices of the Quartermaster and Commissary Generals and transferred to the Southern Claims Commission, or some other tribunal having more time and better facilities for their prompt investigation and decision than are possessed by these officers.

Fifth. That Congress provide for an annuity-fund for the families of deceased officers, as recommended by the Paymaster-General of the Army.

The report of the Secretary of the Navy shows that we have six squadrons now engaged in the protection of our foreign commerce and other duties pertaining to the naval service. The condition and operations of the department are also shown. The total expenditures for the fiscal year ending June 30, 1877, were \$16,077,974.54. There are unpaid claims against the department chargeable to the last year, which are presented to the consideration of Congress by the report of the Secretary. The estimates for the fiscal year commencing July 1, 1878, are \$16,233,234.40, exclusive of the sum of \$2,314,231, submitted for new buildings, repairs, and improvements at the several navy-yards. The appropriations for the present fiscal year, commencing July 1, 1877, are \$13,592,932.90. The amount drawn from the Treasury from July 1 to November 1, 1877, is \$5,343,037.40, of which there is estimated to be yet available \$1,029,528.30, showing the amount of actual expenditure during the first four months of the present fiscal year to have been \$4,313,509.10.

The report of the Postmaster-General contains a full and clear statement of the operations and condition of the Post-Office Department. The ordinary revenues of the department for the fiscal year ending June 30, 1877, including receipts from the money-order business and from official stamps and stamped envelopes, amounted to the sum of \$27,531,585.26. The additional sum of \$7,013,000 was realized from appropriations from the General Treasury for various purposes, making the receipts from all sources \$34,544,585.26. The total expenditures during the fiscal year amounted to \$33,486,322.44, leaving an excess of total receipts over total expenditures of \$1,058,262.82, and an excess of total expenditures over ordinary receipts of \$5,954,737.18. Deducting from the total receipts the sum of \$63,261.84 received from international money-orders of the preceding fiscal year, and deducting from the total expenditures the sum of \$1,163,818.20 paid on liabilities incurred in previous fiscal years, the expenditures and receipts appertaining to the business of the last fiscal year were as follows:

Expenditures.....	\$32,322,504 24
Receipts (ordinary, from money-order business and from official postage-stamps).....	27,468,828 42
Excess of expenditures.....	\$4,854,180 82

The ordinary revenues of the Post-Office Department for the year ending June 30, 1879, are estimated at an increase of three per cent. over those of 1877, making \$29,034,098.28, and the expenditures for the same year are estimated at \$36,427,771, leaving an estimated deficiency for the year 1879 of \$7,393,672.72. The additional legislation recommended by the Postmaster-General for improvements of the mail service, and to protect the postal revenues from the abuses practised under existing laws, is respectfully commended to the careful consideration of Congress.

The report of the Attorney-General contains several suggestions as to the administration of justice to which I invite your attention. The pressure of business in the Supreme Court and in certain circuit courts of the United States is now such that serious delays, to the great injury and even oppression of suitors, occur, and a remedy should be sought for this condition of affairs. Whether it will be found in the plan briefly sketched in the report, of increasing the number of judges of the circuit courts, and by means of this addition to the judicial force of creating an intermediate court of errors and appeals, or whether some other mode can be devised for obviating the difficulties which now exist, I leave to your mature consideration.

The present condition of the Indian tribes on the territory of the United States and our relations with them are fully set forth in the reports of the Secre-

tary of the Interior and the Commissioner of Indian Affairs. After a series of most deplorable conflicts—the successful termination of which, while reflecting honor upon the brave soldiers who accomplished it, cannot lessen our regret at their occurrence—we are now at peace with all the Indian tribes within our borders. To preserve that peace by a just and humane policy will be the object of my earnest endeavors. Whatever may be said of their character and savage propensities, of the difficulties of introducing among them the habits of civilized life, and of the obstacles they have offered to the progress of settlement and enterprise in certain parts of the country, the Indians are certainly entitled to our sympathy and to a conscientious respect on our part for their claims upon our sense of justice. They were the aboriginal occupants of the land we now possess. They have been driven from place to place; the purchase-money paid to them, in some cases, for what they call their own, has still left them poor; in many instances, when they had settled down upon land assigned to them by compact and began to support themselves by their own labor, they were rudely jostled off and thrust into the wilderness again. Many, if not most, of our Indian wars have had their origin in broken promises and acts of injustice upon our part; and the advance of the Indians in civilization has been slow, because the treatment they received did not permit it to be faster and more general. We cannot expect them to improve and to follow our guidance unless we keep faith with them in respecting the rights they possess, and unless, instead of depriving them of their opportunities, we lend them a helping hand.

I cordially approve the policy regarding the management of Indian affairs outlined in the reports of the Secretary of the Interior and of the Commissioner of Indian Affairs. The faithful performance of our promises is the first condition of a good understanding with the Indians. I cannot too urgently recommend to Congress that prompt and liberal provision be made for the conscientious fulfillment of all engagements entered into by the government with the Indian tribes. To withhold the means necessary for the performance of a promise is always false economy, and is apt to prove disastrous in its consequences. Especial care is recommended to provide for Indians settled on their reservations cattle and agricultural implements, to aid them in whatever efforts they may make to support themselves, and by the establishment and maintenance of schools to bring them under the control of civilized influences. I see no reason why Indians who can give satisfactory proof of having by their own labor supported their families for a number of years, and who are willing to detach themselves from their tribal relations, should not be admitted to the benefit of the homestead act and the privileges of citizenship, and I recommend the passage of a law to that effect. It will be an act of justice as well as a measure of encouragement. Earnest efforts are being made to purify the Indian service, so that every dollar appropriated by Congress shall redound to the benefit of the Indians, as intended. Those efforts will have my firm support. With an improved service, and every possible encouragement held out to the Indians to better their condition and to elevate themselves in the scale of civilization, we may hope to accomplish at the same time a good work for them and for ourselves.

I invite the attention of Congress to the importance of the statements and suggestions made by the Secretary of the Interior concerning the depredations committed on the timber-lands of the United States and the necessity for the preservation of forests. It is believed that the measures taken in pursuance of existing laws to arrest those depredations will be entirely successful if Congress, by an appropriation for that purpose, renders their continued enforcement possible. The experience of other nations teaches

us that a country cannot be stripped of its forests with impunity, and we shall expose ourselves to the gravest consequences unless the wasteful and improvident manner in which the forests in the United States are destroyed be effectually checked. I earnestly recommend that the measures suggested by the Secretary of the Interior for the suppression of depredations on the public timber-lands of the United States, for the selling of timber from the public lands, and for the preservation of forests, be embodied in a law; and that, considering the urgent necessity of enabling the people of certain States and Territories to purchase timber from the public lands in a legal manner, which at present they cannot do, such a law be passed without unavoidable delay. I would also call the attention of Congress to the statements made by the Secretary of the Interior concerning the disposition that might be made of the desert lands, not irrigable, west of the 100th meridian. These lands are practically unsalable under existing laws, and the suggestion is worthy of consideration that a system of lease-hold tenure would make them a source of profit to the United States, while at the same time legalizing the business of cattle-raising, which is at present carried on upon them.

The report of the Commissioner of Agriculture contains the gratifying announcement of the extraordinary success which has rewarded the agricultural industry of the country for the past year. With the fair prices which obtain for the products of the soil, especially for the surplus which our people have to export, we may confidently turn to this as the most important of all our resources for the revival of the depressed industries of the country. The report shows our agricultural progress during the year, and contains a statement of the work done by this department for the advancement of agricultural industry, upon which the prosperity of our people so largely depends. Matters of information are included of great interest to all who seek, by the experience of others, to improve their own methods of cultivation. The efforts of the department to increase the production of important articles of consumption will, it is hoped, improve the demand for labor and advance the business of the country, and eventually result in saving some of the many millions that are now annually paid to foreign nations for sugar and other staple products which habitual use has made necessary in our domestic every-day life.

The board on behalf of the United States Executive Departments at the International Exhibition of 1876 has concluded its labors. The final report of the board was transmitted to Congress by the President near the close of the last session. As these papers are understood to contain interesting and valuable information, and will constitute the only report emanating from the government on the subject of the exhibition, I invite attention to the matter, and recommend that the report be published for general information.

Congress is empowered by the Constitution with the authority of exclusive legislation over the District of Columbia, in which the seat of government of the nation is located. The interests of the District, having no direct representation in Congress, are entitled to especial consideration and care at the hands of the General Government. The capital of the United States belongs to the nation, and it is natural that the American people should take pride in the seat of their National Government, and desire it to be an ornament to the country. Much has been done to render it healthful, convenient, and attractive, but much remains to be done, which its permanent inhabitants are not able and ought not to be expected to do. To impose upon them a large proportion of the cost required for public improvements, which are in a great measure planned and executed for the convenience of the government and of the many thousands of visitors from all parts of the country who temporarily reside at the capital of the nation, is an evident in-

justice. Special attention is asked by the Commissioners of the District in their report, which is herewith transmitted, to the importance of a permanent adjustment by Congress of the financial relations between the United States and the District, involving the regular annual contribution by the United States of its just proportion of the expenses of the District government and of the outlay for all needed public improvements, and such measure of relief from the burden of taxation now resting upon the people of the District as in the wisdom of Congress may be deemed just.

The report of the Commissioners shows that the affairs of the District are in a condition as satisfactory as could be expected in view of the heavy burden of debt resting upon it, and its very limited means for necessary expenses.

The debt of the District is as follows:

Old funded debt.....	\$3,879,691 96
8.65 bonds, guaranteed by the United States..	18,743,250 00
Total bonded debt.....	\$22,122,941 96
To which should be added certain outstanding claims, as explained in the report of the Commissioners.....	1,187,204 52
Making the total debt of the District.....	\$23,310,146 48

The Commissioners also ask attention to the importance of the improvement of the Potomac River and the reclamation of the marshes bordering the city of Washington, and their views upon this subject are concurred in by the members of the Board of Health, whose report is also herewith transmitted. Both the commercial and sanitary interests of the District will be greatly promoted, I doubt not, by this improvement.

Your attention is invited to the suggestion of the Commissioners and of the Board of Health for the organization of a board of charities, to have supervision and control of the disbursement of all moneys for charitable purposes from the District treasury. I desire also to ask your especial attention to the need of adding to the efficiency of the public schools of the District by supplemental aid from the National Treasury. This is especially just, since so large a number of those attending these schools are children of employés of the government. I earnestly commend to your care the interests of the people of the District, who are so intimately associated with the government establishments, and to whose enterprise the good order and attractiveness of the capital are largely due; and I ask your attention to the request of the Commissioners for legislation in behalf of the interests intrusted to their care. The appropriations asked, for the care of the reservations belonging to the government within the city, by the Commissioner of Public Buildings and Grounds, are also commended to your favorable consideration.

The report of the joint commission created by the act approved August 2, 1876, entitled "An act providing for the completion of the Washington Monument," is also herewith transmitted, with accompanying documents. The board of engineer officers detailed to examine the monument, in compliance with the second section of the act, have reported that the foundation is insufficient. No authority exists for making the expenditure necessary to secure its stability. I therefore recommend that the commission be authorized to expend such portion of the sum appropriated by the act as may be necessary for the purpose. The present unfinished condition of the monument, begun so long ago, is a

reproach to the nation. It cannot be doubted that the patriotic sense of the country will warmly respond to such prompt provision as may be made for its completion at an early day, and I urge upon Congress the propriety and necessity of immediate legislation for this purpose.

The wisdom of legislation upon the part of Congress in aid of the States, for the education of the whole people in those branches of study which are taught in the common schools of the country, is no longer a question. The intelligent judgment of the country goes still further, regarding it as also both constitutional and expedient for the General Government to extend to technical and higher education such aid as is deemed essential to the general welfare and to our due prominence among the enlightened and cultured nations of the world. The ultimate settlement of all questions of the future, whether of administration or finance, or of true nationality of sentiment, depends upon the virtue and intelligence of the people. It is vain to hope for the success of a free government without the means of insuring the intelligence of those who are the source of power. No less than one-seventh of the entire voting population of our country are yet unable to read and write.

It is encouraging to observe, in connection with the growth of fraternal feeling in those States in which slavery formerly existed, evidences of increasing interest in universal education, and I shall be glad to give my approval to any appropriate measures which may be enacted by Congress for the purpose of supplementing with national aid the local systems of education in those States and in all the States; and, having already invited your attention to the needs of the District of Columbia with respect to its public-school system, I here add that I believe it desirable, not so much with reference to the local wants of the District, but to the great and lasting benefit of the entire country, that this system should be crowned with a university in all respects in keeping with the national capital, and thereby realize the cherished hopes of Washington on this subject.

I also earnestly commend the request of the Regents of the Smithsonian Institution that an adequate appropriation be made for the establishment and conduct of a national museum under their supervision.

The question of providing for the preservation and growth of the Library of Congress is also one of national importance. As the depository of all copyright publications and records, this library has outgrown the provisions for its accommodation; and the erection, on such site as the judgment of Congress may approve, of a fire-proof library building, to preserve the treasures and enlarge the usefulness of this valuable collection, is recommended. I recommend, also, such legislation as will render available and efficient for the purposes of instruction, so far as is consistent with the public service, the cabinets or museums of invention, of surgery, of education, and of agriculture, and other collections, the property of the National Government.

The capital of the nation should be something more than a mere political centre. We should avail ourselves of all the opportunities which Providence has here placed at our command to promote the general intelligence of the people and increase the conditions most favorable to the success and perpetuity of our institutions.

R. B. HAYES.

WASHINGTON, D. C., December 3, 1877.

R

RADETZKI, FEODOR, a Russian general, was born July 28, 1820. He received his military education in the Academy of Engineers and in the Academy of the General Staff, and in 1839 was appointed to a command of engineers in Warsaw and afterward in Grusia. In 1849 he was attached to the staff of General Rüdiger in Hungary, but in 1852 was again sent to the Caucasus, and here distinguished himself on numerous occasions in the actions with natives. In 1860, he was appointed chief of staff of the Cossacks of the Terek, was created major-general in the same year, and lieutenant-general in 1863. In 1876, he was appointed to the command of the Eighth Army Corps, and with this corps was the first to cross the Danube on June 24, 1877. This brilliant feat was fully equalled by his subsequent heroic defense of the Shipka Pass, by which he undoubtedly saved the Russian forces from a serious disaster.

REFORMED CHURCHES. I. REFORMED CHURCH IN AMERICA (formerly *Dutch Reformed Church*).—The following is a summary of the statistics of this Church as they were reported to the General Synod in June, 1877:

CLASSES.	Churches.	Ministers.	Communicants.
Albany.....	17	19	3,088

The seventy-first annual meeting of the *General Synod* of the Reformed Church in America was held in the city of New York, beginning June 6th. The Rev. Dr. R. W. Clark was elected president. A question which excited general interest came up early in the session, in the case of the Rev. Augustus Blauvelt, D. D., of the classis of Kingston, charged with the utterance of views contrary to the standards of the Church. Dr. Blauvelt had written an article entitled "Protestant Vaticanism" for *Scribner's Monthly* magazine, in which the views objected to were expressed. He had acknowledged the authorship of the article, and that he held the views in question, but had asserted that it had never occurred to him to ask himself whether these views were in accordance with the standards of the Church, or whether he was violating the promises which he made when he signed the formulas of doctrine. He also stated that he disagreed fundamentally with certain specified articles of the Confession of Faith. The classis of Kingston, having taken the case into consideration, decided that Dr. Blauvelt's declarations showed that he did not feel bound by his subscriptions to the standards, that his views upon the Sacred Scriptures were thoroughly in conflict

* Nearly the entire body of native helpers.

† A number of localities are visited as frequently as possible.

with the teachings of the Confession of Faith; declared that the opinions he had avowed "assaulted the very foundations of evangelical religion, betrayed the cause of Christ to His enemies, and wounded the Church in her work and life;" and suspended him from the office of the ministry of the Gospel. Dr. Blauvelt appealed to the Particular Synod, denying that he was seeking to betray the cause of Christ to His enemies. The Synod confirmed the action of the classis, whereupon Dr. Blauvelt appealed to the General Synod, not from the sentence of suspension from the ministry, but from so much of the action of the classis of Kingston as charged that the opinions avowed by him "betrayed the cause of Christ to His enemies." He was given a hearing in the review of the case, after which the Synod decided that the action of the Particular Synod, confirming the action of the classis, was confirmed as a whole. A Committee on the Library of the Theological Seminary in New Brunswick, N. J., reported that 3,000 bound volumes, and nearly 400 unbound pamphlets, had been added to the library, including many old works of importance, the complete works of Kant, Schleiermacher, Schelling, Fichte, Schlegel, Jacobi, Herder, Baader, and other German philosophical and theological writers; and large additions had been made to the works already possessed on the history, literature, and theology of Holland. Many pamphlets on the history of their own Church had also been received.

The Committee on the Publication of the "Centennial Discourses" reported that the first edition of the publication had been exhausted, and that the receipts would cover the expenses. The presidents of the Synod and the preachers on benevolence, both present and past, were requested to furnish copies of their sermons for preservation in the archives at New Brunswick.

The Board of Publication were authorized to publish an edition of the constitution of the Church in the Dutch language. The salutations of the Synod were sent to the French Reformed Church, and a resolution of sympathy was voted with the Free Christian Church of Italy. Resolutions were passed approving the movements in progress throughout the country for the advancement of the temperance cause; exhorting professing Christians, "in the present aspect of the temperance question, to seriously consider the obligation of total abstinence from all intoxicants so that the full weight of their influence may be upon the side of purity, good order, and Christian morals," and urging upon churches and consistories "constant faithfulness in the exercise of Christian discipline against offenders in the Church, who not only in the excesses of drunkenness, but by the manufacture and sale of intoxicating drinks, and also by the rent of property for the purpose of the nefarious

traffic, dishonor Christ;" also approving measures for the suppression of tippling-houses, and the enforcement of the present laws regulating the liquor traffic.

II. REFORMED CHURCH IN THE UNITED STATES (formerly *German Reformed Church*).—The following is a summary of the statistics of the Reformed Church in the United States as they are given in the *Almanacs* of the denomination for 1878:

SYNODS.	Ministers.	Congregations.	Members.	Members unconfirmed.
Synod in the United States..	200	448	68,560	89,960
Synod of Ohio.....	158	388	24,041	11,910
Synod of the Northwest.....	125	192	16,998	18,600
Synod of Pittsburgh.....	50	112	9,312	7,425
Synod of Potomac.....	112	246	21,119	15,607
East German Synod.....	85	87	7,561	5,575
Total.....	680	1,368	196,901	91,077

Number of classes, 45; number of persons who communed during the year, 119,164; number of Sunday-schools, 1,198; number of scholars in the same, 83,604; number of students for the ministry, 160; amount of contributions for benevolent purposes, \$67,514; amount of contributions for congregational purposes, \$357,588. The efforts of this Church in benevolence and missions are exercised through a number of societies, of which a Board of Home Missions, a Board of Foreign Missions, and a Board of Church Extension, are connected with the General Synod; other missionary societies are the Ohio Board of Missions, Tiffin, Ohio, which reports 20 mission stations under its care, the most of which are in Kansas and Missouri, while one is at Denver, Colorado; the Mission Board of the Northwest, Galien, Ohio, which labors mostly among the Germans; the Eastern Board of Missions, Harrisburg, Pa.; and the Mission Board of Ursinus Union, Lebanon, Pa. The Theological Seminary at Tiffin, Ohio, chartered in 1831, had sent out in 1877 a total of 171 ministers; the Mission House at Howard's Grove, Wis., had sent out a large number of German ministers. Other theological institutions of the Church are the Theological Department of Mercersburg College, Mercersburg, Pa.; the Theological Department of Ursinus College, Freeland, Montgomery County, Pa.; and the Seminary at Lancaster, Pa. These five institutions and departments had educated, in 1877, a total of about 683 ministers. The other educational institutions consist of six colleges and seven higher academical schools for young men and young women. The list of periodicals includes seven publications in the English and three in the German language; two of the English papers and one of the German are weekly; the others are monthly and semi-monthly, with one quarterly review.

III. REFORMED DUTCH CHURCH OF SOUTH AFRICA.—The General Assembly of the Reformed Dutch Church of South Africa met at

Villiersdorp in December, 1876, for its regular quadrennial meeting, and was in session nearly five weeks. The Rev. Andrew Murray was chosen moderator. This Church has remained for 150 years in communion with the classis of Amsterdam, Holland, but received a separate constitution in 1804, and came under English rule in 1843. The Church contained a French element of the descendants of more than 300 Huguenot families who had settled in South Africa about 1687. The Church numbered at this time 100 ministers, and 125 churches. It had a theological seminary with three professors, and an average attendance of from 14 to 24 students each year. It employed 12 missionaries, and an institution for the training of missionaries was contemplated. It had organized several schools, for which it had received some 10 or 12 young women teachers from Mt. Holyoke Seminary, Mass. The English language was used in the churches at Capetown, with the hymn-books and liturgy of the Reformed Church in America.

REFORMED EPISCOPAL CHURCH. The Committee on the State of the Church reported to the General Council, in May, that they had received statements from 59 congregations against 34 parishes which had reported in 1876. From the parochial exhibits sent up to them the following statistics had been compiled: number of persons connected with the congregations, 10,728; number of communicants as reported, 4,996; number of Sunday-school scholars, 6,584; of Sunday-school teachers, 627; number of persons baptized, 410; do. confirmed, 657; amount of contributions for benevolent, religious, and parochial purposes, and for current expenses, collections for the sustentation fund, and Sunday-school offerings, \$247,507.32; value of church property (an item which several congregations had failed to report), \$438,086.65; incumbrances upon church property, \$148,700. During the year churches had been occupied, or were in course of erection, at Moncton, N. B.; Digby, N. S.; Chatham, N. B.; Newark, N. J.; Toronto, Canada; Barrie, Canada; Philadelphia, Pa.; New York City; Baltimore and Cumberland, Md.; and steps had been taken to secure church buildings in other places.

The fifth *General Council* of the Reformed Episcopal Church was held at Philadelphia, Pa., beginning May 9th. The roll of the Council included the names of 50 ministers, of whom 38 were present, and 59 churches, distributed as follows: Nova Scotia, 1; New Brunswick, 4; Ontario, 4; British Columbia, 1; California, 1; Massachusetts, 1; New York, 5; New Jersey, 3; Pennsylvania, 7; Maryland, 4; Virginia, 2; South Carolina, 8; Texas, 1; Ohio, 1; Kentucky, 1; Illinois, 12; Missouri, 1; Colorado, 2. The Rev. Bishop Fallows was chosen presiding bishop for the ensuing year. The Church of the Reconciliation, Philadelphia, was admitted to union with the Council. The General Standing Committee reported that

they had received four churches during the year, and had accepted one minister. They had considered the question of establishing the Church in England, and had come to the conclusion that there was nothing in the fraternal relations that had been agreed upon between the Free Church of England and the Reformed Episcopal Church "preventing the latter Church from receiving into its communion ministers and congregations in England or in any other part of the world." Acting upon this view, the Rev. Thomas Huband Gregg, D. D., M. D., late Vicar of East Harborn, in the diocese of Lichfield, England, had been received to the ministry of this church. The committees of the several missionary jurisdictions reported, stating that they had received several ministers. The Rev. B. Johnson, Evangelist of the South, reported concerning his ministrations at Charleston, S. C., and Augusta and Atlanta, Ga. The Rev. P. F. Stevens, in charge of the colored congregations in South Carolina, reported that he had organized two new congregations, and had formed the colored congregations, now numbering thirteen, into the "Charleston Convocation," embracing three parishes or missions, the Charleston, St. John's, and Pineville Missions, with a total of 980 members. Six students had attended his training-school. A plan had been submitted to the Standing Committee for the permanent establishment of this institution. Provision was made by the Council for the continuance of the school. Bishop Cridge reported concerning his visit to the Free Church of England, and the consecration of Bishops Price and Sugden of that body, in 1876. Bishops Nicholson, Cheney, and Fallows made reports of their episcopal work during the year. A schedule of theological study, which had been prepared by a special committee in accordance with the direction of the General Council of 1875, was presented and adopted. The question was carefully discussed whether the bishops of the Church should be synodical bishops, or should be chosen by the Council and assigned by it to their jurisdictions. The following rule was adopted on the subject:

"The bishops of this Church shall be chosen or received agreeably to such rules as shall be fixed by the General Council; and their jurisdiction, powers, duties and terms of office in any Synod or Episcopal Jurisdiction, shall be such as the General Council may hereafter define; and any bishop of this Church may ordain, confirm, or perform any other act of the Episcopal office at the request of any bishop, or of any Church in communion with this Church."

The preparation of a Catechism for the use of Sunday-schools was recommended. A committee was appointed to take into consideration the relation of the Church to the associations and amusements of the world, and report upon it to the next General Council. The question of the functions of the deacons was discussed on the presentation of the report of the com-

mittee on the subject, and was again referred to the committee, with instructions to report to the next Council, the bishops being requested in the mean time, "for the ensuing Council year (purely as a question of uniformity), not to authorize any deacon whom they may ordain to administer either sacrament." A communication was read from ministers and laymen in England, testifying as to the need of the work of the Church in that country. The Council decided to elect a bishop for the United Kingdom of Great Britain and Ireland, and, the election being held, the Rev. Thomas Huband Gregg, D. D., M. D., of Trinity College in the University of Dublin, was chosen to that office. Dr. Gregg was, at the time of his election, the rector of the first Reformed Episcopal church organized in England, a church consisting of 300 communicants, in South End, London, who had recently separated themselves from the Church of England. He was consecrated bishop at the First Reformed Episcopal Church, New York City, June 20th, Bishop Cheney preaching the sermon.

The University of the West, recently established near Chicago, Ill., by the General Council, received early in the year from Mr. Edward Martin, of Red Hook, Dutchess County, New York, a gift of 160 acres of land just outside the limits of the city of Chicago, and valued at more than \$200,000, for the maintenance of the faculty and students first of the College of Theology, and afterward of other colleges as the need may arise. The Regents of the University, in acknowledgment of the gift, determined to call the Theological Department the Martin College of Theology. The department was organized at a meeting of the Board of Regents held in June, by the appointment of a Board of Managers and the election of a Faculty, whose choice was made subject to the approval of the General Council. Bishop Charles E. Cheney was chosen Chancellor of the University, and professors were elected to the chairs of Systematic Theology and Exegesis; Exegetical, Biblical, and Pastoral History; Ecclesiastical History and Polity; Apologetics, or Evidences of Natural and Revealed Religion; Mental and Moral Philosophy and Rhetoric. The General Council had, at its meeting in May, adopted a course of study for candidates for the ministry, to which it requested the managers of the college to adapt their schedule of studies as far as practicable.

RHODE ISLAND. The "adjourned session" of the Rhode Island Legislature, which began early in January, came to a close on the 30th of March. One of the most important acts passed provided for a new and complete registration of voters, every year in towns and cities of more than 7,000 inhabitants, and once in three years in smaller towns. Every qualified voter must be registered on or before the last day of December and must pay a registration tax of one dollar. Town clerks are made officers of registration. The boards of can-

vassers are required to make up lists of voters on the last Monday of January, and to correct and complete the same within four days preceding the first Wednesday in April. The town clerks are required to attend to the work of registration on the last three days of the year, and to attend to the receiving of registry taxes on the three days preceding and including the second Saturday of January, but any person may be registered at any time on application. The registry taxes are to be applied to the support of public schools. An act was passed providing for the government and control of the State institutions in the town of Cranston. They are to be under the charge of a Board of State Charities and Corrections, consisting of nine persons, three from the county of Providence, one from each of the other counties, one from the State at large, and such other person as shall be appointed Secretary of the Board. The Board of State Charities and Corrections is authorized to appoint an agent to examine paupers and lunatics, and ascertain their place of residence, to attend to their removal, and perform such other duties as may be required of him; to appoint a Superintendent of the State Institutions, Deputy Superintendents of the Workhouse and House of Correction, of the Asylum for the Insane and of the Almshouse, the Superintendent of State Institutions nominating the same; and to make appointments of subordinate officers, and establish such regulations as they may deem fit. Various special provisions are made regarding the management of the institutions under the direction of the board. Among the other acts passed was one to prevent incendiarism, and one to provide security against extra-ordinary conflagrations, and for the creation of safety funds by fire insurance companies. The former provides for an investigation by a justice and a jury of six men, in cases of suspected incendiarism, with a view to ascertaining the facts and bringing the incendiary to justice, if the crime is proved. The principal feature of the latter act is a provision for the accumulation of a surplus fund by fire insurance companies as security against heavy losses in case of unusual conflagration. The question of women suffrage occupied considerable attention, and a report was made in favor of permitting unmarried women and widows to vote on all propositions to impose a tax, but the suggestion was not adopted. An act was passed giving women control of their property when their husbands became intemperate, insane, or otherwise incapacitated. Among the appropriations was one of \$120,000 for the new State-prison.

The annual State election occurring on the 4th of April, the conventions of the several political parties were held early in the preceding month. The delegates of the Democracy gathered at the State-house in Providence on the 7th of March, and made the following nominations: For Governor, J. B. Barnaby, of

Providence; Lieutenant-Governor, Ariel Ballou, of Woonsocket; Secretary of State, W. B. W. Hallet, of Providence; Attorney-General, Warren R. Perce, of Providence; General Treasurer, William P. Congdon, of Newport. A State Central Committee was chosen, of which Wm. B. Beach was made chairman, and the following resolutions were adopted:

Whereas, It is our misfortune to convene at a time when the world stands amazed at witnessing, in its greatest Republic, the triumph of fraud over justice:

1. *Resolved*, That our faith in Democratic institutions is unabated. If the prosperity of our beloved country were dependent upon Presidents, Commissions, and Returning Boards, its future would indeed be dark; to none of these do we trust, but to the awakened conscience and resistless power of the American people, which never yet have failed to mete out justice, both to parties and to men.

2. *Resolved*, That we accord a sincere approval to the Democratic members of the Forty-fourth Congress for their patriotism in providing a tribunal to determine the disputed Presidency; and although the Commission established as a High Court of Equity proved but a party tool, for their manliness in accepting its adverse decision.

3. *Resolved*, That under protest only do we submit to the seating, as President of the United States, of one whom the people have emphatically rejected.

4. *Resolved*, That the acceptance by Rutherford B. Hayes of a position which rightfully is another's, leaves no room to expect that the administration will be either honorable to himself or serviceable to the country.

5. *Resolved*, That the degenerated leadership of the Republican party, manifest in the nation at large, by the fraudulent subversion of the will of two sovereign States, and in this State by a continued support of corrupt practices and candidates, furnishes a sufficient proof for its condemnation and abandonment by all honest men.

6. *Resolved*, That we indorse the address of the Democratic members of Congress, issued March 3, A. D. 1877, to the people of the United States, and adopt its sentiments as our own.

7. *Resolved*, That while, as good citizens, we make no opposition to the *de facto* President, we do not admit the rightfulness of his title. And we call upon our fellow-citizens to keep constantly in memory that the inauguration of R. B. Hayes was the result of plain and palpable fraud, indorsed by the historical eight in the announcement of the infamous doctrine that "the action of a Canvassing Board may be mistaken, it may be clouded with error, it may even be tainted with fraud, and yet it is too sacred to be touched, and it ends all inquiry."

8. *Resolved*, That we, delegates of the Democratic party of Rhode Island, cordially inviting the co-operation of every one who approves these principles, announce the following as measures whose early adoption we believe to be for the welfare of the State: 1st. A more rigid economy in public expenditure. 2d. The equalization of the suffrage qualification. 3d. The abolition of the registry tax. 4th. The enactment of a ten-hour law.

9. *Resolved*, That it is the sense of this convention that a memorial and petition be prepared and presented to Congress for the passage of an amendment to the Constitution of the United States, extending the elective franchise to all the citizens of the United States residing in this State.

The Republican Convention was held at the State-house in Providence, on the 8th of March. There were several contesting delegations, and considerable time was spent in effecting an

organization. Charles C. Van Zandt, of Newport, was nominated for Governor; A. C. Howard, of East Providence, for Lieutenant-Governor; Willard Sayles, of Providence, for Attorney-General; Joshua M. Addeman, of Providence, for Secretary of State, and Samuel Clarke, of Lincoln, for Treasurer. No resolutions or declarations of any kind were adopted. A Prohibitory Convention was held March 9th. The nominations made were the same as those of the Republican Convention of the previous day, and the only resolution adopted was the following:

Resolved, That we recommend the several towns of this State to at once organize in such manner as to secure Senators and Representatives in the next General Assembly who will reenact the prohibitory law and have it enforced.

OLD MILL, NEWPORT.

At the election the Republican and Prohibition candidates were chosen by small majorities. The total vote for Governor was 24,475, of which Van Zandt received 12,458, Barnaby, 11,787, and 230 were returned as scattering. Van Zandt's plurality over Barnaby was 671, and his majority 441. The highest Republican majority was 4,416, for Clarke for Treasurer, the vote being, Clarke 14,570, Congdon 10,139, and scattering 15; and the average Republican majority on the entire State ticket was 2,859. The Legislature chosen at this election consisted of 28 Republicans and 8 Democrats in the Senate, and 82 Republicans and 26 Democrats in the House: Republican majority, 20 in the Senate, 56 in the House, and 76 on a joint ballot.

The regular annual session of the Legislature was held at Newport on the 29th of May, and occupied three days, the new Governor being inaugurated on the first day. The sum of \$40,000 was appropriated to buy the Providence High-School building, for the use of the State Normal School; provision was made for dedicating the new court-house at Providence, and an act was passed for the punishment of tramps. Other important legislation was postponed to the adjourned session in January, 1878.

For the fiscal year ending April 30th, the receipts of the State Treasury were \$1,205,541.44, including a balance of \$396,185.53 on hand at the beginning of the year. The disbursements of the year amounted to \$1,021,116.57, leaving a balance unexpended of \$184,424.87. From May 1st to November 30th, the receipts were \$286,387.52, and the disbursements \$423,670.94, which reduced the unexpended balance to \$47,141.45. The outstanding bonded debt of the State on the 1st of January, 1878, was \$2,534,500, and the sinking fund amounted to \$547,289.34. The outstanding bonds are as follows:

Bonds issued October 1, 1861, payable 1881.....	\$500 00
Bonds issued September 1, 1862, payable 1882.....	965,000 00
Bonds issued April 1, 1863, payable 1883.....	200,000 00
Bonds issued July 1, 1863, payable 1893.....	631,000 00
Bonds issued August 1, 1864, payable 1894.....	738,000 00

Total.....\$2,534,500 00

The number of savings institutions in the State is 39, the number of depositors on the 30th of November was 99,646; whole amount of deposits, \$49,567,997.33. There was a decrease during the year of 219 in the number of depositors, and of \$943,982.08 in the aggregate amount of deposits.

The public school statistics for the year ending April 30th are as follows:

DAY SCHOOLS.

Number of different pupils enrolled.....	89,959
Average attendance.....	27,562
Number of schools (graded, 496; ungraded, 292).....	788
Average length of schools.....	9 months, 1 day
Number of teachers regularly employed.....	850
Amount paid male teachers.....	\$98,278 84
Average wages paid male teachers per month.....	\$80 69
Amount paid female teachers.....	\$298,995 14
Average wages paid female teachers per month.....	\$45 91

EVENING SCHOOLS.

Number of different pupils enrolled.....	8,739
Average attendance.....	1,714
Number of schools.....	28
Average number of teachers employed.....	152
Average length of schools.....	12 weeks

RECEIPTS.

State appropriation for day and evening schools.....	\$91,654 50
Town appropriation for day and evening schools.....	361,609 45
Town appropriation for land, buildings, and furniture.....	163,546 15
District taxation.....	52,784 67
Registry taxes, school funds and all other sources.....	60,827 50
Total.....	\$780,422 27

EXPENDITURES.

Teachers' wages and other current expenses of day schools.....	\$473,326 19
Teachers' wages and other current expenses of evening schools.....	16,959 87
School supervision.....	11,418 26
Land, buildings, furniture, and apparatus.....	224,258 98
Total.....	\$725,962 80

The appropriations for the support of the institutions of the State farm at Cranston, for the year, amounted to \$114,019.27. On the 1st of January, 1878, there were in the Workhouse and House of Correction 129 men and 67 women; in the Asylum for the Incurable Insane, 111 men and 98 women; in the Alms-house, 61 men, 66 women, 9 boys, and 4 girls. The average number of inmates in the three institutions for the past three years is as follows:

INSTITUTIONS.	1875.	1876.	1877.
Workhouse and House of Correction.....	223	232	202
Asylum for the Insane.....	170	188	204
Alms-house.....	132	146	144
Total.....	525	566	550

The new State-prison is well advanced toward completion. The total amount of the appropriations made in 6 years for the construction of this institution is \$385,000, and the amount expended to December 31, 1877, is \$353,955.81. The number of inmates in the old prison on the 1st of May was 89, of whom 86 were males and 3 females. The number in the jail was 133, of whom 121 were males and 12 females. The appropriations for the support of the State-prison for the year amounted to \$24,439.85.

The Rhode Island Hospital, on the 30th of September, contained 26 males and 19 females; the number admitted during the year preceding was 255 males and 103 females. The expenses of the institution for the year were \$25,500.26. It is a private establishment under the charge of trustees. The State supports its indigent blind, and deaf and dumb, in institutions outside of the State.

The new court-house at Providence has been completed, and was dedicated, and its custody formally transferred to the State, on the 19th of December.

ROMAN CATHOLIC CHURCH. The year 1877 virtually closed the long pontificate of Pope Pius IX., who died early in the following year. On the 20th of January, 1877, Pius IX. issued the following decree, inserting certain words in the Creed of Pope Pius IV.:

As it always has been, from the earliest times, of custom that a certain and determinate formula should be proposed to the faithful, whereby they should profess faith and solemnly abjure the heresies of each age: so, at the happy closing of the Sacred Council of Trent, the Sovereign Pontiff Pius IV., who hastened without delay to put in force the decrees of the Tridentine Fathers, by the Constitution *Injunctum Nobis*, issued November 13, 1564, drew up a form of Profession of Faith, to be recited by those who were to be promoted to cathedral and other principal churches, or were to obtain dignities, canonries, or other ecclesiastical preferments having cure of souls, and by all others to whom the decrees of said Council applied; also, by others having charge of monasteries, convents, houses, and other places whatsoever of all regular and even of military orders, by what name or title it might happen to be endowed. And this he extended by another Constitution, issued on the same day and year, beginning: *In Sacrosancta*, to all teachers, masters, regents, or other professors of what art

or faculty soever, cleric or lay, or what religious order soever, in what places soever, publicly or privately teaching, or giving lessons or exercises, and, finally, to those that were to take degrees.

But now, soon after the meeting of the Holy Vatican Council, and before it was suspended by the Apostolical Letter, *Postquam Dei munere*, issued on the 20th of October, 1870, two Constitutions of dogma were solemnly promulgated by that council—first, on Catholic faith, beginning: *Dei Filius*; the other on the Church, beginning: *Pastor Aeternus*—it has been judged not only reasonable but necessary that in the Profession of Faith, the dogmatic definitions of this Vatican Council should not only be believed in the heart, but confessed by the mouth by a public and solemn declaration. Wherefore, our most Holy Father Pope Pius IX., having sought the judgment on this point of a Special Congregation of the eminent fathers the Cardinals of the Holy Roman Church, has ordered, directed, and commanded, as by the present decree he orders, directs, and commands, that in the aforementioned formula of Profession of Faith by Pius IV., there shall be said, after the words “Especially by the Holy Synod of Trent,” “and given, defined, and declared by the Œcumenical Council of the Vatican, particularly concerning the primary and infallible magistry of the Roman Pontiff,” and that in future the Profession of Faith, by all who are bound to make it, shall be thus made, and not otherwise, under the comminations and penalties declared by the Council of Trent, and by the aforesaid Constitutions of Pope Pius IV. Let this, therefore, be obeyed diligently and faithfully everywhere, and by all whom it concerns, notwithstanding, etc.

Given at Rome at the Secretariate of the Sacred Congregation of the Council, January 20, 1877.

He maintained the attitude he had assumed toward the new state of things in a brief to the Society of Catholic Youth at Bologna (January 29th), censuring all who proposed to accept the situation and take part in politics, or in the election of members of the Italian Parliament.

In his allocution to the Lenten preachers, he dwelt especially on the increase of vices in Rome.

As a general wish had been expressed to make the Golden Jubilee of his episcopate (June 3d) a day of general solemnity, he issued, (February 27th, a brief, granting a plenary indulgence on that day, with the usual conditions of approaching the sacraments.

On the 12th of March, he addressed an allocution to the cardinals, which excited general interest, as it reviewed the whole condition of the Papacy from the occupation of Rome, the seizure of religious buildings, the law of guarantees, the suppression of pilgrimages and processions, the open encouragement of vice, and, finally, the projected law of Clerical Abuses.

Allocution addressed by Pope Pius IX. to the Cardinals of the Holy Roman Church, in the Vatican Palace, March 12, 1877.

VENERABLE BRETHREN: On many occasions already, during the trying times of our stormy Pontificate, have we convoked your most illustrious order in this palace, to deplore, in your presence, the great evils which the Church unjustly suffers, and that you might hear our protestations against acts perpetrated to the detriment of the Church and of this Apostolic See, whether in Italy or in other countries. During the last few years especially, we have been obliged to witness the repeated and always more violent attacks, together with the many outrages which

the Church of God has been obliged to bear in different parts of the Catholic world, at the hands of implacable enemies, who regarded as a most fitting opportunity for assailing the Church of Jesus Christ the sad situation of abandonment in which we find ourselves, bereft as we are of all human succor. We would, therefore, have desired to-day, venerable brethren, to submit to your wisdom and to your consideration this cruel and so vast persecution now waged against the Church in many countries of Europe; but although it is our intention to present this sad picture to you on another occasion, we cannot refrain, in the mean time, from calling to your minds the trials and vexations, daily increasing in severity, which the Church is undergoing in this Italy of ours, and to point out to you the perils, daily increasing in magnitude, which are threatening us and this Holy See.

The seventh year is already upon us since the invaders of our civil principality, riding rough-shod over every right, human and divine, breaking faith in solemn compacts, and taking advantage of the misfortunes of an illustrious Catholic nation, by violence and force of arms, occupied the provinces still remaining in our power, taking possession of this holy city, and by this act of sovereign iniquity overwhelming the entire Church with grief and mourning. The false and worthless promises, which in those woful days they made to foreign governments concerning our dearest interests, by declaring that they desired to pay homage and honor to the freedom of the Church, and that they intended that the power of the Roman Pontiff should remain free and unabridged—these promises did not succeed in beguiling us into vain hopes, and did not prevent us, from that very moment, from fully realizing all the tribulations and afflictions that awaited us under their dominion. On the contrary, fully aware of the impious designs entertained by men who are leagued together by a fondness for modern innovations and by a criminal oath, we at once openly proclaimed that this sacrilegious invasion was not intended so much to oppress our civil principality as it was to undermine all the more readily, through the oppression of our temporal power, all the institutions of the Church, to overthrow the authority of the Holy See, and to utterly destroy the power of the Vicar of Jesus Christ, which, all unworthy as we are, we exercise here on earth.

Indeed, it may be said that this work of demolition and of general destruction of everything connected with the structure and order of the Church is almost consummated: if not to the extent of the desires and hatred of the persecutors, it is at least so far as concerns the sad heap of ruins they have succeeded, up to this time, in piling up. It is only necessary to glance at the laws and decrees, promulgated since the commencement of the new administration, up to the present day, to realize fully what they have wrested from us, piece by piece, little by little; how, day after day, and one after another, they took the means and resources we so much needed for the proper guidance and direction of the Catholic Church. Thus it is that the iniquitous suppression of religious orders has unfortunately deprived us of valiant and useful auxiliaries, whose work is absolutely necessary for the transaction of the affairs of Ecclesiastical Congregations, and for the performance of so many of the duties of our ministry. This iniquitous suppression has at the same time destroyed, here in this holy city, many asylums in which were domiciled the religious of foreign nations who were wont to repair to this metropolis at stated periods to revive their minds, and to render an account of their stewardship. And it has gone so far as to tear up even the very root of healthful and saving plants which bore fruits of benediction and peace to the furthestmost ends of the earth. This same fatal suppression which has struck these colleges, established in Rome for holy missions, for the training of worthy laborers, willing fearlessly to bear the light of the Gospel even into the most re-

mote and barbarous regions, has unfortunately, by this very act, deprived so many people of most salutary succors of piety and charity, to the great detriment of human welfare and civilization, both of which spring from the holiness, the teachings, and the virtues of our religion. But these laws, already so cruel in themselves, and so diametrically opposed to the interests, not only of religion, but also of human society, have been still more aggravated by the addition, which the ministers of the government have made, of new laws which forbid, under the severest penalties, the living in common and under the same roof, of religious families, the admission of novices, all religious professions among the regulars of either sex. So soon as religious orders were dispersed, the work and project of destruction was directed toward the secular clergy, and then was enacted the law by which we and the pastors of the Italian people were to see, with the deepest sorrow, young seminarians, the hope of the Church, wickedly torn from the sanctuary, and forced, at the very age when they should most solemnly consecrate themselves to God, to don the shoulder-knot of the secular militia, and to lead a life utterly at variance with their education and the spirit of their vocations.

PERUGIA.

Nor is this all: other unjust laws have been enacted, by which the entire patrimony which the Church held by the most sacred, inviolable, and ancient rights, has been in a great measure taken from her, to substitute in its place, and only in part, some paltry revenues, which are entirely at the mercy of the uncertain vicissitudes of the times, and of the good will and pleasure of the public power. We have, likewise, been compelled to deplore the occupation, and the transformation to profane usages, after the lawful possessors, without any distinction, had been driven forth, of a large number of buildings erected by the piety of the faithful, often at very great sacrifices, and which were worthy of the days of Christian Rome, and which offered a peaceful asylum to virgins consecrated to God and to the families of the Regulars.

They have also removed from our control, and from the care of the Holy Ministry, many pious works and institutions consecrated to charity and to the exercise of benevolence, many of which, devoted to the alleviation of poverty and other miseries, had been established by the Sovereign Pontiffs themselves, our predecessors, and through the pious liberality of foreign nations; and if a few of these works

of public charity still exist under the vigilance of the Church, we are assured that a law, that will not long be delayed, will either take them from us or abolish them altogether; this is at least what is clearly and unmistakably announced by public documents. We have, moreover, and we refer to it with the deepest anguish, seen public and private instruction in letters and arts wrenched from the authority and direction of the Church, and the mission of teaching confided to men whose faith was not above suspicion, or to avowed enemies of the Church, who have not shrunk from public professions of atheism. But these traitorous children of the Church were not satisfied with having seized, invaded, or destroyed so many institutions of such vast importance. They must needs throw still more obstacles in the way of the free exercise of the spiritual mission of the ministers of the sanctuary. They have accomplished this criminal object through the law recently passed by the Chamber of Deputies, under the name of the "Law on Clerical Abuses," by virtue of which they impute as a crime and misdemeanor, to bishops as well as priests, and they visit with severe penalties, such acts as the authors of the said law comprise under the insidious name of per-

turbation of conscience, which they call public, or of perturbation of the peace of families. By virtue of this law, also, all words or writings whatsoever, by which ministers of religion may consider it incumbent upon them, by reason of their charge, to point out and disapprove of laws, decrees, or other acts of civil authority as contrary either to the laws of religion or to the laws of God and of His Church, will be equally subject to punishment, as well as the work of those who may have published or distributed these said writings, regardless of the rank of the ecclesiastical authority or the source whence it emanates. Once this law is passed and promulgated, a lay tribunal will be permitted to define whether in the administration of the sacraments, and in the

preaching of the Word of God, the priest has disturbed and how he has disturbed the public conscience, and the peace of families, and the condition of the bishop and priest will be such that their voices can be restricted and silenced, equally with that of the Vicar of Jesus Christ, who, although declared in his person, through political reasons, exempt from all penalties, is none the less supposed to be punished in the person of those who may have been accomplices in his fault; this is, in fact, what a minister of the kingdom in the Chamber of Deputies did not hesitate to declare openly, when, speaking of us, he freely avowed that it was neither new, nor obsolete in the laws, nor contrary to the rules, the science, or the practice of criminal law, to punish the accomplices in a crime when the chief author could not be reached. Whence it becomes clear that, in the intention of those who govern, it is against our person also that the force of this law is directed, so that, when our words or acts shall come in contact with this law, the bishops or priests who may have repeated our words, or executed our orders, must suffer the penalty of this pretended crime, of which we, as chief author, will be condemned to bear the inculpation of the offense.

This, then, venerable brethren, is how, not only so many asylums and institutions which ages have built up, which revolutions have not been able to destroy, and which are so necessary to the administration of the Church, have been destroyed among us, by the violence and spirit of destruction of our enemies, but how, too, they have succeeded by the most criminal means in making it impossible for the Church to perform that sublime mission of teaching and watching over the salvation of the souls she received from her Divine Founder, by decreeing the most severe penalties whereby to close the mouths of her ministers, who, in teaching the people to observe all that Jesus Christ has ordained, and in insisting, in season and out of season, in reminding, supplicating, and reproving in all patience and wisdom, are simply doing what they are commanded to do by divine and ecclesiastical authority. For now we pass over in silence other dark machinations on the part of the assailants of the Church, from which, as we know, some of the public ministers themselves withheld neither their counsels nor their encouragement; machinations which tend to prepare for the Church days of tribulation still more severe, or to create occasions of schisms on the occasion when the election of a new Pontiff will take place, or to impair the exercise of spiritual authority by the bishops directing the churches of Italy. Hence it is that we have been led to declare recently that it should be tolerated to exhibit to the laic power the acts of the Canonical Institution of these very bishops, so as to remedy, as far as in our power, a most sad and fatal state of things in which it was no longer a question of the possession of temporal goods, but rather of the grave and manifest peril to which was exposed that which constitutes our supreme law; that is to say, the very consciences of the faithful, their peace, and the direction and salvation of souls. But in acting in this way, to ward off still graver dangers, we wish it to be again publicly known that we disapprove and utterly detest this unjust statute, which is called the *Royal Placet*, openly proclaiming that it strikes at the divine authority of the Church, and violates her freedom. Now, after all we have exposed up to this, and although we have omitted many other attempts, to which we could refer only to deplore them, we ask the question: How is it possible for us to govern the Church so long as we are under the domination of such a power as is continually depriving us of every assistance and of every way in which to exercise our apostolate, which closes every avenue against us, which daily raises new obstacles in our way, which is going so far as to set new traps and lay new ambushes along our path? Most assuredly we cannot wonder sufficiently that there can be found men in whom we cannot distinguish whether their thoughtlessness is greater than their wickedness, and who, either in public journals or in private documents, or in imprudent speeches delivered at divers assemblies, endeavor to force the conviction upon the people that the present condition of the sovereign Pontiff in Rome is such that, although placed under the dominion of another power, he enjoys full liberty, and can quietly and fully perform all the duties of its supreme spiritual primacy. Now, these men allow no opportunity to escape publicly to confirm this opinion; when the bishops and faithful from foreign lands come to visit us; when we admit their pious assemblies to our presence; again, when, in the addresses we deliver to them, we deplore the enterprises of these impious men against the Church: on occasions like these they sedulously and with guile insinuate to the unwary that we are, by these very acts, enjoying a plenitude of power and the fullest liberty to speak, to receive the faithful, or to govern the whole Church. Indeed, we are much surprised that such assertions can be so impudently maintained, as if the exercises of the acts mentioned were entirely free to us; and as if the

sum total of the government of the Church, which devolves upon us, were bound up in those acts. Who does not know, in effect, that the acts of this liberty they boast so much about are not under our control, but under the control of those who rule, to such an extent that we can only perform these acts so far, and only so far, as we are not hindered from performing them? To know really what the freedom of our acts consists in, while it is under their control, without giving other proofs, the recent law we have just complained of indicates and reveals it sufficiently; that law, by which the free exercise of our spiritual power, as well as that of the ministry, and of the ecclesiastical order, is subjected to a new and intolerable oppression. That if those who rule have permitted us to do certain things because they understand how much it is to their interest to create the impression that we are free under their domination, how many things, and very grave ones, too, are yet necessary, and of high import, which belong to the awful duties of our ministry, for the full and correct performance of which we are without the entire necessary means and freedom, while subject to the yoke of the oppressors.

We would be pleased, indeed, if those who write, or who utter by word of mouth, the assertions we have referred to, would only cast their eyes at what is happening to us, and would decide, with a little more impartial spirit, whether it is possible to say that the power of governing the Church, committed to us by God, can accommodate itself to the condition to which we have been reduced by the invaders. Would that they knew the offensive cries, the insults and outrages, which are continually sent up against our humbleness, even in the Chamber of the representatives of the people—outcries that we pay no attention to as coming from the unfortunates who utter them, but that constitute a great offense for the faithful, whose common Father is thus outraged, and that aim at the belittling of the regard, the authority, and the veneration, which the supreme dignity and sanctity of the vicariate of Christ, which we, unworthy of it, sustain, demands. Would that they could witness the reproaches and calumnies heaped on your most reverend order, and on the hierarchy of the Church, in every form, to the harm of its administration. That they could be witnesses of the mocks and jests with which the august rites and institutions of the Catholic Church are outraged; the effrontery with which the most holy mysteries of religion are profaned; and that they could behold how impiety and atheistic men have become the objects of pomp and of public demonstrations in their honor, while, on the other hand, a ban is placed upon religious ceremonies and the processions which the former piety of the Italian people was wont to celebrate freely on solemn festivals. Would, also, that they took cognizance of the blasphemies which are hurled upon the Church with impunity (while public authority feigns not to hear them) in the Chamber of Deputies, where was presented the criminal project of attacking the very Church herself, where her freedom has been denominated "an abominable and pernicious principle;" where it was maintained that her doctrines are perverse and contrary to society and morality; where, finally, it has been openly declared that her power and authority are fatal to civil society. These very heralds of our pretended freedom cannot deny all these many, continued, and grave occasions, brought about with the object of corrupting imprudent youth by inflaming their passions, and of rooting the very germs of faith out of their hearts. If, in a word, they were to walk through the streets of this city, which, because of the Chair of Peter, ought to be the centre and head of religion, they could soon see whether the temples erected in these latter days to dissenting worship, whether the schools of corruption scattered broadcast, whether all those houses of perdition established everywhere, whether,

finally, the shameful and obscene spectacles presented to the eyes of the people, constitute such a state of things as can be tolerated by one who, in consequence of the charge of his apostolate, ought, and most assuredly desires, to ward off so many evils. But, on the contrary, he is deprived of every means and of every assistance, as also of every exercise of power that could enable him to employ the most necessary remedies, even for one of these many evils, and of going to the aid of those souls that are running to their own destruction.

Such, venerable brethren, is the condition we are forced to endure by the act of those who rule in this holy city; such is our freedom to exercise the ministry, the false freedom that is foisted upon us, and which it is impudently asserted that we enjoy. It is the liberty of witnessing the progressive diminution of order and of the constitution of ecclesiastical things; of seeing the loss of souls without being able to exert ourselves efficiently to repair so much destruction. In such a state of things, should we not regard as a piece of bitter irony and as another mockery what is so often repeated, viz., that we ought to take measures of conciliation and harmony with the new masters, when there could be no other means of conciliation on our part than that of entirely giving over, not only the sovereign rights of this Holy See, which, at the time of our elevation to this supreme chair, we received as a sacred and inviolable trust, to be protected and defended, but to deliver besides, and above all, the divine ministry which has been intrusted to us for the salvation of souls, and to abandon the inheritance of Jesus Christ into the hands of an authority of this kind, whose efforts tend to destroy, if it were possible, the very name of the Catholic religion? Now, every one can certainly see in all their manifestness, and under all their phases, the force, the vigor, and the good faith of those pretended guarantees, by means of which, to deceive the faithful, our enemies have boasted of meaning to secure the freedom and dignity of the Roman Pontiff, and which are at the mere mercy of the hostile whims and caprices of the governments on which they depend, according to their plans, their purposes, and the pleasure of their whims, to apply, preserve, interpret, and execute.

Never, most assuredly never, can the Roman Pontiff ever be fully master of his freedom and of his power, so long as he remains subject to the rulers in his capital. There is no other destiny possible for him in Rome but that of a sovereign or a prisoner; and there can never be any peace, security, or tranquillity for the entire Catholic Church so long as the exercise of the supreme ecclesiastical ministry is at the mercy of the passions of party, the caprice of governments, the vicissitudes of political elections, and of the projects and actions of designing men, who will not hesitate to sacrifice justice to their own interests.

But do not imagine, venerable brethren, in the midst of so many evils that afflict and weigh us down, that our spirit is broken, nor that the confidence with which we await the decrees of the Almighty and Eternal God is about to depart from us. Indeed, ever since the day on which, after the usurpation of our states, we made up our mind to reside in Rome rather than go and seek for peaceful hospitality in foreign countries, and to keep vigilant guard over the tomb of St. Peter, for the defense of Catholic interests, we have never ceased, with God's help, to combat for the triumph of His cause, and we continue to do so every day, nowhere yielding to the enemy save when repulsed by force, so as to preserve the little that yet remains after the assaults of robbers and perverters. Where other assistance wherewith to defend the rights of the Church and of religion failed us, we had recourse to our voice and our remonstrances. You have seen this, yourselves, you who have shared the same dangers and undergone the same afflictions that we have. You have, in effect,

often heard the words we publicly pronounced, either to condemn new assaults and protest against the ever-increasing violence of our enemies, to instruct the faithful by timely warnings, lest they be deceived by the snares of the wicked and by a sort of feigned religion, and that they might not allow themselves to be caught by the perverse doctrines of false brethren. May it please God that they, upon whom devolves the duty, and for whom it is of the greatest advantage to sustain our authority and energetically to defend our cause, the most just and holy of all causes, may at last hearken to our voice and turn their eyes toward us! For is it possible for their wisdom to ignore the fact that it is in vain to look for the true and solid prosperity of nations, for peace and order among peoples, and for stability of power among those who wield the sceptre of authority, if the Church, which maintains through the bond of religion all justly constituted societies, is mocked and insulted with impunity, and if its supreme head cannot exercise full freedom in the power of his ministry and continues subject to the will of another power?

We rejoice, most assuredly, at that most happy fact that our words have been most cheerfully received and with much profit by the whole Catholic people united to us by bonds of filial piety. The continual and reiterated evidences we have received of their affection are such, indeed, that they reflect great glory upon themselves and upon the Church, and lead us to hope that brighter days are in store for this same Church and for this Apostolic See. And, indeed, it is difficult for us to find words sufficiently adequate to express the joy and consolation we have experienced, although deprived of all tangible success, when admiring the beautiful movements of minds and the valiant efforts which, springing forth spontaneously, have daily extended themselves even to the most remote countries, and whose aim it is to take in hand the cause and the defense of the dignity of the Roman Pontificate and of our humility.

The generous subsidies that pour in upon us from all parts of the earth, that we may provide for the urgent necessities of this Holy See, and the frequent Pilgrimages of our children which flock from all countries to this Vatican Palace, to show their devotion to the visible Head of the Church, are such evidences of the fidelity of their hearts that it is altogether impossible for us to offer Divine Goodness an adequate evidence of our gratitude. We would, moreover, that all might understand and regard as a salutary teaching the inward force and true significance of these Pilgrimages, which we see multiplying so much, just at the very time when this Roman Pontificate is the object of such bitter assaults. Because these Pilgrimages are not a mere manifestation of the love and piety of the Faithful toward us, but they especially afford, in a particular manner, a manifest proof of the cares and sorrows which afflict the hearts of our children because their common Father is in a situation entirely abnormal and in no manner becoming to him. And this anxiety and uneasiness, far from diminishing, will go on increasing until the day when the Pastor of the Universal Church will be restored, at last, to the possession of his full and genuine freedom.

In the mean time, venerable brethren, we desire nothing so much as to see our words extend beyond the confines of this Hall to the uttermost ends of the earth, that they may bear witness to the sentiments of our heart toward the Faithful of the whole world, in gratitude for the admirable evidences of love and of filial devotion which they unceasingly display toward us. We desire, therefore, to thank them for the pious liberality with which, not unfrequently, forgetting their own necessities, they come to our assistance, fully confident that everything they give to the Church is given to God. We desire also to congratulate them upon the magnanimity and courage with which they disregard the anger and raileries of the impious, and to tell them that we are

deeply grateful to them for the enthusiasm with which they endeavor to offer us the testimonials of their affection so as to celebrate the anniversary of the day on which, 50 years ago, we, unworthy as we were, received the grace of Episcopal Consecration.

What we desire none the less, is that all the pastors of the churches scattered afar over the earth, in receiving our words, will draw courage from them to make known to their Faithful the dangers, the assaults, and the increasing injuries of which we are the victim, and to assure them, over and over again, that we will certainly never cease, whatever may be the issue of this situation, to condemn the iniquities practised against us. They must also be made to understand that the day may come when our words will no longer reach them as often nor as easily as now, because of difficulties that may arise, either in consequence of the laws above referred to, or of others still more cruel, the presentation of which has been announced. We, therefore, exhort all pastors personally to warn their flocks not to allow themselves to be misled by the perfidious artifices with which deceitful men endeavor in their speeches to disguise and distort the true state of things in which we are now situated, either by concealing its severity, in exalting our independence, or in declaring that our power is subject to no one, while we can really define our position in a few words by saying that the Church of God suffers violent persecution in Italy, that the Vicar of Jesus Christ enjoys neither his liberty nor the full and entire use of his independence.

In this state of things, we consider nothing more opportune, and we desire nothing more ardently, than to see these same pastors, who have given us so many evidences of their union in defense of the rights of the Church, and of their good-will toward this Apostolic See, exhort the faithful confided to them to make use of all the means which the laws of their country place within their reach, to act with promptness with those who govern, to induce these latter to consider more attentively the painful situation forced upon the Head of the Church, and take effective measures toward dissipating the obstacles that stand in the way of his absolute independence.

But as it belongs to Almighty God to send light into the understanding, and to soften the hearts of men, we ask, not only you, venerable brethren, to offer up your fervent prayers to Him, especially in these days of propitiation, but we most earnestly exhort the pastors of all Catholic peoples to assemble together in their churches the faithful committed to them, that they may there offer up, from the bottom of their hearts, humble prayers for the salvation of our Mother Church, for the conversion of our enemies, and for the end of our so numerous and so heavy afflictions. God, Who loves those that fear Him and trust in His mercy, will, we are fully confident, vouchsafe to hear the prayer of that people that cries unto him.

For the rest, venerable brethren, let us take courage in the Lord and in the power of His virtue, and, vested in the armor of God, with the shield of His justice, and with the buckler of the faith, let us bravely and mightily march forth against the powers of darkness and iniquity of this world. Already, indeed, the care that has been taken to confuse and disturb everything has reached that point that the movement threatens, like a torrent, to carry everything over the precipice, and many of those who were the authors and accomplices of this new state of things now look back in alarm, uncertain themselves as to the effect of their work. But God is with us, and He will remain with us until the consummation of ages. They, indeed, must tremble of whom it is written: "I have seen that those that work iniquity and sow sorrows and reap them, perish by the blast of God, and are consumed by the spirit of His wrath." * But to those that fear God,

who combat in His name and who trust in His might, for them is reserved succor and mercy, and there is no doubt that, since there is now question of His cause and of His combat, He will sustain His warriors unto the hour of victory.

The allocution attracted general attention, and the most impartial of the great European journals admitted that the Pope's arraignment of the Italian Government was well founded. In France members of the Senate and Chamber of Deputies formally brought the matter to the attention of government. Protests were made in Germany and England, and the Catholic bishops in Holland, in a pastoral (May 3d), discussed a question which, striking at the head of the Catholic Church, affected Catholics in all parts of the world. The Keeper of the Seals in Italy at once issued a circular to the Procurators-General of the Court of Appeal, charging Pius IX. with having exceeded all conceivable limits, and the allocution a "confirmation of pontifical ingratitude toward a government that had shown itself so free and generous toward the Church." The circular prohibited any adhesion to the argument advanced by the Pope. Cardinal Simeoni, on the 21st of March, in a circular to the Pope's nuncios, cited this very circular as a proof of all that the Pope charged.

The result was that the bill of Clerical Abuses failed to pass. The principle, however, was maintained in theory, that there was no limit to the power of the Italian Government over the Papacy and the Church.

The Episcopal Jubilee of Pius IX. excited the greatest enthusiasm among Catholics, who sent delegations from all countries to congratulate him on the fiftieth anniversary of his consecration as a bishop, and to offer rich presents. In his allocution, June 22d, he cited this as an evidence that the Catholic world desired "that the Supreme Pastor of the Fold of the Lord should preside with full dignity, freedom, and independence." On the 19th of July, he protested through Cardinal Simeoni (August 23d), in a circular addressed to the Diplomatic Corps accredited to the Holy See, against the seizure of three churches, actually used for divine worship in Rome, to be converted into a hospital, a gymnasium, and barracks. A circular note of the Minister of the Interior (July 28th), prohibiting religious processions, was resisted, and two courts having decided that they were legal, and one that they were illegal, the Minister of Grace and Justice (August 23d) defended the circular note. Cardinal Simeoni (September 24th), in a circular, called "attention to the ever-growing restrictions upon the freedom of worship at this centre of Catholicity, and upon the ever-growing obstacles that are placed in the way of the exercise of the spiritual power of the Holy Father. It is difficult to understand how, in a Catholic country, where that religion is the religion of State, the rulers strike at acts of worship so dear to the faithful people, and which have always been peacefully performed

* Job iv. 8.

to agree to the treaty, stating that Turkey would not renew the armistice if the offer was rejected. M. Ristitch then read the conditions of peace. Some of the deputies interrupted the reading, and asked if Serbia was concluding peace with the knowledge and consent of Russia. The majority of the members silenced the interruptions, and M. Ristitch declared that the war began with the consent of the previous Skupshtina, and that peace would be concluded with the full consent of Russia. The conditions of peace were as follows: The frontier lines remain as before the war. The condition of the Jews being an internal matter, the Turks would not insist upon the further discussion of the subject. The Turkish flag will be hoisted on the Servian fortresses by the side of the Servian ensign. The residence of the Turkish agent at Belgrade remains an open question, to be subsequently arranged between the Servian and Turkish Governments. The Turks are to commence evacuating the Servian territory, and to complete the evacuation within twelve days. The Skupshtina voted affirmatively upon every article. At the conclusion of the vote the Prince congratulated the assembly on the completion of their labors, and declared the mission of the Great Skupshtina to be at an end. M. Ristitch then read the Prince's decree dissolving the assembly, which produced a sensation among the deputies, but they obeyed it. The ministry thus achieved a decided success in getting rid of the deputies without giving them an opportunity of asking any embarrassing questions they had prepared. The treaty of peace was signed at Constantinople on March 1st.

The Skupshtina was opened on July 2d by Prince Milan. In his speech from the throne he referred to the war of 1876, and said that in concluding peace in the beginning of the year he had transferred the cause of the Oriental Christians into stronger hands, and that even at the present time the flags of the victorious Czar were floating on the Servian border. He referred to his visit to the Czar at Ploeshti, and said that the latter had assured him of his interest in and care for the Servian nation. He said nothing, however, of his relation to the Porte, nor of Servian neutrality. The sessions of the Skupshtina were held at Kraguyevatz with closed doors, and were guarded by large bodies of troops, so that but little of its transactions became known. This little, however, sufficed to show that stormy scenes were of frequent occurrence, and that the Government met with a strong opposition. Having sanctioned the military measures proposed by the Government, and having rejected the proposition to pay no more tribute to the Porte, the Skupshtina was closed in the latter part of July. The Prince immediately ordered the mobilization of the first class of the militia, while the standing army was sent to the frontier.

In August, the ministry, which had resigned

in the latter part of December, 1876, but had been at that time induced by the Prince to retain office during the pending negotiations with Turkey, again offered its resignation, which was this time definitely refused by the Prince.

In the latter part of August it seemed as if Serbia was about to resume the war against Turkey. Troops were sent to the front, all the commanders were ordered to their posts, while in Belgrade ministerial councils were held almost daily under the presidency of Prince Milan, to consider the question of peace or war. The relations with Turkey grew more warlike every day, until, on December 14th, Prince Milan again declared war. (*See TURKEY.*)

SHACHOVSKI, Prince ALEXIS, was born in 1812, and belongs to a family which traces its direct descent in the male line to Rurik, the founder of Russia. Prince Shachovski did not enter the army until 1837, being then 25 years old. He served with distinction in the Caucasus, was appointed major-general in the suite of the Emperor in 1860, lieutenant-general in 1868, and in 1876 received the command of the 11th Corps. In the second battle of Plevna, which resulted so disastrously for the Russians, he commanded the left wing. After this unfortunate action his name was no longer mentioned. He was but the nominal commander of the 11th Corps, which was divided among different posts at the seat of war.

SHERMAN, JOHN, Secretary of the Treasury of the United States. He was born at Lancaster, Ohio, May 10, 1823, and is a younger brother of General W. T. Sherman. He was admitted to the bar in 1844, and became a partner of his brother, Charles T. Sherman, afterward Judge of the United States District Court. He was a delegate to the Whig conventions of 1848 and 1852. In 1854 he was elected a member of the 34th Congress, and was reelected to the 35th and 36th Congresses. He was the Republican candidate for Speaker in the 36th Congress, and, after a protracted contest, failed of election by one or two votes. He was then made chairman of the Committee of Ways and Means. In 1860 he was again elected to Congress, but in 1861 he was chosen to succeed Salmon P. Chase in the United States Senate. He was reelected Senator in 1867 and in 1873. During his entire Senatorial career he was chairman of the Committee on Finance, and served also on the Committees on Agriculture (of which he was chairman), the Pacific Railroad, the Judiciary, and the Patent Office. When the doubt concerning the Presidential election of 1876 began to clear away, public opinion, with marked unanimity, centred upon Senator Sherman as the probable man for Secretary of the Treasury, and for this position he was selected by President Hayes.

SHUVALOFF, Count PETER, the Russian ambassador in London, is considered, like General Ignatieff, one of the foremost diplomatists of Russia, and is now 49 years old, having been born in 1823. Although not advancing as

rapidly as Ignatieff, he nevertheless obtained the highest military honors in a shorter space of time than is possible in any other country. In 1862 he was colonel, in 1864 major-general, in 1865 lieutenant-general, and in 1871 cavalry general. In spite of his military titles, however, he never held a command. His whole energies were devoted to the police, the civil service, and to diplomacy. He was for a time military *attaché* to the Russian Embassy in Paris, was recalled in 1862 as director of the first chancery in the Ministry of the Interior, and in 1865 became Governor-General of the Baltic Provinces. His prominence in Russian affairs, however, dates from the year 1866. He happened to be in St. Petersburg when an attempt was made to assassinate the Czar. The chief of the secret service, Prince Dolgorukoff, had had intimation of the attempt; he could not prevent it, and, what was still worse, he could not fathom the mystery which surrounded the person of the would-be murderer, nor his motives. He was removed, and Shuvaloff, who had once before cleared up a difficult criminal mystery, was appointed chief of the secret service in his place. The official name of this office is the third division of the secret chancery of the Emperor. The official who holds this position is more powerful than almost any of the ministers. Owing to the requirements of the office, to preserve the peace of the empire, and to watch over the safety of the Czar, his powers are virtually unlimited. Shuvaloff had hardly been in office 24 hours when he discovered the name of the offender, and ascertained that he was not a Pole, as was generally supposed, but a Russian Nihilist. The secret societies which aim at the complete social and political revolution of Russia were completely exposed. For eight years Count Shuvaloff held this office, and under his administration a security prevailed throughout Russia, which had not been known before. He was finally forced to resign this office on account of his health, which he found suffered under exhausting cares. In 1873 he was appointed on a special mission to London, where great excitement prevailed in consequence of the advance of the Russians in Central Asia. He succeeded in allaying the fears of England, by promising in the name of his Government that the Russian troops would not advance beyond the right bank of the Oxus, and even succeeded in bringing about an alliance between the two courts by the marriage of Prince Alfred, Duke of Edinburgh, to the only daughter of the Czar. In October, 1874, he was appointed the successor of Brunnow, who retired from the service on account of his advanced age. During the present complications in the East he has been less successful, owing chiefly to the fact that the Tory Cabinet of Disraeli sympathizes with the Turks. All that he could do under the circumstances was to prevent England from proceeding to open hostility against Russia.

SKOBELEFF, MICHAEL DIMITRIYEVITCH, was born in 1845. Although he is one of the youngest generals in the Russian army, he has become by his daring exploits also one of the most popular. He became an officer in the Russian army in 1863, and has served almost exclusively in Central Asia, where he distinguished himself by his indomitable energy, and his disregard of all danger, being always the first to attack, and always at the head of his troops. In 1873 he took part in the campaign against Khiva, and when the city was stormed he was again the first to enter it. In the campaign in Khokan in 1875, which resulted in the annexation of the country, he was again one of the most active and enterprising leaders, and the appointment as general followed as a reward for his services on this occasion. In 1876 he was appointed military governor and commander-in-chief of the troops in Ferghana, the name of the Russian province embracing Khokan, and retained this position until March, 1877, when he was ordered to join the staff of the Grand-duke Nicholas. During the campaign of 1877 his name has been frequently mentioned. At Simnitsa, he was as usual the first to cross the river. At Plevna, on July 30th, it was due mainly to his efforts that the retreat of Prince Shachovski was not attended with more disastrous results. His capture of Lovatz, on September 3d, was described as a most brilliant affair, and was the first victory for the Russians after a long series of reverses. At Plevna, on September 11th and 12th, he again acted a prominent part, succeeding in taking two of the four redoubts, and was only forced to abandon them through a lack of support. The correspondent of the London *Times*, in describing this battle, says: "He himself led the assault on horseback right up to the glacis of the redoubts. His horse (the seventh he has had killed in this campaign) was blown to pieces under him by a shell which burst right under his belly, but he escaped unhurt, and led the way into the redoubt on foot, sword in hand." For his conduct on this day, he was created a lieutenant-general.

SMITH, ASA DONGE, died at Hanover, N. H., August 16th. He was born at Amherst, N. H., September 21, 1804. He graduated from Dartmouth College in 1830, became Principal of the Limerick Academy in Maine, where he remained one year, and after completing a course in theology at the Andover Seminary, he was installed pastor of the Fourteenth Street Presbyterian Church of New York City, where he remained for twenty-nine years. He became President of Dartmouth College in 1863, which position he continued to hold until 1876. In 1849 the honorary degree of D. D. was conferred upon him by Williams College, and in 1864 he received the degree of LL. D. from the University of New York. He published several works, among them: "Letters to a Young Student," "Memoir of Mrs. Louisa Adam Leavitt" (1843), the "Life

ly, to enter it again as Minister of Finances. As Sturdza was in favor of a demobilization of the reserves, and a strict neutrality toward the Porte, his reëntrance into the cabinet clearly showed the policy to be pursued. He made it, however, dependent upon the adoption of three radical measures—the reduction of the armaments, the sale of state domains, and an increase of taxes. Consequently, not only no reserves were called out, but 4,000 men of the standing army were sent home, and all expenses for armaments were stopped. He resigned his position, however, in March, and on April 4th the Chamber adjourned. In the beginning of March an encounter occurred between Turkish and Roumanian troops on an island in the Danube. The Roumanians claimed that the Turks had violated their territory, and had first fired upon them. In the affray which followed, the Turkish leader was wounded, and afterward died. The authorities on both sides agreed to have the case investigated by a mixed commission, which, however, separated without having accomplished anything. The large concentration of Turkish troops in Widin in April caused considerable commotion in Roumania. It revived the apprehension held for some time previously, lest the Turks, in case of war, should cross the Danube and establish themselves on the bluff on which Kalafat is situated, and thus operate in Roumania against the Russians. At a cabinet council held on April 15th it was therefore determined to increase considerably the forces already stationed at Kalafat, so as to be able to resist, in case of need, any descent of the Turks. At the same time the Roumanian Government laid its apprehensions before the Powers. The nomination of M. Cogalniceano as Minister of Foreign Affairs was looked upon as a decided step toward an alliance with Russia. With the approach of war, the army was mobilized, and concentrated in Wallachia. Colonel Slaniceano, the Minister of War, also resigned, and was appointed chief of staff. The beginning of hostilities between Russia and Turkey was the signal for renewed activity, and Prince Charles placed himself at the head of the troops. The extraordinary session of the Roumanian Chambers was opened on April 26th. Prince Charles, in the speech from the throne, said: "As the Powers declined to guarantee the neutrality of Roumania, or to assist her, they could only rely upon themselves and upon their own exertions to prevent their territory being made the theatre of war. For this purpose the nation would make every sacrifice." The Minister of Foreign Affairs then laid before the House a convention with Russia, dated April 16th, in accordance with which Roumania assured to the Russian troops free passage and the treatment due to a friendly army, while the Czar bound himself to respect the rights of the principality. This convention was adopted by the Chamber by a large majority. (*See TURKEY.*) Although Roumania

was not at war with Turkey, considerable cannonading was kept up between Widin and Kalafat. The session of the Chambers was closed on June 27th.

The most important act of this session was the declaration of the independence of Roumania from Turkey, which was passed on May 21st. On that day, M. Cogalniceano, the Minister of Foreign Affairs, replying to a question, said: "We are a free and independent nation, but, in order to obtain the recognition of our independence, we must vindicate our cause before Europe." The Chamber then unanimously adopted the following order of the day: "The Chamber takes note that war is proclaimed between Roumania and Turkey, and declares the connection between the two countries dissolved. The unanimously desired independence of Roumania thus receives official sanction, and the Chamber counts upon the sense of justice of the guaranteeing Powers." The Senate also unanimously adopted a similar order of the day, affirming the independence of Roumania, and subsequently voted the bill creating a military decoration.

The Chambers met again on November 27th. The speech from the throne contained the following reference to the hopes of Roumania as respects the results of the war:

We hope, on the fall of Plevna into our hands, to reap on its ruins the peace so dear to us. We are also convinced that out of its ruins we shall see the independence of Roumania recognized by all Europe, thanks to our patriotism, the bravery of our soldiers, and their blood shed in a noble cause. The Prince has the firm belief, and the Senate and Chamber will certainly share it with him, that the guaranteeing Powers have by this time become convinced that Roumania is a country possessing real vitality; that she is a nation able to fulfill the mission reserved for her on the Lower Danube, having the perseverance to accomplish it, and the energy to defend it when necessary. The time of foreign tutelage and vassalage has passed away for us; Roumania is now, and will remain forever, a free and independent nation.

RUSSIA (EMPIRE OF ALL THE RUSSIAS), an empire in Europe and Asia. Emperor, Alexander II., born April 17 (new style, April 29), 1818; succeeded his father, Nicholas I., February 18 (March 2), 1855; crowned at Moscow, August 26 (September 7), 1856. He was married on April 16 (28), 1841, to Maria Alexandrovna, formerly Maximiliane Wilhelmine Auguste Sophie Maria, daughter of the Grand-duke Louis II. of Hesse. Children of the Emperor: 1. Heir-apparent, Grand-duke Alexander, born February 26 (March 10), 1845; married November 4, 1866, to Maria Dagmar (born November 26, 1847), daughter of King Christian IX. of Denmark. (Offspring of the union are two sons and one daughter: Nicholas, born May 18, 1868; George, born May 9, 1871; and Xenia, born April 6, 1875.) 2. Grand-duke Vladimir, born April 10 (22), 1847; married August 27, 1874, to Marie, daughter of the Grand-duke Frederick Francis of Mecklenburg-Schwerin. (Offspring of the union is one son, Cyril, born September 30 [October 12], 1876.)

3. Grand-duke Alexis, born January 2 (14), 1850. 4. Grand-duchess Maria, born October 5 (17), 1853; married to Prince Alfred, Duke of Edinburgh. 5. Grand-duke Sergius, born April 29 (May 11), 1857. 6. Grand-duke Paul, born September 21 (October 3), 1860.

The area and population of the great divisions of the Russian Empire were, in 1876, reported as follows:

DIVISIONS.	Square Miles.	Population.
1. European Russia, inclusive of Poland and of the Sea of Azov.....	1,944,677	71,780,980
2. Grand-duchy of Finland.....	144,228	1,912,647
3. Caucasasia.....	172,843	4,898,932
4. Siberia.....	4,824,561	8,428,579
5. Central Asia.....	1,305,523	4,490,213
Total Russian Europe.....	8,391,832	86,450,751

For a detailed account of the area and population of the different governments of the Empire, see ANNUAL CYCLOPEDIA for 1875. To the statement as given there must be added the province of Ferghana, annexed in 1876, containing 23,270 square miles, and a population of 960,000. On the other hand, 1,922 square

miles must be deducted from the area of Siberia, in consequence of the cession of the Kuriles to Japan. If the Caspian Sea, which embraces 169,666 square miles, and is now almost wholly encircled by Russian territory, was included in the area of the empire, the total area would amount to 8,561,498 square miles.

The population of Finland, at the close of 1875, was as follows:

LÄNS.	Lutherans.	Greek Church.	Roman Catholics.	Total.
Nyland.....	188,300	545	...	188,845
Åbo-Björneborg.....	818,296	314	...	818,610

Viborg.....	260,868	28,076	566	289,010
St. Michael.....	162,744	62	...	162,886
Kuopio.....	280,644	7,636	...	288,280
Vasa.....	324,210	22	...	324,232
Uleåborg.....	198,584	198,584
Total.....	1,875,426	86,655	566	1,912,647
or				
Males.....	916,020	18,198	510	934,728
Females.....	959,406	18,457	56	977,919

The religious statistics of the other parts of the Russian Empire, according to the "St. Petersburg Kalender" for 1877, were as follows:

DENOMINATIONS.	European Russia.	Poland.	Caucasasia.	Siberia.	Central Asia.
Orthodox Greek.....	54,853,956	34,185	2,072,089	2,936,827	274,089
Schismatics.....	992,674	4,926	47,592	79,847	46,467
Armenian.....	83,720	595,310	15	1
United Greeks.....	246,485
Roman Catholics.....	2,897,560	4,596,956	25,916	24,316	1,896
Armenian Catholics.....	7,825	5,568	418
Protestants.....	2,855,488	327,815
Christians.....	61,183,898	5,210,317	2,748,682	3,046,068	892,321
Jews.....	1,944,378	815,493	22,732	11,941	8,396
Mohammedans.....	2,868,658	426	1,987,213	61,059	8,016,802
Pagans.....	253,125	245	4,638	286,016	14,740
Non-Christians.....	4,566,161	816,104	2,014,628	359,016	3,034,438

The condition of the finances in 1874 was as follows:

	Rubles.
Receipts in 1874.....	557,738,591
Balance from the previous year.....	1,216,354
Expenditures in 1874.....	516,587,674
Payments due from 1873.....	26,759,361
Balance.....	15,632,910

The estimated revenue and expenditures for 1877, according to the budget as sanctioned by the Emperor on December 30, 1876, were as follows:

REVENUE.	Rubles.
I. ORDINARY REVENUE:	
1. Direct taxes.....	138,617,251
2. Indirect taxes.....	301,021,466
3. Mines, mint, posts, and telegraphs.....	92,543,446
4. State domains.....	29,953,301
5. Miscellaneous receipts.....	43,281,505
6. Revenue of Transcaucasias.....	7,367,627
Total ordinary revenue.....	587,734,596
II. "RECETTES D'ORDRE".....	22,920,627
III. EXTRAORDINARY RECEIPTS (consisting chiefly of sums borrowed for the purpose of subsidizing railways and promoting public works)....	10,072,579
Total revenue.....	570,777,802

* The "recettes d'ordre" represent the estimated receipts from the sale of volumes of laws printed by the Government,

EXPENDITURES.

I. ORDINARY EXPENDITURES:	Rubles.
1. Public debt.....	103,264,871

IV. TEMPORARY EXPENDITURES.....	10,072,579
Total expenditure.....	570,769,280
Balance of receipts.....	8,522

The entire public debt of Russia was estimated, on July 1, 1877, at 1,967,000,000 rubles.

of the produce of State mines, and of other miscellaneous sources. These receipts are balanced by sums of a similar amount, placed on the estimates of expenditure, under the heading of "dépenses d'ordre."

This figure included an internal loan of 210,000,000 rubles, issued in 1877, soon after the commencement of the war with Turkey. Besides this debt, a large amount of paper money with forced currency was outstanding. The total amount of bank-notes in circulation, on January 1, 1876, was 797,313,480 rubles. New is-

ssues of paper money variously estimated at from 205,000,000 to 280,000,000 rubles were made in 1877, during the war with Turkey.

For an account of the Russian army and navy, *see* TURKEY.

The foreign commerce of Russia, in 1874-'75, was as follows (values expressed in rubles):

COUNTRIES.	IMPORTS.		EXPORTS.	
	1874.	1875.	1874.	1875.
Germany.....	179,730,000	221,442,000	136,466,000	109,898,000
Great Britain.....	128,364,000	133,704,000	126,462,000	130,759,000
France.....	19,729,000	33,281,000	36,114,000	40,063,000
Austro-Hungary.....	20,707,000	25,819,000	33,415,000	16,634,000
Turkey.....	17,575,000	20,167,000	12,899,000	12,514,000
Belgium.....	5,837,000	5,057,000	9,502,000	11,592,000
Netherlands.....	9,660,000	12,300,000	18,827,000	18,408,000
Italy.....	10,954,000	11,100,000	8,697,000	6,595,000
Sweden and Norway.....	8,002,000	8,191,000	11,921,000	8,764,000
Denmark.....	6,601,000	3,578,000
Greece.....	1,321,000	2,355,000	1,418,000	1,584,000
Roumania.....	2,488,000	1,901,000	1,824,000	1,600,000
United States.....	10,628,000	8,118,000
South America.....	16,184,000	19,919,000
China.....	10,775,000	10,768,000	8,125,000	2,554,000
Persia.....	4,875,000	6,246,000	1,846,000	1,874,000
Other countries.....	16,604,000	18,612,000	2,098,000	8,517,000
Transit trade.....	5,354,000	3,148,000

The movement of shipping in 1875 was as follows:

PORTS.	ENTERED.		CLEARED.	
	Laden.	In Ballast.	Laden.	In Ballast.
White.....	345	543	885	11
Baltic.....	4,177	2,035	5,758	307
Black.....	2,250	3,354	4,143	1,432
Caspian.....	526	50	446	72
Astrakhan.....	197	52	26
Total.....	7,495	6,032	11,309	1,848

Of the vessels entered, 3,740 were steamers, and of the number cleared, 3,698 were steam-

ers. Among those that entered, there were 2,475 Russian, 2,365 British, 1,653 German, 1,476 Swedish-Norwegian, 1,896 Turkish, and 28 American vessels.

The commercial navy, in 1876, was composed of 1,785 sailing vessels, of 391,000 lasts, and 151 steamers, of 105,962 lasts.

On January 1, 1877, there were 20,879 kilometres of railroad in operation in Russia, inclusive of Finland, and exclusive of Caucasia. In the latter country, there were 1,004 kilometres in operation. On the same date, 2,136 kilometres were in course of construction.

The number of post-offices in 1875 was

BALAKLAVA.

THE KREMLIN, MOSCOW.

SACRED GATE OF THE KREMLIN.

3,412; of letters sent, 63,244,156; postal-cards, 1,419,094; wrappers, 3,636,508; registered letters, 2,984,787; valuable letters, 5,653,297; packages, 1,771,295; and newspapers, printed matter, etc., 42,808,598. The money sent through the mail amounted to 1,488,137,542 rubles, and the value of the packages sent was 49,509,105 rubles.

The telegraph statistics, according to a report of the American Secretary of Legation in St. Petersburg, are as follows:

Length of lines on January 1, 1876 (English miles) ..	54,163
wires " " 1, 1876 (") ..	74,542
Government, railroad, and private stations	1,859
Inland dispatches sent in 1875	3,478,135
Foreign dispatches sent and received	4,179,316

The military preparations, begun in 1876, continued unabated in 1877. In the early part of January, the railroad companies throughout the empire received orders to have all transportation of freight cease by January 27th, so that the roads could be used exclusively for military purposes. The Grand-duke Nicholas, the commander-in-chief of the Russian forces, was afflicted during the early part of the year with a serious disease (it was termed by some inflammation of the bowels), so that he was forced for a time to leave the army, and on February 6th arrived in Odessa. In the beginning of March he was so far restored that he could again attend to his duties. Although a strong party in Russia was in favor of peace and disarmament, the mobilization of the army continued as vigorously as ever. On March 3d, the Emperor ordered that the divisions stationed in the military districts of St. Petersburg, Vilna, Moscow, and Warsaw be formed into nine army corps. This measure tended to increase the war excitement, although the Minister of War declared in his official organ, the *Invalide*, that it was only a necessary step

in the reorganization of the army planned over four years ago. Preparations continued throughout March and April, and on April 24th Russia declared war against Turkey, and the Russian troops crossed the Pruth. (*See TURKEY.*) In the beginning of May, the Emperor, who had reviewed the army at Kishenev previous to the crossing of the Pruth, returned to St. Petersburg. He was everywhere received with great demonstrations of joy, and particularly at Moscow, where he held a reception of the estates, whom he addressed thus:

Six months ago I expressed a hope here that the Eastern Question would be peacefully solved. I wished to the extreme limit to spare my subjects' blood, but my efforts have been fruitless. God has decided otherwise. The Kishenev Manifesto announced to Europe that the foreseen moment had come. Entire Russia, and Moscow among the foremost, responded to my expectations. I am now happy to be able, in concert with the Empress, to thank the Muscovites for their patriotism, which they have testified by acts. The spirit of sacrifice and devotion of which Russia is giving proof exceeds my utmost hopes. May God help us to accomplish our mission!

Quite a number of trials of socialists took place in 1877. The first of these was of a number of students, who on December 18, 1876, the name-day of the Grand-duke Nicholas, arranged a riotous demonstration in front of the Kazan Cathedral in St. Petersburg. Of the prisoners, 21 in number, 18 received various severe sentences, while three were acquitted.

This trial was followed by one in March of 150 persons of both sexes in Moscow. These persons had formed themselves into a secret brotherhood, known as the Propagandists. The real origin of the society, or rather its introduction into Russia, for it is undoubtedly an offshoot of the Commune of Zurich and Paris, is a matter of doubt; but as fast as members were enrolled they bound themselves to give all their property into the common fund, and devoted themselves to the making of converts to the doctrines of the Propaganda. These were simple in the extreme. First, everything was to be broken down. There were to be no individual property, no religion, no government, no laws, and no class distinctions of any sort. Everybody was to return to the condition of Adam and Eve, excepting in the matter of clothing. They all starting even, all were to work. Strange to say, the movement began among the higher classes and spread downward. Some of the wealthiest and proudest families of Russia were represented in it. While many of the members ostensibly retained their former habits of life, and sought to influence those with whom they came into contact, there were others who were too impatient for this kind of work, and sought employment as factory hands, spreading their doctrines among their companions in the night time. The first news received by the Government was from a workman in a factory near Moscow, who brought to the police authorities a number of

NIZHNI NOVGOROD.

the books which had been given him by a young girl, Mademoiselle Vassilieff, who was an agent of the society there. This was in April, 1875; and the police, by carefully working on the information given, managed to arrest privately Mesdemoiselles Vassilieff and Barrinoff. It was evident that these girls were involved in a conspiracy, and the whole force of the Government was soon employed looking for the conspira-

tors. A large number of arrests were made from time to time, almost all the prisoners belonging to families of distinction. In March, 1877, they were brought to trial, and sentences of various degrees of severity were imposed on them. The socialistic tracts spread by the Propagandists were little books, for the most part of 30 or 40 pages each, in green or red wrappers, all professing to be published with

the consent of the censorship, some of them served up in covers, and displaying title-pages, which really belong to quite harmless publications in popular request.

In March, the Government issued a decree that in future all locomotive and rolling stock

purchased by Russian railways must be manufactured in Russia. This was a heavy blow to German industry, as most of the rolling-stock of Russia had formerly been furnished by Germany. To enable the railways to obtain locomotives and carriages in Russia, the Govern-

ODESSA.

ment intended to allow the materials to be imported duty free, and to pay premiums and subsidies to Russian manufacturers.

In consequence of the war, Russia was, during 1877, the scene of great commercial disasters. In Moscow over 40,000 laborers were

reported without work in April, the largest factories were almost all closed, and mercantile failures increased with alarming rapidity. In the manufacturing districts of Poland, over half of the workmen were also without work, and in consequence exposed to starvation.

S

SAFVET PASHA, a Turkish statesman, was born in 1816. He entered the service of the Government, as a translator, at an early age, was afterward secretary to the Sultan Abdul Medjid, and then became an influential member of the Imperial Council. During the Crimean War he was Commissioner of the Danubian Principalities; in 1858 he acted as chairman of the commission which regulated the relations of Moldavia and Wallachia, and from 1865 to 1866 was Turkish ambassador in Paris. He had previously been Under-Secretary of State in the Ministry of Foreign Affairs, and after his return from Paris he was successively Minister of Commerce and Public Works, of Justice and of Education, and on several occasions Minister of Foreign Affairs. This position he held for the last time from 1876 to 1877, and in virtue of his office presided at the Conference of Constantinople held in December, 1876, and January, 1877. The reverses of Abdul

Kerim, and the removal of the latter from the chief command, caused his retirement from office in July, 1877. He was succeeded by Aarifi Pasha.

SCHURZ, CARL, an American statesman, Secretary of the Interior. He was born at Liblar, near Cologne, Prussia, March 2, 1829. He was educated at the Gymnasium of Cologne and the University of Bonn, which he entered in 1846. At the outbreak of the revolution of 1848 he joined Gottfried Kinkel, Professor of Rhetoric in the university, in the publication of a liberal newspaper, of which for a time he was the sole conductor. In the spring of 1849, in consequence of an unsuccessful attempt to promote an insurrection at Bonn, he fled with Kinkel to the Palatinate, entered the revolutionary army as adjutant, and took part in the defense of Rastadt. On the surrender of that fortress, he escaped to Switzerland. In 1850 he returned secretly to Germany, and, with ad-

mirable skill and self-devotion, effected the escape of Kinkel from the fortress of Spandau, where he had been condemned to twenty years' imprisonment. In the spring of 1851 he was in Paris, acting as correspondent for German journals, and he afterward spent a year in teaching in London. He came to the United States in 1852, resided three years in Philadelphia, and then settled in Madison, Wis. In the presidential canvass of 1856 he delivered speeches in German in behalf of the Republican party, and in the following year was defeated as a candidate for Lieutenant-Governor of Wisconsin. During the contest between Mr. Douglas and Mr. Lincoln for the office of United States Senator from Illinois, in 1858, he delivered his first speech in the English language, which was widely republished. Soon after he removed to Milwaukee, and began the practice of law. In the winter of 1859-'60 he made a lecture tour in New England, and aroused attention by a speech delivered in Springfield, Mass., against the ideas and policy of Mr. Douglas. He was an influential member of the Republican National Convention of 1860, being largely instrumental in determining that portion of the platform relating to citizens of foreign origin, and spoke both in English and German during the canvass which followed. President Lincoln appointed him Minister to Spain, which post he resigned in December, 1861, in order to enter the army. In April, 1862, he was commissioned brigadier-general of volunteers, and on June 17th assumed command of a division in the corps of General Sigel, with which he took part in the second battle of Bull Run. He was made major-general, March 14, 1863, and at the battle of Chancellorsville commanded a division of General Howard's corps (the 11th), which was routed by Jackson. He had temporary command of the 11th Corps at the battle of Gettysburg, and subsequently took part in the battle of Chattanooga. On the close of the war he returned to the practice of law. In 1865-'66 he was the Washington correspondent of the *New York Tribune*, and in 1866 he made a report, as special commissioner appointed by President Johnson, on the condition of the Southern States, which was submitted to Congress. In the same year he removed to Detroit, where he founded the *Detroit Post*, and in 1867 he became editor of the *Westliche Post*, a German newspaper, published in St. Louis. He was temporary chairman of the Republican National Convention in Chicago in 1868, and labored earnestly in the succeeding canvass for the election of General Grant. In January, 1869, he was chosen United States Senator from Missouri, for the term ending in 1875. He opposed some of the leading measures of President Grant's administration, and in 1872 took a prominent part in the organization of the Liberal party, presiding over the convention in Cincinnati which nominated Horace Greeley for the presidency. He visited Europe in 1873, and again in 1875, being received with much

consideration in his native country. On his return he took part in the political canvass in Ohio, in which he opposed strenuously the increase of the national currency.

In the presidential campaign of 1876, Mr. Schurz made speeches in various parts of the country in favor of the election of Governor Hayes; and in March following he was made Secretary of the Interior in the President's cabinet.

SEMMES, RAPHAEL, an officer in the Confederate navy, died at Point Clear, Ala., August 30th. He was born in Charles County, Md., September 27, 1809, and entered the United States navy as a midshipman in 1826, became lieutenant in 1837, and commander in 1855. In 1834, while awaiting orders, he studied law, and was admitted to the bar at Cumberland, Md. During the Mexican War he served both on board ship, and as an aide to General Worth. On the outbreak of the civil war he resigned the secretaryship of the Lighthouse Board at Washington, took command of the Confederate steamer Sumter at New Orleans, ran the blockade at the mouth of the Mississippi, and in July, 1861, captured several American merchant vessels in the Gulf. He then went to Southampton, England, where he was for some time closely watched by the United States steamer Tuscarora. When he put to sea the Tuscarora was detained 24 hours by the British authorities; but she followed him to the Straits of Gibraltar, and so closely blockaded him in the port of Tangier that he sold his vessel and returned to England. In August, 1862, he took command of the steamer Alabama, built for him at Birkenhead, England, and manned by an English crew, and continued his career of capturing and destroying merchant vessels. On January 11, 1863, off Galveston, Texas, he engaged the United States gunboat Hatteras, and after a short action sunk her. On June 19, 1864, in an engagement nine miles off the harbor of Cherbourg, France, the United States steamer Kearsarge, Captain Winslow, sunk the Alabama. Semmes was taken up by the English yacht Deerhound, and carried to England. After the close of the war he entered upon the practice of law in Mobile, Ala. He was arrested and taken to Washington in December, 1864, but was imprisoned only four months. He delivered public lectures on his exploits, and published "Service afloat and ashore during the Mexican War" (1851), "Campaign of General Scott in the Valley of Mexico" (1852), "The Cruise of the Alabama and the Sumter" (London and New York, 1864), and "Memoirs of Service afloat during the War between the States" (Baltimore, 1869).

SERVIA, a principality of Southeastern Europe. Prince, Milan IV. Obrenovitch, born in 1854; succeeded to the throne by the election of the Servian National Assembly, after the assassination of his uncle, Prince Michael Obrenovitch, June, 1868; was crowned at Bel-

grade, and assumed the Government, August 22, 1872; was married October 17, 1875, to Natalie de Keshko, the daughter of a Russian nobleman; offspring of the union is a son, Prince Alexander, born August 14, 1876. The area of Servia is 14,606 square miles; population in 1876, 1,366,923. According to the budget for the year 1875-'76, the revenue was 35,256,692 "tax piastres" (1 piastre=4 cents), and the expenditures 34,806,884 piastres. A loan was contracted in 1876 in consequence of the war, the amount of which, however, is not known. The number of taxable persons in 1875 was 287,047. The imports in 1874 amounted to 32,456,362 francs, the exports to 39,001,878 francs, and the transit trade to 6,631,000 francs.

According to the new organization introduced after the conclusion of the armistice in

1876, the Servian army is composed: 1. Of the standing and regular army (4 battalions infantry of 400 men each, and two squadrons cavalry of 96 men each); 2. The active army, comprising the former militia or the national army of the 1st ban; 3. The reserve, comprising the 2d and 3d bans of the national army.

Toward the close of January, Midhat Pasha, the Turkish Grand-Vizier, addressed a note to Prince Milan, inviting him to conclude peace. In the beginning of February, the Porte proposed the following conditions to Servia, waiving its former claim for substantial guarantees: 1. The right of being diplomatically represented at Belgrade. 2. That Jews and Armenians shall enjoy the same rights as native Servians. 3. That Servia shall not allow the formation of armed bands or the violation of Turkish territory. 4. That the existence of secret socie-

THE IRON GATE OF THE DANUBE.

ties shall not be permitted. 5. That the Servian fortresses shall be kept in good repair; and, finally, that the Turkish flag shall be hoisted upon those fortresses jointly with the Servian flag. The Servians declared it impossible to discuss the stipulation for granting privileges to Jews and Armenians equal to those enjoyed by other Servian subjects. The opposition to the Jews came from a combination of merchants in Belgrade, who were connected with and influenced the body in Servia which furnishes cabinets to both political parties. The Jews had connections which would enable them to import goods and merchandise direct from the manufacturers in France, England, and Norway, while the Servian merchants were only known and credited in Austria. Under such circumstances the Jews could greatly undersell the native merchants in the

interior, and for this reason the Servian Government placed restrictions on Jewish citizens. On February 14th, a deputation from Servia, with Senator Christitch at its head, set out for Constantinople to conduct the peace negotiations, while on the same day the Great Skupshchina was convoked to meet on February 27th. This body, which has four times as many members as the ordinary Legislature, is called together only on extraordinary occasions. In the latter part of the month a complete agreement was effected between the Porte and the Servian agents. On February 27th the Skupshchina met and organized by the election of Topuzovitch as President. On the following day Prince Milan with his ministers appeared before the assembly, and having declared it formally opened, began his address, which lasted for about one hour. He urged the members

to agree to the treaty, stating that Turkey would not renew the armistice if the offer was rejected. M. Ristitch then read the conditions of peace. Some of the deputies interrupted the reading, and asked if Serbia was concluding peace with the knowledge and consent of Russia. The majority of the members silenced the interruptions, and M. Ristitch declared that the war began with the consent of the previous Skupshtina, and that peace would be concluded with the full consent of Russia. The conditions of peace were as follows: The frontier lines remain as before the war. The condition of the Jews being an internal matter, the Turks would not insist upon the further discussion of the subject. The Turkish flag will be hoisted on the Serbian fortresses by the side of the Serbian ensign. The residence of the Turkish agent at Belgrade remains an open question, to be subsequently arranged between the Serbian and Turkish Governments. The Turks are to commence evacuating the Serbian territory, and to complete the evacuation within twelve days. The Skupshtina voted affirmatively upon every article. At the conclusion of the vote the Prince congratulated the assembly on the completion of their labors, and declared the mission of the Great Skupshtina to be at an end. M. Ristitch then read the Prince's decree dissolving the assembly, which produced a sensation among the deputies, but they obeyed it. The ministry thus achieved a decided success in getting rid of the deputies without giving them an opportunity of asking any embarrassing questions they had prepared. The treaty of peace was signed at Constantinople on March 1st.

The Skupshtina was opened on July 2d by Prince Milan. In his speech from the throne he referred to the war of 1876, and said that in concluding peace in the beginning of the year he had transferred the cause of the Oriental Christians into stronger hands, and that even at the present time the flags of the victorious Czar were floating on the Serbian border. He referred to his visit to the Czar at Ploeshti, and said that the latter had assured him of his interest in and care for the Serbian nation. He said nothing, however, of his relation to the Porte, nor of Serbian neutrality. The sessions of the Skupshtina were held at Kraguevatz with closed doors, and were guarded by large bodies of troops, so that but little of its transactions became known. This little, however, sufficed to show that stormy scenes were of frequent occurrence, and that the Government met with a strong opposition. Having sanctioned the military measures proposed by the Government, and having rejected the proposition to pay no more tribute to the Porte, the Skupshtina was closed in the latter part of July. The Prince immediately ordered the mobilization of the first class of the militia, while the standing army was sent to the frontier.

In August, the ministry, which had resigned

in the latter part of December, 1876, but had been at that time induced by the Prince to retain office during the pending negotiations with Turkey, again offered its resignation, which was this time definitely refused by the Prince.

In the latter part of August it seemed as if Serbia was about to resume the war against Turkey. Troops were sent to the front, all the commanders were ordered to their posts, while in Belgrade ministerial councils were held almost daily under the presidency of Prince Milan, to consider the question of peace or war. The relations with Turkey grew more warlike every day, until, on December 14th, Prince Milan again declared war. (*See TURKEY.*)

SHACHOVSKI, Prince ALEXIS, was born in 1812, and belongs to a family which traces its direct descent in the male line to Rurik, the founder of Russia. Prince Shachovski did not enter the army until 1837, being then 25 years old. He served with distinction in the Caucasus, was appointed major-general in the suite of the Emperor in 1860, lieutenant-general in 1868, and in 1876 received the command of the 11th Corps. In the second battle of Plevna, which resulted so disastrously for the Russians, he commanded the left wing. After this unfortunate action his name was no longer mentioned. He was but the nominal commander of the 11th Corps, which was divided among different posts at the seat of war.

SHERMAN, JOHN, Secretary of the Treasury of the United States. He was born at Lancaster, Ohio, May 10, 1823, and is a younger brother of General W. T. Sherman. He was admitted to the bar in 1844, and became a partner of his brother, Charles T. Sherman, afterward Judge of the United States District Court. He was a delegate to the Whig conventions of 1848 and 1852. In 1854 he was elected a member of the 34th Congress, and was reelected to the 35th and 36th Congresses. He was the Republican candidate for Speaker in the 36th Congress, and, after a protracted contest, failed of election by one or two votes. He was then made chairman of the Committee of Ways and Means. In 1860 he was again elected to Congress, but in 1861 he was chosen to succeed Salmon P. Chase in the United States Senate. He was reelected Senator in 1867 and in 1873. During his entire Senatorial career he was chairman of the Committee on Finance, and served also on the Committees on Agriculture (of which he was chairman), the Pacific Railroad, the Judiciary, and the Patent Office. When the doubt concerning the Presidential election of 1876 began to clear away, public opinion, with marked unanimity, centred upon Senator Sherman as the probable man for Secretary of the Treasury, and for this position he was selected by President Hayes.

SHUVALOFF, Count PETER, the Russian ambassador in London, is considered, like General Ignatieff, one of the foremost diplomatists of Russia, and is now 49 years old, having been born in 1823. Although not advancing as

rapidly as Ignatieff, he nevertheless obtained the highest military honors in a shorter space of time than is possible in any other country. In 1862 he was colonel, in 1864 major-general, in 1865 lieutenant-general, and in 1871 cavalry general. In spite of his military titles, however, he never held a command. His whole energies were devoted to the police, the civil service, and to diplomacy. He was for a time military *attaché* to the Russian Embassy in Paris, was recalled in 1862 as director of the first chancery in the Ministry of the Interior, and in 1865 became Governor-General of the Baltic Provinces. His prominence in Russian affairs, however, dates from the year 1866. He happened to be in St. Petersburg when an attempt was made to assassinate the Czar. The chief of the secret service, Prince Dolgorukoff, had had intimation of the attempt; he could not prevent it, and, what was still worse, he could not fathom the mystery which surrounded the person of the would-be murderer, nor his motives. He was removed, and Shuvaloff, who had once before cleared up a difficult criminal mystery, was appointed chief of the secret service in his place. The official name of this office is the third division of the secret chancery of the Emperor. The official who holds this position is more powerful than almost any of the ministers. Owing to the requirements of the office, to preserve the peace of the empire, and to watch over the safety of the Czar, his powers are virtually unlimited. Shuvaloff had hardly been in office 24 hours when he discovered the name of the offender, and ascertained that he was not a Pole, as was generally supposed, but a Russian Nihilist. The secret societies which aim at the complete social and political revolution of Russia were completely exposed. For eight years Count Shuvaloff held this office, and under his administration a security prevailed throughout Russia, which had not been known before. He was finally forced to resign this office on account of his health, which he found suffered under exhausting cares. In 1873 he was appointed on a special mission to London, where great excitement prevailed in consequence of the advance of the Russians in Central Asia. He succeeded in allaying the fears of England, by promising in the name of his Government that the Russian troops would not advance beyond the right bank of the Oxus, and even succeeded in bringing about an alliance between the two courts by the marriage of Prince Alfred, Duke of Edinburgh, to the only daughter of the Czar. In October, 1874, he was appointed the successor of Brunnow, who retired from the service on account of his advanced age. During the present complications in the East he has been less successful, owing chiefly to the fact that the Tory Cabinet of Disraeli sympathizes with the Turks. All that he could do under the circumstances was to prevent England from proceeding to open hostility against Russia.

SKOBELEFF; MICHAEL DIMITRIYEVITCH, was born in 1845. Although he is one of the youngest generals in the Russian army, he has become by his daring exploits also one of the most popular. He became an officer in the Russian army in 1863, and has served almost exclusively in Central Asia, where he distinguished himself by his indomitable energy, and his disregard of all danger, being always the first to attack, and always at the head of his troops. In 1873 he took part in the campaign against Khiva, and when the city was stormed he was again the first to enter it. In the campaign in Khokan in 1875, which resulted in the annexation of the country, he was again one of the most active and enterprising leaders, and the appointment as general followed as a reward for his services on this occasion. In 1876 he was appointed military governor and commander-in-chief of the troops in Ferghana, the name of the Russian province embracing Khokan, and retained this position until March, 1877, when he was ordered to join the staff of the Grand-duke Nicholas. During the campaign of 1877 his name has been frequently mentioned. At Simnitsa, he was as usual the first to cross the river. At Plevna, on July 30th, it was due mainly to his efforts that the retreat of Prince Schachovski was not attended with more disastrous results. His capture of Lovatz, on September 3d, was described as a most brilliant affair, and was the first victory for the Russians after a long series of reverses. At Plevna, on September 11th and 12th, he again acted a prominent part, succeeding in taking two of the four redoubts, and was only forced to abandon them through a lack of support. The correspondent of the London *Times*, in describing this battle, says: "He himself led the assault on horseback right up to the glacis of the redoubts. His horse (the seventh he has had killed in this campaign) was blown to pieces under him by a shell which burst right under his belly, but he escaped unhurt, and led the way into the redoubt on foot, sword in hand." For his conduct on this day, he was created a lieutenant-general.

SMITH, ASA DODGE, died at Hanover, N. H., August 16th. He was born at Amherst, N. H., September 21, 1804. He graduated from Dartmouth College in 1830, became Principal of the Limerick Academy in Maine, where he remained one year, and after completing a course in theology at the Andover Seminary, he was installed pastor of the Fourteenth Street Presbyterian Church of New York City, where he remained for twenty-nine years. He became President of Dartmouth College in 1863, which position he continued to hold until 1876. In 1849 the honorary degree of D. D. was conferred upon him by Williams College, and in 1864 he received the degree of LL. D. from the University of New York. He published several works, among them: "Letters to a Young Student," "Memoir of Mrs. Louisa Adam Leavitt" (1843), the "Life

and Character of John Hall, D. D." (1854), "The Importance of a Scriptural Ministry," "The Puritan Churches," "Christian Stewardship," "Addresses at Inauguration, Hanover, N. H., 1863," "Beneficence our Life Work, a Baccalaureate Discourse, 1865," and "Death Abolished," etc. He also wrote many articles for the *American Theological Review* and *Biblical Repository*.

SMITH, HENRY BOYNTON, an American clergyman, was born in Portland, Maine, November 21, 1815, and died in New York City, February 7th. He graduated at Bowdoin College in 1834, and was a tutor there in 1836-'37, and in 1840-'41, and studied theology at Andover and Bangor, and subsequently at Halle and Berlin. He was pastor of the Congregational Church in West Amesbury, Mass., from 1842 to 1846, when he became Professor of Mental and Moral Philosophy in Amherst College. In 1850 he became Professor of Church History in the Union Theological Seminary, New York, and in 1855 of Systematic Theology, which chair he resigned in 1873. He was elected in 1863 Moderator of the New School General Assembly of the Presbyterian Church, and at the next General Assembly in Dayton, Ohio, in 1864, delivered a discourse which was published under the title "Christian Union and Ecclesiastical Reunion." He was subsequently a member of the General Assembly's Committee on Reunion with the Old School General Assembly, and presented a report on a doctrinal basis of union ("The Reunion of the Presbyterian Churches," 1867). In 1867 he was a delegate to the Evangelical Alliance in Amsterdam, where he read a "Report on the State of Religion in the United States." He was a founder of the *American Theological Review*, and its editor from 1859 to 1862, when it was consolidated with the *Presbyterian Review*, which he edited till 1871. His principal works are: "The Relations of Faith and Philosophy" (1849), "The Nature and Worth of the Science of Church History" (1851), "The Problem of the Philosophy of History" (1853), "The Idea of Christian Theology as a System" (1857), "An Argument for Christian Colleges" (1857), "History of the Church of Christ, in Chronological Tables" (1859); a new edition of the Edinburgh translation of Gieseler's "Church History" (5 vols., 1859-'63), of which vols. iv. and v. were chiefly translated by Prof. Smith; a revised edition of the Edinburgh translation of Hagenbach's "History of Christian Doctrine" (2 vols., 1861-'62); with James Strong, a new edition of the Edinburgh translation of Stier's "Words of the Lord Jesus" (in parts, 1864, *et seq.*); and with R. D. Hitchcock, "The Life, Character, and Writings of Edward Robinson" (1864).

SOUTH CAROLINA. After the Federal troops had been withdrawn from South Carolina, by order of President Hayes, as stated in the *ANNUAL CYCLOPEDIA* for 1876, the Attorney-General and the other State officers at the

head of the various departments, under Governor Chamberlain, having held among themselves a consultation on the situation of affairs, addressed to him a joint letter, dated April 10th, in which, after asserting his and their right to continue in office, they point at the probable consequences of the apprehended conflict between the masses belonging to the opposite parties in the State, and advise him to yield to the imperative force of circumstances, saying, in conclusion: "We cannot afford to contribute, however indirectly, to such a catastrophe, even in the advocacy of what we know to be our right. We are agreed, therefore, in counseling you to discontinue the struggle for the occupancy of the gubernatorial chair, convinced as we are that, in view of the disastrous odds to which its maintenance has been subjected by the action of the Federal Administration, your retirement will involve no surrender of principle, nor its motive be misapprehended by the great body of that political party to which, in common with ourselves, you are attached."

STATE SEAL OF SOUTH CAROLINA.

Mr. Chamberlain appears to have heeded this advice, and acted on it. Under the same date of April 10th, he published an address "To the Republicans of South Carolina," wherein he sets forth the certainty and validity of his reelection to the office of Governor, and his right to continue in the discharge of its duties for a second term; but says that, owing to the unaccountable action of the Federal Administration in suddenly taking away its moral as well as material support from him and them, he is resolved to retire from the contest; concluding with these words: "I now announce to you, and to the people of South Carolina, that I will no longer actively assert my right to the office of Governor of South Carolina."

A written communication from Mr. Hampton, dated April 10th, was answered by Mr. Chamberlain, the same day, appointing the hour of 12 meridian, on the 11th, when the Executive Chamber, then in his possession, with the records and papers belonging to it,

would be turned over to Mr. Hampton. At the time fixed, a representative of Mr. Chamberlain handed over to a representative of Mr. Hampton the keys of the Executive office and the Seal of the State, accompanying the delivery with the words of the usual formula.

On the 12th of April, Wade Hampton entered the State House and took actual possession of the Executive office; into which his papers also were transferred from the place he had before occupied elsewhere for the discharge of his duties as Governor.

The offices assigned to the several departments of the Executive were still occupied by the officers of Mr. Chamberlain's administration. They refused to comply with the request to vacate their places, on the ground that their respective competitors, elected with Mr. Hampton, had previously instituted against them suits in the nature of *quo warranto* for that purpose; and that, those suits being still pending, they had the right to keep their offices until the courts should have decided against them.

On the 16th of April, Governor Hampton caused the doors of the several offices to be sealed. He had previously signified to them by letter that this measure of sealing the doors might have been carried out with their consent and under their protest, so as to leave their rights as they then stood before the courts. After the sealing had been executed, they protested against it.

One of the first acts of Governor Hampton, on taking possession of the State House, was to issue a proclamation under the same date, April 12th, convening the Legislature at Columbia for an extraordinary session on the 24th.

The Legislature met at the time appointed, and both Houses were organized at the first sitting. The Senate was called to order by R. H. Gleaves, who had acted as Lieutenant-Governor in Mr. Chamberlain's administration, and, as such, had presided over the Senate during the session opened in November, 1876. He took now the chair only to address the Senators and bid them farewell, having first asserted his right to continue to preside over them; on which he said, among other things: "We meet now under the call of a gentleman who has not heretofore been recognized by this body as the Governor of South Carolina. If that gentleman is to be regarded as the actual Governor of the State, it has occurred to me that I should no longer exercise my right to preside here. I desire to place on record, in the most public and unqualified manner, my sense of the great wrong which thus forces me practically to abandon rights conferred on me, as I fully believe, by a majority of my fellow-citizens of this State. Those rights I do not renounce to-day; but I do not feel that I can advance the interests of those whom I represent politically by longer exercising my right as Lieutenant-Governor presiding over this Sen-

ate; and I therefore announce to you, Senators, that I shall vacate this chair from this time forward." Thereupon, W. D. Simpson, the Lieutenant-Governor elected with Governor Hampton, occupied the vacated chair, and entered upon the duties of President.

The number of Senators present at the roll-call was 27—17 Republicans, 10 Democrats—a few only being absent.

The House of Representatives was called to order by William H. Wallace, the Speaker, who, at the opening of the session in November, 1876, had been elected by his fellow-members to preside over that body, which the Supreme Court, on December 6th, declared to be the legal House of Representatives of South Carolina. On the roll being called, 69 members answered to their names; whereupon the Speaker announced that a quorum was present, and the House ready for business. On a motion to adjourn, the House then adjourned to the following day.

This abrupt end of the first sitting was intended against those members of the House who at its meeting for the regular session in November, 1876, had organized themselves and acted as a separate body, presided over by E. W. M. Mackey, as Speaker. Upon the meeting of the Legislature for the extra session in April, 1877, the said members were present to participate in the proceedings, occupying together one side of the Hall. But the Clerk left their names out; and as soon as the roll had been called, the House was adjourned. Subsequently, however, these so-called Mackey members were not only admitted to act with the others in the extra session, and paid for it, but were paid also for their work in the said November session, when they refused to recognize the Hampton Legislature and Government of the State, and acted against both. They were given \$200 each for that work.

The two Houses met in joint convention on the 15th of May, for the purpose of electing a Chief Justice of the Supreme Court, in the place of Franklin J. Moses, Sr., who had died on the 22d of the preceding February. A. J. Willard was elected by a vote of 86 against 39 cast for Mr. McGowan, his principal competitor. Mr. Willard had sat on the Supreme Bench as associate justice for a long time, and won the general respect of the people for his impartiality, and the other qualities befitting a judge. Although he was a Republican, and a native of a Northern State, all the Democrats in both Houses, except one in the Senate, voted for him; while almost all the Republicans voted for Mr. McGowan.

The General Assembly closed its extra session by final adjournment on the 9th of June, having continued it 46 days. During that time 102 acts and joint resolutions were passed by both Houses, and were approved by the Governor. Among the more important are the following: "An act to reduce and fix the per diem and mileage of members of the General Assem-

ably." It fixes their compensation for the future at \$5 a day, and 20 cents mileage each way, instead of paying them \$600 and mileage for each regular and extra session, as it was before provided by statute and the constitution. "An act to raise supplies and make appropriations for the fiscal year commencing November 1, 1876." It levies a tax of 7 mills on the dollar for the State, and of 2 to 5 mills, respectively, for the counties, specifying the rates for the several counties in detail. The chief objects to which the 7-mill tax for State purposes is to be applied are distinctly enumerated in the first section of the act, as follows:

SECTION 1. That a tax of 7 mills upon every dollar of the value of all taxable property of this State be, and the same is hereby, levied for the following purposes, to wit: to meet appropriations: 1. To defray the current expenses of the government for the fiscal year ending October 31, 1877; 2. To pay the interest due the 1st of January, 1877, and the 1st of July, 1877, upon the consolidated bonds and certificates of stock which have been issued under the act to reduce the volume of the public debt and provide for the payment of the same, approved December 22, 1873, which shall be found to be valid and *bona fide* by the commission to investigate the same and be approved by the General Assembly at the next regular session thereof; and 3. To pay such other indebtedness of the State as may be reported to be valid by the said commission, and to which it may be applied by the General Assembly at its next regular session. Should the proceeds of said tax be insufficient to meet all the payments provided for in this act, the Governor is hereby authorized to borrow, on the credit of the State, such sum, not exceeding \$100,000, as may be necessary to meet such deficiency.

"A joint resolution to raise a commission to investigate the indebtedness of the State." The important parts of the resolution were as follows:

In view of the great uncertainty that exists in the minds of the property-owners and tax-paying portion of our people, as to the real and definite amount of the true and valid indebtedness of the State, and the character of the obligations out of which the indebtedness has grown, and of the equally unsatisfactory condition of the credit of the State as long as any doubt or suspicion attaches to claims held against her; and in order to give reasonable assurance to the honest creditor, on the one hand, that the State intends to faithfully meet her obligations at as early a date as practicable, and, on the other hand, to satisfy the tax-payer that the General Assembly will have proceeded intelligently in whatever steps may be taken to adjust and provide for the public debt; therefore,

Be it resolved by the Senate and House of Representatives of the State of South Carolina, now met and sitting in General Assembly, and by the authority of the same:

SECTION 1. That, in accordance with that portion of his Excellency's message touching this subject, a commission, to consist of 3 members of the Senate and 4 members of the House of Representatives, shall be elected by each House respectively.

SEC. 2. It shall be the duty of said commission to make a complete and thorough investigation of the following and kindred matters, and to report the results to the next session of this General Assembly, to wit: 1. The entire amount of consolidated bonds and certificates of stock that have been issued under

the act to reduce the volume of the public debt, and provide for the payment of the same, approved December 22, 1873, so as to show, under proper heads and classifications, the number in the series, the letter, date of issue, date of redemption, denomination, rate of interest, by whom signed and countersigned, and to whom issued. 2. Whether there are in the State Treasurer's office on file, as vouchers, canceled bonds, coupons, and certificates of stocks of the issues described, issued in accordance with law, and authorized to be consolidated by the act above recited, to the amount required by said act.

SEC. 3. Should it appear to the commission, in the course of the investigation, that any of said bonds, certificates of stock, or coupons, have been illegally or otherwise improperly issued, it shall report the same, together with the evidence upon which the illegality or nonconformity to law rests.

SEC. 4. The commission is hereby authorized to require the holders of said bonds, coupons, and stock to produce the same for inspection before the commission in Columbia. Such as shall be found to have been issued according to law, and that are valid *bona fide* bonds, coupons, and stocks, shall be registered by their number, letter, denomination, and such other distinctive titles as may be best suited to the object in view, and shall be certified as correct, in such form as the commission may deem proper.

SEC. 5. The commission shall have full power and authority to send for persons and papers, and to administer oaths; and false swearing by or before said commission shall be indictable and punishable as perjury.

SEC. 6. The Controller-General and Treasurer are hereby authorized and required to cooperate with said commission when called upon.

SEC. 7. The commission shall be authorized to sit during the recess of the General Assembly.

SEC. 8. The compensation of the commission shall be a per diem of \$5 each.

SEC. 9. It shall also be the duty of said commission to investigate the amount and character of the floating indebtedness of the State, and make a report thereon in detail.

SEC. 10. That said commission shall have power to report any special matter.

The Legislature met again at Columbia, for the regular session, on the 27th of November, 1877.

In pursuance of concurrent resolutions previously adopted, the two Houses met in joint convention on December 5th, for the purpose of electing an Attorney-General as well as an Associate Justice of the Supreme Court, and a Judge of the Seventh Judicial Circuit, to fill the vacancies created by the resignations. The following were duly elected: For Associate Justice of the Supreme Court, J. C. Haskell; for Judge of the Seventh Judicial Circuit, W. H. Wallace; for Attorney-General, Leroy F. Youmans. Messrs. Wallace and Youmans were elected unanimously.

At the sitting of December 7th, William H. Wallace, Judge-elect of the Seventh Judicial Circuit, resigned his office as Speaker, and J. C. Sheppard was elected to the vacancy.

On December 20th, the General Assembly adjourned for the holidays, to meet again on January 16, 1878.

The condition of affairs in South Carolina, during the year 1877, appears to have been satisfactory. In his annual message to the Legislature, Governor Hampton states: "Our State is rehabilitated; peace prevails through-

out our borders; the laws are impartially enforced and fully respected; good-will between all classes is rapidly obliterating the animosities of the past; health blesses our people; and the labors of the husbandmen have been crowned with abundant harvests."

The receipts of the Treasury up to November 26, 1877, amounted to \$755,885.96; the expenditures, under the present administration, to \$232,829, made up by the following items: Salaries, \$83,715; Legislature, \$89,456; contingent funds, \$18,845; lunatic asylum, \$32,521; public printing, \$8,792.

The cash balance in the Treasury, on November 26, 1877, was \$340,185.92.

The gross amount of all the taxable property in the State, including by estimate the property located in several counties which failed to report, is set down at \$135,735,883, classified as follows: Real property, \$86,896,002; personal property, \$42,162,311; railroad property, \$6,677,550.

The aggregate amount of interest accrued on the consolidation bonds and stocks, up to July 1, 1877, was \$343,236.

The amount which represents the principal of the State debt, and the interest accrued on it to the present time, will appear from the report of the Special Joint Committee appointed by the Legislature at the last session to investigate it.

The school statistics, for the year 1877, are summarily as follows:

The total available free-school fund for the year was \$189,352.80, of which \$100,000 was the State appropriation, \$53,965 the receipts from the local tax in Charleston City, and \$35,387.80 from the Peabody fund and other sources. The receipts from the poll tax were applied, as required by law, to the payment of old indebtedness. The total scholastic population—that is, the number of children entitled to the benefits of the free schools—was 228,128, of whom 74,117 are colored males, 70,198 colored females, 43,397 white males, and 40,416 white females. The total number of children attending school was 102,396, or less than one-half of those who were entitled to attend. Of these, 24,878 were white males, 21,568 white females, 29,230 colored males, and 26,722 colored females. This shows that more than one-half the whites, both male and female, attend the schools; and considerably less than one-half the blacks, male and female, attend.

The total number of teachers employed was 2,674, of whom 943 were Southern white male teachers, 740 Southern white female teachers, 673 Southern colored male teachers, 260 Southern colored female teachers, 27 Northern white female teachers, 15 Northern white male teachers, 8 Northern colored female teachers, and 8 Northern colored male teachers. The schools are kept open, on the average, three months out of the year. The total amount paid the teachers was \$212,581.64. The average monthly pay of male teachers was \$28.32, and of female teachers \$26.87.

The number of school-houses erected during the year 1877 was 25, at a total cost of \$2,755.29, being an average cost of a little over \$100 each. The number of school-houses rented during the year was 79. The number of school-houses erected previously is 2,059, at a total cost of \$292,131.83, being an average of a little less than \$150.

The proposed amendment to the State Con-

stitution, levying a tax of at least two mills on the dollar on all taxable property, to support the free schools in the State, was adopted at the election of November 6, 1877, by an almost unanimous vote of the people. The whole number of votes cast on it was 175,549, of which 168,688 were *for*, and 6,856 *against*. The sum collected from this tax, together with that of the poll tax, devoted also to educational purposes, will yield a yearly amount of about \$350,000, which is considered sufficient to put the free schools of the State on a footing of general usefulness. In order to become part of the Constitution, and go into practical operation, the said amendment was to be ratified by a two-thirds vote of each House of the General Assembly. This has now been done.

The Legislature had in contemplation the establishment of a university or college for the instruction of the blacks, equal to the existing one for the whites. To this end, a joint committee on the State University was instructed to consider the subject, and report to the next General Assembly. This committee submitted their report on December 10, 1877, recommending the establishment of separate institutions for whites and blacks, having equal advantages of instruction.

The charitable institutions in the State are under praiseworthy management, and the amount paid out of the public Treasury for their expenses in 1877 has been much less than in former years.

The penitentiary also is well managed; except that the convicts earn nothing, but are wholly at the charge of the State.

The judicial proceedings in the following criminal cases during the year 1877, instituted in behalf of the State, and terminated in the conviction of the accused, and the sentences passed on them, seem to be worthy mention: F. L. Cardozo, the mulatto State Treasurer of South Carolina for several years, and forming part of Governor Chamberlain's administration till his leaving the State House on April 11, 1877, was arrested on the 21st of July for fraud upon the State Government, and bailed in the sum of \$20,000, awaiting trial; L. Cass Carpenter, formerly editor of a Republican newspaper in South Carolina, ex-Congressman and ex-Revenue-Collector, was arrested on the 28th of June, charged with forgery, and held on bail to await his trial; and Robert Smalls, a colored man, previously a member of the State Legislature, then elected Congressman on November 7, 1876, from the fifth district of South Carolina, was also arrested upon the charge of having, in December, 1872, "received a bribe in his official capacity, to influence his acts in the office of State Senator of South Carolina," and held on bail to answer to the indictment. These three were tried together before the Court of General Sessions at Columbia, and convicted by a jury composed of whites and blacks. Whereupon Judge Townsend, at the sitting of the

court on November 8th, ordered the prisoners to be brought in. After stating his reasons for refusing a new trial in the cases of two of them, and deciding not to grant the motion in arrest of judgment, he passed sentence on each of the prisoners as follows:

F. L. Cardozo, "to be confined in the county jail for two years, and pay a fine of \$4,000; in default of payment of the fine, to be imprisoned for an additional year."

L. Cass Carpenter, "to be confined in the county jail for two years, and pay a fine of \$1,000."

Robert Smalls, "to be confined in the penitentiary with hard labor for three years."

They were defended by eminent counsel, who, after the sentences had been passed, announced that he had filed and served upon the Attorney-General notice of appeal in all the three cases; and asked that the prisoners might be released on bail, pending the action of the higher court. After opposition and argument on this point, the matter seems to have been arranged on the following day, and the prisoners admitted to bail in the sum of \$10,000 each.

SPAIN, a kingdom of Southern Europe. King, Alfonso XII., born November 28, 1857; proclaimed King December 30, 1874. The ministry in 1877 was composed as follows: Canovas del Castillo, President of the Council; Silvela, Foreign Affairs; Calderon y Collantes, Justice; Caballos y Vargas, War; Barzanallana, Finances; Pavia, Navy; Romero y Roldo, Interior; Count Toreno, Agriculture and Commerce; Herrera, Colonies. The area of Spain is 195,774 square miles; the population in 1870 was 16,635,506. The area of the Spanish colonies* was 117,209 square miles; the population, 8,093,610.

The population of the capitals of the provinces of Spain is as follows, according to a memoir prepared by Señor Guillem, chief of a bureau in the Ministry of the Interior.

7. Ministry of Foreign Affairs.....	8,253,118
8. " Justice.....	53,629,307
9. " War.....	122,291,918
10. " the Navy.....	25,984,774
11. " the Interior.....	40,581,924
12. " Public Works.....	48,857,209
13. " Finances.....	138,156,680
14. Extraordinary expenditures.....	2,775,000
Total.....	735,775,184

The public debt on June 30, 1876, amounted to 37,028,312,246 reals (1 real = \$0.0496).

The Spanish army is to consist, according to a new plan of the Minister of War, in time of peace, of 100,000 men, of whom 69,492 will belong to the infantry, 16,130 to the cavalry, 10,232 to the artillery, and 4,146 to the corps of engineers. The fleet, in 1875, was composed as follows:

NAVY.	Guns.	Horse-power.
VESSELS OF THE FIRST CLASS.		
6 iron-clads.....	105	5,100
9 screw-frigates.....	887	5,020
2 paddle-steamers.....	32	1,000
VESSELS OF THE SECOND CLASS.		
8 paddle-steamers.....	86	2,480
10 screw-steamers.....	49	2,100
2 transports.....	..	600
VESSELS OF THE THIRD CLASS.		
1 iron-clad monitor.....	3	260
1 floating battery.....	5	80
16 screw-steamers.....	89	2,500
32 gunboats.....	32	1,280
8 paddle-steamers.....	14	907
4 screw transport vessels.....	..	580
VESSELS NOT CLASSIFIED.		
2 steamers.....	4	230
30 small steamers.....	40	1,230
131.....	746	23,267

The commercial navy consisted, on June 1, 1877, of 2,685 sailing vessels of 381,070 tons, and 230 steamers of 176,250 tons, together 2,915 vessels of 557,320 tons.

The aggregate length of the railroads in operation amounted, on January 1, 1876, to 5,796 kilometres (1 kilometre = 0.62 English mile); the aggregate length of the telegraph lines, on January 1, 1875, to 12,260 kilometres; that of the wires to 29,648 kilometres. The number of dispatches was 1,590,823, of which 890,833 were inland, 407,781 foreign, and 292,209 official dispatches.

The first legislative session under the gov-

ernment of King Alfonso was closed on January 5th, when several changes in the ministry took place. Martin de Herrera was appointed Colonial Minister; Manuel Silvela, Minister of Foreign Affairs; and Calderón y Collantes, Minister of Justice. On April 25th, the Cortes were opened by the King. In a speech from the throne, he referred in satisfactory terms to the country as at peace, and promised the prompt pacification of Cuba, the insurgents being totally disorganized. The Cortes were asked to unite in raising the country from the abyss into which it had fallen. The difference

in the Sulu Archipelago had been settled satisfactorily with England and Germany. There was an enormous deficiency in the treasury, owing to the war expenses, and it was necessary to reorganize the finances of the country with the support of the deputies. Señor Posada Herrera was reelected President of the Cortes by a vote of 265 to 5, the Constitutionals abstaining from voting. Señor Canovas del Castillo, the Prime Minister, addressing a meeting of Senators, said the cabinet would pursue a conciliatory policy. If revolutionary violence went so far as to menace the institu-

THE PALACE, MADRID.

tions of the country, the Government, with the support of the Senate, would be able to defend the throne and dynasty. On May 5th, the Minister of Foreign Affairs made a speech in the Senate, opposing an amendment which had been moved to the address in reply to the speech from the throne, demanding that the Government should support the restoration of the Pope's temporal power. The minister pointed out that it did not become Spain to interfere in questions which did not come within her province, and which affected nations allied with her. The Catholic party subsequently withdrew the amendment, the Government being, however, at the same time, requested to adopt the most suitable means for securing for the Pope complete and real independence. In the Chamber of Deputies, on May 9th, Señor Gamazo, a member of the opposition, attacked the foreign policy of the Government. With regard to the treaty with Germany and England, Señor Silvela, the Minister for Foreign Affairs, and Señor Collantes, the Minister of Justice, replied, defending the Protocol signed in April, and declaring that, by

that treaty, the Spanish sovereignty over the Sulu Archipelago was recognized, and liberty of foreign commerce tolerated with places not actually occupied by Spain. With regard to the relations with the United States, Señor Collantes stated that at the accession of the present Government, between two and three years ago, the relations of Spain with the United States were in an extremely critical condition; but during that time all the subjects of complaint on the part of the United States had been satisfactorily settled, including pecuniary indemnification to the officers and crew of the *Virginus*, the prosecution of Burriel, the pardon of sundry Americans condemned to death for treason to Spain, the restitution of their confiscated property, and the settlement of various other private claims, besides two great subjects which had been for many years fruitful sources of discord between the two countries, namely, the subject of extradition, and, above all, that of the true construction of the treaty of 1795.

The declaration of Señor Calderón y Collantes as to the understanding of his Government

respecting the true application of the treaty was as follows:

1. No citizen of the United States residing in Spain, her adjacent islands, or her ultramarine possessions, charged with acts of sedition, treason, or conspiracy against the institutions, the public security, the integrity of the territory, or against the Supreme Government, or any other crime whatsoever, shall be subject to trial by an exceptional tribunal, but exclusively by the ordinary jurisdiction, except in the case of being captured with arms in hand.

2. Those who, not coming within this last case, may be arrested or imprisoned, shall be deemed to have been so arrested or imprisoned by order of the civil authority, for the effects of the law of April 17, 1821, even though the arrest or imprisonment shall have been effected by armed force.

3. Those who may be taken with arms in hand, and who are therefore comprehended in the exception of the first article, shall be tried by ordinary council of war, in conformity with the second article of the hereinbefore-mentioned law; but, even in this case, the accused shall enjoy for their defense the guarantees embodied in the aforesaid law of April 17, 1821.

4. In consequence whereof, as well in the cases mentioned in the third paragraph as in those of the

second, the parties accused are allowed to name attorneys and advocates, who shall have access to them at suitable times. They shall be furnished in due season with a copy of the accusation and a list of witnesses for the prosecution, which latter shall be examined before the presumed criminal, his attorney and advocate, in conformity with the provisions of Articles xx. to xxxi. of the said law; they shall have the right to compel the witnesses of whom they desire to avail themselves to appear and give testimony, or to do it by means of depositions; they shall present such evidence as they may judge proper, and they shall be permitted to be present and make their defense in public trial, orally or in writing by themselves, or by means of their counsel.

5. The sentence pronounced shall be referred to the Audiencia of the Judicial District of the Captain-General, according as the trial may have taken place before the ordinary judge or before the Council of War, in conformity also with what is prescribed in the above-mentioned law.

In July, the budget was agreed to in the Cortes. In the course of the debate Señor Canovas del Castillo said the financial situation was improving. The Government had been able to abandon the system of raising loans to

MALAGA.

pay the coupons. A copyright bill was adopted, whereby subjects of states whose legislation in regard to literary matters is similar to Spain's will have in Spain the same rights as Spanish subjects. The Cortes finally adjourned in the middle of July. Before their adjournment, the King had appointed Señor Orovio Minister of Finances. The insurrection in Cuba continued during the year, although the Government troops, under the chief command of General Martinez Campos, who had been appointed in 1876, made considerable progress in reconquering territory from the insurgents. The Governor-General, Jovellar, in order to induce the insurgents to return to their al-

legiance, issued the following decree on May 5th:

ARTICLE I. From the date of this decree, all orders of banishment decreed gubernatively by this Government for political motives are hereby rescinded, and all proceedings now under way regarding the same are hereby overruled.

ART. II. The embargoes imposed gubernatively on insurgents who have presented or may present themselves for pardon before the termination of the war shall also be raised. There will, however, be excepted from the favor of desembargo the property of backsliding insurgents and that of the leaders of the insurrection, in respect to which this General Government will adopt the measure it deems most convenient, according to the special circumstances of each case.

ART. III. The property, embargoed gubernatively, of the disloyal ("infidentes") who have since died, shall also be released from embargo, and delivered unto their lawful heirs, if these remain faithful to the Spanish nation.

ART. IV. The property referred to in the two preceding articles once returned, its owners or holders shall not sell, assign, transfer, or burden it in any manner until two years after the official publication of the complete pacification of the island.

ART. V. The proceeds of property before its return shall be considered as applied toward the expenses of the war, unless otherwise provided for, and its owners without any right to make reclamation of any nature whatsoever.

ART. VI. None of those whose property has been released from embargo shall either have the right to make reclamation for any loss or injury that may have been suffered by the property or object returned them.

ART. VII. To assist as far as possible in the return of said property, this Government will authorize the Governors and Lieutenant-Governors of the island to effect the same in each case, to those comprised in this decree, whose property is situated within their respective jurisdictions, with the due precautions which shall be communicated to them from the office of the Secretary of the General Government.

ART. VIII. The judicial proceedings actually under way against *infidentes* shall be forwarded until overruled or judged, as may result in law.

ART. IX. Concerning the property adjudged to the State, by sentence of competent tribunals, his Majesty's Government will decide in due time whatever it may deem most convenient.

ART. X. The requisite orders shall be issued through the office of the Secretary of this General Government, that the foregoing articles shall be duly complied with by whom it may concern.

MATANZAS.

On November 8d he issued another decree, declaring that all estates ruined during the war, and in the way of reconstruction, shall be free from contributions for five years from the date of the decree. Every new estate and all new property acquired in cities or villages of the central and oriental departments will have the same privilege. All industries and commerce in said departments newly established will be exempt for three years from contributions. All female cattle, either Spanish or foreign, imported into Cuba with the exclusive object of raising stock, will be duty free for two years. Instructions for the fulfillment of this decree were given at the respective centres of the island. The decree was received with much satisfaction.

On March 28th, the Spanish Government paid to Mr. Cushing, the Minister of the United States, the sum of £102,574 14s. 2d., being the first installment of the indemnification declared up to that time to citizens of the United States by the commission of arbiters. The remainder, amounting to £106,768 5s. 1d., was paid on October 8th.

STANLEY, HENRY M. The recent return from Africa of this noted traveler created a wide-spread interest in his achievements. He

was born near Denbigh, Wales, in 1840. His original name was John Rowlands. At the age of three he was sent to the poorhouse at St. Asaph, where he remained till he was thirteen, receiving there a good education. For a year he was a teacher at Mold, Flintshire, and then shipped at Liverpool as a cabin-boy, on a vessel bound to New Orleans. There he found employment with a merchant named Stanley, who subsequently adopted him and gave him his name. His benefactor died intestate, and young Stanley, at the outbreak of the civil war, enlisted in the Confederate army, was taken prisoner, volunteered in the United States navy, and subsequently became an acting ensign in the iron-clad *Ticonderoga*. After the close of the war he traveled in Turkey and Asia Minor, and in 1866 visited Wales. He gave a dinner to the children in St. Asaph poorhouse, telling them in a speech that, whatever success he had attained, or would attain in the future, he owed to the education he received there. In the spring of 1867 he returned to the United States, and in 1868 accompanied the British expedition to Abyssinia as correspondent of the *New York Herald*. In 1869 he was sent to Spain in the same capacity, and on October 17th of that year was

commissioned by the proprietor of the *Herald* to find Dr. Livingstone. After attending the opening of the Suez Canal, he visited Constantinople, Palestine, the Crimea, the Valley of the Euphrates, Persia, and India, and sailed from Bombay, October 12, 1870. He arrived at Zanzibar, January 6, 1871, and set out for the interior of Africa on March 21st, with 192 followers. He found Dr. Livingstone at Ujiji, Lake Tanganyika, November 10th, explored with him the northern portion of the lake, and began his return voyage on March 14, 1872. He arrived in England late in July, and gave an account of his expedition before the British Association at Brighton, August 16th. On August 27th the Queen sent him a gold snuff-box set with diamonds, and on October 21st he was banqueted by the Royal Geographical Society. In November he published "How I found Livingstone" (London and New York). In 1873 he received the patron's medal of the Royal Geographical Society. After the death of Livingstone, Mr. Stanley was commissioned, by the proprietors of the *New York Herald* and the London *Telegraph*, to explore the lake region of Equatorial Africa. As reported in his letters to those journals, he left Zanzibar in November, 1874, at the head of 350 men, diverged from the usual road at Upwapwa, reached the western frontier of Ugongo on December 31st, struck direct across an almost level plain, and at Tchiwya, in the Urimi country, about the latitude of Ujiji, he found the waters flowing northward. Thence he followed the course of the river Shemeeyu for 350 miles, and reached Kagehyi, on the Victoria N'yanza Lake, February 27, 1875, having lost 194 men by death and desertion. He launched a boat, conveyed in pieces from the coast, and circumnavigated the lake, assisted by 30 canoes lent him by M'tesa, King of Uganda. His circumnavigation covered about 1,000 miles; he minutely explored the inlets, and found that the opinion of Burton and Livingstone, based on native reports, that N'yanza is a collection of lagoons, is wrong, and that Speke and Grant were right in declaring it to be one large lake, containing many islands. On April 17th he started to complete his exploration of the west side of the Victoria N'yanza. In November, 1876, Stanley reached Nyangwa, the farthest northern point attained by Livingstone or Cameron. He was on the Congo River for nine months, and reached the Atlantic coast in August, 1877. He returned to Europe at the beginning of 1878, where he was received with the highest honors. For the details of Stanley's recent explorations see GEOGRAPHICAL EXPLORATIONS in this volume, also ANNUAL CYCLOPEDIA for 1876.

STEPHENS, ALEXANDER HAMILTON, member of Congress from Georgia. He was born in Talliaferro County, Ga., February 11, 1812. He graduated at Franklin College, Athens, Ga., in 1832, was admitted to the bar in 1834, and rapidly obtained a large and lucrative prac-

tice at Crawfordville. He was elected to the Legislature of Georgia in 1836, and was re-elected for five successive terms. In 1842 he was elected to the State Senate. In 1843 he was elected as a Whig to Congress, and held his seat till 1859. In February, 1847, he submitted a series of resolutions in relation to the Mexican War, which afterward formed the platform of the Whig party. He opposed the Clayton Compromise in 1848, and took a leading part in the compromises of 1850. The passage of the Kansas and Nebraska Act in 1854 in the House of Representatives was strongly supported by him as chairman of the Committee on Territories. After the breaking up of the Whig party, he acted with the Democrats. At the close of the 35th Congress, Mr. Stephens declined to be again a candidate, and on July 2, 1859, he made a speech at Augusta, Ga., announcing his retirement from public life. During the Presidential canvass of 1860 he sustained Douglas, and denounced those who advocated a dissolution of the Union in case of Mr. Lincoln's election; and in November, 1860, he made a speech before the Legislature of Georgia against secession, on which subject he had an interesting correspondence with Mr. Lincoln in December. He was nevertheless elected to the Secession Convention which met at Milledgeville, January 16, 1861, and there spoke and voted against the secession ordinance. He was a member of the Southern Congress which met in Montgomery, Ala., in February, and was elected Vice-President of the Confederacy. On March 21st he delivered a speech in Savannah, in which he declared slavery to be the corner-stone of the new government. On April 23d, as a special commissioner from the Confederate States, he addressed the convention at Richmond, urging the union of Virginia with the Confederacy. He frequently differed from the policy of the Richmond government, especially on the subject of martial law; and on September 8, 1862, he pronounced the appointment by General Bragg of James M. Calhoun as civil governor of Atlanta a palpable usurpation. His letter on this subject created a marked sensation through the South. On February 3, 1865, with R. M. T. Hunter and John A. Campbell, he held an informal conference on a steamer in Hampton Roads with President Lincoln and Mr. Seward, which had no practical result. After Lee's surrender, Stephens returned to his home in Crawfordville, where, on May 11, 1865, he was arrested and sent to Fort Warren, in Boston harbor; but on October 11th he was released on parole. On February 22, 1866, he delivered a speech before the Legislature of Georgia, favoring the restoration policy of President Johnson. In the same month he was elected to the United States Senate; but as the State had not complied with the conditions of reconstruction, he was not permitted to take his seat. In 1872 he was elected to Congress, where he has since continued, being reelected in 1874 and 1876.

Mr. Stephens has published "A Constitutional View of the Late War between the States, its Causes, Character, Conduct, and Results" (2 vols. 8vo, Philadelphia, 1868-'70), and several speeches. "Alexander H. Stephens, in Public and Private," with his letters and speeches before, during, and since the war, by Henry Cleveland, was published in 1867.

STOUGHTON, EDWIN W., United States Minister to Russia, was born in Windsor County, Vt., in 1818. He removed to New York in 1837, where, for many years, he has been a prominent member of the bar of that city. Until within a few years past he was a pronounced Democrat. During the administration of President Grant, he published an elaborate letter in which he defended on constitutional grounds the President's use of the army in Louisiana. Mr. Stoughton has since been an active Republican. He was one of the Northern men who, at the request of the President, visited New Orleans after the election of 1876 to witness the action of the Returning Board; and was one of the counsel who argued the Republican case before the Electoral Commission. In October, 1877, he was appointed Minister to Russia by President Hayes, and was promptly confirmed by the Senate.

SULEIMAN PASHA, the successor of Mehemet Ali as commander-in-chief of the Turkish forces in Bulgaria, is said to be a most unostentatious and reserved man. His headquarters are the very reverse of the gorgeous establishments one sees with many generals of much less pretense than this the most successful and favored of the Sultan's field-m Marshals. He has received a European education, and is considered intelligent and clever. After having been stationed for some time in the provinces, he received a call as teacher to the military school in Constantinople. As such he began to take part in politics, was involved in the palace plot of 1876, and was rewarded with the rank of Pasha. Upon the resumption of hostilities with Montenegro in 1877, he was appointed to the command of the division operating from the north, with the orders to provision and relieve Nicsic. In this he was completely successful. His march afterward through Montenegro was not as successful. He was next ordered to take command of the Turkish forces in Roumelia, and here attracted the attention of the world by his fierce struggle for the Shipka Pass. On October 4th, he was appointed to succeed Mehemet Ali as commander-in-chief.

SWEDEN AND NORWAY, two kingdoms of Northern Europe, united under the same dynasty. King, Oscar II., born January 21, 1829; succeeded to the throne at the death of his brother, Charles XV., September 18, 1872; married, June 6, 1857, to Sophia, born July 9, 1836, daughter of the late Duke Wilhelm of Nassau. Oldest son: Gustavus, heir-apparent, Duke of Wermland, born June 16, 1858.

SWEDEN.—The executive authority is in the hands of the King, who acts under the advice of a ministry, formerly called the Council of State. The composition of the ministry at the close of 1877 was as follows: Baron L. de Geer, Minister of State and of Justice, appointed 1875; O. M. Björnstjerna, appointed 1872; J. H. Rosenswärd, Minister of War, 1877; Baron F. W. von Otter, Minister of the Navy, 1874; C. J. Thyselius, Minister of the Interior, 1875; H. L. Forssell, Minister of Finance, 1875; F. F. Carlson, Minister of Education and Ecclesiastical Affairs, 1875. Besides these, there are three ministers without portfolio: H. G. Lagerstråle, 1875; Baron C. J. O. Alströmer, 1870; and J. H. Lovén, 1874.

The following table shows the area of Sweden, inclusive of inland lakes, according to a new survey by the Swedish general staff, and the population on December 31, 1876:

LÄNS.	Square Miles.	Population.
Stockholm { City.....	12.68	157,215
{ Län.....	2,994.30	188,854
Upsala.....	2,052.78	106,004
Södermanland.....	2,630.63	142,565
Ostergötland.....	4,242.61	267,009
Jönköping.....	4,464.23	190,241
Kronoberg.....	3,841.51	166,784
Calmar.....	4,437.66	240,767
Gottland.....	1,202.97	54,581
Blekinge.....	1,164.12	182,735
Christianstad.....	2,506.98	229,714
Malmöhus.....	1,847.03	383,407
Halland.....	1,899.47	182,423
Gothenburg and Bohus.....	1,952.52	248,024
Elfsborg.....	4,943.16	2 6,819
Skaraborg.....	3,806.10	254,722
Wermland.....	7,245.75	267,283
Oerebro.....	3,520.72	181,520
Vestmanland.....	2,624.17	125,256
Kopparberg.....	11,209.16	188,650
Gefleborg.....	7,418.67	163,772
Westernorland.....	9,530.05	154,073
Jämtland.....	19,567.53	76,991
Westerbotten.....	21,942.68	99,864
Norrbotten.....	40,562.32	85,085
Lake Wenner.....	2,150.05
Lake Wetter.....	738.07
Lake Mælär.....	448.90
Lake Hjelmar.....	187.55
Total.....	170,741.02	4,429,718

Of the total population, 2,151,326 were males, and 2,278,387 females. In 1875, there were 30,762 marriages, 140,317 births (inclusive of still-births), 92,798 deaths (inclusive of still-births), and 4,359 still-births. In the same year, 9,727 emigrants left the country.

The population, according to the census of 1870, was 4,168,525. Of this number 4,162,087 were Lutherans, 3,809 Baptists, Mormons, and Methodists, 578 Roman Catholics, 1,836 Jews, and 220 others.

The population of the principal cities of Sweden, in 1876, was as follows:

Stockholm.....	157,215	Jönköping.....	18,744
Göteborg.....	63,756	Upsala.....	18,049
Malmö.....	33,292	Lund.....	12,794
Norrköping.....	26,787	Oerebro.....	10,496
Gefle.....	11,617	Helsingborg.....	10,066
Carlskrona.....	17,290	Calmar.....	10,009

The budget for 1878 is as follows (value in crowns, 1 crown = \$0.26 $\frac{1}{4}$):

REVENUE.

Surplus of revenue of 1876.....	8,000,000
Ordinary revenue:	
Domains, railroads, land-taxes, etc.....	81,290,000
Extraordinary revenue:	
Customs.....	22,000,000
Post.....	4,800,000
Stamps.....	2,400,000
Tax on spirits, etc.....	13,500,000
Income-tax.....	3,200,000
	45,900,000
Net profit of the State Bank.....	900,000
Total.....	86,090,000

EXPENDITURE.

Ordinary:	
Royal household.....	1,218,000
Justice.....	3,726,700
Foreign Affairs.....	609,300
Army.....	16,949,500
Navy.....	5,139,000
Interior.....	14,434,600
Education and Ecclesiastical Affairs.....	8,707,253
Finance.....	12,360,500
Pensions.....	2,237,500
	65,322,373
Extraordinary.....	11,476,647
Expenditure through the Riksgäldskontor:	
Paying of loans.....	8,673,000
Miscellaneous (Diet, etc.).....	613,000
	9,291,000
Total.....	86,090,000

Besides the budget, the Riksdag of 1877 voted 6,000,000 crowns for the construction of new railroads, 2,000,000 crowns to complete the rolling-stock of the lines already opened for traffic, while a loan of 2,000,000 crowns was granted to private railroad companies for 1878. These expenses were to be covered by loan. The expenditure for the army, church, and for certain civil offices, is in part defrayed out of the revenue of landed estates belonging to the crown, and the amounts do not appear in the budget estimates. To the expenditure for foreign affairs, Norway contributes annually 304,700 crowns, a sum not entered in the estimates.

The public debt of Sweden on January 1, 1877, amounted to 176,169,737 crowns.

The Swedish army in 1876 numbered 156,970 men. The navy in 1877 consisted of 40 steamers of 5,693 horse-power and 152 guns, 10 sailing vessels with 105 guns, and 87 smaller vessels.

The imports and exports in 1875 were as follows (value in crowns):

COUNTRIES.	Imports from	Exports to
Denmark.....	48,882,000	24,653,000
Norway.....	15,142,000	7,093,000
Finland.....	4,639,000	4,197,000
Russia.....	18,558,000	1,442,000
Germany.....	55,205,000	12,987,000
Great Britain.....	91,983,000	109,250,000
Netherlands and Belgium.....	17,291,000	14,494,000
France.....	10,129,000	24,687,000
Spain and Portugal.....	2,220,000	8,423,000
Countries on Mediterranean Sea.....	1,347,000	1,457,000
United States.....	2,482,000	1,098,000
West Indies.....	1,166,000	39,000
Brazil.....	8,081,000	388,000
States on the Rio de la Plata.....	961,000	4,000
Cape Colony.....		473,000
Australia.....		908,000
Total, 1875.....	268,066,000	206,552,000
" 1874.....	306,810,000	233,332,000
" 1860.....	82,469,000	86,496,000

The movement of shipping in 1875 was as follows:

FLAG.	ARRIVALS.		CLEARANCES.	
	Loaded Vessels.	Lasts.*	Loaded Vessels.	Lasts.*
Swedish.....	4,142	519,542	7,957	761,682
Norwegian.....	678	120,219	2,014	548,416
Foreign.....	3,151	557,518	4,599	822,440
Total.....	7,971	1,197,579	14,570	2,132,538

II. NORWAY.—In Norway the executive is represented by the King, who exercises his authority through a Council of State, composed of two Ministers of State and nine Councilors. Two of the councilors, who are changed every year, together with one of the ministers, form a delegation of the Council of State, residing at Stockholm, near the King. The Council of State was composed as follows in 1877: F. Stang (appointed 1873), Minister of State; R. T. Nissen (1875), Education and Worship; O. A. Selmer (1874), Justice; Nils Vogt (1871), Interior; H. L. Helliesen (1863), Finance and Customs; A. H. Munthe (1877), Army; Jens Holmboe (1874), Navy and Post-Office; Jacob Aall (*pro tem.*), Revision of Public Accounts. The delegation of the Council at Stockholm consisted of O. R. Kjerulf (1871), Minister of State; J. C. Falsen (1869), and J. L. Johansen (1872). The area of Norway is 122,280 square miles, and the population, according to the census of 1875, 1,802,882, or 1,807,555 inclusive of sailors in Norwegian ports. (For an account of the area and population of each of the provinces of Norway, see ANNUAL CYCLOPEDIA for 1876.)

The movement of population in 1876 was as follows: marriages, 14,067; births, 58,229; deaths, 34,608.

The receipts for 1875 amounted to 53,401,800 crowns (1 crown = \$0.26 $\frac{1}{2}$), and the expenditures 44,691,800 crowns. The public debt, on December 31, 1876, was 70,450,000 crowns. The imports, in 1875, amounted to 176,913,000 crowns, and the exports to 103,494,000 crowns. The war navy, in 1877, consisted of 32 steamers of 2,750 horse-power and 156 guns, and 91 sailing vessels with 146 guns. The commercial navy, in 1875, consisted of 7,814 vessels of 1,394,363 tons. The railroads in operation, in 1876, amounted to 590 kilometres. The number of Government telegraph-stations, at the close of 1876, was 109; length of lines, 7,026, and of wires, 12,970 kilometres. The number of inland dispatches sent was 471,062; of foreign dispatches sent, 117,777; and of foreign dispatches received, 134,489; making a total of 723,328. The railroad telegraphs are not included in these figures. (See ANNUAL CYCLOPEDIA for 1876.) The number of post-offices, in 1876, was 824. The number of inland letters sent was 7,846,840, of which 745,322

* 1 Swedish last = 3.27 English tons.

GOTHENBURG.

were money letters with 177,000,000 crowns. The number of foreign letters sent and received was 3,357,280, of which 38,830 were money letters with 11,000,000 crowns. The number of newspapers sent was 8,798,387.

The parliamentary proceedings in both Sweden and Norway were entirely of a local character and unimportant.

Among the works of the year containing information on Norway are Dr. O. J. Broch's "Norway and the Norwegians" (Christiania, 1877).

SWITZERLAND, a republic of Central Europe, consisting of twenty-two cantons, three of which are divided each into two independent half-cantons. The President of the Federal Council for 1877 was Dr. J. Heer, of Glarus, and the Vice-President, Dr. C. Schenck, of Berne. The area of Switzerland is 15,981 square miles; the population, according to an official estimate, was 2,759,854 on July 1, 1876. The area and population of the different cantons were as follows:

CANTONS.	Square Miles.	Population.
Zurich.....	666	294,994
Berne.....	2,609	528,670
Lucerne.....	580	188,816
Uri.....	415	16,900
Schwyz.....	851	49,216
Unterwalden ob dem Wald.....	183	15,009
Unterwalden nid dem Wald.....	112	11,998
Glarus.....	267	86,179
Zug.....	92	21,775
Freiburg.....	644	118,952
Soleure.....	808	77,808
Basle City.....	14	51,515
Basle Country.....	168	55,548
Schaffhausen.....	114	88,925
Appenzell Outer Rhodes.....	101	48,879
Appenzell Inner Rhodes.....	61	11,907
St. Gall.....	750	196,834
Grisons.....	2,774	92,906
Aargau.....	542	201,567
Thurgau.....	851	95,074
Ticino.....	1,088	121,763
Vaud.....	1,244	242,489
Valais.....	2,026	100,490
Neuchâtel.....	812	102,843
Geneva.....	108	99,352
Total.....	15,981	2,759,854

Of the total number of inhabitants, 1,348,914 were males, and 1,410,940 were females.

The movement of population in 1876 was: 22,376 marriages, 90,786 births, and 66,816 deaths.

The total revenue of the Confederation for 1876 amounted to 42,277,141 francs, and the expenditures to 43,462,625 francs. The budget for 1877 estimated the receipts at 42,972,300 francs, and the expenditures at 43,900,800 francs. The liabilities of the republic amounted, at the close of 1876, to 31,124,917 francs, as a set-off against which there was Federal property amounting to 35,725,480 francs.

For railroads, post-offices, etc., *see* ANNUAL CYCLOPEDIA, 1876.

CASTLE OF CHILLON.

The Federal Assembly met on March 5th. On March 14th, the Ständerath, or Cantonal Council, enacted the law, previously adopted by the Nationalrath, for the protection of children working in factories. On March 25th a law was enacted providing for the taxation of those exempt from military duty. The Assembly

then adjourned. It met again on June 4th. The Nationalrath elected for its President Herr Marti, of Berne, and for its Vice-President, M. Philippin, of Neuchâtel; the Ständerrath, for its President, Herr Hofmann, of St. Gall, and for its Vice-President, M. Vesaz,

vote on October 21st. The first and second were rejected. The third law was one limiting the hours of labor, especially for women and children in factories, and providing that employers are to pay their wages at intervals of not more than a fortnight, and in specie.

This law was confirmed by a majority of 157,495 to 146,020.

The Swiss export returns for the year 1876 show strikingly how the American competition in watchmaking has injured the Swiss trade. In 1875 the export of watches to the United States fell off 30 per cent., and in 1876 there was a further falling off of 43 per cent., making a difference of 7,909,000 francs between 1874 and 1876. Musical boxes fell off 24 per cent. during the last year, the export being 49 per cent. below the average of 1864-'75.

In June an international conference was

BASLE.

of Lausanne. After an unimportant session the Assembly adjourned on June 23d, and assembled again on December 3d. On the 18th it elected Dr. Schenck, of Berne, as President of the Confederation for 1878, and Herr Hammer, of Soleure, as Vice-President, and adjourned on the 22d.

Three new laws were submitted to a popular

held at Lucerne, on the question of resuming the works in the St. Gothard Tunnel. The commission fixed the sum required to complete the undertaking at 40,000,000 francs, of which they proposed that Germany should contribute 10,000,000 francs, Italy 10,000,000 francs, Switzerland 8,000,000 francs, and the company 12,000,000 francs.

T

TELEPHONE. This is an invention for reproducing the human voice, by the agency of electricity, at long distances from the speaker. Like other great inventions it has been a growth in the application of principles known for many years; and, as was so often the case before, the result has been attained by several independent experimenters almost simultaneously. To whom the chief credit actually belongs, is now a matter of dispute, which we need not here undertake to decide; it may be stated, however, that the names most prominently associated with the invention are those of Mr. Elisha Gray, of Chicago; Prof. A. Graham Bell, of the Boston University; Prof. A. C. Dolbear, of Tufts College, Massachusetts; and Mr. Thomas A. Edison, of Menlo Park, New Jersey.

The principle, mode of working, and construction of the telephone may be described as follows:

If a wire, from a galvanic battery through

which a current of electricity is passing, be wound around a piece of soft iron, as represented in Fig. 1, the bar will be made magnetic, and kept in that condition as long as the current continues to pass round it; and its ends will then attract and hold bits of iron, but drop them when the battery is taken away. If the

Fig. 1.

bar be of steel, instead of soft iron, it will be magnetized and attract iron just as before; but, unlike the soft-iron bar, it will *keep* its magnetism and attract the iron even after the battery is removed. Its magnetism will be permanent. Since, however, electricity made the magnet, we can, in turn, make the magnet a source of electricity. Suppose the magnetized steel bar has attracted and is holding on to a piece of

iron. We can now disconnect the battery and join the ends of the wire, as in Fig. 2; then, if the piece of iron be pulled off and stuck on again, a current of electricity will run through the wire every time it is done. Electricity produced in this way is called magneto-electricity, and the current in the wire is said to

FIG. 2.

be an induced electric current. If, now, the wire from bar No. 1 (Fig. 3) be extended to a distance, and coiled around another magnetized bar (No. 2), the currents induced in it, by making and breaking the contact of the piece of soft iron with the first magnet, will simultaneously affect the magnetism in the distant magnet also. Though the magnets be a mile or many miles apart, the disturbance in one is immediately and equally manifested in the other.

But, what is still more remarkable, these in-

duced currents may be sent through the wire without the actual contact of the soft iron with the steel magnet. If this piece of iron is brought very near to one magnet without touching it, and then withdrawn, an electric thrill or wave is induced in the wire which is felt in the distant magnet, just as if the contact had been actually made and broken. And so, if we play the piece of soft iron backward and forward, before the magnet, no matter how rapidly or slightly, each motion is felt as an electric pulse in the magnet at the other end.

We have here the fundamental principle of the telephone. No galvanic battery is employed to furnish an electrical current, as in the case of the telegraph; but the currents in the wires are produced by the motions of the piece of soft iron acting on the magnet. Thus far we have represented these motions in a very rude and coarse way, as if the piece of iron were vibrated backward and forward by the hand; but what we have really to deal with is something infinitely more delicate than this. The piece of soft iron of which we have been speaking, shown at *a*, Figs. 2 and 3, represents what is called the *diaphragm* of the telephone. It is a thin, circular sheet of iron, a couple of inches in diameter, held by its rim, and adjusted so that its centre comes very close to the

FIG. 3.

end of the magnetized bar. And the motions which now concern us are simply the vibrations produced in this iron membrane by the beats against it of agitated air. Everybody knows that sounds are propagated through the aerial medium by waves that travel swiftly from their sources, and that we hear them because the waves strike in rapid succession upon the drum of the ear. It is also well understood that these waves differ greatly in their rates, depending upon the rapidity of vibration in the sounding body; and, moreover, that they are very complex, there being waves within waves of various orders in a single tone. It is the special complexity of these wave-systems, in the different cases, that gives those peculiarities of tone that mark different musical instruments and distinguish the voice in different individuals. These waves, started by a person talking, beat against the diaphragm of the telephone and throw it into vibrations. This iron diaphragm acting inductively on the

magnet originates magneto-electric currents in the wire helix about it, and these travel to another helix encircling the magnet at the other end, and, acting upon that, exert electromagnetic effects which increase and decrease the strength of the magnet, thus setting its dia-

FIG. 4.

phragm into vibration. These vibrations correspond exactly with those of the first diaphragm, and the second diaphragm is thus made to restore to the air in one place what the first one received from the air in another place. These air-waves, falling on the tympanum of the list-

ener, reproduce the original sound or voice. The arrangement being the same at both ends, the machine, of course, works both ways; so that when a person is talking to the distant diaphragm the direction is reversed, and the sounds are emitted by the diaphragm near by, and thus the original talker gets his response.

To make a telephone, procure a tube, *b b* (Fig. 4), of thin sheet-brass, one inch long, two inches in diameter, and with a flange one-half inch wide. Then from a ferrotype-plate—the photographer's "tin-type"—cut a round plate, shown edgewise at *c c*, to cover the tube *b b* over the flange. This is the vibrator or diaphragm. Next cut a wooden ring or "washer," *d d*, the width of the flange, and about one-eighth of an inch thick. Then make a spool, *e e*, one inch long, of thin sheet-brass again, with one flange wide enough to cover the wooden ring, the tube of the spool being made so as to fit tightly the magnet *g*, which is a strongly-magnetized steel rod, four inches long and three-eighths of an inch in diameter. The parts will then fit together, and may be screwed firmly through the flanges *b b*. The least polished side of the plate *c c* should face the magnet, and it is well to scrape the part opposite the end of the bar, so as to expose the iron. The spool is to be wound with about fifty yards of No. 36 or 38 silk-covered copper wire, about the thickness of a bristle. The magnet is then shoved in, till it nearly touches the plate *c c*. After joining the ends of the spool-wire to the line-wires *f f*, that run to another instrument just like it, the telephone will be ready for use. It is important to concentrate the voice upon a narrow space at the middle of the plate; and for his purpose a movable wooden mouth-piece, *a a*, is used, with an opening at the bottom about the size of a dime. This mouth-piece should fit neatly, and reach to within about one-eighth of an inch of the diaphragm.

Fig. 5 represents a section of Bell's tele-

FIG. 5.

phone. *E E* is the diaphragm, *F* the tube, *B* the silk-covered wire wound upon the spool, extending, *C C*, to the binding-screws *D D*, where the two ends are connected with the line-wires. The magnet *A* has its distance from the diaphragm adjusted by the screw at the opposite end. Fig. 6 represents the form and aspect of the instrument as used. It is

about five or six inches long and two and a half inches broad at its widest part. In sending a message, the instrument is held to the mouth, and the words distinctly spoken in ordinary tones or even a whisper. The instrument is then held to the ear to receive the answer. Instead of this, two telephones connected may be used at each station, so that one may be held to the ear all the time, while the other is used for telephoning.

The impression produced by listening to a communication through this instrument has been aptly described as follows: "The voice, whether in speaking or singing, has a weird, curious sound in the telephone. It is in a measure ventriloquial in character; and, with the telephone held an inch or two from the ear, it has the effect as if some one were singing far off in the building, or the sound were coming up from a vaulted cellar or through a massive stone-wall." The singing or speaking is heard microscopically, as it were, or rather microphonically, but wonderfully distinct and clear in character.

The longest distance at which conversation has been carried on, so far, through the telephone, is about 250 miles. With a submarine cable conversation has been carried on between England and France across the English Channel. Conversation has also been held through the bodies of sixteen persons standing hand-in-hand.

The telephone has been regarded as a toy, or a curiosity to be played with; but, while it is undoubtedly extremely interesting as a novelty, it is very much more than this; it is, scientifically and practically, a great success. There are, undoubtedly, difficulties in its use, but, considering that it is a contrivance but of yesterday, the wonder is that it is so perfect. The telegraph was much longer regarded as an impracticable invention, and it is impossible to say how soon the telephone may not take rank among the necessities of common life.

TENNESSEE. The subject which most largely occupied the attention of the public authorities and the people of the State of Tennessee during the year was that of a readjustment of the State debt on a basis that would make its requirements press less heavily upon

FIG. 6.

their exhausted resources. On the 26th of December, 1876, a letter had been addressed to Governor Porter by a number of the largest holders of the bonds of the State, expressing their confidence that an equitable adjustment could be made, and recommending that the Legislature appoint a commission to proceed to New York and confer with the creditors, with a view to bringing about such an adjustment. In response to this proposition, a resolution was adopted by the Legislature on the 27th of January, inviting the creditors to submit some definite plan, and the following proposition was subsequently made:

1. That the revenue laws of the State shall be amended so that the collection of taxes may be assured at the time or times when they become due, and that at the smallest possible cost to the tax-payer.

2. That the reforms proposed and recommended to the Legislature by your Excellency in regard to the cost of county criminal prosecutions be enacted into a law.

3. That the expenses of the State Government be reduced to as low a figure as is consistent with the maintenance of its dignity.

4. That the present rate of taxation be maintained, and that the other sources of revenue be not diminished.

5. That the State levy annually a special tax of one mill on the dollar of taxable property, the proceeds of which, in every year, together with any surplus revenue, shall be used in the purchase, cancellation, and destruction of the new issue of bonds which it is proposed herein to issue for existing bonds and past-due coupons, and the coupons of July 1, 1877.

6. That the Legislature pass a law authorizing the funding of all outstanding bonds of the State, of all past-due coupons thereon, and of the coupons which will fall due on July 1, 1877, into new bonds of the State, bearing date July 1, 1877, and having 50 years to run to maturity, bearing interest for a period of five years from their date, at the rate of three (3) per cent. per annum; for a period of five years thereafter, interest at the rate of four (4) per cent. per annum; for a period of five years from the termination of the last-mentioned period, interest at the rate of five (5) per cent. per annum; and thereafter, until maturity and payment, interest at the rate of six (6) per cent. per annum. Interest on each bond to be paid semi-annually, on January 1st and July 1st, in every year from and after its date, and the coupons evidencing it to be receivable by the State for all taxes and dues payable to the State; said bonds to be for \$100, \$500, and \$1,000.

Meanwhile, on the 25th of January, a meeting had been held at the Clearing-house in New York, "to consider the embarrassment of the several Southern States which are in default, and to devise a plan for the readjustment of their debts, and for the restoration of their credit." Five bank officers, Geo. S. Coe, J. D. Vermilye, B. B. Sherman, B. B. Comegys, and Enoch Pratt, were appointed as a board of arbiters to act in the matter. Tennessee was invited to cooperate with them in securing an adjustment of the State debt, and the Governor, in a special message on the 22d of February, recommended that a committee be appointed to meet the arbiters, and lay before them statistics of the debt and resources of the State, and such other information as might be pertinent, and receive such propositions as they should

see fit to make. After considerable discussion a commission of five members was authorized and appointed to proceed to New York on this mission. The commission reached New York on the 7th of March, and had its first conference with the arbiters on the following day. The first proposition made was that the whole debt be funded in fifty-year bonds, bearing interest at 3 per cent. for the first five years, 4 per cent. for the next five years, 5 per cent. for the third five years, and 6 per cent. thereafter. The commission protested against this as not sufficiently liberal to the State, and subsequent consultations resulted in a proposition for the adjustment and compromise of the whole debt by the issue of new bonds at the rate at 60 cents on the dollar, the bonds to run 30 years, and bear interest at the rate of 6 per cent. This plan was reported to the Legislature by the commission on the 19th of March without recommendation. The propriety of accepting or rejecting this plan of adjustment was discussed for some time, and several propositions were submitted in the Legislature, but no definite action was taken before the adjournment. The subject continued to occupy attention and to be publicly discussed. Several prominent citizens of the State, including D. M. Key, Postmaster-General of the United States, and Senator I. G. Harris, wrote letters, advocating at length the acceptance of the plan of adjustment. Finally, the Governor called a special session of the Legislature, to begin on the 5th of December, the object of which was thus expressed in his proclamation:

1. To consider the recommendation made by the arbiters at the conference held at New York in March, 1877, to adjust the State debt by the issuance of new six per cent. bonds at the rate of sixty per cent. of the total amount of principal and past-due interest.

2. To levy a tax sufficient to meet the interest on the new bonds; to provide a sinking fund for the extinguishment of the debt, and for the more efficient collection of the revenue.

3. To provide, by appropriate legislation, for the expenses of the General Assembly.

In a message submitted on the first day of the session, the Governor reviewed the action which had been taken, and urged the acceptance of the plan of the arbiters. He said that the debt was nearly all incurred prior to the civil war for purposes of internal improvement, and there was no question of its validity. He also contended that the State would be amply able to meet its obligations under the proposed adjustment. The question speedily arose whether the Legislature could do more, under the call of the Governor, than to act upon the single proposition submitted, in view of the fact that the constitution provides that, when the Legislature is convened by the Governor "on extraordinary occasions," he shall "state specifically the purposes for which they are to convene; but they shall enter on no legislative business except that for which they were specifically called together." The question was referred to a special committee, a majority of

which was of the opinion that no other proposition than that submitted in the Governor's proclamation could be considered. The Governor, having received assurances from some of the creditors that an adjustment on the basis of fifty cents on the dollar would be accepted, called a second extra session, to begin on the 11th of December, immediately on the adjournment of the first:

1. To consider the adjustment and compromise of the State debt.

2. To provide the necessary revenues to meet the interest on such bonds as may be issued under such adjustment, and for the more efficient collection of the revenues of the State.

3. To provide, by appropriate legislation, for the expenses of the first extra session of the Fortieth General Assembly, and of the session hereby convened.

A report of the Controller was submitted, conveying the following information regarding the resources and debt of the State:

ASSESSMENT OF TAXABLE PROPERTY IN THE STATE
FOR THE YEAR 1877.

East Tennessee.....	\$54,225,545
Middle Tennessee (De Kalb County estimated)...	106,762,914
West Tennessee	75,511,122

Total taxable property.....\$286,799,581

BONDED DEBT.

Amount of bond debt funded and registered December 19, 1876, including bonds held by East Tennessee University.....	\$23,208,400
Funded and registered since December 19, 1876..	41,000
Accrued interest from January 1, 1876, to July 1, 1878.....	8,487,410
Compound coupons, July, 1874, to July, 1875, estimated	40,000

\$26,776,810

Securities canceled since December 19, 1876, 2,576 bonds.....	\$2,876,000
299 bonds, indebtedness of Mississippi & Tennessee Railroad.....	299,000
Coupons of above, five installments....	459,903

8,634,908

Due by purchasers Knoxville & Charleston Railroad.....	\$52,125
Due by purchasers McMinnville & Manchester Railroad.....	204,000

256,125

Total bond debt funded and registered.....\$22,885,777

The school fund was stated as \$2,512,500, the interest on which is included in current expenses. A statement of receipts of the treasury from December 19, 1876, to December 1, 1877, showed an aggregate of \$1,258,386.55; expenditures for the same period on warrants issued, \$649,357.12, and \$230,988.54 not included in current expenses, or \$880,345.66 in all. The propositions received for an adjustment on the fifty per cent. basis came from various creditors who claimed to be holders of large amounts of bonds. One J. J. MacKinnon also appeared as the agent of "The Funding Association of America, Limited," claiming to represent the interests of a large portion of the creditors, and submitting a similar proposition. Wide differences of opinion prevailed in the Legislature, ranging all the way from a sentiment in favor of complete repudiation to that of meeting all obligations in full; but the extreme views on either side had little

support. A bill was finally framed and passed in the Senate, providing for an adjustment of the debt on the basis of fifty cents on the dollar, represented by thirty-year bonds, bearing interest at 4 per cent. for five years, 5 per cent. for the second five years, and 6 per cent. thereafter. This failed in the House, a portion of the opposition being in favor of the sixty per cent. plan as the only one likely to be accepted by all the creditors, another portion contending for 4 per cent. interest for the whole term, and others objecting to a provision in the bill making coupons receivable for taxes. The Legislature finally adjourned on the 28th of December, without accomplishing any part of the purpose for which it was called together, and leaving the subject of the debt where it was at the beginning of the year.

The regular session of the Legislature, which began on the first day of the year, came to a close on the 27th of March. The general legislation was of small importance. The returns of the vote for Governor at the election of 1876, as originally announced in joint convention of the two Houses, stood 122,507 for James D. Porter, the Democratic candidate; 73,612 for Dorsey B. Thomas, independent candidate; 10,571 for George Maney, Republican; 1,690 for W. F. Yardley, colored Republican; and 603 for A. M. Hughes. The correctness of the canvass was questioned, and the matter referred to a committee for investigation. Their report gave the vote as follows: Porter, 123,740; Thomas, 75,695; Maney, 10,436; Yardley, 2,165. This was accepted as the correct official declaration. Two United States Senators were chosen, one for the full term of six years, from March 4, 1877, and the other to fill the vacancy occasioned by the death of Andrew Johnson, whose term expires in 1881. Isham G. Harris was elected on the first ballot for the full term, but for the unexpired term 73 ballots were taken, resulting finally in the choice of James E. Bailey. The Secretary of State, Treasurer, and Controller, were also chosen by the Legislature. Thirty-eight ballots were taken for Secretary of State, resulting in the choice of C. N. Gibbs. M. T. Polk was elected Treasurer on the second ballot, and J. L. Gaines Controller on the first ballot. The following resolutions were adopted early in the session:

Whereas, During the recent Presidential election, his Excellency the President of the United States has seen fit to invade the rights of our sister States, South Carolina and Louisiana, by sending the army of the United States into the borders of said sister States on the eve of the elections, with a view to influence the result of said elections and perpetuate the sway of certain individuals against the will of a majority of the voters in said States; and,

Whereas, The army of the United States, being then stationed within the borders of said States, was placed beneath the orders and under the control of certain evil-disposed persons to be used by them for the promotion of their own personal ends, and to the injury of the liberties of the people therein, and that all good citizens have the right and should protest against this usurpation on the part of the Chief Magistrate of the nation: therefore be it

Resolved by the General Assembly of the State of Tennessee, That the action of his Excellency the President of the United States, in this extraordinary license of arbitrary power, deserves and receives the hearty condemnation of the body of liberty-loving people throughout the entire country.

Be it further resolved, That we deprecate all Federal Executive interference in State elections for partisan purposes, and invoke the law-abiding spirit of a free people to correct the evils complained of, as well as to effectuate the will of the people as expressed in the late elections, State and national.

Among the acts passed was one authorizing municipal corporations to compromise or settle their indebtedness; one creating the new county of Haines out of portions of Benton, Carroll, Henderson, and Decatur; one repealing the 10 per cent. interest law; one prohibiting the sale of intoxicating liquors near institutions of learning; one depriving the State

of the power to borrow money; one repealing the act of 1875, establishing an Immigration Bureau; and one creating a State Board of Health. Bills reducing the rate of taxation from 40 to 10 cents on a hundred dollars, and amending the assessment laws, were vetoed by the Governor and passed in spite of his objections. The amendments to the Constitution proposed by the previous General Assembly were defeated, failing to receive the necessary two-thirds vote in the House.

A litigation of long standing, involving the conflicting claims of the depositors and note-holders of the old Bank of Tennessee to the remaining assets of that institution, was decided in January in favor of the note-holders. The bank, which was located in Nashville, suspended on the approach of the Federal army,

MEMPHIS.

in 1862; its assets were carried south and afterward captured by General Sherman at Atlanta, Ga., and delivered to the State authorities. A large portion of them consisted of Confederate bonds, Tennessee war bonds, and bills and notes which became worthless. A part of the balance was wasted or lost while nominally in custody of the State authorities, so that only \$275,850 remained of what nominally footed up at \$10,325,000. There was \$1,500,000 due to depositors, and about the same amount outstanding in notes. According to the decision of the Supreme Court of the State, the holders of the notes are entitled to receive what is left of the assets, after the payment of various costs and expenses.

A case was decided by the Supreme Court in February, which involved the validity of the act of 1875, declaring the keeping of dogs a "privilege," and imposing a tax upon it as such. The Constitution requires all taxation

upon property to be uniform according to value, and authorizes the taxing of "merchants, peddlers, and privileges." The court held, substantially, that dogs were property, and the keeping of them could not by legislative action be made a privilege in any proper legal sense. Neither could the taxing of these animals, under the provisions of the law in question, be regarded as a police measure for the restriction of their number, as it was clearly intended as a measure for obtaining revenue. Accordingly the act was declared null and void. The judge, in concluding a long opinion on the subject, said:

The result is, that the law before us must be held void as a revenue measure or tax imposed in violation of the limitations of our Constitution, and not sustainable under the police power of the State, because not so purposed in the first place, and, second, because not using the appropriate remedies for the exercise of such power. However lightly we may esteem the animal subject to this tax, the Constitu-

tion of our State is not thus lightly to be esteemed—and must be held, both in great and small matters, to be the supreme law of the land.

The semi-annual interest on the State School fund, which was apportioned among the counties on the 1st of April, amounted to \$75,375.

The assessed value of the railroads of the State for purposes of State taxation is:

Nashville, Chattanooga & St. Louis.....	\$2,782,924 89
Louisville & Nashville, with branches and leased roads.....	3,596,523 13
St. Louis & Southeastern.....	290,596 43

A convention in the interest of the improvement of the navigation of the Tennessee River was held at Chattanooga on the 5th of December. Resolutions were adopted declaring the work to be one of national importance, and calling for assistance from the Congress of the United States.

TERGUKASSOFF, ARSAS ARTAMYEVITCH, the commander of the Russian Erivan column, is the son of an Armenian priest, and was born in 1819. He received his education in the corps of engineers, which he left in 1839, with the rank of lieutenant. After serving for several years in the department of road construction in St. Petersburg, he was appointed to the board for war communications in the Caucasus, in which he remained four years. In 1850, he retired from the military service with the rank of lieutenant-colonel, but entered the active army again within two years. Since then he has served in the Caucasus, distinguishing himself on various occasions, particularly at the capture of Shamyl, in 1859. For his many brilliant actions he was decorated with numerous orders, and received from the emperor a golden sword. Appointed colonel in 1858, he advanced to the rank of major-general in 1865, and was shortly after appointed to the command of the Nineteenth Infantry Division. Shortly before the opening of the present war, he was raised to the rank of lieutenant-general.

TEXAS. The peace of this State was much disturbed during the past year by the troubles on the Rio Grande border, which not only caused great local excitement, but engaged the consideration of the General Government. As early as the 1st of June the Cabinet was occupied in discussing measures to prevent cattle-stealing raids into Texas from Mexico and other

lawless acts on the part of Mexicans. The result of this deliberation was embodied in the following letter of instructions written by the Secretary of War to the General of the Army:

WAR DEPARTMENT,
WASHINGTON, D. C., June 1, 1877. }

GENERAL: The report of W. M. Shafter, lieutenant-colonel Twenty-fourth infantry, commanding the district of the Nueces, Texas, concerning recent raids by Mexicans and Indians from Mexico into Texas for marauding purposes, with your indorsement of the 29th instant, has been submitted to the President, and has, together with numerous other reports and documents relating to the same subject, been duly considered. The President desires that the utmost vigilance on the part of the military forces in Texas be exercised for the suppression of these raids. It is very desirable that efforts to this end, in so far at least as they necessarily involve operations on both sides of the border, be made with the cooperation of Mexican authorities; and you will instruct General Ord, commanding in Texas, to invite such cooperation on the part of local Mexican authorities, and to inform them that, while the President is anxious to avoid giving offense to Mexico, he is nevertheless convinced that the invasion of our territory by armed and organized bodies of thieves and robbers, to prey upon our citizens, should not be longer endured. General Ord will at once notify the Mexican authorities along the Texas border of the great desire of the President to unite with them in the efforts to suppress this long-continued lawlessness. At the same time he will inform those authorities that, if the government of Mexico shall continue to neglect the duty of suppressing these outrages, the duty will devolve upon this government, and will be performed, even if its performance should render necessary the occasional crossing of the border by our troops. You will, therefore, direct General Ord that, in case the lawless incursions continue, he will be at liberty, in the use of his own discretion, when in pursuit of a band of the marauders, and when his troops are either in sight of them or upon a fresh trail, to follow them across the Rio Grande, and overtake and to punish them, as well as retake stolen property taken from our citizens and found in their hands, on the Mexican side of the line. I have the honor to be, very respectfully,

GEORGE W. McCORARY, Secretary of War.

To General W. T. SHERMAN, commanding Army of the United States.

On the 12th of August an armed band of from 10 to 15 Mexican outlaws crossed from the Mexican side, entered Rio Grande City, the county seat of Starr County, where they broke open the jail and released Esproneda and Garza, two notorious criminals, one of whom had been indicted for murder, and the other for theft of cattle. While perpetrating this outrage they severely wounded the county-attorney, Noah Cox, and three jailors. With the released prisoners the desperadoes recrossed the river, pursued by a detachment of United States troops under Major Price. On being notified by General Ord of these lawless proceedings, Governor Hubbard wrote the facts to President Hayes, concluding as follows:

Under the extradition treaty in force I am vested with authority to demand extradition of criminals from any neighboring Mexican State. I propose to make this demand, but desire cooperation by a simultaneous demand from the President.

To this the following reply was sent:

WASHINGTON, August 14, 1877.

His Excellency R. B. HUBBARD, Governor of Texas,
Austin:

The President directs me to acknowledge the receipt of your dispatch of the 13th instant.

Your proposed demand for extradition is in accordance with treaty stipulations.

Measures for the protection and maintenance of American rights involved will be immediately taken here.

(Signed)

F. W. SEWARD,

Acting Secretary of State.

Acting under orders from Governor Hubbard, John C. Russell, of Corpus Christi, judge of the twenty-fifth judicial district, and *ex-officio* extradition agent, made formal demand of General Canales, the Governor of Tamaulipas, on August 23d, for the extradition of the persons engaged in the jail-delivery as well as for the felons released by them. This demand was delivered by the Sheriff of Starr County to the Governor of Tamaulipas, at Matamoras. After much delay and discussion as to the proper construction of the extradition treaty, President Diaz, of the Central Government, through his accredited agent and member of his Cabinet, General Benavides, ordered Governor Canales to have delivered to the Texas agent the released prisoners Esproneda and Garza, and also the raiders who delivered them and attempted to murder citizens of Texas.

Governor Hubbard had instructed the extradition agent representing Texas under the special provisions of the treaty of December 11, 1861, to demand—First, the prisoners released, irrespective of nationality, because, having committed the crimes of theft and murder on Texas territory, within organized counties, and having been legally indicted by the grand juries of said counties, arrested by the high sheriffs under proper *capias* of the courts, lodged in jail in default of bail, the jurisdiction of the criminal courts of Texas had already attached, and the clause of the treaty excepting citizens of either country from the operation of its general provisions could not be invoked. These prisoners were released by an unlawful mob, without the consent of this government, and the Republic of Mexico should place them back, if within her power, in their original position inside the jail of Rio Grande City.

The extradition agent also demanded, in an able and exhaustive paper, the delivery to the Texas authorities of the outlaws engaged in this affair as an act of comity toward a neighboring and friendly Republic. In this demand the Governor of Tamaulipas, General Canales, did not concur, nor did any one of the local, civil, or military authorities of Tamaulipas; and they refused to become the instruments of extraditing any person charged with crime in Texas, fleeing to Mexico, and who claimed to be simply of Mexican origin. General Benavides, however, representing the Central Government, concurred in the views of Judge Russell that all the persons engaged in the Rio Grande City outrage should be delivered to the

Texas authorities, and it was so ordered. On September 11th three of the persons were so delivered. Under the directions of Governor Hubbard the commissioner reiterated his demand for the remaining murderer, Garza, and the confederates of the two raiders already delivered. Governor Canales, and Passamento, Judge of the First Instance, replied that rather than comply with the orders of President Diaz every civil officer of the border Mexican States either had resigned or would resign, "freely and frankly confessing," says Governor Hubbard, "as the correspondence will show, that the excited public sentiment of the Mexican people would not allow any more extraditions of fugitives from Texas, of Mexican origin or blood, in any event. It has proved true in letter and spirit. Troops of the regular army of the Central Government of Mexico were ordered from Vera Cruz, and proceeded to Matamoras in the Mexican war steamer *Independencia* ostensibly to enforce obedience to the orders of the Central Government, and especially in the matter of the extradition of fugitives from justice under the extradition treaty. These troops have not caused the arrest of any of the Rio Grande City outlaws, nor endeavored to arrest them; and instead of upholding their government have deserted its standard and affiliated with the revolutionary elements of Tamaulipas and the other border States in their determination to hold the treaty at defiance for the future."

"I cannot fail," continues Governor Hubbard, in his communication of October 4th, to Secretary Evarts, "to call the attention of the United States Government to the fact—undisguised—that Garza and the bandits who released him have been and are now in and around Camargo, in sight of the very spot on which they shot down innocent men and women, and released murderers from the jail. It is a fact, likewise well known, that Esproneda and the two others who were delivered at midnight, opposite Matamoras, were friendless and homeless vagabonds, who, it appears, had depredated as much upon Mexican as upon American citizens; but Garza and the other outlaws are noted desperadoes and representative men of their class—perhaps owning ranches near Camargo and beyond, and have never been molested or in danger of arrest by the Mexican military or civil authorities. In the presence of these facts, and when advised that now and henceforth a demand for fugitives from justice would be to reenact a solemn farce at the expense of the pride and dignity and honor of Texas, I directed that, until further orders, no more efforts should be made for extradition under a treaty ignored on the one part, but which has always been observed in earnest good faith toward the sister republic by the State of Texas and by the General Government. We have no assurance of peace and security along the Mexican border, nor have we had such security since the Mexican War and the annexation of the Republic of Texas as a State to the American Union."

On December 13th a mob of Mexicans and Texas citizens, of Mexican birth, attacked the State troops at San Elizario, in Texas. Six persons were reported killed, including five of the State troops. On receipt of the news of this affair, Governor Hubbard telegraphed for the aid of federal troops, saying:

The Mexican force being too strong to be repelled by the Texas troops, and it being impossible to raise a civil *posse* from the citizens, who are nearly all of Mexican blood and sympathy, and having no reinforcements within 700 miles, I ask the aid of such United States troops as may be nearest to the scene of action, to repel this invasion of our territory.

A favorable response to this application was given by the Administration, and United States troops were ordered to move from New Mexico to the scene of the difficulty. But there seems to have been no further outbreak. The United States troops in this department, while executing orders to prevent marauding from Mexico, carried out as far as practicable instructions from Washington to enforce the neutrality laws and prevent the invasion of Mexico by parties from the Texas side of the Rio Grande. A large party of revolutionists, under Colonel Martinez, was driven across the river in June, pursued to this side, and attacked again, by Mexican troops; they took refuge in one of the United States camps near by, were disarmed and detained prisoners for about a month and until they gave their parole not to organize in the United States to disturb the peace of Mexico. Another party, consisting of 2 officers, 44 men, and 43 horses, organizing for the same purpose, was arrested near Eagle Pass by the troops, August 5th, and, pursuant to law, placed under bonds by the United States commissioner not to violate the neutrality laws. General Escobedo, and 16 officers with him, were arrested in camp near Ringgold Barracks, July 21st, under instructions from these headquarters, and taken before the United States commissioner, who placed them under bonds to keep the peace; and a strict watch was kept over the movements of every Mexican and American who might be suspected of designing to disturb the peace or plunder the people across the border.

The important question, whether the intermarriage of negroes and whites is lawful in Texas, was decided by the United States District Court, at Austin. The question arose under the act of the Texas Legislature passed in 1853, which forbids any person to marry a negro or a person of mixed blood, descended from negro ancestry, to the third generation inclusive, under penalty of confinement in the penitentiary for not less than two nor more than five years. There has been no law passed by the State of Texas since the abolition of slavery prohibiting marriage between the white and black races. The issue before the court, in this case, was whether the act of 1853 is now in force. Judge Duvall held that it was not, for the following reasons:

Because it was passed in the interest and protection of slavery, before that institution had been abolished, and when the negro was not a citizen of the United States, and because it fixes a penalty upon the white person alone. It is a prohibition based solely upon color, and operating on the white race alone. To say that this statute is now in force would be, as it seems to me, to disregard the effect

of the fourteenth and fifteenth amendments of the Constitution of the United States, and the first section of the civil rights bill. I think it infringes upon both. It is unfair and unequal in its operation, because it would visit a heavy penalty upon a white citizen, and none whatever upon a colored citizen, for doing a certain act. It is ordered that the clerk of this court do forthwith direct the sheriff of McLennan County to discharge said Lou. Brown from further custody, as being deprived of her liberty, under the aforesaid act of the Legislature, contrary to the Constitution and laws of the United States.

Excepting the border troubles already described, the public affairs of Texas were very quiet during the past year. There was no session of the Legislature, nor a general election. Efforts have been made, by public officers and others, to disseminate information concerning the natural resources of the State and the inducements which are offered to immigrants to settle there. The natural advantages of Texas are many and important, and are at present attracting a large immigration.

The State may be divided into four regions: Eastern, Central or Middle, Western, and Northern Texas. Eastern Texas embraces the territory between the Sabine and Trinity Rivers, and is the great timber region of the State, there being only a few prairies confined to the Gulf coast. The southern portion is low and level, the northern rolling and elevated, but not mountainous. The greater portion of Central Texas, between the Trinity and Colorado Rivers, is prairie, but there is considerable timber along the streams. Northern Texas, including two or three tiers of counties, from Red River, is about equally divided between prairie and forest. Western Texas embraces the region between the Colorado and the Rio Grande; prairies cover about four-fifths of its surface; with the exception of occasional districts covered with post-oak or the mesquite-tree, timber is confined almost entirely to the valleys of the streams, which are densely wooded. The northwest extremity of the State, between Indian Territory and New Mexico, is known as the "Panhandle." In general the south and southeast portion, along the coast, is level and of little elevation. North of this the country is undulating. The west and northwest region is almost an elevated table-land, while the district between the Pecos and Rio Grande is mountainous. The table-land includes a large part of the Llano Estacado, and has been but imperfectly explored; it is said to vary from 2,000 to 4,000 feet in height. The Llano Estacado or Staked Plain (so called from the great abundance of yucca stems, resembling stakes) extends from the Rio Pecos in New Mexico on the west to the head-waters of the Colorado, Brazos, and Red Rivers on the east, and from the valley of the Canadian on the north to the Pecos on the south. Its surface is gently undulating; vegetation is scanty, owing to the dryness of the climate and the lack of streams. The principal ranges, between the Pecos and Rio Grande, are the Guadalupe, Sierra Hueca, Eagle, Sierra Blanca, and Apache Mountains, attaining in places an elevation of between 5,000 and 6,000 feet. Between the upper waters of the Colorado and Brazos is a large tract of timbered land, known as the "Mesquite Timber," and between the upper Brazos and Trinity a long tract, from 5 to 30 miles wide, extending from Johnson County to the Canadian River, in Indian Territory, and called the "Cross Timbers."

The climate is remarkably salubrious; and, though warm enough for the production of most of the semi-tropical and some of the tropical fruits, it is less enervating and more free from malarious diseases than that of any other of the Gulf States. Northern cool, dry winds occur from October to May at in-

tervals of about a week, rarely lasting more than three days. They produce a sudden depression in the temperature, but are said to make the climate more healthful and the air purer. The heat of summer is tempered by winds from the Gulf which blow far inland. Corn-planting usually begins about the middle of February, and grain is harvested in the latter part of May, and Indian-corn in July. Cotton-picking begins about July 10th, and continues to December 1st. The soil is in general very fertile. The river bottoms are unsurpassed in this respect by those of any State in the Union. There are three or four varieties of soil, each well adapted to certain crops. The stiff black soil of the river bottoms is best fitted for sugar and cotton, though the latter grows well on the prairies and uplands; the finer black or chocolate-colored soil of the prairie lands yields abundant crops of corn and the cereals, and the lighter, copper-colored soil of the uplands is admirable for the grasses and fruits; while the fine silt of the inlands produces the best Sea Island cotton known. Irrigation has been successfully practised in some instances in the west, where rain is scanty. Texas is specially noted as a stock-raising country, for which the mildness of its climate and the great variety of its nutritious grasses peculiarly fit it. The western portion, even where too dry for agriculture, is particularly adapted to cattle and sheep, and here are vast herds and flocks. Large numbers of horses and hogs are also kept. The buffalo and deer are found in the northwest, and wild horses or "mustangs" roam over the western prairies. The chief crops are cotton, Indian-corn, and wheat. Cotton and corn may be grown in nearly every part of the State. Wheat is raised chiefly in the north. The sugar-cane is cultivated principally on the Brazos, near its mouth, and rice in the southeast corner of the State. Oats, barley, beans, tobacco, and potatoes are raised to some extent. In the south, figs and oranges may be produced. In addition to these natural advantages liberal laws, relating to preemption, homesteads, etc., have been passed to induce persons to settle in the State. The constitution provides that "to every head of a family who has not a homestead there shall be donated 160 acres of land out of the public domain, upon the condition that he will select, locate, and occupy the same for three years, and pay the office fees on the same. To all single men, twenty-one years of age, there shall be donated 80 acres of land out of the public domain, upon the same terms and conditions as are imposed upon the head of a family." The statutes passed pursuant to this provision give to every head of a family, man or woman, or a single man of lawful age, who has not a homestead in the State, 160 acres of land to the former, and 80 acres to the latter, out of any part of the public domain, as a homestead, on the only condition that he, or she, will select and occupy it for three years and pay the office fees, which do not amount to more than \$15. These and all homesteads of families acquired in any other manner can never be seized for debt, or their use and enjoyment, as homesteads, be interrupted, so long as an individual member of the family exists, except for the purchase money, taxes due thereon, or for work and material used in constructing improvements thereon; nor can any homestead be sold without the consent of the wife, and cannot be mortgaged or encumbered in any manner except for the debts above named, even with the consent of the wife. The homesteads of a family exempt from forced sale for all debts, except those above specified, shall not exceed 200 acres of land in the country, or if in a city, town, or village, not to exceed \$5,000 in value at the time of its designation as a homestead, without regard to the value of the improvements thereon. The law provides that "there shall also be reserved to every family in this State, free and exempt from forced sale for debts, the following property: All household and kitchen furniture; all implements of

husbandry; and tools and apparatus belonging to any trade or profession, and all books belonging to private or public libraries; 5 milch cows and calves; 2 yoke of oxen; 2 horses and 1 wagon; 1 carriage or buggy; 1 gun; 20 hogs; 20 head of sheep; all provisions and forage on hand for home consumption; all saddles, bridles, and harness necessary for the use of the family; and to every citizen not a head of a family, 1 horse, bridle and saddle, all wearing-apparel, all tools, apparatus, and books belonging to his private library."

THIERS, LOUIS ADOLPHE, ex-President of the French Republic, was born at Marseilles, April 16, 1797, and died at St.-Germain, September 3, 1877. A full account of his literary and political career till 1871, when he became President of the French Republic, was given in the ANNUAL CYCLOPEDIA for 1871. M. Thiers was a strong opponent of the Italian and German schemes for National Unity, which became prominent subjects for discussion between 1860 and 1870. He disapproved the declaration of war against Prussia in 1870, but only because he thought the time had not come, and France was not adequately prepared for war. During the war, he urged the most active and thorough measures of resistance to the progress of the Germans. He was made a member of the Committee of National Defense in the latter part of August, 1870, and shortly afterward undertook a mission to the principal capitals of Europe to ask the governments to intervene in behalf of his afflicted country, all of which proved unsuccessful. He was returned to the Assembly in February, 1871, from 26 different departments, receiving an aggregate of a 1,000,000 votes. One of the first acts of the Chamber was to elect him, February 17, 1871, President of the Executive Power. His first work was the difficult one of obtaining the consent of the Assembly to the extremely onerous conditions of peace which were imposed by the Prussians. Approval of the treaty was secured by a vote of five-sixths of the Assembly. The Assembly was removed to Versailles in March, and Paris a few days afterward fell into the hands of the Communists, who inflicted immense damage upon the public works, and the persons and property of obnoxious persons, destroying, among other objects of their hostility, M. Thiers's own residence. The city was captured by the forces of the government on the last of May, after having been for about two months in the possession of worse enemies than the Prussians, and the participants in the communistic outrages were punished. M. Thiers was strengthened at the supplementary elections for the Assembly in July, 1871, and the Assembly, meeting in August, passed a vote of confidence in him, enlarged his powers, changed the title of his office to that of President of the Republic, and made his term of office three years. The attention of the government was directed chiefly, till that object was accomplished, to the payment of the war indemnity to Prussia,

upon which the entire withdrawal of the German armies from French soil was conditioned. M. Thiers labored so well in this work, and inspired so enthusiastic a popular coöperation with his efforts, that not only was no default made in the payment of the immense installments that were required, but most of them were paid before they were due, and the final payment was made some time before the period specified in the treaty had expired. M. Thiers had always been known as a Constitutional Monarchist, and an advocate of the pretensions of the house of Orleans. He was, however, a strong opponent of the Second Empire. His views relative to the form of government best for France were partly modified by his experience as Chief of the Executive, and he declared himself in his message of November, 1872, in favor of the Republic, as the form of government acceptable to the majority of the people, and the only form that could be upheld in the existing condition of the country. This declaration produced a coalition of the monarchical parties against him, which grew stronger as his attitude in favor of the definite establishment of the Republic became more distinct. Various circumstances strengthened the combination, and an adverse vote was passed against M. Thiers by the Assembly, under the pressure of which he resigned the office of President of the Republic, May 24, 1873. He resumed his place as a member of the National Assembly, but he did not afterward take an active part in political discussions, although he was always ready to give the Republicans the benefit of his counsels, until the exciting events which followed President MacMahon's dismissal of the ministry on the 16th of May, 1877, brought him forward again as the central figure of French politics. After the dissolution of the Assembly in June, 1877, the Republicans turned to M. Thiers as the one man whom all the people could trust, and as their destined leader. Through all the exciting events which followed, till his death, he was looked to with confidence as the statesman who could and would be called upon to lead the country out of the difficulties in which a mistaken policy had involved it. His death was at first regarded as a great blow to the hopes of the Republicans, as it left no man conspicuous in their ranks who was not liable to the distrust of the conservatives as of too radical tendencies. The apprehended disaster to the prospects of the party was partly removed by the discovery among M. Thiers's papers of the draft of a manifesto written with express reference to the situation of the country, which described in the strongest terms the dangers of the course which the government was pursuing, and advised a persistent adherence to the conservative republic. The leaders of the party adopted the programme of M. Thiers, and practised the moderation he recommended, and the Republicans were saved from defeat.

All parties united in testifying to the distinguished services M. Thiers had rendered the country. He was universally acknowledged, with the deepest expressions of gratitude, to have been the man to whom, above all others, France was indebted for the restoration of peace, for final deliverance from the Germans, and for the opportunity to recover itself. President MacMahon issued an order on hearing of his death, recommending that all divisions should for a time disappear in order, by a great national demonstration, to pay honor to him. The government desired to give him a public funeral, but Madame Thiers preferred to keep the control of the arrangements in her own hands. Letters of condolence were sent to his widow from all the heads of the house of Orleans, from Queen Victoria, from the ex-Queen of Spain, from the Sultan of Turkey, from Prince Gortchakoff, from the Count von Westphalen, expressing the personal respects of Prince Bismarck, from Marshal Serrano, and Castellar, of Spain, and from other eminent dignitaries of several nations.

THOMPSON, RICHARD W., Secretary of the Navy, was born in Culpepper County, Va., in 1809. In 1831 he went to Louisville, Ky., and soon after removed to Lawrence County, Ind., where he taught school for a while. In 1834 he was admitted to the bar and was elected to the Indiana Legislature, to which he was reelected in 1835. He afterward served two years in the State Senate, of which he was president *pro tem*. In 1840 he was a presidential elector, and advocated the election of General Harrison. He was again a presidential elector in 1844. He was a representative in Congress from 1841 to 1843, and from 1847 to 1849, when he declined to be a candidate for reelection. He afterward resumed the practice of the law in Terre Haute. He was a presidential elector in 1864 and delegate to the Republican National Convention of 1868. He has written many political platforms and acquired a wide reputation as an excellent platform-maker. The resolutions adopted by the Chicago Convention in 1860 were written and read by him. He was chairman of the Indiana delegation at the Cincinnati Convention in 1877, and in an effective speech he brought the name of Senator Morton as a candidate before the convention. When President Hayes organized his cabinet, Mr. Thompson was made Secretary of the Navy.

Mr. Thompson is the author of "Papacy and the Civic Power," published in 1876.

TODLEBEN, FRANZ EDUARD, a Russian general, was born May 20, 1818, in Mitau, as the son of a merchant. He entered the school of cadets in Riga in 1829, went from there to the school of engineers in 1838, and four years later entered the cadet battalion of sappers, where he soon attracted the attention of his superiors. Up to 1846, he was employed in building the fortifications of Kiev, and then fought for three years in the Caucasus. Dur-

ing the Crimean War he planned and constructed the fortifications of Sebastopol, which he made one of the strongest fortresses in the world. This work gained for him the reputation of one of the foremost engineers of the time, and the high esteem of the Czar, who spoke of him only as "my defender of Sebastopol." Since 1856, he has held the position of aide to the Grand-Duke Nicholas, and his advice is consulted on all occasions. When Baron Krüdener so signally failed in reducing Plevna, General Todleben, who had up to that time remained in St. Petersburg, was called to the seat of war and was intrusted with the direction of the operations.

TORPEDOES: It was not until the American civil war that the electric torpedo was effectively employed; and the terrible success which was accomplished with both offensive and defensive torpedoes in that war acquired for it the high position it holds among modern weapons. The application of electricity to the torpedo made it a secure and manageable weapon. During the Franco-German war the harbors of the North Sea were so effectually fortified with torpedoes that the splendid French fleet never ventured near the coast.

It was expected that the latest types of attacking torpedoes and the various schemes of torpedo-defense would be well tested in the late Russo-Turkish war; but although the action of the Turkish fleet was greatly hindered by the fear of these lurking foes, there were few actual encounters, and the newest forms were not employed at all. The only offensive torpedo used in the Turkish war was the spar variety. A Turkish monitor was sunk in the Danube by a torpedo attached to her side with reckless daring on the part of the attacking crew, and fired by the electric spark.

In all the great marine powers a torpedo service and special schools of instruction have been instituted. In the United States a naval torpedo-school was established some years ago at Newport; there is also a torpedo-station for the army at Willett's Point, on Long Island. (*See NAVY, UNITED STATES.*)

In England instruction in this branch is imparted at the Royal Naval College, at Greenwich. In the French torpedo-school, at Boyardville, both officers and seamen are instructed in the management of this submarine weapon. Germany has a torpedo-station and a full corps of experienced instructors, both at Kiel and Wilhelmshaven. A torpedo-service has lately been organized in Russia also, with two depots and schools for instruction.

Torpedoes are of two general classes, answering essentially different purposes—ground or stationary torpedoes, and offensive torpedoes. Stationary torpedoes are employed for coast and harbor defense, or to protect a body of shipping of inferior strength from attack. They consist of shells of metal or wood moored to anchors or stockades, and fired either by concussion or by an electric current sent from

shore or shipboard. The usual form is an iron cask, containing the charge of gunpowder, dynamite, or gun-cotton, with its fuse or cap, and an air-partition for buoyancy, fastened in a position a few feet below low water to an iron mooring-block by a chain. They are often disposed in two or more lines across a water-passage, so that, if a hostile ship is not injured by a torpedo in the first row, she will yet have

to pass a second or third line of mines; the torpedoes may be placed effectively 100 feet apart, with a distance of 500 feet between the lines; an ordinary charge is 250 lbs. of gun-cotton. The inner lines should be provided with circuit-closers, to act when darkness or fog prevents the operators from watching. The ordinary way of determining when a ship is over one of the mines is by cross-bearings, two observers watching from different stations, and firing when a point of intersection denoting the position

FIG. 1.—AUSTRIAN SUBMARINE MINE.

of a mine is reached in the course of the vessel. Automatic telescopic firing-keys have been devised, which are attached to the observers' spy-glasses, and which break the circuit whenever the telescope, in following the ship, bears on a point where there is a torpedo.

In English torpedoes gun-cotton is the usual explosive material. It is compressed into disk-shaped cakes while moist, in which condition it is non-inflammable, and can only be exploded by a certain detonating agent, which consists of a cake of dry gun-cotton exploded by a cap of fulminate of mercury. On the Continent of Europe dynamite is preferred as a torpedo explosive. Gun-cotton, when packed in its moist state, is safer to handle than powder; dynamite, also, can be so compounded for electrical firing that there is no danger of an untoward explosion from concussion. Extensive observations have been made in the behavior of different explosives at various depths, and in different positions. The vertical effect is very much greater than the lateral effect of a torpedo in the water. For that reason, and because the bottom of a vessel is not protected with armor, it is sought to explode torpedoes as far down on the ship's hull as possible. The English moor fixed torpedoes in groups, to be fired simultaneously, in order to secure this vertical action. Gunpowder is not adapted for offensive torpedoes, but may be used with advantage in sunken mines. It can be employed in sufficient charges at a considerable depth; 2,000 kilogrammes, exploded 40 metres below a ship's bottom, will make a hole 6 metres in diameter, if the hull be directly over the mine.

The effect of gun-cotton for the rupture of hulls is calculated to be equal to that of 3.75 times its weight of gunpowder. A moored torpedo of 500 lbs. of gun-cotton will destroy a strong iron-clad, if exploded 40 feet below her bottom; such a torpedo will throw up a cone of water 60 feet high and 220 feet broad at the base.

Moored torpedoes of dynamite can be combated by countermining. Experiments were made in Denmark about three years ago, which proved that dynamite torpedoes cannot be planted near together in the water without exploding simultaneously. A charge of 150 lbs. of dynamite in 10 feet of water will discharge, by the vibrations imparted to the water, all the dynamite within a distance of 300 feet, upon its explosion. Gun-cotton is also very sensible to vibrations communicated to the water by the same material. It was noted, in the same series of experiments, that a current of electricity from a powerful electric machine, traversing one of a bundle of wires, will induce secondary currents in the other wires, which will discharge other torpedoes than the one meant to be operated. This fact has led to a plan of defense by which a whole system of mines may be cleared by connecting the wire of one of them with a frictional electric machine. By exploding countermines off a man-of-war the danger of sunken dynamite torpedoes can certainly be averted. A harbor entrance can be cleared by suspending countermines from buoys, and, after letting them drift with the wind or tide into the desired position, discharging them by electricity; 500 lbs. of gun-cotton is calculated to be sufficient to destroy all submarine mines within the radius of 120 yards. Still more formidable than torpedo mines are the modern locomotive torpedoes, the principal forms of which are described below. The old style of offensive torpedoes, which were floated down against their object and fired by concussion, clock-work, or time-fuses, were too uncertain in their action and too easily detected and avoided to require any special safeguard. The modern submerged locomotive torpedoes and torpedo-launches are so perfectly under the control of their operators, so fatal in their action, and so swift in their movements, that it is thought by many that they have rung the knell of the expensive, mighty iron-clads of modern navies. Under the conditions when they attack they can hardly be avoided if seen. They demand special means of protection; the most promising modes of defense yet devised are described below. The Whitehead fish-torpedo, the Harvey towing-torpedo, and the Lay torpedo-boat are all submarine, and are operated at a distance. The Whitehead is discharged, with a swift, unerring aim, at its object; the Lay submarine boat is steered and operated by electricity; the Harvey torpedo is guided by the craft which tows it, and shows no sign of its approach; the torpedo-launches can be sent out without

a crew, and steered by electricity, but generally they are manned.

The Harvey torpedo, invented by Commander Harvey, of the British Navy, in 1862, is charged with gunpowder, which is ignited by a percussion bolt of detonating powder. The torpedo is incased in a wooden box, which is

FIG. 2.—HARVEY TORPEDO.

buoyant, although cork buoys are sometimes employed in addition. This torpedo can be lowered from a ship's deck by means of a windlass, and is very useful for a vessel which is pursued by a hostile ship. It can be dropped down to the surface of the water in such a position that it will either drift or remain in the course of the vessel giving chase. On being struck by the hull of the ship, a lever is pressed down, which sets in motion the mechanism which discharges the detonator. The charge is sufficient to stave a hole in a vessel's side or bilge. While being towed, the torpedo-chest always floats on the surface; but it can be ballasted, so that it will sink, upon slackening the wire tow-line, under the hostile vessel, and can be fired against the ship's bottom, either by the mechanical firing-bolt, which operates by contact, or also by electricity. There are two different forms of case, one for the star-board and one for the port side.

The Whitehead fish-torpedo is a steel cylinder, shaped like a cigar, and pointed at both ends; it is 14 to 19 feet in length, and 14 to 16 inches in diameter. The interior is divided into 3 compartments: in the head is placed the explosive, some 350 lbs. of gun-cotton; in the

FIG. 3.—LUPPIS WHITEHEAD TORPEDO.

centre is a chamber holding the propelling and regulating machine; in the tail part is contained the supply of compressed air which works the engine. The diminutive engine which propels the torpedo has a capacity of

40 horse-power, although its weight is only 35 lbs. The mechanism can be regulated so that the boat will travel through the water at any required depth, from 1 to 30 feet below the surface. The tension of the compressed air is 800 lbs. per square inch, but the air-chamber is tested to 1,200 lbs.; the charge is sufficient to propel the torpedo 220 yards at the velocity of 24 knots an hour, or 1,000 yards at the rate of 20 knots an hour. The torpedo is driven forward by two small three-bladed steel screws, right and left handed, placed behind. The case of the torpedo is of specially prepared steel, and the screws are made from the finest quality of metal. The torpedo is fired from an impulse tube, which is fitted into a post below the water-line; or it may be fired from the deck, sinking immediately to the depth at which it is set, and then going straight to its target, the rate at which the vessel from which it is discharged is sailing making no difference in the accuracy of the aim, which is so perfect that a vessel, distant 1,000 yards, can be hit every time, though sailing 10 or 12 knots an hour. The torpedo is made to sink and remain during its travel at a certain depth below the water-line by means of an horizontal balance-rudder; the fish is generally ballasted to swim about 8 feet below the surface, and charged for a journey of 1 to $1\frac{1}{2}$ mile. It is so contrived that, if it fails to hit the object-vessel, it will rise to the surface, and, having been rendered harmless by a guard-trigger, can be recaptured; or it can be constructed to sink to the bottom after running its course, and explode at half-cock. The charge of explosive is sufficient to rend a hole in a ship's side of 70 feet area.

These torpedoes are manufactured by Messrs. Whitehead & Co. at Fiume, on the Mediterranean, and are purchasable for all the world, like Krupp's cannons. The first effective fish-torpedo was made in 1867. The secret of their construction has been sold to the British Admiralty.

FIG. 4.—WOOD AND LAY TORPEDO.

The Lay torpedo, or submarine torpedo-boat, is the invention of Mr. Lay, of Buffalo, and has been purchased by the United States Government. It is a cylindrical boat, with conical ends, carrying a spar-torpedo, or containing in its forward end a sufficient quantity, say 100 lbs., of explosive. The motive power is supplied by an engine worked by carbonic

acid gas, which drives a screw-propeller. The liquid to be expanded into gas is stored in the forward section of the cylindrical body. There is a coil of rope in the interior, which connects it with the point from which it has been dispatched. The torpedo can be launched from shore as from a ship. All its movements are within the control of the operator on shore, who steers it, regulates its machinery, and explodes it by means of a compact electrical battery and key-board. The course of the boat is shown to the operator by a small flag which rises above the surface of the water. Experiments were made with the Lay torpedo at Cleveland, Ohio, in the early part of the summer, which showed that the course of the boat was perfectly under control; the speed attained was at the rate of 9 miles an hour around a goal half a mile from shore.

A locomotive torpedo, called the "rocket-torpedo," designed by Mr. Macdonald, in England, is said to have three times the velocity of the Whitehead torpedo, and a range of over two miles. The rocket-torpedo is cigar-shaped; it is made of various sizes, according to the length of its intended course, and the amount of explosive in the charge. It is discharged from a skeleton-tube, or trough, by means of an electric fuse; it may be sent from a boat or from the side of a man-of-war with equal facility. Its motive power is derived from the gas developed in the slow combustion of some composition which evolves a rapidly expanding gas. It has more than all the merits of the Whitehead torpedo, it is claimed, without the danger of compressed air, and can be fired with the utmost accuracy, the speed not diminishing in the latter part of the course. Its cost, also, is only one-tenth that of the Whitehead.

The famous Thornycroft launches, fitted for spar, fish, and other torpedoes, are redoubtable aids in torpedo-warfare. The first of the fast torpedo-boats made by the firm was the river-launch, built in 1871, which, although less than 50 feet long, could make $16\frac{1}{2}$ knots an hour. Boats were soon ordered for the Norwegian, Swedish, and Danish Governments, of somewhat greater size, engined with about 90 horse-power, in which 6 air-compartments were introduced for safety; they were armed with towing-torpedoes, whose course was on one side of the boat, like the Harvey.

Larger launches were then made for France and Austria, of 67 feet length and 8 feet 6 inches beam, draught 4 feet 3 inches, and indicated horse-power 200, capable of a speed of over 18 knots an hour. These were armed with spar-torpedoes, to be fired by electricity or upon contact at will of the operator. The French boats steamed across the Channel in the open

sea. Experiments were made with these boats at Cherbourg in February and March, 1877, which proved that they can discharge their torpedoes with safety. The old hull of a frigate, named the *Bayonnaise*, towed along at the speed of about 6 knots an hour, was attacked by one of the Thornycroft launches. A large rent was made in the side of the wooden hulk, which sank directly to the bottom. The interest of the experiment centred in the effect of the shock on the torpedo craft. This was driven back some distance, and was entirely submerged for a few moments by the great sheaf-like wave which arose between it and the ship attacked. The torpedo was charged with 15 kilogrammes of damp gun-cotton; it was exploded $8\frac{1}{2}$ feet below the surface, at the end of a 40-foot spar. Six launches larger than these have been made for the French Government. They are 87 feet in length, and 10 feet 6 inches in the beam, and are guaranteed for a speed of 18 knots for 3 consecutive hours; the plates and frames below the water's surface are galvanized. Launches of somewhat smaller dimensions, engined for 18 knots an hour, have been furnished to the Dutch navy, and others, armed with Whitehead torpedoes, to the Italian navy. The Lightning torpedo-launch, constructed for the British Government, is 84 feet long, and 10 feet 10 inches in the beam, with a draught of 5 feet, and an indicated horse-power of 350; she has made on trial 19.4 knots per hour, and has considerable sea-going powers. The armament is Whitehead's torpedoes, which are discharged from the deck, forward. The Thornycroft launches are built of thin steel plates, fitted in the lightest manner. They are designed and engined for the highest attainable speed, though several of the larger ones can ride in rough weather without danger.

An admirable torpedo-launch has been built by the English house of Wiggell & Co. The boat is composed in all its parts of steel; it is the very finest quality, and the hull is galvanized inside and out, to prevent deterioration from the sea-water. The launch, though 75 feet long, with 10 feet beam, does not weigh over 12 to 14 tons. It has 8 water-tight compartments, any one of which is sufficient to float the craft. The deck is covered with a bullet-proof armor of crucible steel, $\frac{3}{8}$ of an inch thick. It is almost invisible in the water, being painted a greenish-gray color: as smokeless coal is used for fuel, no smoke nor any steam is seen; and no noise is made in the passage through the water. These launches are armed with Whitehead torpedoes. The cold-riveting of the seams is a work of great delicacy. The main engines, of 250 horse-power, are of the compound description, and remarkably small and light. Other engines drive the air-pump and the circulating pump of a surface condenser. The engines are lubricated without oil, which would cause the decay of the boiler-plates. The boiler is worked at a pressure of 120 lbs. per square inch, and the boats are war-

ranted capable of a speed of 18 knots an hour. The propelling-screw is three-bladed, having four different pitches to work in the water to the best advantage. The interior is ventilated by a fan driven by an engine made of phosphor bronze, which is run at 13,000 revolutions per minute. The boat rises 2 feet 6 inches above the surface of the water. The commanding officer stands in a sighting-turret and issues his commands to the inclosed interior through speaking-tubes, and steers the launch himself. The Whitehead torpedo is contained in a tubular casing at the side of the boat. The torpedoes are lowered into place by a peculiar gearing, and are charged to travel with an accurate aim for 400 yards. The torpedo is discharged from the tube by a current of compressed air. These launches are fitted with apparatus for discharging also Greek-fire or crude petroleum for a distance of 300 feet in 18 seconds of time; the petroleum ignites by the enemy's own fire, or is set on fire by a rocket.

One of the complete and formidable systems of torpedo-warfare has been developed by Admiral A. D. Porter, of the United States Navy, in the torpedo-steamer *Alarm*, built and fitted up after his plans, and commanded by Lieutenant Frederick H. Paine. The *Alarm* is 172 feet in length, 32 of which consist of the submerged ram; her breadth of beam is 27 feet 6 inches, and her draught 11 feet. She is built of charcoal iron on the bracket-plate plan, having a double hull, and is further divided up into water-tight compartments. From the extremity of her submerged bow protrudes a spar-torpedo, 13 feet below the water-line; and from each side project similar torpedoes, which explode under the enemy's bottom, when she swings around broadside. Nearly the whole hull is under water, displacing about 700 tons, the deck being only 3 feet above the sea; yet she is able, with her powerful compound engines, of making 15 knots an hour. At the bow is a 15-inch gun. With a strong electric light an enemy can be sighted at night. In her beams the torpedo-ship is armed with machine-guns for close fighting. The boat is steered by the same apparatus with which it is propelled, the Fowler wheel. With this triumphant mechanism the vessel can be turned about almost instantly, as though on a pivot. The torpedoes are thrust out from their receptacles in the depths of the hold immediately on the word of command. The spars are long iron cylinders, having at the extremity a metallic shell containing the explosive, a hundred pounds or more of gunpowder; it is fired by electricity; the angle at which the spar projects can be diversified by a heavy tackle, so that the torpedo may be sunk to any desired depth below the surface before striking and exploding. The ram must always attack the enemy bows on, which, owing to the feathering arrangement of the propeller, by which her direction can be momentarily altered without loss of leeway, she will be enabled to do

in every case except in a stern chase after a fleetier vessel. The Alarm has excellent sailing qualities, riding buoyantly in the heaviest seas. All the peculiar and novel mechanical arrangements are ripely contrived and conveniently disposed. She seems impregnable to the heaviest artillery, all her works and vital parts being under water, and only vulnerable through the steel-sheathed deck; several of the hermetically closed compartments might be penetrated without sinking or disabling the boat: the only danger probable is lest she be dragged down by the wreck of some gigantic iron-clad which she had destroyed. A remarkable feature in Admiral Porter's torpedo-boat is the precaution against the netting, mentioned below among torpedo defenses, which would render that kind of protection futile. If the torpedo strikes against one of these guards, its presence is indicated by a mechanical contrivance; and when the netting is pushed back, or broken through, and actual impact on the vessel's hull is accomplished, that event is mechanically indicated, and then first does the operator set off the torpedo.

The most promising schemes yet suggested for the special defense of ships against the attack of torpedoes are to hang a crinoline of wire-netting under the bilge and around the sides of a man-of-war, or to surround it with a convoy of torpedo-boats and towing-torpedoes, which must be numerous enough to watch for and intercept any attacking-torpedo. The latter method would greatly complicate a naval engagement. The British Thunderer has been provided with a crinoline of chain-netting. Various kinds and forms of netting defenses have been designed with the purpose of presenting the strongest protection against the torpedo consistent with the least resistance to the water. At best, such a defense would be a serious hinderance in sailing and manœuvring the vessel. In experiments with improved Whitehead torpedoes, a chain-net has been easily perforated, although the wire was $\frac{1}{8}$ of an inch thick. The best form of net has been found to be wire grummet-matting, with strands about half an inch thick, rove into open meshes. Its advantage over the other kinds of netting is its great flexibility; the force of the torpedo is gradually arrested, the mat giving and then throwing off the torpedo on its recoil. The plan of providing a ship with defensive satellites, which shall patrol beside and before her when there is danger of torpedo attacks, is perhaps more practicable. She could be protected against attack from behind by a number of Harvey torpedoes or Whitehead torpedoes towed in the same way, which could be discharged against an attacking launch when sighted. It might be possible to protect the beams and bow also with torpedoes towed alongside. This plan of defense, if practicable against torpedo-launches, would still be a very imperfect protection against Whitehead and other submarine types of torpedo. Artillerists

have not yet despaired of defending vessels against torpedo-boats with light guns, which can quickly be brought to bear, and rapidly reloaded, or perhaps with some modified form of the Gatling gun, the principal object being to discharge as many shots as possible at the diminutive craft during the three minutes or so while she is within range.

TRANSVAAL REPUBLIC. This free state of Southern Africa ceased to exist as a separate nation in 1877, the territory of the republic being annexed by a British special commissioner to the British Empire on April 12th. After the occupation of Natal by the British in 1842, the Dutch Boers, or farmers, who formed a large part of the population, moved beyond the Orange and still later beyond the Vaal River, and here formed the two republics of Orange River and Transvaal. The latter was recognized by the British Government in 1852, and the Orange River Free State two years later. The Boers had constantly to struggle for superiority with the natives, who outnumbered them almost ten to one, and in 1876 this struggle threatened the very existence of the Transvaal Republic. (*See ANNUAL CYCLOPEDIA*, 1876.) In January, a British commissioner, Sir Theophilus Shepstone, arrived at Pretoria, the capital of the Transvaal, accompanied by only a small body of Natal mounted police, besides his staff. As early as October 15, 1876, he had received his royal commission of appointment, by which he was authorized, in certain circumstances, to annex so much of the territory adjacent to the British colonies as to him, after due consideration, should seem fit. Immediately upon his arrival, Sir Theophilus Shepstone placed before the president, Mr. Burgers, the views and intentions of the British Government as regarded the necessity of an entire change in the administration of the country. The *Volksraad* or local parliament was summoned to consider the commissioner's proposals, and during the animated discussions which then ensued the president endeavored to bring the members and the people to a sense of the condition of the republic by the most full exposure of its weakness and extremity, and of the unpatriotic apathy of its people. He urged the Legislature to accept the terms proposed by Lord Carnarvon for a confederation with the British colonies. To this the extreme independents were bitterly opposed. He then warned them that without a proper conception of their obligations as a civilized government, their independence could not be maintained, and therefore proposed an alteration in the constitution which would give more power to the executive, and this was accepted as a means of escape from impending dissolution. Ministers of finance, of public works, of war, of justice, and other functionaries with high-sounding titles, were nominated to office; but in the mean while the financial condition of the country, bordering upon a state of bankruptcy, remained unimproved. Under

these circumstances the commissioner, on April 9th, declared his intention to proclaim, provisionally, the authority of the Queen over the territory. The president, Mr. Burgers, issued a formal protest against such proceedings, but intimated that he would, on behalf of his government, submit provisionally, while a deputation proceeded to England and America for the purpose of defending the rights of the people, and endeavoring to arrive at a peaceable solution of the matter. On April 12th, the proclamation of annexation was formally made. It began with a reference to the "Sand River Convention," which recognized the Transvaal as an independent state precisely a quarter of a century ago. The language of that instrument was very explicit; it guaranteed on the part of the British Government to the emigrant farmers north of the Vaal "the right to manage their own affairs, and to govern themselves according to their own laws, without any interference on the part of the British Government." But this arrangement, according to Sir T. Shepstone's reasoning, was founded upon certain well-understood though unexpressed conditions. The chief of these was that the new state should be able to maintain order and to control its native neighbors. But order had been imperfectly secured; the government failed to protect many of the white subjects, who were forced to make terms with the native chiefs and to pay them blackmail. Panics were frequent, both in the north, where Secocoeni's victory had disorganized the community, and in the south, where the Zulu king was threatening invasion. Loss of confidence had produced commercial ruin and state bankruptcy. The white inhabitants, though so vastly outnumbered by the blacks, had been divided into factions, and the approach of the presidential election, "so far from allaying the general anxiety or from inspiring hope in the future, is looked forward to by all parties as most likely to result in civil war, with its attendant anarchy and bloodshed." The temptations to which the natives were subjected by this spectacle of weakness had been increased by the war, in which the Boers suffered defeat in 1876, "thus at once shaking the prestige of the whites in South Africa, and placing every European community in peril." These were the reasons advanced by Sir T. Shepstone to justify the interference of the British Government with the independence conceded to the Boers by the Sand River Convention. The proclamation noted still further "how strongly a large proportion of the inhabitants of the Transvaal view the urgency and imminence of the circumstances by which they are surrounded, the state being unable to devise any means by which the country is to be saved from ruin." The territory, therefore, of the South African Republic was declared to be subject to the British Crown. The discontented were warned not to attempt resistance. Provision was made for the continuance of ex-

isting administrative and judicial arrangements, and a separate government was guaranteed to the Transvaal.

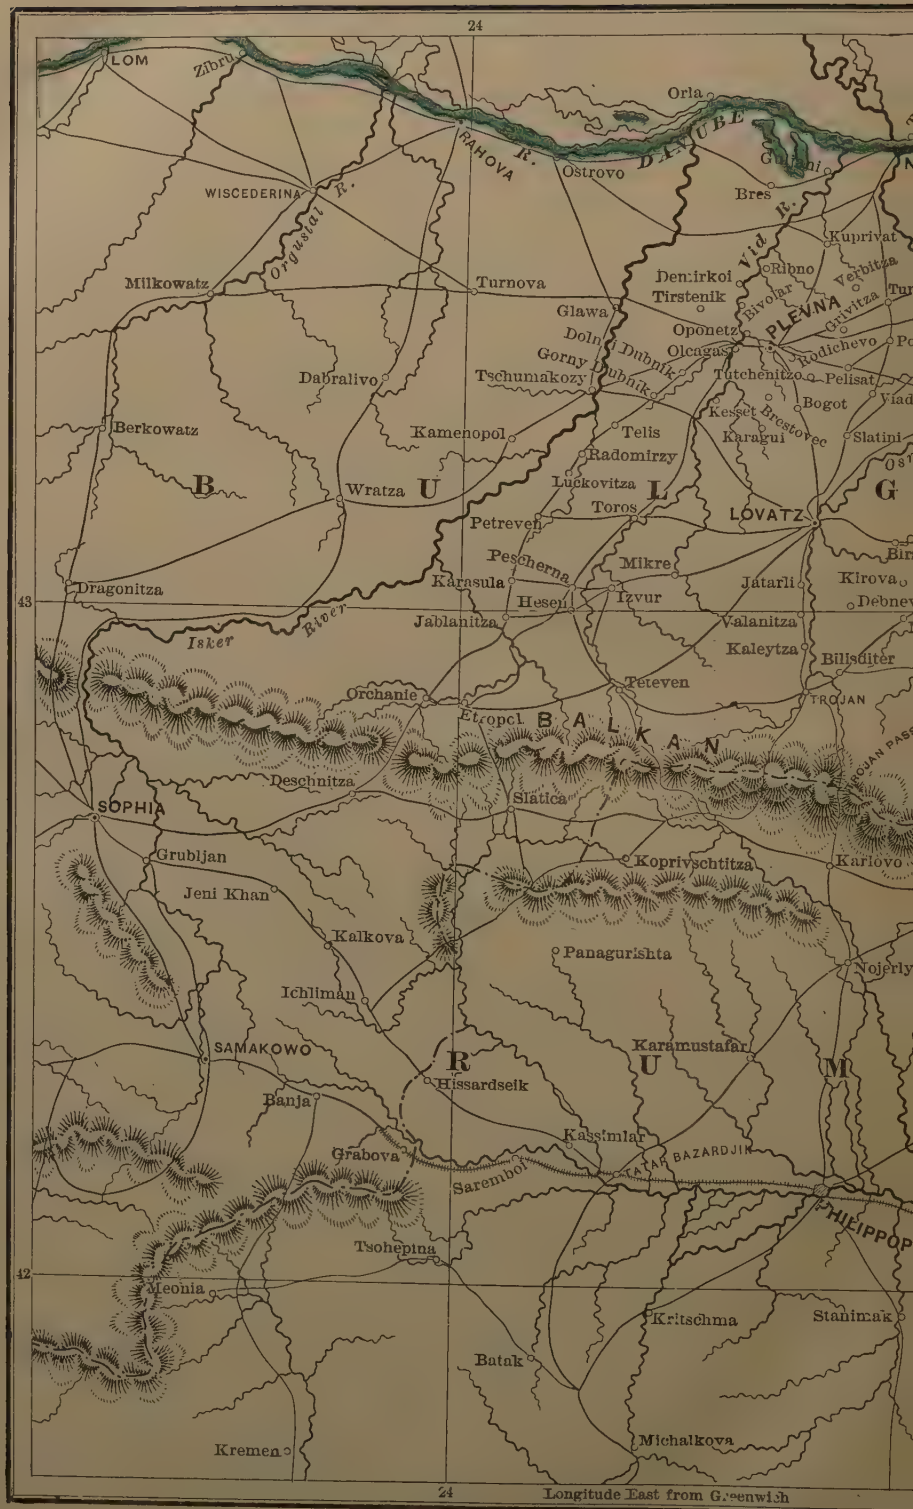

The change of government was effected without any disturbance. On May 4th, a command of British troops arrived in Pretoria and were cordially received by the population. Among the people the annexation met with but very little opposition. On the natives the effect of the annexation was also good. When it became known to them that the country had passed under British rule, they laid down their arms, and sent messages of friendship to Sir T. Shepstone.

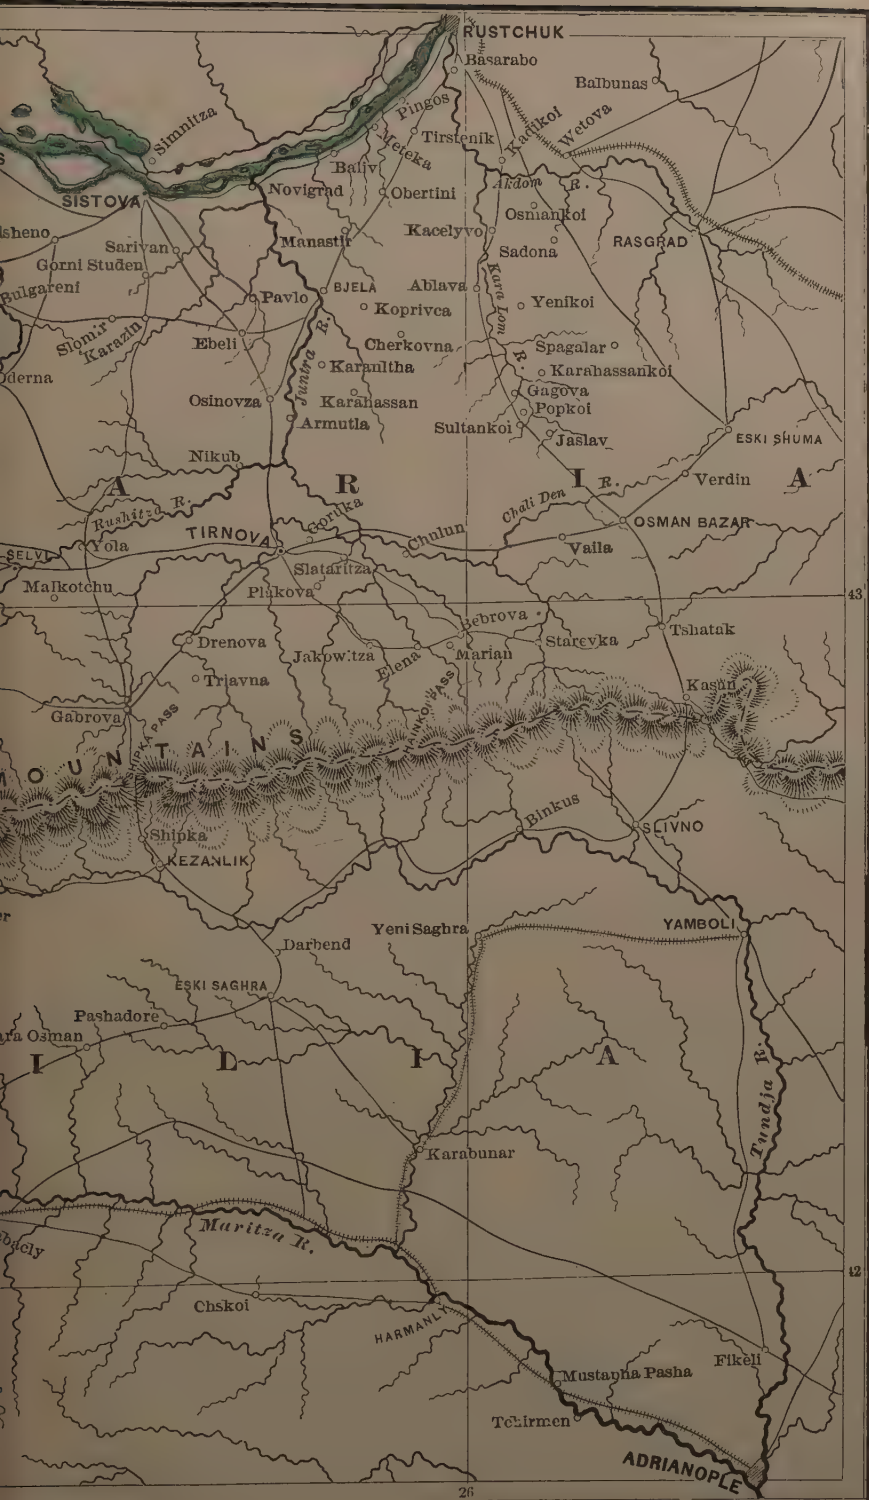

TURKEY, an empire in Eastern Europe, Western Asia, and Northern Africa. Reigning sovereign, Sultan Abdul-Hamid II., born September 22, 1842; succeeded his elder brother, Sultan Murad V., August 31, 1876. The heir-presumptive to the throne is Mehemet Reshad Effendi, the brother of the present Sultan, born November 3, 1844. (For an account of the dependencies of Turkey see EGYPT, MONTENEGRO, ROUMANIA, and SERVIA.)

The area and population of the Turkish Empire were as follows, according to the reports of the Statistical Department of the Turkish Ministry of Public Instruction:

DIVISIONS.	Area.	Population.
1. TURKEY PROPER.		
In Europe.....	140,370	9,400,364
In Asia and Africa.....	1,087,899	13,079,112
District of Constantinople.....		1,400,000
Nomads.....		2,000,000
Army and police.....		560,262
Foreign population.....		500,000
Total Turkey proper.....	1,228,269	31,939,738
2. DEPENDENCIES.		
In Europe:		
Roumania.....	46,799	5,073,000
Servia.....	14,606	1,367,000
In Africa:		
Egypt.....	869,839	17,000,000
Tunis.....	45,716	2,000,000
3. Tributary Principality of Samos.....	212	35,873
Total dependencies and tributary states.....	976,722	25,475,873
Total Turkish Empire....	2,204,991	57,415,616

An interesting account of the finances of Turkey, and of the causes which contribute to their present condition, is given in a work entitled "Stambul und das moderne Türken-thum" (Leipsic, 1877). It says: "It is probably without a parallel in the annals of history that a state which, 25 years ago, did not have a public debt, should contract within 20 years, in the midst of peace, and in possession of the most fertile and richest lands, a debt of 5-6,000,000,000 francs, and then declare itself bankrupt. But there was also a conjunction of events which has no parallel in history: an avaricious monarch, a government whose members did not even know the first principles of political economy, a large number of pashas over head and ears in debt, and all these indi-

viduals in the hands of swindlers of the worst kind, and, in addition, a corrupt press, which lauded these shameless proceedings in unmeasured terms."

In a report by Mr. Eugene Schuyler to the State Department at Washington appears a statement of the trade of Constantinople with the United States, for the year ended June 30, 1876, showing that the total imports amounted to \$2,665,426, and that the total exports to this country were valued at \$154,248. The articles imported were valued as follows:

Rifles.....	\$1,515,888
Carbines.....	26,186
Ammunition.....	922,020
Petroleum.....	187,571
All others.....	8,811
Total.....	\$2,655,426

This was an increase of \$940,637 as compared with the preceding year. The principal items of the exports to the United States were:

Opium, about.....	\$52,000
Attar of roses.....	48,000
Bags.....	21,000
Rugs.....	6,000
And miscellaneous "bazaar articles".....	17,000
Total.....	\$189,000

During the year only seven American vessels cleared from the port of Constantinople, as against no less than 2,134 British vessels, 1,732 of which were steamers.

On January 31st the Russian Government issued a circular note to its representatives at the courts of the other guaranteeing Powers. After recapitulating the diplomatic efforts at pacification, extending from the outbreak of the insurrection in 1875 to the convening of the Constantinople Conference, the note continues:

This conference in its preliminary deliberations arrived at a complete understanding, both respecting the conditions of peace, and the reforms to be introduced. It communicated the result to the Porte as the firm and unanimous wish of Europe, but met with an obstinate refusal. Thus, after more than a year of diplomatic efforts, demonstrating the value the Great Powers attach to the pacification of the East, and the right they possess of insuring it, because of the general interests involved, and their firm desire to obtain it by means of a European understanding, the Cabinets again find themselves in the same position as at the commencement of the crisis, which is further aggravated by the blood that has been shed, the passions that have been raised, and the indefinite prolongation of the deplorable state of things which weighs upon Europe, and justly preoccupies public opinion and the Governments.

The Porte pays no regard to its former engagements, to its duties as a member of the European concert, or to the unanimous wishes of the Great Powers. Far from having made a step toward a satisfactory solution of the Eastern question, the Ottoman Empire has been and remains a permanent menace to the peace of Europe, as well as to the sentiments of humanity and the conscience of Christian peoples.

The conference became a failure, and the ambassadors departed, leaving the embassies in care of *chargés d'affaires*.

In March, General Ignatieff set out on a tour to the different capitals, in order to propose a protocol to the signatory Powers. The proposal met with opposition from the British Government only, as several parts of it were considered derogatory to British interests. After considerable negotiations the Protocol was finally signed on March 31st.

Previous to the signing of the Protocol a meeting of the different ambassadors was held in the British Foreign Office. The minutes of this meeting were as follows:

Count Munster, Ambassador of Germany; Count Beust, Ambassador of Austria-Hungary; the Marquis d'Harcourt, Ambassador of France; the Earl of Derby, her Britannic Majesty's Principal Secretary of State for Foreign Affairs; General Count de Menabrea, Ambassador of Italy; and Count Shuvaloff, Ambassador of Russia, met together this day at the Foreign Office for the purpose of signing the Protocol proposed by Russia, relative to the affairs of the East.

Count Shuvaloff made the following declaration, placing at the same time a *pro-memoria* of it in the hands of her Britannic Majesty's Secretary of State:

"If peace with Montenegro is concluded, and the Porte accepts the advice of Europe, and shows itself ready to replace its forces on a peace footing, and seriously to undertake the reforms mentioned in the Protocol, let it send to St. Petersburg a Special Envoy to treat of disarmament, to which his Majesty the Emperor would also on his part consent.

"If massacres similar to those which have stained Bulgaria with blood take place, this would necessarily put a stop to the measures of demobilization."

The Earl of Derby read and delivered to each of the other Plenipotentiaries a declaration, copy of which is annexed to the present *procès-verbal*.

General Count de Menabrea declared that Italy is only bound by the signature of the Protocol of this day's date, so long as the agreement happily established between all the Powers by the Protocol itself is maintained.

The signature of the Protocol was then proceeded with.

The following declaration was made by Earl Derby:

The undersigned, her Britannic Majesty's Principal Secretary of State for Foreign Affairs, makes the following declaration in regard to the Protocol signed this day by the Plenipotentiaries of Great Britain, Germany, Austria-Hungary, France, Italy, and Russia: "Inasmuch as it is solely in the interests of European peace that her Britannic Majesty's Government have consented to sign the Protocol proposed by that of Russia, it is understood beforehand that, in the event of the object proposed not being attained—namely, reciprocal disarmament on the part of Russia and Turkey, and peace between them—the Protocol in question shall be regarded as null and void.

"LONDON, March 31, 1877. (Signed) DERBY."

It was manifest that a peaceful solution of the Eastern troubles was still far from being realized. Russia, by massing large bodies of troops on the Roumanian border, was apparently threatening Turkey, so that in the latter country a strong feeling existed against disarmament. The Protocol was fully discussed in the Council of Ministers, and on April 10th the Porte sent its reply to the Powers, declining to receive it.

The concluding and most emphatic section of the Turkish answer brings back to the eyes of the Powers the Treaty of Paris, which the Protocol treated rudely. The portion of that document to which especial reference is made is the latter part of article 9, which says: "It is well understood that it [the firman promising amelioration of the condition of Turkish subjects without distinction of religion or race] could not give the right, in any case, to the aforesaid Powers to interfere either collectively or separately in the relations of his Majesty the Sultan with his subjects, nor in the interior administration of his Empire."

This answer of the Porte breathed a spirit of defiance to Russia, and seemed to make war inevitable. Active preparations were now made by both Governments for the coming struggle. The Russian forces in Bessarabia and Southern Russia were concentrated along the line of the Pruth, while the Turkish forces gathered on the Danube. On April 18th, the Russian Chancery in Constantinople was closed, and about the same time the Czar set out for Kishenev, the headquarters of the Russian army, accompanied by the Minister of War. On April 24th, the Czar issued his proclamation to the nation. The text is as follows:

Our faithful and beloved subjects know the strong interest we have constantly felt in the destinies of the oppressed Christian population of Turkey. Our desire to ameliorate and assure their lot has been shared by the whole Russian nation, which now shows itself ready to bear fresh sacrifices to alleviate the position of the Christians in the Balkan Peninsula.

The blood and property of our faithful subjects have always been dear to us, and our whole reign attests our constant solicitude to preserve to Russia the benefit of peace. This solicitude never failed to actuate us during the deplorable events which occurred in Herzegovina, Bosnia, and Bulgaria. Our object before all was to effect amelioration in the position of the Christians in the East by means of pacific negotiations; and in concert with the great European Powers, our allies and friends, for two years we have made incessant efforts to induce the Porte to effect such reforms as would protect the Christians in Bosnia, Herzegovina, and Bulgaria from the arbitrary measures of local authorities. The accomplishment of these reforms was absolutely stipulated by anterior engagements contracted by the Porte toward the whole of Europe.

Our efforts, supported by diplomatic representations, made in common by the other Governments, have not, however, attained their object. The Porte has remained unshaken in its formal refusal of any effective guarantee for the security of its Christian subjects, and has rejected the conclusions of the Constantinople Conference. Wishing to essay every possible means of conciliation in order to persuade the Porte, we proposed to the other Cabinets to draw up a special Protocol comprising the most essential conditions of the Constantinople Conference, and to invite the Turkish Government to adhere to this international act, which states the extreme limits of our peaceful demands. But our expectation was not fulfilled. The Porte did not defer to this unanimous wish of Christian Europe, and did not adhere to the conclusions of the Protocol.

Having exhausted pacific efforts, we are compelled by the haughty obstinacy of the Porte to proceed to more decisive acts, feeling that our equity and our own dignity enjoin it. By her refusal Turkey

places us under the necessity of having recourse to arms.

Profoundly convinced of the justice of our cause, and humbly submitting ourselves to the grace and help of the Most High, we make known to our faithful subjects that the moment foreseen when we pronounced words to which all Russia responded with complete unanimity has now arrived. We expressed the intention to act independently when we deemed it necessary, and when Russia's honor should demand it. In now invoking the blessing of God upon our valiant armies, we give them the order to cross the Turkish frontier.

ALEXANDER.

Given at Kishenev, this the 12th day of April [old style], in the year of grace 1877, and the 23d year of our reign.

The formal declaration of war was handed to the Turkish *chargé d'affaires* in St. Petersburg on April 24th. It declared that, as the negotiation between the Porte and Russia had not led to the desired result, the Czar, to his regret, saw himself forced to take up arms. Russia would therefore from that day be at war with the Porte. The diplomatic relations were interrupted, and the members of the Ottoman embassy would receive their passports, as likewise the Ottoman subjects in Russia who might wish for them. Those who wished to remain would enjoy the protection of the laws.

In the mean time a strong feeling in favor of peace began to make itself manifest in Servia and Montenegro. On January 25th, Midhat Pasha addressed a friendly note to the two provinces, which was favorably received. With Servia, peace was finally concluded on March 1st. (*See SERVIA*.) The negotiations with Montenegro continued until the middle of April, but without any result, as the two Governments could not agree on the territory to be ceded to Montenegro.

In the beginning of February an important change took place in the Government of Turkey. Midhat Pasha was deposed and banished, and Edhem Pasha made grand-vizier in his place.

On March 19th the first Turkish Parliament met, which had been elected in accordance with a clause of the new constitution. It was opened by the Sultan in person. In the speech from the throne he returned thanks to Providence for having been able to open the first session of his Parliament, and he then enumerated the principal laws which the two assemblies would be called upon to discuss during this session. These were an electoral bill, a provincial bill, a bill on commercial regulations, a code of civil procedure, measures for the reorganization of the tribunals, the promotion and retirement of public functionaries, a press bill, a bill for the organization of a court account, and finally the budget law. The Sultan specially recommended the study and adoption of the financial bills, and he stated that measures would be taken to offer the creditors of Turkey, with the concurrence and consent of their representatives, the most solid guarantees for the execution of the engagements of foreign creditors, while at the same time reconciling them with the urgent necessities of the

treasury. He also expressed hope of a favorable issue to the negotiations entered into with Montenegro, a result which would enable the Government to send the troops at present under arms to their homes, to the great advantage of agriculture. Finally, the Sultan declared that, though the conference, which met in Constantinople on the proposal of England, did not result in a definite understanding, it had been none the less demonstrated that both before and since the conference the Government had been, and would be, ready to anticipate in practice those wishes of the Powers which could be reconciled with existing treaties, the rules of international law, and the exigencies of the situation.

In Bosnia, the insurrection continued to smoulder on during the early part of the year. In the Herzegovina outrages were committed by the Bashi-Bazouks upon the refugees who had returned from Austria, and were about to rebuild their homes.

TURKISH BATH.

In April an insurrection broke out among the Miridites, a Catholic tribe of Albania, occupying the country between Prisrend and Scutari. Dervish Pasha was sent against them with about 10,000 men; and having defeated them in several small engagements, they retreated to the mountains, where they were soon forced to surrender by a scarcity of provisions.

At the outbreak of hostilities between Russia and Turkey, the two armies were about 450 miles apart. The Russian army was massed near the northeastern frontier of Roumania, with the headquarters at Kishenev, a town on the railroad between Odessa and Jassy. The Turkish troops were stationed at various points along the line of the Danube from Tchernetz

to Silistria. Between the armies was the principality of Roumania, which, nominally a vassal of Turkey, had been drifting during the period immediately preceding the war into an alliance with Russia. Late in March, stores and ammunition were sent by the Russians into the former country, and the Russian and Roumanian railway lines were connected, so that rolling-stock could be easily concentrated at Jassy. On Monday, April 23d, about 17,000 Russian troops were transferred by railway to Jassy, which is about 80 miles distant from Kishenev. Within twenty-four hours the Russians occupied Galatz, Braila (also called Ibrail, Brailov, and Brailov), and Bucharest, the capital of Roumania. The Russians made themselves masters of the Roumanian railway system, and could mass their forces either at Giurgevo or Tchernetz. There is a tolerable road between Bucharest and Oltenitza, where the Danube is about 800 yards wide. At Giurgevo the width of the river is three-fourths of a mile. The natural crossing-places are at Giurgevo, Oltenitza, and Kalarash, and of the three Giurgevo is the most important. The Danube is a wide and swift river, across which it would not be easy to throw a bridge of boats; but as the line of defense was so long, the assailants had on the whole a great advantage. The Turkish divisions were scattered, and the assailing army could be massed quietly and hurled suddenly in overwhelming force against the defenders at a single point. The first line of the Turkish defense was, however, quite formidable. The southern bank of the Danube is for the most part high, while the Roumanian is low and swampy. The Turkish towns nestle among the hills, and many of them are fortified, while the Roumanian side is desolate. The little Turkish gunboats, each carrying a heavy gun, could have pretty much their own way, unless the Russians could drive them off with torpedoes, large numbers of which had been stored along the Roumanian bank. Of the fortified towns in Turkey, the most important are those forming what is known as the Turkish quadrilateral—Rustchuk, Silistria, Varna, and Shumla. Rustchuk is a town of about 30,000 inhabitants, and is situated on the Danube. In 1811 it was besieged for several weeks, and was finally taken by the Russians. After its evacuation in 1812 the Russians burned it, but it was soon rebuilt, and what is now the town of Giurgevo, on the other side of the Danube, was constructed as a fortified bridge-head. At the opening of the Danubian campaign the Russians then occupied Giurgevo, and the Turks Rustchuk, but several months passed in which both armies attempted to make a passage, until at last the Turks gained a foothold on one of the islands, and eventually captured Giurgevo. During the early months of 1877, the fortifications of the town were considerably improved. In April, for a distance of three miles along the margin of the stream, the bank was thickly

studded with earthwork batteries facing in every direction, so that they could sweep the whole broad bosom of the Danube so thoroughly that a row-boat could not run the gantlet of their iron hailstorm. Behind the low bluff along the bank there was an undulating plateau, about two miles broad, extending backward to a continuous rising ground, having a series of knolls upon its surface. On each of these knolls was an intrenched work, while the ridge above was "a great intrenched camp, with an elaborate earthwork redoubt on each flank and another in the centre."

Silistria, another strongly-fortified Turkish town on the Danube, with about 20,000 inhabitants, is a very ancient city. Its fortifications are said to be among the best military works of the time, and are considered pretty nearly impregnable. Varna, with about 20,000 inhabitants, lies on the northern side of a small bay of the Black Sea. It is also a very ancient town. The sea-side is defended by three powerful batteries, and as ships of large size could not approach nearer than for bombardment purposes, these batteries are considered sufficient for the defense of the harbor. On the land-side the city is completely inclosed by a wall, and at every favorable place bastions have been thrown out, and are heavily armed. The remaining corner of this quadrilateral, Shumla, a town of about 40,000 inhabitants, is also one of the strongest fortifications in Turkey. Roads from Varna, Constantinople, Rustchuk, and Silistria, meet there. The town lies on the north slope of the Balkan, about midway between its crest and the Lower Danube, in a gorge, horseshoe-shaped, and inclosed on three sides by mountains. In all the wars between Turkey and Russia, it has been the point of concentration for the Turkish forces. In the vicinity is an intrenched camp, capable of accommodating from 40,000 to 60,000 men. At the summit of the cliffs which surround it is a wide table-land, covered with brush and underwood, intersected by narrow, confined paths. The fortifications which crown the heights are of great extent. Besides the strongly-bastioned wall, there are numerous detached works, massive barracks, and hospitals, built since 1830. The most accessible approaches are guarded by strong forts. The Russians attempted to take it in 1774, 1807, 1810, and in 1828, but without success. Besides these four, the Turks have the two other important fortresses of Widin and Nicopolis, on the Danube. This river would thus form with its fortresses the first line of the Turkish defense. If the Russians effected a crossing, and pushed on, the Turks would have to fall back on their second line, the Balkan range. This is the main defense of Central Turkey, a great rampart, which the Russians would have to scale before they could reach Adrianople and Constantinople. These mountains are 5,000 feet high at the western extremity and 2,000 feet high at the sea.

The distance from the Danube to the top of the passes is about 50 or 60 miles, across a rough and broken country, and the declivities of the mountains themselves are clothed with forests. The climate is very cold and bleak. Between the Balkan range and the Danube there are two of the fortresses just mentioned—Shumla and Varna—one of which commands all the roads from Rustchuk and Silistria to Constantinople, and the other the coast road from the Dobrudja and the Lower Danube. The Russian troops would be exposed to the fire of the Turkish gunboats and monitors on the coast road, and Shumla is the strongest fortress in Central Turkey. Beyond the Balkan range is an undulating country sloping toward the Sea of Marmora. From Adrianople a railroad runs to Constantinople, a distance of 70 miles. Within a few miles of the Bosphorus there is a range of hills which would form a third line of defense if the Turks were driven from the river and the mountains.

In the Dobrudja the two principal points of defense for the Turks are Tultcha and Hirsova. The town of Tultcha was originally the *tête de pont* of Ismail when both places belonged to Turkey. It is situated on the right bank of the Danube, and at an angle of the river near to where it branches into three channels. The two southern outlets were at one time defended by Tultcha. The ground surrounding the place is very unfavorable for defensive works, being low and swampy, and commanded by some elevated points in the rear of the town. Since the improvement of the Danube navigation, considerable importance attaches to Tultcha as a *position de passage*. Hirsova derived its sole importance from possessing a permanent bridge of boats, the only one on the Danube in 1809. This led the Turks to add to its defenses and construct around it five bastioned fronts, surrounded by a ditch. Hirsova, however, holds a position of control over the Danube that is important in the attack or defense of the Dobrudja, as it represents the terminus of a defensive line across that territory which might be utilized by the Turks before the Russians could seize it.

In Turkey the army has been organized under regulations issued in 1871. Its ranks are entirely supplied from the Mahommedans, except in certain privileged districts, such as Albania and Bosnia, which furnish special corps of their own. In the rest of Turkey every able-bodied Mussulman of 20 years and upward is bound by law to serve; but, notwithstanding this law, a young Turk of the wealthier classes can always obtain exemption. The term of service is 20 years, of which 4 are spent in the active army (*nizam*), 2 on furlough (*ichtjat*), 6 in the reserve (*redef*), and 8 in the *mustehafiz*, corresponding to the German *Landsturm*.

The total military forces of Turkey, exclusive of the sedentary army formed of those who have served 12 years, are as follows:

DIVISIONS.	Regi- ments.	War Footing.	Peace Footing.
Infantry	86	117,360	100,800
Cavalry	24	22,416	17,280
Field artillery	6	7,800	7,800
Artillery in fortresses.....	4	5,200	5,200
Engineers	2	1,600	1,600
Detached corps in Candia, Tri- poli, and Tunis.....	8	16,000	16,000
Total.....	80	170,376	149,680
Reserves			148,680
Auxiliaries			75,000
Irregulars			87,000
Total.....			459,360

Among the irregular troops are the 16 regiments of *gendarmes*; the Bashi-Bazouks, volunteer infantry, who receive nothing but weapons and ammunition from the Government; the Spahis, volunteer cavalry furnished chiefly by the Mahomedan lords of Bosnia and other provinces; Bedouins from Asia and Africa, and other volunteer bodies. The auxiliaries are made up of the contingents furnished by the tributary states and the provinces not subject to the Nizam or standing army service. Prior to the outbreak of the war, the number of the Turkish troops in Bulgaria was estimated at 115,000 infantry, 3,000 artillery, and 216 guns. This army was distributed as follows: In Tultcha, 7,000; Silistria, 18,000; Rustchuk, 10,000; Varna,

8,000; Shumla, 18,000; Tirnova, 5,000; Nicopolis and Sistova, 2,000; and in and around Widin, 50,000 men and 144 guns. Another estimate stated that at the outbreak of the war the Turks had about 100,000 men available for the defense of the Balkans and the Danube. At Widin, there were 20,000 men; at Rustchuk, 12,000; at Silistria, 20,000; at Shumla, 45,000; at other points, 3,000. On the Greek frontier 30,000 Turks were stationed, and at least 90,000 troops were scattered along the borders of Servia, Montenegro, and Austria. The Turkish forces in Asia Minor did not number more than 80,000 men; so that the effective strength of the armies of the Porte was about 300,000.

The Russian army consists, according to the law of 1874, of the standing army and the *Opoltschenie*, corresponding to the German *Landwehr*. The standing army is composed of land and marine troops. The land army comprises troops obtained by an annual conscription, to which all young men of over 21 years of age are liable; the reserves; the supplementary troops, intended as substitutes for the losses in the active army; the Cossacks; and bodies of troops made up of foreigners. The *Opoltschenie* is made up of the entire remaining male population between the ages of 20 and 40, able to bear arms. The following table gives the strength of the Russian army on a war footing:

DIVISIONS.	Battalions.	Squadrons.	Guns.	Officers.	Combatants.	Non-combatants.	Horses.
A. RUSSIA IN EUROPE.							
1. Field Army.....	543	341	2,172	18,150	674,957	53,042	132,550
2. Reserves.....	171½	3,500	170,700	13,000	10,000
3. Supplementary troops.....	170	156	18	5,750	235,000	85,300	27,000
4. Local troops, etc.....	10,800	274,900	41,400	1,800
Total.....	38,200	1,353,557	142,742	171,350
B. CAUCASUS.							
1. Field Army.....	118	16	836	2,888	134,500	10,200	18,170
2. Reserves.....	1	22	998	65	8
3. Supplementary troops.....	29	12	...	901	33,282	5,586	2,142
4. Local troops.....	1,100	47,500	3,280	720
Total.....	4,906	216,380	19,131	21,040
C. RUSSIA IN ASIA.							
1. Field Army.....	4½	...	88	187	6,200	1,000	1,800
2. Local troops.....	870	28,500	3,000	1,700
Total.....	1,057	34,700	4,000	3,500
Grand Total.....	44,163	1,609,637	165,873	195,890

To these must be added the irregular troops, comprising 23 battalions, 180 guns, 3,505 officers, 131,290 combatants, 5,698 non-combatants, and 120,999 horses. In preparing for the present war the Russian Government called out or "mobilized" only part of the reserve. According to trustworthy reports the army organized for the conflict consisted recently of 275,000 infantry, 20,000 cavalry, and 900 guns. Prior to the order to enter Roumania, these troops were distributed as follows in proximity to the seat of war: The Seventh and Twelfth

Corps, numbering 60,000 infantry, 4,000 cavalry, and 288 guns, were at Odessa and Sebastopol. The Eighth, Ninth, Tenth, and Eleventh Corps were at and around Kishenev; they numbered 120,000 infantry, 8,000 cavalry, and 432 guns. The Army of the Caucasus, intended to invade Asiatic Turkey, numbered 65,000 infantry, 8,000 cavalry, and 180 guns. This distribution of the army enabled Russia to begin hostilities with a much greater force than in the Russo-Turkish war of 1853, when only 74,000 men crossed the Pruth at the beginning of the

campaign. The Roumanian army consisted of 60,000 men poorly equipped and badly disciplined. It was concentrated at Krajova, and occupied Kalafat. The commander of the Turkish forces on the Danube was Abdul Kerim Pasha, while the Russian army of invasion was placed under the command of the Grand-Duke Nicholas, the brother of the Emperor.

The naval force of Turkey consisted at the close of 1875 of 20 iron-clad ships and 70 other steamers. The greater number of the iron-clads were built in Great Britain. The Turkish navy was manned in 1875 by 30,000 sailors

and 4,000 marine troops. The Turkish iron-clad fleet was as follows:

CLASSES.	Number.	Guns.	Average Horse-Power.
Frigates.....	7	104	971
Corvettes.....	8	85	882
Gunboats.....	10	10	150

The Russian navy consists of two great divisions, the Baltic and Black Sea fleets, each of which is again subdivided into sections. In 1875 the Russian navy was composed as follows:

CLASSES.	Number.	Guns.	Tonnage.	Horse-Power.
1. BALTIC FLEET.				
Iron-clads (inclusive of 4 in building).....	27	197	143,004	28,280
Men-of-war.....	44	190		
Transport steamers.....	66	...		
2. IN THE BLACK SEA.				
Iron-clads (inclusive of 1 in building).....	2	4	81,836	4,880
Men-of-war (inclusive of 1 in building).....	25	81		
Transport steamers.....	4	...		
3. IN THE CASPIAN SEA.				
Men-of-war (inclusive of 1 in building).....	11	89	8,856	1,400
Vessels not armed.....	8	...		
4. SIBERIAN FLEET.				
Men-of-war.....	6	18	624	217
Vessels not armed.....	9	...		
5. ARAL FLEET—Steamers.....	18	88	8,800	1,668
6. WHITE SEA—Steamers.....	3	4	1,000	140
Total.....	223	561	188,120	81,080

Connected with the fleet were 89 admirals, 4,000 officers, and 25,943 seamen. The iron-clad fleet of war comprised the following vessels:

IRON-CLADS.	Number.	Guns.	Tonnage.	Horse-Power.
Mastless turret-ship..	1	4	1,800	9,662
Frigates.....	8	76	4,600	36,185
Corvettes.....	8	10	600	5,161
Turret monitors.....	14	20	1,600	18,500
Floating batteries,...	8	74	1,110	10,285
Total.....	29	184	9,210	74,798

Immediately upon the declaration of war the Russian troops crossed the Pruth and, as stated above, occupied Jassy, Galatz, and other important points in Roumania. Small bodies had previously entered Roumania, and a detachment of Cossacks had reached Kalafat, opposite Widin. The Roumanian Government formally protested, and withdrew its troops from the districts occupied by the Russians.

On April 25th the Porte replied to the Russian declaration of war. The following is the principal passage in which she appeals to the mediation of Europe on the strength of the 8th Article of the Treaty of Paris:

The Sublime Porte consequently falls back on Article 8 of the Treaty of Paris, which is in these terms: "Should there arise between the Sublime Porte and one or more of the signatory Powers any

misunderstanding threatening the maintenance of their relations, the Sublime Porte and each of the Powers, before having recourse to the employment of force, will give the other contracting parties an opportunity of preventing this extremity by their mediatory action." Although it is not the Ottoman Government which threatens to take the initiative of aggression, and although, consequently, it was by rights the part of the Russian Government to appeal to these stipulations of the Treaty of Paris, this Imperial Government, in order to avoid all misunderstanding, applies to the signatory Powers of that Treaty for them to use their good offices in the grave circumstances in which it is placed, by applying the article before mentioned, and thus putting an end to the dangerous tension affecting the relations of the two states by means of such mediatory action in conformity with right and treaty.

The Russians soon after closed the navigation of the Danube and notified the foreign vessels to leave the river. By May 1st, the Turkish gunboats had all left the Lower Danube, as the Russians had placed a large number of torpedoes all along the river. When hostilities began, Hobart Pasha, the commander of the Turkish Black Sea fleet, with his vessel, was at Rustchuk. Against the advice of his friends he determined to run by the Russian batteries, and bring his vessel out to the Black Sea. He left Rustchuk at night. On arriving at Galatz, which was guarded by torpedoes and heavy batteries commanding the river, the lights on the steamer had been extinguished, but a rocket from the Roumanian shore showed

that Hobart Pasha's approach was discovered, and apprised the Muscovite gunners. On his coming abreast of the batteries, the heavy guns began to fire, but the Rethymo, Hobart Pasha's vessel, was run so close inshore that the gunners were unable to depress their pieces fast enough to get good aim. The admiral only fired one shot, and the Rethymo passed to the Black Sea safely. After the first dash of the Russians from the Pruth to the Danube, by which they managed to secure Galatz and Braila, both sides seemed to relapse into inactivity. Although large numbers of Russians crossed the Pruth, so that on May 1st there were 120,000 in Roumania, they advanced slowly. The movements of the Turks appeared to have been supine, and prompted more by unreasonable panic than by any strategical principle or accurate conception of a plan of campaign. On the outbreak of hostilities the Turkish army held considerable force at Widin, and the remainder of the troops were scattered along the Danube and in the rear of the stream as far as Varna when the Russian advance took place. The Turkish staff appeared to have at

once rushed to the conclusion that the narrow neck of land between Galatz and the mouth of the Danube, which forms the northern portion of the Dobrudja, was the menaced point; and the troops hurried in that direction, and suffered considerably from sickness contracted in the unhealthy marsh-land upon which they were thrown without proper stores of supplies, food, or medicines. They were, however, afterward massed toward Silistria and Rustchuk. The Turkish monitors had early in May thrown several shells into Reni, Galatz, and Braila, and the inhabitants of these towns were, in consequence, ordered to leave. On April 29th the Minister of Foreign Affairs of Roumania communicated to the Chamber of Deputies a convention with Russia, dated April 16, 1877, in which the Prince of Roumania assured to the Russians a free passage and the treatment due a friendly army, and the Czar bound himself to respect the rights of Roumania. The minister said the convention was to secure respect for Roumania's position as an individual state in accordance with the Treaty of Paris. This convention was adopted by both Chambers.

BOSPORUS, SHOWING CASTLES OF EUROPE AND ASIA.

The Turkish Government then informed the Roumanian agent that, in view of the convention made with Russia and the entrance of the Russian troops into Roumania, the Porte could no longer look upon the Prince and the local authorities as free agents, but as being in the power of the enemy; and could, therefore, hold no more official communication with them. The Porte likewise addressed a circular on the subject to the Powers, which, after referring to the breach of neutrality implied by such a convention as that made by Roumania, and to the violation of the Treaty of Paris of which

Russia had been guilty by occupying that country, accused the Government of the Prince of having betrayed the interests of his country and the confidence of his suzerain, besides disappointing the hopes cherished by Europe when it established the united principalities. Such faithlessness could not, according to the note, be too strongly condemned.

In the first week of May an action occurred between the Turkish gunboats and the Russian batteries on the Danube, but without any very important result. The Roumanian troops again occupied Kalafat, and the Turks, regarding

them as enemies, shelled the fortress from Widin. The fire was returned, and thus actual warfare was begun between the Porte and its vassal state. Prince Charles assumed the command of the Roumanian army, which had been increased by the calling-out of the militia and the reserves. On May 8th, two Turkish monitors, supported by the shore batteries at Ghiacet, opened a severe fire upon the Russian batteries at Braila, which replied vigorously. The cannonade lasted three hours. Braila was uninjured. All night there was great activity in the Russian camp, showing that they were about to assume the offensive. Early on the following morning their batteries recommenced cannonading Ghiacet. Later in the day a body of Cossacks crossed the river and destroyed all the works around the town. On May 11th, the Russian batteries at Braila succeeded in sinking a Turkish monitor before that town. Cannonading continued during this time all along the river. At Oltenitza the Russian batteries bombarded the town of Turtukai on the opposite bank, and succeeded in firing the town, which was then abandoned by the Turks. The forward movement of the Russian troops during May continued very slowly. Large bodies of them were massed at Giurgevo, opposite Rustchuk, and were sent on to Simnitza. The principal causes of the delay of the Russians were the great difficulties of transportation encountered in Bulgaria. The roads in Roumania were also in such a condition, brought on by the incessant rains, that the troops could march only under the greatest difficulties.

One of the most daring deeds in the early part of the war was performed on the Lower Danube near Braila on the morning of May 25th. A small detachment of Russian soldiers, commanded by Lieutenant Dubasheff, accompanied by the commander of the Roumanian flotilla, Major Murgescu, left the northern shore of the Danube in a number of small boats, and proceeded toward the point Petra Fetei, below Matchin, and opposite Braila, at which point there was stationed a large Turkish monitor. The night was very dark, and they managed to surround the monitor before being discovered by the Turkish lookouts. When finally observed by the sentries on board they were challenged. Major Murgescu replied in Turkish, "Friends." The Turks, evidently not satisfied, commenced firing in the direction of Matchin, not knowing where these boats came from. The shots flew wide of their mark, and did no damage to the men in the boats. During the firing several of the Russian soldiers plunged into the water, swam silently to the hull of the iron-clad vessel, and placed the deadly torpedo in close contact with the bottom of the monitor. After the destructive machine had been securely fastened and the wires of an electric battery accurately adjusted, the men retired to the neighboring shore of the river, and at half-past three in the morning the monitor was blown into the air, with all the officers

and crew. The town of Matchin opposite which the action took place is situated on the right or Bulgarian side of the Danube, distant from Braila ten miles to the eastward. Being a place of moderate strength, it was selected by the Turks as the base of monitor operations against Braila; but, owing to the uncertainty attending the river-levels at this season, it has been the point where the monitors took refuge during a threatened subsidence.

By June 3d the Russians had finally occupied the chief positions on the Danube, and their lines extended from Galatz to Kalafat. The number of Russians was estimated at 240,000, without counting the Roumanians or the reserves, who numbered 60,000 men. On June 6th, the Emperor Alexander arrived at Ploieshti, and took up his headquarters at that place. In the beginning of June, another attempt was made, without success, by the Russians to sink a Turkish monitor.

At the same time that the Russians crossed into Roumania, they also entered into Armenia, the easternmost province of Turkey in Asia. The scene of war is thus described by the *Invalide*, the official organ of the Russian War Department:

The general character of the country bordering upon our trans-Caucasian Provinces is that of a mountainous land, of which the hills are high and steep, but the valleys are wide, and favor military movements. There are numerous carriage-roads, but they are in a bad condition, especially in spring, at the rainy season, and in autumn. They require frequent repair. The principal roads connecting the vilayet of Erzerum with our trans-Caucasian Provinces are these: 1. From Alexandropol, three roads lead to Kars by way of Arpa Chai, the border port. Branching out from Molla Musa, one of these roads proceeds to Tichnis and Hadji Vali; the second to Kisil Tebachuebach and Kuruk Dara; while the third and most northerly goes to Mekus. Our troops marched along the two former roads, these being comparatively easy and passable at the time. The last road to Mekus is well provided with grass, but circuitous. The distance from Alexandropol to Kars is 70 versts (1 verst = $\frac{1}{2}$ English mile). 2. From the Province of Erivan three roads lead to Bayazid. Of these, two are carriage-roads, repaired by our Erivan detachment in 1854, while the third is fit only for horses. The first road goes from the village of Igdir to the post of Orgoff, then ascends the Tehangil ridge, and, passing by a fresh-water lake, reaches the Kurd village of Kurabulach. Thence it proceeds along the western side of the lake Baigel, crosses the river Garnaux Tchai, and terminates at Bayazid. The second road goes from the village of Tehachtehe, in the Province of Erivan, 20 versts northwest of the Orgoff post, through the Pass of Karavan Serai, and the valley of the Balik Tchai. It then makes for Diadin, situate on the great transit road from Erzerum to Bayazid, and farther west reaches Bayazid. This pass is not so high as the preceding one, but has no water at first; at the rainy season, too, the valley of the Balik Tchai becomes a swamp. The third road is at present only for horses, but may easily be made practicable for carriages. It is south from our port of Abasgel, and, ascending the pass of the same name, proceeds to the Monastery of Surpu Oganess, west of Diadin. Bayazid is 135 versts from a river. 3. From Akhaltz'kh to Ardaban there is but one carriage-road. It accompanies the right bank of the river Dozchoff Tchai, from the village of Ker, ascends in zigzags the ridge Souk Pugar,

passes along Mount Olgar, and descends to Ardahan. The road runs through the village of Kanardel, and, crossing the hills of Ardjan and the river Kara Tchai, descends to Ardahan. At a distance of about 90 versts from Osurget to Batum there are two roads—one a carriage-road along the shore by the fortress of Ziche Dsiri, the other a mule-track by Kobuleti and the fortress of Tchuruksu. Besides these, there is another difficult mule-track from Akhaltzikh to Batum through Chul. The distance is about 50 versts. The road from Kars to Erzerum, a distance of about 200 versts, goes by the village of Kotanli, and, having ascended the Soghanli ridge, proceeds to Medgingert, Khorassan, Ardos, Koprikoi, and Hassan Kaleh, and farther on to Erzerum. Although this road is habitually used by the carriages traveling between Alexandropol and Erzerum, it is very troublesome to pass, especially in spring. Another road connecting Kars with Erzerum skirts the spur of the Soghanli at Yeni Keff; but this is very steep, and though, perhaps, a means of turning the enemy's flank on the Soghanli, will prove very troublesome. Erzerum, toward which all the roads of the vilayet converge, is a strategical point of the greatest importance. Thence the only macadamized road in the country, 280 versts long, runs to Trebizond. The road is passable during the whole of the year. Other roads from Erzerum proceed, first, to Bayazid, and farther on to Tabreez, in Persia (about 280 versts); secondly, through Khinis and Mush to Bitlis; thirdly, to Erzengan; and fourthly, to Kars, Olti, etc. Telegraph lines connect Erzerum with Erzengan and Trebizond; with Sevas and Constantinople, Kars, Mush, Bitlis, Van, and Bayazid. The total length of the telegraph wires in the vilayet is 900 versts. The principal fortress in Asia, and that forming the objective point of the Russian attack, is Erzerum, which is surrounded by a wall, but is practically undefended. It stands in the centre of a great parched plain which is swept by the bitter-cold wind and storms of winter, and is equally exposed to the burning heats of summer. The city is commanded by heights that are crowned by an old Turkish castle that offers a fair mark for the Russian gunners in testing the range of their pieces. It could not hold out an hour against modern rifled artillery such as that with which the Russians are provided. The houses in the city are flat-roofed and are generally covered with soil on which grass grows in summer. Goats and even cows graze on these artificial and elevated pastures. The approaches to Erzerum are protected by a number of smaller fortresses; the most important of these is Kars, situated on the road from Alexandropol to Erzerum. It stands at an elevation of about 6,000 feet above the sea-level. The castle commands the town and also the plateau in front of it. Here the desperate defense under General Sir Fenwick Williams was made in 1855, but which terminated in the surrender of the place, with its entire garrison, to the Russian General Mouravieff. Other fortresses guarding the approaches to Erzerum, and situated between this city and Kars, are Hassan Kaleh and Bardess. Hassan Kaleh is situated at the base of the mountains and contains about 800 houses. The castle is defended by a double loopholed and crenellated wall, but the whole building is not capable of defense against artillery. Bardess or Barduze is a village on a pass in the Soghanli Mountains, where the Turks made a stubborn defense of this road in 1828 against the Russians. Wood is plenty in the vicinity of this pass. The whole line in this chain is capable of being converted into one of immense strength. Another strong point which would probably be an objective point of attack of the Russians was Van, situated near the lake of this name. It is a town of about 15,000 inhabitants, mostly Armenians and Turks, with only a few Kurds. The strategic value of the place lies in the fact that it forms the junction point of what may be called the two great

highways which here bifurcate—the one westward through Mush and Karput into Asia Minor, and the other southward to Mosul and the whole of the Tigris Valley. Northeast of it is Bayazid, an important position near the Russo-Persian frontier, and therefore of considerable strategic value. It is commanded by a large castle standing on a rocky eminence and built on a succession of stone terraces. Batum, on the coast of the Black Sea, and near the Russian border, is a little town with an excellent harbor, the Bay of Batum being inclosed east and south by high mountains, and protected on the west by hillocks pierced by the river Tchuruk. A macadamized road from Batum to Ardahan and Kars is in course of construction, and was to have been finished in 1876. The Russian troops in the Caucasus, at the outbreak of hostilities, were reported to amount to 140,000 men, and were under the command of the Grand-Duke Michael, a brother of the Emperor. The Fourth Turkish Army Corps, stationed in Asia Minor, under the command of Ahmed Mukhtar Pasha, was reported to amount to 64,000 regulars, besides 6,000 militia, and 5,000 Kurdish irregular cavalry. Simultaneously with the advance of the Russian armies in Europe, the Russian troops in the Caucasus crossed the Asiatic frontier of Turkey in three columns. The main force, coming from Alexandropol, marched upon Kars; the Rion detachment marched upon Batum; and the Erivan detachment upon Bayazid. The Alexandropol corps, under the command of Adjutant-General Loris Melikoff, entered Turkish territory in two columns, and, taking the Turkish outposts prisoners, on the same day reached Molla Musa and Bash Shuragel. On the 27th of April the greater part of the corps crossed the river Kars Tchai, and passed the night at Kuruk Dara, Hadji Vali, and Subotan. On the 29th the corps reached Zaim and Angi Keff, dispatching 27 squadrons and sotnias, with 16 guns, to cut off the communications between Kars and Erzerum. This cavalry, under the command of Major-General Tchavtchavadze, in their successful reconnoitring on the 28th, 29th, and 30th, destroyed the telegraph between Kars and Erzerum, and pursued a Turkish detachment of 8 battalions marching from Kars to Erzerum, and commanded, as the prisoners reported, by Mukhtar Pasha himself. To support the cavalry, General Loris Melikoff ordered 12 battalions of grenadiers, without knapsacks, accompanied by 40 guns and 5 sotnias, to turn the flank of the enemy at Kars, and proceed rapidly to Visinkoi. At the same time 8 Turkish battalions sallied forth from Kars, and, with some artillery, took up a position under cover of the fortress guns. The artillery which accompanied the Russian cavalry, opening fire, dismounted a Turkish cannon. After this engagement, General Loris Melikoff, leaving the cavalry at Visinkoi, with his remaining forces returned on the 1st of May to his former camp at Zaim. The population everywhere showed the most friendly disposition toward the Russians. On April 29th the centre of the Russian army, about 40,000 strong, under General Melikoff, attacked Mukhtar Pasha, encamped 5 miles from Kars. The Turks fought desperately, but the Russians, supported by powerful artillery, dislodged them from all their positions. Mukhtar, calling out all the reserves of the Kars garrison, attempted at six o'clock next day to recover his ground with an army estimated by the Russians at 60,000 men; but the Russians, reinforced during the night by 2 divisions and 10 batteries, beat the Turks all along the line, and drove them under the guns of Kars. The losses on both sides were considerable. On April 30th, the town of Bayazid was taken by the vanguard of the Russian division forming the southernmost column of the Russian army, which started from Erivan six days before. According to the Russian account, the Turkish garrison, consisting only of 1,700 men, made no attempt to defend the place, but withdrew, abandon-

ing a large quantity of ammunition. Afterward the Russians occupied the town and citadel. This movement was considered as important, as Bayazid is on the road to Erzerum through Toprak Kaleh, the distance being a fortnight's march. The column on the right marched along the coast of the Black Sea toward Batum, in front of which it met with a repulse. Another battle before Batum took place on Friday, May 11th. About 5 o'clock in the morning the Russian forces, which had been largely augmented for the purpose, advanced with batteries of field-artillery and made a furious attack upon the heights defending Batum on the land side, which were occupied by Bashi-Bazouks. The Ottoman troops were intrenched upon the slopes and ledges of these hills, and upon the advance of the enemy they opened on his columns a terrible and well-sustained fire of cannon and musketry which literally mowed the Russians down. They fell by scores and hundreds on the plain below the Turkish positions. During their attempts to make way against this fire a body of Turkish horse and foot, taking advantage of a thick forest, broke forth upon the flank of the Russian column, and effected great slaughter. The Muscovites being upon ground perfectly open, and having no choice but to fight or fly, in a short time the spot which was the scene of this flank movement became covered with dead and dying Russians. But the enemy quickly brought up reinforcements, and the battle was renewed with much determination. For many hours the efforts of the assailants were desperately maintained, but toward midday their artillery fire gradually slackened, and they at length withdrew after suffering very considerable losses. The Turkish troops during the entire engagement behaved with great gallantry. They had, however, during a part of the action the advantage of intrenchments on high ground, and it was due to this fact, no doubt, that their losses, compared to those inflicted upon the enemy, were insignificant. The victory was won by the extraordinary courage of the Bashi-Bazouks. The dead and wounded on the Russian side exceeded 4,000. The engagement lasted over eight hours' actual fighting. The last of the Russians did not withdraw until near midnight. The Russians lost many guns. The only Turkish officer of note killed was Khalim Bey, major of irregulars. The column on the left, after occupying Bayazid, marched on to Diadin, and from there moved on toward Jeranos. Another division was sent from Bayazid to the shores of Lake Van, against Van and Diarbekir, to operate from this direction against Erzerum. The main column under General Tergukasoff continued to march on toward Erzerum, until, on June 18th, it met the Turkish army under Mehemet Pasha, on the plain between Delibaba and Zeidekan. The Turks withdrew to a village called Thaha—a shepherds' resting-place, abandoned in winter, and not to be confounded with Daher, 8 miles off. At 6 o'clock the next morning, after some unimportant outpost combats, the Russians developed a movement upon Zeidekan. Immediately 6 Turkish battalions, with all the field artillery available, and 2 mountain guns, moved out to meet the enemy. About noon they came up with the Russians, about 6 miles from Thaha. Soon after, heavy Russian guns, from a commanding position on the top of a ridge, 4,000 yards off, opened a brisk and well-directed fire on the eminence occupied by the Ottoman troops. Saturday morning, at 6 o'clock, 6 large masses of Russian infantry made a general advance, under cover of a terrible artillery fire, the shells, however, falling short. As they approached, the Turks poured in a steady and effective fire. The enemy still pressed forward, and succeeded in crossing the intervening ridge between the two positions, having detached a strong body to turn the Turkish right flank. For two hours, in the face of a destructive fire from the Russian artillery, the Turks stood to their guns with remarkable courage, not-

ing daunted by their losses. At 9 o'clock the Russians brought up 4 field guns on a ridge, which enabled them to rake almost the entire front of the Turkish line. From this moment the losses of the latter became serious; their men fell rapidly; their artillery was dislodged, and their infantry left exposed, without support, to a murderous fire. For over 20 minutes the Ottomans stood with unflinching courage before this new attack; and at this crisis it was that Mehemet Pasha, their commander, fell, sword in hand, in front of his men. To increase the difficulties, ammunition fell short, and much wild cavalry and infantry firing took place. At 9.45 the Russian fire was actually ploughing the ground, their shells falling like hailstones. Their flank movements now commenced with energy, preceded by a hurricane of iron missiles that made wide gaps in the Ottoman centre, tearing its front ranks to pieces. The height which the Turks held at the opening of the battle no longer became tenable. The survivors were driven off by the Russians at 11.45 o'clock. A cavalry charge from the Muscovite forces completed the discomfiture of their opponents. The Turks lost 850 in prisoners, and had 1,000 killed and wounded. After this battle, the Turks having fallen back on Delibaba, the Russian left wing took possession of the Delibaba Pass and fortified it. The Russian right wing having retired somewhat, Mukhtar Pasha telegraphed to Rashid Pasha to join him with 9 of the 12 battalions forming the Turkish left wing. Mukhtar quitted his headquarters at Zewin on the night of June 17th, for Delibaba, to take command of the Turkish right wing in person. On the following day he received reinforcements, which raised the strength of the right wing to 19 battalions (14,250 men), 4 cavalry regiments, and 3 batteries. The Russians in the Delibaba Pass numbered 20,000 with 5 batteries. Several skirmishes were fought on Wednesday, June 20th. On the 21st, Mukhtar attacked the pass. The fighting lasted from 6 o'clock in the morning until 8 in the evening. The Russians were at first driven from their positions, but they afterward recaptured them and attacked the Turkish positions on the heights with charges of infantry and cavalry. The Turkish front gave way for a short time, but afterward rallied, charged the Russians, and drove them back. The Turks then opened a terrible artillery fire and compelled the Russians to fall back with heavy loss. The Turks acknowledged a loss of 400 killed and about the same number wounded, while the Russian loss was at least double. On the 22d, Mukhtar again fought a severe battle. The Russian cavalry were placed in an intrenchment, to act as infantry, but ultimately the Turks drove them out and pursued them, the Russians retreating in disorder as far as Zeidekan. The whole of the fighting lasted 38 hours. The Turkish loss was upward of 2,000, and the Russian much heavier. The Russians afterward retreated to Kara Kilissa, and were again driven from there on July 2d. But owing to the apathy of the Turkish leaders they succeeded in retreating in safety in the direction of Bayazid.

The centre of the Russian army continued to assemble before Kars during May. Attempts were made by the Russians to storm the fortress, as well as sorties by the Turks, but none of these engagements were of any account. On May 17th the Russians succeeded in taking the fortress Ardahan, after two unsuccessful attempts. On this occasion they captured 82 guns, among them many Krupp guns. Russian authorities were immediately installed in the town and sanjak of Ardahan. Skirmishing continued on the line from Kars to Erzerum during the remainder of May. On the night of May 29th,

4,000 Circassian cavalry, commanded by Mousa Pasha, were ordered to proceed toward Kars, entirely unsupported by artillery or infantry. They rested for the night at Bekli-Ahmed, a small village north of Kars. The Russians secretly organized a powerful force, and during the night surrounded and surprised the village. Almost the entire force of the Circassians was massacred, and Moussa Pasha himself was among the missing. In the early part of June, the Russians, having effected a junction of their left and centre, concentrated their forces around Kars, while their outposts had previously advanced as far as Olti and Kisil Kilissa. Subsequently the centre also succeeded in establishing communication with the right, so that the eastern heads of the passes between the Soghanli and Kiretech ranges were in their hands. In the second week of June they retired from Pennek and Olti, and concentrated all their available forces around Kars, with the intention of striking a decisive blow at that point before proceeding any farther. Accordingly, several attacks were made under the lead of Grand-Duke Michael in person. The first

points attacked were the forts Tamaz and Kara Dag, erected in 1855. The fights lasted three days, but did not result in any advantage for the Russians. The losses on both sides were considerable. On June 25th, the Russians attacked the Turkish positions at Zewin. The battle was very severe, and both armies fought with great bravery. The Turks under Ismail Pasha, the Governor of Erzerum, had seventeen weak battalions, while the Russians had fifteen battalions, with twenty-four guns. But the Russians were completely routed, and fell back to Mellidoz. The result of this victory was chiefly due to Feizi Pasha, the chief of staff of Mukhtar Pasha. On the 29th they were again severely defeated, and were forced to retreat. In the latter part of June a Russian corps of 1,000 men penetrated as far as Van, but were defeated and driven back to Bayazid. This town was then again occupied by the Turkish forces, composed chiefly of Kurds, while the Russian garrison in the citadel continued to hold out. General Tergukasoff, although hard pressed by the enemy, succeeded in driving away the Kurds, and in relieving the

BUYUKDEREH.

garrison. These reverses of the Russian centre and left wing forced General Melikoff, in the beginning of July, to raise the siege of Kars, and to retreat to Russian territory.

On May 29th the extreme right of the Russians again attacked Batum, but were repulsed with considerable loss. In June, Dervish Pasha was appointed to the command at Batum, receiving considerable reinforcements at the same time. He immediately took up the offensive against the Russians, and succeeded, on June 24th, in forcing them to abandon the position held by them since the beginning of the war. They

then took up another along the Russo-Turkish frontier, between Fort Nicholas and Orzugeti.

On the shores of the Black Sea the Turks were effectually assisted by a squadron. In the latter part of April it bombarded Fort St. Nicholas (also called Shefkaty), situated immediately beyond the Turkish boundary, and which had been dismantled since 1854. A Russian sergeant, who happened by chance to be in the fort, was killed. The squadron then went on to Poti, which it also bombarded and set on fire. On May 18th it bombarded Sukhum Kaleh. Afterward it landed a number of sol-

diers, who were immediately joined by large numbers of natives. A violent combat ensued, in the course of which the Russians were driven out of Sukhum Kaleh. The Circassians, who had submitted to the Russian rule after a long and severe struggle only, and after a large number had emigrated, rose immediately upon the arrival of the Turks, and the whole of Circassia was soon in revolt. The Turkish squadron, under Hassan Pasha, supplied them with arms and ammunition. The activity displayed by the fleet along the eastern shores of the Black Sea produced a panic along the entire coast, particularly at Odessa, so that at one time large numbers of inhabitants left the town. The blockade of the Black Sea declared by the Turks was not very effective, for, after Russian steamers with torpedo boats had made an unsuccessful attack on the Turkish iron-clads at the Sulina mouth of the Danube, in the third week of June, the steamers Constantine and Vladimir went on a cruise, the former from Sebastopol, and the latter from Odessa. The Constantine sank four Turkish merchantmen, while the Vladimir succeeded in capturing a Turkish merchant brig.

The Montenegrins, after the expiration of the armistice, resumed hostilities, and met with continued reverses; yet, instead of being crushed between the two corps of Ali Saib and Suleiman Pasha, first defeated Ali Saib at Sagaratch and forced him to retire to Spuz, and on June 24th also defeated Suleiman Pasha and drove him into Albania. On June 26th, the Turks took up a position between Spuz and Podgoritz, while the Montenegrins were stationed at Kumani. The losses of the Turks were estimated as high as 10,000 men. At the end of June Montenegro was again freed from Turkish troops; but as these forces were seriously needed against the Russians, and as Austria was said to be decidedly opposed to a Turkish occupation of Cettigne, the greater part of them, under Suleiman Pasha, were embarked at Scutari for Roumelia, while Mehemet Ali was sent to Bulgaria, where he was soon after intrusted with the supreme command.

The Russian declaration of war produced a profound sensation throughout Europe, particularly in England, where it led to stormy scenes in Parliament. (*See GREAT BRITAIN.*) In the early part of May, Earl Derby sent an answer to the Russian circular, which was well calculated to make a British intervention appear probable. The plainness of speech of the answer, contrary to all diplomatic custom, while attracting considerable attention from the other Powers, produced great ill-feeling in Russia, and raised great hopes in Turkey. One official dispatch from St. Petersburg stated that an answer to the British note was considered superfluous, as the only proper reply could be a declaration of war. The Sultan sent his adjutant to Mr. Layard to express his thanks, and also ordered his ministry to convey his official thanks to the British Government.

In his dispatch Lord Derby said:

The Protocol to which her Majesty's Government, at the instance of that of Russia, recently became parties, required from the Sultan no fresh guarantees for the reform of his administration. With a view of enabling Russia the better to abstain from isolated action, it affirmed the interest taken in common by the Powers in the condition of the Christian populations of Turkey. It went on to declare that the Powers would watch carefully the manner in which the promises of the Ottoman Government were carried into effect; and that, should their hopes once more be disappointed, they reserved to themselves the right to consider in common the means which they might deem best fitted to secure the well-being of the Christian populations and the interests of the general peace.

To these declarations of the intentions of the Powers the consent of the Porte was not asked or required. The Porte, no doubt, has thought fit—unfortunately, in the opinion of her Majesty's Government—to protest against the expressions in question as implying an encroachment on the Sultan's sovereignty and independence. But while so doing, and while declaring that they cannot consider the Protocol as having any binding character on Turkey, the Turkish Government have again affirmed their intention of carrying into execution the reforms already promised.

Her Majesty's Government cannot therefore admit, as is contended, that the answer of the Porte removed all hope of deference on its part to the wishes and advice of Europe, and all security for the application of the suggested reforms. Nor are they of opinion that the terms of the note necessarily precluded the possibility of the conclusion of peace with Montenegro, or of the arrangement of mutual disarmament. Her Majesty's Government still believe that, with patience and moderation on both sides, these objects might not improbably have been attained. . . .

But the course on which the Russian Government has entered involves graver and more serious considerations. It is in contravention of the stipulation of the Treaty of Paris of March 30, 1856, by which Russia and the other signatory Powers engaged, each on its own part, to respect the independence and the territorial integrity of the Ottoman Empire. In the conferences of London of 1871, at the close of which the above stipulation, with others, was again confirmed, the Russian plenipotentiary, in common with those of the other Powers, signed a declaration, affirming it to be an essential principle of the law of nations that no power can liberate itself from the engagements of a treaty, nor modify the stipulations thereof, unless with the consent of the contracting parties by means of an amicable arrangement. In taking action against Turkey on his own part, and having recourse to arms without further consultation with his allies, the Emperor of Russia has separated himself from the European concert hitherto maintained, and has at the same time departed from the rule to which he himself had solemnly recorded his consent.

The neutral position of the Suez Canal, and consequently that of Egypt, had occasioned great uneasiness in England, as it is the road to India. On this subject Earl Derby addressed a note, dated May 6th, to the Russian ambassador, in which he said:

Should the war now in progress unfortunately spread, interests may be imperilled which they (her Majesty's Government) are equally bound and determined to defend, and it is desirable that they should make it clear, as far as at the outset of the war can be done, what the most prominent of those interests are. Foremost among them is

the necessity of keeping open, uninjured and uninterrupted, the communication between Europe and the East by the Suez Canal. An attempt to blockade or otherwise to interfere with the Canal or its approaches would be regarded by them as a menace to India and as a grave injury to the commerce of the world. On both these grounds any such step—which they hope and fully believe there is no intention on the part of either belligerent to take—would be inconsistent with the maintenance by them of passive neutrality. The mercantile and financial interests of European nations are also so largely involved in Egypt that an attack on that country, or its occupation, even temporarily, for purposes of war, could scarcely be regarded with unconcern by the neutral Powers, certainly not by England. The vast importance of Constantinople, whether in a military, a political, or a commercial point of view, is too well understood to require explanation. It is, therefore, scarcely necessary to point out that her Majesty's Government are not prepared to witness with indifference the passing into other hands than those of its present possessors of a capital holding so peculiar and commanding a position. The existing arrangements, made under European sanction, which regulate the navigation of the Bosphorus and Dardanelles, appear to them wise and salutary, and there would be, in their judgment, serious objections to their alteration in any material particular. Her Majesty's Government have thought it right thus frankly to indicate their views.

In answer to this communication, Prince Gortchakoff, the Russian Minister of Foreign Affairs, wrote to Count Shuvaloff on the 18th of May, saying:

The Imperial Cabinet will neither blockade, nor interrupt, nor in any way menace the navigation of the Suez Canal. They consider the Canal as an international work, in which the commerce of the world is interested, and which should be kept free from any attack. Egypt is a part of the Ottoman Empire, and its contingents figure in the Turkish army. Russia might, therefore, consider herself as at war with Egypt. Nevertheless, the Imperial Cabinet does not overlook either the European interests engaged in the country or those of England in particular. They will not bring Egypt within the radius of their military operations. As far as concerns Constantinople, without being able to prejudice the course or issue of the war, the Imperial Cabinet repeats that the acquisition of that capital is excluded from the views of his Majesty the Emperor. They recognize that in any case the future of Constantinople is a question of common interest, which cannot be settled otherwise than by a general understanding, and that if the possession of that city were to be put in question, it could not be allowed to belong to any of the European Powers. As regards the Straits, although their two shores belong to the same sovereign, they form the only outlet of two great seas in which all the world has interests. It is, therefore, important, in the interests of peace and of the general balance of power, that this question should be settled by a common agreement on equitable and efficiently guaranteed bases. Lord Derby has alluded to other British interests which might be affected by the eventual extension of the war, such as the Persian Gulf and the route to India. The Imperial Cabinet declares that it will not extend the war beyond what is required for the loudly and clearly declared object for which his Majesty the Emperor was obliged to take up arms. They will respect the British interests mentioned by Lord Derby as long as England remains neutral. They have a right to expect that the English Government will, on their side, in like manner take into fair consideration the particular interests which Russia

has at stake in this war, and in view of which she has imposed such great sacrifices on herself. These consist in the absolute necessity of putting an end to the deplorable condition of the Christians under Turkish rule and to the chronic state of disturbance provoked by it. This state of things, and the acts of violence resulting from it, excite in Russia an agitation caused by the Christian feeling so profound in the Russian people, and by the ties of faith and race which unite them to a great part of the Christian population of Turkey. The Imperial Government is the more obliged to take account of this, since it reacts both on the internal and external situation of the Empire.

The situation in Constantinople during this period was of a very critical character. Dissensions arose between the Parliament and the Ministry. Early in May the impeachment of Redif Pasha was threatened, and dissolution was significantly hinted at on the one side, and threats of revolution were heard on the other. On May 24th a demonstration of the Softas occasioned considerable alarm. A body of them, numbering about 2,000, followed by a rabble, probably again as large, proceeded to the Chamber of Deputies to demand the dismissal of the ministers. The Chamber received a deputation of five Softas and discussed their petition. The debate became so stormy that the President was obliged to suspend the sitting. The Softas then marched to the Palace. The Sultan, however, had fled to his Asiatic castle across the Bosphorus. Feeling somewhat reassured by the reports of his ministers, he returned to the city the following morning, protected by a strong military escort. Five of the leaders were exiled. The immediate result of the demonstration was the creation of a Council of War, under the presidency of the Minister of War, Redif Pasha, or, in his absence, Rauf Pasha. Among the members were Mehemed Rushdi, a former Grand-Vizier; the Minister of Marine, Senator Umik Pasha; Halim Pasha; Said Pasha, aide-de-camp to the Sultan; Mahmoud Damad, Grand-Master of the Artillery; Uzif Pasha, and other high officials.

The passage of the Danube took place on June 22d at Galatz and Braila. The Russian troops crossed early, meeting with no opposition until they reached the village of Zatoca, which, after a brief contest, was abandoned by the Turks. Another body of troops having crossed from Braila, the Turks abandoned Matchin, Tultcha, and Hirsova, which were then occupied by the Russians. On the morning of June 27th, after several days' continuous firing between the opposing batteries on either bank, the Russians crossed in force at Simnitza. The passage was opposed by the Turks, and after several hours' severe fighting they were driven back with considerable loss. An attempt at crossing made at Nicopolis was unsuccessful. During the passage of the Danube firing was kept up along the whole line of the river between the opposite batteries. It was particularly terrible between Rustchuk and Giurgevo. Rustchuk was almost completely destroyed by the Russian fire, while Giurgevo also suffered

considerably. At Nicopolis, the Russian fire was also very effective. The crossing continued very slowly during the last week of June, owing chiefly to the partial destruction by a storm of the bridge at Simnitza. The Russian headquarters were transferred to Simnitza. The Emperor at the same time issued a proclamation to the Bulgarians, in which, after stating that the aim of Russia now, as formerly, was to protect the co-religionists in the Turkish Empire, he said: "Henceforth Russian arms will protect all Christians from violence. No injury shall be done them or theirs with impunity. All crimes shall receive punishment." As soon as the Russians had established themselves in the captured city of Sistova, strong detachments were sent out on the road to Tirnova, which was captured on July 3d. The Russians immediately established a civil government, with Prince Tcherkasky as provisional governor. Biela was occupied on the 5th. On July 6th, about 120,000 Russians had crossed at Sistova, comprising about 20,000 cavalry and 250 cannon. This army was divided into three columns, the principal one of which, under the command of the Czarevitch, marched on Rustchuk, and the other two toward the Balkans and Nicopolis respectively.

GALLI POLI.

The Russian army in the Dobrudja by July 6th had cleared that section of Turks as far as Trajan's Wall, extending from Tchernavoda to Kustendje, and prepared to commence their advance to the Balkans, so as to cooperate with the army operating west of the quadrilateral. On July 15th they occupied Kustendje, and on the 17th Medjidie. In the second week of July the Turks retired from the line of the Jantra, and the Russians occupied most of the territory between the Jantra and the Lom. On July 16th Nicopolis, one of the strongest points on the Danube, was surrendered to the Russians after a severe bombardment, leaving the town little more than a heap of ruins. The Russians on this occasion captured two pashas, 6,000 men, 40 cannon, and two gunboats.

The retreat of the Russian army in Armenia, and the raising of the siege of Kars, were admitted in an official dispatch from Alexandropol, dated July 4th. The dispatch stated that "General Melikoff, being apprised of a movement of Mukhtar Pasha toward Kars, in order to place the troops besieging Kars in a position to move with greater readiness, suspended the bombardment, sent the siege artillery to Kurukdara and Alexandropol, concentrated the greater part of the cavalry at Hadji Vali to protect communications, and stationed the infantry at Zaim." The Russians had hardly retired when the Turks appeared in their place. Comparative quiet, however, reigned along the entire lines until the close of July, when the Russians again assumed the offensive. General Oklobjio, commanding the Rion detachment, had occupied since his retreat from Batum a position beyond the river Tchuruk, forming the boundary between the Russian and Turkish territory, and had been left unmolested by Dervish Pasha.

In the Caucasus, the revolt among the natives had rather increased than decreased during July. With the exception of Abkhasia, where it had been aided by Turkish troops and the Batum naval squadron, the revolt

was in all cases limited to small territories, and was readily suppressed by flying columns. In the Terek territory the disorders were, according to Russian dispatches, of an alarming character. The Abkhasians were opposed by the Ingur Corps under General Alkhasoff, which had originally consisted of the Luchum and Kutais columns. This corps gained but little ground, being harassed in its flank by the Batum squadron, and had merely guarded the road from

Kutais to Tiflis, and the railroad from Poti to Tiflis.

On July 12th, General Gourko, with ten regiments of cavalry and some mountain batteries, preceded by Cossacks, left Tirnova, moving east as far as Helena; thence he turned to the south, leaving his artillery behind, and crossed the mountains by a secret pass on July 13th, debouching from the mountains at the village of Hainkoi, whence he sent his Cossacks to cut the railway and telegraph line at Yeni Sagra, between Yamboli and Adrianople. On the next day, moving westward, he carried, on July 17th, the village of Kasanlik by assault with small loss. Thus he had turned the best pass in the Balkans—the Shipka Pass—through which there is a very good road for Turkey, over grades for the most part easy. On July

18th, he gained possession of the village of Shipka, while at the same time a regiment, coming from the north by the main road from Gabrova, attacked the Turkish defenses in the narrow defile of the pass. This attack was renewed on the following day, the 19th, with complete success, leaving the pass in the hands of the Russians.

According to the original plan of the Russians, General Gourko was to attack the pass on the 17th from the rear, while Prince Mirsky was to attack from the front. But General Gourko was delayed, and Prince Mirsky undertook the attack alone on the 17th, while the former did not come to his assistance until the 18th, as stated above. It was considered very strange that the Turks did not offer a greater resistance, as their position was certainly a very strong one.

The Balkan Mountains, forming the second line of defense for Turkey, are crossed by numerous passes, of which, however, only six are available for the passage of an invading army. These naturally divide themselves into two groups, the eastern radiating from the central point of Shumla, the western from that of Tirnova. The first in order is the Shipka Pass, connecting Tirnova and Gabrova in the north with Kasanlik in the south. A good road across it was begun by order of Midhat Pasha, but has never been completed. It is, nevertheless, the easiest pass of the Balkans. Its height is 4,500 feet at the summit, and the green valleys seen from its southern slope present a most beautiful view. Next comes the Tvarditza Pass. This is reached from Tirnova by a road through the valley of the Saltar to the old Bulgarian town of Helena and thence by a path over the mountains, debouching in the valley of the Tundja, 30 or 40 miles east of Kasanlik. Between the Shipka and the Tvarditza Pass is a mountain path leading to Hainkoi. It was this pass that General Gourko used in crossing the mountains, it having been pointed out to him by Bulgarians. A little beyond the Tvarditza Pass, the Balkans branch off into three distinct ranges. The southern or main ridge runs almost due east to Cape Eminch on the Black Sea, and is therefore called Eminch Dagb. The central range, called by the Bulgarians Stara-Planina, or Old Mountain, follows the same direction, with a slight bend to the north, as far as the junction of the two branches of the Kamtchik River; and the northern spur, called the Kutchuk, or Little Balkan, passing Kasan, ends in the vicinity of Smadova and the Great Kamtchik; while beyond it, still farther to the north, lies the crescent-shaped outwork formed by the Binar Mountains, the heights around Shumla, and the rocky ridges through which the Pravadi flows downward to Varna and the Black Sea. In the hollow between the Kutchuk and Stara-Planina branches of the Balkan, surrounded on every side by steep hills, lies the town of Kasan, called by Bulgarians Kotel or Kettle, from the peculiar

shape of the gorge inclosing it. From Kasan two roads branch off, one crossing the Balkans to Slivno and forming the Demir Kapu Pass, the celebrated Iron Gate, and the other going to Karnabad and forming the Kotlenski Buaz Pass.

The rapid and unobstructed advance of the Russians in Bulgaria, and the crossing of the Balkans, had created a decided panic as well as great dissatisfaction with Abdul Kerim, the commander-in-chief, in Constantinople. It was therefore determined to make a change in the command; and on July 19th Abdul Kerim was removed, and Mehemet Ali, who had brought his forces from Montenegro, was appointed commander-in-chief. At the same time, Suleiman Pasha was appointed commander-in-chief of the Turkish forces in Roumelia, after having effected a junction with Rauf Pasha. The effect of the change was soon perceptible. Renewed activity was imparted to the Turkish movements, and a general advance of their lines was determined upon. On July 19th, the Russians sustained their first check in Europe. General Schilder-Shuldner, with a weak force, was sent against Plevna, a town southwest of Nicopolis. He was, however, defeated and driven back, a Russian official dispatch from Tirnova giving the Russian loss at two colonels and 14 inferior officers killed, one general, 36 inferior officers, and 1,878 men placed *hors de combat*; while the Turks admitted a loss of 1,200 killed and wounded. In consequence of this defeat the corps of General Krüdener, stationed south of Plevna, and the 11th under Prince Shachovski, which was marching on Widin, were united, and the headquarters of the Grand-Duke, which had been established for a short time at Tirnova, were withdrawn to Biela. Fresh troops were ordered from Roumania, and even a Roumanian corps crossed at Nicopolis, the first Roumanian troops to cross the river. Mehemet Ali at Shumla and Osman Pasha at Plevna were seeking to effect a junction at Tirnova, and to crush the Russians between them. The Russian force under General Krüdener was strengthened in every possible way, until it reached 60,000 men. During the time spent by the Russians in gathering their forces, the Turkish commander also increased his forces and strengthened his positions, so that when the Russian attack came it found him strong, with fully 50,000 men. The attack was made on July 30th. Baron Krüdener began the battle about half-past nine in the morning, attacking the Turkish centre at Grivitz, and the northern flank of the intrenched position over Bahora, while Prince Shachovski attacked Radisevo, and General Skobelev, Jr., held in check a strong Turkish force at Lovatz, which was the extremity of the Turkish line. A series of hotly-contested engagements, extending over July 30th and 31st, resulted again in a decided Russian repulse with very heavy losses. The army of Prince Shachovski, which had consisted of three brigades, was completely

destroyed; and the remains during the night gathered at Bulgareni, where the corps of General Krüdener was met, who, although he had not suffered as severely, had also been completely defeated. All accounts agree in praising the bravery of the Russian soldiers, but the same mistake was made on this occasion as on the former, that the Russians had underestimated the strength of the enemy, and had proceeded to the attack with insufficient force. The Turks, however, did not follow up the advantage gained. The Russians immediately retook the positions held by them previously. At the same time they made great exertions to retrieve their disaster. Four additional corps, which had been lying in Roumania, were hurried forward. The entire Imperial Guard, which was partly stationed in Poland and partly in St. Petersburg, received orders to march to Bulgaria; while an Imperial ukase, dated July 22d (August 3d), ordered the mobilization of 188,600 men of the Landwehr, which was reported to have been received with great enthusiasm in Russia. On August 7th, a Russian force, consisting of 8 infantry divisions and 8 squadrons of cavalry, attacked the Turks at Lovatz. The latter, however, were reinforced in time by 5 battalions of infantry, and some cavalry from Plevna, and repulsed the Russians, whose loss was reported at 300 dead and 600 wounded. Lovatz, situated about 40 miles from Selvi, seriously threatened the Russian line of communication, and consequently the Russians considered it essential to take this city.

In the latter part of July, the Russians closed the Sulina mouth of the Danube, by sinking vessels and then filling up with stones and sand, so that the only mouth of the river accessible to larger vessels became impassable. This measure met with severe opposition from some of the Powers, Great Britain dispatching several men-of-war to the Sulina mouth, to protect British interests, while Austria contented herself with a mild protest. Prince Gortchakoff issued a special note on the subject, in which he stated that Russia would remove all obstructions at the end of the war, and would leave the bed of the river in the same condition as it was before the war. With regard to the British complaints, the note said that after the Czar had promised not to attack Egypt, it was but reasonable to expect that the British Government would use its influence with the Khedive to restrain him from participating in the war. This had not been the case, for in the recent battles the Russians had been opposed to Egyptian troops. If England then wished to secure her interests in Egypt, she was requested to use her influence with the Khedive to restrain him from any further hostile steps, which Russia would perhaps be forced to resent.

Beyond the Balkans the Russians continued on their victorious career for a short time only. After defeating Suleiman and Rauf Pashas at

Karabunar, south of Yeni Sagra, and pushing a body of Cossacks as far as Kirk Kilissa, 30 miles east of Adrianople, General Gourko was forced by the Russian reverses north of the Balkans to retreat to the passes of Shipka and Hainkoi, and thus secure his communication with Bulgaria. In the middle of August he was appointed to the command of the Imperial Guards ordered from St. Petersburg to Plevna, while the command of the Balkan Army was given to Prince Mirsky. During the following weeks comparative quiet reigned on the seat of war in Europe. North of the Balkans both the Turks and Russians were waiting for reinforcements before resuming active operations. While both sides, therefore, were watching each other in strong fortifications, the operations were confined to small engagements at Rasgrad, Osman Bazar, and Eski Djuma, an advance of Prince Hassan beyond Bazardjik, an ineffectual attempt of the Turks to land troops at Kustendje, which had been occupied by General Zimmermann, and the movements of Suleiman Pasha, south of the Balkans. In the mean while, the Russians hurried their reinforcements forward as quickly as possible. The 7th and 10th Corps, stationed on the shores of the Black Sea, were ordered forward early in August, and by the second week in that month parts of the 7th Corps had reached the army of the Czarevitch, while the 10th Corps was ordered to join General Zimmermann in the Dobrudja, who held Trajan's Wall. The strengthening of the left wing was deemed necessary, as the Turks had withdrawn those troops from the Caucasus which under Fazli Pasha had aided the rebellious tribes in that district, and intended to land them at various points in the Dobrudja. At the same time the Egyptian corps under Prince Hassan, backed by a body of reserves under Rashid Pasha, was advancing against Trajan's Wall, in order to force the Russians back from the line of Tchernavoda to Kustendje. The Emperor Alexander and the Grand-Duke Nicholas had taken up their headquarters at Gorni-Studen, between Biela and Plevna, while the left wing of the Russian main army continued in an observant position before Rustchuk, and before a portion of the Turkish Army of the East under Achmet Eyub Pasha. The latter occupied a strong position at Rasgrad, which he had changed into a fortified camp. The new Serdar Ekrem, Mehemet Ali, who had spent considerable time on reorganizing the forces at Shumla, had concentrated large masses of troops at Eski Djuma and Osman Bazar, and began to advance slowly toward Tirnova. On the Lom River, Mehemet Ali's troops had several small engagements with the Russians under the Czarevitch during the last week in August. Finally, on August 29th, the Turks began a forward movement. Nedjib Pasha, starting from Eski Djuma, crossed the Black Lom near Yaslar, and drove the Russians from their positions at that point. At the same time Fuad and Salih Pashas advanced

from Rasgrad in a northwesterly direction toward Torlak. Mehemet Ali Pasha commanded the Turks in person and repulsed the Russians along the entire line. On the 30th, the fighting was resumed. The main force of the Russians was at Sadana, and opened fire on the advancing Turks under Nedjib Pasha. Sadana soon caught fire, and the Russians retreated to Karasan. Here a desperate engagement took place, and the Turks were getting the worst of it, when suddenly Baker Pasha, with a portion of Subit's division, came to them, and, getting well on the Russian right flank, compelled the Muscovites to vacate their ground. At the same time that Karasan was taken, Sabid Pasha attacked Haidarkoi, which was also taken by the Turks. Mehemet Ali now had his headquarters at Yenikoi, and, without pursuing the advantage he had gained, simply retained his position. On September 6th, Achmet Eyub advanced from Rasgrad, and attacked the Russian positions at Kechlova. The Turkish forces were greatly superior to the Russians in point of numbers and were constantly receiving reinforcements. The Russians fought with great bravery, but were finally compelled to retreat beyond the Lom. On the 7th, the Russian force at Kadikoi, which had served as a corps of observation before Rustchuk, was also defeated and driven across to the left bank of the Lom, so that now the whole right bank of the river was in possession of the Turks. On the 8th, Mehemet Ali crossed the river with three divisions, and began to advance slowly toward the Jantra.

On the Russian right wing, fronting toward Plevna, everything was quiet up to the close of August; but on the 31st, Osman Pasha made a determined attack on the Russian position at Pelisat, and was repulsed with considerable loss. At this point Baron Krüdener had been relieved from the command, and General Zottoff put in his place. On September 3d, General Skobelev recaptured Lovatz, which had been in the hands of the Turks since July 28th. The battle was very severe and the losses on both sides considerable.

The operations on the Lom and around Plevna during August were far exceeded in interest by the fierce struggles for the Shipka Pass. On August 16th, a Turkish detachment succeeded in entering the Hainkoi Pass, but were so warmly received by a strong Russian corps that it was forced to retreat. On the 20th and 21st Suleiman Pasha proceeded to the attack of the pass, and not less than ten times did the Turks assail the Russian fortifications at the entrance, on these days. The conflict was fierce; but, although the Turks constantly received reinforcements, they were repulsed every time with great loss. On the morning of the 22d the Turks renewed their attack; but when, at noon, the Russians received reinforcements, they retreated. On the following morning the Turks again proceeded to the attack, and so the fighting was kept up with great bit-

terness till the 27th. After this date firing continued, but the real conflict had ceased. The end of this terrible struggle left the Russians in full possession of all the strong points, although they were closely watched by the Turks. The losses on both sides during this week of battles, the most sanguinary week of the campaign, was very great. A dispatch from the Russian headquarters estimated the total loss of both sides at 12,000, of whom fully two-thirds were Turks.

Since the battle before Plevna in the last days of July, Osman Pasha, instead of following up the successes gained on that occasion, had used his opportunity to make of Plevna and its surroundings a fortified camp of unusual strength, which could only be taken by a regular siege, and to reinforce his army with troops from Sophia and Widin. The Russians had also received considerable reinforcements, among them three Roumanian divisions, and the chief command of the united forces before Plevna was given early in September to Prince Charles of Roumania, who took up his headquarters at Poradim. On September 7th, the Grand-Duke Nicholas also arrived at this place with his staff, and was followed a few days later by the Czar. After a period of comparative quiet of over a month, interrupted only by occasional small engagements and the affair at Pelisat, the united Russians and Roumanians again proceeded to attack Plevna. On September 7th, the third battle began with a furious cannonade of the Russians, which they continued uninterruptedly until the 11th, when a general attack was undertaken against the Turkish positions, which was unsuccessful until the evening. After the Emperor had retired from the field disheartened and tired out, the right wing of the Russian army, composed mainly of Roumanians, succeeded in taking the great redoubt of Grivitza by surprise, while on the left wing General Skobelev maintained himself in two smaller earthworks, which seriously threatened Osman Pasha's line of retreat. During the night the Turks sought in vain to recover their lost positions, but on the 12th they succeeded in regaining the two redoubts south of Plevna, on which occasion General Skobelev's corps was almost annihilated in consequence of a want of support. On the 14th, the Turks also attempted to retake the Grivitza redoubt, but were repulsed. After that date operations rested, with the exception of an unsuccessful attempt of the Roumanians on the 18th to capture the redoubt nearest the Grivitza. The losses on both sides were very great, exceeding even those of the terrible struggle in the Shipka Pass. Up to the afternoon of the 14th, the Russo-Roumanian loss was stated officially at 16,000 men, while the Turkish losses, particularly during the struggles for their lost redoubts, were also very large. The deportment of the Roumanian troops, who, on this occasion, were under fire for the first time, was praised by all observers. The allied armies on this

occasion were estimated at 75,000 to 80,000 men, with more than 400 field guns, while Osman Pasha's forces hardly reached a strength of 50,000 combatants and 150 guns. On the 18th, the Roumanians, starting from the Grivitzza redoubt, attempted to storm the great central redoubt lying next to it, but were repulsed with considerable loss. After this decided repulse, the Russians proceeded to a regular siege of Plevna. They had completely surrounded the Turkish positions, and were daily drawing their lines closer around it; a relief corps was advancing on Plevna from the direction of Sophia, under Shevket Pasha. It had been assembled in the middle of September at Orkhanie, between Plevna and Sophia, and was composed of troops from Nissa, Widin, and Sophia. The Russians by the middle of September had, on the road from Plevna to Sophia, not only a body of cavalry, but also some infantry; and Shevket Pasha, in a dispatch from Orkhanie, dated September 22d, stated that this Russian force consisted of 15 battalions, 3 cavalry regiments, and 8 guns. In spite of this body, however, the Turkish force under Hifzi Pasha, consisting of 20 battalions, a cavalry regiment, two batteries, and a train of provisions and ammunition said to number 1,200 wagons, reached Plevna on September 23d, while Hakit Pasha covered his rear and Shevket Pasha had occupied a fortified camp at Orkhanie with his newly formed corps. In the last week of September, General Todleben was appointed the military adviser of Prince Charles, clearly indicating that the Russians intended to proceed to a regular siege of Plevna.

After Suleiman Pasha had nearly exhausted his strength in the latter part of August, in trying to secure the Shipka Pass, and the 13th Russian Corps had maintained itself in its positions, the Turkish general employed the last days of August and the first weeks of September in the reorganization of his forces. While Radetzki was completing his fortifications and his roads, Suleiman was actively engaged in erecting new batteries and bringing up heavy artillery. The first half of September was therefore filled up with cannonades and small engagements between the outposts. But on the night from September 16th to 17th, after a continuous cannonade of five days, the Turks suddenly and unexpectedly attacked the Russians along the entire line. After having lost several outlying works, the latter, after a struggle of nine hours' duration, forced the Turks down the declivities, and completely defeated them. The Russians lost during this struggle 31 officers and 1,000 men killed and wounded, while over 3,000 Turkish dead covered the hill-sides. After this repulse the Turks continued to bombard the Russian positions.

Although Mehemet Ali crossed the Lom on September 8th, the greater part of his army did not get over until a week later. In order to prevent the Turks from gaining a firm foothold on the left bank of the river, a part of the

Twelfth Russian Army Corps advanced on the 14th in the direction of Kechlova, and attacked the force of the enemy that had passed this place the day before, at Sinankoi. These troops were under Assaf Pasha, and afterward received reinforcements from Sabit Pasha. The Russians were severely repulsed on this occasion, and in consequence retreated beyond the Banicka Lom, a branch of the Kara Lom. In the course of the 14th, there were numerous trifling engagements between reconnoitring bodies along the whole front. On the evening of the 14th, four Russian battalions marching from Tcherkovna made an attack on the Turkish outposts to the west of Vodica. After an engagement lasting till midnight, the Russians retreated. On September 21st, Mehemet Ali attacked the right wing of the Czarevitch's army under the command of General Tatitcheff, at Tcherkovna, and was repulsed after an engagement of five hours. On the following day he retreated a short distance, and on September 25th fell back with his whole army to the Kara Lom, and during the following days recrossed this river, occupying the same positions that he had left on August 20th. This complete failure brought about an entire revulsion of feeling throughout Turkey, and Mehemet Ali, who, upon his appointment to the supreme command, had been generally hailed as the deliverer, was now as bitterly denounced. He was removed, and Suleiman Pasha appointed in his stead.

With the beginning of August, it was decided in Constantinople, in consequence of demands made by Mehemet Ali, to send a large part of the troops in Asia to the seat of war in Europe. Therefore the troops which had aided the insurrection in the Caucasus were all removed and sent to Varna, while at Batum Dervish Pasha also embarked with part of the troops stationed there. At the same time troops stationed at Bagdad received orders to proceed to Europe.

The operations in August were as follows: On the extreme right wing, General Oklobjio remained in his positions, without attempting any forward movement. He was, however, attacked several times by Dervish Pasha: thus, on the 13th, on his right flank, with the co-operation of some Turkish monitors, and again on August 24th, this time along his entire front. On both occasions the enemy was repulsed. At Ardahan everything remained quiet. The brigade which had occupied this fortress, after leaving a sufficient garrison, joined Loris Melikoff's army, and, on August 12th, arrived on his extreme right at Zaim, in all four battalions cavalry and artillery. General Loris Melikoff, commanding the Russian centre, ordered on several occasions cavalry to advance against Mukhtar Pasha's positions on the Aladja Dag, southeast of Kars, and between Visinkoi and Ani, and skirmishes took place frequently between the cavalry of the two armies. On August 13th, the Russian

staff estimated Mukhtar Pasha's force to consist of 11 battalions Nizams, 25 battalions Redifs, 35 field and mountain guns, 6 squadrons regular cavalry, and 3,500 mounted Circassians, Kurds, Zapties, and Bashi-Bazouks—in all about 33,000 men. Early in the morning of August 18th, the three infantry divisions under General Dewell and Heimann, with numerous cavalry and 120 guns, advanced from their camps at Kurukdara and Bashkadiklar, near Alexandropol, against the fortified positions of Mukhtar Pasha. After an engagement lasting eight hours, the Russians retreated in excellent order to their camps. They officially state their loss as 1 officer and 60 men killed, and 18 officers and 270 men wounded; the Turks state their loss as 117 killed and 342 wounded, and estimate the Russian loss at 1,500 men, and speak of having taken many prisoners. Seven days after this engagement, on August 25th, Mukhtar Pasha attacked the Russian positions with his whole force, and attempted to turn the Russian left flank. After fighting from early in the morning until five o'clock in the afternoon, with great loss on both sides, the Turks finally retreated without being pursued, and reoccupied their old positions. They retained the height of Kizil Tepe, which they had stormed early in the morning. The Erivan column, under General Tergukasoff, did not move out of its positions around Igdir, and was kept in check by Ismail Pasha. No action of any account took place here, except an attack on a Russian detachment under Colonel Ismailoff, at Igdir, on August 24th, by a superior Turkish force, which was, however, repulsed. On the 28th, three Turkish columns made a fresh attack, but were repulsed, notwithstanding their numerical superiority, after a five hours' engagement, with the loss of 400 men, the Russian losses being insignificant.

In the Caucasus, General Alkhasoff completely quelled the Abkhasian revolt during August. This was owing to the dissensions existing among the different Abkhasian tribes, and to the departure of the Turkish troops, who took with them several thousand Circassian families. Shortly after their departure from Suchum Kaleh, a torpedo-cutter of the Russian man-of-war Constantine destroyed a large Turkish iron-clad on the Caucasian coast, making the fifth iron-clad the Turks lost in this manner during 1877. The positions of the opposing armies remained virtually unchanged during September, the fighting done being limited to skirmishes between the different outposts. On October 1st, the Russians began a general forward movement against Kars, and on the 2d a general battle took place. The Turkish army formed a line which extended from Great and Little Yagni, two fortified hills in the Kurukdara Plain, as far as Ani, on the Arpa Tchai River, with the centre advanced toward the river and resting on Kizil Tepe. The Russians, who had been reënforced both by new troops and those lately employed against

the Caucasian insurgents, commenced the battle at daybreak by an assault on Great Yagni, which was the extreme outwork of Mukhtar Pasha's fortifications, about twelve miles due east from Kars. Here the Turks seem to have been taken by surprise as much as the Russians were when Mukhtar Pasha won Kizil Tepe from them and compelled them to abandon their fortified camp at Kurukdara. A single Turkish battalion defending Great Yagni was cut to pieces or captured after two hours' obstinate defense, which gave the Turks an opportunity to prepare for the next assault. This came soon after, and the battle that followed was described as one of the most bitterly-contested and most sanguinary of the campaign, lasting over thirteen hours. The final result was that the Russians were repulsed at every point, and were even forced to abandon Great Yagni, which had been taken at the opening of the contest. The fighting was kept up until the evening of the 5th, but the result was not changed. The Russians undoubtedly suffered a severe defeat. This, however, did not check their advance, as it was thought at the time that it would. On October 11th, they gained an important victory over Mukhtar Pasha, turning his right flank and forcing him to retreat to Kars. On the 14th, the Turkish left rested on Little Yagni, the centre on Awlia (or Olya) Tepe, and the right on Aladja Dag, where three divisions were strongly fortified. Olya Tepe is a spur or hill midway between Yagni and Aladja, about fifteen miles east by south from Kars. Besides these positions, the Turks occupied several strong places, such as Orlok and Visinkoi, in the rear of their line, for the protection of their army and Kars from a flank attack. On Sunday, the 14th, the Russian left having been extended to the banks of Arpa Tchai, beyond Ani, a division under General Lazareff moved south of Aladja Dag, drove the Turks from Orlok upon Visinkoi and Kars, and occupied Orlok, thus completely turning Mukhtar's right. On the morning of Monday, the 15th, a heavy cannonade was directed against Olya Tepe, which was the key to the Turkish positions. In the afternoon General Heimann, with about 10,000 infantry, carried Olya Tepe by assault, cutting the Turkish army in two. The centre and left wing, under Mukhtar himself, retreated upon Kars, pursued by General Heimann and harassed in the flank by General Lazareff, but succeeded in gaining the cover of the fortifications of Kars after a fearful rout, during which he lost a great number in killed and wounded, several thousand prisoners, and four guns. The three divisions constituting the Turkish right had meantime been surrounded and attacked, and driven from their fortified camp with great loss. Finally, at 8 o'clock on Monday night, the remnant of this portion of Mukhtar's army surrendered with thirty-two guns and a great quantity of material. Among the persons captured were seven pashas. The consequences

of this battle made themselves felt immediately. For, while the main army of the Turks was virtually destroyed, and Mukhtar could hardly dare to leave Kars with the remainder, Ismail Pasha, who had been operating against Igdir, immediately began his retreat to Turkish territory, closely pursued by General Tergukasoff. On the other hand, the Russian garrison of Ardahan, not finding itself threatened any longer, proceeded to active operations. It advanced to Pennek, and thence to Olti, and there threatened any army that might advance to the relief of Kars. On October 27th, Mukhtar Pasha and Ismail Pasha joined their forces at Koprikoi, and continued their retreat to Erzerum. At the same point, Heimann and Tergukasoff joined their forces on the 28th. On November 4th, the Russians attacked Mukhtar's positions on the Deve Boyun, a mountain ridge immediately before Erzerum, and, after nine hours' severe fighting, completely defeated the Turks, who fled in all directions. On the 9th the Russians attacked Erzerum, but were repulsed and driven back to the Deve Boyun, where they made a stand and repulsed all Turkish attempts to dislodge them. Another attack on November 14th was also unsuccessful. On Sunday, November 18th, the fortress and city of Kars was taken by the Russians by storm, over 300 cannons, and large stores of ammunition, etc., falling into the hands of the victors. The Turks lost 5,000 killed and wounded, 10,000 prisoners, and many flags. The Russian loss was about 2,700. The Russian soldiers made but trifling booty, and spared peaceful citizens, women, and children. General Loris Melikoff directed the battle during the day. The Grand-Duke Michael was present also. The former entered the city at 11 o'clock Sunday morning.

This virtually ended the campaign in Armenia for 1877. Although the Russians proceeded to invest Erzerum, and also sent reinforcements to General Oklobjio, operating against Batum, no actions of any account occurred.

In the first week of July, after an absence of six months, the British fleet returned to Besika Bay. It was during the sittings of the conference, and at the request of Lord Salisbury, that the admiral received orders to quit Besika and retire to the Piræus. This was done not so much to mark the displeasure of the British Government at the obstinacy of the Turks as to convey to them by an outward and visible sign that they had nothing to expect from England in case they should be involved in a war with Russia. In 1876 Lord Derby informed a deputation that the fleet had been ordered to Besika in order to protect the Europeans and the native Christians of Constantinople in case of any outbreak of Mussulman fanaticism. But this motive was certainly not made public at the time, and those who professed to know the intentions of the Government declared in a tone of resolution and de-

fiance that this was a demonstration against the Ozar, who would have to count with England in case of any aggression on the Sultan's rights. When Lord Salisbury arrived at Constantinople he soon found that the Turks were possessed with the fixed idea that, do what they might, England would never allow them to be attacked. It was to eradicate this persistent confidence that the fleet was directed to leave Turkish waters and proceed to Athens. Its return, therefore, at this time, was regarded as a menace to Russia not to proceed too far.

The continued Russian successes in Europe, which caused the change in the chief command of the Turkish army, also brought about important changes in the ministry. Safvet Pasha, the Minister of Foreign Affairs, resigned, and Aarifi Pasha was appointed in his place. The change indicated a victory of the war party; for while Safvet Pasha always counseled peace, Aarifi, a fanatical Turk, would continue the war to the bitter end. Redif Pasha, the Minister of War, was removed, and Mahmoud Damad Pasha appointed in his place. Aarifi Pasha, however, resigned within ten days, and was replaced by Server Pasha. Further ministerial changes took place in the latter part of August, when Mustapha Pasha was temporarily appointed Minister of War, and Safvet Pasha was appointed Minister of the Interior in place of Hassim Pasha.

When Suleiman Pasha left the Shipka Pass, to succeed Mehemet Ali as commander-in-chief of the Shumla Army, he was succeeded in the command of the operations against the Shipka Pass by Rauf Pasha. No actions of any importance occurred here during the remainder of the year beyond an ineffectual attempt on the part of the Turks to capture Fort St. Nicholas on November 21st, and occasional bombardments between the hostile batteries. Suleiman Pasha, upon his arrival with the Army of Eastern Bulgaria, remained inactive for some time. Finally, on November 18th, he sent a strong division from Kadikoi across the Lower Lom, against the Twelfth Russian Army Corps, under the Grand-Duke Vladimir, with orders to take Pyrgos. The movement was at first successful, but was afterward repulsed by the Russians. Another forward movement on the same line, undertaken on the 26th, met with no better success. On the same day, the 26th, the Turkish centre, stationed at Rasgrad, together with the left wing at Osman Bazar, undertook a forward movement on the line of Osman-Bazar-Selvi, which led to a battle at Elena on December 5th. In this battle several Russian battalions were destroyed, and eleven Russian guns captured, but the victory brought the Turks no great advantage. On December 12th, Suleiman made another forward movement, crossing the Lower Lom at Kadikoi, and attacked Metchka and Tirstenik. After seven hours' severe fighting, he was repulsed with a loss of about 2,000 men. On the 15th he also withdrew his troops from Elena. All these

movements were undertaken to relieve Osman Pasha in Plevna, but were unsuccessful.

The main object of the Russian commander before Plevna, during October, was to complete the investment of that place, and for that purpose it was necessary to secure the road leading to the west. Although smaller bodies of Russian troops had been west of Plevna, and along the Vid River, for some time, it was not until October 24th that the Russians gained a firm foothold on the road leading to Orkhanie. On that day General Gourko stormed the town of Gorni Dabnik; four days later he stormed Telis. On October 31st, Osman Pasha evacuated Dolni Dabnik, situated half-way between Gorni Dabnik and Plevna, on the Sophia road, and thus enabled the Russians to advance about six miles nearer to Plevna. This advance completed the investment of it, and from this time until its surrender it was entirely cut off from the outer world. An attempt made by Shevket Pasha on October 31st, to introduce an ammunition train into Plevna, was repulsed by the Russians. During the month of November the Russian lines were drawn still closer. On November 9th, General Skobelev stormed the Green Hill, a wooded eminence south of Plevna, and within three miles of that town, and held it against several Turkish attacks during the following days. On the north side, the Roumanian troops, on the 12th, also advanced to within about three miles. On the 12th Osman Pasha was called upon to surrender, but decidedly refused. In order to secure the army of investment on the west, where Mehemet Ali was gathering a fresh army at Sophia, the Russians sent out considerable bodies of troops, which, on November 9th, took the town of Vratza, situated on the road from Rahova on the Danube to Sophia. On the 21st Rahova was taken by the Roumanians; on the 22d Pravetz or Pravza, four or five miles east of Orkhanie, was taken by the Russians, and on the 24th Etropol fell into their hands. These successes gave the Russians the entire line from Rahova to Etropol, which completely protected the investing lines on the west, as well as the important pass of Baba Konak. In Plevna the situation became daily more desperate. In spite of Osman Pasha's boast that there were sufficient provisions to last until spring, the want thereof made itself bitterly felt, while the entire absence of proper hospital accommodations produced great suffering and large numbers of deaths within the Turkish army, which in turn bred disease among the garrison and the inhabitants of the town. On December 9th, 144 days after Osman Pasha's first arrival, 45 days after the complete investment, and about 60 days after the arrival of the last ammunition train, Osman Pasha decided upon a sortie. For three days previous the Russians knew that he had exhausted his provisions, and was preparing such a movement. On the evening of Sunday, December 9th, they received news that he would concentrate all his army near the bridge

over the Vid. This was confirmed in the night by Skobelev, who perceived that the Turks had abandoned in silence the Krishina redoubt and all the positions on the "Green Hill." All these positions he occupied. About seven o'clock on Monday morning the Turks crossed the Vid by the old bridge and the new one which they had constructed, and flung themselves upon the Russian positions to the north of the road defended by the grenadiers. The line extended from the road to the Roumanian positions. The Turks dashed against it with such ardor and fury that in a few moments they almost annihilated the Sibirsky regiment of grenadiers, and they captured a complete battery placed there. A terrible struggle followed. The Turks here were under the fire of the second line of investment and of one hundred cannons, and the grenadiers resolved to recapture the lost guns, and again advanced. A bayonet fight then took place, which lasted a quarter of an hour, in which a large number of men were killed; and finally the Turks were defeated and driven back. They fell back on the Vid, pursued by the Russian infantry and the fire of the artillery. There, sheltered behind the banks of the river, they replied, and the battle lasted until half-past twelve, when the firing ceased on both sides. It had not ceased more than half an hour when a parlementaire arrived with the important news that Osman Pasha was disposed to treat for the surrender of the place and of his army. The Russian infantry slowly advanced toward the bridge, and the officers, on reaching the bridge, mixed with the Turkish soldiers and opened a conversation with them. Soon afterward, Tefik Bey, head of the Turkish staff, arrived and said that Osman Pasha was wounded.

The conditions of the surrender were arranged in a quarter of an hour. They were the complete surrender of the place, of the army, and of the arms. All this was settled with astonishing rapidity, so that when the Grand-Duke arrived, half an hour later, the Turks had laid down their arms, and all was over. Osman Pasha did not attempt to cut his way through, as it was supposed he would, without artillery and without baggage. He had, on the contrary, a considerable train, more than 500 vehicles, which had started, and a large force of artillery, which supported the attack of the infantry. The sortie was a brilliant affair, but it never had a chance of success, and it cannot be imagined that Osman Pasha expected it to succeed, but he made it, probably, to satisfy his own sense of duty. His wound was in the leg, and was not serious. He was treated with the utmost courtesy and consideration by the Grand-Duke and all the Russian officers. The fall of Plevna virtually ended the war in Europe. In the Western Balkans Mehemet Ali was superseded by Nedjib Pasha, one of the younger generals, who gained considerable distinction as chief of staff in the campaign against Servia in 1876.

Servia, which had concluded peace in February, again took up arms against Turkey in December. (*See SERVIA.*) Their main army, the Morava corps, advanced from Alexinat toward Nissa, and arrived at this town on December 15th. On the same day they occupied Mramor, six miles west of Nissa. On the 22d the investment of Nissa was completed, and the commander of the post was notified that the town would be bombarded. Several detachments had in the mean time cleared the neighborhood of Turkish troops, and had occupied Ak Palanka on the 24th, and Pirot on the 27th. The Timok corps, under Horvatovitch, on December 16th, occupied Adlie, or Kula, about eighteen miles west of Widin. On the 19th it occupied the St. Nicholas Pass, connecting Belgradchik in the north and Isvor in the south; and on the 23d effected a junction with the Russians, who had come from Berkovatz, forming part of the cavalry division of General Arnoldi. This division, which had originally belonged to the Army of Plevna, was sent in the beginning of November to the west of Plevna. On December 16th, Arnoldi occupied Berkovatz, and on the 25th effected a junction with the Servian Morava corps at Pirot.

After the withdrawal of the Turkish troops from Montenegro in June, Prince Nicholas proceeded very carefully to advance against the neighboring portions of Herzegovina. On July 22d, he stormed several of the outlying works of Nicsic, and on September 8th this fortress surrendered to him. Presyeka was taken on September 16th, Bilek on the 17th, and the four forts of the Duga Pass on the 18th. He had thus secured a corner of Herzegovina which could easily be maintained. The Montenegrin troops were now dismissed to their homes. In the beginning of November, Prince Nicholas again resumed operations, this time directing his attention to Albania, where Ali Saib was stationed with a few thousand troops. On November 12th, the Montenegrins stormed several of the outlying works of Antivari, took the fortress of Spizza on the 16th, and the town of Antivari shortly afterward, the Turks holding the citadel until January 10, 1878.

When Kars had fallen, Mahmoud Damad, who was supposed to be in favor of peace, and who had up to this time been all-powerful at the Turkish court, was removed from the direction of military affairs. At the same time the Council of War was abolished, and the Minister of War was clothed with full powers. Two weeks later, Mustapha Pasha was removed, and Rauf Pasha appointed Minister of War in his place. The condition of the Turkish Empire was truly terrible at the close of the year. Without money, without armies, and without friends, it was finally obliged to ask for an armistice in the first days of 1878.

The second session of the Ottoman Parliament met on December 13th. In his speech

from the throne, the Sultan reviewed the events which led to the war with Russia, by severely denouncing the Christian subjects of Turkey who had taken up arms against their Government, "in spite of the equality in the eyes of the law which all our subjects enjoy, and the immunities which secure their nationality and their language."

In Bosnia several engagements took place between the Turkish troops and the insurgents, which culminated in the defeat of the insurgents under Despotovitch, on August 4th, when the latter was forced to seek safety on Austrian territory. Other insurgent bands, under a leader named Gotub, who appeared after this, were characterized as little better than robber bands.

In Thessaly and the other Greek provinces of Turkey, a reign of terror prevailed during the year, brought about by marauding bands of Bashi-Bazouks, and even by regular troops. A revolutionary government was established, and was aided by contributions from Greece, and a few engagements with the Turkish troops took place. In Crete the same state of affairs prevailed, the Christians retreating to the mountains where the Turks could not follow them.

The war was marked by the perpetration of outrages upon non-combatants and private property, both in Asia and in Europe, for which it would be hard to find a parallel in the history of civilized nations.

TURNBULL, ROBERT, an American clergyman, born at Whiteburn, Linlithgowshire, Scotland, September 10, 1809, and died at Hartford, Conn., November 20, 1877. He graduated at Glasgow University, studied theology, preached for a short time in Scotland and England, and in 1833 settled in Danbury, Conn. In 1835 he became pastor of the Baptist Church in Detroit, in 1837 of the South Baptist Church, Hartford, Conn., in 1839 of the Boylston Street (now Harvard Street) Baptist Church in Boston, and in 1845 of the first Baptist Church in Hartford, where he continued to reside until his death. In 1851 he received the degree of D. D. from Madison University. He published "The Theatre" (Boston, 1840); "Olympia Morata" (1842); "Vinet's Vital Christianity," translated, with an introduction and notes (1846); "The Genius of Scotland" (New York, 1847); "The Genius of Italy" (1849); "Theophany, or the Manifestation of God in Christ" (Hartford, 1851); "Vinet's Miscellanies" (New York, 1852); "Pulpit Orators of France and Switzerland" (1853); "Christ in History, or the Central Power" (Boston, 1856); and "Life Pictures, or Sketches from a Pastor's Note-Book" (New York, 1857). He edited Sir William Hamilton's "Discussions on Philosophy," and was for several years editor of the *Christian Review*.

U

UNITARIANS. The fifty-second annual meeting of the American Unitarian Association was held in Boston, Mass., May 29th. Mr. Henry P. Kidder was chosen president. The treasurer reported that his total receipts for the year had been \$111,659.10, and his expenditures \$99,228.11. The funds held on the account of the association were: the General Fund, amounting to \$75,048.75; the Hayward Fund, amounting to \$25,750.00; the Perkins Fund, amounting to \$10,209.50; the Kendall Fund, amounting to \$2,164.75; the King Fund, amounting to \$10,000.00; and the Lienow Trust Fund, amounting to \$4,327.00—for which satisfactory securities were exhibited. The association also possessed uninvested balances on account of the General Fund of \$7,750.06, and of the Homer Fund of \$220.88. The total balance in the hands of the treasurer, including the last-mentioned sums, was \$12,430.09. The Executive Committee reported that the year's contributions from the churches, up to the time of the anniversary, had amounted to more than \$26,000; more than \$14,000 had also been collected for the church at Washington, making in all \$40,000, a larger sum than had been contributed in any one of the five preceding years. The church at Washington had been begun, the contract for the execution of the work having been signed by the committee.

The anniversary of the *British Unitarian Association* was held in London. Mr. James Lup-ten was chosen president. The treasurer reported that the general expenditure had been about £7,000 on account of the association, and £4,617 of the Jubilee Fund. The report of the secretary stated that of the 20 provincial societies, nine were connected with the association, five having joined during the year. In Scotland, notwithstanding the strong efforts which had been made, the difficulty of establishing new churches was found for the present to be almost insuperable. In Ireland, a promising field of usefulness had appeared in Londonderry. Two new chapels had been built in South Wales, and a grant had been made to aid in the erection of a new chapel, in place of one from which the congregation had been expelled. Progress was reported in a number of towns in England, and in various quarters of London. The sales of books had amounted to £1,004. Grants had been made to the extent of £129 for books, and £78 for tracts.

UNITED BRETHREN. The following is a summary of the statistics of the United Brethren Church for 1877, as they are given in the *United Brethren Almanac* for 1878, showing the number of organized churches, of ministers, and of members of each conference:

CONFERENCES.	Organized Churches.	Number of Ministers.	Number of Members.

The table shows an increase of 107 ministers and 4,882 members, and a decrease of 11 churches, from 1876. The footings of other items of the statistical tables are: Whole number of meeting-houses, 2,003; of parsonages, 301; of Sunday-schools, 2,897; of children, officers, and teachers, in the same, 169,530; amount of contributions for salaries of ministers, \$335,072.88; for the bishops, \$5,681.93; for ministerial aid, \$2,273.02; for missions, \$33,648.60; for church building and expenses, \$207,907.29; for educational funds, \$13,713.90; for the Biblical Seminary, \$1,772.36; for church erection and the general Sunday-school fund, \$1,541.96; amount of Sunday-school collections, \$36,509.88; total contributions of the church, \$638,060.24, against \$669,799.21 in 1876.

The *General Conference* of the Church of the United Brethren in Christ met in its quadrennial session at Westfield, Ill., May 10th. The bishops of the Church presided in turn. The quadrennial address of the bishops, after

* Statistics for 1876.

noticing the death of Bishop David Edwards, which had occurred since the previous meeting of the General Conference, reviewed the growth of the Church and its enterprises during the four years. The number of members had increased from 125,658 in 1872 to 144,881 in 1876; the missionary department, church erection, and publishing interests had continued to develop; and while thirty years before the Church had not a single institution of learning, it had now ten colleges and seminaries, with not less than a thousand students in actual attendance; and the Biblical Seminary had proved its usefulness and practicability during eight years of existence. Reports were made of the operations of all the enterprises of the Church during four years. The question of the position of the Church in reference to secret societies, and the enforcement of the rules against members of the Church participating in such bodies, figured prominently in all the discussions and actions of the Conference. It came up first in the form of an appeal from the decision of the Miami Annual Conference in a case which had originated in a church in Dayton, Ohio. Two of the members of this church had been expelled for connection with secret societies; but the pastor of the church, in putting the case to vote before the congregation, had received the votes in favor of expulsion, thirteen in number, but had refused to call for votes in the negative, saying that the church could only vote affirmatively. An appeal was taken from this action to the Quarterly Conference, which sustained the pastor. An appeal was then taken to the Annual Conference, which declared the action of the pastor null and void, and decided:

1. That the class, and not the congregation, or preacher, or a minority of the class, is the expelling power in the Church of the United Brethren in Christ.

2. That there can be no parliamentary question which it is proper for a class, congregation, or conference, to consider and vote upon at all unless both an affirmative and a negative vote be taken. Otherwise it is no vote at all.

The pastor appealed against this decision to the General Conference. The General Conference sustained the appeal of the pastor, and reviewed the action of the Annual Conference. The question came up again upon the report of the Committee on Revision of the Discipline, proposing an amendment making it the duty of a bishop "to insist upon it that all the laws of the Church are faithfully executed." An amendment was proposed prescribing to the bishop a particular and stringent method of performing this duty, which was lost by a vote of 30 yeas to 73 nays, and the provision as reported by the committee was adopted. An examination of the Annual Conferences was held to ascertain whether they had violated the laws of the Church, or countenanced violations of them, the Conferences being called in alphabetical order, the examination being confined to Conference action, and the bishop or

presiding delegate answering for his Conference. None of the Conferences having been found to have failed officially as such in the discharge of their duties, all were pronounced loyal. The Conference decided to elect five bishops, a new episcopal district being formed for the Pacific coast, and fixed the salary of the bishops at one thousand dollars each. The report adopted on the subject suggested that the bishops should visit missions and explore new fields as much as possible. Bishops Glossbrenner, Weaner, and Dickson were reelected; the Rev. M. Wright, editor of the *Religious Telescope*, was chosen to fill the vacancy in the episcopal office; and the Rev. N. Carth, of Indiana, was elected the fifth bishop.

UNITED STATES. At the commencement of the year 1877, the country was in a state of great excitement respecting the result of the Presidential election. The votes of Florida, Louisiana, and South Carolina were counted by the canvassing boards with a result in favor of the Republican Presidential Electors. This result, at the canvass by Congress of all the State returns of the Presidential election, would give the Republican candidate (Mr. Hayes) one majority, and secure his election. The Democrats, however, asserted that the canvassing boards in each of the above-mentioned States had made an unjust canvass; that the popular vote in each had been in favor of the Democratic electors by a considerable majority; that legal Democratic votes in large numbers had been rejected, and that by the people the Democratic candidate for the Presidency had been elected. The certificates of the results in each State, sent to Washington under the official seal of the respective Governors, gave the election to Mr. Hayes by one vote. At all previous elections the canvass of Congress had been confined exclusively to these certificates. It was, therefore, manifest that a canvass by Congress, conducted like all previous ones, would elect the Republican candidate, or terminate in a disagreement between the two Houses. At this time the Lower House was largely Democratic, the Senate Republican, and the Executive (Grant) a Republican. A disagreement between the two Houses would have terminated the canvass without a choice. Under these circumstances, an act was passed to refer all contested cases to a commission consisting of Senators, Representatives, and Judges of the Supreme Court. If it decided these according to the face of the certificates, the Republican candidate would be elected; if it decided to investigate the local proceedings in the contested States prior to the Governor's certificates, these, then, might be set aside, and the Democratic candidate be elected. The Democrats advocated the latter course, but the commission adopted the former, and Mr. Hayes was declared to be elected. (For the act, the Commission, and its proceedings, see CONGRESS, U. S.) The people acquiesced in the decision, and the new President was duly inaugurated,

and entered on the administration of the Government. (For the Inaugural Address, see PUBLIC DOCUMENTS.) The following comprises the Executive officers: *President*, Rutherford B. Hayes, of Ohio; *Vice-President*, William A. Wheeler, of New York; *Secretary of State*, William M. Evarts, of New York; *Secretary of the Treasury*, John Sherman, of Ohio; *Secretary of War*, George W. McCrary, of Iowa; *Secretary of the Navy*, Richard W. Thompson, of Indiana; *Secretary of the Interior*, Carl Schurz, of Missouri; *Postmaster-General*, David M. Key, of Tennessee; *Attorney-General*, Charles Devens, of Massachusetts.

The first important official action of the new Administration, in accord with the inaugural address, tending to produce a settlement of affairs in South Carolina, was an invitation to the two rival Governors, Hampton and Chamberlain, to a conference at Washington. The letter of invitation to Governor Chamberlain was as follows:

EXECUTIVE MANSION, WASHINGTON, D. C.,
March 28, 1877.

SIR: I am instructed by the President to bring to your attention his purpose to take into immediate consideration the position of affairs in South Carolina, with a view of determining the course which, under the Constitution and laws of the United States, it may be his duty to take in reference to the situation in that State as he finds it upon succeeding to the Presidency. It would give the President great pleasure to confer with you in person, if you shall find it convenient to visit Washington, and shall concur with him in thinking such a conference the readiest and best mode of placing your views as to the political situation in your State before him. He would greatly prefer this direct communication of opinion and information to any other method of ascertaining your views upon the present condition and immediate prospect of public interests in South Carolina. If reasons of weight with you should discourage this course, the President will be glad to receive any communication from you in writing, or through any delegate possessing your confidence, that will convey to him your views of the impediments to the peaceful and orderly organization of a single and undisputed State Government in South Carolina, and of the best method of removing them. It is the earnest desire of the President to be able to put an end, as speedily as possible, to all appearance of intervention of the military authority of the United States in the political derangements which affect the Government and afflict the people of South Carolina. In this desire the President cannot doubt that he truly represents the patriotic feeling of the great body of the people of the United States. It is impossible that protracted disorder in the domestic government of any State can or should ever fail to be a matter of lively interest and solicitude to the people of the whole country. In furtherance of the prompt and safe execution of this general purpose he invites a full communication of your opinions on the whole subject in such one of the proposed forms as may seem to you most useful. By the direction of the President, I have addressed to the Hon. Wade Hampton a duplicate of this letter.

I am, very respectfully, your obedient servant,
W. K. RODGERS, Private Secretary.
To the Hon. DANIEL H. CHAMBERLAIN.

The result was that the Federal troops were soon withdrawn from the State, the Republican officials retired, and the administration of affairs passed into the hands of Governor Hampton.

(For the details of these proceedings, see SOUTH CAROLINA.)

In the case of Louisiana, some delay intervened, but on April 20th the following instructions were issued to the Secretary of War:

EXECUTIVE MANSION, WASHINGTON, D. C.,
April 20, 1877.

SIR: Prior to entering upon the duties of the Presidency there had been stationed by my predecessor, in the immediate vicinity of the building used as a State House in New Orleans, La., and known as Mechanics' Institute, a detachment of United States infantry. Finding them in that place I have thought proper to delay a decision of the question of their removal until I could determine whether the condition of affairs is now such as to either require or justify continued military intervention of the National Government in the affairs of the State. In my opinion there does not now exist in Louisiana such domestic violence as is contemplated by the Constitution as the ground upon which the military power of the National Government may be invoked for the defense of the State. The disputes which exist as to the right of certain claimants to the chief executive office of that State are to be settled and determined, not by the Executive of the United States, but by such orderly and peaceable methods as may be provided for by the constitution and laws of the State. Having the assurance that no resort to violence is contemplated, but that on the contrary disputes in question are to be settled by peaceful methods, under and in accordance with law, I deem it proper to take action in accordance with the principles announced when I entered upon the duties of the Presidency. You are, therefore, directed to see that proper orders are issued for the removal of said troops at an early date from their present position to such regular barracks in the vicinity as may be selected for their occupation.

R. B. HAYES.
To Hon. GEORGE W. McCRARY, Secretary of War.

The Secretary thereupon thus addressed the Commander of the Army:

WAR DEPARTMENT, WASHINGTON, D. C.,
April 20, 1877.

General WILLIAM T. SHERMAN, commanding United States Army.

GENERAL: I have the honor to inclose herewith a copy of a communication from the President of the United States, in which he directs that the detachment of the United States troops now stationed in the vicinity of the Mechanics' Institute, in the city of New Orleans, La., be withdrawn to such convenient barracks as may be selected for their occupation. You are hereby charged with the execution of this order, and will cause the withdrawal to take place on Tuesday next, the 24th of April, at 12 o'clock meridian.

Very respectfully, your obedient servant,
GEORGE W. McCRARY, Secretary of War.

The removal of the troops was followed by the complete establishment of the authority of the Democratic Governor. (See LOUISIANA.)

The course thus pursued with these States by the President caused much dissatisfaction to many of the members of the Republican party, but was warmly approved by the rest of the people.

An effort was also made by the Administration to effect a reform in the civil service by the appointment to office of persons of the best character and attainments, with less regard to political influence. Public officers were also required to abstain from interference in elections. The following brief letter was also published:

Double Eagle—\$20 (Gold).

Half Eagle—\$5 (Gold).

Eagle—\$10 (Gold).

Quarter Eagle—\$2.50 (Gold).

Dollar—100 cents (Silver).

Half Dollar—50 cents (Silver).

Quarter Dollar—25 cents (Silver).

Dime—10 cents (Silver).

COINS OF THE UNITED STATES.

EXECUTIVE MANSION, WASHINGTON, *June 22, 1877.*

SIR: I desire to call your attention to the following paragraph in a letter addressed by me to the Secretary of the Treasury on the conduct to be observed by officers of the General Government in relation to the elections: "No officer shall be required

or permitted to take part in the management of political organizations, caucuses, conventions, or election campaigns. Their right to vote and to express their views on public questions, either orally or through the press, is not denied, provided it does not interfere with the discharge of their official duties.

No assessment for political purposes on officers or subordinates should be allowed." This rule is applicable to every department of the civil service. It should be understood by every officer of the General Government that he is expected to conform his conduct to its requirements. Very respectfully,

R. B. HAYES.

The President also expressed a determination that members of Congress should not dictate in the matter of patronage, and adhered to it firmly. In consequence thereof, the Administration received very little of a direct and vigorous support from the Republicans, and its recommendations to Congress were often chiefly sustained and carried through by the Democratic members.

An opinion that a fraud had been committed by the Returning Board of Louisiana, in counting the votes for Presidential Electors, extensively prevailed. Legal proceedings were commenced against the members of the board near the close of the year, and the trial of one of them resulted in his conviction. The proceedings were continued in 1878.

The failure of the appropriation for the support of the army at the session of Congress which closed March 4, 1877, made an extra session necessary. This was convened on October 15th by the following message of the President:

A PROCLAMATION.

Whereas the final adjournment of the Forty-fourth Congress without making the several appropriations for the support of the army for the fiscal year ending June 30, 1878, presents an extraordinary occasion requiring the President to exercise the power vested in him by the Constitution to convene the Houses of Congress in anticipation of the day fixed by law for their next meeting: now, therefore, I, Rutherford B. Hayes, President of the United States, do, by virtue of the power to this end in me vested by the Constitution, convene both Houses of Congress to assemble at their respective chambers at 12 o'clock noon, on Monday, the 15th day of October next, then and there to consider and determine such measures as, in their wisdom, their duty and the welfare of the people may seem to demand. In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this 5th day of May, in the year of our Lord 1877, and of the Independence of the United States of America the one hundred and first.

R. B. HAYES.

By the President:

WM. M. EVARTS, Secretary of State.

Congress thus assembled on October 15th, and the session was continued without interruption until the commencement of the regular one in December. It was soon manifest that the Republican majority in the Senate was very small, and might perhaps soon disappear; that there was a lack of harmony between the President and his party, and that he could not rely upon its undivided support of his measures. At this session, also, the first measure of a reactionary nature, relating to the financial affairs of the country, was introduced. It was technically designated as the "Silver Bill." (See page 291.) The results of the financial legislation of Congress since the close of the civil

war had been to replace all the bonds of the United States which had been issued (payable, either principal or interest, in currency or "greenbacks," as it was popularly called) with new bonds for a longer period, in which both principal and interest were to be paid in coin; also to demonetize silver, or to take from it its legal-tender feature, thereby rendering bonds and future specie payments payable in gold; and also the passage of an act requiring the resumption of the payment of specie on all Government legal-tender notes on January 1, 1879. This involved the payment of specie on national-bank notes and other similar obligations. The commercial transactions of the country have been shrinking since September, 1873, and with its immense indebtedness of governments, corporations, and individuals, a state of insolvency and extreme depression prevailed throughout the year. The discussions which ensued will be found set forth under the article CURRENCY, in this volume. The "Silver Bill" above mentioned was the first legislative expression of the point of reaction to which the public mind had at that time reached. It subsequently passed Congress over the President's veto by more than the necessary two-thirds majority.

On June 15th, the Commission provided for in the Treaty of Washington of 1871, which should decide the sum to be paid by the United States Government to the Dominion of Canada for the privilege of fishing in their bays, harbors, and creeks, and for that of landing and curing fish, convened at Halifax, in Nova Scotia. The Commission consisted of Ensign H. Kellogg, of Massachusetts, to represent the United States; A. T. Galt, to represent Great Britain; and the umpire, M. M. de Fosse, the Belgian envoy. Dwight Foster appeared in behalf of the United States, and F. C. Ford in behalf of Great Britain. For the results of the Commission, see DOMINION OF CANADA.

The political agitation developed by the labor-strikes (see LABOR-STRIKES) forms the most interesting chapter of the movement. This agitation may be traced back to several different sources, and it developed into as many different phases. First, there has always prevailed a popular sentiment in America that labor deserves to be well remunerated. It has been the boast in this country that the road to wealth is open to all, that every industrious and saving laborer can gain a comfortable competency, that our workmen are better paid and better nourished than their brothers in Europe. This feeling dates from the origin of productive activity here. Secondly, there was a wide-spread and bitter feeling against the railroad companies, and a desire that legal limitations should be set to their powers. The reckless and regardless machinations and rivalries of their controllers, their ruinous borrowings and extravagance, had set the whole country against the railroads in particular; but

the two classes which made the hardest reproaches against the managers of the railways were the two most nearly affected by their acts, their employes and the farmers. Thirdly, there was a general desire among the mechanical class that their order should be heard and felt in politics, though in what cause and for what ends they had formed no definite conception. Fourthly, there were the social democrats, of whom every city contains a coterie; they are nearly all foreigners, Germans, Bohemians, Poles, Frenchmen, Italians, active minds, thoroughly imbued with the doctrines of the French commune and the German social democracy. Revolutionists from principle, they seize every opportunity to bring their ideas before the people. In the meetings and conventions held with reference to the political combination of the industrial classes, those who were most earnest in the matter were the least in haste to proceed to action. The socialists were the earliest to attribute to the strikes a politico-social character; but from the first to the last they evolved nothing but speeches and manifestoes, possessing neither the material nor the skill for party organization: they, as a rule, are not less unpopular among the workmen of the country than they are among other classes; and where sometimes their principles were indorsed and adopted in the programmes of the meetings, they, the original authors, were unrecognized and condemned. In Louisville a workingman's party under the guidance of skilled politicians elected several members to the Legislature. Their platform renounced both the existing parties, and proclaimed the formation of a party to be composed of the industrial classes, which should reform the financial policy of the Government, establish the eight-hour law, erect courts of arbitration to decide in disputes between capital and labor, forbid private contracts for prison products, stop the employment of children under 14 years of age in factories or elsewhere, establish compulsory education and the liberal pecuniary support of public schools, reduce taxes and economize in Governmental, State, and municipal expenses, raise the imposts on necessities, oppose class legislation, refuse to support professional politicians, and nominate no one who is not a laborer. Their platform to the contrary notwithstanding, the elected candidates were not workingmen, and were

not far removed from the class called professional politicians. In Ohio a workingman's State ticket was nominated upon a platform of a decided socialistic character. Here, again, their candidates were not workingmen proper. The platforms of the older parties in this State demanded innovations, which the press of the country criticised as being of a similar revolutionary tendency. A clause in the Republican manifesto reads:

We recommend, first, that Congress establish a national bureau of industry; second, that Congress exert its authority over all national highways of trade by prescribing and enforcing such reasonable regulations as will tend to promote safety of travel, secure fair returns for capital invested and fair wages to employes, preventing mismanagement, improper discriminations, and the aggrandizement of officials at the expense of stockholders and shippers and employes; third, that provision be made for statutory arbitrations between employers and employes, to adjust controversies, reconcile interests, and establish justice and equality between them.

TREASURY DEPARTMENT, WASHINGTON.

The Bread-Winners' League of New York, a quasi-political association, issued a call for an independent labor party in the following tenor:

Citizens of the State of New York, Members and Friends of the Independent Party and of the "Bread-Winners' League:" You are requested to immediately assemble in your respective districts, and organize on our platform and resolutions, especially the following:

1. That the Government immediately take control, own, and operate the railroads.
2. That labor laws are absolutely necessary.
3. Immediate "resumption of labor" on needed public improvements, with Government funds and for the public benefit.
4. Repeal of all national-bank charters and the issue of greenbacks in their stead.

Trades-union men, labor reformers, Grangers, and greenback men should be up and doing. The harvest is ripe. Organization and the ballot can yet save the nation. *The Bread-Winners' League pledges to the people to see that Congress shall obey the will of*

the people. The starving, striking railroad operatives have our deepest sympathy, but the rioters strengthen the cause of the monopolists, and are injuring the cause of the people.

Citizens, organize. Unite with us and we will redeem the nation from bond, bank, and railroad monopolists by converting every city in this vast, rich, idle country into an active workshop, each acre of its broad land into a farm, every mine into a source of life instead of a potter's field to its workers. By order State Council.

The programme issued by a convention in Baltimore merely contained a repetition of the well-known projects of the European socialists. It declared that the emancipation of the laboring class can only be accomplished by the action of the laboring class itself; that the struggle for this emancipation is not one for class privileges and monopolies, but for equal rights and equal duties; that the economical subjection of the laborer to the possessor of the means of labor is the foundation of servitude in all its forms, and of social misery, spiritual debasement, and political dependence; that the economical liberation of the laboring class is thence the great final purpose to which, as a means, every political activity should be subordinate; that all efforts hitherto directed to this end have failed from a lack of union of the different branches of labor in each country, and from the lack of a real combination of the laborers of all lands; that the liberation of the laboring class is neither a local nor a national, but a social problem, which takes in all lands in which modern society exists, and whose solution depends on the combined practical and intellectual efforts of the most progressive nations. The "Labor Party of the United States," founded on these principles, therefore demands that all the means of labor (land, machines, means of transportation) should become the property of the community, and that, instead of hired labor, should be introduced production in common and an equitable distribution of the products. It repudiates all connection with the political parties. The reforms which it immediately proposes are: 1. Introduction of a uniform day's work, for the present eight hours per diem, and punishment of the parties transgressing; 2. Sanitary inspection of laborers' workshops, dwellings, food, etc.; 3. Establishment of a bureau of labor statistics; 4. Prohibition of speculation in convict labor; 5. Prevention of children under 14 years of age working in industrial enterprises; 6. Free tuition in all educational institutes; 7. A stringent law for the protection of laborers; 8. Free justice; 9. Abolition of conspiracy laws; 10. Assumption and management of all telegraphs and commercial roads by the State; 11. Governmental control of all industrial enterprises, and the conduct of the same through free coöperative communities for the benefit of the whole people. The following resolutions read at the Tompkins Square meeting, held during the strike in New York, express the same internationalist principles, but

are aimed more immediately at the corporate companies of the country:

Resolved, That we consider all legalized chartered corporations, such as railroad, mining, banking, manufacturing, gas, etc., under their present system of operation, as the most despotic and heartless enemies of the working classes.

Resolved, That their acts of tyranny and oppression have been the cause of demoralizing thousands of honest workmen, thereby driving them to acts of madness, desperation, and crime, that they would not otherwise have been guilty of had they been justly dealt by.

Resolved, That as these chartered companies have been the primal cause of their miseries and their consequences, we hold them morally responsible for all acts of violence that proceed from, and are the legitimate results of, their tyranny and oppression.

Resolved, That we view with alarm the growing influence and power of these corporations over the legislation of State and nation, and believe, if that influence continues, the executive, judicial, and legislative branches of the Government will become totally demoralized, the right of the masses destroyed, and instead of the voice of the people the power of the Almighty Dollar will become absolute and supreme.

Resolved, That we do earnestly request and advise all the working classes throughout the country to unite as speedily as possible, for the purpose of forming a political party, based upon the natural rights of labor. Let us make common cause against a common enemy, namely, organized capital.

Resolved, That nothing short of a political revolution through the ballot-box on the part of the working classes will remedy the evils under which they suffer.

Resolved, That it is the purpose of the Workingmen's party to confiscate, through legislation, the unjustly-gotten wealth of these legalized and chartered corporation thieves, that are backed by the Shylocks and money syndicates of Europe and this country.

The following extract from an address to the citizens of St. Louis by the executive committee of the United Workingmen's party of that city seems to require the regulation of wages by law:

We deem it to the interest of all business men, particularly retail dealers, to use their best endeavors to further the passage of an eight-hour law and living wages. The working classes, in times of prosperity, constitute the great circulating medium of the country. Good times for the mechanic means active industries in the factories and shops, and plenty of business to the storekeepers. We ask, in the name of common-sense, if the experience of the past three years has not been sufficient evidence of the damaging effects to business caused by the circulating medium being withdrawn from the many into the hands of the few? Statistics prove that before this strike nearly 4,000,000 toilers were idle in the United States, caused by improved machinery forcing man out of employment, and those who were in forced idleness, through sheer destitution, were compelled to underbid their fellow-workmen until wages paid to those fortunate enough to have work became so low as to make even their case desperate. Hence, using a homely phrase, "the chickens came home to roost." The only persons temporarily benefited by this sad condition of things are a class of people so few in number, who mostly spend their fortunes in Europe, that we clearly see the necessity of our merchants increasing the purchasing capacity of the bulk of the population. The cry of over-production is a fallacy while the millions have reasonable wants ungratified.

Few, if any, questions decided by the Su-

preme Court of the United States in recent years have been of greater general interest and importance than those raised by the so-called "Granger cases." One of the most important of these was that of *Munn and Scott* against the State of Illinois. The issue raised was whether the General Assembly of Illinois can, under the limitations upon the legislative power of the States imposed by the Constitution of the United States, fix by law the maximum of charges for the storage of grain in warehouses in Chicago and other places in the State having not less than 100,000 inhabitants, in which grain is stored in bulk, and in which the grain of different owners is mixed together, or in which grain is stored in such a manner that the identity of the different lots or parcels cannot be accurately preserved. It was contended that such a law was repugnant:

First, to that part of section 8, Article I., of the Constitution of the United States, which confers upon Congress the power "to regulate commerce with foreign nations and among the several States."

Second, to that part of section 9 of the same article which provides that "no preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another."

Third, to that part of the Fourteenth Amendment which ordains that no State shall "deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

In considering the last point, Chief Justice Waite, who delivered the judgment of the Supreme Court, conceded that the Government has no power to control rights which are purely and exclusively private; but it may regulate the conduct of its citizens, one toward another, and the manner in which each shall use his property when such regulation becomes necessary for the public good. "In the exercise of this power it has been customary in England from time immemorial, and in this country from its first colonization, to regulate ferries, common carriers, hackmen, bakers, millers, wharfingers, innkeepers, etc.; and in so doing to fix a maximum of charge to be made for services rendered, accommodations furnished, and articles sold. To this day statutes are to be found in many of the States upon some or all of these subjects, and we think it has never yet been successfully contended that such legislation came within any of the constitutional prohibitions against interference with private property. With the Fifth Amendment in force, Congress in 1870 conferred power upon the city of Washington to regulate . . . the rates of wharfage at private wharves . . . the sweeping of chimneys, and to fix the rates of fees therefor . . . and

the weight and quality of bread (8 Statutes, 587, section 7); and, in 1848, to make all necessary regulations respecting hackney carriages, and the rates of fare of the same, and the rates of hauling by carmen, wagoners, carmen, and draymen, and the rates of commission of auctioneers (9 Statutes, 224, section 2). From this it is apparent that, down to the time of the adoption of the Fourteenth Amendment, it was not supposed that the statutes regulating the use, or even the price of the use, of private property, necessarily deprived an owner of his property without due process of law. Under some circumstances they may, but not under all. The amendment does not change the law in this particular. It simply prevents the States from doing that which will operate as such a deprivation."

In the case of the United States *vs.* R. G. Hazard, the Circuit Court of the United States for the district of Rhode Island has decided that a person who failed to make return of his income, under the law of Congress, but who paid the tax as assessed by the United States assessor, with the added penalty of 50 per cent., is liable for any deficit in the tax in case the amount so assessed was less than the actual income.

In the two cases brought by the Bank of Kentucky and the Planters' National Bank against the Adams Express Company, the Supreme Court of the United States has de-

SMITHSONIAN INSTITUTION, WASHINGTON.

cided a question of interest and importance to the general public—viz., that express companies are liable for loss of goods caused by the negligence not only of their own servants but also of the railroad company employed to carry the goods; and that the stipulation in the receipt given to the shipper, that the express company will not be liable for losses caused by fire, does not exempt the company from liability for losses by fire arising from

the negligence of its own servants or those of the railroad company.

In the case of the Chicago, Milwaukee & St. Paul Railroad Company, appealed from the Wisconsin Circuit, the question was whether the railroad companies in Wisconsin can recover for transportation of property more than the maximum fixed by statute, by showing that the amount charged was no more than reasonable compensation for services rendered. The decision is that, as between the company and freighter, the maximum of the statute is the limit of the recovery for transportation actually performed. If the company should refuse to carry at prices fixed, and an attempt should be made to forfeit its charter on that account, other questions might arise which would not be anticipated at this time. For goods actually carried, the limit of the State is the limit of recovery.

In the case of the Chicago, Burlington & Quincy Railroad Company against the Attorney-General, which had been appealed from the Iowa Circuit, the Supreme Court of the United States, affirming the judgment of the court below, held that a State has power to control the rates of fare and freight charged by a common carrier within its limits. Railroad companies are carriers for hire. They are incorporated as such, and given extraordinary powers, in order that they may better serve the public in that capacity. They are, therefore, engaged in a public employment affecting the public interest; and, under the decision of *Munn and Scott vs. the State of Illinois*, they are subject to legislative control as to their rates of fare and freight, unless protected by their charters. The Burlington & Missouri River Railroad Company, the benefit of whose charter the Chicago, Burlington & Quincy Railroad Company now claims, was organized under the general corporation law of Iowa, with power to contract in reference to its business, the same as private individuals, and to establish by-laws and make all rules and regulations deemed expedient in relation to its affairs, but being subject nevertheless to such rules and regulations as the General Assembly of Iowa might from time to time enact.

In the case of the Hannibal & St. Joseph Railroad Company, the plaintiff in error *vs. Husen*, the Supreme Court of the United States, reversing the judgment of the Supreme Court of Missouri, held that a State law prohibiting the driving or transporting of cattle into a State is a violation of that part of the Federal Constitution which declares that "Congress shall have power to regulate commerce with the foreign nations and among the several States." The statute in question was passed by the Missouri Legislature in 1872, and enacted that "no Texas, Mexican, or Indian cattle shall be driven or otherwise conveyed into or remain in any county in this State between the first day of March and the first day of No-

vember in each year by any person or persons." It further provided that "if any person or persons shall bring into this State any Texas, Mexican, or Indian cattle, in violation of the first section of this act, he or they shall be liable in all cases for all damages sustained on account of disease communicated by said cattle." Other sections made such bringing of cattle into the State a criminal offense, and prescribed penalties. Under the provisions above quoted this action was brought against the railroad company that had conveyed the cattle into the county. The court conceded that any State has the power to pass laws for police purposes. This power may be exercised in prescribing sanitary regulations, adopting precautionary measures against social evils, etc. Under it a State may legislate to prevent the spread of crime, or pauperism, or disturbances of the peace. It may exclude from its limits convicts, paupers, idiots, and lunatics, and persons likely to become a public charge, as well as persons afflicted by contagious or infectious diseases. This is a right founded on self-defense. The same principle would justify the exclusion of property dangerous to the property of citizens of the State; for example, animals having contagious or infectious diseases. All these powers are in immediate connection with the protection of persons and property against noxious acts of other persons, or such a use of property as is injurious to the property of others. They are self-defensive. But, whatever may be the nature and reach of the police power of a State, it cannot be exercised over a subject confined exclusively to Congress by the Federal Constitution.

UNIVERSALISTS. The *General Convention* of the Universalist churches in the United States met at Chicago, Ill., October 24th. Seventy-nine clerical and lay delegates attended the sessions. The Rev. J. D. W. Joy, of Massachusetts, was chosen president. The Board of Trustees reported that their total receipts for the year had been \$14,939.26, and their disbursements \$14,649.29. The receipts had been reduced from every source but one, the exceptional case being in the repayment of loans of theological students, which had amounted to \$1,982, nearly twice as much as in any previous year. A part of the Nursery Fund, although it was considered safely enough invested, in the end had paid no interest, and another part had lain at a very low interest awaiting investment; the proceeds of the missionary boxes had fallen from \$2,287 in 1876 to \$1,545 in 1877; and the annual contributions had fallen from \$5,357 in 1876 to \$3,680 in 1877.

The following is a summary of the statistics of the Universalist churches in the United States and Canada, as they are given in the *Universalist Register* for 1878. It contains a statement of the number of the parishes, the number of the families, the number of the churches, and also the number of the members.

Whole number of State conventions, 23; of Sunday-schools, 659, with 60,757 teachers and pupils; of ministers, 722, with 8 licensed lay preachers; of church edifices, 765. Value of parish property, above indebtedness, \$6,978,-110. One minister is reported in each of the States and Territories of Arkansas, Alaska, Mississippi, Nebraska, Tennessee, and Virginia, and two ministers reside in Colorado. One church organization exists in Arkansas. Four societies, 31 families, and 1 church building and 8 "Union" meeting-houses are returned in Mississippi. The denomination has a church building at Richmond, Va., which is valued at \$10,000, but which it does not use. One ordained minister is preaching in Scotland, assisted by several laymen; several church organizations have been formed in that country, of which those at Dunfermline, Selkirk, and Larbert are particularly mentioned; a church has been built at Dunfermline, and a Universalist book and tract depot has been established at the same place. The Universalist faith is also preached at missionary stations in England. One biweekly and 5 weekly general newspapers, 3 Sunday-school papers, 1 quarterly review, and 1 annual *Register*, are published in the interests of the denomination. The Universalist Publishing House, at Boston, Mass., owns the titles and copyrights of 125 volumes. One of the schools of the denomination which has been reported in previous years, the Liberal Institute, at Jefferson, Wis., is no longer in existence, having passed from the hands of the society under the foreclosure of a

* The families are estimated in the parishes which make no report.

mortgage. The 11 remaining institutions, of which 5 are classed as colleges or universities, and 6 as seminaries or academies, returned in 1877 a total of 87 professors and teachers, 886 students, and assets valued at \$2,289,000.

UTAH. Governor Emery, in his message submitted to the Legislature on January 15, 1878, says:

Since the meeting of the last Legislature, the affairs of the Territory have continued, in most respects, satisfactory. The general health of the people has been good, and peace and order have prevailed throughout the Territory.

Agricultural crops have been abundant, and the husbandmen have been amply rewarded for their labor.

The mines, in their further development, have increased in positive value, and, where energy and skill have been displayed in working them, promise large returns to their owners.

Many which but two years since were regarded as mere prospects of doubtful worth have grown into well-developed mines of great value.

The facilities for milling and smelting have kept pace with the product of the mines. Several extensive establishments have been erected for the reduction of ores, all of which, I believe, are in successful operation, and afford additional employment for a large number of men.

Already attention is being directed to the vast coal fields of the San Pete country, where are to be found immense veins of bituminous coal of superior quality for coking and ordinary uses. The day appears not distant when these mines will furnish fuel for the smelting of our ores, at a cost probably of one-fourth the money now paid for Pennsylvania coke. This event will mark a new era, giving fresh impetus to our mining and smelting enterprises.

The finances are not unsatisfactory, there being no great indebtedness above the amount due from the counties; but some plan needs to be adopted for the settlement of these outstanding accounts, which embarrass the treasury.

Under its present school law every religious denomination in Utah deems it necessary to furnish schools for its children, while but one of these denominations receives any assistance from the public treasury. In Salt Lake alone more than thirty thousand dollars are annually expended for private tuition. This amount of money could furnish schooling for nearly the whole number of children in the city; whereas, under the present arrangement, it procures instruction for only about one-fifth of the entire number of the school age.

It is urged that the Legislature provide more effective methods for the capture and conviction of the men who drive out of Utah annually large numbers of stolen cattle and horses. These depredations prove a great obstacle to the extension of grazing, to which vast areas in the Territory are adapted.

On the subject of polygamy, Governor Emery addresses the Legislature as follows:

The majority of the people of this Territory belong to a religious sect known as the "Latter-Day Saints." I do not intend to discuss the merits or demerits of this new religion, but to refer to one of its distinctive features—polygamy. This system of marriage has continued here for thirty years, and

for fifteen years in violation of law. In all the States and Territories, except Utah, it is considered a grave offense, and is severely punished. Polygamy is no less a crime here than in other portions of our country, and yet the law remains a dead letter upon the statutes. I regard this system of marriage an evil, undermining the peace of society brought with in its influence, and carrying with it dark shadows, which rest like a blight upon the offspring of these illegal relations, and the women who are maintained in them. The number of polygamous wives in Utah is large—how large I have not the means of knowing—yet it is safe to say they number thousands.

The statutes and laws have been compiled by a commission created by the last Legislature. That body also adopted a penal code, modeled upon that of California, but failed to adopt a code of procedure for the courts in

criminal cases, except such as are held by justices of the peace. Such a code of procedure the Governor recommends the present Legislature to adopt. He also recommends that a commission, eminently qualified for its duties, should be appointed to codify the laws and eliminate from them whatever is in conflict with Congressional enactment; and that they should also be instructed to draft such bills as they may deem advisable for the public good, and submit their work to the next Legislature.

The silk culture is attracting some attention in the Territory, and it has now been demonstrated by actual experiment that its climate and soil are admirably adapted to the mul-

SALT LAKE CITY, SHOWING THE TABERNAACLE.

berry-tree and the production of silk. It is believed this will be a profitable industry. The silk which has been produced so far is of good quality, and the manufactured fabrics are of an excellent and substantial character.

The death of Brigham Young, it was thought by many, would prove a severe blow to Mormonism, and lead to its destruction; but, according to a recent statement, Mormonism has taken a new start, and, instead of disintegration, there never was such unity among its people. Governor Young's government was centralized to the point of creating a sort of

slavery, which had a deadening effect upon society. Since his death many reforms have been introduced or promised. The priesthoods have been reorganized, and are now held to a strict accountability for their duties. It is promised that the trustee in trust of the Church shall give an account of the tithes twice a year, and that an investigation shall be made into all the Church accounts. Governor Young, during his life, gave no account of the tithes, and no one knew how much he received or what disposition he made of the money. These measures are very popular.

V

VANDEBILT, CORNELIUS, an American capitalist, died in New York, January 4, 1877. He was born near the present Stapleton, Staten Island, N. Y., May 27, 1794. He was averse to education, and at the age of 16 he bought

a small vessel, with which he plied between the island and New York. At 18 he owned two vessels, and was captain of a third. At 19 he married, removed to New York, and bought sloops and schooners, and at 23 he was

free from debt and worth \$9,000. In 1817 he assisted Thomas Gibbons in building the first steamboat run between New York and New Brunswick, N. J., and became captain of her at a salary of \$1,000 a year. In 1818 he took command of a much larger and better boat on the same line, his wife at the same time keeping the hotel at New Brunswick. In 1824 Vanderbilt had full control of the Gibbons line, and brought it up to paying \$40,000 a year. In 1827, while still superintending the Philadelphia route, he leased for 14 years the ferry between New York and Elizabethport, N. J., put on new boats, and made it very profitable. In 1829 he left Gibbons; and in the following 19 years, till 1848, he built and operated steamboats on the Hudson, on Long Island Sound, on the route to Boston, and on the Delaware from Bordentown to Philadelphia. He put on new and superior boats in opposition to an old line till he was bought off, or drove off his competitors, so that he had the monopoly and profits. In 1848-'49 he built the steamship *Prometheus*, in which in 1850 he sailed for the isthmus of Darien. He had already purchased a controlling interest in the "American Atlantic and Pacific Ship Canal Company," which projected a canal across the isthmus; but for this scheme Vanderbilt substituted a transit route from Greytown at the mouth of the San Juan to San Juan del Sur on the Pacific, which had the advantage over the old transit from Chagres to Panama of saving 700 miles between New York and San Francisco. In 1851 he put three steamers on the Atlantic side, and four on the Pacific side, and went into competition with the "United States" and the "Pacific Mail" companies. In 1852, with three more steamers, he started a branch line from New Orleans to Greytown. In 1853 he went to Europe in his steam yacht *North Star*; and while he was abroad C. K. Garrison and Charles Morgan, holding a large amount of the transit stock, threw him out of the management. On his return he organized an opposition line to Morgan's between New Orleans and Galveston, and in 1854 established an independent line between New York and Aspinwall, with steamers on the Pacific side to compete with the Pacific Mail line. He soon compelled a compromise, and once more held the control of the transit company. In 1856 William Walker, then ruling in Nicaragua, seized the property of the transit company; and Vanderbilt, with the assistance of Costa Rica, fomented an insurrection which expelled Walker. The bar of the mouth of the San Juan rendered approach to Greytown difficult, which led to the abandonment of the transit business. In April, 1856, Vanderbilt received a large subsidy for withdrawing his California line, the field not affording profit for two companies. His independent transatlantic line, started in 1855, was abandoned in 1861 by the withdrawal of the Vanderbilt, a steamer costing \$800,000, which he gave to the Government

on the outbreak of the civil war. During his steamship career he owned 21 steamers, 11 of which he built, and with steamboats his entire steam fleet numbered 66; and for many years he had been popularly known as the "Commodore." When he abandoned the water in 1864 his accumulations were estimated at \$40,000,000. As early as 1844 he had become largely interested in the New York & New Haven Railroad, and in 1845 he began to buy the stock of the Harlem Railroad, and in 1864 held the whole of it. In 1859 and subsequently he invested several millions in the mortgage bonds of the Erie road. Soon after coming into possession of the Harlem road, he secured a controlling interest in the Hudson River & New York Central Railroads, and consolidated the two. Since 1873 the Lake Shore & Michigan Southern has been operated in conjunction with the New York Central & Hudson River roads as one continuous route, 978 miles in extent, and with the Harlem and side lines and branches presenting an aggregate of 2,128 miles subject to one management, representing an aggregate capital of \$149,000,000, half of which is said to have belonged to Vanderbilt and his family. Mr. Vanderbilt gave \$700,000 to Vanderbilt University in Nashville, Tenn., and \$50,000 to the Church of the Strangers in New York. His wealth at the time of his death was variously estimated at from \$60,000,000 to \$100,000,000. All of this excepting about \$15,000,000 was bequeathed to his son William H. Vanderbilt. This circumstance led to a contest of the will. William H. Vanderbilt succeeded his father as President of the New York Central Railroad.

VERMONT. Almost the only event of the year worthy of note in the State of Vermont was the celebration, at Bennington, of the battle which occurred there on the 16th of August, 1777. The celebration began on the 15th. A salute was fired and the bells of the village were rung at sunrise, and a military and civic procession paraded the streets in the forenoon. The Hon. E. J. Phelps, of Burlington, presided at the exercises in a pavilion, and delivered an address of welcome. This was followed by an historical address delivered by the Hon. Daniel Roberts, of Burlington, and a poem by Mrs. Julia C. R. Dorr, of Rutland. There were also brief speeches by distinguished guests, among whom were the Vice-President of the United States, Senators Edmunds and Morrill, Ex-Governor Hoffman and the Hon. E. W. Stoughton of New York, Ex-Governor Harri-man of New Hampshire, Governor Connor of Maine, Governor Van Zandt of Rhode Island, and others. The President of the United States arrived in the afternoon, when there was a military review and a public reception, followed in the evening by a general illumination, torchlight procession, and open-air concerts. On the 16th, there were salutes and bell-ringing at sunrise, and a procession in the forenoon, in which detachments of military

from Vermont, New Hampshire, and Massachusetts took part. New Hampshire and Massachusetts participated officially in the celebration; and among the guests of the day were the President of the United States, Mr. Evarts, Secretary of State, Attorney-General Devens, Chief Justice Waite, Governor Prescott of New Hampshire, Governor Rice of Massachusetts, and other prominent public men. The exercises in the pavilion consisted of an oration by S. C. Bartlett, President of Dartmouth College; a poem written for the occasion by William Cullen Bryant, of New York; an original hymn by Mrs. Maria Mason, and appropriate music. About 15,000 people were present. At the close of the exercises there was a banquet, and in the evening an illumination and torchlight procession. The celebration closed on the 17th with a grand parade of the Vermont militia.

A somewhat singular case of the reprieve of a man convicted of murder, only a few minutes before the time set for his execution, occurred at Rutland on the 6th of April. John P. Phair was charged with the murder of Mrs. Frieze, at Rutland, on the morning of June 9, 1874, and had been subsequently convicted on wholly circumstantial evidence. A new trial had been refused, and he was sentenced to be hung on the 6th of April. On the morning of that day a statement prepared by the condemned man was published in a newspaper at Boston, Mass., which had the effect of bringing out what was deemed to be new evidence tending to show the man's innocence. A reprieve of four weeks was granted on telegraphic information from Boston, in order to permit an examination of the evidence. This was regarded of sufficient importance to justify a further reprieve until after the next session of the Legislature, which occurs in October, 1878. As a new trial had been once denied there was no power except that of the Legislature to grant it.

On the 30th of June, there were 20 savings institutions in the State. The number of depositors was 31,528, an increase of 3,047 in one year. The amount of deposits was \$3,321,726.54, an increase of \$263,173.51. The disbursements in dividends amounted to \$381,400.10. The total expenses of the banks, including United States revenue taxes, were \$42,653.64. The resources and liabilities of the banks were as follows:

RESOURCES.

Loans on mortgages of real estate.....	\$4,478,755 64
Loans on personal and collateral security.....	1,639,229 29
Real estate owned.....	87,371 52

Total liabilities.....	\$3,040,827 38

As no election and no session of the Legislature took place this year, there was a total lack of political action by the people, and an absence of all official reports and information.

VIRGINIA. The average annual receipts from taxation for the last eight fiscal years have been \$2,401,726. The receipts from the same source for the fiscal year 1876-'77 were \$2,505,387. The ordinary expenses of the government for the last fiscal year were less than for any year since the constitution took effect, and less by \$88,583 than the average annual expenses of the last eight years on the same account. The principal sum of the entire debt proper of the Commonwealth, September 30, 1877, was \$29,350,816.76. The arrears of interest which have accrued since the Funding Bill took effect, and which constitute so much non-interest-bearing debt, amounted to \$4,188,141.33. Consequently the whole of the public debt, including the principal and all arrears of interest, is \$33,538,958.09. The entire debt assumed by the Funding Bill was \$30,478,646.49. The difference is the increase of the debt during the six years which have elapsed since the Funding Bill went into operation.

The condition of the sinking and literary funds, which are sometimes erroneously classed as part of the State debt, but which constitute no part of it, is as follows: Sinking fund: principal, \$5,145,271.90; interest, \$931,996.26; aggregate, \$6,077,268.16. Literary fund: principal, \$1,428,245.25; interest, \$176,271.64; total, \$1,604,516.89.

The most important measure passed by the Legislature of 1877 is known as the Moffett Register Law, which imposes a tax, and prescribes the mode of collecting it, on the privilege of selling wine, ardent spirits, or malt liquors. It was approved March 30th, and was amended by an act approved April 2d. Its chief object was to create a revenue to pay the interest on the public debt. The law provides that no person shall sell wine, ardent spirits, malt liquors, or any mixture thereof, either by wholesale, retail, or to be drunk at the place where sold, or in any other way, without first having obtained a license. A license to sell by wholesale includes only the privilege of selling in quantities of five gallons or more. A license to sell by wholesale and retail includes only the privilege of selling in quantities of one gallon or more. A license to sell by retail includes only the privilege of selling in quantities not exceeding five gallons at any time to any one individual, which shall not be drunk where sold, but shall be delivered to the purchaser in bottles, jugs, demijohns, or other vessels, to be removed therefrom. A license to sell to be drunk where

sold is known as a bar-room license, under which no wine, ardent spirits, malt liquors, nor any mixture thereof, shall be sold to be taken away from the place of delivery, but shall be drunk there. Any person desiring to carry on the business of a retail liquor merchant, and also that of a bar-room keeper, is required to obtain a separate license for each, and to comply with all the provisions of the law in relation to both privileges. Any person selling without a license shall be deemed guilty of a misdemeanor, and shall be fined not less than twenty dollars nor more than five hundred dollars, and be imprisoned not less than one month nor more than twelve months.

It was made the duty of the auditor of public accounts to have made a bar-room register, to be supplied to the various cities, towns, and counties of the State. The instrument adopted by the act for this purpose was known as the

Moffett Register. This is about the size of a common cigar box. All the machinery is inclosed within a box, which is made of cast-iron. On the front of the box is a combination of dials, registering from 1 to 1,000,000. On the reverse side is a crank. The register is permanently fixed on a counter, with the dial facing the customer, and the crank nearest the bartender. Where malt and spirituous liquors are sold, there is a register for each, appropriately labeled. When a glass of lager-beer is sold, the bar-tender turns the crank once, a gong or bell within the box sounds one, and the hands on the dial move forward one point. The alcoholic register is the same, but the latter liquor is taxed $2\frac{1}{2}$ cents a drink, the former $\frac{1}{2}$ cent a drink. The duties of the commission of the revenue, and the regulations to be observed by retail dealers, are set forth in sections 4 and 5 of the law, as follows:

MOUNT VERNON.

4. Whenever the commissioner of the revenue of any county, city, or town shall receive from the auditor of public accounts the necessary registers, he shall immediately cause the same to be firmly fixed, according to plans and instructions furnished by said auditor, in a conspicuous place in the room of delivery and place of business of every bar-room keeper or retail dealer licensed under the provisions of this act within his district. When the bar-room keeper or retail dealer desires to sell malt liquor under his license, there shall be placed an additional register, in like manner as above required, and one is to be marked as a malt-liquor register, and the other as an alcoholic-liquor register, in such form and characters as the said auditor shall prescribe. The commissioner of the register shall see that the instruments are well located, firmly attached, and kept in good working order, and for this purpose shall, from time to time, inspect the same; and if, after such register shall have been put in use, it becomes inoperative or out of order, it shall be the duty of the commissioner of the revenue, upon notice of the fact, to be at once given to him by the dealer, to replace it immediately with a good and perfect instrument, and charge the licensed dealer so supplied with the cost of repairing or replacing the injured register. The auditor of public accounts shall provide each commissioner of the

revenue with a sufficient number of registers to enable him to comply with the requirements of this section. The number of registers which may be necessary to the proper registration of the sales of each licensed dealer shall be determined by the commissioner of the revenue of the district in which such dealer resides. Every register shall be locked after each inspection by the commissioner of the revenue, and the key retained in his possession; and he shall seal the register after each inspection in such manner as the auditor of public accounts may direct. The character of the lock and seal required by this section shall be prescribed by the said auditor.

5. After the registers provided for in the next preceding section shall have been placed in the bar-room or place of business of licensed dealers, it shall be the duty of the retail dealer, immediately on the sale of every half pint, fraction, or multiple thereof, of ardent spirits, wines, malt liquors, or any mixture thereof, in the presence of the purchaser, or person to whom it is delivered, to turn the crank of the proper register until the bell has struck once, and the indicator on the dial has moved one point or number for each half pint, or multiple thereof, so sold, up to and including one gallon. It shall, in like manner, be the duty of the bar-room keeper, immediately upon the sale of each drink of wine, ardent spirits, malt

liquors, or any mixture thereof, in the presence of the purchaser or person to whom it is delivered, to turn the crank of the proper register until the bell has struck once, and the indicator on its dial has moved one point or number for each drink sold by him. The true intent and meaning of this section is that, in the case of a retail dealer, the sale of each pint, or fraction thereof, shall constitute the unit or basis of taxation, and in the case of a bar-room keeper the sale of every drink shall be the unit or basis of taxation; and in the former case the bell shall be struck once, and the indicator on the dial moved one unit for every half pint, or fraction thereof, sold; and in the latter case, the bell is to be struck once, and the indicator moved one unit for every drink sold; that is to say,

for the sale of a half pint or less the retail dealer shall register one number on the dial, in the manner above required; for the sale of a quantity in excess of a half pint and less than a pint, he shall register two units; for the sale of a quantity in excess of a pint and less than a pint and a half, he shall register three units, and in the same ratio for each half pint sold, multiple, or fraction thereof, up to and including one gallon, he shall register one unit.

The following table is appended for the better illustration of the scale of assessment to be used by officers acting under the provisions of this section:

QUANTITY OF LIQUOR.	No. of Registrations.	Tax on Alcoholic Liquor and Wine.	Tax on Malt Liquors.
Less than half pint.....	1	2½ cents	½ cent
Half pint.....	1	2½ "	½ "
More than half pint and less than 1 pint.....	2	5 "	1 "
One pint.....	2	5 "	1 "
More than 1 pint and less than 1½ pint.....	3	7½ "	..
One and a half pint.....	3	7½ "	..
More than 1½ pint and less than 2 pints.....	4	10 "	..
Two pints.....	4	10 "	..
Half gallon.....	8	20 "	..
One gallon.....	16	40 "	..

The law provides that any licensed retail or bar-room liquor dealer, for every willful failure to perform any of the duties required of him under the provisions of section 5, above quoted, shall be deemed guilty of a misdemeanor, and, on conviction, shall be fined not less than twenty nor more than one hundred dollars, one-third to go to the informer, for which such dealer and his sureties shall be liable on his bond; and on conviction for a second violation he shall forfeit his license, which shall not be renewed for one year.

The specific license tax on retail or bar-room liquor dealers, and the manner of paying it, are prescribed as follows by section 7:

7. The specific license tax on a retail liquor dealer shall be paid by him semi-annually, in advance, one half at the time his license is granted, and the other half at the expiration of six months, and shall be as follows: In the country or in towns of two thousand inhabitants or less, the tax shall be \$50: provided that in the country or in towns of two thousand inhabitants or less, whenever the tax realized from the liquor register during the year amounts to \$25, the specific license tax shall be \$25; and in towns of over two thousand inhabitants, whenever the tax realized from the said liquor register during the year amounts to \$50, the specific license tax shall be \$50; and if the dealer shall desire the privilege of selling both as a retail dealer and a bar-room dealer, he may do so upon the payment of \$75, if in the country or town of two thousand inhabitants or less; and in towns of more than two thousand inhabitants, upon the payment of \$150: provided that in the country or towns of two thousand inhabitants or less, whenever the tax realized from the liquor register, hereinbefore mentioned, during the year amounts to the sum of \$37.50, the specific tax shall be \$37.50; and in towns of more than two thousand inhabitants, whenever the tax realized from the said liquor register during the year amounts to \$75, the specific tax shall be \$75. Each retail dealer, and bar-room dealer, and ordinary keeper, shall, at the time the registers are fixed in his place of business, pay to the treasurer of his city or county, upon the certificate of the commissioner of the revenue, the sum of \$10 for the use of each register so fixed in his place

of business. And in addition to the tax hereinbefore imposed, each bar-room dealer and ordinary keeper shall pay an amount equal to two and a half cents upon each drink of wine or alcoholic liquor, or mixture thereof, and one-half cent upon each drink of malt liquor sold by him. And each retail liquor dealer shall, in addition to the specific license tax hereinbefore imposed, pay a sum equal to two and a half cents upon each half pint, or fractional part thereof, of wine or alcoholic liquor, or mixture thereof, sold by him; and on amounts in excess of one-half pint, up to and including one pint, five cents; on more than one pint, up to and including one and a half pint, seven and a half cents; on more than one and a half pint, up to and including two pints, 10 cents; on four pints or one-half gallon, 20 cents; on one gallon, 40 cents; and on each gallon in excess of one, up to and including five gallons, 10 cents per gallon; and one-half cent for each half pint, or fractional part thereof, of malt liquor sold by him; which sum, so ascertained, shall be paid by him at such time and in such manner as is prescribed in the next succeeding section. And it shall be the duty of every retail liquor dealer to keep a book, as prescribed in the 11th section of this act, in which he shall keep a record of all liquors sold by him, in quantities of more than one gallon, showing the names of the persons to whom sold, the day of sale, and number of gallons, and so forth, as prescribed in section 11 of this act: provided that nothing in this section shall be construed as requiring the payment of more than one specific tax by the keeper of an ordinary.

It is made the duty of the commissioners of the several counties, cities, and towns, to visit monthly the places of business of all licensed retail and bar-room liquor dealers, to examine the registers, to keep a record of the liquors sold, and the revenue accrued, and to report to the auditor of public accounts and the treasurer of the county or corporation. On receipt of such certificate it becomes the duty of the treasurer to collect the tax with which each dealer is charged.

Wholesale liquor dealers are licensed in the manner prescribed for retail and bar-room dealers, and may, in addition to the wholesale

license, obtain a license to sell by retail. Under a license to sell by wholesale, the dealer is allowed to sell only in quantities of five gallons or upward; and under a license to sell by retail, in addition to wholesale, he is allowed to sell in quantities of one gallon or more. The specific tax to be paid at the time the license is granted is, in the case of the wholesale dealer, \$150; and for the additional privilege of selling by retail, he is required to pay \$100 more, and the further sum of 40 cents on every sale of one gallon, and 10 cents a gallon on each gallon in excess of one up to and including five gallons. The dealer is required to keep a record of all alcoholic liquors so sold by him in quantities of more than one gallon, in a separate book for that purpose, showing the names of persons to whom sold, the day of sale, and the number of gallons. This record is to be open to the inspection of commissioners of the revenue or tax-collector. Any dealer who shall fail to comply with the above requirements, or who shall make a false or fraudulent entry or return in the book or report which he is required to keep, is liable to a fine of not less than \$200 nor more than \$1,000; and for a second offense, shall in addition forfeit his license. The law also imposes a license tax on manufacturers and distillers.

In September the Moffett register was put in operation in all the principal saloons of Richmond, and subsequently it was put in use in other cities and towns. It is estimated that the Commonwealth will derive a revenue of about \$500,000 a year from the operation of this law.

The Supreme Court of Appeals has affirmed the constitutionality of that provision of the Moffett Register Law which requires that "the cities of the Commonwealth shall first be supplied" with registers. It was contended that this was an invidious and unjust discrimination against the city liquor dealers, and in favor of the country dealers, and that its effect was to impose upon the former a new and burdensome system of taxation, from which the latter were wholly exempt for a considerable period, thus violating the rule which secures equality and uniformity of taxation upon all engaged in the same business. The Court ruled that it was impossible to put registers in operation in every county of the State at the same time; and that the Legislature had never attempted exact uni-

formity and equality in the license tax. "It is not meant," said the Court, "that the Legislature may apply one system of taxation as a permanent revenue measure in one part of the State, and another system in another part of the State. Such legislation would constitute at best but arbitrary exactions under the forms of taxation. But when a new and important

WASHINGTON AND LEE UNIVERSITY, LEXINGTON.

revenue system is adopted, and put into execution, which is but an experiment, a large discretion must be left to the legislative department as to the mode and manner of assessment and collection of the tax."

The Conservative (Democratic) party met in Richmond, August 8th, and continued in session several days. The following platform was adopted:

Whereas the good people of the State of Virginia, represented by the Conservative party, have been greatly concerned and agitated by representations and misrepresentations as to what would be the probable action of this Convention upon the subject of the State debt, and it has become vitally important to the preservation of the integrity and harmony of the party that an authoritative expression of opinion should be promulgated upon that question; and whereas the future welfare, power, and prosperity of this Commonwealth depend upon the continued existence and cohesion of the Conservative party: Now, therefore, be it resolved by the Conservative party of Virginia, in Convention assembled—

1. While the Conservative party, true to the past glorious history of Virginia, and proud of her good name and fame among the nations of the earth, would scorn to repudiate her just obligations, and are resolved to preserve inviolate the public faith and credit, yet we cannot but view with concern and anxiety the accumulation of our financial difficulties and the increasing weight of our public debt. We, therefore, earnestly urge upon the Legislature and executive branches of the government the importance of using all just and honorable means of bringing about an adjustment of the obligations of the Commonwealth which will bring the payment of interest upon our indebtedness within the resources of the

State derived from the present rate of taxation, and do equal justice to all classes of our creditors.

2. That every effort should be used by the legislative department of the State to reduce the expenditures of the government, and return to the methods of frugality, economy, and moderation practised by our forefathers, and approved by former generations of Virginians, even in the palmiest days of our prosperity.

3. That in the approaching election of members of the Legislature it is earnestly recommended by the Convention that the people shall elect their representatives with a view to their wisdom and integrity, and their ability to deal with the difficulties presented by the financial situation of the Commonwealth.

4. That our past experience demonstrates the great benefit resulting to the people of Virginia from an active, thorough, and efficient Conservative organization, representing and expressing the views and wishes of all classes and conditions. That, in order to continue to enjoy such benefits, all good citizens should strive to strengthen and preserve that organization, and by mutual concessions to settle all differences of opinion, justly and fairly inside of the party.

5. That we hereby ratify and reaffirm the vital principles of conservatism as embodied in the platforms of our party, heretofore promulgated, and hereby declare our uncompromising opposition to radicalism in any and all of its forms and features.

NORFOLK.

Colonel F. W. M. Holliday, of Winchester, was nominated for Governor; General James A. Walker, of Pulaski, for Lieutenant-Governor; and Raleigh T. Daniel, of Richmond, for Attorney-General. Soon after the adjournment of the convention, Mr. Daniel died. A meeting of the State committee was held, and General James G. Field, of Culpepper, was chosen to fill the vacancy on the ticket.

No nominations were made by the Republican party. Of a total vote of 106,329, Colonel Holliday received 101,940. Governor Holli-

day was born in Winchester, and is 50 years old. He graduated at Yale College, and studied law at the University of Virginia. After serving as Commonwealth's attorney, he commanded the Thirty-third Virginia Regiment, and lost an arm at Cedar Mountain. He was recommended by Stonewall Jackson for the rank of brigadier-general, but was unable to accept the honor because his arm had to be reamputated. He was in the Confederate Congress in 1863, and has had an extensive law practice since the war. He was elector at large for Tilden in 1876.

W

WALDENSIANS. The annual synod of the Waldensian Church was held at La-Tour-de-Peilz, Switzerland, September 11th. Pastor Lantaret was chosen moderator. The number of communities of the church had been reduced from 40 to 39 by the transfer of the congregation of Pastor Ravi, of Rome, to the American Methodist Episcopal Church. The synod had, besides its regular congregations, 39 evangelistic stations, of which four would shortly be organized into congregations, and 37 places visited by evangelists. The number of communicants was 2,414 against 2,278 in 1876. The number of regular attendants on worship had fallen from 3,896 in 1876 to 3,735, the reduction being occasioned by persecutions to which the community of Riesi, in Sicily, had

been exposed. Besides the regular attendants, 13,000 or 14,000 occasional attendants were reported. The day-schools returned 1,888 and the Sunday-schools 1,637 pupils. The entire ministerial and evangelistic force of the church consists of 3 professors of theology, 29 pastors and ministers, 14 evangelists, 51 teachers, and 4 colporteurs, in all 101 laborers.

WASHBURN, EMORY, died at Cambridge, Mass., March 18th. He was born in Leicester, Mass., in 1800, graduated at Williams College in 1817, was admitted to the bar at Lenox, Mass., and became the partner of Governor and Senator John Davis, at Worcester, Mass., where he was for 30 years a leading lawyer. He was in the House of Representatives in 1826 and 1827, and in the Senate of

1841 and 1842. In 1844 he was appointed Judge of the Court of Common Pleas, but resigned in 1847, and was elected Governor of the State in 1853. He accepted the Bussey professorship of law in Harvard University in 1856, and filled that position for 20 years. The degree of Doctor of Laws was conferred on him in 1854 by both Harvard and Williams Colleges. Besides compiling a variety of historical sketches, he wrote a "Treatise on the Law of Real Property," "Law of Easements and Servitudes," "Sketches of the Judicial History of Massachusetts," and "Study and Practice of the Law."

WASHINGTON TERRITORY. Though the great distance of the Territory from the centres of civilization, and difficulty of access, have retarded immigration, its progress in wealth and population has been steady and satisfactory. Agriculture, manufactures, and mining have been unusually prosperous. The wages of labor have been remunerative. Under the existing revenue law no portion of the revenue for a given year is paid into the Territorial Treasury until after the expiration of that year, and after all the expenses for the year have accrued and warrants therefor have been drawn upon the Treasury. This has necessitated the payment of interest on these warrants, in some instances, for a period of more than two years. County treasurers are required to pay over Territorial revenue only three times each year, on the first day of February, July, and November. The Territory credits each county annually with the amount of delinquent Territorial tax therein, but no provision is made for the payment to the Territory of the amount so credited should it be subsequently collected by the county, by sale of lands or otherwise.

The tide lands on Puget Sound and in the valleys of the rivers flowing into the Sound, and a portion of the heavily timbered land, constitute an agricultural area capable of supporting a population as dense as that of any of the older States. The production of cereals and vegetables on these lands can be justly characterized as enormous. The obstructions to navigation existing in many of these rivers have prevented settlements upon lands above the obstructions.

The character, quality, and extent of the agricultural lands east of the Cascade Mountains must be seen and examined to be fully appreciated. The productive capacity of that region is estimated at 50,000,000 bushels of wheat per annum. The production of wheat in the eastern portion of the Territory, the past season, is estimated to be 50,000 tons, of which 40,000 tons will be exported.

Among the large and important industries of the Territory are the salmon and other fisheries, on the Sound and on the Columbia River. Many of those which are in this Territory on the Columbia River appear to be claimed by a neighboring State, and annual productions

which should be credited to the Territory figure largely in the statement of exports of that State.

Coal and lumber constitute the principal articles of export from Puget Sound. The quantity of lumber manufactured during the past year has been about the same as in former years—250,000,000 feet, valued at \$2,500,000. The recent construction of railroads from tide water to the coal fields of King and Pierce Counties will stimulate the production of coal. The shipments during the first seven months of the year amounted to more than 80,000 tons, seven-eighths of which were from King County.

Under an act of the last Legislative Assembly, a proposition to form a State constitution and a State government was submitted to the people at the last general election. Eight-eleveths of the entire number of votes cast on the question, which constituted a majority of all the votes cast at the election, were in favor of a State government.

By existing laws a complete census of the Territory is required to be taken biennially, but the work is frequently neglected. The present year six counties failed to forward census returns. It is estimated that the present population will reach 50,000, a gain in two years of 14,000. Immigration appears to be on the increase, a fact attributable to the work of the Board of Immigration in disseminating information respecting the Territory. The average number of patients under treatment in the Hospital for the Insane during the year ending August 15, 1877, was 64 $\frac{2}{3}$. The assessed value of property in 1875 was \$14,569,156; in 1877 (two counties estimated), \$17,063,577.94. Territorial tax levied in 1876, \$60,556.81; in 1877, \$67,423.95. Amount paid into the Treasury from October 1, 1875, to September 1, 1877, \$109,821.79. Amount disbursed, \$108,158.79. Amount of warrants paid from October 1, 1875, to September 15, 1877, \$88,253.62 (for Insane Hospital, \$54,983.62; keeping convicts, \$17,366.04; Territorial University, \$1,500; salaries, \$7,889.23; miscellaneous, \$6,514.73). Amount of criminal expenses allowed to counties, \$5,547.57. Amount of interest paid on warrants, \$4,720.82. Warrants outstanding on October 1, 1875, \$21,840.22; on September 15, 1877, \$7,478.93.

WEST VIRGINIA. The Legislature of this State met at Wheeling for its regular session on January 10, 1877. Upon the organization of the two Houses, U. N. Arnett, of Marion County, was elected President of the Senate; in the House of Delegates, Mr. Gibson was chosen Speaker by a unanimous vote, being the nominee of the Democratic members. The Republicans made no nominations.

The vote for State officers as canvassed before the Legislature was as follows: For Governor, Henry M. Matthews received 56,206 votes; Nathan Goff, Jr., 43,477; James Laidly, 332. For State Superintendent of Free

Schools, W. K. Pendleton received 57,605 votes; F. H. Crago, 42,196. For Auditor, Joseph S. Miller received 57,830 votes; Charles M. Shinn, 42,271. For Treasurer, Thomas J. West received 57,772 votes; Moses Frankinberger, 42,239. For Attorney-General, Robert White received 57,843 votes; John A. Hutchinson, 42,196.

Thereupon the Speaker of the House of Delegates, as President of the Joint Assembly, declared that, "for Governor, Henry M. Matthews; for Superintendent of Free Schools, William K. Pendleton; for Treasurer, Thomas J. West; for Attorney-General, Robert White; and for Auditor, Joseph S. Miller, having respectively received the highest number of the votes cast for the several offices, were elected thereto." Frank Hereford and Henry G. Davis were duly elected United States Senators, the former to fill the unexpired term made vacant

by the death of Allen T. Caperton, and the latter for the term of six years, commencing on March 4, 1877.

At the time of his election to the United States Senate, Mr. Hereford was representing the State in the other House of Congress, having been elected to that office in 1870, and consecutively reelected in 1872 and 1874.

Shortly before the final adjournment of the Legislature, the Democratic members of both Houses met together in the Hall of Representatives for the purpose of deliberating upon the proceedings of the Electoral Commission, and the action of Congress in regard to the counting of the electoral votes. From the Committee on Resolutions, consisting of nine members, a majority and a minority report was submitted. After discussion, the majority report was adopted, which was as follows:

HARPER'S FERRY.

Whereas, By a fair and honest expression of the will of a decided majority, the people of the United States on the 7th day of November last declared in favor of Samuel J. Tilden for the office of President, and Thomas A. Hendricks for the office of Vice-President, of the United States; and

Whereas, The electors chosen by the people of the several States on December 6th met in their respective States and cast at least 197 votes for said Samuel J. Tilden and Thomas A. Hendricks for the office of President and Vice-President of the United States, which said 197 votes were a decided majority of the number of electoral votes cast; and

Whereas, By fraud and corruption, and the falsification of the returns of the election in at least two of said States, the legal majorities in said States were attempted to be set aside and disregarded in pursuance of an organized conspiracy by the leaders of the Radical party against the liberties of the people; and

Whereas, In pursuance of said conspiracy, fostered by fraud, corruption, and falsehood, the Radical majority in the Senate of the United States expressed

their determination not to count the electoral vote legally cast, as aforesaid, in the manner prescribed by the Constitution and every precedent established in the history of this country in like cases, but by hypocrisy, deceit, and false professions of patriotism induced the House of Representatives to assist in creating a tribunal unknown to the people, yet possessing the power to inquire into the fraudulent transactions, and ascertain the true and lawful vote of said States; and

Whereas, Said tribunal refused to inquire into said alleged frauds, and utterly disregarded the plain provisions of the act creating said tribunal, rendering contradictory and partisan decisions, attempting to legalize and force upon the people the results of the most infamous frauds ever attempted upon a free people: Therefore

Resolved, That our Senators be instructed, and our Representatives in Congress be requested, to use all legal, constitutional, and honorable means to prevent the consummation of this most foul conspiracy against republican government and the liberties of the people.

Resolved, That our Senators in Congress be instructed, and our Representatives requested, to oppose any appropriation for the support of the army that does not restrict expressly and strongly the army from being used in the Southern States, and confines its use to the protection of our western frontier.

The Legislature adjourned *sine die* on March 2d, having continued in session 50 days. During that time a large number of acts and joint resolutions of a local nature were passed on various subjects, of which were the following:

An act to make silver coin issued by the United States Government a legal tender within the State of West Virginia. The vote on this bill was: in the House of Delegates—ayes, 59; nays, none; in the Senate—ayes, 13; nays, 10.

An act providing for the location of a permanent seat of government for the State, and the erection thereof of the necessary public buildings for the use of the State. The vote on its passage stood as follows: in the House of Delegates—yeas, 40; nays, 16; in the Senate—yeas, 11; nays, 10.

An important act, commonly called the "Usury Bill," was also passed at this session, but vetoed by Governor Jacob as unconstitutional.

The Governor's objection of unconstitutionality is stated to have been an involuntary mistake, occasioned by the different wording of the inside and outside titles of the engrossed bill placed before him for his approval. He read only the inside title, copied by the engrossing clerks at the head of the act from the printed bill as originally introduced; whereas, during the discussions held on the bill, its title was altered and amended. The proper title, as amended, was fully and correctly written on the outside of the engrossed bill sent to the Governor for his signature; but, without looking at it, he seems to have read the inside title only, which was objectionable. This cause of the mistake could not have been detected and corrected by the Joint Committee on Enrolled Bills for want of time, the occurrence having taken place on the very last days of the session.

A joint resolution "proposing an amendment to the State Constitution in relation to the Judicial Department" was adopted by the House of Delegates early in the session, but it failed to pass the Senate.

The result of the election held on August 7, 1877, was in favor of Charleston, in the county of Kanawha, for the seat of government. From the official returns of 53 counties, it appears that the aggregate number of ballots cast for either of three cities, the votes of two counties being estimated, was as follows:

For Charleston.....	41,283
For Clarksburg.....	30,812
For Martinsburg.....	8,049

The event was celebrated by the residents of Charleston on the 17th and 18th of August by a general illumination, etc.

On August 15, 1877, the Independent Green-

back party of West Virginia held a State Convention, when they unanimously adopted the following platform:

The Independent Greenback party of West Virginia acknowledge allegiance to no other organization. Republican platforms ignore the greenback, bestow faint praise upon the "dollar of the fathers," laud gold, and tacitly accept national bank notes as "true money;" while Democratic platforms go a little farther, and venture to condemn "contraction," demand the repeal of the Resumption Act, and the abolition of national banks. Both parties profess willingness to accord to labor its just rewards, but neither of them proposes a practical method; while we demand, as the only means of attaining that end, restoration to the people of the money government has destroyed.

We hold that the decay of wealth or shrinkage in the value of property and labor is the necessary result of the destruction by government of our money, and that bankruptcy, poverty, idleness, riots, and crimes are its legitimate fruit.

That it is as consistent with common-sense to affirm that idleness induces wealth as that over-production creates hard times.

That a domestic system of finance is the best safeguard against instability in values.

That as it is not the material that constitutes money, but the sovereign will that utters it, the declaration by government that the greenback shall be equal in all its monetary functions with gold is the only sure method of bringing paper money to par.

That over-production is a heresy in political economy, and affords no solution to admitted depression in business, but in under-consumption and scarce money we find a more simple solution.

One dollar now, whether it be gold, silver, or paper, cannot perform the functions of \$5 ten years ago.

We further hold that professed resumption in the existing supply of the precious metals will entail national disgrace. Specie payment has never been an honest monetary system in this country or in England, where commerce has sought the most convenient expedients. If the system is again to be inflicted upon the country, it is better that we have it at once, for the twofold reason that it may stop the destruction of the people's money, and at the same time put it in the power of money capitalists, by a run upon the Federal Treasury for gold, to show to the world that the system is radically dishonest.

We hold that the General Government, as the supreme exponent of the public will, is competent to confer upon the emanations of its exchequer the same monetary virtues upon paper as upon metals; that the most effective mode of giving circulation to gold is to declare the paper dollar its equivalent for all purposes, and that this can be done by omitting the "promise to pay" as well from the paper dollar as from the gold and silver dollar.

We further hold that the payment of national, as well as individual, debts has a higher sanction than legal enactments. We, therefore, appeal to the moral sense of the public, when we demand that each shall be paid in money of no higher purchasing power than that in which it was contracted.

That, while under ordinary circumstances we do not hold that a "national debt is a national blessing," in the present condition of people and government we believe our national debt can be made a threefold source of good by the issue of Treasury notes in volume equal to the same:

First—By placing within the reach of the people the medium of discharging individual indebtedness, and at the same time providing for the growing wants of commerce.

Second—By the reduction of taxation to the extent of the annual interest upon the national debt.

Third—By averting the issue of national repudiation, which will inevitably become a plank in American politics, unless monetary relief is speedily brought to the people.

1. We are, therefore, in favor of the immediate payment of the entire national debt, so far as can be done in good faith to both debtor and creditor, in strict pursuance of the contract, in lawful money.

2. As lawful money meant greenbacks when a large portion of the debt was contracted, it cannot justly have a different meaning now. Hence, the further issue of Treasury notes necessary for this portion of the public debt should be stamped with the proviso of inability to pay import duties and interest on the public debt.

3. So much of the public debt as was originally payable in "coin" to be discharged forthwith by the sale of full legal tenders for silver bars, if found to be the cheapest material for coinage.

4. The payment of such part of the public debt as calls for "gold" to be paid in that material, if the same be in the Treasury. If not, then that sale be made of full legal tenders, at their market value, to be issued for that purpose, for the purchase of gold coin or bullion, so far as may be necessary.

5. The speedy withdrawal of all bank circulation and payment of the bonds deposited for security thereof.

6. When the greenbacks reach the Federal Treasury, the same to be replaced for circulation by the issue of full legal tenders as the future paper circulation of the country.

The probable receipts and disbursements of the General State Fund for the current fiscal year and the following are officially estimated as follows: For the year ending September 30, 1877—receipts, \$374,175; disbursements, \$355,086.97. For the year ending September 30, 1878—receipts, \$350,000; disbursements, \$313,988.26.

The following summary statistics exhibit the working of the school system for the year ending August 31, 1877: whole number of children of school age between 6 and 21 years, 194,940. Aggregate amount of the apportionment of the general school fund, distributed among the several counties in proportion to the number of children of school age therein, \$195,183.75. Total expenditures for all school purposes from the teachers' and building funds for the said year, \$770,658.86. Cost per pupil for tuition for the year, based on the number attending school, \$4.80. Cost per pupil for all purposes, based on the number of daily average attendance, for the school year, \$7.66. For the year ending August 31, 1876, it was \$7.72. Total assets reported from all sources during the year, including the balance on hand at its beginning, September 1, 1876, \$921,307.10. Balance on hand of both teachers' and building funds on September 1, 1877, \$160,122.85.

The number of school-houses in West Virginia is 2,959.

The various charitable institutions of West Virginia continue under praiseworthy management. For their support and incidental expenses, the following amounts were appropriated out of the moneys of the General State Fund for the first and second years respectively: For the Hospital for the Insane, \$56,575, and

\$55,575. For the lunatics in jails, \$15,000, and \$15,000. For the Institution for the Deaf, Dumb, and Blind, \$23,600, and \$28,600.

In the West Virginia Penitentiary there are 195 convicts, belonging to all classes of society.

The prison appears to be unexceptionably managed in all respects.

WILKES, CHARLES, an American naval officer, was born in New York in 1801, and died in Washington, D. C., February 8, 1877. He was appointed a midshipman in 1816, and served on the Mediterranean station in 1819-'20, and in the Pacific in 1821-'23. In 1826 he was appointed as lieutenant. He was appointed to the Department of Charts and Instruments in 1830, and was the first in the United States to set up and observe with fixed astronomical instruments. On August 18, 1838, he sailed from Norfolk, Va., in command of a squadron of five vessels and a store ship, to explore the southern seas. He visited Madeira, the Cape Verd Islands, Rio de Janeiro, Tierra del Fuego, Valparaiso, Callao, the Paumotu group, Tahiti, the Samoan group (which he surveyed and explored), Wallis Island, and Sydney in New South Wales. He left Sydney in December, 1839, and made important discoveries in the antarctic regions. In 1840 he thoroughly explored the Feejee group, and visited the Hawaiian Islands, where he measured the pendulum on the summit of Mauna Loa. In 1841 he visited the northwestern coast of America and the Columbia and Sacramento Rivers, and on November 1st set sail from San Francisco, visited Manila, Socorro, Borneo, Singapore, the Cape of Good Hope, and St. Helena, and cast anchor at New York on June 10, 1842. Charges preferred against him by some of his officers were investigated by a court-martial, and he was acquitted of all except illegally punishing some of his crew, for which he was reprimanded. He was made a commander in 1843. He published "Narrative of the United States Exploring Expedition, 1838-'42" (6 vols. 4to, also 5 vols. 8vo, Philadelphia, 1845; abridged, 1 vol. 8vo, New York, 1851). Of the remaining 11 volumes, giving the scientific results of the expedition, he was the author of that on meteorology. In 1849 he published "Western America, including California and Oregon" (8vo, Philadelphia), and in 1856 his "Theory of the Winds" (8vo, New York). He was made a captain in 1855. In 1861 he was sent to the West Indies in the frigate San Jacinto to look after the Confederate steamer Sumter; and on November 8th he took forcibly from the British mail steamer Trent, in the Bahama Channel, Messrs. Slidell and Mason, commissioners of the Confederate States to France and England, and conveyed them to Boston. For this action he received a vote of thanks from Congress; but his course was finally disapproved by the President, and the commissioners were surrendered to England. In 1862 he was com-

missioned as commodore and placed first on the list. While in command of the flotilla in James River he shelled and destroyed City Point, on August 28th. In 1863 he commanded a special squadron in the West Indies, and captured many blockade-runners. He was commissioned as rear-admiral on the retired list, July 25, 1866.

WISCONSIN. The Legislature, which assembled early in January, continued in session for eight weeks. There were enacted 301 laws. The amount of the State tax levied was \$263,815, against \$383,827 the preceding year, showing a decrease of \$120,012. Laws were passed strictly of a local nature.

The most important measure of this session was the registry law, which repealed all former laws on this subject. It applies only to cities and incorporated villages, and to towns in which the same are attached for election purposes. The mayors of cities and the presidents of villages are directed to present to the common councils or boards of trustees, as the case may be, at their first regular meeting in September of each year, the names of three persons for inspectors and two persons for clerks of election, for each election precinct in such cities or villages, to be approved by these bodies. Not more than two inspectors and one clerk shall belong to the same political party.

The receipts from all sources into the State Treasury during the year ending September 30, 1877, were \$1,789,625; disbursements, \$1,827,227; balance in the Treasury at the end of the year, \$278,264. The receipts into the general fund during the fiscal year were \$1,199,954.86; balance from previous year, \$10,959.94; total, \$1,210,914.80.

The total disbursements from this fund were \$1,204,900.

The State indebtedness remains as at the close of the preceding fiscal year, and is represented by:

Bonds outstanding.....	\$14,000
Currency certificates.....	57
Certificates of indebtedness to trust funds.	2,238,000
Total.....	\$2,252,057

In addition to this the Secretary of State reports the total indebtedness of the counties, cities, towns, villages, and school districts in the State as amounting to \$9,658,545.04, which, added to the State debt proper, makes the total public indebtedness of the people of Wisconsin \$11,910,602.04, being somewhat less than three and one-half per cent. of the total assessed valuation.

The assessed value of all property in the State, subject to taxation, as returned by the assessors, is:

Personal property.....	\$77,362,481
City and village lots.....	91,521,992
Land.....	182,935,881
Total.....	\$351,780,354

The value of the various kinds of property exempt from taxation, reported for the year 1876, is as follows:

United States property.....	\$557,535
State property.....	159,515
County property.....	1,152,066
Town, city, and village property.....	880,970
Cemetery property.....	278,469
Common school property.....	1,883,017
Railroad property.....	7,487,627
Church property.....	4,516,359
College and academy property.....	652,500
All other property.....	815,238

Total..... \$18,524,196

Deducting from this amount the value of railroad, telegraph, and insurance property, which, in the form of licenses, pays what is regarded as a fair proportion of taxes, and also the several items of public property, there remains less than \$6,000,000 exempt from taxation.

The total tax levied in the State, for the year 1876, was \$8,097,435, amounting to \$2.22 on each \$100 of assessed valuation. The purposes for which these taxes were levied, with the amounts and rates, were as follows:

KIND.	Amount.	Rate.
State tax.....	\$788,942 00	.2162
County tax.....	1,458,649 00	.8889
Town tax.....	3,390,417 00	.6329
School tax.....	1,617,689 00	.4434
Road tax.....	1,032,588 00	.2533

It thus appears that the direct State tax was less than one-tenth of the total tax. The entire State tax, direct and indirect, for 1877, amounted to \$1,199,955, and is only about one-seventh of the total tax paid by the entire people.

The latest school statistics yet published are those for 1876. The number of pupils attending school in that year, compared with the attendance of the preceding year, was as follows:

DESCRIPTION.	1875.	1876.
Attending the public schools.....	279,654	282,186
Attending private schools.....	16,240	24,028
Attending colleges and academies.	2,151	1,853
Estimated for benevolent institutions.....	1,150	1,160
Totals.....	299,955	309,227

The total number of teachers employed in 1876 was 8,634, of whom 5,904 were males and 2,730 were females. The total value of school property was \$4,875,618. The expenditures aggregated \$2,153,811, including \$1,462,326 for teachers' wages.

The number of convicts confined in the State Prison September 30, 1877, was 290, which was also the average number in confinement during the year. In the manufacturing department, \$77,176 worth of goods was produced. The net cost of the institution to the State during the year was \$21,450; but of this amount \$6,550 was for extraordinary expenditures.

The Industrial School for Boys, at Waukesha,

continues to meet all reasonable anticipations. The whole number of inmates during the year was 471, and the number remaining September 30, 1877, was 364. The average number for the year was 341. The expenditures amounted to 46,321, including \$900 for permanent improvements. The expenditures at the Institution for the Education of the Blind were \$19,686, exclusive of \$64,353 expended for building purposes. The number of pupils in attendance during the year was 91, of whom 76 were present September 30, 1877. At the Institute for the Deaf and Dumb, the current expenditures amounted to \$31,426. The average attendance during the year was 155. The sum of \$94,823 was expended for the maintenance of 498 patients in the Wisconsin Hospital for the Insane, near Madison. The number of inmates at the close of the year was 382, and the average number during the year was 370. In the Northern Hospital for the Insane, 704 patients were cared for at a cost of \$122,559.

A more systematic provision is urged for the hundreds of chronic insane scattered over the State in jails, poor-houses, and private families. There are about 800 inmates of the Soldiers' Home near Milwaukee.

The geological survey of the State has been prosecuted with very satisfactory results during the year. The second volume of the final reports has been published.

The number of acres of public lands sold during the year was 42,064.81.

During the year there were forfeited 15,015.54 acres, for non-payment of annual interest, amounting to \$20,200.

The whole number of acres held by the State at the close of the year was 1,568,655.

The Commissioners of Fisheries conduct hatcheries at Milwaukee and Madison. At the former, fish for the great lakes are hatched and raised, and at the latter, inland varieties. During the past year there were turned out from the Milwaukee establishment 1,736,000 lake-trout fry, and 6,295,000 young white-fish. From the Madison hatchery 67,500 California salmon and 179,000 brook-trout were distributed.

The Republican State Convention assembled at Madison, September 11th, and nominated the following ticket: For Governor, William E. Smith, of Milwaukee; Lieutenant-Governor, J. M. Bingham, of Chippewa; Secretary of State, Hans B. Warner, of Pierce; State Treasurer, Richard Guenther, of Winnebago; Attorney-General, William E. Carter, of Grant; Superintendent of Public Instruction, W. O. Whitford, of Rock. The Convention adopted the following resolutions:

That we reaffirm the principles which have guided the National Republican party hitherto; that we declare it to be the steadfast purpose of the Republicans of Wisconsin to coöperate with all good citizens in maintaining, in letter and spirit, the constitutional amendments framed to secure equal rights and protection to all, in maintaining the plighted faith of the nation, and in promoting reforms to secure

economy and efficiency in every branch of government.

That, most earnestly desiring the pacification of the Southern section of our Union and its speedy return to material prosperity, we are mindful that this can be gained only by obedience to law, by protection to all in every right, by a careful regard for that class of citizens least able to protect themselves. In the efforts of the present National Administration to restore peace and concord to the South, we recognize a magnanimous purpose to remove every semblance of excuse for lawlessness and violence. We hope that this magnanimity will be duly appreciated, and that the reciprocal pledges made by prominent citizens and officials of the South will be faithfully kept. We shall rejoice if the Southern policy of the President produces the hoped-for results of order and peace. But if these results shall not follow this experiment, we demand that other measures be adopted which shall secure to all citizens, without distinction of race or color, the fullest enjoyment of their constitutional rights.

That the determination of the National Executive to render the civil service more efficient and less obnoxious to criticism meets our approval. The perfection of our system of government in every detail of administration is one of the most important duties of the hour. All efforts in that direction should be fairly considered, neither hastily approved nor condemned.

That in the purposes and patriotism of President Hayes, we declare our unshaken confidence.

Resolved, That the attention of Congress is called to the necessity of such modification of the patent laws as shall, while affording adequate recompense to the inventor, at the same time secure the complete protection of the people from undue exactions for the use of patented articles.

That we rejoice that the fidelity of the Republican party in upholding the national credit has brought our currency so near the point of resumption of specie payment. We hold that the silver dollar should be restored to its former place as money, and made legal tender for the payment of debts except where otherwise distinctly provided by law, with coinage so regulated as to maintain equality of value, and preserve the harmonious circulation of gold, silver, and legal-tender notes as money.

While we earnestly condemn all violence, outlawry, and mob rule, yet the Republican party expresses its heart-felt sympathy with the condition of the workingmen who are willing to work but are unable to find employment; and public attention should be called to the grave importance of the labor question, and the most careful consideration should be given to the same by Federal and State Legislatures.

That we oppose any further bestowal of public lands upon railroad corporations, and urge the establishment of such governmental regulation over inter-State railroads as their importance as national highways and the interest of the people demand.

That we congratulate the people of Wisconsin that, during the many years in which the Republican party has been in the ascendancy, no stain has been found upon its record in this State; and we therefore confidently point to its whole history, and especially to the wise and economical administration of Governor Harrison Ludington, as the best evidence and guarantee of its intentions and purposes for the future.

Resolved, That the Republican party is in favor of an appropriation by Congress for the purpose of assisting, under suitable regulations, the surplus laboring men of the larger cities and mining districts to settle on the public lands.

The Democratic Convention met in Fond du Lac, September 26th, and nominated James A. Mallory, for Governor; R. E. Davis, for Lieutenant-Governor; James B. Hays, for

Secretary of State; John Ringle, for State Treasurer; Joseph M. Morrison, for Attorney-General; and Edward Searing, for Superintendent of Public Instruction. The following platform was adopted:

The Democratic and Reform party of Wisconsin, in State Convention assembled, renews its pledges of devotion to the Union and the Constitution with all the amendments. It declares its firm belief that the will of the people was defeated in the late Presidential election by fraud and chicanery under the protection of the Federal military, and through the ballot box will express its condemnation of the act and the actors.

It declares for the freedom of the ballot unawed by the bayonet, and insists that military interference in regulating and controlling elections is subversive of the first principles of a free government.

It declares its opposition to subsidies, and is in favor of the preservation of the public lands for the use of actual settlers.

It declares its hostility to the financial policy of the Republican party withdrawing capital from taxation, increasing the burden of the public debt by declaring currency bonds payable in gold, demonetizing silver in the interest of the creditor and at the expense of the debtor, and attempting to force resumption when it will bring ruin upon the general business interests of the country, and demands instead that the property protected by the government pay its just proportion of the expenses of the government; that silver be remonetized, and the present resumption act be repealed and resumption be postponed until the financial condition of the country will permit it.

It declares its opposition to a longer continuance of the national bank currency, and demands that the government furnish its own notes in the place thereof.

It declares its unyielding opposition to high protective tariffs as vicious in principle, advancing the interests of a few at the expense of the many.

It declares in opposition to the fostering of monopolies, and favors such legislative regulation of interstate as well as State commerce as will prevent a combination of railway, express, telegraph, and freight companies from extorting exorbitant rates to make watered stock yield a productive interest.

It declares in favor of such legislation as will equalize the pay of the soldiers in the late war, and its hostility to the system of technicalities used by government officials to prevent the payment to them of their honest dues.

It declares for a reduction of National and State expenses, and to that end demands the reformation of and an honest administration of the revenue laws; the abolition of sinecure offices; the reduction of large and unearned salaries to officers, and the discharge of all supernumerary office-holders.

It declares its opposition to high and exorbitant rates of interest, and demands the reduction of legal rates to 7 per cent. and no more.

It declares for the repeal of all laws exempting railroad land and corporate stock and property, other than that held for religious and school purposes, from taxation.

It declares for the maintenance of our free-school system, free to all, without taint of sectarianism.

It declares its opposition to extraordinary and unusual sumptuary laws, but insists that the minority must acquiesce in the lawfully-expressed will of the majority.

It demands that due regard be paid by our government to the labor question, and to all just claims of the workmen, and demands the enactment of stringent laws for the protection of labor, and the savings of labor, and the collection of wages due workmen.

It demands the proper regulation of prison-labor

laws, and for the protection of the health and lives of the operatives in manufacturing establishments.

With this declaration of our principles, we recommend the ticket this day put in nomination to the favorable consideration and support of the State.

The details of the election were as follows, the three leading candidates, for each office, being Republican, Democrat, and Greenback:

GOVERNOR.		Vote.	Plurality.
Wm. E. Smith.....		78,759	8,273
J. A. Mallory.....		70,486	
E. P. Allis.....		26,216	
J. C. Hall.....		399	
C. M. Campbell.....		2,176	
Scattering.....		56	

Total vote..... 178,252

LIEUTENANT-GOVERNOR.		Vote.	Plurality.
J. M. Bingham.....		77,926	6,270
R. E. Davis.....		71,656	
E. H. Benton.....		25,745	
E. W. Arndt.....		895	
B. H. Brown.....		2,165	
Scattering.....		120	

Total vote..... 178,007

SECRETARY OF STATE.		Vote.	Plurality.
H. B. Warner.....		78,506	6,847
J. B. Hayes.....		71,659	
J. H. Osborn.....		25,077	
J. E. Weber.....		417	
Julius Gugler.....		2,225	
Scattering.....		115	

Total vote..... 177,922

STATE TREASURER.		Vote.	Plurality.
Richard Guenther.....		81,087	12,682
John Ringle.....		68,405	
Wm. Schwartz.....		25,887	
M. J. Althouse.....		420	
Geo. Kisbert.....		2,177	
Scattering.....		187	

Total vote..... 177,613

ATTORNEY-GENERAL.		Vote.	Plurality.
Alex. Wilson.....		77,804	5,004
J. M. Morrow.....		72,800	
Henry Hayden.....		25,090	
Eli Hooker.....		894	
E. A. Petersolia.....		2,219	
Scattering.....		615	

Total vote..... 177,922

STATE SUPERINTENDENT.		Vote.	Plurality.
W. C. Whitford.....		75,788	8,180
Edward Searing.....		72,658	
G. M. Steele.....		25,911	
J. W. Carhart.....		826	
Henry Eggers.....		2,208	
Scattering.....		459	

Total vote..... 177,845

At the same election two amendments to the Constitution were ratified. One provided for an increase of the Judges of the Supreme Court from three to five; the other was as follows:

Resolved by the Senate, the Assembly concurring, That Section 2 of Article VIII. of the Constitution of this State be amended so as to read as follows: "Section 2. No money shall be paid out of the Treasury, except in pursuance of an appropriation by law. [No appropriation shall be made for the payment of any claim against the State, except claims of the United States, and judgments, unless filed within six years after the claim accrued.]"

The amendment consists of the addition of

what is above inclosed in brackets. The vote on the amendments was as follows:

For Judicial Amendment.....	79,140	62,377
Against.....	16,763	
Total.....	95,903	
For Financial Amendment.....	83,046	29,675
Against.....	8,371	
Total.....	86,417	

William E. Smith, who is now Governor of Wisconsin, was born in Scotland in 1824. He came to this country at an early age and received a good education. He resided for a time in New York, then in Michigan, and settled at Fox Lake, in Wisconsin, in 1849. He is a merchant, was elected to the lower branch of the State Legislature in 1850, and was a member of the Senate in 1858-'59 and in 1864-'65. From 1866 to 1870 he was State Treasurer. In 1870 he was again elected to the Assembly; and when that body met in January, 1871, he was chosen Speaker. The Legislature is politically classified as follows:

	Senate.	House.	Joint Ballot.
Republican.....	21	49	69
Democrat.....	21	42	63
Greenback.....		7	7
Socialist.....		1	1

WYOMING. During the two years intervening since the adjournment of the last Legislature, the affairs of the Territory have generally been in a prosperous condition. Business has enlarged; branches of industry have increased, and additional capital has found investment in different sections. The depression which has weighed so heavily upon the country at large has not been felt by the people. Among the interests of the Territory stock-raising is one of the most prominent. The experience of each successive year has furnished additional and conclusive evidence of the adaptability of its vast plains to the raising of horses, cattle, and sheep. The following table of shipments will show the progress of the business from its beginning:

YEARS.	Car-loads.
1873.....	286
1874.....	738
1875.....	975
1876.....	1,344
1877.....	1,649

Each car carries twenty head, so that 32,480 head were shipped in 1877. The net return to the owners was \$30 per head, making a total sum of \$974,400. The quantity of wool shipped has been as follows:

YEARS.	Pounds.
1873.....	85,077
1874.....	216,242
1875.....	223,033
1876.....	333,919
1877.....	346,280

This is a good exhibit for a portion of what was once regarded as the Great American Desert. These cattle have literally raised themselves for the market. They have been out

upon the ranges during the whole of the winters without shelter and without feed from the stack, and have been prepared for slaughter almost without cost, save the expense of gathering them in and shipping them.

Winter grazing in Wyoming, so long doubted, has come to be an established fact, and the careful observer must be convinced that not very far in the future the Territory will become one of the principal stock-raising sections of the continent.

The raising of wheat upon the Laramie Plains and in the Wind River Valley has been tested

THE GIANTESS.

during the past season with satisfactory results. The development of the mining interests of the Territory has continued with steady progress. The production of coal has increased during the year.

The capture and surrender of most of the hostile Sioux, the abolition of the Indian title to the lands, and the moral effect of the unexampled pursuit and capture of Joseph and the Nez Percés, afford reasons for the belief that peace will be maintained in this region of country, and that the settlement of northern Wyo-

ming, hitherto prevented by marauding Indians, will go forward, and its mineral and pastoral wealth be made available by the industry of the settler. The removal of the Indian agencies from the northern border to points near the Missouri River is now taking place, and this gives additional confidence in the prospect of peace.

The following is the financial statement for the past two years: On hand at the beginning of the term, \$8,792.37; receipts, \$43,698.49; total, \$52,490.86; disbursements, \$50,635.34; balance, \$1,855.52. There are outstanding bills to the amount of about \$4,800.

The total valuation of property as assessed for the year 1877 is \$9,275,811. The rate of assessment for Territorial purposes is three mills on the dollar. The amount of tax levied for the year is \$27,837.

There are now 67 Territorial prisoners in the United States Penitentiary at Laramie, at a cost of \$1 per day per man, which is the contract price with the Government.

The Governor recommends that all convicts having more than two years to serve be sent to the House of Correction at Detroit, where

THE GIANT GEYSER.

the cost of keeping them is \$1.25 per week per prisoner.

A volume published in the latter part of the year gives many interesting details respecting the Territory. It is entitled "The Hand-

Book of Wyoming, and Guide to the Black-Hills and Big-Horn Regions: for Citizen, Emigrant, and Tourist." By Robert E. Strahorn ("Alter Ego"), of the *Western Press*. 8vo. pp. 249. Cheyenne, Wyoming.

THE THUD GEYSER.

From this volume the following information is condensed:

The number of cattle and sheep owned in the Territory at the present time is: Cattle, 90,000, and sheep, 67,871. The common method of handling cattle is to purchase in the spring two and three year old Texas steers, at \$12 and \$16 a head delivered in Cheyenne, and to sell the same, the ensuing year, at any of the stations, at an average of \$28 per head. The expense of keeping a herd of 1,000 is reckoned for the year at \$1.75 per head; of a herd of 5,000, at \$1.40; of 10,000, at \$1; and 25,000, from 65 to 75 cents. Sheep require some attention in herding, feeding, and sheltering from storms—creating an expense per head of 27 cents per annum. With proper care, they return the owner a large annual profit on the money laid out.

Capital invested in the dairying business, with easy management, doubles itself annually. The case is cited of a dairyman who received \$6,540 for the products of 50 cows in a single year. In another instance cited, a net profit of \$2,600 was realized from the yield of 80 cows in a single season. This experience is said to be duplicated by hundreds of dairymen along the eastern base of the Rocky Mountains.

The area of fertile land in Wyoming, having natural facilities for copious irrigation, and abundant material for fencing and building in convenient proximity, aggregates 20,000 square miles, or nearly 13,000,000 acres. It is adapted to the growth of the cereals and the crops and fruits of the temperate zone. The market within the Territory for products of the soil is shown in the statement that potatoes command an average of two cents per pound through the entire year; turnips, one to three cents; onions, three to six cents; cabbage, three to seven cents, and other garden-produce in proportion. Small fruits everywhere command prices that insure a competence to the producer.

Y

YOUNG, BRIGHAM, died August 29, 1877. He was born in Whitingham, Vt., June 1, 1801. He was the son of a farmer, received but little education, and learned the trade of painter and glazier. He was a member of the Baptist Church, and is said to have preached occasionally. In 1832 he joined the Mormons

at Kirtland, Ohio, and was soon ordained an elder, and began to preach. His talent and shrewdness speedily made him prominent, and in 1835 he was ordained one of the twelve apostles, and sent out with the other apostles to preach the new doctrines. His field of labor was the Eastern States, and he was sig-

nally successful in making converts. After the death of Joseph Smith, in June, 1844, Young was one of four aspirants to the presidency, and was unanimously chosen to that office by the apostles. The choice met the general approval of the sect, and soon afterward his principal rival, Sidney Rigdon, being contumacious, was excommunicated. After the charter of Nauvoo had been revoked by the Legislature of Illinois, and the city bombarded, Young set out with his followers in 1846, and, after a weary march across the Plains, reached Great Salt Lake Valley, which, he persuaded them, was the promised land. Here he founded Salt Lake City in July, 1847, and became the absolute ruler of the colony. Extensive tracts of land were brought under cultivation, an "immigration fund" was established, and large numbers of converts were brought by a well-organized system from Europe, chiefly from the working classes of Great Britain, and especially from Wales. A considerable number came also from Sweden and Norway, and a smaller number from Germany, Switzerland, and France. In March, 1849, a convention was held at Salt Lake City, and a State organized under the name of Deseret, a word understood by the Mormons to signify "the land of the honey-bee." A legislature was elected, and a constitution framed and sent to Washington; but Congress refused to recognize the new State, and in September organized the country occupied by the Mormons into the Territory of Utah, of which Brigham Young was appointed Governor by President Fillmore. In the following year the Federal judges were forced by threats of violence from Young to quit Utah, and the laws of the United States were openly defied and subverted. This led to the removal of Young, and the appointment of Colonel Steptoe of the United States Army as Governor. Colonel Steptoe arrived in Utah in August, 1854, with a battalion of soldiers; but such was the state of affairs in the Territory that he did not deem it prudent to assume the office of Governor, and, after wintering in Salt Lake City, he formally resigned his post, and removed with his troops to California. Most of the civil officers who were commissioned about the same time with Colonel Steptoe arrived in Utah a few months after he had departed. They were harassed and terrified like their predecessors. In February, 1856, a mob of armed Mormons, instigated by sermons from the heads of the Church, broke into the courtroom of the United States District Judge, and, at the point of the bowie-knife, compelled Judge Drummond to adjourn his court *sine die*. Soon afterward all the United States officers, with the exception of the Indian agent, were forced to flee from the Territory. These and similar outrages at length determined President Buchanan to supersede Brigham Young in the office of Governor, and to send to Utah a military force to protect the Federal

officers, and to compel obedience to the laws. In 1857 the office of Governor of Utah was conferred upon Alfred Cumming, a superintendent of Indian affairs on the Upper Missouri, and that of Chief Justice on Judge Eckels, of Indiana; and a force of 2,500 men, under experienced officers, was sent to protect them in the discharge of their duties. The Mormons were greatly excited at the approach of these troops. Young, in his capacity of Governor, issued a proclamation denouncing the army as a mob, and forbidding it to enter the Territory, and calling the people of Utah to arms to repel its advance. The army reached Utah in September, and on October 5th and 6th a party of mounted Mormons destroyed several of the supply trains, and a few days later cut off 800 oxen from the rear of the army and drove them to Salt Lake City. The army, of which Colonel A. S. Johnston had by this time assumed the command, was overtaken by the snows of winter before it could reach Salt Lake Valley, and about the middle of November went into winter quarters on Black's Fork, near Fort Bridger. On November 27th, Governor Cumming issued a proclamation declaring the Territory to be in a state of rebellion. In the spring of 1858, by the intervention of Mr. Thomas L. Kane, of Pennsylvania, who had gone to Utah by way of California, bearing letters from President Buchanan, a good understanding was brought about between Governor Cumming and the Mormon leaders; and toward the end of May two commissioners arrived at the camp with a proclamation from the President offering pardon to all Mormons who would submit themselves to Federal authority. This offer was accepted by the heads of the Church. On August 29, 1852, Brigham Young proclaimed the "celestial law of marriage," sanctioning polygamy, which he declared had been revealed to Joseph Smith in July, 1848. Smith's widow and her four sons at once denounced this as a forgery, and headed a schism. Though the Mormon apostles had repeatedly replied to the imputation of such doctrine or practice with the most emphatic and explicit denials, the personal power of Brigham Young was such that he had little difficulty in establishing polygamy as an institution of the Church. Young took to himself a large number of wives, most of whom resided in a building known as the "Lion House," so called from a huge lion carved in stone which stands upon the portico. In 1874, his fifteenth wife, Ann Eliza, left him, and petitioned the United States Court for a divorce. The petition was denied on the ground that the marriage was polygamous, and therefore null. In 1871 Brigham Young was indicted for polygamy, but no conviction was reached. In addition to his office of President of the Church, Young was Grand Archer of the Order of Danites, a secret organization within the Church, which was one of the chief sources of his absolute

power; and by organizing and directing the trade and industry of the community for his own advantage, he accumulated immense wealth.

YOUNG MEN'S CHRISTIAN ASSOCIATION. The Twenty-second Annual International Convention of the Young Men's Christian Associations of the United States and the British Provinces met at Louisville, Ky., June 6th. Mr. J. T. Farwell, of Chicago, Ill., was chosen president. The report of the Executive Committee reviewed the growth of the associations from 1865, when they numbered only 65 isolated bodies, to the present number of more than 1,000 organizations, bound together under International, State, and Provincial Commissions, with more than 150,000 members. In 1865, there was not an association building; now there were 48 such buildings, valued at \$2,000,000, and other property owned by the associations, raising the aggregate value to \$3,000,000. The expenditure of the committee during the year had been \$16,000; adding to this the expenses of the State organizations and associations, the whole amount of expenditure had been almost \$500,000. Eight thousand three hundred men had been provided with employment. The average weekly attendance on the Associational Bible Classes was 8,123. Special attention was given to the consideration of the work of the associations in the South, where efforts in organization had been prosecuted for several years past. When these efforts were begun, there were but two associations in the South; now there were 150 associations, with strong State organizations and many active working members. Attention was especially directed to the work in behalf of the colored people. Report was made from Canada that the number of associations in Ontario and Quebec had increased from 44 in 1876 to 59.

Mr. Anthony Comstock, secretary of the Society for the Suppression of Vice, at a special meeting held to hear him, made a report of the

success of his efforts for the suppression of obscene literature. He had seized and destroyed the plates for 163 out of 173 books published in the United States since 1878, and 24 tons of literature, and 1,200,000 pictures, photographic plates, cards, etc. Only four acquittals had been had in cases of 200 prosecutions which had been instituted by him.

The Thirty-second Anniversary Meeting of the Young Men's Christian Association of London was held April 19th. Mr. J. G. Shepherd presided. The report of the secretary embraced the review of the history of the institution for more than 30 years, showing that the number of societies had now increased to 2,043, extending all over the world, and distributed as follows: in London, 28; in the English towns and rural districts, 289; in Scotland, 63; in Ireland, 11; in the British colonies and possessions, 18; in France, 43; in Belgium, 18; in Germany, 243; in Holland, 294; in Spain, 4; in Italy, 6; in Switzerland, 140; in Sweden, 8; in the United States and North America, 982; in China, 2; in Syria, 3; in Japan, 1. The formation of societies in some of the business houses of London was mentioned. The financial statement showed that the receipts of the association for the year had been £3,123, and that a deficiency existed of £575. The number of new members received during the year was 360, and the total number of members was 5,440.

The Young Men's Christian Association of Scotland held their Annual Meeting at Edinburgh in July. The Executive Committee reported that returns had been received from 67 associations, four more than had reported in the previous year. The total number of members in the reporting associations was 12,148. Fifty-eight associations had classes for biblical study. Prayer-meetings were now held in 45 of them, and 26 associations were carrying on evangelistic work. The total number of associations was 95.

Z

ZIMMERMANN, APALLON ERNESTOVITCH, a Russian general, was born in Livonia, in 1825. He commenced his military career in 1843 as a lieutenant in the Fourteenth Hussars of Mitau. After having passed through the Academy of the General Staff, he was attached in 1848 to the general staff, and in the same year conducted several works in the departments Archangel and Olonetz. In the following year he was attached to the General Count Berg, whom he accompanied in his expedition to Hungary. From 1851 to 1854 he was in the Caucasus and took part in the expeditions against the rebellious tribes of that region. Upon the breaking out of the Crimean War he was on

the Armenian frontier as chief of staff of the Akalzik division; but in 1854 he was ordered to the Crimea, where he served in Sebastopol until the surrender of that fortress. In 1860 he was sent on an expedition against Khokan, in which he was successful, gaining for himself the rank of major-general. In 1862 he became chief of staff of the military district of Vilna, and as such took part in the suppression of the Polish insurrection. He was created lieutenant-general in 1868, and on February 19, 1877, was appointed to the command of the Fourteenth Army Corps, with which on June 21, at Braila, he was the first to cross the Danube.

- which it is done, 88, 89; new metals discovered, 90; sensitiveness of silver salts, 91; new acids, 91; estimation of alcohol in a watery mixture, 92; determination of copper, 92; theory of the formation of saline deposits, 92; new method of preventing surface oxidation of iron, 93; reducing action of native sulphurets, 93; qualitative determination of native potassa, 93; artificial production of corundum, 93; purification of hydrogen, 94; sources and determination of the proteids, 94; new process for the detection and determination of thein, 95; new unit of light for photometry, 96; salicylic acid as an antiferment of wine, 97.
- Chile*.—Boundaries, 97; President and cabinet, 97; Council of State, 97; public officers, 97; army, 97; national guard, 97; navy, 97; revenue, 97; budget, 98; foreign debt, 98; internal loan, 98; foreign commerce, 98; value of exports and imports to and from the United States, 98; postal treaty with Great Britain, 98; education, 99; expenses, 99.
- China*.—Emperor, 99; area and population, 99; foreign trade, 99; share of England, 99; foreign residents, 100; severe famine, 100; reports, 100; methods of relief, 100; Sungarian revolt, 101; war, 101; edict against the use of opium, 101; railroad from Shanghai to Woosung, 102; opening new ports, 102; conference of Protestant missionaries, 102; papers read, 102.
- Christian Connection*.—Conferences, 103; statistics, 103.
- CLIFFORD, Judge NATHAN*.—Member and President of the Electoral Commission, 164; on receiving testimony, 201.
- Coal*.—Production in 1877, 103; Pennsylvania mines, 104; production of anthracite, 104; coal production of the United States, 104; state of the anthracite trade, 104; low prices, 105; season contracts, 105; Philadelphia & Reading Railroad Company, 105; course of the trade, 105; annual production throughout the world, 106.
- Colombia*.—Boundaries, 106; President and cabinet, 106; officers of States, 106; national finances, 106; national debt, 106; present condition of Colombia, 106; army, 107; public instruction, 107; commerce, 108; end of the revolution, 108.
- Colorado*.—Election, 108; valuation of property, 108; decision on the powers of the Board of Equalization, 108; extension of Central Railroad, 108; State University, 108; State government, 109; debt, 109; taxes, 109; new counties, 109; mines and products, 109; miles of railroad, 109; public instruction, 109.
- Commerce, International*.—Crisis in the commercial world, 109; causes, 109; social, natural, political, 109; effect on Great Britain, 109; shrinkage of French foreign trade, 110; collapse of speculative enterprise in Austria and Germany, 110; new markets sought by England and Germany, 110; changes of commercial treaties, 110; exports of different countries before the stagnation, 110; report of the British Commissioners of Customs, 110; gloomy forebodings of the English mind, 111; decline of the trade, 111; decline of the exports and increase of the imports, 111; chronicle of London prices in 1877; the financial ebb in France, 112; speculative occupations, 112; change in the habits of daily consumption, 112; diminished capacity for consumption, 112; imports of raw materials and exports of manufactures from France and England in three years, 113; increase of French foreign commerce, 113; further details of French commerce, 114; French commercial treaty, 114; foreign trade of Italy, 114; the severe financial crisis in Portugal, 114; causes of the financial crisis in Germany and Austria, 115; speculations, 115; a swift collapse, 115; its effects, 116; commercial relations of Sweden and Norway, 116; returns of the Russian Finance Bureau, 116; increase of exports from India and new industries, 117; foreign trade of Japan, 117; gradual extension of the Chinese foreign trade, 117; improvement in the industrial condition of the countries of South and Central America, 117; foreign trade of Mexico and the West Indies, 118; effect of the war on the European stock market, 118; *rationale* of gold movements between England and other countries, 118; effect of the decline in the silver market, 119; effect of the Eastern war on the wheat market, 119; the extent and sources of the supply of wheat imported into England, 119; depression of the cotton industry, 120.
- Commerce (Foreign) of the United States*.—A period of commercial stagnation and contracted consumption, 120; export and import trade, 120; extent of the entire foreign commerce for seven years, 121; excess of exports over imports, 121; unmanufactured exports, 121; superiority of American manufactures, 121; values of different classes of merchandise exported and imported, 122, 123; the principal national markets of some of the classes of exports, with the quantities taken, 124; the European customers for manufactured articles, 125; cause of the reduction in the value of imports, 125; decline in certain articles, 125; wool clip of the United States, 126; share of each country in the export and import commerce of the United States, 126; large trade with the neighboring countries on the American continent, 127; the unreported trade to Canada, 127; different degrees of intimacy in the commercial relations of the United States with different countries, 127; interest of the United States in the total foreign trade of Great Britain, 127; trade with Great Britain, 128; American trade with Germany, 128; ditto with France, showing an adverse balance, 128; tabular survey of the commercial relations of the United States with other countries, 129; returns of the Bureau of Statistics, 130.
- Committee*.—In the Senate, relative to counting the electoral vote, 137; ditto in the House, 137.
- Congregationalists*.—Statistics, 130; Congregational Union, 130; Home Missionary Society, 130; Association, 130; Education Society, 131; National Council, 131; Publishing Society, 131; foreign missions, 131; theological seminaries, 131; the Bible in schools, 132; monument to John Robinson, 132; Union of Ontario, 132; British Congregationalists, 133; statistics, 133; Union of England and Wales, 133; annual meeting, 133; London Missionary Society, 134; Colonial do., 134; American Board of Commissioners, 134; statistics of missions, 135; churches in France, 135; do. Switzerland, 135.
- Congress, United States*.—Second session of Forty-fourth, 136; message, 136 (see *Public Documents* in this volume).
- In the House, resolution relative to counting the electoral vote, 137; referred, 137; substitute reported by the committee, 137; resolution adopted, 137; resolution passed by the Senate, 137; Senate Committee, 137; House Committee, 137.
- In the Senate, report of joint committee on counting the electoral vote, 137; bill submitted with report, 137; the bill, 137, 138; report of committee, 139; with amendments proposed to the Constitution relative to

a Presidential election, 140; Congress charged with a most onerous and responsible duty, 141; first section of the bill, 141; object of second section, 141; the selection of a Commission, 141; Senators and Representatives, 142; Judges of Supreme Court, 142; provisions of the bill, 142; what is to be decided? 143; does it grant too much or too little? 143; shall the Commission descend below the action of the State authorities? 143; what the act is designed to do, 143; what are we to do? 144; the tribunal must decide everything, 144.

This bill is a compromise, 144; a bill offered two years ago, 144; if Congress goes behind the officers of States it becomes a grand returning board, 145; the Constitution creates the duty but does not locate the power anywhere, 145; it is in the President of the Senate or the two Houses of Congress, 145; the nature of the bill, 146; the Commission a mixed one, 146; four judges are to select a fifth, 146; we have no tribunals made up in that way, 146; fundamental that the actions of the States shall be received unquestioned by Congress, 146; the jurisdictional part of the bill, 146; the theory of the bill, 147; we say in this bill, take the Constitution as it stands, that is your guide, 148; it might have been possible to put fetters on these fifteen members, 148; is there no limit in this bill? 148; some say they believe the Constitution authorizes the Commission to go into and settle questions which belong exclusively to the States, 148; the boundary of this power is the very marrow of contention, 149; there is an irreconcilable difference of opinion, 149; if everybody were as perfect as Massachusetts the electoral vote would count itself, 149.

This bill is enacted for the present, and no longer, 150; what does the bill do? 150; if it be the duty of the two Houses to ascertain whether the action of the electors is in accordance with the Constitution, they must inquire, 150; this bill secures the great object, 150; how has every count been made? 150; all questions to be decided are to be contained in the written objections, 151; what does this Commission decide? 151; the concurrent vote of both Houses necessary to reject a vote, 151; do the five judges act in their official character? 152; it is said the bill goes outside the Constitution, 152; that it will give the making of President to one man, 152; that it infringes the prerogative of the President of the Senate, 152; amendment proposed, 153; points of conflict of opinion, 153; some on the interpretation of the Constitution, 153; the question of going behind a returning board has a great many points in it, 154; eleven propositions upon which the most antagonistic opinions prevail, 154; what are the advantages of this bill? 155; the electoral vote has been counted for nearly a century under the Constitution, there is a power to do it somewhere, 155; words of the Constitution, 156; remark of Chancellor Kent, 156; is the power lodged in the House of Representatives? 156; can we contrive a commission, and put this business into their hands? 156; the power is conferred upon the two Houses to be executed by joint or concurrent action, 157; if we have the power to count the votes, it cannot be taken from us, nor can we divest ourselves of it, 157; the measure is a violation of the Constitution, 157; amendment offered, 158; its effect, 158; other amendments offered, 158; lost, 158; bill passed, 159.

In the House, the Senate bill considered, 159; it transcends in importance any measure likely to come

before Congress, 159; influence of the Administration in the late election, 159; scheme complete for counting Tilden out and Hayes in, 159; this House would not be passive, 159; the logical result of such a state of affairs is civil war, 160; what the Democrats aimed to secure in the recent struggle, 160; a series of statutes, the fruit of the war, 160; only opening for escape is an agreement upon some method to secure a lawful Executive, 160; the proposed measure is in the very spirit of the Constitution, 161.

This measure is not a compromise, 161; there will be a feeling of relief over the country when it becomes a law, 161; the radical defect of the bill is that it puts a vast, cumbersome machine in the place of the plain, simple plan of the Constitution, 161; counting the vote is a function of a special organization which may be perfected by Congress, 161; the measure rests on three propositions, 162; it should be accepted in preference to the alternative, 162; the hour of deliverance has at last come, 162; bill passed, 163; message from the President, 163.

Members of the Commission, 164; rules, 164; counting of the vote commenced, 165; proceedings, 165; vote of Alabama, 165; vote of Arkansas, 165; vote of Florida objected to, 166; objections, 166; further objections, 167; referred to the Electoral Commission, 168 (see *Electoral Commission*).

Report of the decision of the Electoral Commission, 203; objection to it submitted, 203; vote in the Senate on the Florida decision, 204; do. in the House, 204; adoption of the decision by non-concurrence to reject, 205; votes of other States counted, 205.

Certificates of the vote of Louisiana presented, 205; objections offered, 205; further objections, 207, 208; referred to the Electoral Commission, 208; decision of the Commission, 208; objections to the decision, 209, 210; documents of the State referred to, 211-215; further objections, 216; vote of the Senate on the decision, 216; do. of the House, 217; other votes counted, 217.

The case of Oregon referred to the Electoral Commission, 218; report of the Commission, 208; sustained, 219.

Case of South Carolina referred to the Commission, 219; report of the Commission, 219; objections submitted, 220; not sustained, 220; count of the votes concluded, 220; the vote for President as counted by Congress, 221; report of the committee on the powers and duties of the House of Representatives in the Presidential count, 221; views of the minority, 222; close of the session, 222.

CONKLING, ROSCOE.—Senator from New York, 186; on the Electoral Commission bill, 147-149.

Connecticut.—Meeting of the Legislature in January, 222; resolutions relative to the congressional count of the electoral vote, 222; acts of the Legislature, 223; do. amending the act concerning domestic relations, 223; amendments to the Constitution, 224; finances, 224; school fund, 224; savings banks, 224; fire insurance companies, 225; education, 225; normal school, 225; insane hospital, 226; school for imbeciles, 226; State-prison, 226; militia, 226; new State-house building, 227; calamity at Staffordville, 227; elevated points within the State, 227.

Costa Rica.—Situation, 227; area, 227; public officers, 228; revenue and expenditures, 228; foreign debt, 228; map of Costa Rica, 228; shipping, 228; progress in railways, 229; telegraph lines, 229; education, 229; political disturbance, 229.

Cotton.—Crop for 1877, 229; its weight, 229; production

- of Sea Island, 230; total exports for six years, 230; annual crop since 1880, 230; exports of cotton manufactures, 231; margin of profit, 231; manufacturing in the Southern States, 231; amount taken by mills, 232; fluctuations in the price, 232; deliveries of bales during seven seasons, 232; average weight of American bales, 233; exports of yarn and piece goods from Great Britain, 233; estimated consuming capacity of the Continent, 233; consumption of each country, 234.
- Counsel* before the Electoral Commission, 178.
- Counting* the electoral vote, 165.
- Creedmoor*.—A British and American rifle match, 234; former international contests, 234; conditions of the match, 234; results of the match, 235.
- Currency*.—Question before the public mind, 235; attitude of bi-metallic countries, 235; testimony of Henri Cernuschi, 235; effect of a bi-metallic currency, 236; the silver crisis of 1876, 236; a plan for a speedy resumption of specie payments, 236; the law of supply and demand denied on money material, 236; mint regulations in different countries of Europe, 236; history of the silver dollar in the United States, 237; Annual Convention of the American Bankers' Association, 237; a plan for resumption of specie payments, 237; production of silver, 237; impossibility of preserving a double standard, 237; resolutions adopted, 238; Jevons's address before the Social Science Association, 238; his plan for resumption, 238; Sherman's prophecy of a specie basis attained, 239; a monetary commission of Congress, 239; topics for investigation, 239; report on the causes of the variations of silver, 239; origin of the scheme of demonetization, 240; product of silver in 25 years, 240; estimates of Chevalier, 240; relation between the bullion value of gold and silver, 240; fluctuations in the bullion value of silver in 117 years, 241; silver in Europe, 241; do. in the East, 241; diminution of the gold yield, 242; effect of demonetizing silver, 243; coin obligations of the United States, 243; prohibition of the coinage of silver, 243; Congress commission recommend the restoration of the double standard, 244; minority reports, 244.
- D**
- Dakota*.—The Black Hills, 245; progress in milling ores, 245; gold product, 246.
- DAVENPORT, EDWARD L.*—Birth and death, 246; career on the stage, 246.
- DAVIS, DAVID*.—Senator from Illinois, 136; elected Senator, 282, 283; biographical sketch, 368.
- DAVIS, CHARLES H.*—Birth and death, 246; naval career, 246.
- DAWES, HENRY L.*—Senator from Massachusetts, 136; on the Electoral Commission bill, 148.
- DECAZES, DUC LOUIS*.—Biographical sketch, 320.
- Delaware*.—Session of the Legislature, 247; acts passed, 247; fruit-raising, 247; statistics, 247; strawberries, 247; peaches, 247; new enterprises, 248; free schools, 248.
- Denmark*.—Ruler, 248; ministry, 248; area and population, 248; commerce, 248; shipping, 248; railroads, 249; legislation, 249; discussion of the budget, 249; depression of business, 249; parties in the Legislature, 249; new session, 249; trial of ex-ministers, 250; social democrats, 250.
- DERVISH PASHA*.—Commander of a Turkish corps, 250; military and civil career, 251.

- DISRAELI, BENJAMIN*.—Birth, 251; extraordinary career as a statesman and author, 252.
- Domestic Relations*.—Act of the Connecticut Legislature giving to the wife an equal right with the husband to acquire and control property, 223.
- Dominion of Canada*.—The fishery question, 253; the agreement, 253; arbitrators, 254; the cases, 254; decision, 254; timber trade, 254; failures, 254; treaty with the Blackfeet Indians, 254; tracts of territory surrendered by Indians, 255; report of postmaster-general, 255; commerce by provinces, 256; shipping, 257; value of fisheries, 257; reproduction, 257; immigrants, 257; inland revenue, 258; debt, 258; school statistics, 258.
- DRAGOMIROFF*.—Russian general, 259; birth, 259; military career, 259.
- DUPAURE, JULES*.—Biographical sketch, 320.
- E**
- Earth*.—Present area and population, 259; statistics of sex, 259; the largest cities, 260; the railroads of the world, 260; postal and telegraph statistics, 261.
- Eastern Question*.—Action relative to, in former years, 261; views of the Powers in 1873, 261; effect of the Herzegovina insurrection in 1875, 262; increase of complexity, 262; interests of the chief Powers in Turkish affairs, 262; protection of the Christian nationalities a pretext, 263; most difficult question the disposition of the European provinces, 263; Austria will resist any change, 264; schemes proposed, 264; plan of Capo d'Istria, 264; other suggestions, 264; Mr. Gladstone's paper, 265.
- EATON, WILLIAM W.*—Senator from Connecticut, 136; on the Electoral Commission bill, 155.
- Ecuador*.—Boundaries, 265; area and population, 265; capital, 265; finances, 265; debt, 265; commerce, 265; chief articles of export, 265; quantities and destination of each, 266; railways, 265; battle at Galte, 266; effect of public disturbances, 266; map of Ecuador, 267; most serious outbreak of the year, 268.
- EDHEM PASHA*.—Birth, 268; civil career, 268.
- EDMUNDS, GEORGE F.*—Senator from Vermont, 136; on the bill to provide an Electoral Commission, 140-158.
- Egypt*.—Ruling family, 268; area and population, 268; public debt, 268; imports and exports, 268; three staple exports, 269; railways, 269; schools, 269; reception of the new Turkish Constitution, 269; effect of the Russian war, 269; Colonel Gordon, 269; inspection of coasts of Red Sea, 270; arrangement relative to the Egyptian floating debt, 270; Suez Canal Company, 270; its freedom of navigation, 271; Lord Derby's declaration, 271; statement of Lord Lyons, 271; communication to the State Department at Washington, 271; decision of the Court of Appeals, 271; opening of the Ismailia Canal, 272; books of the year, 272.
- Electoral Commission*.—Act of Congress to create, 137; report of committee with, 137; its members, 164; rules, 164; convenes for consultation, 168; officers appointed, 168; the case of Florida presented, 168; the manner of proceeding discussed and decided, 169; what is the case of Florida? 170; is evidence admis-

sible—if so, what? 170; what the rules provide, 170; the case presented, 170; the county canvass, 170; the State canvass, 171; action of the canvassers, 171; a fraud, 171; action of the people to right the wrong, 171; what did the Tilden electors do? 171; judicial action in Florida, 171; what has the Legislature of Florida done? 172; provisions of its law, 172; three returns, 172; it is said no amount of testimony can invalidate the signature of the Governor, 173; upon what foundation does that doctrine rest? 173; what law makes the Governor's certificate evidence against the truth? 173; is not your right to inquire into the very truth implied by the law under which you act? 173; is a law to provide for a *quo warranto* in existence? if not, Congress can pass one, 174; there is another rule of law operating on this question, 174.

What is the case before the Commission? 174; there are three certificates, 174; two are wanting in all the elements of constitutional and legal validity, 175; confine the argument to No. 1, 175; we say everything in denial of fraud in the State officers, 175; we are not here to defend fraud, 175; propositions presented by the other side, 175; what are the powers of this Commission? 175; where does it get powers to review the popular vote? 176; all counting is to be done by the President of the Senate or the two Houses, 176; what does the word *count* mean? 176; the narrow circle of discretion that surrounds the ministerial act of counting, 177; it is asked—are we to take the certificate against the truth? 177; function of the canvassing board of Florida, 177; the canvass, 178; will you recognize canvass after canvass? 178; the case is made, 178.

Mode of proceeding by counsel suggested, 178.

Desirable matter in the nature of evidence to be laid before the Commission, 179; the general facts of the case stated, 179; details of evidence which the Tilden counsel desire to offer, 179; discussion of Commissioners as to the presentation of evidence, 180; mode of proceeding, 182; the powers of the Commission, 182; action of Congress relative to Florida, 183; evidence sent from the two Houses of two separate and distinct characters, 183; Commission invested with all the powers of Congress, the question is on the materiality and admissibility of the evidence, 183; nothing in the law of Congress declaring that the certificate shall be conclusive evidence, 184; Congress cannot tie its hands so it cannot inquire into the truth of the appointment of electors and the electoral vote, 184; before you count you must ascertain what are votes, 185; authority for going behind the certificate of the State Executive, 185; report of the Senate Committee in 1873, 185; power of a joint rule, 185; authority of this precedent, 186; two propositions as to evidence, 186; case of Florida under the second proposition, 187; the evidence from that State, 187.

What are we engaged in doing? 187; what is the nature of the implied power to distinguish between these several sets of votes? 188; distinct from judicial power, 188; no law, either State or Federal, in reference to the office and functions of an elector, 188; the question is—which set of electors of Florida by the actual declaration of the final authority of the State has become entitled to the office? 189; the man who is in the office is the man for whom we are inquiring, 189; fraud makes things voidable but it does not violate everything, 189; three topics laid down for the consideration of counsel, 190; the three topics, 190; what evidence other than these certificates

is now before the Commission, 190; as to the objections, 190; as to any evidence before either House of Congress, 190; what is excluded by the admission of the other side, 191; what it is proposed to introduce, 191; where has occurred any matter for judicial consideration? 191; the Commission cannot receive evidence that goes behind the State's record of its election certified by the Governor, 192; the *quo warranto* is a matter of common law, 192; case of *Groome vs. Gwynne*, 192; no endowment of this Commission with powers to make it a court under the Constitution, 193; the suit in Florida declares the Hayes electors in possession, 193; legislation of Florida, 193; what are the powers, their disposition and arrangement in the transaction of choosing a President, 194; the vote of the electors is their own vote, 194; a novel proposition that judicial power can put its finger into the political transaction of choosing anybody to an elective office, 194; the novelty of the situation produces strange results, 195.

The most important case ever presented to any official authority in the United States, 195; the Commission, how selected, 195; the questions to be considered, 195; what powers have been vested in this Commission for the purpose before it? 196; the position maintained, 196; the powers of the Commission, 196; nature of the count, 197; construction of the Constitution, 197; the competency of each House to ascertain the truth is unquestionable, 198; objection to this construction, 198; overwhelming inconvenience, 198; what powers has each House of Congress under the laws? 199; condition of all cases of this kind, 199.

Question of admissibility of evidence discussed, 199; the evidence to impeach certificate No. 1 should not be received, 199; the power of Congress to go behind the returns has been again and again asserted, 199; testimony been ordered in one of these cases, 200; our duty to hear the proof offered, 200; such a judgment would proclaim this Government is no longer one of the people, 200; the determination of electors is the exclusive prerogative of the State, 200; the two Houses cannot question the declaration of a State, 200; the questions must be disposed of on their merits, 200; neither Congress nor the Commission has authority to recanvass the vote of Florida, 201; the evidence should not be received, 201; reasons for offering the evidence, 201; resolutions of the Commission, 201; votes, 201; decision of the Commission in the Florida case, 201, 202; report of the Commission to Congress on the Florida case, 202.

The case of Louisiana referred to the Commission, 208; report to Congress, 208.

The case of Oregon referred to the Commission, 218; report to Congress, 218.

The case of South Carolina referred to the Commission, 218; report to Congress, 219; close of the session of the Commission, 219.

ELLET, ELIZABETH F. L.—Birth and death, 272; writings, 272.

Engineering.—Improvements in methods and instruments, 272; iron truss bridge over the Kentucky River, 273; do. over the Ohio River, 273; steel-wire bridge at Cotteneva, California, 273; malleable iron in girders, 273; Mississippi bridge at Council Bluffs, 274; the great Tay bridge, 274; system of pneumatic excavation, 275; the Severn bridge, 275; the Ilkeston viaduct, 275; the Marguerite bridge, 275; the Eddy-stone lighthouse removal, 276; Philadelphia and

- Atlantic City Railroad, 276; Billerica and Bedford narrow gauge, 276; route from Orenburg into Central Asia, 276; road from Berder to Galatz, 276; Brazilian railways, 276; do. in Buenos Ayres, 277; railroad in Nubia, 277; railways in India, 277; do. in Japan, 277; Berlin City Railroad, 277; new horseshoe, 277; rubber tires, 278; street pavement, 278; subterranean telegraph, 278; new tunnel in Bergen Hill, 278; Baltimore water-works tunnel, 278; adit of the Freiberg mines, 278; the Severn tunnel, 279; Welland Canal enlargement, 279; ship canal along the Seine, 279; jetties at the mouth of the Mississippi River, 279; Chatham naval docks in England, 279; Stobcross docks, 280; new form of floating docks, 280; water supply of Lyons, France, 280; the deepest artesian well, 281.
